Gold slide [ENG] A slide rule used on British ships to compute barometric corrections and reduction of pressure to sea level; it includes the effects of temperature, latitude, index correction, and barometric height above sea level.

gold sodium chloride *See* sodium gold chloride.

gold sodium cyanide *See* sodium gold cyanide.

gold sodium thiomalate [PHARM] $C_4H_3AuNa_2O_4S$ A crystalline compound, soluble in water; used as an antirheumatic in medicine. Also known as disodium aurothiomalate; sodium aurothiomalate.

gold sodium thiosulfate [PHARM] $Na_3Au(S_2O_3)_2 \cdot 2H_2O$ A white crystalline compound that is freely soluble in water; used for treatment of rheumatoid arthritis and lupus erythematosus.

gold solder [MET] Solder composed of 60% gold, 20% silver, and 20% copper.

Goldstone bosons [PHYS] Particles with zero mass and zero spin which accompany spontaneous breaking of exact fundamental symmetries.

gold tin precipitate *See* gold tin purple.

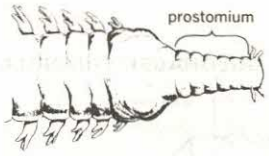
gold tin purple [ORG CHEM] A brown powder which is a mixture of gold chloride and brown tin oxide, soluble in ammonia; used in coloring enamels, manufacturing ruby glass, and painting porcelain. Also known as gold tin precipitate; purple of Cassius.

gold trioxide *See* gold oxide.

golfada [METEOROL] A heavy gale of the Mediterranean.

golf ball [ENG] A printing element used on some typewriters and serial printers, consisting of a rotating, spherically shape, removable typehead that skims across the printed line while the typewriter or printer carriage does not move.

GONIADIDAE



Multiannulate prostomium of *Goniada* in dorsal view.

Golgi apparatus [CYTOL] A cellular organelle that is part of the cytoplasmic membrane system; it is composed of regions of stacked cisternae and it functions in secretory processes.

Golgi cell [ANAT] **1.** A nerve cell with long axons. **2.** A nerve cell with short axons that branch repeatedly and terminate near the cell body.

Golgi-Mazzoni's corpuscle [ANAT] A small sensory lamellar corpuscle located in the parietal pleura.

Golgi tendon organ [PHYSIO] Any of the kinesthetic receptors situated near the junction of muscle fibers and a tendon which act as muscle-tension recorders.

Gomberg-Bachmann-Hey reaction [ORG CHEM] Production of diaryl compounds by adding alkali to a mixture of a diazonium salt and a liquid aromatic hydrocarbon or a derivative.

Gomberg reaction [ORG CHEM] The production of free radicals by reaction of metals with triarylmethyl halides.

Gomphidae [INV ZOO] A family of dragonflies belonging to the Anisoptera.

gomphosis [ANAT] An immovable articulation, as that formed by the insertion of teeth into the bony sockets.

Gomphotheriidae [PALEON] A family of extinct proboscidean mammals in the suborder Elephantoidea consisting of species with shoveling or digging specializations of the lower tusks.

Gomphotheriinae [PALEON] A subfamily of extinct elephantoid proboscideans in the family Gomphotheriidae containing species with long jaws and bunomastodont teeth.

gon *See* grade.

gonad [ANAT] A primary sex gland; an ovary or a testis.

gonadal agenesis [MED] Failure of the gonad to develop, or retrogression of the gonad at very early stages. Also known as gonadal dysgenesis.

gonadal dysgenesis *See* gonadal agenesis.

gonadectomy [MED] Surgical removal of a gonad.

gonadotropic hormone [BIOCHEM] Either of two adenohypophyseal hormones, FSH (follicle-stimulating hormone) or ICSH (interstitial-cell-stimulating hormone), that act to stimulate the gonads.

gonadotropin [BIOCHEM] A substance that acts to stimulate the gonads.

gonapophysis [INV ZOO] A paired, modified appendage of the anal region in insects that functions in copulation, oviposition, or stinging.

gondola car [ENG] A flat-bottomed railroad car which has no top, fixed sides, and often removable ends, in which steel, rock, or heavy bulk commodities are transported.

Gondwanaland [GEOL] The ancient continent that is supposed to have fragmented and drifted apart to form eventually the present continents.

gong buoy [NAV] A buoy similar in construction to a bell buoy, but sounding a distinctive note because of the use of sets of gongs, each gong having a different tone.

Goniadidae [INV ZOO] A family of marine polychaete annelids belonging to the Errantia.

gonidium [BIOL] An asexual reproductive cell or group of cells arising in a special organ on or in a gametophyte.

gonimoblast [BOT] A filament arising from the fertilized carpogonium of most red algae.

goniometer [ELECTROMAG] An instrument for determining the direction of maximum response to a received radio signal, or selecting the direction of maximum radiation of a transmitted radio signal; consists of two fixed perpendicular coils, each attached to one of a pair of loop antennas which are also perpendicular, and a rotatable coil which bears the same space relationship to the coils as the direction of the signal to the antennas. [ENG] **1.** An instrument used to measure the angles between crystal faces. **2.** An instrument which uses x-ray diffraction to measure the angular positions of the axes of a crystal. **3.** Any instrument for measuring angles.

goniometric locator [ELECTROMAG] In radio detection finding, a rotating device that samples signals from orthogonal fixed antennas.

goniophotometer [OPTICS] A photometer designed to measure the intensity of light reflected from a surface at various angles.

gonioscope [MED] A special optical instrument for studying in detail the angle of the anterior chamber of the eye.

gonitis [MED] Inflammation of the knee joint.

gonnardite [MINERAL] $Na_2CaAl_4Si_6O_{20} \cdot 7H_2O$ Zeolite

mineral occurring in fibrous, radiating spherules; specific gravity is 2.3.

gonococcal arthritis [MED] A blood-borne joint infection by *Neisseria gonorrhoeae* occurring as a manifestation of gonorrhea.

gonococcal epididymitis [MED] Inflammation of the epididymitis due to infection by *Neisseria gonorrhoeae*; a secondary manifestation of gonorrhea.

gonococcus *See* Neisseria gonorrhoeae.

Gonodactylidae [INV ZOO] A family of mantis shrimp in the order Stomatopoda.

gonodendrum [INV ZOO] A branched structure which bears clusters of gonophores.

go/no-go detector [ENG] An instrument having only two operating states, such as a common fuse which is either intact or melted.

go/no-go test [ENG] A test based on the measurement of one or more parameters but which can have only one of two possible results, to pass or reject the device under test.

gonopalpon [INV ZOO] Tentaclelike, sensitive structures associated with cnidarian gonophores.

gonophore [BOT] An elongation of the receptacle extending between the stamens and corolla. [INV ZOO] Reproductive zooid of a hydroid colony.

gonopodium [VERT ZOO] Anal fin modified as a copulatory organ in certain fishes.

Gonorhynchiformes [VERT ZOO] A small order of soft-rayed teleost fishes having fusiform or moderately compressed bodies, single short dorsal and anal fins, a forked caudal fin, and weak toothless jaws.

gonorrhea [MED] A bacterial infection of man caused by the gonococcus (*Neisseria gonorrhoeae*) which invades the mucous membrane of the urogenital tract.

gonorrheal urethritis [MED] Inflammation of the urethra, particularly in males, as the result of gonorrhea.

gonorrheal vulvovaginitis [MED] Inflammation of the vulva and vagina as the result of gonorrhea.

gonosome [INV ZOO] Aggregate of gonophores in a hydroid colony.

gonosomite [INV ZOO] The ninth segment of the abdomen of the male insect. Also known as genital segment.

gonostome [INV ZOO] The part of the genital duct of a coelomate invertebrate known as the coelomic funnel. Also known as coelomostome.

gonostyle [INV ZOO] Gonapophysis of dipteran insects.

gonotome [EMBRYO] The part of an embryonic somite involved in gonad formation.

gonozooid [INV ZOO] A zooid of bryozoans and tunicates which produces gametes.

gonyautoxin [BIOCHEM] One of a group of saxitoxin-related compounds that are produced by the dinoflagellates *Gonyaulax catenella* and *tamarensis*.

gonys [VERT ZOO] A ridge along the mid-ventral line of the lower mandible of certain birds.

Gooch crucible [ANALY CHEM] A ceramic crucible with a perforated base; in analysis it is used for filtration through asbestos or glass.

good geometry [NUC PHYS] An arrangement of source and detecting equipment such that little error is produced by the finite sizes of the source and the detector aperture.

Goodman duckbill loader [MIN ENG] A gathering and loading assembly for coal, consisting of a shovel trough with a shovel head fitting inside the feeder trough, an operating carrier which controls the connection between these troughs, a sliding shoe which moves to and fro on the floor of the seam, a swivel trough, and a pendulum jack; it loads the coal into the shaker conveyor pan column.

Goodman loader [MIN ENG] **1.** An electrohydraulic power shovel designed for loading coal where the seams are 6 feet (1.8 meters) or more in thickness. **2.** A loader designed for loading coal from thin seams; has a telescoping fan-shaped apron that extends from the entry of the room to the working face.

goodness of fit [STAT] The degree to which the observed frequencies of occurrence of events in an experiment correspond to the probabilities in a model of the experiment. Also known as best fit.

good oil *See* raffinate.

Goodpasture's syndrome [MED] A complex of symptoms associated with acute glomerulonephritis and pulmonary hemorrhage.

good seamanship [NAV] Any precaution which may be required by the ordinary practice of seamen.

googol [MATH] A name for 10 to the power 100.

googolplex [MATH] A name for 10 to the power googol.

goongarrite [MINERAL] $Pb_4Bi_2S_7$ A mineral composed of a sulfide of lead and bismuth.

goop [MATER] A compound in paste form containing finely divided magnesium, used as a constituent of certain incendiary bomb fillings.

goose [VERT ZOO] The common name for a number of waterfowl in the subfamily Anatinae; they are intermediate in size and features between ducks and swans.

gooseberry [BOT] The common name for about six species of thorny, spreading bushes of the genus *Ribes* in the order Rosales, producing small, acidic, edible fruit.

gooseberry stone *See* grossularite.

goosefoot oil *See* chenopodium oil.

gooseneck [DES ENG] **1.** A pipe, bar, or other device having a curved or bent shape resembling that of the neck of a goose. **2.** *See* water swivel. [NAV ARCH] An iron hook which joins a spar to a mast.

gooseneck barnacle [INV ZOO] Any stalked barnacle, especially of the genus *Lepas*.

gopher [VERT ZOO] The common name for North American rodents composing the family Geomyidae. Also known as pocket gopher.

gopher hole [ENG] Horizontal T-shaped opening made in rock in preparation for blasting. Also known as coyote hole. [MIN ENG] An irregular pitting hole made during prospecting.

gopher-hole blasting *See* coyote blasting.

gophering [MIN ENG] A method of breaking up a sandy medium-hard overburden where usual blastholes tend to cave in, by firing an explosive charge in each of a series of shallow holes; debris is cleared, and holes are made deeper for further charges, until they are deep enough to take enough explosives to break up the deposit.

gorceixite [MINERAL] $BaAl_3(PO_4)_2(OH)_5 \cdot H_2O$ A brown mineral composed of a hydrous basic phosphate of barium and aluminum.

Gordiidae [INV ZOO] A monogeneric family of worms in the order Gordioidea distinguished by a smooth cuticle.

Gordioidea [INV ZOO] An order of worms belonging to the Nematomorpha in which there is one ventral epidermal cord, a body cavity filled with mesenchymal tissue, and paired gonads.

gordioid larva [INV ZOO] The developmental stage of nematomorphs, free-living for a short time.

gordonite [MINERAL] $MgAl_2(PO_4)_2(OH)_2 \cdot 8H_2O$ A colorless mineral composed of a hydrous basic phosphate of magnesium and aluminum.

Gordon's formula [CIV ENG] An empirical formula which gives the collapsing load of a column in terms of its cross-sectional area, length, and least diameter.

gore [CIV ENG] A small triangular parcel of land.

gorge [ARCH] The entrance to a bastion. [GEOGR] A narrow passage between mountains or the walls of a canyon, especially one with steep, rocky walls. [OCEANOGR] A collection of solid matter obstructing a channel or a river, as an ice gorge.

gorge wind *See* canyon wind.

Gorgonacea [INV ZOO] The horny corals, an order of the coelenterate subclass Alcyonaria; colonies are fanlike or featherlike with branches spread radially or oppositely in one plane.

gorgonin [BIOCHEM] The protein, frequently containing iodine and bromine, composing the horny skeleton of members of the Gorgonacea; contains iodine and bromine.

Gorgonocephalidae [INV ZOO] A family of ophiuroid echinoderms in the order Phrynophiurida in which the individuals often have branched arms.

gorilla [VERT ZOO] *Gorilla gorilla*. An anthropoid ape, the largest living primate; the two African subspecies are the lowland gorilla and the mountain gorilla.

gorlic acid [ORG CHEM] $C_5H_7(C_{12}H_{22})COOH$ An unsaturated acid derived from sapucainha oil, obtained from the seeds of a tree in the Amazon Valley.

goslarite [MINERAL] $ZnSO_4 \cdot 7H_2O$ A white mineral composed of hydrous zinc sulfate.

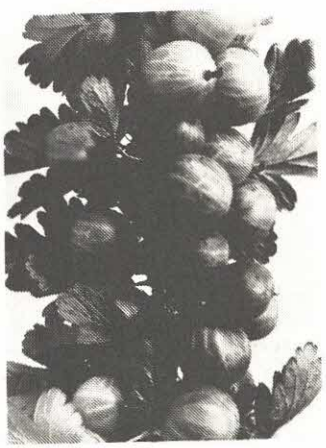
gosling blast [METEOROL] A sudden squall of rain or sleet in England. Also known as gosling storm.

gosling storm *See* gosling blast.

GOOSE

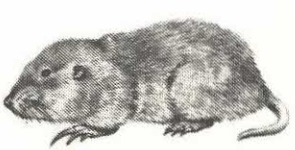
Canada goose *(Branta canadensis)*.

GOOSEBERRY



Gooseberry branch bearing leaves and fruits. *(USDA)*

GOPHER



Pocket gopher of North America.

gossamer [TEXT] A filmy gauze fabric.

gossan [GEOL] A rusty, ferruginous deposit filling the upper regions of mineral veins and overlying a sulfide deposit; formed by oxidation of pyrites. Also known as capping; gozzan; iron hat.

gossypose *See* raffinose.

Gotlandian [GEOL] A geologic time period recognized in Europe to include the Ordovician; it appears before the Devonian.

Goto pair [ELECTR] Two tunnel diodes connected in series in such a way that when one is in the forward conduction region, the other is in the reverse tunneling region; used in high-speed gate circuits.

gouge [DES ENG] A curved chisel for wood, bone, stone, and so on. [GEOL] Soft, pulverized mixture of rock and mineral material found along shear (fault) zones and produced by the differential movement across the plane of slippage. [MIN ENG] A layer of soft material along the wall of a vein which favors miners by enabling them, after gouging it out with a pick, to attack the solid vein from the side.

gouging [ENG] The removal of material by electrical, mechanical, or manual means for the formation of a groove.

Gould's belt [ASTRON] A belt of bright stars inclined about 20° to the Milky Way and including most of the bright stars in Orion, Scorpio, Carina, and Centaurus, apparently resulting from a slight tilt of the spiral arm of the Milky Way Galaxy containing the sun, with respect to the galactic plane.

gout [MED] A condition of purine metabolism resulting in increased blood levels of uric acid with ultimate deposition as urates in soft tissues around joints.

gouy [PHYS CHEM] An electrokinetic unit equal to the product of the electrokinetic potential and the electric displacement divided by 4π times the polarization of the electrolyte.

Gouy balance [ANALY CHEM] Device for measurement of diamagnetic and paramagnetic susceptibilities of samples (solid, liquid, solution).

government frequency bands [COMMUN] Radio-frequency bands which are allotted to various departments and services of the federal government.

governor [MECH ENG] A device, especially one actuated by the centrifugal force of whirling weights opposed by gravity or by springs, used to provide automatic control of speed or power of a prime mover.

gowk storm [METEOROL] In England, a storm or gale occurring at about the end of April or the beginning of May.

goyazite [MINERAL] $SrAl_3(PO_4)_2(OH)_5 \cdot H_2O$ A granular, yellowish-white mineral composed of a hydrous strontium aluminum phosphate.

gozzan *See* gossan.

g parameter [ELECTR] One of a set of four transistor equivalent-circuit parameters; they are the inverse of the *h* parameters.

G parity [PARTIC PHYS] The eigenvalue of a system under the operation of inversion in isotopic spin space; it is conserved by the strong interactions. Also known as isotopic parity.

GPI *See* ground point of intercept.

gpu *See* geopotential unit.

gr *See* grain.

Graafian follicle [HISTOL] The mature mammalian ovum with its surrounding epithelial cells.

grab [ENG] An instrument for extricating broken boring tools from a borehole.

grabbing crane [MECH ENG] An excavator made up of a crane carrying a large grab or bucket in the form of a pair of half scoops, hinged to dig into the earth as they are lifted.

grab bucket [MECH ENG] A bucket with hinged jaws or teeth that is hung from cables on a crane or excavator and is used to dig and pick up materials.

grab dredger [MECH ENG] Dredging equipment comprising a grab or grab bucket that is suspended from the jib head of a crane. Also known as grapple dredger.

graben [GEOL] A block of the earth's crust, generally with a length much greater than its width, that has dropped relative to the blocks on either side.

grabhook [DES ENG] A hook used for grabbing, as in lifting blocks of stone, in which case the hooks are used in pairs connected with a chain, and are so constructed that the tension of the chain causes them to adhere firmly to the rock.

grab sample [MIN ENG] A random mode of sampling; the samples may be taken from the pile broken in the process of mining, or from a truck or car of ore or coal.

graceful degradation [COMPUT SCI] A programming technique to prevent catastrophic system failure by allowing the machine to operate, though in a degraded mode, despite failure or malfunction of several integral units or subsystems.

Gracilariidae [INV ZOO] A family of small moths in the superfamily Tineoidea; both pairs of wings are lanceolate and widely fringed.

gracilis [ANAT] A long slender muscle on the medial aspect of the thigh.

Gradall [MECH ENG] A hydraulic backhoe equipped with an extensible boom that excavates, backfills, and grades.

gradation [GEOL] **1.** The leveling of the land, or the bringing of a land surface or area to a uniform or nearly uniform grade or slope through erosion, transportation, and deposition. **2.** Specifically, the bringing of a stream bed to a slope at which the water is just able to transport the material delivered to it.

gradation period [GEOL] The time during which the base level of the sea remains in one position. Also known as base-leveling epoch.

grade [CIV ENG] **1.** To prepare a roadway or other land surface of uniform slope. **2.** A surface prepared for the support of rails, a road, or a conduit. [COMMUN] One of two types of television service, designated grade A and grade B, each having a specified signal strength, that of grade A being several times as large as B. [ENG] The degree of strength of a high explosive. [GEOL] The slope of the bed of a stream, or of a surface over which water flows, upon which the current can just transport its load without either eroding or depositing. [MATH] A unit of plane angle, equal to 0.01 right angle, or $\pi/200$ radians, or 0.9°. Also known as gon. [MIN ENG] **1.** A classification of ore according to recoverable amount of a valuable metal. **2.** To sort and classify diamonds.

gradeability [MECH ENG] The performance of earthmovers on various inclines, measured in percent grade.

grade beam [CIV ENG] A reinforced concrete beam placed directly on the ground to provide the foundation for the superstructure.

grade correction *See* slope correction.

grade crossing [CIV ENG] The intersection of roadways, railways, pedestrian walks, or combinations of these at grade.

graded [GEOL] Brought to or established at grade.

graded bedding [GEOL] A stratification in which each stratum displays a gradation in the size of grains from coarse below to fine above.

graded-junction transistor *See* rate-grown transistor.

graded periodicity technique [ELECTR] A technique for modifying the response of a surface acoustic wave filter by varying the spacing between successive electrodes of the interdigital transducer.

graded profile *See* profile of equilibrium.

graded stream [HYD] A stream in which, over a period of years, slope is adjusted to yield the velocity required for transportation of the load supplied from the drainage basin.

graded topocline [ECOL] A topocline having a wide range, or ranging into different kinds of environment, thus subjecting its members to differential selection so that divergence between local races may become sufficient to warrant creation of varietal, or even specific, names.

grade line [CIV ENG] A line or slope used as a longitudinal reference for a railroad or highway.

grade of coal [MIN ENG] A classification of coal based on the amount and nature of the ash and sulfur content.

grader [MECH ENG] A high-bodied, wheeled vehicle with a leveling blade mounted between the front and rear wheels; used for fine-grading relatively loose and level earth.

grade scale [GEOL] A continuous scale of particle sizes divided into a series of size classes.

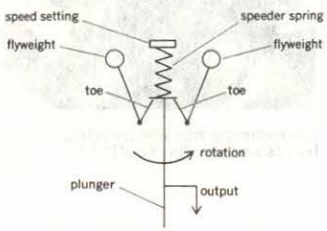
grade separation [CIV ENG] A grade crossing employing an underpass and overpass.

grade slab [CIV ENG] A reinforced concrete slab placed directly on the ground to provide the foundation for the superstructure.

grade stake [CIV ENG] A stake used as an elevation reference.

gradient [GEOL] The rate of descent or ascent (steepness of slope) of any topographic feature, such as streams or hillsides. [MATH] A vector obtained from a real function $f(x_1, x_2, \ldots, x_n)$ whose components are the partial derivatives of f;

GOVERNOR



Ballhead of governor containing whirling flyweights driven at a speed proportional to the speed of the prime mover.

GRABEN

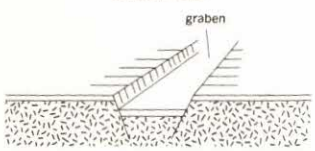


Diagram of simple graben. *(From A. K. Lobeck, Geomorphology, McGraw-Hill, 1939)*

this measures the maximum rate of change of f in a given direction. [NAV] A slope expressed in feet per mile as a ratio of the horizontal to the vertical distance; for example, 40:1 means 40 feet horizontally to 1 foot vertically.

gradient coupling [PARTIC PHYS] A hypothetical interaction of particles in which the interaction Hamilton depends explicitly on first derivatives of wave functions associated with the particles with respect to position and time.

gradient current [OCEANOGR] A current defined by assuming that the horizontal pressure gradient in the sea is balanced by the sum of the Coriolis and bottom frictional forces; at some distance from the bottom the effect of friction becomes negligible, and above this the gradient and geostrophic currents are equivalent. Also known as slope current.

gradient elution analysis [ANALY CHEM] A form of gas-liquid chromatography in which the eluting solvent is changed with time, either by gradually mixing a second solvent of greater eluting power with the first, less powerful solvent, or by a gradual change in pH or other property.

gradienter [ENG] An attachment placed on a surveyor's transit to measure angle of inclination in terms of the tangent of the angle.

gradient flow [METEOROL] Horizontal frictionless flow in which isobars and streamlines coincide, or equivalently, in which the tangential acceleration is everywhere zero; the balance of normal forces (pressure force, Coriolis force, centrifugal force) is then given by the gradient wind equation.

gradient method [MATH] A finite iterative procedure for solving a system of n equations in n unknowns.

gradient microphone [ENG ACOUS] A microphone whose electrical response corresponds to some function of the difference in pressure between two points in space.

gradient of equal traction [MIN ENG] The gradient at which the tractive force necessary to pull an empty tram inby (slightly uphill) is equal to that force required to pull a loaded tram outby.

gradient projection method [MATH] Computational method used in nonlinear programming when constraint functions are linear.

gradient tints [MAP] A series of color tints used on maps or charts to indicate relative heights or depths. Also known as elevation tints; hypsometric tints.

gradient wind [METEOROL] A wind for which Coriolis acceleration and the centripetal acceleration exactly balance the horizontal pressure force.

gradient-wind level *See* geostrophic-wind level.

grading [GEOL] The gradual reduction of the land to a level surface; for example, erosion of land to base level by streams. [IND ENG] Segregating a product into a number of adjoining categories which often form a spectrum of quality. Also known as classification.

graduate [CHEM] A cylindrical vessel that is calibrated in fluid ounces or milliliters or both; used to measure the volume of liquids.

graduated coating [MET] In thermal spraying, a deposit consisting of a number of layers which vary in material composition.

Graebe-Ullman reaction [ORG CHEM] **1.** Production of fluorenone by boiling 2-benzoylbenzenediazonium salts in dilute acid solution. **2.** Reaction of 2-aminodiphenylamines with nitrous acid to form a benzotriazole which on heating loses nitrogen to form a carbazole.

Graeffe's method [MATH] A method of solving algebraic equations by means of squaring the exponents and making appropriate substitutions.

Graetz number [THERMO] A dimensionless number used in the study of streamline flow, equal to the mass flow rate of a fluid times its specific heat at constant pressure divided by the product of its thermal conductivity and a characteristic length. Also spelled Grätz number. Symbolized N_{Gz}.

Graetz problem [FL MECH] The problem of determining the steady-state temperature field in a fluid flowing in a circular tube when the wall of the tube is held at a uniform temperature and the fluid enters the tube at a different uniform temperature.

graft [BIOL] **1.** To unite to form a graft. **2.** A piece of tissue transplanted from one individual to another or to a different place on the same individual. **3.** An individual resulting from the grafting of parts. [BOT] To unite a scion to an understock in such manner that the two grow together and continue development as a single plant without change in scion or stock.

graft copolymer [ORG CHEM] Any high polymer composed of two or more different polymeric entities chemically united.

graftonite [MINERAL] $(Fe,Mn,Ca)_3(PO_4)_2$ A salmon-pink mineral, crystallizing in the monoclinic system, and found as laminated intergrowths of triphylite; hardness is 5 on Mohs scale, and specific gravity is 3.7.

Graham-Cole test *See* cholecystography.

Grahamella [MICROBIO] A genus of the family Bartonellaceae; intracellular parasites in red blood cells of rodents and other mammals.

grahamite [GEOL] *See* mesosiderite. [MINERAL] A solid, jet-black hydrocarbon that occurs in veinlike masses; soluble in carbon disulfide and chloroform.

Graham's law of diffusion [FL MECH] The law that the rate of diffusion of a gas is inversely proportional to the square root of its density.

grain [BOT] **1.** A rounded, granular prominence on the back of a sepal. **2.** *See* cereal. **3.** *See* drupelet. [GEOL] The particles or discrete crystals that make up a sediment or rock. [GRAPHICS] A small particle of metallic silver remaining in a photographic emulsion after developing and fixing; these grains together form the dark areas of a photographic image. [HYD] The particles which make up settled snow, firn, and glacier ice. [MATER] **1.** The appearance and texture of wood due to the arrangement of constituent fibers. **2.** The woodlike appearance or texture of a rock, metal, or other material. **3.** The direction in which most fibers lie in a sample of paper, which corresponds with the way the paper was made on the manufacturing machine. [MECH] A unit of mass in the United States and United Kingdom, common to the avoirdupois, apothecaries', and troy systems, equal to 1/7000 of a pound, or to 6.479891×10^{-5} kilogram. Abbreviated gr. [ORD] A single piece of solid propellant, regardless of size or shape, used in a gun or rocket; a rocket grain is often very large and shaped to fit its requirements. [TEXT] The direction in a piece of fabric which is parallel with the selvage.

grain alcohol *See* ethanol.

grain boundary [MET] Surface between individual grains in a metal.

grain diminution *See* degradation recrystallization.

grain direction [COMPUT SCI] In character recognition, the arrangement of paper fibers in relation to a document's travel through a character reader.

grain drill [AGR] A drill used to sow small grains or seeds.

grainer process [CHEM ENG] A salt production method in which salt is produced by surface evaporation of brine in open-air flat pans.

grainer salt [MATER] Sodium chloride produced by the grainer process.

grain fineness number [MATER] Average grain size of a granular material.

grain flow [MET] The fiber patterns appearing on the surface of a forging and resulting from the alignment of the crystalline structure of the base metal in the direction of working.

grain growth [MET] Enlargement of grains in a metal, usually through heat treatment. [PETR] Enlargement of some individual crystals in a monomineralic rock, producing a coarser texture. Also known as germination.

graininess [GRAPHICS] A mottled effect in film caused by clumping of the silver particles.

graining [ENG] Simulating a grain such as wood or marble on a painted surface by applying a translucent stain, then working it into suitable patterns with tools such as special combs, brushes, and rags. [GRAPHICS] A technique in which lithographic metal plates are abraded for greater water retention and coating adhesion.

grain leather [MATER] Leather made from the grain side of a skin.

grain size [GEOL] Average size of mineral particles composing a rock or sediment. [MET] Average size of grains in a metal expressed as average diameter, or grains per unit area or volume.

grain sorghum [BOT] *Sorghum bicolor*. A grass plant cultivated for its grain and to a lesser extent for forage. Also known as nonsaccharine sorghum.

grain spacing [DES ENG] Relative location of abrasive grains on the surface of a grinding wheel.

gram [MECH] The unit of mass in the centimeter-gram-second system of units, equal to 0.001 kilogram. Abbreviated g; gm.

gramagrass [BOT] Any grass of the genus *Bouteloua*; pasture grass.

gram-atomic weight [CHEM] The atomic weight of an element expressed in grams, that is, the atomic weight on a scale on which the atomic weight of carbon-12 isotope is taken as 12 exactly.

gram-calorie *See* calorie.

gram-centimeter [MECH] A unit of energy in the centimeter-gram-second gravitational system, equal to the work done by a force of magnitude 1 gram force when the point at which the force is applied is displaced 1 centimeter in the direction of the force. Abbreviated g-cm.

gram determinant [MATH] The gram determinant of vectors $\mathbf{v}_1, \ldots, \mathbf{v}_n$ from an inner product space is the determinant of the $n \times n$ matrix with the inner product of $\mathbf{v}_i$ and $\mathbf{v}_j$ as entry in the ith column and jth row; its vanishing is a necessary and sufficient condition for linear dependence.

gramenite *See* nontronite.

gram-equivalent weight [CHEM] The equivalent weight of an element or compound expressed in grams on a scale in which carbon-12 has an equivalent weight of 3 grams in those compounds in which its formal valence is 4.

gram-force [MECH] A unit of force in the centimeter-gram-second gravitational system, equal to the gravitational force on a 1-gram mass at a specified location. Abbreviated gf. Also known as fors; gram-weight; pond.

gramicidin [MICROBIO] A polypeptide antibacterial antibiotic produced by *Bacillus brevis*; active locally against gram-positive bacteria.

Graminales [BOT] The equivalent name for Cyperales.

Gramineae [BOT] The grasses, a family of monocotyledonous plants in the order Cyperales characterized by distichously arranged flowers on the axis of the spikelet.

graminicolous [ECOL] Living upon grass.

graminivorous [ZOO] Feeding on grasses.

graminoid [BOT] Of or resembling the grasses.

grammar [COMMUN] The set of rules governing the order of words in a communication, clause, or sentence.

gram-molecular volume [CHEM] The volume occupied by a gram-molecular weight of a chemical in the gaseous state at 0°C and 760 millimeters of pressure (101,325 newtons per square meter).

gram-molecular weight [CHEM] The molecular weight of compound expressed in grams, that is, the molecular weight on a scale on which the atomic weight of carbon-12 isotope is taken as 12 exactly.

gram-negative [MICROBIO] Of bacteria, decolorizing and staining with the counterstain when treated with Gram's stain.

gram-negative diplococci [MICROBIO] Three bacteriologic genera composing the family Neisseriaceae: *Gemella*, *Veillonella*, and *Neisseria*.

gram-positive [MICROBIO] Of bacteria holding the color of the primary stain when treated with Gram's stain.

gram-rad [NUCLEO] A unit of integral absorbed dose of radiation, equal to 100 ergs.

gram-roentgen [NUCLEO] A unit of energy conversion, equal to a dose of 1 roentgen delivered to 1 gram of air.

Gram-Schmidt orthogonalization process [MATH] A process by which an orthogonal set of vectors is obtained from a linearly independent set of vectors in an inner product space.

Gram's stain [MICROBIO] A differential bacteriological stain; a fixed smear is stained with a slightly alkaline solution of basic dye, treated with a solution of iodine in potassium iodide, and then with a neutral decolorizing agent, and usually counterstained; bacteria stain either blue (gram-positive) or red (gram-negative).

gram-variable [MICROBIO] Pertaining to staining inconsistently with Gram's stain.

gram-weight *See* gram-force.

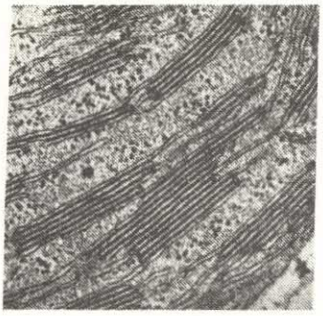
grana [CYTOL] A multilayered membrane unit formed by stacks of the lobes or branches of a chloroplast thylakoid.

Granby car [MIN ENG] An automatically dumped car for hand loading or power-shovel loading; a wheel attached to its side engages an inclined track at the dumping point.

Grand Banks [GEOGR] Banks off southeastern Newfoundland, important for cod fishing.

grand canonical ensemble [STAT MECH] A collection of systems of particles used to describe an individual system which is allowed to exchange both energy and particles with its environment.

GRANA



Part of oat leaf chloroplast at high magnification. Grana are seen in side view, revealing profiles of membranes. Thylakoids that interconnect grana are shown, with components of stroma, or ground substance, in which thylakoids lie. The dense granules are chloroplast ribosomes.

GRANITE MOSS

Granite moss (*Andreaea rupestris*), showing gametophyte with sporophytes. (*From G. M. Smith, Cryptogamic Botany, vol. 2, 2d ed., McGraw-Hill, 1955*)

grandfather [COMPUT SCI] A data set that is two generations earlier than the data set under consideration.

grandfather cycle [COMPUT SCI] The period during which records are kept but not used except to reconstruct other records which are accidentally lost.

grandite [MINERAL] A garnet that is intermediate in chemical composition between grossular and androdite.

grand mal [MED] A complete epileptic seizure involving sudden loss of consciousness and tonic convulsion of the skeletal musculature followed by clonic muscular spasms.

grandrelle yarn [TEXT] Yarn of blended or mixed colors made by twisting together two contrasting single yarns.

grand unified field theory [PARTIC PHYS] A theory in which the strong, electromagnetic, and weak interactions become aspects of one interaction.

granite [PETR] A visibly crystalline plutonic rock with granular texture; composed of quartz and alkali feldspar with subordinate plagioclase and biotite and hornblende.

granite cloth [TEXT] A fabric having a hard finish with an irregular pebbled surface made by weaving tightly twisted wool or blended yarns.

granite-gneiss [PETR] A banded metamorphic rock derived from igneous or sedimentary rocks mineralogically equivalent to granite.

granite moss [BOT] The common name for a group of the class Bryatae represented by two Arctic genera and distinguished by longitudinal splitting of the mature capsule into four valves.

granite pegmatite *See* pegmatite.

granite porphyry *See* quartz porphyry.

granite series [GEOL] A sequence of products that evolve continuously during crustal fusion; earlier products tend to be deep-seated, syntectonic, and granodioritic, and later products tend to be shallower, late syntectonic, or postsyntectonic, and more potassic.

granite wash [GEOL] Material eroded from granites and redeposited, forming a rock with the same major mineral constituents as the original rock.

granitic batholith [GEOL] A granitic shield mass intruded as the fusion of older formations.

granitic layer *See* sial.

granitic magma [PETR] A coarse-grained igneous rock.

granitization [PETR] A process whereby various types of rock may be converted to granite or closely related material.

granoblastic fabric [PETR] The texture of metamorphic rocks composed of equidimensional elements formed during recrystallization.

granodiorite [PETR] A visibly crystalline plutonic rock composed chiefly of sodic plagioclase, alkali feldspar, quartz, and subordinate dark-colored minerals.

granogabbro [PETR] Plutonic rock composed of quartz, basic plagioclase, potash-feldspar, and at least one ferromagnesian mineral; intermediate between a granite and a gabbro, and in a strict sense, a granodiorite with more than 50% boric plagioclase.

granophyre [PETR] A quartz porphyry or fine-grained porphyritic granite.

Grantiidae [INV ZOO] A family of calcareous sponges in the order Sycettida.

granular [SCI TECH] Having a grainy texture.

granular-bed separator [ENG] Vessel or chamber in which a bed of granular material is used to remove dust from a dust-laden gas as it passes through the bed.

granular fracture [MET] Grain-like or crystalline surface appearance of a broken metal.

granular gland [PHYSIO] A gland that produces and secretes a granular material.

granular ice [HYD] Ice composed of many tiny, opaque, white or milky pellets or grains frozen together and presenting a rough surface; this is the type of ice deposited as rime and compacted as névé.

granularity [PETR] The feature of rock texture relating to the size of the constituent grains or crystals.

granular leukocyte *See* granulocyte.

granular powder [MET] Equidimensional metal particles that are not spherical.

granular snow *See* snow grains.

granular structure [MATER] Nonuniform appearance of molded or compressed material due to presence of particles of composition, either within the material or on the surface.

granulate [CHEM] To form or crystallize into grains, granules, or small masses.
granulated metal [MET] Small pellets produced by pouring molten metal through a screen or similar device and chilling the droppings in water.
granulation [ASTRON] The small "rice grain" markings on the sun's photosphere. Also known as photospheric granulation. [MED] **1.** Tiny red granules made of capillary loops in the base of an ulcer. **2.** Process of granular tissue formation around a focus of inflammation. [PL PATH] Dry, tasteless condition of citrus fruit due to hardening of the juice sacs when fruit is left on trees too late in the season. [SCI TECH] The state or process of reducing a material to grains or small particles.
granulator [FOOD ENG] A revolving cylinder in which sugar is dried and granulated.
granule [GEOL] A somewhat rounded rock fragment ranging in diameter from 2 to 4 millimeters; larger than a coarse sand grain and smaller than a pebble.
granulite [PETR] **1.** Granite that contains muscovite. **2.** A relatively coarse, granuloblastic rock formed at the high temperatures and pressures of the granulite facies.
granulite facies [PETR] A group of gneissic rocks characterized by a granoblastic fabric and formed by regional dynamothermal metamorphism at temperatures above 650°C and pressures of 3000–12,000 bars.
granuloblastosis [VET MED] An avian leukosis characterized by the presence of excessive numbers of immature granulocytes in the blood of affected birds.
granulocyte [HISTOL] A leukocyte containing granules in the cytoplasm. Also known as granular leukocyte; polymorph; polymorphonuclear leukocyte.
granulocytic leukemia [MED] A blood disease involving neoplastic transformation of granulocytes, principally the neutrophilic series. Also known as myelogenous leukemia; myeloid leukemia.
granulocytopenia [MED] A deficiency of granulocytes in circulating blood. Also known as granulopenia.
granulocytosis [MED] An increase in the number of granulocytes in the circulation.
granuloma [MED] A discrete nodular lesion of inflammatory tissue in which granulation is significant.
granuloma inguinale [MED] An infectious, chronic, destructive granulomatous lesion of humans most frequently localized in the genital and inguinal regions; caused by Donovan bodies (*Donovania granulomatis*).
granuloma pyogenicum [MED] A hemangioma with superimposed inflammation on the skin or other epithelial surfaces.
granulomatosis [MED] Any disease characterized by multiple granulomas.
granulometry [PETR] Measurement of grain sizes of sedimentary rock.
granulopenia *See* granulocytopenia.
Granuloreticulosia [INV ZOO] A subclass of the protozoan class Rhizopodea characterized by reticulopodia which often fuse into networks.
granulosis [INV ZOO] A virus disease of lepidopteran larvae characterized by the accumulation of small granular inclusion bodies (capsules) in the infected cells.
Granville wilt [PL PATH] A bacterial wilt of tobacco caused by *Pseudomonas solanacearum*.
grape [BOT] The common name for plants of the genus *Vitis* characterized by climbing stems with cylindrical-tapering tendrils and polygamodioecious flowers; grown for the edible, pulpy berries.
grapefruit [BOT] *Citrus paradisi*. An evergreen tree with a well-rounded top cultivated for its edible fruit, a large, globose citrus fruit characterized by a yellow rind and white, pink, or red pulp.
grapefruit oil [MATER] Pale-yellow, volatile liquid with grapefruit aroma; soluble in oils, insoluble in glycerin; derived from fresh rind of *Citrus paradisi*; used in flavors and toiletries. Also known as oil of grapefruit; oil of shaddock.
grapefruit seed oil [MATER] Reddish-brown oil expressed from grapefruit seeds; has nutlike aroma and bitter taste; solidifies at −10°C; used as lubricant for textile fibers and leather.
grapestone [GEOL] A cluster of sand-size grains, such as calcareous pellets, held together by incipient cementation shortly after deposition; the outer surface is lumpy, resembling a bunch of grapes.
grape sugar *See* dextrose.
grapevine drainage *See* trellis drainage.
grapevine stopper [NAV ARCH] A device that allows temporary grip on a large-diameter cable at high tension; consists of a webbed sleeve that contracts under tension.
graph [MATH] **1.** The planar object, formed from points and line segments between them, used in the study of circuits and networks. **2.** The graph of a function f is the set of all ordered pairs $[x, f(x)]$, where x is in the domain of f. **3.** *See* graphical representation.
graph component [MATH] A particular type of maximal connected subgraph of a graph.
graphechon [ELECTR] A storage tube having two electron guns, one for writing and the other for reading and simultaneous erasing, on opposite sides of the storage medium, which consists of an insulator or semiconductor deposited on a thin substratum of metal supported by a fine mesh.
grapheme [COMMUN] A pictorial representation of a semanteme, such as X-reference for cross-reference.
graph follower *See* curve follower.
graphical analysis [MATH] The study of interdependent phenomena by analyzing graphical representations.
graphical design [ELECTR] Methods of obtaining operating data for an electron tube or semiconductor circuit by using graphs which plot the relationship between two variables, such as plate voltage and grid voltage, while another variable, such as plate current, is held constant.
graphical representation [MATH] The plot of the points in the plane which constitute the graph of a given real function or a pictorial diagram depicting interdependence of variables. Also known as graph.
graphical statics [MECH] A method of determining forces acting on a rigid body in equilibrium, in which forces are represented on a diagram by straight lines whose lengths are proportional to the magnitudes of the forces.
graphical symbol [ELEC] A true symbol, rather than a coarse picture, representing an element in an electrical diagram.
graphical visual display device [COMPUT SCI] A computer input-output device which enables the user to manipulate graphic material in a visible two-way, real-time communication with the computer, and which consists of a light pen, keyboard, or other data entry devices, and a visual display unit monitored by a controller. Also known as graphoscope.
graphic arts [GRAPHICS] Those methods of applied arts used to form a visual end product that conveys information or is a decoration; methods include drawing, painting, photography, all types of printing, and bookmaking.
graphic display [ELECTR] The display of data in graphical form on the screen of a cathode-ray tube.
graphic granite [PETR] A distinct type of pegmatite in which quartz and orthoclase crystals grew together along a parallel axis. Also known as Hebraic granite; runite.
graphic intergrowth [PETR] An intergrowth of crystals, commonly feldspar and quartz, that produces a type of poikilitic texture in which the larger crystals have a fairly regular geometric outline and orientation, and resemble cuneiform writing.
graphic methods [GRAPHICS] Pencil-and-paper methods that employ the geometry of a plane to express mathematical relationships and to carry out mathematical operations in analog form.
graphic panel [CONT SYS] A master control panel which indicates the status of equipment and operations in a system, and their relationships.
graphic recording instrument [ENG] An instrument that makes a graphic record of one or more quantities as a function of another variable, usually time.
graphics [COMMUN] **1.** In communications systems, an information mode in which a graphic system is used to reproduce intelligence; a variation of facsimile. **2.** Nonvoice analog information devices and modes such as facsimile, photographics, and television. [SCI TECH] **1.** The graphic media. **2.** The art of drawing a three-dimensional object on a two-dimensional surface according to mathematical rules of projection.
graphic scale [MAP] A graduated line that indicates the length of miles or kilometers as they appear on a map; the line has the advantage of remaining true after the map is enlarged or reduced in reproduction. Also known as bar scale.
graphic tellurium *See* sylvanite.
graphic terminal [ELECTR] A cathode-ray-tube or other type of computer terminal capable of producing some form of

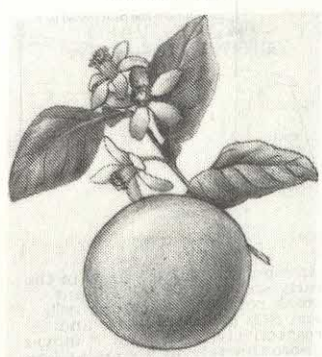
GRANULATION

Large-scale photograph of photospheric granulation in white light taken from an altitude of 80,000 feet (24.38 kilometers) above sea level. The length of this section is about 55,000 kilometers on the sun. *(Princeton University Observatory)*

GRAPE

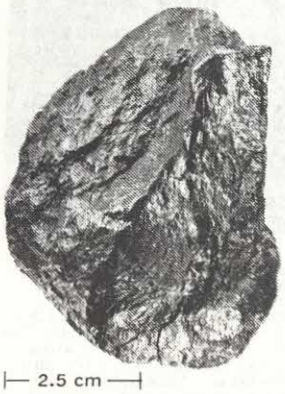
Foliage, tendrils, fruit, and stem characteristics of the Concord grape *(Vitis labruscana)*.

GRAPEFRUIT



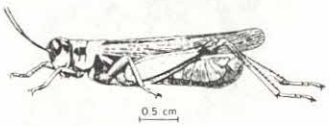
Foliage, flowers, and fruit of grapefruit.

GRAPHITE



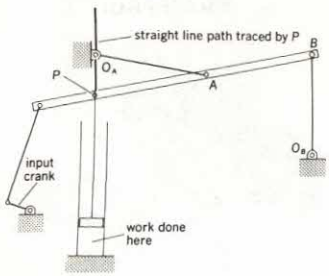
An earthy aggregate of graphite. *(American Museum of Natural History Specimen)*

GRASSHOPPER



Melanoplus mexicanus, a grasshopper. *(From Illinois Natural History Survey)*

GRASSHOPPER LINKAGE



Grasshopper linkage used in the early steam engine. As input crank rotates, the cranks AO_A and BO_B pivot about O_A and O_B respectively, and point P moves approximately in a straight line. *(Georgia Institute of Technology, Theoretical Analysis of Four-Bar Mechanisms, Final Report, NSF Grant GP-2748)*

line drawing based on data being processed by or stored in a computer.

graphic texture [GEOL] A pattern of rocks that is similar to cuneiform characters.

Graphidaceae [BOT] A family of mosses formerly grouped with lichenized Hysteriales but now included in the order Lecanorales; individuals have true paraphyses.

Graphiolaceae [MYCOL] A family of parasitic fungi in the order Ustilaginales in which teleutospores are produced in a cuplike fruiting body.

graphite [MINERAL] A mineral consisting of a low-pressure allotropic form of carbon; it is soft, black, and lustrous and has a greasy feeling; it occurs naturally in hexagonal crystals or massive or can be synthesized from petroleum coke; hardness is 1–2 on Mohs scale, and specific gravity is 2.09–2.23; used in pencils, crucibles, lubricants, paints, and polishes. Also known as black lead; plumbago.

graphite anode [CHEM ENG] One of the electrodes of graphite used in a mercury cell to produce chlorine by electrolysis. [ELECTR] **1.** The rod of graphite which is inserted into the mercury-pool cathode of an ignitron to start current flow. **2.** The collector of electrons in a beam power tube or other high-current tube.

graphite flake [MET] A curved graphite particle in gray cast iron.

graphite grease [MATER] A lubricating grease that contains 2–10% amorphous graphite; used for bearings, especially in damp places.

graphite-moderated reactor [NUCLEO] A nuclear reactor in which graphite is the principal moderating material.

graphite oil [MATER] A deflocculated suspension of graphite in oil; used as a lubricant.

graphite resistor [ELEC] A resistor made of carbon for resistance heating and suitable for any temperature that can be used.

graphite rosette [MET] Graphite flakes which extend radially outward from the centers of crystallization.

graphitic carbon [MET] Carbon in iron or steel present in the form of graphite.

graphitic corrosion [MET] Corrosion of gray cast iron in which the metallic iron constituent is converted into corrosion products which cement together the residual graphite.

graphitic steel [MET] Alloy steel containing graphitic carbon.

graphitization [ORG CHEM] The formation of graphitelike material from organic compounds.

graphitizing [MET] Annealing cast iron to convert all or some of the combined carbon to graphitic carbon.

graphoscope *See* graphical visual display device.

graph theory [MATH] **1.** The mathematical study of the structure of graphs and networks. **2.** The body of techniques used in graphing functions in the plane.

grapnel [DES ENG] An implement with claws used to recover a lost core, drill fittings, and junk from a borehole or for other grappling operations. Also known as grapple. [NAV ARCH] An anchor with four or five hooks used for dragging the bottom or for anchorage.

grappier cement [MATER] A cement composed of finely ground lumps of leftover underburned and overburned slaked lime.

grapple *See* grapnel.

grapple dredger *See* grab dredger.

grapple hook [DES ENG] An iron hook used on the end of a rope to snag lines, to hold one ship alongside another, or as a fishing tool. Also known as grappling iron.

grappling iron *See* grapple hook.

Grapsidae [INV ZOO] The square-backed crabs, a family of decapod crustaceans in the section Brachyura.

graptolite shale [GEOL] Shale containing an abundance of extinct colonial marine organisms known as graptolites.

Graptolithina [PALEON] A class of extinct colonial animals believed to be related to the class Pterobranchia of the Hemichordata.

Graptoloidea [PALEON] An order of extinct animals in the class Graptolithina including branched, planktonic forms described from black shales.

Graptozoa [PALEON] The equivalent name for Graptolithina.

graser *See* gamma-ray laser.

Grashof formula [FL MECH] Formula, $m = 0.0165 A_2 p_1^{0.97}$, used to express the discharge m of saturated steam, where A_2 is the area of the orifice in square inches, and p_1 is reservoir pressure in pounds per square inch.

Grashof number [FL MECH] A dimensionless number used in the study of free convection of a fluid caused by a hot body, equal to the product of the fluid's coefficient of thermal expansion, the temperature difference between the hot body and the fluid, the cube of a typical dimension of the body and the square of the fluid's density, divided by the square of the fluid's dynamic viscosity. Also known as free convection number.

grasp [IND ENG] A basic element (therblig) in time-motion study; a useful element that accomplishes work.

grass [BOT] The common name for all members of the family Gramineae; moncotyledonous plants having leaves that consist of a sheath which fits around the stem like a split tube, and a long, narrow blade. [ELECTR] Clutter due to circuit noise in a radar receiver, seen on an A scope as a pattern resembling a cross section of turf. Also known as hash.

grass crops [AGR] Plants cultivated as forage and grain to be consumed by domestic livestock.

grasserie [INV ZOO] A polyhedrosis disease of silkworms characterized by spotty yellowing of the skin and internal liquefaction. Also known as jaundice.

grasshopper [INV ZOO] The common name for a number of plant-eating orthopteran insects composing the subfamily Saltatoria; individuals have hindlegs adapted for jumping, and mouthparts adapted for biting and chewing.

grasshopper fuse [ELEC] Small fuse incorporating a spring which, upon release by the fusing wire, connects an auxiliary circuit to operate an alarm.

grasshopper linkage [MECH ENG] A straight-line mechanism used in some early steam engines.

grassland [ECOL] Any area of herbaceous terrestrial vegetation dominated by grasses and graminoid species.

grassland climate *See* subhumid climate.

Grassmann algebra *See* exterior algebra.

Grassmannian *See* Grassmann manifold.

Grassmann manifold [MATH] The differentiable manifold whose points are all k-dimensional planes passing through the origin in n-dimensional euclidean space. Also known as Grassmannian.

Grassmann's laws [ANALY CHEM] Seven laws of color identification and mixing that form the basis of modern analytical colorimetry.

grass minimum [METEOROL] The minimum temperature shown by a minimum thermometer exposed in an open situation with its bulb on the level of the tops of the grass blades of short turf.

Grassot fluxmeter [ENG] A type of fluxmeter in which a light coil of wire is suspended in a magnetic field in such a way that it can rotate; the ends of the suspended coil are connected to a search coil of known area penetrated by the magnetic flux to be measured; the flux is determined from the rotation of the suspended coil when the search coil is moved.

grass-roots deposit [MIN ENG] A deposit that is discovered in surface croppings, is easily exploited, and can pay for its own development while in progress.

grass-roots mining [MIN ENG] Also known as mining on a shoestring. **1.** Inadequately financed mining operation, with catch-as-catch-can practices. **2.** Mining from surface down to bedrock.

grass-roots plant [CHEM ENG] A complete plant erected on a virgin site.

grass sickness [VET MED] A disease of horses occurring mainly in Scotland; thought to be caused by a virus similar to the one that causes poliomyelitis in humans.

grass temperature [METEOROL] The temperature registered by a thermometer with its bulb at the level of the tops of the blades of grass in short turf.

grass tetany [VET MED] A magnesium-deficiency disease of cows.

grate [ENG] A support for burning solid fuels; usually made of closely spaced bars to hold the burning fuel, while allowing combustion air to rise up to the fuel from beneath, and ashes to fall away from the burning fuel.

graticule [MAP] A network of lines representing the earth's parallels of latitude and meridians of longitude on a map, chart, or plotting sheet. [OPTICS] A scale at the focal plane of an optical instrument to aid in the measurement of objects.

grating [ELECTROMAG] **1.** An arrangement of fine, parallel

wires used in waveguides to pass only a certain type of wave. **2.** An arrangement of crossed metal ribs or wires that acts as a reflector for a microwave antenna and offers minimum wind resistance. [SPECT] *See* diffraction grating.

grating constant [OPTICS] The distance between consecutive diffraction centers of a ultrasonic wave which is producing a light diffraction spectrum. [SPECT] The distance between consecutive grooves of a diffraction grating.

grating spectrograph [SPECT] A grating spectroscope provided with a photographic camera or other device for recording the spectrum.

grating spectroscope [SPECT] A spectroscope which employs a transmission or reflection grating to disperse light, and usually also has a slit, a mirror or lenses to collimate the light sent through the slit and to focus the light dispersed by the grating into spectrum lines, and an eyepiece for viewing the spectrum.

gratonite [MINERAL] $Pb_9As_4S_{15}$ A mineral composed of lead arsenic sulfide, occurring in rhombohedral crystals.

Grätz number *See* Graetz number.

Gratz rectifier [ELECTR] Three-phase, full-wave rectifying circuit using six rectifiers connected in a bridge circuit.

graupel *See* snow pellets.

grav *See* G.

gravel [GEOL] A loose or unconsolidated deposit of rounded pebbles, cobbles, or boulders.

gravel bank [GEOL] A natural mound or exposed face of gravel, particularly such a place from which gravel is dug.

gravel desert *See* reg.

gravel mine [MIN ENG] A mine extracting gold from sand or gravel. Also known as placer mine.

gravel pump [MECH ENG] A centrifugal pump with renewable impellers and lining, used to pump a mixture of gravel and water.

gravel stop [BUILD] Metal flashing placed at the edge of a roof to prevent gravel from falling off.

Grave's disease *See* hyperthyroidism.

graveyard *See* burial ground.

graveyard shift [IND ENG] The shift of workers that begins at or around midnight; the last shift of the day.

gravid [ZOO] **1.** Of the uterus, containing a fetus. **2.** Pertaining to female animals when carrying young or eggs.

Gravigrada [VERT ZOO] The sloths, a group of herbivorous xenarthran mammals in the order Edentata; members are completely hairy and have five upper and four lower prismatic teeth without enamel.

gravimeter [ENG] A highly sensitive weighing device used for relative measurement of the force of gravity by detecting small weight differences of a constant mass at different points on the earth. Also known as gravity meter.

gravimetric absorption method [ANALY CHEM] A method of measuring the moisture content of a gas in which a known volume of gas is passed through a suitable desiccant, such as phosphorus pentoxide or silica gel, and the change in weight of the desiccant is observed.

gravimetric analysis [ANALY CHEM] That branch of quantitative analytical chemistry in which a desired constituent is converted, usually by precipitation or combustion, to a pure compound or element, of definite known composition, and is weighed; in a few cases a compound or element is formed which does not contain the constituent but bears a definite mathematical relationship to it.

gravimetric geodesy [GEOD] The science that utilizes measurements and characteristics of the earth's gravity field, as well as theories regarding this field, to deduce the shape of the earth and, in combination with arc measurements, the earth's size.

gravimetry [ENG] Measurement of gravitational force.

graving dock [CIV ENG] A form of dry dock consisting of an artificial basin fitted with a gate or caisson, into which a vessel can be floated and the water pumped out to expose the vessel's bottom.

gravitation [PHYS] The mutual attraction between all masses in the universe. Also known as gravitational attraction.

gravitational acceleration [PHYS] The acceleration imparted to a body by the attraction of the earth; approximately equal to 980.7 cm/sec^2, or 32.2 ft/sec^2.

gravitational astronomy *See* celestial mechanics.

gravitational attraction *See* gravitation.

gravitational clustering [ASTRON] A theory that attributes the hierarchy structure of the universe to growth of density fluctuations in a statistically uniform and isotropic universe.

gravitational collapse [ASTRON] The implosion of a star or other astronomical body from an initial size to a size hundreds or thousands of times smaller.

gravitational constant [MECH] The constant of proportionality in Newton's law of gravitation, equal to the gravitational force between any two particles times the square of the distance between them, divided by the product of their masses. Also known as constant of gravitation.

gravitational convection *See* thermal convection.

gravitational displacement [MECH] The gravitational field strength times the gravitational constant. Also known as gravitational flux density.

gravitational energy *See* gravitational potential energy.

gravitational field [MECH] The field in a region in space in which a test particle would experience a gravitational force; quantitatively, the gravitational force per unit mass on the particle at a particular point.

gravitational-field theory [RELAT] A theory in which gravity is treated as a field, as opposed to a theory in which the force acts instantaneously at a distance.

gravitational flux density *See* gravitational displacement.

gravitational force [MECH] The force on a particle due to its gravitational attraction to other particles.

gravitational gradient guidance [NAV] A system for maintaining the desired orientation of a space vehicle in the vicinity of the earth (or any large celestial body) which utilizes the differences in the pull of gravity between points on the craft having different distances from the earth.

gravitational instability [MECH] Instability of a dynamic system in which gravity is the restoring force.

gravitational lens [ASTRON] A massive galaxy whose gravitational field focuses light from a distant quasar near or along its line of sight, giving a double or multiple image of the quasar.

gravitational mass [PHYS] The mass of a particle as it determines the force it experiences in a gravitational field; equal to inertial mass according to the equivalence principle.

gravitational potential [MECH] The amount of work which must be done against gravitational forces to move a particle of unit mass to a specified position from a reference position, usually a point at infinity.

gravitational potential energy [MECH] The energy that a system of particles has by virtue of their positions, equal to the work that must be done against gravitational forces to assemble the particles from some reference configuration, such as mutually infinite separation. Also known as gravitational energy.

gravitational pressure *See* hydrostatic pressure.

gravitational radiation *See* gravitational wave.

gravitational radius *See* Schwarzschild radius.

gravitational red shift [RELAT] A displacement of spectral lines toward the red when the gravitational potential at the observer of the light is greater than at its source.

gravitational repulsion [PHYS] Hypothetical repulsion of matter and antimatter; however, experimental results indicate that matter and antimatter attract according to the same laws as matter and matter.

gravitational settling [GEOL] A movement of sediment resulting from gravitational forces.

gravitational sliding [GEOL] Extensive sliding of strata down a slope of an uplifted area. Also known as sliding.

gravitational systems of units [MECH] Systems in which length, force, and time are regarded as fundamental, and the unit of force is the gravitational force on a standard body at a specified location on the earth's surface.

gravitational tide [OCEANOGR] An atmospheric tide due to gravitational attraction of the sun and moon.

gravitational wave [RELAT] A propagating gravitational field predicted by general relativity, which is produced by some change in the distribution of matter; it travels at the speed of light, exerting forces on masses in its path. Also known as gravitational radiation.

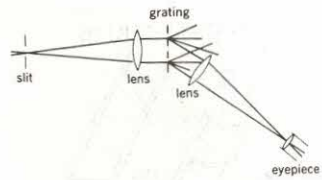
gravitometer *See* densimeter.

graviton [PHYS] A theoretically deduced particle postulated as the quantum of the gravitational field, having a rest mass and charge of zero and a spin of 2.

gravity [MECH] The gravitational attraction at the surface of a planet or other celestial body.

gravity anomaly [GEOPHYS] The difference between the observed gravity and the theoretical or predicted gravity.

GRATING SPECTROSCOPE



Transmission grating spectroscope.

GRAVIMETRIC ABSORPTION METHOD

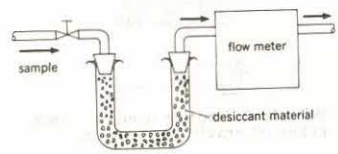


Diagram of the gravimetric absorption method.

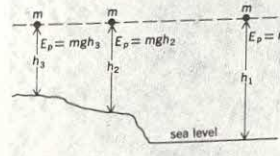
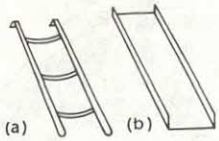
GRAVITATIONAL POTENTIAL ENERGY



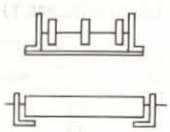
The gravitational potential energy E_p of a body of weight mg (m = mass, g = force of gravity) for different reference levels (h_1, h_2, h_3).

GRAVITY CHUTE



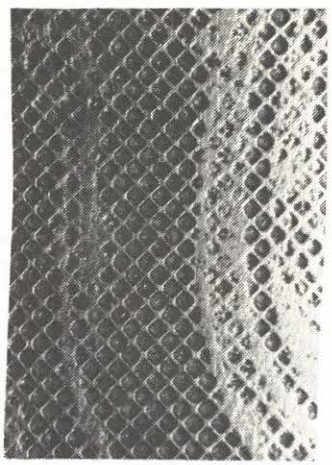
Two types of gravity chutes. *(a)* Barrel skid. *(b)* Plain chute.

GRAVITY CONVEYOR



Wheels and roller used in some types of gravity conveyors.

GRAVURE PRINTING



Sheet-fed gravure printing surface.

gravity bar [MIN ENG] A 5-foot (1.5-meter) length of heavy half-round rod forming the link between the wedge-oriented coupling and the drill-rod swivel coupling on an assembled Thompson retrievable borehole-deflecting wedge.

gravity bed [ENG] A moving body of solids in which particles (granules, pellets, beads, or briquets) flow downward by gravity through a vessel, while process fluid flows upward; the moving-bed technique is used in blast and shaft furnaces, petroleum catalytic cracking, pellet dryers, and coolers.

gravity cell [PHYS CHEM] An electrolytic cell in which two ionic solutions are separated by means of gravity.

gravity chute [ENG] A gravity conveyor in the form of an inclined plane, trough, or framework that depends on sliding friction to control the rate of descent.

gravity classification [MIN ENG] The grading of ores, or the separation of waste from coal, by the differences in specific gravities of the substances.

gravity-collapse structure *See* collapse structure.

gravity concentration [ENG] **1.** Any of various methods for separating a mixture of particles, such as minerals, based on the differences in density of the various species and on the resistance to relative motion exerted upon the particles by the fluid or semifluid medium in which separation takes place. **2.** The separation of liquid-liquid dispersions based on settling out of the dense phase by gravity.

gravity conveyor [ENG] Any unpowered conveyor such as a gravity chute or a roller conveyor, which uses the force of gravity to move materials over a downward path.

gravity corer [ENG] Any type of corer that achieves bottom penetration solely as a result of gravitational force acting upon its mass.

gravity dam [CIV ENG] A dam which depends on its weight for stability.

gravity drainage [HYD] Withdrawal of water from strata as a result of gravitational forces.

gravity drainage reservoir [GEOL] A reservoir in which production is significantly affected by gas, oil, and water separating under the influence of gravity while production takes place.

gravity erosion *See* mass erosion.

gravity fault *See* normal fault.

gravity feed [ENG] Movement of materials from one location to another using the force of gravity.

gravity flow [HYD] A form of glacier movement in which the flow of the ice results from the downslope gravitational component in an ice mass resting on a sloping floor.

gravity-flow gathering system [PETRO ENG] The use of gravity (downhill flow) through pipelines to transport and collect liquid at a central location; used for gathering of waste water from waterflooding operations for treatment prior to reuse or disposal.

gravity-gradient attitude control [AERO ENG] A device that regulates automatically attitude or orientation of an aircraft or spacecraft by responding to changes in gravity acting on the craft.

gravity haulage [MIN ENG] A type of haulage system in which the set of full cars is lowered at the end of a rope, and gravity force pulls up the empty cars, the rope being passed around a sheave at the top of the incline. Also known as self-acting incline.

gravity incline [MIN ENG] An opening made in the direction of, and along the same gradient as, the dip of the deposit.

gravity map [GEOPHYS] A map of gravitational variations in an area displaying gravitational highs and lows.

gravity meter [ENG] **1.** U-tube-manometer type of device for direct reading of solution specific gravities in semimicro quantities. **2.** An electrical device for measuring variations in gravitation through different geologic formations; used in mineral exploration. **3.** *See* gravimeter.

gravity pendulum *See* pendulum.

gravity prospecting [ENG] Identifying and mapping the distribution of rock masses of different specific gravity by means of a gravity meter.

gravity railroad [ENG] A cable railroad in which cars descend a slope by gravity and are hauled back up the slope by a stationary engine, or there may be two tracks with cars so connected that cars going down may help to raise the cars going up and thus conserve energy.

gravity segregation [ENG] Tendency of immiscible liquids or multicomponent granular mixtures to separate into distinct layers in accordance with their respective densities.

gravity separation [ENG] Separation of immiscible phases (gas-solid, liquid-solid, liquid-liquid, solid-solid) by allowing the denser phase to settle out under the influence of gravity; used in ore dressing and various industrial chemical processes.

gravity settling chamber [ENG] Chamber or vessel in which the velocity of heavy particles (solids or liquids) in a fluid stream is reduced to allow them to settle downward by gravity, as in the case of a dust-laden gas stream.

gravity spring [HYD] A spring that issues under the influence of gravity, not internal pressure.

gravity stamp [MIN ENG] Unit in a stamp battery which directs a heavy falling weight onto a die on which rock is crushed.

gravity station [ENG] The site of installation of gravimeters.

gravity survey [ENG] The measurement of the differences in gravity force at two or more points.

gravity tide [GEOPHYS] Cyclic motion of the earth's surface caused by interaction of gravitational forces of the moon, sun, and earth.

gravity vector [MECH] The force of gravity per unit mass at a given point. Symbolized **g**.

gravity wall [CIV ENG] A retaining wall which is kept upright by the force of its own weight.

gravity wave [FL MECH] **1.** A wave at a gas-liquid interface which depends primarily upon gravitational forces, surface tension and viscosity being of secondary importance. **2.** A wave in a fluid medium in which restoring forces are provided primarily by buoyancy (that is, gravity) rather than by compression.

gravity wheel conveyor [MECH ENG] A downward-sloping conveyor trough with closely spaced axle-mounted wheel units on which flat-bottomed containers or objects are conveyed from point to point by gravity pull.

gravity wind [METEOROL] A wind (or component thereof) directed down the slope of an incline and caused by greater air density near the slope than at the same levels some distance horizontally from the slope. Also known as drainage wind; katabatic wind.

gravity yard *See* hump yard.

gravure coating *See* engraved-roll coating.

gravure printing [GRAPHICS] A process that prints from sunken or depressed surfaces or cups on a plate, in contrast to the raised printing surfaces of letterpress; the depth (and the area) of the depressed areas varies, thus yielding more or less ink on the paper.

Grawitz's tumor *See* renal-cell carcinoma.

gray [NUCLEO] The International System unit of absorbed dose, equal to the energy imparted by ionizing radiation to a mass of matter corresponding to 1 joule per kilogram. Symbolized Gy.

gray antimony *See* antimonite; jamesonite.

gray blight [PL PATH] A fungus disease of tea caused by *Pestalotia* (*Pestalozzia*) *theae*, which invades the tissues and causes the formation of black dots on the leaves.

graybody [THERMO] An energy radiator which has a blackbody energy distribution, reduced by a constant factor, throughout the radiation spectrum or within a certain wavelength interval. Also known as nonselective radiator.

gray casting [MET] A casting of gray iron.

Gray clay treating [CHEM ENG] A fixed-bed, vapor-phase treating process used to polymerize selectively unsaturated gum-forming constituents (diolefins); a fixed bed is used of 30- to 60-mesh fuller's earth.

gray cobalt *See* cobaltite.

Gray code [COMMUN] A modified binary code in which sequential numbers are represented by expressions that differ only in one bit, to minimize errors. Also known as reflective code.

gray copper ore *See* tetrahedrite.

gray filter *See* neutral-density filter.

gray hematite *See* specularite.

gray iron [MET] Pig or cast iron in which the carbon not contained in pearlite is present in the form of graphitic carbon.

gray leaf spot [PL PATH] A fungus disease of tomatoes caused by *Stemphylium solani* and characterized by water-soaked brown spots on the leaves that become gray with age.

Grayloc tubing joint [PETRO ENG] Special wellbore-tubing joint that has greater leak resistance and strength than standard API tubing joints.

gray manganese ore *See* manganite.
gray matter [HISTOL] The part of the central nervous system composed of nerve cell bodies, their dendrites, and the proximal and terminal unmyelinated portions of axons.
gray mold [PL PATH] Any fungus disease characterized by a gray surface appearance of the affected part.
gray scab [PL PATH] A fungus disease of willow caused by *Sphaceloma murrayae* and characterized by irregular raised leaf spots having grayish-white centers and dark-brown margins.
gray scale [OPTICS] A series of achromatic tones having varying proportions of white and black, to give a full range of grays between white and black; a gray scale is usually divided into 10 steps.
gray sour *See* lime sour.
gray speck [PL PATH] A manganese-deficiency disease of oats characterized by light-green to grayish leaf spots, and later by the buff or light-brown discoloration of the blades.
graywacke [PETR] An argillaceous sandstone characterized by an abundance of unstable mineral and rock fragments and a fine-grained clay matrix binding the larger, sand-size detrital fragments.
graywall [PL PATH] A disease of tomatoes thought to be caused by excess sunlight and characterized by translucent grayish-brown streaks or blotches on the fruit and browning of the vascular strands.
graze [ORD] **1.** To pass close to the surface, as a shot that follows a path nearly parallel to the ground and low enough to strike a standing person. **2.** Burst of a projectile at the instant of impact with the ground. Also known as graze burst. **3.** In time fire, a burst on impact with the ground or other material object on a level with or below the target. [VERT ZOO] To feed by browsing on, cropping, and eating grass.
graze burst *See* graze.
grazing angle [PHYS] A very small glancing angle.
grazing fire [ORD] Small-arms fire which is approximately parallel to the ground and does not rise above the height of a standing person.
grazing incidence [PHYS] Incidence at a small glancing angle.
grease [MATER] **1.** Rendered, inedible animal fat that is soft at room temperature and is obtained from lard, tallow, bone, raw animal fat, and other waste products. **2.** A lubricant in the form of a solid to semisolid dispersion of a thickening agent in a fluid lubricant, such as petroleum oil thickened with metallic soap.
grease cup [ENG] A receptacle used to apply a solid or semifluid lubricant to a bearing; the receptacle is packed with grease and the cap forces the grease to the bearing.
greased-deck concentration [MIN ENG] A separation process based on selective adhesion of certain grains (diamonds) to quasi-solid grease.
grease gun [ENG] A small hand-operated device that pumps grease under pressure into bearings.
grease ice [HYD] A kind of slush with a greasy appearance, formed from the congelation of ice crystals in the early stages of freezing. Also known as ice fat; lard ice.
greasepaint [MATER] Makeup made of melted tallow or grease used by theatrical performers.
grease seal [ENG] **1.** Type of seal used on floating pistons of some hydropneumatic recoil systems to prevent leakage past the piston of gas or oil; also used in cylinders of some hydropneumatic equilibrators. **2.** Seal used to retain grease in a case or housing, as on an axle shaft.
grease spot [PL PATH] A fungus disease of turf grasses caused by *Pythium aphanidermatum* and characterized by spots that have a greasy border of blackened leaves and intermingled cottony mycelia. Also known as spot blight.
grease spot photometer [OPTICS] A photometer in which the light sources whose intensities are to be compared illuminate a thin sheet of opaque paper with a translucent spot at the center.
grease table [MIN ENG] An apparatus for concentrating minerals, such as diamonds, which adhere to grease; usually a shaking table coated with grease or wax over which an aqueous pulp is flowed.
grease trap [CIV ENG] A trap in a drain or waste pipe to stop grease from entering a sewer system.
greasewood [BOT] Any plant of the genus *Sarcobatus*, especially *S. vermiculatus*, which is a low shrub that grows in alkali soils of the western United States.
grease wool [TEXT] Raw wool as shorn form the sheep, containing original natural oils.
greasy quartz *See* milky quartz.
Great Basin high [METEOROL] A high-pressure system centered over the Great Basin of the western United States; it is a frequent feature of the surface chart in the winter season.
great circle [GEOD] A circle, or near circle, described on the earth's surface by a plane passing through the center of the earth. [MATH] The circle on the Riemann sphere produced by a plane passing through the center of the sphere.
great-circle bearing [NAV] The initial direction along a great circle through two terrestrial points, expressed as angular distance from a reference direction.
great-circle chart *See* gnomonic chart.
great-circle course [NAV] Course along the direction of the great circle through the departure point and the destination; expressed as the angular distance from a reference direction, usually north to the direction of the great circle; the angle varies from point to point along the great circle.
great-circle direction [GEOD] Horizontal direction of a great circle, expressed as angular distance from a reference direction.
great-circle distance [GEOD] The length of the shorter arc of the great circle joining two points.
great-circle sailing [NAV] Any method of solving the various problems involving courses, distance, and so on, as they are relating to a great-circle track.
great-circle track [NAV] The track of a craft following a great circle, or the approximate great circle which a craft intends to follow.
great cluster [ASTRON] A galaxy cluster containing thousands of member galaxies and having a radius of 5,000,000 to 20,000,000 light-years.
great diurnal range [OCEANOGR] The difference in height between mean higher high water and mean lower low water. Also known as diurnal range.
Greater Dog *See* Canis Major
greater ebb [OCEANOGR] The stronger of two ebb currents occurring during a tidal day.
greater flood [OCEANOGR] The stronger of two flood currents occurring during a tidal day.
greater omentum [ANAT] A fold of peritoneum that is attached to the greater curvature of the stomach and hangs down over the intestine and fuses with the mesocolon.
greatest common divisor [MATH] The greatest common divisor of integers $n_1, n_2, \ldots, n_k$ is the largest of all integers that divide each n_i. Abbreviated gcd. Also known as highest common factor (hcf).
greatest elongation [ASTRON] The maximum angular distance of a body of the solar system from the sun, as observed from the earth.
greatest lower bound [MATH] The greatest lower bound of a set of numbers S is the largest number among the lower bounds of S. Abbreviated glb. Also known as infimum (inf).
great galago *See* thick-tailed bushbaby.
Great Ice Age [GEOL] The Pleistocene epoch.
Great Nebula of Orion *See* Orion Nebula.
great soil group [GEOL] A group of soils having common internal soil characteristics; a subdivision of a soil order.
great tropic range [OCEANOGR] The difference in height between tropic higher high water and tropic lower low water.
great year [ASTRON] The period of one complete cycle of the equinoxes around the ecliptic, about 25,800 years. Also known as platonic year.
grebe [VERT ZOO] The common name for members of the family Podicipedidae; these birds have legs set far posteriorly, compressed bladelike tarsi, individually broadened and lobed toes, and a rudimentary tail.
greco [METEOROL] An Italian name for the northeast wind.
Greco-Latin square [STAT] An arrangement of combinations of two sets of letters (one set Greek, the other Roman) in a square array, in such a way that no letter occurs more than once in the array. Also known as orthogonal Latin square.
Greeffiellidae [INV ZOO] A superfamily of free-living nematodes in the order Desmoscolecoidea.
Greek group [ASTRON] The group of Trojan planets which lies near the Lagrangian point 60° ahead of Jupiter. Also known as Achilles group.
green [MET] Pertaining to an unsintered powder. [OPTICS] The hue evoked in an average observer by monochromatic radiation having a wavelength in the approximate range from

GREAT CIRCLE

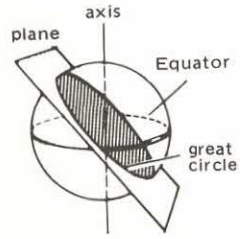


Diagram of a great circle described by a plane through the center of the earth.

492 to 577 nanometers; however, the same sensation can be produced in a variety of other ways.

green algae [BOT] The common name for members of the plant division Chlorophyta.

green belt *See* frostless zone.

Greenburg-Smith impinger [MIN ENG] A dust-sampling apparatus based on the principle of impingement of the dust-carrying air at high velocity upon a wetted glass surface; also involves bubbling the air through a liquid medium.

green chalcedony *See* chrysoprase.

green copperas *See* ferrous sulfate.

green flash [ASTRON] A brilliant green coloration of the upper limb of the sun occasionally observed just as the sun's apparent disk is about to sink below a distant clear horizon. Also known as blue flash; blue-green flame; green segment; green sun.

green gland *See* antennal gland.

green glass [MATER] Glass given a blue-green hue by substituting cupric oxide for the chromium compound used in ordinary glass.

green gold [MET] A greenish alloy of gold obtained by using silver, silver and cadmium, or silver and copper as the alloying metal.

greenheart [MATER] Wood from *Octolea rodioei;* resistant to fungi and termites and used for shipbuilding, docks, and marine planking.

greenhouse [BOT] Glass-enclosed, climate-controlled structure in which young or out-of-season plants are cultivated and protected.

greenhouse effect [METEOROL] The effect of the earth's atmosphere in trapping heat from the sun; the atmosphere acts like a greenhouse.

Greenland anticyclone [METEOROL] The glacial anticyclone which is supposed to overlie Greenland; analogous to the Antarctic anticyclone.

greenlandite *See* columbite.

Greenland spar *See* cryolite.

green laser [OPTICS] A gas laser using mercury and argon to generate a green line at 5225 angstroms, corresponding to the wavelength that is most readily transmitted through seawater.

green lead ore *See* pyromorphite.

green lumber [MATER] Freshly sawed lumber, before drying.

green manure [AGR] Herbaceous plant material plowed into the soil while still green.

green mold [MYCOL] Any fungus, especially *Penicillium* and *Aspergillus* species, that is green or has green spores.

green mud [GEOL] **1.** A fine-grained, greenish terrigenous mud or oceanic ooze found near the edge of a continental shelf at depths of 300–7500 feet (90–2300 meters). **2.** A deep-sea terrigenous deposit characterized by the presence of a considerable proportion of glauconite and calcium carbonate.

green nickel oxide *See* nickel oxide.

green oats [AGR] Oat crops before separating and grading.

greenockite [MINERAL] CdS A green or orange mineral that crystallizes in the hexagonal system; occurs as an earthy encrustation and is dimorphous with hawleyite. Also known as cadmium blende; cadmium ocher; xanthochroite.

green oil [MATER] In the Scottish shale-oil industry, once-run crude shale oil.

green roof [MIN ENG] A mine roof which has not broken down or which shows no sign of taking weight.

green rosette [PL PATH] A virus disease of the peanut characterized by bunching and yellowing of the leaves with severe stunting of the plant.

green rot [PL PATH] A decay of fallen deciduous trees in which the wood is colored a malachite green by the fungus *Peziza aeruginosa*.

green salt *See* uranium tetrafluoride.

greensand [GEOL] A greenish sand consisting principally of grains of glauconite and found between the low-water mark and the inner mud line. [PETR] Sandstone composed of greensand with little or no cement.

greenschist [PETR] A schistose metamorphic rock with abundant chlorite, epidote, or actinolite present, giving it a green color.

greenschist facies [PETR] Any schistose rock containing an abundance of green minerals and produced under conditions of low to intermediate temperatures (300–500°C) and low to moderate hydrostatic pressures (3000–8000 bars).

Green's dyadic [MATH] A vector operator which plays a role analogous to a Green's function in a partial differential equation expressed in terms of vectors.

green segment *See* green flash.

Green's function [MATH] A function, associated with a given boundary value problem, which appears as an integrand for an integral representation of the solution to the problem.

Green's identities [MATH] Formulas, obtained from Green's theorem, which relate the volume integral of a function and its gradient to a surface integral of the function and its partial derivatives.

green sky [METEOROL] A greenish tinge to part of the sky, supposed by seamen to herald wind or rain, or in some cases, a tropical cyclone.

green smut [PL PATH] A fungus disease of rice characterized by enlarged grains covered with a green powder consisting of conidia, and caused by *Ustilaginoidea virens*. Also known as false smut.

green snow [HYD] A snow surface that has attained a greenish tint as a result of the growth within it of certain microscopic algae.

Green's theorem [MATH] Under certain general conditions, an integral along a closed curve C involving the sum of functions $P(x,y)$ and $Q(x,y)$ is equal to a surface integral, over the region D enclosed by C, of the partial derivatives of P and Q; namely,

$$\int_C P\,dx + Q\,dy = \iint_D \left(\frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y}\right) dx\,dy.$$

greenstick fracture [MED] An incomplete fracture of a long bone, seen in children; the bone is bent but splintered only on the convex side.

greenstone [MINERAL] *See* nephrite. [PETR] Any altered basic igneous rock which is green due to the presence of chlorite, hornblende, or epidote.

greenstone belts [GEOL] Oceanic and island arclike sequences that are similar to, and run to the south and north of, the Swaziland System.

greenstone schist [PETR] Greenstone with a foliated structure.

green strength [MET] The mechanical strength which a compacted powder must have in order to withstand mechanical operations to which it is subjected after pressing and before sintering, without damaging its fine details and sharp edges.

green sulfur bacteria [MICROBIO] A physiologic group of green photosynthetic bacteria of the Chloraceae that are capable of using H_2S and other inorganic electron donors.

green sun *See* green flash.

green vitriol *See* ferrous sulfate.

greenware [MATER] Ceramic ware that has not yet been fired.

Greenwell formula [MIN ENG] A formula used for calculating the thickness of tubing and involving the required thickness of tubing in feet, the vertical depth in feet, the diameter of the shaft in feet, and an allowance for possible flaws or corrosion.

Greenwich apparent noon [ASTRON] Local apparent noon at the Greenwich meridian; twelve o'clock Greenwich apparent time, or the instant the apparent sun is over the upper branch of the Greenwich meridian.

Greenwich apparent time [ASTRON] Local apparent time at the Greenwich meridian. Abbreviated GAT.

Greenwich civil time *See* Greenwich mean time.

Greenwich hour angle [ASTRON] Angular distance west of the Greenwich celestial meridian; the arc of the celestial equator, or the angle at the celestial pole, between the upper branch of the Greenwich celestial meridian and the hour circle of a point on the celestial sphere, measured westward from the Greenwich celestial meridian through 360°. Abbreviated GHA.

Greenwich interval [ASTRON] An interval based on the moon's transit of the Greenwich celestial meridian, as distinguished from a local interval based on the moon's transit of the local celestial meridian.

Greenwich lunar time [ASTRON] Local lunar time at the Greenwich meridian; the arc of the celestial equator, or the angle at the celestial pole, between the lower branch of the Greenwich celestial meridian and the hour circle of the moon, measured westward from the lower branch of the Greenwich celestial meridian through 24 hours.

Greenwich mean noon [ASTRON] Local mean noon at the

Greenwich meridian, twelve o'clock Greenwich mean time, or the instant the mean sun is over the upper branch of the Greenwich meridian.

Greenwich mean time [ASTRON] Mean solar time at the meridian of Greenwich. Abbreviated GMT. Also known as Greenwich civil time; universal time; Z time; zulu time.

Greenwich meridian [GEOD] The meridian passing through Greenwich, England, and serving as the reference for Greenwich time; it also serves as the origin of measurement of longitude.

Greenwich sidereal time [ASTRON] Local sidereal time at the Greenwich meridian. Abbreviated GST.

gregale [METEOROL.] The Maltese and best-known variant of a term for a strong northeast wind in the central and western Mediterranean and adjacent European land areas; it occurs either with high pressure over central Europe or the Balkans and low pressure over Libya, when it may continue for up to 5 days, or with the passage of a depression to the south or southeast, when it lasts only 1 or 2 days; it is most frequent in winter.

Gregarinia [INV ZOO] A subclass of the protozoan class Telosporea occurring principally as extracellular parasites of invertebrates.

Gregorian calendar [ASTRON] The calendar used for civil purposes throughout the world, replacing the Julian calendar and closely adjusted to the tropical year.

Gregorian telescope [OPTICS] A reflecting telescope having a paraboloidal mirror with a hole in the center and a small secondary (concave ellipsoidal) mirror placed beyond the focus of the primary mirror; light is reflected to the secondary mirror and back to an eyepiece at the hole; the telescope produces an erect image but a small field of view.

Gregory formula [MATH] A formula used in the numerical evaluation of integrals derived from the Newton formula.

greisen [PETR] A pneumatolytically altered granite consisting of mainly quartz and a light-green mica.

grenade [ORD] A small explosive or chemical missile, originally designed to be thrown by hand, but now also designed to be projected from special grenade launchers, usually fitted to rifles or carbines.

grenade cartridge extractor [ORD] An extractor designed for pulling an empty cartridge case or unfired cartridge out of the chamber of a grenade launcher.

grenade launcher [ORD] A device designed to hold a grenade in position for firing but does not itself propel the missile.

grenade net [ORD] A net of chicken wire or some similar material placed over a trench, for example, as a protection against grenades.

grenade pit [ORD] A pit, usually at the bottom of an incline, to catch hand grenades and limit the effects of their explosion.

grenadine [TEXT] A gauzelike fabric made on a jacquard loom.

grenatite *See* leucite; staurolite.

Grenville orogeny [GEOL] A Precambrian mountain-forming epoch.

grenz ray [NUCLEO] An x-ray produced at the long-wavelength end of the x-ray spectrum, involving wavelengths of the order of 1 to 10 angstroms (0.1 to 1 nanometer), by using special x-ray tubes that operate at voltages from only 5000 to 15,000 volts.

gressorial [VERT ZOO] Adapted for walking, as certain birds' feet.

greyhound [PETRO ENG] A stand of drill pipe comprising one or more lengths with a tool joint at each end; used to fashion lengths of less than one regular stand during drilling.

grid [COMPUT SCI] In optical character recognition, a system of two groups of parallel lines, perpendicular to each other, used to measure or specify character images. [DES ENG] A network of equally spaced lines forming squares, used for determining permissible locations of holes on a printed circuit board or a chassis. [ELEC] **1.** A metal plate with holes or ridges, used in a storage cell or battery as a conductor and a support for the active material. **2.** Any systematic network, such as of telephone lines or power lines. [ELECTR] An electrode located between the cathode and anode of an electron tube, which has one or more openings through which electrons or ions can pass, and serves to control the flow of electrons from cathode to anode. [MAP] A system of uniformly spaced perpendicular lines and horizontal lines running north and south, and east and west on a map, chart, or aerial photograph; used in locating points. [MED] *See* Potter-Bucky grid. [MIN ENG] Imaginary line used to divide the surface of an area when following a checkerboard placement of boreholes.

grid amplitude [NAV] Amplitude relative to grid east or west.

grid-anode transconductance *See* transconductance.

grid azimuth [NAV] In grid navigation, the angle in the plane of projection measured clockwise between a straight line and the central meridian of a plane-rectangular coordinate system.

grid battery *See* C battery.

grid bearing [NAV] In grid navigation, the angle in the plane of the projection between a line and a north-south grid line.

grid bias [ELECTR] The direct-current voltage applied between the control grid and cathode of an electron tube to establish the desired operating point. Also known as bias; C bias; direct grid bias.

grid-bias cell *See* bias cell.

grid blocking [ELECTR] **1.** Method of keying a circuit by applying negative grid bias several times cutoff value to the grid of a tube during key-up conditions; when the key is down, the blocking bias is removed and normal current flows through the keyed circuit. **2.** Blocking of capacitance-coupled stages in an amplifier caused by the accumulation of charge on the coupling capacitors due to grid current passed during the reception of excessive signals.

grid blocking capacitor *See* grid capacitor.

grid cap [ELECTR] A top-cap terminal for the control grid of an electron tube.

grid capacitor [ELECTR] A small capacitor used in the grid circuit of an electron tube to pass signal current while blocking the direct-current anode voltage of the preceding stage. Also known as grid blocking capacitor; grid condenser.

grid cathode capacitance [ELECTR] Capacitance between the grid and the cathode in a vacuum tube.

grid characteristic [ELECTR] Relationship of grid current to grid voltage of a vacuum tube.

grid circuit [ELECTR] The circuit connected between the grid and cathode of an electron tube.

grid condenser *See* grid capacitor.

grid conductance *See* electrode conductance.

grid control [ELECTR] Control of anode current of an electron tube by variation (control) of the control grid potential with respect to the cathode of the tube.

grid-controlled mercury-arc rectifier [ELECTR] A mercury-arc rectifier in which one or more electrodes are employed exclusively to control the starting of the discharge. Also known as grid-controlled rectifier.

grid-controlled rectifier *See* grid-controlled mercury-arc rectifier.

grid control tube [ELECTR] Mercury-vapor-filled thermionic vacuum tube with an external grid control.

grid convergence *See* grid declination.

grid course [NAV] In grid navigation, the horizontal direction expressed as the angular distance from grid north.

grid current [ELECTR] Electron flow to a positive grid in an electron tube.

grid declination [NAV] In grid navigation, the angular difference in direction between grid north and true north; it is measured east or west from true north. Also known as declination of grid north; grid convergence.

grid-dip meter [ELECTR] A multiple-range electron-tube oscillator incorporating a meter in the grid circuit to indicate grid current; the meter reading dips (reads lower grid current) when an external resonant circuit is tuned to the oscillator frequency. Also known as grid-dip oscillator.

grid-dip oscillator *See* grid-dip meter.

grid direction [NAV] Horizontal direction expressed as angular distance from grid north, measured from grid north, clockwise through 360°.

grid drive [ELECTR] A signal applied to the grid of a transmitting tube.

grid driving power [ELECTR] Average product of the instantaneous value of the grid current and of the alternating component of the grid voltage over a complete cycle; this comprises the power supplied to the biasing device and to the grid.

grid element [ELEC] A sinuous resistor used to heat a furnace, made of heavy wire, strap, or casting and suspended from refractory or stainless supports built into the furnace walls, floor, and roof.

grid equator [NAV] A line perpendicular to a prime merid-

ian, at the origin; for the usual orientation in polar regions, the grid equator is the 90°W–90°E meridian forming the basic grid parallel, from which grid latitude is measured.

grid-glow tube [ELECTR] A glow-discharge tube in which one or more control electrodes initiate but do not limit the anode current except under certain operating conditions.

grid heading [NAV] In grid navigation, the heading relative to grid north.

gridiron pendulum [HOROL] A compensation pendulum in which the unequal thermal expansion of two metals is utilized to keep the length constant.

gridistor [ELECTR] Field-effect transistor which uses the principle of centripetal striction and has a multichannel structure, combining advantages of both field effect transistors and minority carrier injection transistors.

grid latitude [NAV] In grid navigation, the angular distance from a grid equator.

grid leak [ELECTR] A resistor used in the grid circuit of an electron tube to provide a discharge path for the grid capacitor and for charges built up on the control grid.

grid-leak detector [ELECTR] A detector in which the desired audio-frequency voltage is developed across a grid leak and grid capacitor by the flow of modulated radio-frequency current; the circuit provides square-law detection on weak signals and linear detection on strong signals, along with amplification of the audio-frequency signal.

grid limiter [ELECTR] Limiter circuit which operates by limiting positive grid voltages by means of a large ohmic value resistor; as the exciting signal moves in a positive direction with respect to the cathode, current through the resistor causes an IR drop which holds the grid voltage essentially at cathode potential; during negative excursions no current flows in the grid circuit, so no voltage drop occurs across the resistor.

grid locking [ELECTR] Defect of tube operation in which the grid potential becomes continuously positive due to excessive grid emission.

grid longitude [NAV] In grid navigation, the angular distance between a prime grid and any designated grid meridian.

grid magnetic angle [NAV] In grid navigation, the angular difference in direction between grid north and magnetic north; it is measured east or west from grid north.

grid meridian [NAV] One of the grid lines extending in a grid north-south direction.

grid metal [MET] An alloy of lead with 5–12% antimony and sometimes with a smaller amount of tin; used for grids in storage batteries.

grid modulation [ELECTR] Modulation produced by feeding the modulating signal to the control-grid circuit of any electron tube in which the carrier is present.

grid navigation [NAV] A navigation system related to a reference grid instead of the true north for the measurement of angles.

grid nephosope [ENG] A nephoscope constructed of a grid work of bars mounted horizontally on the end of a vertical column and rotating freely about the vertical axis; the observer rotates the grid and adjusts the position until some feature of the cloud appears to move along the major axis of the grid; the azimuth angle at which the grid is set is taken as the direction of the cloud motion.

grid neutralization [ELECTR] Method of amplifier neutralization in which a portion of the grid-cathode alternating-current voltage is shifted 180° and applied to the plate-cathode circuit through a neutralizing capacitor.

grid north [NAV] In grid navigation, the northerly or zero direction indicated by the grid datum of directional reference.

grid parallel [NAV] A line parallel to a grid equator, connecting all points of equal grid latitude.

grid-plate capacitance [ELECTR] Direct capacitance between the grid and the plate in a vacuum tube.

grid-plate transconductance *See* transconductance.

grid-pool tube [ELECTR] An electron tube having a mercury-pool cathode, one or more anodes, and a control electrode or grid that controls the start of current flow in each cycle; the excitron and ignitron are examples.

grid prime vertical [NAV] The vertical circle through the grid east and west points of the horizon.

grid pulse modulation [ELECTR] Modulation produced in an amplifier or oscillator by applying one or more pulses to a grid circuit.

grid pulsing [ELECTR] Circuit arrangement of a radio-frequency oscillator in which the grid of the oscillator is biased so negatively that no oscillation takes place even when full plate voltage is applied; pulsing is accomplished by removing this negative bias through the application of a positive pulse on the grid.

grid-rectification meter [ENG] A type of vacuum-tube voltmeter in which the grid and cathode of a tube act as a diode rectifier, and the rectified grid voltage, amplified by the tube, operates a meter in the plate circuit.

grid resistor [ELECTR] A general term used to denote any resistor in the grid circuit.

grid return [ELECTR] External conducting path for the return grid current to the cathode.

grid rhumb line [NAV] A line making the same oblique angle with all grid meridians; grid parallels and meridians may be considered special cases of the grid rhumb line.

grid spectrometer [SPECT] A grating spectrometer in which a large increase in light flux without loss of resolution is achieved by replacing entrance and exit slits with grids consisting of opaque and transparent areas, patterned to have large transmittance only when the entrance grid image coincides with that of the exit grid.

grid suppressor [ELECTR] Resistor of low ohmic value inserted in the grid circuit of a radio-frequency amplifier to prevent low-frequency parasitic oscillations.

grid swing [ELECTR] Total variation in grid-cathode voltage from the positive peak to the negative peak of the applied signal voltage.

grid track [NAV] The direction of the track relative to grid north.

grid transformer [ELECTR] Transformer to supply an alternating voltage to a grid circuit or circuits.

grid-type level detector [ELECTR] A detector using a vacuum tube with input applied to a grid.

grid variation [NAV] In grid navigation, the angular difference between grid north and magnetic north.

grid voltage [ELECTR] The voltage between a grid and the cathode of an electron tube.

Griebe-Schiebe method [SOLID STATE] A method of observing the piezoelectric behavior of small crystals, in which the crystals are placed between two electrodes connected to the resonant circuit of an oscillator, and tuning of the resonant circuit results in jumps in the oscillator frequency which produce clicks in headphones or a loudspeaker attached to the plate circuit of the oscillator.

Griebhard's rings [ELEC] A method of producing lines of constant color on a copper sheet, coinciding with the equipotential lines of an electric field.

Griess reagent [ANALY CHEM] A reagent used to test for nitrous acid; it is a solution of sulfanilic acid, α-naphthylamine and acetic acid in water.

Griffith crack [MET] Any small flaw in a metal theorized as creating a low order of fracture strength.

griffithite [MINERAL] A micalike mineral containing magnesium, iron, calcium, and aluminosilicate.

Griffith's criterion [MECH] A criterion for the fracture of a brittle material under biaxial stress, based on the theory that the strength of such a material is limited by small cracks.

Griffiths' method [THERMO] A method of measuring the mechanical equivalent of heat in which the temperature rise of a known mass of water is compared with the electrical energy needed to produce this rise.

Griffith's white *See* lithopone.

Grignard reaction [ORG CHEM] A reaction between an alkyl or aryl halide and magnesium metal in a suitable solvent, usually absolute ether, to form an organometallic halide.

Grignard reagent [ORG CHEM] RMgX The organometallic halide formed in the Grignard reaction; an example is C_2H_5MgCl; it is useful in organic synthesis.

Grignard synthesis [ORG CHEM] Use of the Grignard reagent in any one of a vast number of reactions, usually condensations; typical syntheses involve formation of a hydrocarbon, acid, ketone, or secondary or tertiary alcohol.

grillage [CIV ENG] A footing that consists of two or more tiers of closely spaced structural steel beams resting on a concrete block, each tier being at right angles to the one below.

grille [ENG ACOUS] An arrangement of wood, metal, or plastic bars placed across the front of a loudspeaker in a cabinet for decorative and protective purposes.

grille cloth [ENG ACOUS] A loosely woven cloth stretched

across the front of a loudspeaker to keep out dust and provide protection without appreciably impeding sound waves.

Grimmiales [BOT] An order of mosses commonly growing upon rock in dense tufts or cushions and having hygroscopic, costate, usually lanceolate leaves arranged in many rows on the stem.

grindability [MATER] Relative ease with which a material can be ground.

grindability index [MATER] A numerical indication of the capacity of a material to be ground.

grinder [MECH ENG] Any device or machine that grinds, such as a pulverizer or a grinding wheel.

grinding [ELECTR] **1.** A mechanical operation performed on silicon substrates of semiconductors to provide a smooth surface for epitaxial deposition or diffusion of impurities. **2.** A mechanical operation performed on quartz crystals to alter their physical size and hence their resonant frequencies. [MECH ENG] **1.** Reducing a material to relatively small particles. **2.** Removing material from a workpiece with a grinding wheel. [MIN ENG] The act or process of continuing to drill after the bit or core barrel is blocked, thereby crushing and destroying any core that might have been produced.

grinding aid [ENG] An additive to the charge in a ball mill or rod mill to accelerate the grinding process.

grinding burn [MECH ENG] Overheating a localized area of the work in grinding operations.

grinding cracks [MATER] Cracks in a workpiece resulting from grinding.

grinding fluid [MATER] Cutting fluid used in metal-grinding operations.

grinding medium [ENG] Any material including balls and rods, used in a grinding mill.

grinding mill [LAP] A lathe designed for lapidary work. [MECH ENG] A machine consisting of a rotating cylindrical drum, that reduces the size of particles of ore or other materials fed into it; three main types are ball, rod, and tube mills.

grinding pebbles [ENG] Pebbles, of chert or quartz, used for grinding in mills, where contamination with iron has to be avoided.

grinding ratio [MECH ENG] Ratio of the volume of ground material removed from the workpiece to the volume removed from the grinding wheel.

grinding relief [MET] A groove at the edge of a metal surface which permits overhang of the corner of the grinding wheel.

grinding sensitivity [MATER] Susceptibility of a material to the formation of grinding cracks.

grinding stress [MECH] Residual tensile or compressive stress, or a combination of both, on the surface of a material due to grinding.

grinding-type resin [ORG CHEM] Vinyl or other resin that requires grinding before dispersal into plastisols or organosols.

grinding wheel [DES ENG] A wheel or disk having an abrasive material such as alumina or silicon carbide bonded to the surface.

grindle *See* bowfin.

grindstone [ENG] A stone disk on a revolving axle, used for grinding, smoothing, and shaping.

grip [ORD] One of a pair of wooden or plastic items designed to be attached by threaded fasteners to the two sides of the frame of a weapon, such as a revolver or bayonet; it is shaped to fit the hand and to provide a formed surface to hold the weapon.

griphite [MINERAL] $(Na,Al,Ca,Fe)_6Mn_4(PO_4)_5(OH)_4$ Mineral composed of a basic phosphate of sodium, calcium, iron, aluminum, and manganese.

gripper [GRAPHICS] One of the metal fingers on a printing press that clamps the paper into position and controls its flow as it passes through.

gripper edge [GRAPHICS] **1.**The leading edge of the paper as it passes through a printing press. **2.**The front edge of a lithographic or wraparound plate that is secured to the front clamp of the plate cylinder.

gripper margin [GRAPHICS] The blank edge of paper which is unprinted because it is held by the grippers.

grip safety [ORD] Safety mechanism that prevents a gun from being fired unless the stock is firmly grasped while the trigger is pulled; used mainly on automatic pistols.

griquaite [PETR] A hypabyssal rock that contains garnet and diopside, and sometimes olivine or phlogopite, and is found in kimberlite pipes and dikes.

grisaille [TEXT] A poplin-type fabric in salt-and-pepper gray with printed warp and coarse filling the imparts a texture.

grisein [MICROBIO] $C_{40}H_{61}O_{20}N_{10}SFe$ A red, crystalline, water-soluble antibiotic produced by strains of *Streptomyces griseus*.

griseofulvin [MICROBIO] $C_{17}H_{17}O_6Cl$ A colorless, crystalline antifungal antibiotic produced by several species of *Penicillium*. Also known as curling factor.

griseolutein [MICROBIO] Either of two fractions, A or B, of broad-spectrum antibiotics produced by *Streptomyces griseoluteus*; more active against gram-positive than gram-negative microorganisms.

griseomycin [MICROBIO] A white, crystalline antibiotic produced by an actinomycete resembling *Streptomyces griseolus*.

grissaille [GRAPHICS] **1.** A technique of painting to imitate a bas-relief and done in shades of gray. **2.** All methods of painting in which full modeling is done in black and white or other contrasting tones, and then finished by the application of transparent glazes.

grist [AGR] Grain for grinding or the products and by-products of grinding. [FOOD ENG] Ground malt for brewing.

gristmill [FOOD ENG] A mill that grinds grains.

grit [GEOL] **1.** A hard, sharp granule, as of sand. **2.** A coarse sand. [MATER] An abrasive material composed of angular grains. [PETR] A sandstone composed of angular grains of different sizes.

grit blasting [ENG] Surface treatment in which steel grit, sand, or other abrasive material is blown against an object to produce a roughened surface or to remove dirt, rust, and scale. Also known as sandblasting.

grit chamber [CIV ENG] A chamber designed to remove sand, gravel, or other heavy solids that have subsiding velocities or specific gravities substantially greater than those of the organic solids in waste water.

grit size [DES ENG] Size of the abrasive particles on a grinding wheel.

grizzly [ENG] **1.** A coarse screen used for rough sizing and separation of ore, gravel, or soil. **2.** A grating to protect chutes, manways, and winzes, in mines, or to prevent debris from entering a water inlet.

grizzly bear [VERT ZOO] The common name for a number of species of large carnivorous mammals in the genus *Ursus*, family Ursidae.

grizzly chute [MIN ENG] A chute equipped with grizzlies which separate fine from coarse material as it passes through the chute.

grizzly crusher [MECH ENG] A machine with a series of parallel rods or bars for crushing rock and sorting particles by size.

grizzly worker [MIN ENG] In metal mining, a laborer who works underground at a grizzly.

Groeberiidae [PALEON] A family of extinct rodentlike marsupials.

grog [FOOD ENG] Liquor diluted with water and served hot. [MATER] Fired refractory material that is used in the manufacture of products which must withstand extreme heat.

groin [ANAT] Depression between the abdomen and the thigh. [ARCH] The projecting edge at the intersection of two vaults. [CIV ENG] A barrier built out from a seashore or riverbank to protect the land from erosion and sand movements, among other functions. Also known as groyne; jetty; spur dike; wing dam.

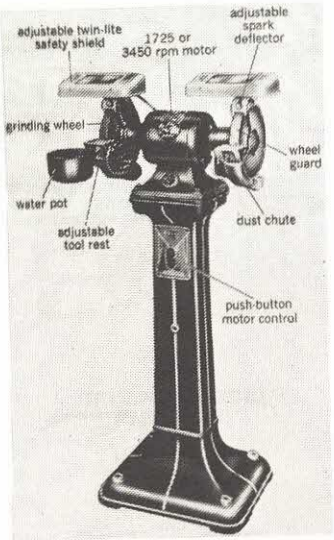
Gromiida [INV ZOO] An order of protozoans in the subclass Filosia; the test, which is chitinous in some species and thin and somewhat flexible in others, is reinforced with sand grains or siliceous particles.

grommet [ENG] **1.** A metal washer or eyelet. **2.** A piece of fiber soaked in a packing material and used under bolt and nut heads to preserve tightness. [ORD] Device made of rope, plastic, rubber, or metal to protect the rotating band of projectiles.

grommet nut [DES ENG] A blind nut with a round head; used with a screw to attach a hinge to a door.

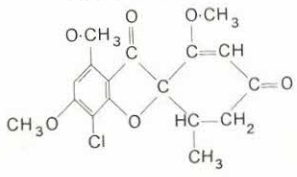
groove [BIOCHEM] Any of a group of depressions in the double helix of deoxyribonucleic acid that are believed to be sites occupied by nuclear proteins. [DES ENG] A long, narrow channel in a surface. [GEOL] Glaciated marks of large size on rock. [ORD] One of the spiral depressions in the

GRINDING WHEEL



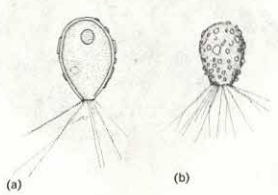
Power-driven grinding wheels used on handheld workpieces. *(Rockwell International Corp.)*

GRISEOFULVIN



Structural formula for griseofulvin.

GROMIIDA



Representative Gromiida. *(a) Plagiophrys parvipunctata. (b) Pseudodiffugia fluva (after Penard). (From R. P. Hall, Protozoology, Prentice-Hall, 1953)*

rifling of a gun to impart a spinning motion to a projectile which stabilizes it in flight.

groove casts [GEOL] Rounded or sharp, crested, rectilinear ridges that are a few millimeters high and a few centimeters long; found on the undersurfaces of sandstone layers lying on mudstone.

grooved drum [DES ENG] Drum with a grooved surface to support and guide a rope.

groove diameter [ORD] One of the two diameters of a rifled barrel; it is measured between two grooves that are diametrically opposed.

groove face [MIN ENG] The portion of a surface of a member that is included in a groove.

groove sample [MIN ENG] A sample of coal or ore obtained by cutting appropriate grooves along or across the road exposures. Also known as channel sample.

groove weld [MET] A weld in the groove between a pair of members.

grooving saw [MECH ENG] A circular saw for cutting grooves.

grosgrain [TEXT] A ribbed material, usually with a dull finish, made by using cotton in the filling.

Grosh's law [COMPUT SCI] The law that the processing power of a computer is proportional to the square of its cost.

gros point *See* rose point.

gross anatomy [ANAT] Anatomy that deals with the naked-eye appearance of tissues.

gross area [BUILD] Sum of the areas of all stories included within the outside face of the exterior walls of a building.

gross-austausch [METEOROL] The exchange of air mass properties and the associated momentum and energy transports produced on a worldwide scale by the migratory large-scale disturbances of middle latitudes.

Grossberg unit [BIOL] A unit for the standardization of lipase.

gross errors [STAT] Errors that occur when a measurement process is subject occasionally to being very far off.

gross index [COMPUT SCI] The first of two indexes consulted to gain access to a record.

gross information content [COMMUN] Measure of the total information, redundant or otherwise, contained in a message; expressed as the number of bits, nits, or Hartleys required to transmit the message with specified accuracy over a noiseless medium without coding.

gross porosity [MET] Gas pockets or pores of undesirable size and quantity in a casting or a weld metal.

gross primary production [ECOL] The incorporation of organic matter or biocontent by a grassland community over a given period of time.

gross production rate [ECOL] The speed of assimilation of organisms belonging to a specific trophic level.

gross recoverable value [MIN ENG] The part of the total metal recovered from an ore multiplied by the price.

gross stress reaction [PSYCH] A transient personality disorder in which, under conditions of great or unusual stress, a normal person utilizes neurotic mechanisms to deal with danger.

gross ton *See* ton.

gross tonnage [NAV ARCH] The total volume of the interior of a ship, measured in tons (units of 100 cubic feet).

grossular *See* grossularite.

grossularite [MINERAL] $Ca_3Al_2(SiO_4)_3$ The colorless or green, yellow, brown, or red end member of the garnet group, often occurring in contact-metamorphosis impure limestones. Also known as gooseberry stone; grossular.

gross unit value [MIN ENG] The weight of metal per long or short ton as determined by assay or analysis, multiplied by the market price of the metal.

gross weight [IND ENG] The weight of a vehicle or container when it is loaded with goods. Abbreviated gr wt.

grothite *See* sphene.

Grotthus' chain theory [PHYS CHEM] An early theory used to explain the conductivity of an electrolyte, in which it was assumed that the cathode and anode attract hydrogen and oxygen respectively, and the molecules of the electrolyte are stretched out in chains between the electrodes, with decomposition occurring in molecules closest to the electrodes.

ground [AERO ENG] To forbid (an aircraft or individual) to fly, usually for a relatively short time. [ELEC] **1.** A conducting path, intentional or accidental, between an electric circuit or equipment and the earth, or some conducting body serving in place of the earth. Abbreviated gnd. Also known as earth (British usage); earth connection. **2.** To connect electrical equipment to the earth or to some conducting body which serves in place of the earth. [GEOL] **1.** Any rock or rock material. **2.** A mineralized deposit. **3.** Rock in which a mineral deposit occurs. [NAV] To touch bottom or run aground; in a serious grounding, the vessel is said to strand.

ground absorption [ELECTROMAG] Loss of energy in transmission of radio waves, due to dissipation in the ground.

ground-air [ORD] **1.** Of missiles, signals, and so on, from the ground to the air. **2.** Of a military force, made up of army or marine and air force units. **3.** Of actions, conducted by both ground and air units.

ground area [BUILD] The area of a building at ground level.

ground-based navigation aid [NAV] That portion of a navigation system which is located on the ground and emits signals or receives them from crafts or vehicles; these signals provide the navigation information.

ground cable [ELEC] A heavy cable connected to earth for the purpose of grounding electric equipment.

ground chain [NAV ARCH] A chain that keeps the anchor, when it is being pulled up from the ocean mooring, away from the side of the ship; it is attached along the first length of the anchor chain.

ground check [ENG] **1.** A procedure followed prior to the release of a radiosonde in order to obtain the temperature and humidity corrections for the radiosonde system. **2.** Any instrumental check prior to the ground launch of an airborne experiment. Also known as base-line check.

ground-check chamber [ENG] A chamber that is used to check the sensing elements of radiosonde equipment and that houses sources of heat and water vapor plus instruments for measuring temperature, humidity, and pressure, and in which air circulation is maintained by a motor-driven fan.

ground circuit [ELEC] A telephone or telegraph circuit part of which passes through the ground.

ground clutter [ELECTROMAG] Clutter on a ground or airborne radar due to reflection of signals from the ground or objects on the ground. Also known as ground flutter; ground return; land return; terrain echoes.

ground coal [MIN ENG] The bottom of a coal seam.

ground conductivity [ELEC] The effective conductivity of the ground, used in calculating the attenuation of radio waves.

ground control [CIV ENG] Supervision or direction of all airport surface traffic, except an aircraft landing or taking off. [ENG] The marking of survey, triangulation, or other key points or system of points on the earth's surface so that they may be recognized in aerial photographs.

ground-controlled approach [NAV] Technique or procedures by which a ground controller directs an aircraft to reach a point from which a landing may be made; the controller utilizes information from various sensors, including radar.

ground-controlled approach minimums [NAV] The minimum ceiling or visibility under which an aircraft may be landed with the use of ground-controlled approach (GCA); the pilot must be qualified to use GCA (and the aircraft must be equipped with the necessary radio equipment) before GCA minimums are applicable to the particular flight; at most airports GCA minimums are less than other minimums because of the double check on the "glide path" position of the aircraft.

ground-controlled approach radar [ENG] A ground radar system providing information by which aircraft approaches may be directed by radio communications. Abbreviated GCA radar.

ground-controlled interception [ORD] In air defense, an interception in which the interceptor weapon is vectored to the target by instructions transmitted from the ground.

ground-controlled intercept radar [ENG] A radar system by means of which a controller may direct an aircraft to make an interception of another aircraft. Abbreviated GCI radar.

ground controller [ENG] Aircraft controller stationed on the ground; a generic term, applied to the controller in ground-controlled approach, ground-controlled interception, and so on.

ground cover [BOT] Prostrate or low plants that cover the ground instead of grass. [FOR] All forest plants except trees.

ground current *See* earth current.

ground data equipment [ENG] Any device located on the ground that aids in obtaining space-position or tracking data (including computation function); reads out data telemetry, video, and so on, from payload instrumentation, or is capable of

GROSSULARITE

Grossularite, a subspecies of garnet, with formula $Ca_3Al_2(SiO_4)_3$. *(American Museum of Natural History Specimen)*

transmitting command and control signals to a satellite or space vehicle.

ground-derived navigation data [NAV] That data used in navigation and obtained by systems or parts of systems located on the ground or sea.

ground detector [ELEC] An instrument or equipment used for indicating the presence of a ground on an ungrounded system. Also known as ground indicator.

ground dielectric constant [ELEC] Dielectric constant of the earth at a given location.

ground discharge *See* cloud-to-ground discharge.

ground distance [NAV] The great-circle distance between two ground positions, as contrasted with slant distance or slant range, the straight-line distance between two points. Also known as ground range.

grounded-anode amplifier *See* cathode follower.

grounded-base amplifier [ELECTR] An amplifier that uses a transistor in a grounded-base connection.

grounded-base connection [ELECTR] A transistor circuit in which the base electrode is common to both the input and output circuits; the base need not be directly connected to circuit ground. Also known as common-base connection.

grounded-cathode amplifier [ELECTR] Electron-tube amplifier with a cathode at ground potential at the operating frequency, with input applied between control grid and ground, and with the output load connected between plate and ground.

grounded-collector connection [ELECTR] A transistor circuit in which the collector electrode is common to both the input and output circuits; the collector need not be directly connected to circuit ground. Also known as common-collector connection.

grounded-emitter amplifier [ELECTR] An amplifier that uses a transistor in a grounded-emitter connection.

grounded-emitter connection [ELECTR] A transistor circuit in which the emitter electrode is common to both the input and output circuits; the emitter need not be directly connected to circuit ground. Also known as common-emitter connection.

grounded-gate amplifier [ELECTR] Amplifier that uses thin-film transistors in which the gate electrode is connected to ground; the input signal is fed to the source electrode and the output is obtained from the drain electrode.

grounded-grid amplifier [ELECTR] An electron-tube amplifier circuit in which the control grid is at ground potential at the operating frequency; the input signal is applied between cathode and ground, and the output load is connected between anode and ground.

grounded-grid-triode circuit [ELECTR] Circuit in which the input signal is applied to the cathode and the output is taken from the plate; the grid is at radio-frequency ground and serves as a screen between the input and output circuits.

grounded-grid-triode mixer [ELECTR] Triode in which the grid forms part of a grounded electrostatic screen between the anode and cathode, and is used as a mixer for centimeter wavelengths.

grounded ice *See* stranded ice.

grounded-plate amplifier *See* cathode follower.

grounded system [ELEC] Any conducting apparatus connected to ground. Also known as earthed system.

ground effect [AERO ENG] Increase in the lift of an aircraft operating close to the ground caused by reaction between high-velocity downwash from its wing or rotor and the ground. [COMMUN] The effect of ground conditions on radio communications.

ground-effect machine *See* air-cushion vehicle.

ground electrode [ELEC] A conductor buried in the ground, used to maintain conductors connected to it at ground potential and dissipate current conducted to it into the earth, or to provide a return path for electric current in a direct-current power transmission system.

ground environment [ENG] **1.** Environment that surrounds and affects a system or piece of equipment that operates on the ground. **2.** System or part of a system, as of a guidance system, that functions on the ground; the aggregate of equipment, conditions, facilities, and personnel that go to make up a system, or part of a system, functioning on the ground. [ORD] In air defense, the portion of the air defense system that provides for the detection, surveillance, and control of airborne objects; normally these are ground-based facilities, but also include overwater facilities, such as picket vessels, and airborne early warning and control aircraft.

ground equalizer inductors [ELECTROMAG] Coils, having relatively low inductance, inserted in the circuit to one or more of the grounding points of an antenna to distribute the current to the various points in any desired manner.

ground fallout plot [NUCLEO] Time lines plotted within a radioactive fallout plot that approximate the distances to which local fallout will have spread at the end of succeeding hours; these lines are determined by using the rate of fall of the radioactive material and the mean wind vector (fallout wind) in the layer of air through which the material is falling.

ground fault [ELEC] Accidental grounding of a conductor.

ground fault interrupter [ELEC] A fast-acting circuit breaker that also senses very small ground fault currents such as might flow through the body of a person standing on damp ground while touching a hot alternating-current line wire.

ground fire [ORD] Fire, such as antiaircraft fire, that originates from the ground.

ground flutter *See* ground clutter.

ground fog [METEOROL] A fog that hides less than 0.6 of the sky and does not extend to the base of any clouds that may lie above it.

ground frost [METEOROL] In British usage, a freezing condition injurious to vegetation, which is considered to have occurred when a minimum thermometer exposed to the sky at a point just above a grass surface records a temperature (grass temperature) of 30.4°F (−0.9°C) or below.

ground glass [OPTICS] A sheet of matte-surfaced glass on the back of a view camera or process camera so that the image of the subject can be focused on it; it is exactly in the film plane.

ground handling equipment *See* ground support equipment.

groundhog *See* barney.

ground ice [HYD] **1.** A body of clear ice in frozen ground, most commonly found in more or less permanently frozen ground (permafrost), and may be of sufficient age to be termed fossil ice. Also known as stone ice; subsoil ice; subterranean ice; underground ice. **2.** *See* anchor ice.

ground ice mound [GEOL] A frost mound containing bodies of ice. Also known as ice mound.

ground indicator *See* ground detector.

grounding [ELEC] Intentional electrical connection to a reference conducting plane, which may be earth, but which more generally consists of a specific array of interconnected electrical conductors referred to as the grounding conductor.

grounding conductor [ELEC] An array of interconnected electric conductors at a uniform potential, to which electrical connections are made for the purpose of grounding.

grounding electrode [ELEC] Conductor embedded in the earth, used for maintaining ground potential on conductors connected to it, and for dissipating into the earth, current conducted to it.

grounding plate [ELEC] An electrically grounded metal plate on which a person stands to discharge static electricity picked up by his body, or a similar plate buried in the ground to act as a ground rod.

grounding reactor [ELEC] A reactor sometimes used in a grounded alternating-current system which joins a conductor or neutral point to ground and serves to limit ground current in case of a fault. Also known as earthing reactor (British usage).

grounding receptacle [ELEC] A receptacle which has an extra contact that accepts the third round or U-shaped prong of a grounding attachment plug and is connected internally to a supporting strap, providing a ground both through the outlet box and the grounding conductor, armor, or raceway of the wiring system.

grounding transformer [ELEC] Transformer intended primarily for the purpose of providing a neutral point for grounding purposes.

ground instrumentation *See* spacecraft ground instrumentation.

ground inversion *See* surface inversion.

ground junction *See* grown junction.

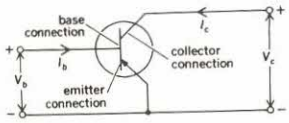
ground layer *See* surface boundary layer.

ground lead *See* work lead.

ground log [NAV] A device for determining the course and speed made good over the ground in shallow water, consisting of a lead or weight attached to a line and thrown overboard to the bottom; the course being made good is indicated by the direction the line tends, and the speed by the amount of line paid out in unit time.

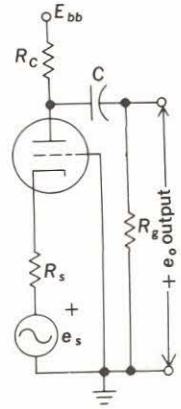
ground loop [COMMUN] Return currents or magnetic fields

GROUNDED-EMITTER CONNECTION



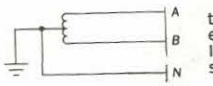
Schematic diagram of grounded-emitter connection of an alloy junction transistor.

GROUNDED-GRID AMPLIFIER



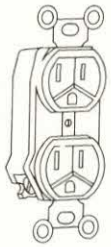
Schematic diagram of a grounded-grid amplifier.

GROUNDING



Grounding used in a single-phase three-wire 240/120-volt service; A and B conduct the current; N is the grounding wire.

GROUNDING RECEPTACLE



Grounding-type 15-amp receptacle.

from relatively high-powered circuits or components which generate unwanted noisy signals in the common return of relatively low-level signal circuits. [ELEC] Potentially detrimental loop formed when two or more points in an electric system that are nominally at ground potential are connected by a conducting path.

ground magnetic survey [ENG] A determination of the magnetic field at the surface of the earth by means of ground-based instruments.

groundman [ENG] A person employed in digging or excavating. [MIN ENG] *See* mucker.

groundmass *See* matrix.

ground mine [ORD] An underwater mine with negative buoyancy, intended to rest on the bottom of relatively shallow water.

ground moraine [GEOL] Rock material carried and deposited in the base of a glacier. Also known as bottom moraine; subglacial moraine.

ground noise [ENG ACOUS] The residual system noise in the absence of the signal in recording and reproducing; usually caused by inhomogeneity in the recording and reproducing media, but may also include tube noise and noise generated in resistive elements in the amplifier system. [GEOPHYS] In seismic exploration, disturbance of the ground due to some cause other than the shot.

ground outlet [ELEC] Outlet equipped with a receptacle of the polarity type having, in addition to the current-carrying contacts, one grounded contact which can be used for the connection of an equipment-grounding conductor.

ground plane [ELEC] A grounding plate, aboveground counterpoise, or arrangement of buried radial wires required with a ground-mounted antenna that depends on the earth as the return path for radiated radio-frequency energy.

ground plane antenna [ELECTROMAG] Vertical antenna combined with a grounded horizontal disk, turnstile element, or similar ground plane simulation; such antennas may be mounted several wavelengths above the ground, and provide a low radiation angle.

ground plate [ELEC] A plate of conducting material embedded in the ground to act as a ground electrode.

ground plot *See* dead-reckoning plot.

ground point of intercept [NAV] In terminal approach procedures, a point in the vertical plane on the runway center line by which it is assumed that the straight-line extension of the slide slope intercepts the runway approach surface base line. Abbreviated as GPI.

ground position [NAV] A position on the spherical or spheroidal earth, particularly such a position vertically below an aircraft.

ground-position indicator [NAV] An airborne computing mechanism that provides a continuous indication of position through data derived from instruments which give heading, airspeed, elapsed time, and drift.

ground potential [ELEC] Zero potential with respect to the ground or earth.

ground pressure [GEOPHYS] The pressure to which a rock formation is subjected by the weight of the superimposed rock and rock material or by diastrophic forces created by movements in the rocks forming the earth's crust. Also known as geostatic pressure; lithostatic pressure; rock pressure.

ground protection [ELEC] Protection provided a circuit by a device which opens the circuit when a fault to ground occurs.

ground range *See* ground distance.

ground recharge [ELEC] The flow of electrons from the ground, in reference to lightning effects.

ground-referenced navigation data [NAV] Navigation data which are referenced to points on the earth's surface.

ground-reflected wave [ELECTROMAG] Component of the ground wave that is reflected from the ground.

ground resistance [ELEC] Opposition of the earth to the flow of current through it; its value depends on the nature and moisture content of the soil, on the material, composition, and nature of connections to the earth, and on the electrolytic action present.

ground return [ELEC] Use of the earth as the return path for a transmission line. [ELECTROMAG] **1.** An echo received from the ground by an airborne radar set. **2.** *See* ground clutter.

ground-return circuit [ELEC] Circuit which has a conductor (or two or more in parallel) between two points and which is completed through the ground or earth.

ground rod [ELEC] A rod that is driven into the earth to provide a good ground connection.

groundscatter propagation [COMMUN] Multihop ionospheric radio propagation along other than the great-circle path between transmitting and receiving stations; radiation from the transmitter is first reflected back to earth from the ionosphere, then scattered in many directions from the earth's surface.

ground sluice [MIN ENG] A channel through which gold-bearing earth is passed in placer mining.

ground speed [NAV] Speed of an aircraft relative to the surface of the earth.

ground state [QUANT MECH] The stationary state of lowest energy of a particle or a system of particles.

ground strafing [ORD] Attack upon ground troops by low-flying aircraft using bombs, machine gun, and cannon.

ground streamer [METEOROL] An upward advancing column of high-ion density which rises from a point on the surface of the earth toward which a stepped leader descends at the start of a lightning discharge.

ground substance *See* matrix.

ground support equipment [AERO ENG] That equipment on the ground, including all implements, tools, and devices (mobile or fixed), required to inspect, test, adjust, calibrate, appraise, gage, measure, repair, overhaul, assemble, disassemble, transport, safeguard, record, store, or otherwise function in support of a rocket, space vehicle, or the like, either in the research and development phase or in an operational phase, or in support of the guidance system used with the missile, vehicle, or the like. Abbreviated GSE. Also known as ground handling equipment.

ground surveillance radar [ENG] A surveillance radar operated at a fixed point on the earth's surface for observation and control of the position of aircraft or other vehicles in the vicinity.

ground swell [OCEANOGR] Swell as it passes through shallow water, characterized by a marked increase in height in water shallower than one-tenth wavelength.

ground system [ELECTROMAG] The portion of an antenna that is closely associated with an extensive conducting surface, which may be the earth itself.

ground tackle [NAV ARCH] The anchoring equipment on a ship.

ground-to-cloud discharge [GEOPHYS] A lightning discharge in which the original streamer processes start upward from an object located on the ground.

ground trace [ENG] The theoretical mark traced upon the surface of the earth by a flying object, missile, or satellite as it passes over the surface, the mark being made vertically from the object making the trace.

ground truth measurements [GEOPHYS] Measurements of various properties, such as temperature and land utilization, which are conducted on the ground to calibrate observations made from satellites or aircraft.

ground-up read-only memory [COMPUT SCI] A read-only memory which is designed from the bottom up, and for which all fabrication masks used in the multiple mask process are custom-generated.

ground visibility [METEOROL] In aviation terminology, the horizontal visibility observed at the ground, that is, surface visibility or control-tower visibility.

groundwater [HYD] All subsurface water, especially that part that is in the zone of saturation.

groundwater decrement *See* groundwater discharge.

groundwater depletion curve [HYD] A recession curve of streamflow, so adjusted that the slope of the curve represents the runoff (depletion rate) of the groundwater; it is formed by the observed hydrograph during prolonged periods of no precipitation. Also known as groundwater recession.

groundwater discharge [HYD] **1.** Water released from the zone of saturation. **2.** Release of such water. Also known as decrement; groundwater decrement; phreatic-water discharge.

groundwater flow [HYD] That portion of the precipitation that has been absorbed by the ground and has become part of the groundwater.

groundwater increment *See* recharge.

groundwater level [HYD] **1.** The level below which the rocks and subsoil are full of water. **2.** *See* water table.

groundwater recession *See* groundwater depletion curve.

groundwater recharge *See* recharge.

groundwater replenishment *See* recharge.

groundwater surface *See* water table.

groundwater table *See* water table.

ground wave [COMMUN] A radio wave that is propagated along the earth and is ordinarily affected by the presence of the ground and the troposphere; includes all components of a radio wave over the earth except ionospheric and tropospheric waves. Also known as surface wave. [ORD] One of the waves formed in the ground by an explosion.

ground ways [CIV ENG] Supports, usually made of heavy timbers, which are placed on the ground on either side of the keel of a ship under construction, providing a track for launching, and supporting the sliding ways. Also known as standing ways.

ground wire [CIV ENG] A small-gage, high-strength steel wire used to establish line and grade for air-blown mortar or concrete. Also known as alignment wire; screed wire. [ELEC] A conductor used to connect electric equipment to a ground rod or other grounded object.

groundwood pulp *See* mechanical pulp.

ground zero [ORD] The point on the surface of the earth (including water) at which, above which, or below which an atomic detonation has actually occurred. Also known as surface zero.

group [CHEM] **1.** A family of elements with similar chemical properties. **2.** A combination of bonded atoms that behave as a single unit under certain conditions. [COMMUN] A subdivision containing a number of voice channels, either within a supergroup or separately, normally comprised of up to 12 voice channels occupying the frequency band 60–108 kilohertz; each voice channel may be multiplexed for teletypewriter operation, if required; the number of voice channels which may be simultaneously multiplexed for teletypewriter operation will vary according to equipment design. [MATH] A set G with an associative binary operation where $g_1 \cdot g_2$ always exists and is an element of G; each g has an inverse element g^{-1}, and G contains an identity element.

group A kits [ELECTR] Normally those items of electronic equipment which may be permanently or semipermanently installed in an aircraft for supporting, securing, or interconnecting the components and controls of the equipment, and which will not in any manner compromise the security classification of the equipment.

group B kits [ELECTR] Normally, the operating or operable component of the electronic equipment in an aircraft which, when installed on or in connection with group A parts, constitute the complete operable equipment.

group bus [ELEC] A scheme of electrical connections for a generating station in which more than two feeder lines are supplied by two bus-selector circuit breakers which lead to a main bus and an auxiliary bus.

group busy tone [COMMUN] High tone connected to the jack sleeves of an outgoing trunk group as an indication that all trunks in the group are busy.

group code *See* systematic error-checking code.

group-coded record [COMPUT SCI] A method of recording data on magnetic tape with eight tracks of data and one parity track, in which every eighth byte in conjunction with the parity track is used for detection and correction of all single-bit errors.

group diffusion method [NUCLEO] An approximation used in studying the diffusion of neutrons in a nuclear reactor, in which the range of neutron energies, from source energy to thermal energy, is divided into a finite number of intervals, or groups, and the neutrons in each group are assumed to diffuse with no loss of energy, until they have undergone the average number of collisions needed to reduce their energy to that of the next lower group.

group dynamics [PSYCH] A branch of social psychology which studies problems involving the structure of a group.

grouped-frequency operation [COMMUN] Use of different frequency bands for channels in opposite directions in a two-wire carrier system.

grouped records [COMPUT SCI] Two or more records placed together and identified by a single key, to save storage space or reduce access time.

group flashing light [NAV] A light showing groups of flashes at regular intervals, the duration of light being less than that of darkness.

group frequency [ELECTROMAG] Frequency corresponding to group velocity of propagated waves in a transmission line or waveguide.

group incentive [IND ENG] Any wage incentive applied to more than one employee who is engaged in group work characterized by interdependent relationship between operations with consequent physical proximity and unification of interest.

group-indicate [COMPUT SCI] To print indicative information from only the first record of a group.

grouping [COMMUN] Periodic error in the spacing of recorded lines in a facsimile system.

grouping circuits [COMMUN] Circuits used to interconnect two or more switchboard positions together, so that one operator may handle the several switchboard positions from one operator's set.

grouping of records [COMPUT SCI] Placing records together in a group to either conserve storage space or reduce access time.

group mark [COMPUT SCI] A character signaling the beginning or end of a group of data.

group modulation [COMMUN] Process by which a number of channels, already separately modulated to a specific frequency range, are again modulated to shift the group to another range.

group number [OCEANOGR] The first two numbers in the argument number in A. T. Doodson's scheme for predicting tides.

group occulting light [NAV] A light having groups of eclipses at regular intervals; the duration of the light period is equal to or greater than that of the dark period.

group of stars [ASTRON] A number of stars moving in the same direction with the same speed.

groupoid [MATH] A set having a binary relation everywhere defined.

group printing [COMPUT SCI] The printing of information summarizing the data on a group of cards or other records when a key change occurs.

group psychotherapy [PSYCH] Therapy given to a group of people by a therapist relying on the group effect on the individual and the person's interactions with the group.

group theory [MATH] The study of the structure of groups which especially deals with the classification of finite groups.

group therapy [PSYCH] A technique of psychotherapy, consisting of a group of persons who discuss personal problems under the guidance of a therapist.

group velocity [PHYS] The velocity of the envelope of a group of interfering waves having slightly different frequencies and phase velocities.

grouse [VERT ZOO] Any of a number of game birds in the family Tetraonidae having a plump body and strong, feathered legs.

grouser [ENG] A temporary pile or a heavy, iron-shod pole driven into the bottom of a stream to hold a drilling or dredging boat or other floating object in position. Also known as spud.

grout [MATER] **1.** A fluid mixture of cement and water, or a mixture of cement, sand, and water. **2.** Waste material of all sizes obtained in quarrying stone.

grout curtain [ENG] A row of vertically drilled holes filled with grout under pressure to form the cutoff wall under a dam, or to form a barrier around an excavation through which water cannot seep or flow.

grout hole [ENG] **1.** One of the holes in a grout curtain. **2.** Any hole into which grout is forced under pressure to consolidate the surrounding earth or rock.

grouting [ENG] The act or process of applying grout or of injecting grout into grout holes or crevices of a rock.

grout injector [ENG] A machine that mixes the dry ingredients for a grout with water and injects it, under pressure, into a grout hole.

groutite [MINERAL] $HMnO_2$ A mineral of the diaspore group, composed of manganese, hydrogen, and oxygen; it is polymorphous with manganite.

grout pipe [ENG] A pipe that transports grout under pressure for injection into a grout hole or a rock formation.

grove cell [ELEC] Primary cell, having a platinum electrode in an electrolyte of nitric acid within a porous cup, outside of which is a zinc electrode in an electrolyte of sulfuric acid; it normally operates on a closed circuit.

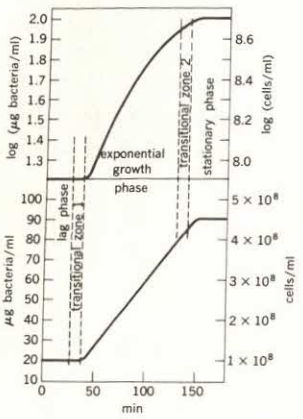
Grove's synthesis [ORG CHEM] Production of alkyl chlorides by passing hydrochloric acid into an alcohol in the presence of anhydrous zinc chloride.

grower's year [CLIMATOL] In Great Britain, the 12-month period starting November 6, and referring to the cycle of seasonal change of weather.

GROUSE

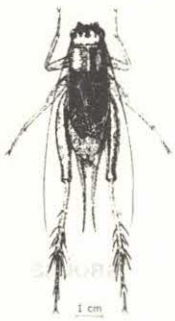
The ruffed grouse (*Bonasa umbellus*), a popular game bird of North America.

GROWTH CURVE



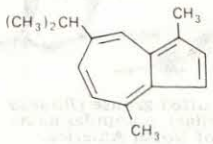
Growth curve of a typical bacterium. Lag phase = 25 minutes, doubling time = 45 minutes, and the specific growth rate = 0.154 min^{-1}.

GRYLLIDAE



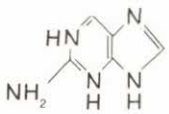
Grass cricket (*Nemobius fasciatus*). (*From Illinois Natural History Survey*)

GUAIAZULENE



Structural formula.

GUANINE



Structural formula of guanine.

growing season [AGR] The period of the year when climatic conditions are favorable for plant growth, common to a place or an area.

growl [GEOPHYS] Noise heard when strata are subjected to great pressure.

growler [ELEC] An electromagnetic device consisting essentially of two field poles arranged as in a motor, used for locating short-circuited coils in the armature of a generator or motor and for magnetizing or demagnetizing objects; a growling noise indicates a short-circuited coil. [OCEANOGR] A small piece of floating sea ice, usually a fragment of an iceberg or floeberg; it floats low in the water, and its surface often is heavily pitted; it often appears greenish in color.

grown-diffused transistor [ELECTR] A junction transistor in which the final junctions are formed by diffusion of impurities near a grown junction.

grown junction [ELECTR] A junction produced by changing the types and amounts of donor and acceptor impurities that are added during the growth of a semiconductor crystal from a melt. Also known as ground junction.

grown-junction photocell [ELECTR] A photodiode consisting of a bar of semiconductor material having a *pn* junction at right angles to its length and an ohmic contact at each end of the bar.

grown-junction transistor [ELECTR] A junction transistor in which different impurities are placed in the melt in sequence as the silicon or germanium seed crystal is slowly withdrawn, to produce the alternate *pn* and *np* junctions.

growth [MED] Any abnormal, localized increase in cells, such as a tumor. [PHYSIO] Increase in the quantity of metabolically active protoplasm, accompanied by an increase in cell number or cell size, or both.

growth curve [MICROBIO] A graphic representation of the growth of a bacterial population in which the log of the number of bacteria or the actual number of bacteria is plotted against time. [NUCLEO] A curve showing how some quantity associated with a radioactive transformation or induced nuclear reaction increases with time.

growth fabric [PETR] Orientation of fabric elements independent of the influences of stress and resultant movement.

growth factor [AERO ENG] The additional weight of fuel and structural material required by the addition of 1 pound of payload to the original payload. [PHYSIO] Any factor, genetic or extrinsic, which affects growth.

growth form [ECOL] The habit of a plant determined by its appearance of branching and periodicity.

growth hormone [BIOCHEM] **1.** A polypeptide hormone secreted by the anterior pituitary which promotes an increase in body size. Abbreviated GH. **2.** Any hormone that regulates growth in plants and animals.

growth lattice [GEOL] The rigid, reef-building, inplace framework of an organic reef, consisting of skeletons of sessile organisms and excluding reef-flank and other associated fragmental deposits. Also known as organic lattice.

growth rate [MICROBIO] Increase in the number of bacteria in a population per unit time.

growth regulator [BIOCHEM] A synthetic substance that produces the effect of a naturally occurring hormone in stimulating plant growth; an example is dichlorophenoxyacetic acid.

growth spiral [CRYSTAL] A structure on a crystal surface, observed after growth, consisting of a growth step winding downward and outward in an Archimedean spiral which may be distorted by the crystal structure.

growth step [CRYSTAL] A ledge on a crystal surface, one or more lattice spacings high, where crystal growth can take place.

groyne *See* groin.

GR-S rubber [ORG CHEM] Former designation for general-purpose synthetic rubbers formed by copolymerization of emulsions of styrene and butadiene; used in tires and other rubber products; previously also known as Buna-S, currently known as SBR (styrene-butadiene rubber).

grubbing [CIV ENG] Clearing stumps and roots.

grub screw [DES ENG] A headless screw with a slot at one end to receive a screwdriver.

grubstake [MIN ENG] In the United States, supplies or money furnished to a mining prospector for a share in his discoveries.

grubstake contract [MIN ENG] An agreement between two or more persons to locate mines upon the public domain by their joint aid, effort, labor, or expense, with each to acquire by virtue of the act of location such an interest in the mine as agreed upon in the contract.

gruenlingite [MINERAL] Bi_4TeS_3 A mineral composed of sulfide and telluride of bismuth.

Gruidae [VERT ZOO] The cranes, a family of large, tall, cosmopolitan wading birds in the order Gruiformes.

Gruiformes [VERT ZOO] A heterogeneous order of generally cosmopolitan birds including the rails, coots, limpkins, button quails, sun grebes, and cranes.

Grüneisen constant [SOLID STATE] Three times the bulk modulus of a solid times its linear expansion coefficient, divided by its specific heat per unit volume; it is reasonably constant for most cubic crystals. Also known as Grüneisen gamma.

Grüneisen gamma *See* Grüneisen constant.

Grüneisen relation [SOLID STATE] The relation stating that the electrical resistivity of a very pure metal is proportional to a mathematical function which depends on the ratio of the temperature to a characteristic temperature.

grunerite [MINERAL] $(Mg,Fe)_7Si_8O_{22}(OH)_2$ Variety of amphibole; forms monoclinic crystals.

grus *See* gruss.

Grus [ASTRON] A constellation, right ascension 22 hours, declination 45°S. Also known as Crane.

gruss [GEOL] A loose accumulation of fragmental products formed from the weathering of granite. Also spelled grus.

gr wt *See* gross weight.

Gryllidae [INV ZOO] The true crickets, a family of orthopteran insects in which individuals are dark-colored and chunky with long antennae and long, cylindrical ovipositors.

Gryllioblattidae [INV ZOO] A monogeneric family of crickets in the order Orthoptera; members are small, slender, wingless insects with hindlegs not adapted for jumping.

Gryllotalpidae [INV ZOO] A family of North American insects in the order Orthoptera which live in sand or mud; they eat the roots of seedlings growing in moist, light soils.

GSC *See* gas-solid chromatography.

G scan *See* G scope.

G scope [ELECTR] A cathode-ray scope on which a single signal appears as a spot on which wings grow as the distance to the target is decreased, with bearing error as the horizontal coordinate and elevation angle error as the vertical coordinate. Also known as G indicator; G scan.

GSE *See* ground support equipment.

g service [COMMUN] A Federal Aviation Administration service pertaining to aural and visual monitoring of radio aids to air navigation and of the landlines and radio communications systems, to detect faulty operation.

GST *See* Greenwich sidereal time.

G star [ASTRON] A star of spectral type G; many metallic lines are seen in the spectra, with hydrogen and potassium being strong; G stars are yellow stars, with surface temperatures of 5500–4200 K for giants, 6000–5000 K for dwarfs.

G string *See* field waveguide.

g suit [ENG] A suit that exerts pressure on the abdomen and lower parts of the body to prevent or retard the collection of blood below the chest under positive acceleration. Also known as anti-g suit.

Guadalupian [GEOL] A North American provincial series in the Lower and Upper Permian, above the Leonardian and below the Ochoan.

guaiac [MATER] A resin obtained from the trees *Guaiacum santum* and *G. officinale;* soluble in alcohol, ether, and chloroform; used in medicine and varnish.

guaiacol [ORG CHEM] $C_6H_4(OH)OCH_3$ A colorless, crystalline compound, soluble in water; used as a reagent to determine the presence of such substances as lignin, narceine, and nitrous acid. Also known as *ortho*-hydroxyanisole; 1-hydroxy-2-methoxybenzene; methylpyrocatechine.

guaiazulene [PHARM] $C_{15}H_{18}$ A blue oil with a boiling point of 165–170°C; used as an anti-inflammatory drug.

guanajuatite [MINERAL] Bi_2Se_3 Bluish-gray mineral composed of bismuth selenide, occurring in crystals or masses.

guanidine [BIOCHEM] CH_5N_3 Aminomethanamidine, a product of protein metabolism found in urine. Also known as carbamidine; iminourea.

guanidine-acetic acid *See* glycocyamine.

guanine [BIOCHEM] $C_5H_5ON_5$ A purine base; occurs naturally as a fundamental component of nucleic acids.

guano [MATER] Phosphate- and nitrogen-rich, partially decomposed excrement of seabirds; used as a fertilizer.

guanophore *See* iridocyte.

guanosine [BIOCHEM] $C_{10}H_{13}O_5N_5$ Guanine riboside, a nucleoside composed of guanine and ribose. Also known as vernine.

guanosine tetraphosphate [BIOCHEM] A nucleotide which participates in the regulation of gene transcription in bacteria by turning off the synthesis of ribosomal ribonucleic acid.

guanylic acid [BIOCHEM] A nucleotide composed of guanine, a pentose sugar, and phosphoric acid and formed during the hydrolysis of nucleic acid. Abbreviated GMP. Also known as guanosine monophosphate; guanosine phosphoric acid.

guar [AGR] *Cyanopsis tetragonaloba*. A leguminous crop adapted to semiarid regions of the southwestern United States and Mexico. Also known as cluster bean.

guard [ENG] A shield or other fixture designed to protect against injury. [MIN ENG] A support in front of a roll train to guide the bar into the groove.

guard ammunition [ORD] Ammunition specifically designed for use by guards, usually containing a reduced propelling charge.

guard arm [ELEC] **1.** Crossarm placed across and in line with a cable to prevent damage to the cable. **2.** Crossarm located over wires to prevent foreign wires from falling into them.

guard band [ELECTR] A narrow frequency band provided between adjacent channels in certain portions of the radio spectrum to prevent interference between stations.

guard cell [BOT] Either of two specialized cells surrounding each stoma in the epidermis of plants; functions in regulating stoma size.

guard circle [DES ENG] The closed loop at the end of a grooved record.

guard-electrode system [PETRO ENG] System of extra electrodes used during electrical logging of reservoir formations to confine the surveying current from the measuring electrode to a generally horizontal path.

guarding [ELEC] A method of eliminating surface-leakage effects from measurements of electrical resistance which employs a low-resistance conductor in the vicinity of one of the terminals or a portion of the measuring circuit.

guard lock [CIV ENG] *See* entrance lock. [ENG] An auxiliary lock that must be opened before the key can be turned in a main lock.

guard magnet [MIN ENG] A magnet employed in a crushing system to remove or arrest tramp iron ahead of the machinery.

guardrail [CIV ENG] **1.** A handrail. **2.** A rail made of posts and a metal strip used on a road as a divider between lines of traffic in opposite directions or used as a safety barrier on curves. **3.** A rail fixed close to the outside of the inner rail on railway curves to hold the inner wheels of a railway car on the rail. Also known as check rail; safety rail; slide rail.

guard relay [ELEC] Used in the linefinder circuit to make sure that only one linefinder can be connected to any line circuit when two or more line relays are operated simultaneously.

guard ring [ELEC] A ring-shaped auxiliary electrode surrounding one of the plates of a parallel-plate capacitor to reduce edge effects. [ELECTR] A ring-shaped auxiliary electrode used in an electron tube or other device to modify the electric field or reduce insulator leakage; in a counter tube or ionization chamber a guard ring may also serve to define the sensitive volume. [THERMO] A device used in heat flow experiments to ensure an even distribution of heat, consisting of a ring that surrounds the specimen and is made of a similar material.

guard screen *See* oversize control screen.

guard shield [ELECTR] Internal floating shield that surrounds the entire input section of an amplifier; effective shielding is achieved only when the absolute potential of the guard is stabilized with respect to the incoming signal.

guard signal [COMPUT SCI] A signal used in digital-to-analog converters, analog-to-digital converters, or other converters which permits values to be read or converted only when the values are not changing, usually to avoid ambiguity error.

guard wire [ELEC] A grounded conductor placed beneath an overhead transmission line in order to ground the line, in case it breaks, before reaching the ground.

guar gum [MATER] A mucilage formed from seeds of the guar plant; light-gray powder dispersible in water; used as a thickening agent in paper, foods, pharmaceuticals, and cosmetics.

Guarnieri body [PATH] Eosinophilic cytoplasmic inclusion bodies found in the epidermal cells of patients with smallpox or chickenpox.

guava [BOT] *Psidium guajava*. A shrub or low tree of tropical America belonging to the family Myrtaceae; produces an edible, aromatic, sweet, juicy berry.

guayule [BOT] *Parthenium argentatum*. A subshrub of the family Compositae that is native to Mexico and the southwestern United States; it has been cultivated as a source of rubber.

guba [METEOROL] In New Guinea, a rain squall on the sea.

gubernaculum [ANAT] A guiding structure, as the fibrous cord extending from the fetal testes to the scrotal swellings. [INV ZOO] **1.** A posterior flagellum of certain protozoans. **2.** A sclerotized structure associated with the copulatory spicules of certain nematodes.

Gudden-Pohl effect [ELECTR] The momentary illumination produced when an electric field is applied to a phosphor previously excited by ultraviolet radiation.

Gudermannian [MATH] The function y of the variable x satisfying $\tan y = \sinh x$ or $\sin y = \tanh x$; written $\mathrm{gd}x$.

gudgeon [ENG] **1.** A pivot. **2.** A pin for fastening stone blocks. [NAV ARCH] Metal fittings on the sternpost of a boat or on the rudderpost of a ship on which the rudder is hung; the gudgeon forms the pivot point.

gudmundite [MINERAL] FeSbS A silver-white to steel-gray orthorhombic mineral composed of a sulfide and antimonide of iron.

Guerbet reaction [ORG CHEM] A condensation of alcohols at high temperatures through the action of sodium alkoxides.

guerrilla warfare [ORD] Operations carried on by independent or semi-independent forces in the rear of the enemy; these operations usually are conducted by irregular forces acting either separately from, or in conjunction with, regular forces but may at times be conducted entirely with regular troops.

guess-warp [NAV ARCH] A line used in conjunction with a Jacob's ladder on the thimble of which boat crews reeve their bowlines.

guest element *See* trace element.

Guest unit [BIOL] A unit for the standardization of plasmin.

Guggenheim process [CIV ENG] A method of chemical precipitation which employs ferric chloride and aeration to prepare sludge for filtration.

Guiana Current [OCEANOGR] A current flowing northwestward along the northeastern coast of South America.

guidance [NAV] The process of directing the movements of any vehicle, especially an aeronautical vehicle or space vehicle, with particular reference to the selection of a course or flight path.

guidance site [ENG] Specific location of high-order geodetic accuracy containing equipment and structures necessary to provide guidance services or a given launch rate; it may be an integrated part of a launch site, or it may be a remote facility.

guidance station equipment [ENG] The ground-based portion of the missile guidance system necessary to provide guidance during missile flight; it specifically includes the tracking radar, the rate measuring equipment, the data link equipment, and the computer, test, and maintenance equipment integral to these items.

guidance system [AERO ENG] The control devices used in guidance of an aircraft or spacecraft. [NAV] Apparatus for generating and detecting the path along which a vehicle or craft is guided, often remotely and automatically.

guidance tape [COMPUT SCI] A magnetic tape or punched paper tape that is placed in a missile or its computer to program desired events during flight.

guide bearing [MECH ENG] A plain bearing used to guide a machine element in its lengthwise motion, usually without rotation of the element.

guide bracket [MIN ENG] A steel bracket fixed to a bunton to secure rigid guides in a shaft.

guide coupling [MIN ENG] A short coupling with a projecting reamer guide or pup to which is attached a reaming bit, which it couples to a reaming barrel.

guided bend test [MET] A bend test in which the specimen is bent to a predetermined shape.

guided bomb [ORD] An aerial bomb that is guided in range or azimuth, or both, during its drop.

guide edge [COMPUT SCI] The edge of a paper or magnetic

GUAVA

Psidium guajava, showing a branch with leaves and two berries and a berry cut in half.

tape, punch card, printed sheet, or other medium used to properly align its position.

guided missile [ORD] An unmanned self-propelled vehicle, with or without a warhead, which is designed to move in a trajectory or flight path all or partially above the earth's surface and whose trajectory or course, while in flight, is capable of being directed by remote control, by homing systems, or by inertial or programmed guidance from within; excludes drones, torpedoes, and rockets and other vehicles whose trajectory or course cannot be controlled while in flight.

guided-missile control [ORD] The guidance or direction exercised over a guided missile during its flight to a target.

guided missile exercise head [ORD] An item designed to simulate a guided missile warhead, with or without telemetering devices.

guided-missile ship [NAV ARCH] A warship equipped with guided-missile launchers, and sometimes with a gun battery, long-range sonar, and antisubmarine warfare weapons. Also known as missile ship.

guided-missile submarine [NAV ARCH] A submarine designed to have an additional capability to launch guided-missile attacks from surface condition.

guided propagation [COMMUN] Type of radio-wave propagation in which radiated rays are bent excessively by refraction in the lower layers of the atmosphere; this bending creates an effect much as if a duct or waveguide has been formed in the atmosphere to guide part of the radiated energy over distances far beyond the normal range. Also known as trapping.

guided rocket [ORD] A guided missile having rocket propulsion.

guided wave [ELECTROMAG] A wave whose energy is concentrated near a boundary or between substantially parallel boundaries separating materials of different properties and whose direction of propagation is effectively parallel to these boundaries; waveguides transmit guided waves.

guide frame [MIN ENG] A frame held rigidly in place by roof jacks or timbers, with provisions for attaching a shaker conveyor pan line to the movable portion of the frame; prevents jumping or side movement of the pan line.

guide holes [COMPUT SCI] One or more rows of holes prepunched around the margins of hand-sorted cards.

guide idler [MECH ENG] An idler roll with its supporting structure mounted on a conveyor frame to guide the belt in a defined horizontal path, usually by contact with the edge of the belt.

guide margin [COMPUT SCI] The distance between the guide edge of a paper tape and the center line of the track of holes that is closest to this edge.

guide mill [MET] A hand rolling mill with a series of stands and guides at the entrance to the rolls.

guide number [GRAPHICS] A number that relates the output of a light source (such as a flashbulb) to the sensitivity of a particular film; when the number is divided by the distance in feet to the subject, it gives the T stop at which the lens should be set.

guide pin [ENG] A pin used to line up a tool or die with the work.

guide post [CIV ENG] A post along a road that bears direction signs or guide boards.

guide rail [CIV ENG] A track or rail that serves to guide movement, as of a sliding door, window, or similar element.

guide ring [MIN ENG] A longitudinally grooved, annular ring made almost full borehole size, which is fitted to an extension coupling between the core barrel and the first drill rod.

guide rod [MIN ENG] A heavy drill rod coupled to and having the same diameter as a core barrel on which it is used; gives additional rigidity to the core barrel and helps to prevent deflection of the borehole. Also known as core barrel rod; oversize rod.

guides [MECH ENG] **1.** Pulleys to lead a driving belt or rope in a new direction or to keep it from leaving its desired direction. **2.** Tracks that support and determine the path of a skip bucket and skip bucket bail. **3.** Tracks guiding the chain or buckets of a bucket elevator. **4.** The runway paralleling the path of the conveyor which limits the conveyor or parts of a conveyor to movement in a defined path. [MIN ENG] **1.** Steel, wood, or steel-wire rope conductors in a mine shaft to guide the movement of the cages. **2.** Timber, rope, or metal tracks in a hoisting shaft, which are engaged by shoes on the cage or skip so as to steady it in transit. **3.** The holes in a crossbeam through which the stems of the stamps in a stamp mill rise and fall.

guide wavelength [ELECTROMAG] Wavelength of electromagnetic energy conducted in a waveguide; guide wavelength for all air-filled guides is always longer than the corresponding free-space wavelength.

guiding center [ELECTROMAG] A slowly moving point about which a charged particle rapidly revolves; this is used in an approximation for the motion of a charged particle in slowly varying electric and magnetic fields.

guiding telescope [OPTICS] A telescope that is mounted so that it remains parallel to a photographic telescope and is used by a person observing through it to supplement the clock motion in keeping the image of a celestial body motionless on a photographic plate.

guildite [MINERAL] $(Cu,Fe)_3(Fe,Al)_4(SO_4)_7(OH)_4 \cdot 15H_2O$ A dark-brown mineral composed of a basic hydrated sulfate of copper, iron, and aluminum.

Guillain-Barré syndrome *See* Landry-Guillain-Barré syndrome.

Guillemin effect [ELECTROMAG] The tendency of a bent magnetorestrictive rod to straighten in a magnetic field parallel to its length.

Guillemin line [ELECTR] A network or artificial line used in high-level pulse modulation to generate a nearly square pulse, with steep rise and fall; used in radar sets to control pulse width.

guillotine [GRAPHICS] A heavy steel knife used to cut printing plates made of copper, zinc, or magnesium and to trim excess metal from electrotype or stereotype casts.

Guinea Current [OCEANOGR] A current flowing eastward along the southern coast of northwestern Africa into the Gulf of Guinea.

guinea fowl [VERT ZOO] The common name for plump African game birds composing the family Numididae; individuals have few feathers on the head and neck, but may have a crest of feathers and various fleshy appendages.

guinea pig [VERT ZOO] The common name for several species of wild and domestic hystricomorph rodents in the genus *Cavia*, family Caviidae; individuals are stocky, short-eared, short-legged, and nearly tailless.

guinea worm [INV ZOO] *Dracunculus medinensis*. A parasitic nematode that infects the subcutaneous tissues of humans and other mammals.

Guinier-Preston zones [MET] The initially formed zones of a precipitate as it comes out of solid solution.

guipure [TEXT] A machine-made lace with a heavy gimp motif connected by bars and without mesh grounds.

guitarfish [VERT ZOO] The common name for fishes composing the family Rhinobatidae.

guitermanite [MINERAL] $Pb_{10}Ar_6S_{19}$ A bluish-gray mineral composed of lead, arsenic, and sulfur, occurring in compact masses.

Gukhman number [THERMO] A dimensionless number used in studying convective heat transfer in evaporation, equal to $(t_0 - t_m)/T_0$, where t_0 is the temperature of a hot gas stream, t_m is the temperature of a moist surface over which it is flowing, and T_0 is the absolute temperature of the gas stream. Symbolized Gu; N_{Gu}.

gular [ANAT] Of, pertaining to, or situated in the gula or upper throat. [VERT ZOO] A horny shield on the plastron of turtles.

gulch [GEOGR] A gulley, sometimes occupied by a torrential stream.

gulch claim [MIN ENG] A claim laid upon and along the bed of an unnavigable stream winding through a canyon, with precipitous, nonmineral, and uncultivable bands wherein have accumulated placer deposits.

Guldberg and Waage law *See* mass action law.

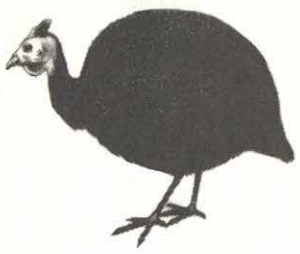
Guldberg-Waage group [CHEM ENG] A dimensionless number used in studying chemical reactions in blast furnaces; it is given by an equation relating volumes of reacting gases and reacting products. Symbolized N_{GW}.

gulf [GEOGR] **1.** An abyss or chasm. **2.** A large extension of the sea partially enclosed by land.

Gulfian [GEOL] A North American provincial series in Upper Cretaceous geologic time, above the Comanchean and below the Paleocene of the Tertiary.

Gulfining [CHEM ENG] A catalytic hydrogen-treating process used to remove sulfur from cracked and straight-run distil-

GUINEA FOWL



The common guinea fowl *(Numida meleagris)*, with red wattles and pearl-green plumage.

GUINEA PIG

The guinea pig, with short legs and large angular claws.

lates and fuel oils, also improving carbon residue, color, and general stability and effecting a slight increase in gravity.

Gulf Stream [OCEANOGR] A relatively warm, well-defined, swift, relatively narrow, northward-flowing ocean current which originates north of Grand Bahama Island where the Florida Current and the Antilles Current meet, and which eventually becomes the eastward-flowing North Atlantic Current.

Gulf Stream Countercurrent [OCEANOGR] **1.** A surface current opposite to the Gulf Stream, one current component on the Sargasso Sea side and the other component much weaker, on the inshore side. **2.** A predicted, but as yet unobserved, large current deep under the Gulf Stream but opposite to it.

Gulf Stream eddy [OCEANOGR] A cutoff meander of the Gulf Stream.

Gulf Stream front [OCEANOGR] The pronounced horizontal temperature gradient that defines a cross section of the Gulf Stream.

Gulf Stream meander [OCEANOGR] One of the changeable, winding bends in the Gulf Stream; such bends intensify as the Gulf Stream merges into North Atlantic Drift and break up into detached eddies at times, at about 40°N.

Gulf Stream system [OCEANOGR] The Florida Current, Gulf Stream, and North Atlantic Current, collectively.

gulfweed [BOT] Brown algae of the genus *Sargassum*.

gull [VERT ZOO] The common name for a number of long-winged swimming birds in the family Laridae having a stout build, a thick, somewhat hooked bill, a short tail, and webbed feet.

gullet [ANAT] *See* esophagus. [INV ZOO] A canal between the cytostome and reservoir that functions in food intake in ciliates.

gully [GEOGR] A narrow ravine.

gully erosion [GEOL] Erosion of soil by running water.

gully-squall [METEOROL] A nautical term for a violent squall of wind from mountain ravines on the Pacific side of Central America.

gulp [COMPUT SCI] A series of bytes considered as a unit.

gum [MATER] A hydrophilic plant polysacchride or derivative that swells to produce a viscous dispersion or solution when added to water.

gum accroides *See* acaroid resin.

gum ammoniac *See* ammoniac.

gum arabic [MATER] A water-soluble gum obtained from acacia trees in Africa and Australia; produced commercially as a white powder; used in the manufacture of inks and adhesives, in textile finishing, and as the principal binder in watercolor and gouache. Also known as acacia gum; gum Kordofan; gum Senegal.

gum benzoin *See* benzoin gum.

gumbo [BOT] *See* okra. [GEOL] A soil that forms a sticky mud when wet.

gumbotil [GEOL] Deoxidized, leached clay that contains siliceous stones.

gum dammar *See* dammar.

gum Kordofan *See* gum arabic.

gumme [PATH] A mass of rubberlike necrotic tissue found in any of various organs and tissues in tertiary syphilis.

gummed paper [MATER] **1.** A variety of colored, patterned papers with adhesive on one side for easy application. **2.** Coated or uncoated book paper, gummed on one side, used for stickers, labels, stamps, seals, and tapes.

gummite [MINERAL] Any of various yellow, orange, red, or brown secondary minerals containing hydrous oxides of uranium, thorium, and lead. Also known as uranium ocher.

gummosis [PL PATH] Production of gummy exudates in diseased plants as a result of cell degeneration.

gum resin [MATER] A group of oleoresinous substances obtained from plants; mixtures of true gums and resins less soluble in alcohol than natural resins; examples are rubber, guttapercha, gamboge, myrrh, and olibanum; used to make certain pharmaceuticals.

gum Senegal *See* gum arabic.

gum test [CHEM ENG] A standard ASTM test to determine the amount of gums in gasolines.

gum thus *See* olibanum.

gum vein [BOT] Local accumulation of resin occurring as a wide streak in certain hardwoods.

gun [ORD] A piece of ordnance, consisting essentially of a tube or barrel, for throwing projectiles by force, usually the force of an explosive but sometimes that of compressed gas, a spring, or so on.

gunbarrel [CHEM ENG] An atmospheric vessel used for treatment of waterflood waste water.

gunboat [NAV ARCH] A small, moderate-speed, heavily armed vessel for general patrol and escort duty; usually unarmored and of less than 2000 tons.

gun-bomb-rocket sight [ORD] A computing sight used in a fighter aircraft in which different data may be set for use in aiming gunfire, bombs, or rockets.

gun book [ORD] Log that records the history of the operations and inspections of a particular gun.

gun bore line [ORD] The extended bore axis of a gun.

gun breech [ORD] The mass of metal at the rear end of a cannon, from the front slope to the rear face, exclusive of the breech mechanism; in this metal are formed the seat for the breech mechanism, the powder chamber, and the slopes connecting the latter with the rifled portion of the bore.

gun burner [ENG] A burner which sprays liquid fuel into a furnace for combustion.

gun camera [OPTICS] **1.** A camera used in gunnery training that records the image of the target at which it is aimed on a strip of motion-picture film. **2.** A camera synchronized to a gun to record the results of firing, with the film revealing if the camera was correctly sighted on the target.

gun carriage [ORD] Mobile or fixed support for a gun; sometimes includes the elevating and traversing mechanisms.

gun charger [ORD] A mechanism on a gun that operates to retract the breech mechanism or bolt to the rear and to insert a charge into the chamber.

guncotton [MATER] Any of various nitrocellulose explosives of high nitration (13.35–13.4% nitrogen) made by treating cotton with nitric and sulfuric acids; used principally in the manufacture of single-base and double-base propellants.

gundeck [NAV ARCH] A deck on old-time warships on which the ship's guns were carried.

gun deflection board *See* deflection board.

gun-directing radar [ORD] Radar used to direct antiaircraft artillery or similar fire.

gun displacement [ORD] **1.** Distance from a gun to the directing point or the base piece of a battery. **2.** Movement of a gun to a new firing position.

gun emplacement [ORD] Firing location of a gun together with necessary installations, such as camouflage, and ammunition supply.

gunfire [ORD] Use of artillery, rifles, and small arms as distinguished from the use of bayonets, swords, torpedoes, and bombs.

gun fore-end [ORD] A wood or plastic piece that is usually designed with a semicircular groove to fit under the barrel of a gun and is attached by metal fastening devices; it is shaped to fit the hand and is used to steady the weapon during firing.

gun group [ORD] Major parts of a gun, considered as a unit distinct from its mount.

gun handguard [ORD] A wood or plastic piece that is usually designed with a semicircular groove to fit over the top of the barrel of a carbine or rifle and is attached by metal fastening devices; it is shaped to fit the hand and to protect it during firing; it excludes the gun fore-end.

gun hoist [ORD] A device placed near the breech of a gun for lifting propellant and projectiles.

gun jack [ORD] A jack for forcing a tube of a gun out of battery.

gunk *See* rod dope.

gun launcher [ORD] A gun adapted to launching guided missiles or rockets.

gun-laying radar [ENG] Radar equipment specifically designed to determine range, azimuth, and elevation of a target and sometimes also to automatically aim and fire antiaircraft artillery or other guns.

gun line [ORD] For a single aircraft gun, the axis of the bore extended; for multiple guns, it is the mean gun line.

gunlock [ORD] Fastening device used to prevent a weapon from being fired.

gunmetal [MET] **1.** Bronze composed of copper and tin in proportions of 9:1, formerly used to make cannons. **2.** Any metal or alloy from which guns are made. **3.** Any metal or alloy treated to give the appearance of black, tarnished copper-alloy gunmetal.

gun mount [ORD] An item designed to support a gun.

Gunn amplifier [ELECTR] A microwave amplifier in which a Gunn oscillator functions as a negative-resistance amplifier when placed across the terminals of a microwave source.

Gunn diode *See* Gunn oscillator.

Gunn effect [ELECTR] Development of a rapidly fluctuating current in a small block of a semiconductor (perhaps *n*-type gallium arsenide) when a constant voltage above a critical value is applied to contacts on opposite faces.

gunnel *See* gunwale.

Gunneraceae [BOT] A family of dicotyledonous terrestrial herbs in the order Haloragales, distinguished by two to four styles, a unilocular bitegmic ovule, large inflorescences with no petals, and drupaceous fruit.

gunner's quadrant [ENG] Mechanical device having scales graduated in mils, with fine micrometer adjustments and leveling or cross-leveling vials; it is a separate, unattached instrument for hand placement on a reference surface.

gunnery [ORD] The art or practice of using machine guns or cannon either on the ground or in the air.

Gunn oscillator [ELECTR] A microwave oscillator utilizing the Gunn effect. Also known as Gunn diode.

gun parallax [ORD] The difference in azimuth between the line from the directing point to the target and the line from the gun to the target.

gun pendulum [ENG] A device used to determine the initial velocity of a projectile fired from a gun in which the gun is mounted as a pendulum and its excursion upon firing is measured.

gunpowder [MATER] A black or brown explosive mixture of potassium nitrate, charcoal, and sulfur; originally, it was made in powder form, now generally in grains of various sizes.

gunpowder paper [MATER] Paper with an explosive on it that is rolled up for use in loading.

gun pressure [ORD] Pressure within a gun tube or barrel, as used in design practices.

gun reaction [MECH] The force exerted on the gun mount by the rearward movement of the gun resulting from the forward motion of the projectile and hot gases. Also known as recoil.

gunsight [ORD] A mechanical or optical device for aiming a firearm or for placing a gun or rocket launcher in position; based on the principle that two points (the observer's eye and a suitable mark in the instrument) in fixed relation to each other may be brought in line with a third (the target).

gunsight computer [ORD] The component of a computing gunsight that calculates for variables in gunnery and computes a prediction angle.

gun silencer [ORD] An item specifically designed to silence the explosive report caused by the discharge of cartridges by small arms weapon; it incorporates integral chambers or baffles which allow the gases to expand gradually. Also known as silencer.

gun slide [ORD] Portion of a gun which rests on the cradle guides.

gunstock [ORD] The wooden stock in which the barrel and mechanism of a gun are fixed.

gun stoppage [ORD] A condition which prevents a gun from being fired, usually in automatic weapons as the result of a cartridge not feeding properly from the magazine to the breech of the gun.

Gunter's chain [ENG] A chain 66 feet (20.1168 meters) long, consisting of 100 steel links, each 7.92 inches (20.1168 centimeters) long, joined by rings, which is used as the unit of length for surveying public lands in the United States. Also known as chain.

gun turret [ORD] Dome-shaped or cylindrical armored structure containing one or more guns, located on forts, warships, airplanes, or tanks.

gun-type burner [ENG] An oil burner that uses a nozzle to atomize the fuel.

gunwale [NAV ARCH] The upper edge of the side of a boat. Also spelled gunnel.

Günz [GEOL] A European stage of geologic time, in the Pleistocene (above Astian of Pliocene, below Mindel); it is the first stage of glaciation of the Pleistocene in the Alps.

Günzberg reagent [ANALY CHEM] A solution of 2 grams of vanillin and 4 grams of phloroglucinol in 80 milliliters of 95% alcohol; used as a test reagent for determining free hydrochloric acid in gastric juice.

Günz-Mindel [GEOL] The first interglacial stage of the Pleistocene in the Alps, between Günz and Mindel glacial stages.

Gurevich effect [SOLID STATE] An effect observed in electric conductors in which phonon-electron collisions are important, in the presence of a temperature gradient, in which phonons carrying a thermal current tend to drag the electrons with them from hot to cold.

Gurney formulas [ORD] A series of formulas proposed by R.W. Gurney for determining initial fragment velocity as a function of the type of explosive and the ratio of explosive charge to metal weight; each formula corresponds to a particular shape of container.

Gurney-Mott theory [CHEM] A theory of the photographic process that proposes a two-stage mechanism; in the first stage, a light quantum is absorbed at a point within the silver halide gelatin, releasing a mobile electron and a positive hole; these mobile defects diffuse to trapping sites (sensitivity centers) within the volume or on the surface of the grain; in the second stage, trapped (negatively charged) electron is neutralized by an interstitial (positively charged) silver ion, which combines with the electron to form a silver atom; the silver atom is capable of trapping a second electron, after which the process repeats itself, causing the silver speck to grow.

gusset [CIV ENG] A plate that is used to strengthen truss joints. [MIN ENG] A V-shaped cut in the face of a heading.

gusset plate [CIV ENG] A rectangular or triangular steel plate that connects members of a truss.

gust [METEOROL] A sudden, brief increase in the speed of the wind; it is of a more transient character than a squall and is followed by a lull or slackening in the wind speed.

gustation [PHYSIO] The act or the sensation of tasting.

gustatoreceptor [ANAT] A taste bud. [PHYSIO] Any sense organ that functions as a receptor for the sense of taste.

gust-gradient distance [AERO ENG] The horizontal distance along an aircraft flight path from the "edge" of a gust to the point at which the gust reaches its maximum speed.

gustiness [METEOROL] A quality of airflow characterized by gusts.

gustiness components [METEOROL] **1.** The ratios, to the mean wind speed, of the average magnitudes of the component fluctuations of the wind along three mutually perpendicular axes. **2.** The ratios of the root-mean-squares of the eddy velocities to the mean wind speed. Also known as intensity of turbulence.

gustiness factor [METEOROL] A measure of the intensity of wind gusts; it is the ratio of the total range of wind speeds between gusts and the intermediate periods of lighter wind to the mean wind speed, averaged over both gusts and lulls.

gust load [MECH] The wind load on an antenna due to gusts.

gustsonde [ENG] An instrument dropped from high altitude by a stable parachute, to measure the vertical component of turbulence aloft; consists of an accelerometer and radio telemetering equipment.

gust tunnel [AERO ENG] A type of wind tunnel that has an enclosed space and is used to test the effect of gusts on an airplane model in free flight to determine how atmospheric gusts affect the flight of an airplane.

gut [ANAT] The intestine. [EMBRYO] The embryonic digestive tube. [GEOL] **1.** A narrow water passage such as a strait. **2.** A channel deeper that the surrounding water; generally formed by water in motion.

Guthrie test [PATH] A screening test for the detection of phenylketonuria in which the inhibition of growth of a strain of *Bacillus subtilis* by a phenylalanine analog is reversed by L-phenylalanine, as found in elevated concentration in the plasma of patients with phenylketonuria.

guti weather [METEOROL] In Rhodesia, a dense stratocumulus overcast, frequently with drizzle, occurring mainly in early summer, and associated with easterly winds that invade the interior, bringing in cool and stable maritime air when an anticyclone moves eastward south of Africa.

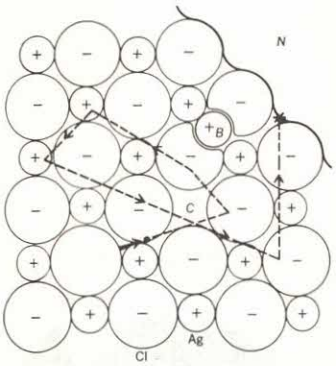
gutta-balata *See* balata.

gutta-percha [MATER] A leathery, thermoplastic substance consisting of gutta hydrocarbon with some resin obtained from the latex of certain Malaysian sapotaceous trees; it is used as insulation for submarine cables, and in golf balls and other products.

guttation [BOT] The discharge of water from a plant surface, especially from a hydathode.

gutter [BUILD] A trough along the edge of the eaves of a

GURNEY-MOTT THEORY



Schematic representation of Gurney-Mott theory. Broken line shows path of photoelectron which is eventually trapped in vicinity of a silver speck *N*. The interstitial silver ion *B* has come up to neutralize the charge of the electron and thus to add to the silver speck. *(After J. R. Haynes and W. Schockley)*

building to carry off rainwater. [CIV ENG] A shallow trench provided beside a canal, bordering a highway, or elsewhere, for surface drainage. [GRAPHICS] In the pages of a book, the unprinted space or inner margin between the printed area and the binding. [MET] A groove along the periphery of a die impression to allow for excess flash during forging. [MIN ENG] A drainage trench cut along the side of a mine shaft to conduct the water back into a lodge or sump.

guttering [ENG] A process of quarrying stone in which channels, several inches wide, are cut by hand tools, and the stone block is detached from the bed by pinch bars. [MIN ENG] The process of cutting gutters in a mine shaft.

Guttiferae [BOT] A family of dicotyledonous plants in the order Theales characterized by extipulate leaves and conspicuous secretory canals or cavities in all organs.

guttra [METEOROL] In Iran, sudden squalls in May.

Guttulinaceae [MICROBIO] A family of microorganisms in the Acrasiales characterized by simple fruiting structures with only slightly differentiated component cells containing little or no cellulose.

Gutzeit test [ANALY CHEM] A test for arsenic; zinc and dilute sulfuric acid are added to the substance, which is then covered with a filter paper moistened with mercuric chloride solution; a yellow spot forms on the paper if arsenic is in the sample.

Gutzkow's process [MET] A modification of the sulfuric acid parting process for bullion containing large amounts of copper; a large excess of acid is used, and the silver sulfate is then reduced with charcoal, or, in the original process, ferrous sulfate.

guxen [METEOROL] A cold wind of the Alps in Switzerland.

guy [ENG] A rope or wire securing a pole, derrick, or similar temporary structure in a vertical position.

guy derrick [MECH ENG] A derrick having a vertical pole supported by guy ropes to which a boom is attached by rope or cable suspension at the top and by a pivot at the foot.

guyot [GEOL] A seamount, usually deeper than 100 fathoms (180 meters), having a smooth platform top. Also known as tablemount.

guzzle [METEOROL] In the Shetland Islands, an angry blast of wind, dry and parching.

G value [NUCLEO] The number of molecules produced or destroyed for each 100 electron volts absorbed by a substance from ionizing radiation. Also known as G factor.

GW *See* gigawatt.

Gy *See* gray.

Gymnarchidae [VERT ZOO] A monotypic family of electrogenic fishes in the order Osteoglossiformes in which individuals lack pelvic, anal, and caudal fins.

Gymnarthridae [PALEON] A family of extinct lepospondylous amphibians that have a skull with only a single bone representing the tabular and temporal elements of the primitive skull roof.

gymnite *See* deweylite.

Gymnoascaceae [MYCOL] A family of ascomycetous fungi in the order Eurotiales including dermatophytes and forms that grow on dung, soil, and feathers.

Gymnoblastea [INV ZOO] A suborder of coelenterates in the order Hydroida comprising hydroids without protective cups around the hydranths and gonozooids.

gymnoblastic [INV ZOO] Having naked medusa buds, referring to anthomedusan hydroids.

gymnocarpous [BOT] Having the hymenium uncovered on the surface of the thallus or fruiting body of lichens or fungi.

gymnocephalous cercaria [INV ZOO] A type of digenetic trematode larva.

Gymnocerata [INV ZOO] An equivalent name for Hydrocorisae.

Gymnocodiaceae [PALEOBOT] A family of fossil red algae.

Gymnodinia [INV ZOO] A suborder of flagellate protozoans in the order Dinoflagellida that are naked or have thin pellicles.

gymnogynous [BOT] Having a naked ovary.

Gymnolaemata [INV ZOO] A class of ectoproct bryozoans possessing lophophores which are circular in basal outline and zooecia which are short, wide, and vaselike or boxlike.

Gymnonoti [VERT ZOO] An equivalent name for Cypriniformes.

Gymnophiona [VERT ZOO] An equivalent name for Apoda.

Gymnopleura [INV ZOO] A subsection of brachyuran decapod crustaceans including the primitive burrowing crabs with trapezoidal or elongate carapaces, the first pereiopods subchelate, and some or all of the remaining pereiopods flattened and expanded.

gymnosperm [BOT] The common name for members of the division Pinophyta; seed plants having naked ovules at the time of pollination.

Gymnospermae [BOT] The equivalent name for Pinophyta.

Gymnostomatida [INV ZOO] An order of the protozoan subclass Holotrichia containing the most primitive ciliates, distinguished by the lack of ciliature in the oral area.

Gymnotidae [VERT ZOO] The single family of the suborder Gymnotoidei; eel-shaped fishes having numerous vertebrae, and anus located far forward, and lacking pelvic and developed dorsal fins.

Gymnotoidei [VERT ZOO] A monofamilial suborder of actinopterygian fishes in the order Cypriniformes.

gynaecandrous [BOT] Having staminate and pistillate flowers on the same spike.

gynander [BIOL] A mosaic individual composed of diploid female portions derived from both parents and haploid male portions derived from an extra egg or sperm nucleus.

gynandry [PHYSIO] A form of pseudohermaphroditism in which the external sexual characteristics are partly or wholly of the male aspect, but internal female genitalia are present. Also known as female pseudohermaphroditism; virilism.

gynecology [MED] The branch of the medical science dealing with diseases of women, particularly those affecting the sex organs.

gynecomastia [MED] Abnormal enlargement of the mammary glands in the male.

gynephobia [PSYCH] An abnormal fear of women.

gynobase [BOT] A gynoecium-bearing elongation of the receptacle in certain plants.

gynodioecious [BOT] Dioecious but with some perfect flowers on a plant bearing pistillate flowers.

gynoecium [BOT] The aggregate of carpels in a flower.

gynogenesis [EMBRYO] Development of a fertilized egg through the action of the egg nucleus, without participation of the sperm nucleus.

gynomerogony [EMBRYO] Development of a fragment of a fertilized egg containing the haploid egg nucleus.

gynomonoecious [BOT] Having complete and pistillate flowers on the same plant.

gynophore [BOT] **1.** A stalk that bears the gynoecium. **2.** An elongation of the receptacle between pistil and stamens.

gynostemium [BOT] The column composed of the united gynoecia and androecium.

gyotaku [GRAPHICS] The art of Japanese fish printing, a modern application of stone-rubbing technique.

gypsite [GEOL] A variety of gypsum consisting of dirt and sand; found as an efflorescent deposit in arid regions, overlying gypsum. Also known as gypsum earth.

gypsophilous [ECOL] Flourishing on a gypsum-rich substratum.

gypsum [MINERAL] $CaSO_4 \cdot 2H_2O$ A mineral, the commonest sulfate mineral; crystals are monoclinic, clear, white to gray, yellowish, or brownish in color, with well-developed cleavages; luster is subvitreous to pearly, hardness is 2 on Mohs scale, and specific gravity is 2.3; it is calcined at 190–200°C to produce plaster of paris.

gypsum board [MATER] A plaster board covered with paper.

gypsum cement *See* gypsum plaster.

gypsum earth *See* gypsite.

gypsum lath [MATER] Lath consisting of a core of set gypsum surfaced with paper that is treated to receive plaster.

gypsum plank [MATER] A structural precast unit consisting of gypsum core reinforced with welded galvanized steel mesh and bounded on all four edges with a tongue-and-groove steel form; used as the roof deck of steel-frame buildings, and sometimes for the floor system.

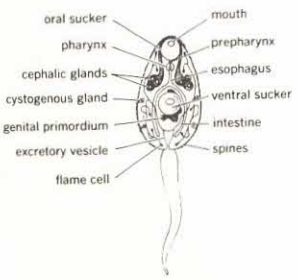
gypsum plaster [MATER] Plaster made principally from gypsum. Also known as gypsum cement.

gypsum wallboard [MATER] Wallboard consisting of a core of set gypsum surfaced with paper or other fibrous material suitable to receive paint or paper.

gypsy [NAV ARCH] A small auxiliary drum fitted to one or both ends of a winch or windlass.

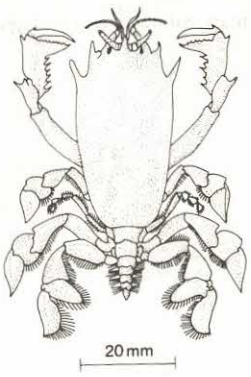
gypsy head [NAV ARCH] A small auxiliary drum at the end

GYMNOCEPHALOUS CERCARIA



Anatomy of gymnocephalous cercaria. *(From R. M. Cable, An Illustrated Laboratory Manual of Parasitology, Burgess, 1958)*

GYMNOPLEURA



Gymnopleuran crab, *Raninoides louisianensis.* *(Smithsonian Institution)*

GYPSUM

A gypsum crystal found in Oxfordshire, England. *(American Museum of Natural History Specimen)*

of a windlass or capstan, used to handle lines. Also spelled gipsy head.

gypsy moth [INV ZOO] *Porthetria dispar*. A large lepidopteran insect of the family Lymantriidae that was accidentally imported into New England from Europe in the late 19th century; larvae are economically important as pests of deciduous trees.

Gyracanthididae [PALEON] A family of extinct acanthodian fishes in the suborder Diplacanthoidei.

gyration tensor [SOLID STATE] A tensor characteristic of an optically active crystal, whose product with a unit vector in the direction of propagation of a light ray gives the gyration vector.

gyration vector [OPTICS] For light propagating in an optically active medium, a vector whose cross product with the time derivative of the electric displacement vector gives a negative contribution to the electric field.

gyrator [ELECTROMAG] A waveguide component that uses a ferrite section to give zero phase shift for one direction of propagation and 180° phase shift for the other direction; in other words, it causes a reversal of signal polarity for one direction of propagation but not for the other direction. Also known as microwave gyrator.

gyrator filter [ELECTR] A highly selective active filter that uses a gyrator which is terminated in a capacitor so as to have an inductive input impedance.

gyratory breaker *See* gyratory crusher.

gyratory crusher [MECH ENG] A primary breaking machine in the form of two cones, an outer fixed cone and a solid inner erect cone mounted on an eccentric bearing. Also known as gyratory breaker.

gyratory screen [MECH ENG] Boxlike machine with a series of horizontal screens nested in a vertical stack with downward-decreasing mesh-opening sizes; near-circular motion causes undersized material to sift down through each screen in succession.

gyre [OCEANOGR] A closed circulatory system, but larger than a whirlpool or eddy.

Gyrinidae [INV ZOO] The whirligig beetles, a family of large coleopteran insects in the suborder Adephaga.

Gyrinocheilidae [VERT ZOO] A monogeneric family of cypriniform fishes in the suborder Cyprinoidei.

gyro *See* gyroscope.

gyrocompass [NAV] A north-seeking form of gyroscope used as a vehicle's or craft's directional reference. Also known as gyroscopic compass.

gyrocompass alignment [NAV] Automatic alignment of a gyrocompass with the celestial meridian.

gyrocompassing [NAV] In inertial navigation equipment, a process of self-alignment in azimuth accomplished without any external equipment, consisting basically of using the inertial platform's accelerometers to slave it to the local gravity vector, and employing one of the gyros to seek true north by sensing the rotation of the earth in the manner of a gyro compass.

Gyrocotylidae [INV ZOO] An order of tapeworms of the subclass Cestodaria; species are intestinal parasites of chimaeroid fishes and are characterized by an anterior eversible proboscis and a posterior ruffled adhesive organ.

Gyrocotyloidea [INV ZOO] A class of trematode worms according to some systems of classification.

Gyrodactyloidea [INV ZOO] A superfamily of ectoparasitic trematodes in the subclass Monogenea; the posterior holdfast is solid and is armed with central anchors and marginal hooks.

gyro error [NAV] The error in the reading of the gyro compass, expressed in degrees east or west to indicate the direction in which the axis of the compass is offset from the north.

gyro flux-gate compass [NAV] A compass in which a flux gate, horizontally stabilized by a gyroscope, senses the horizontal component of the earth's magnetic field; being fixed with respect to the aircraft, the compass reacts to each change in heading with a change in current.

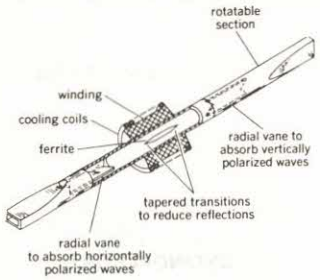
gyrofrequency *See* cyclotron frequency.

gyrogonite [PALEOBOT] A minute, ovoid body that is the residue of the calcareous encrustation about the female sex organs of a fossil stonewort.

gyro graph [NAV] A graph for recording and indicating drift of a directional gyro; usually a graph of drift from the desired heading versus time.

gyro log [NAV] **1.** A written record of directional gyro drift. **2.** A written record of the performance of a gyro compass.

GYRATOR



A practical nonreciprocal gyrator.

GYROSCOPE

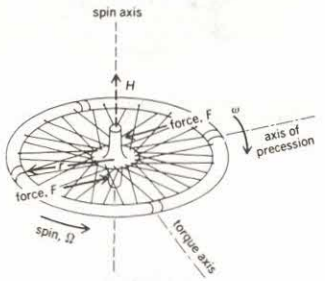


Illustration of gyroscope principle. Bicycle wheel with high spin velocity Ω has angular momentum $H = mr^2\,\Omega$, where m and r are mass and radius of wheel. Torque T resulting from force F produces precession with small angular velocity $\omega = T/H$ about axis perpendicular to both spin axis and torque axis.

gyromagnetic compass [NAV] A magnetic compass in which gyroscopic stabilization is used to indicate direction.

gyromagnetic coupler [ELECTR] A coupler in which a single-crystal yig (yttrium iron garnet) resonator provides coupling at the required low signal levels between two crossed strip-line resonant circuits.

gyromagnetic effect [ELECTROMAG] The rotation induced in a body by a change in its magnetization, or the magnetization resulting from a rotation.

gyromagnetic radius *See* Larmor radius.

gyromagnetic ratio [PHYS] **1.** The ratio of the magnetic dipole moment to the angular momentum for a classical, atomic, or nuclear system. **2.** Occasionally, the reciprocal of the quantity in the first definition.

gyromagnetics [ELECTROMAG] The study of the relation between the angular momentum and the magnetization of a substance as exhibited in the gyromagnetic effect.

gyropendulum [MECH ENG] A gravity pendulum attached to a rapidly spinning gyro wheel.

Gyropidae [INV ZOO] A family of biting lice in the order Mallophaga; members are ectoparasites of South American rodents.

gyroplane [AERO ENG] A rotorcraft whose rotors are not power-driven.

gyrorepeater [ENG] That part of a remote indicating gyro compass system which repeats at a distance the indications of the master gyro compass system.

gyroscope [ENG] An instrument that maintains an angular reference direction by virtue of a rapidly spinning, heavy mass; all applications of the gyroscope depend on a special form of Newton's second law, which states that a massive, rapidly spinning body rigidly resists being disturbed and tends to react to a disturbing torque by precessing (rotating slowly) in a direction at right angles to the direction of torque. Also known as gyro.

gyroscopic-clinograph method [ENG] A method used in borehole surveying which measures time, temperature, and temperature on 16-millimeter film while a gyroscope maintains the casing on a fixed bearing.

gyroscopic compass *See* gyrocompass.

gyroscopic/Coriolis-type mass flowmeter [ENG] An instrument consisting of a C-shape pipe and a T-shaped leaf-spring tuning fork which is excited by an electromagnetic forcer, resulting in an angular deflection of the pipe which is directly proportional to the mass-flow rate within the pipe.

gyroscopic couple [MECH ENG] The turning moment which opposes any change of the inclination of the axis of rotation of a gyroscope.

gyroscopic drift [NAV] The horizontal rotation of the spin axis of a gyroscope about the drift axis.

gyroscopic horizon [NAV] A gyroscopic instrument that indicates the lateral and longitudinal attitude of an aircraft by simulating the natural horizon.

gyroscopic mass flowmeter [ENG] An instrument in which the torque on a rotating pipe of suitable shape, through which a fluid is made to flow, is measured to determine the mass flow through the pipe.

gyroscopic precession [MECH] The turning of the axis of spin of a gyroscope as a result of an external torque acting on the gyroscope; the axis always turns toward the direction of the torque.

gyroscopics [MECH] The branch of mechanics concerned with gyroscopes and their use in stabilization and control of ships, aircraft, projectiles, and other objects.

gyrosextant [NAV] A sextant provided with a gyroscope for the purpose of determining the horizontal.

gyrostabilizer [ENG] A gyroscope used to stabilize ships and airplanes.

gyrotron [ELECTR] **1.** A device that detects motion of a system by measuring the phase distortion that occurs when a vibrating tuning fork is moved. **2.** A type of microwave tube in which microwave amplification or generation results from cyclotron resonance coupling between microwave fields and an electron beam in vacuum. Also known as cyclotron resonance maser.

gyro wheel [MECH ENG] The rapidly spinning wheel in a gyroscope, which resists being disturbed.

gyrus [ANAT] One of the convolutions (ridges) on the surface of the cerebrum.

gyttja [GEOL] A fresh-water anaerobic mud containing an abundance of organic matter; capable of supporting aerobic life.

H

h *See* Planck's constant.

H *See* henry; hydrogen.

Ĥ [MED] A symbol used in electrocardiography for the longitudinal axis of the heart as projected on the frontal plane.

ha *See* hectare.

HAA *See* height above airport.

Haanel depth rule [GEOPHYS] A rule for estimating the depth of a magnetic body, provided the body may be considered magnetically equivalent to a single pole; the depth of the pole is then equal to the horizontal distance from the point of maximum vertical magnetic intensity to the points where the intensity is one-third of the maximum value.

haar [METEOROL] A wet sea fog or very fine drizzle which drifts in from the sea in coastal districts of eastern Scotland and northeastern England; it occurs most frequently in summer.

Haar measure [MATH] A measure on the Borel subsets of a locally compact topological group whose value on a Borel subset U is unchanged if every member of U is multiplied by a fixed element of the group.

Haase system [MIN ENG] Shaft sinking in loose ground or quicksand by piles in the form of iron tubes connected by webs; downward movement is facilitated by water forced down the tubes to wash away loose material beneath their points.

habenula [ANAT] **1.** Stalk of the pineal body. **2.** A ribbonlike structure.

habenular commissure [ANAT] The commissure connecting the habenular ganglia in the roof of the diencephalon.

habenular ganglia [ANAT] Olfactory centers anterior to the pineal body.

habenular nucleus [ANAT] Either of a pair of nerve centers that are located at the base of the pineal body on either side and serve as an olfactory correlation center.

Haber-Bosch process [CHEM ENG] Early nitrogen-fixation process for production of ammonia from hydrogen and nitrogen, catalyzed by iron; now replaced by more efficient ammonia synthesis processes. Also known as Haber process.

Haber process *See* Haber-Bosch process.

habit [CRYSTAL] *See* crystal habit. [PSYCH] A repetitious behavior pattern.

habitat [ECOL] The part of the physical environment in which a plant or animal lives.

habit plane [CRYSTAL] The crystallographic plane or system of planes along which certain phenomena such as twinning occur.

habitual abortion [MED] Recurring, successive spontaneous abortion.

habituation [MED] **1.** A condition of tolerance to the effects of a drug or a poison, acquired by its continued use; marked by a psychic craving for it when the drug is withdrawn. **2.** Mild drug addiction in which withdrawal symptoms are not severe.

habitus [BIOL] General appearance or constitution of an organism.

haboob [METEOROL] A strong wind and sandstorm or duststorm in the northern and central Sudan, especially around Khartum, where the average number is about 24 haboobs a year.

habutai [TEXT] A smooth, lightweight silk fabric, originally hand-woven in Japan.

hachure [MAP] A short line used to denote slopes of the ground, as on maps.

H acid [ORG CHEM] $H_2NC_{10}H_4(OH)(SO_3H)_2$ A gray powder or crystalline substance that is soluble in water, ether, and alcohol; used as a dye intermediate. Also known as 8 amino-1-naphthol-3,6-disulfonic acid.

hackberry [BOT] **1.** *Celtis occidentalis*. A tree of the eastern United States characterized by corky or warty bark, and by alternate, long-pointed serrate leaves unequal at the base; produces small, sweet, edible drupaceous fruit. **2.** Any of several other trees of the genus *Celtis*.

hacking [LAP] A system of grooves in a lap that hold diamond powder for cutting and polishing gems.

hackle [TEXT] A board studded with long, thin wire brushes and used for hackling.

hackling [TEXT] Passing a comb through flax to clean and straighten the fibers.

hackmanite [MINERAL] A mineral of the sodalite family containing a small amount of sulfur; fluoresces orange or red in ultraviolet light.

hackmarack *See* tamarack.

hacksaw [ENG] A hand or power tool consisting of a fine-toothed blade held in tension in a bow-shaped frame; used for cutting metal, wood, and other hard materials.

hack watch [HOROL] A watch having a device for stopping the balance so that the hour, minute, and second hands may be reset precisely; used for timing observations of celestial bodies and regulating ship clocks.

hadal [OCEANOGR] Pertaining to the environment of the ocean trenches, over 6.5 kilometers in depth.

Hadamard's inequality [MATH] An inequality that gives an upper bound for the square of the absolute value of the determinant of a matrix in terms of the squares of the matrix entries; the upper bound is the product, over the rows of the matrix, of the sum of the squares of the absolute values of the entries in a row.

Hadar *See* β Centauri.

haddock [VERT ZOO] *Melanogrammus aeglefinus*. A fish of the family Gadidae characterized by a black lateral line and a dark spot behind the gills.

hade [GEOL] **1.** The angle of inclination of a fault as measured from the vertical. **2.** The inclination angle of a vein or lode.

Hadfield manganese steel [MET] Austenitic steel (face-centered cubic structure) containing 11–14% manganese; resistant to shock and wear. Also known as austenitic manganese steel; manganese steel.

Hadley cell [METEOROL] A direct, thermally driven, and zonally symmetric circulation first proposed by George Hadley as an explanation for the trade winds; it consists of the equatorward movement of the trade winds between about latitude 30° and the equator in each hemisphere, with rising wind components near the equator, poleward flow aloft, and finally descending components at about latitude 30° again.

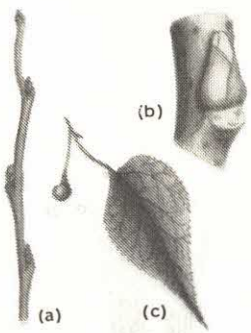
Hadromerina [INV ZOO] A suborder of sponges in the class Clavaxinellida having monactinal megascleres, usually with a terminal knob at one end.

hadromycosis [PL PATH] Any plant disease resulting from infestation of the xylem by a fungus.

hadron [PARTIC PHYS] An elementary particle which has strong interactions.

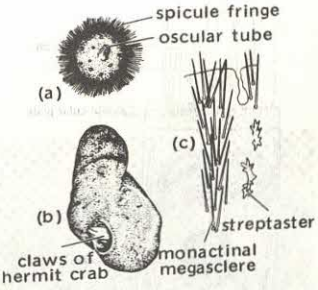
hadron era [ASTRON] The period in the early universe when the physical forces (gravity, weak, strong, and electromagnetic) diverged from a condition of rough equivalence to increasing disparity, roughly the time between about 10^{-43} and 10^{-4} second after the big bang.

HACKBERRY

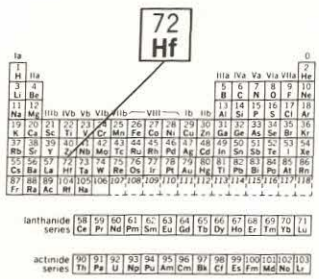


Common hackberry *(Celtis occidentalis)*. *(a)* Twig. *(b)* Lateral bud. *(c)* Leaf.

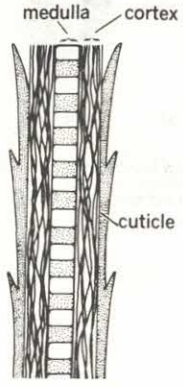
HADROMERINA



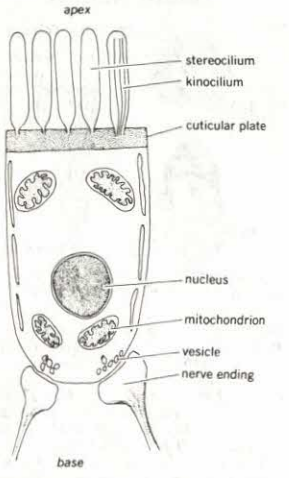
Representative hadromerine sponges. *(a) Radiella sol*, deep-sea species with peripheral fringe of spicules *(from Hyman, 1940, after Ridley and Dendy, 1887)*. *(b) Suberites ficus* living on shell occupied by hermit crab *(from Hyman, 1940, after Muller, 1914)*. *(c)* Monactinal megasclere arrangement of *Spirastrella (after Hyman, 1940)*.



Periodic table of the chemical elements showing the position of hafnium.



Longitudinal section of a hair shaft.



Generalized diagram of hair cell showing the two types of cilia: the stereocilium and the kinocilium.

hadronic atom [ATOM PHYS] An atom consisting of a negatively charged, strongly interacting particle orbiting around an ordinary nucleus.

hadrosaur [PALEON] A duck-billed dinosaur.

Hadsel mill [MIN ENG] An early autogenous grinding mill in which comminution was caused by the fall of ore on ore that was rotating in a large-diameter horizontal cylinder.

Haeckel's law *See* recapitulation theory.

haematodocha [INV ZOO] A sac in the palpus of male spiders that fills with hemolymph and becomes distended during pairing.

Haemobartonella [MICROBIO] A genus of bacteria in the family Anaplasmataceae; parasites in or on red blood cells of many vertebrates.

Haemophilus [MICROBIO] A genus of gram-negative coccobacilli or rod-shaped bacteria of uncertain affiliation; cells may form threads and filaments and are aerobic or facultatively anaerobic; strictly blood parasites.

Haemosporina [INV ZOO] A suborder of sporozoan protozoans in the subclass Coccidia; all are parasites of vertebrates, and human malarial parasites are included.

haerangium [MYCOL] The fruiting body of *Fugascus* and *Ceratostomella*.

HAF black *See* high-abrasion furnace black.

haff [GEOGR] A freshwater lagoon separated from the sea by a sandbar.

Hafnia [MICROBIO] A genus of bacteria in the family Enterobacteriaceae; motile rods that can utilize citrate as the only source of carbon.

hafnium [CHEM] A metallic element, symbol Hf, atomic number 72, atomic weight 178.49; melting point 2000°C, boiling point above 5400°C.

hafnium carbide [INORG CHEM] HfC Gray powder, melting at 3887°C; used in the control rods of nuclear reactors.

Haftplatte [INV ZOO] An adhesive plate or disk in some turbellarians; it is a glanduloepidermal organ.

Hageman factor *See* factor XII.

Hagen-Poiseuille law [FL MECH] In the case of laminar flow of fluid through a circular pipe, the loss of head due to fluid friction is 32 times the product of the fluid's viscosity, the pipe length, and the fluid velocity, divided by the product of the acceleration of gravity, the fluid density, and the square of the pipe diameter.

Hagen-Rubens relation [OPTICS] An equation for the reflectivity of a solid surface in terms of the frequency of radiation of the conductivity of the solid; it applies at wavelengths long enough that the product of the frequency and the relaxation time is much less than unity.

hagfish [VERT ZOO] The common name for the jawless fishes composing the order Myxinoidea.

Haggenmacher equation [CHEM] Equation to calculate latent heats of vaporizations of pure compounds by using critical conditions with Antoine constants.

H agglutinin [IMMUNOL] An antibody that is type-specific for the flagella of cells or microorganisms.

Hahn-Banach extension theorem [MATH] The theorem that every continuous linear functional defined on a subspace or linear manifold in a normed linear space X may be extended to a continuous linear functional defined on all of X.

Hahnemannism *See* homeopathy.

Hahn technique [SOLID STATE] A method of studying changes in solids under various treatments that involves incorporating small amounts of radium into the solid and measuring the emanating power.

Haidinger brushes [OPTICS] Faint yellow, brushlike patterns that are observed when a bright surface is viewed through a polarizer such as a rotating Nicol prism or sheet of Polaroid film; believed to be caused by birefringence of fibers at the fovea of the eye.

Haidinger fringes [OPTICS] Interference fringes produced by nearly normal incidence of light on thick, flat plates. Also known as constant-angle fringes; constant-deviation fringes.

haidingerite [MINERAL] $HCaAsO_4 \cdot H_2O$ A white mineral composed of hydrous calcium arsenate.

hail [METEOROL] Precipitation in the form of balls or irregular lumps of ice, always produced by convective clouds, nearly always cumulonimbus.

hail stage [METEOROL] Thermodynamic process of freezing of suspended water drops in adiabatically rising air with temperature below the freezing point, under the assumption that release of latent heat of fusion maintains constant temperature until all water is frozen.

hailstone [METEOROL] A single unit of hail, ranging in size from that of a pea to that of a grapefruit, or from less than ¼ inch (6 millimeters) to more than 5 inches (13 centimeters) diameter; may be spheroidal, conical, or generally irregular in shape.

hair [ZOO] **1.** A threadlike outgrowth of the epidermis of animals, especially a keratinized structure in mammalian skin. **2.** The hairy coat of a mammal, or of a part of the animal.

hair ball *See* lake ball.

hair cell [HISTOL] The basic sensory unit of the inner ear of vertebrates; a columnar, polarized structure with specialized cilia on the free surface.

haircloth [TEXT] A stiff, wiry fabric made with a weft of hair, especially of horsehair or camel's hair, and a warp of cotton, linen, or wool.

hair copper *See* chalcotrichite.

haircord [TEXT] **1.** An English dress muslin made with thick warp cords. **2.** An English bleached cotton fabric with colored warp cords; similar to dimity but heavier.

hair cracks [MATER] Fine, random cracks in the surface of the top coat of paint or other coating material.

hair cycle [PHYSIO] The formation and growth of a new hair, followed by a resting stage, and ending with growth of another new hair from the same follicle.

hair felt [MATER] Felt made of cattle hair; used as insulation in buildings.

hair follicle [ANAT] An epithelial ingrowth of the dermis that surrounds a hair.

hair gland [ANAT] Sebaceous gland associated with hair follicles.

hair hygrometer [ENG] A hygrometer in which the sensing element is a bundle of human hair, which is held under slight tension by a spring and which expands and contracts with changes in the moisture of the surrounding air or gas.

hairline *See* air line.

hairpin tube [DES ENG] A boiler tube bent into a hairpin, or U, shape.

hair pyrites *See* millerite.

hair salt *See* alunogen.

hairspring *See* balance spring.

hairstone [GEOL] Quartz embedded with hairlike crystals of rutile, actinolite, or other mineral.

hair trigger [ORD] The trigger of a firearm when it is delicately balanced so as to fire easily.

hairworm [INV ZOO] The common name for about 80 species of worms composing the class Nematomorpha.

hairy tongue [MED] Hyperplasia of the papillae forming hairlike projections on the tongue.

Halacaridae [INV ZOO] A family of marine arachnids in the order Acarina.

halation [ELECTR] An area of glow surrounding a bright spot on a fluorescent screen, due to scattering by the phosphor or to multiple reflections at front and back surfaces of the glass faceplate. [OPTICS] A halo on a photographic image of a bright object caused by light reflected from the back of the film or plate.

halazone [ORG CHEM] $COOHC_6H_4SO_2NCl_2$ White crystals, with strong chlorine aroma; slightly soluble in water and chloroform; used as water disinfectant.

halcyon days [METEOROL] A period of fine weather.

Haldane's rule [GEN] The rule that if one sex in a first generation of hybrids is rare, absent, or sterile, then it is the heterogametic sex.

Halecomorphi [VERT ZOO] The equivalent name for Amiiformes.

Halecostomi [VERT ZOO] The equivalent name for Pholidophoriformes.

Hale cycle [ASTRON] The variation of the sun's magnetic field over a period of approximately 22 years, during which the field reverses and is restored to its original polarity; one such cycle comprises two successive sunspot cycles.

half-adder [ELECTR] A logic element which operates on two binary digits (but no carry digits) from a preceding stage, producing as output a sum digit and a carry digit.

half-adjust [COMPUT SCI] A rounding process in which the least significant digit is dropped and, if the least significant digit is one-half or more of the number base, one is added to the next more significant digit and all carries are propagated.

half-and-half solder [MET] Solder composed of tin and lead in equal parts.

half-angle formulas [MATH] In trigonometry, formulas that express the trigonometric functions of half an angle in terms of trigonometric functions of the angle.

half-arc angle [METEOROL] The elevation angle of that point which a given observer regards as the bisector of the arc from his zenith to his horizon; a measure of the apparent degree of flattening of the dome of the sky.

half bat [MATER] One half of a brick, cut across the length.

half block [COMPUT SCI] The unit of transfer between main storage and the buffer control unit; it consists of a column of 128 elements, each element 16 bytes long.

half-breadth plan [NAV ARCH] A plan of a ship showing outlines of horizontal sections or waterlines at various levels, from the main deck to the keel; only the left or right half is shown.

half-bridge [ELEC] A bridge having two power supplies, located in two of the bridge arms, to replace the single power supply of a conventional bridge.

half-cell [PHYS CHEM] A single electrode immersed in an electrolyte.

half-cell potential [PHYS CHEM] In electrochemical cells, the electrical potential developed by the overall cell reaction; can be considered, for calculation purposes, as the sum of the potential developed at the anode and the potential developed at the cathode, each being a half-cell.

half chronometer [HOROL] **1.** A watch in which the lever and chronometer escapements are combined. **2.** A watch adjusted for temperature.

half cock [ORD] Position of the hammer of a small arm weapon when it is held by the first cocking notch, with the trigger locked and the weapon relatively safe.

half column [ARCH] A column projecting from a wall by about half its diameter.

half-convergency *See* conversion angle.

half-course [MIN ENG] The drift or opening driven at an angle of about 45° to the strike and in the plane of the seam.

half cycle [ENG] The time interval corresponding to half a cycle, or 180°, at the operating frequency of a circuit or device.

half-cycle transmission [COMMUN] Data transmission and control system that uses synchronized sources of 60-hertz power at the transmitting and receiving ends; either of two receiver relays can be actuated by choosing the appropriate half-cycle polarity of the 60-hertz transmitter power supply.

half-dog setscrew [DES ENG] A setscrew with a short, blunt point.

half-duplex circuit [COMMUN] A circuit designed for half-duplex operation. Abbreviated HDX.

half-duplex operation [COMMUN] Operation of a telegraph system in either direction over a single channel, but not in both directions simultaneously.

half-duplex repeater [ELECTR] Duplex telegraph repeater provided with interlocking arrangements which restrict the transmission of signals to one direction at a time.

half-hard [MET] A rolled-metal product of intermediate hardness or temper.

half-header [MIN ENG] A large cap piece; used by sawing a header in two and placing, generally, two timbers under the half header on one side of the haulage, with the end extending over the haulage.

half-life [CHEM] The time required for one-half of a given material to undergo chemical reactions. [NUCLEO] The average time interval required for one-half of any quantity of identical radioactive atoms to undergo radioactive decay. Also known as half-value period; radioactive half-life.

half line *See* ray.

half-loaded [ORD] In automatic arms, the condition wherein the belt or magazine is inserted and the receiver is charged, but without the first cartridge actually in the chamber.

half-moon [ASTRON] The moon as seen in the first quarter and the last, or third, quarter.

half nut [DES ENG] A nut split lengthwise so that it can be clamped around a screw.

half-period zones *See* Fresnel zones.

half plane [MATH] The portion of a plane lying on one side of some line in the plane; in particular, all points of the complex plane either above or below the real axis.

half-power frequency [ELECTR] One of the two values of frequency, on the sides of an amplifier response curve, at which the voltage is $1/\sqrt{2}$ (70.7%) of a midband or other reference value. Also known as half-power point.

half-power point [ELECTR] **1.** A point on the graph of some quantity in an antenna, network, or control system, versus frequency, distance, or some other variable at which the power is half that of a nearby point at which power is a maximum. **2.** *See* half-power frequency.

half-pulse-repetition-rate delay [ELECTR] In the loran navigation system, an interval of time equal to half the pulse repetition rate of a pair of loran transmitting stations, introduced as a delay between transmission of the master and slave signals, to place the slave station signal on the B trace when the master station signal is mounted on the A trace pedestal.

half-round file [DES ENG] A file that is flat on one side and convex on the other.

half section [GRAPHICS] View of a section of a symmetrical workpiece or assembly on an engineering drawing, terminating at an axis of symmetry.

half set [MIN ENG] In mine timbering, one leg piece and a collar.

half-shift register [ELECTR] Logic circuit consisting of a gated input storage element, with or without an inverter.

half-side formulas [MATH] In trigonometry, formulas that express the tangents of one-half of each of the sides of a spherical triangle in terms of its angles.

half-silvered surface [OPTICS] A surface covered with metallic film of a thickness such that approximately half the light falling on it at normal incidence is reflected and half is transmitted.

half space [BUILD] A broad step between two half flights of a stair. [MATH] A space bounded only by an infinite plane.

half step *See* semitone.

half-subtracter [ELECTR] A logic element which operates on two digits from a preceding stage, producing as output a difference digit and a borrow digit. Also known as one-digit subtracter; two-input subtracter.

half tap [ELEC] Bridge placed across conductors without disturbing their continuity.

half thickness [PHYS] The thickness of a sheet of material which reduces the intensity of a beam of radiation passing through it to one-half its initial value. Also known as half-value layer; half-value thickness.

half-through arch [CIV ENG] A bridge arch having the roadway running through it at an elevation midway between the base and the crown.

half tide [OCEANOGR] The condition when the tide is at the level between any given high tide and the following or preceding low tide. Also known as mean tide.

half-tide basin [CIV ENG] A lock of very large size and usually of irregular shape, the gates of which are kept open for several hours after high tide so that vessels may enter as long as there is sufficient depth over the sill; vessels remain in the half-tide basin until the ensuing flood tide, when they may pass through the gate to the inner harbor; if entry to the inner harbor is required before this time, water must be admitted to the half-tide basin from some external source.

half-tide level [OCEANOGR] The level midway between mean high water and mean low water.

half-timbered [BUILD] Pertaining to a timber frame building with brickwork, plaster, or wattle and daub filling the spaces between the timbers.

half time [NUCLEO] The time during which half the radioactive material resulting from a nuclear explosion remains in the atmosphere.

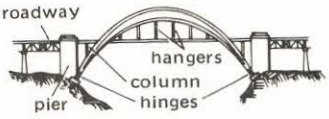
halftone [GRAPHICS] An engraving used in printing to reproduce photographs and drawings that contain continuous tones, that is, grays (middle tones or halftones) in addition to black and white; preparation involves photographing the artwork through a screen.

halftone characteristic [COMMUN] Fidelity of the recorded density shadings compared with the subject copy transmitted; the term may also be used to express the relationship between the facsimile signal and the subject copy or recorded copy.

halftone contact screen [GRAPHICS] A screen consisting of a regular pattern of dots that is used for making halftone negatives in a camera.

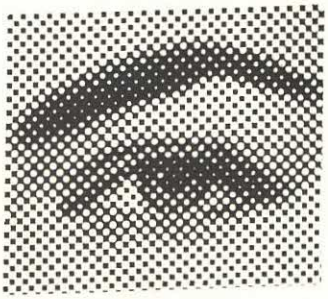
half-track [MECH ENG] **1.** A chain-track drive system for a vehicle; consists of an endless metal belt on each side of the vehicle driven by one of two inside sprockets and running on bogie wheels; the revolving belt lays down on the ground a

HALF-THROUGH ARCH



Drawing of a half-through, two-hinged, crescent-rib arch. *(From G. A. Hool and W. S. Kinne, Movable and Long-span Steel Bridges, 2d ed., McGraw-Hill, 1943)*

HALFTONE



Greatly enlarged detail of photoengraved halftone plate, showing formation of dots of different sizes. *(American Museum of Photography)*

flexible track of cleated steel or hard-rubber plates; the front end of the vehicle is supported by a pair of wheels. **2.** A motor vehicle equipped with half-tracks.

half-track tape recorder *See* double-track tape recorder.

half-value layer *See* half thickness.

half-value period *See* half-life.

half-value thickness *See* half thickness.

half-wave [ELEC] Pertaining to half of one cycle of a wave. [ELECTROMAG] Having an electrical length of a half wavelength.

half-wave amplifier [ELECTR] A magnetic amplifier whose total induced voltage has a frequency equal to the power supply frequency.

half-wave antenna [ELECTROMAG] An antenna whose electrical length is half the wavelength being transmitted or received.

half-wave dipole *See* dipole antenna.

half-wavelength [ELECTROMAG] The distance corresponding to an electrical length of half a wavelength at the operating frequency of a transmission line, antenna element, or other device.

half-wave plate [OPTICS] A thin section of a doubly refracting crystal, of a thickness such that the ordinary and extraordinary components of normally incident light emerge from it with a phase difference corresponding to an odd number of half wavelengths.

half-wave rectification [ELECTR] Rectification in which current flows only during alternate half cycles.

half-wave rectifier [ELECTR] A rectifier that provides half-wave rectification.

half-wave transmission line [ELECTROMAG] Transmission line which has an electrical length equal to one-half the wavelength of the signal being transmitted or received.

half-wave vibrator [ELEC] A vibrator having only one pair of contacts; interrupts the flow of direct current through the primary of a power transformer, but does not reverse the current.

half-width [MATH] For a function which has a maximum and falls off rapidly on either side of the maximum, the difference between the two values of the independent variable for which the dependent variable has one-half its maximum value.

half-word I/O buffer [COMPUT SCI] A buffer, the upper half being used to store the upper half of a word for both input and output characters, the lower half of the buffer being used for purposes such as the storage of constants.

halibut [VERT ZOO] Either of two large species of flatfishes in the genus *Hippoglossus;* commonly known as a right-eye flounder.

halibut liver oil [MATER] Fishy-tasting oil, pale yellow to dark red, with slightly fishy smell; soluble in alcohol, ether, chloroform, and carbon disulfide, insoluble in water; derived from halibut livers; used as medicine, as vitamin A and D source, and to dress leather.

Halichondrida [INV ZOO] A small order of sponges in the class Demospongiae with a skeleton of diactinal or monactinal, siliceous megascleres (or both), a skinlike dermis, and small amounts of spongin.

Halictidae [INV ZOO] The halictid and sweat bees, a family of hymenopteran insects in the superfamily Apoidea.

halide [CHEM] A compound of the type MX, where X is fluorine, chlorine, iodine, bromine, or astatine, and M is another element or organic radical.

Halimeda [BOT] A genus of small, bushy green algae in the family Codiaceae composed of thick, leaflike segments; important as a fossil and as a limestone builder.

Halimond tube [MIN ENG] A miniature pneumatic flotation cell used for examination of small ore samples under closely controllable conditions.

Haliotis [INV ZOO] A genus of gastropod mollusks commonly known as the abalones.

Haliplidae [INV ZOO] The crawling water beetles, a family of coleopteran insects in the suborder Adephaga.

halite [MINERAL] NaCl Native salt; an evaporite mineral occurring as isometric crystals or in massive, granular, or compact form. Also known as common salt; rock salt.

Halitheriinae [PALEON] A subfamily of extinct sirenian mammals in the family Dugongidae.

Hall accelerator [PL PHYS] A plasma accelerator based on the Hall effect.

Hall angle [ELECTROMAG] The electric field, resulting from the Hall effect, perpendicular to a current, divided by the electric field generating the current.

Hall coefficient [ELECTROMAG] A measure of the Hall effect, equal to the transverse electric field (Hall field) divided by the product of the current density and the magnetic induction. Also known as Hall constant.

Hall constant *See* Hall coefficient.

Hall cyclic thermal reforming [CHEM ENG] A gas-making process that uses component parts of carbureted–water gas apparatus to generate high-Btu gas from feedstocks ranging from naphtha to Bunker C.

Hall effect [ELECTROMAG] The development of a transverse electric field in a current-carrying conductor placed in a magnetic field; ordinarily the conductor is positioned so that the magnetic field is perpendicular to the direction of current flow and the electric field is perpendicular to both.

Hall-effect gaussmeter [ENG] A gaussmeter that consists of a thin piece of silicon or other semiconductor material which is inserted between the poles of a magnet to measure the magnetic field strength by means of the Hall effect.

Hall-effect isolator [ELECTROMAG] An isolator that makes use of the Hall effect in a semiconductor plate mounted in a magnetic field, to provide greater loss in one direction of signal travel through a waveguide than in the other direction.

Hall-effect modulator [ELECTR] A Hall-effect multiplier used as a modulator to give an output voltage that is proportional to the product of two input voltages or currents.

Hall-effect multiplier [ELECTR] A multiplier based on the Hall effect, used in analog computers to solve such problems as finding the square root of the sum of the squares of three independent variables.

Hall-effect switch [ELECTR] A magnetically activated switch that uses a Hall generator, trigger circuit, and transistor amplifier on a silicon chip.

Haller's organ [INV ZOO] A chemoreceptor on the tarsus of certain ticks.

Hallett table [MIN ENG] A Wilfley-type concentrating table having the tops of the riffles in the same plane as the cleaning planes, and riffles inclined toward the waste water side.

Halley's Comet [ASTRON] A member of the solar system, with an orbit and a period of about 76 years; its nucleus has been estimated to be about 15 kilometers in radius; next due to appear in 1985–1986.

Hall generator [ELECTROMAG] A generator using the Hall effect to give an output voltage proportional to magnetic field strength.

Hallian [GEOL] A North American stage of Pleistocene geologic time, above the Wheelerian and below the Recent.

halliard *See* halyard.

Hallinger shield [MIN ENG] A tunneling shield valuable for working in very soft ground; incorporates a mechanical excavator and does not entail the use of timbering to protect the miners.

Hall mobility [SOLID STATE] The product of conductivity and the Hall constant for a conductor or semiconductor; a measure of the mobility of the electrons or holes in a semiconductor.

halloysite [MINERAL] $Al_2Si_2O_5(OH)_4 \cdot 2H_2O$ Porcelainlike clay mineral whose composition is like that of kaolinite but contains more water and is structurally distinct; varieties are known as metahalloysites.

Hall process [MET] An electrolytic recovery process for aluminum employing a fused-bauxite (aluminum oxide), cryolite electrolyte.

hallucination [PSYCH] A perception without an appropriate stimulus.

hallucinogen [PHARM] A substance, such as LSD, that induces hallucinations.

hallucinogenic [PHARM] Of or pertaining to a hallucinogen. [PSYCH] Referring to any stimulus that creates the impression of experiencing a hallucination.

hallucinosis [PSYCH] The condition of being possessed by more or less persistent hallucinations, especially while fully conscious.

hallux [ANAT] The first digit of the hindlimb; the big toe of man.

hallux valgus [MED] A deformity of the great toe, in which the head of the first metatarsal deviates away from the second metatarsal, that is, toward the outside of the foot, and the phalanges are deviated toward the second toe, causing prominence of the metatarsophalangeal joint.

Hall voltage [ELECTR] The no-load voltage developed across a semiconductor plate due to the Hall effect, when a specified value of control current flows in the presence of a specified magnetic field.

Hallwachs effect [PHYS] The ability of ultraviolet radiation to discharge a negatively charged body in a vacuum.

halmeic [GEOL] Referring to minerals or sediments derived directly from sea water. Also known as halmyrogenic; halogenic.

halmophagous [ZOO] Pertaining to organisms which infest and eat stalks or culms of plants.

halmyrogenic *See* halmeic.

halmyrolysis [GEOCHEM] Postdepositional chemical changes that occur while sediment is on the sea floor.

halo [ASTRON] A type of ray system in which many short, filamentary streaks form a complex network of bright matter surrounding the lunar crater. Also known as nimbus. [ELECTR] An undesirable bright or dark ring surrounding an image on the fluorescent screen of a television cathode-ray tube; generally due to overloading or maladjustment of the camera tube. [GEOL] A ring or cresent surrounding an area of opposite sign; it is a diffusion of a high concentration of the sought mineral into surrounding ground or rock; it is encountered in mineral prospecting and in magnetic and geochemical surveys. [METEOROL] Any one of a large class of atmospheric optical phenomena which appear as colored or whitish rings and arcs about the sun or moon when seen through an ice crystal cloud or in a sky filled with falling ice crystals. [OPTICS] A ring around the photographic image of a bright source caused by light scattering in any one of a number of possible ways.

haloalkane [ORG CHEM] Halogenated aliphatic hydrocarbon.

Halobacteriaceae [MICROBIO] A family of gram-negative, aerobic rods and cocci which require high salt (sodium chloride) concentrations for maintenance and growth.

Halobacterium [MICROBIO] A genus of bacteria in the family Halobacteriaceae; single, rod-shaped cells which may be pleomorphic when media are deficient.

halo blight [PL PATH] A bacterial blight of beans and sometimes other legumes caused by *Pseudomonas phaseolicola* and characterized by water-soaked lesions surrounded by a yellow ring on the leaves, stems, and pods.

halocarbon [ORG CHEM] A compound of carbon and a halogen, sometimes with hydrogen.

halocarbon plastic [ORG CHEM] Plastic made from halocarbon resins.

halocarbon resin [ORG CHEM] Resin produced by the polymerization of monomers made of halogenated hydrocarbons, such as tetrafluoroethylene, C_2F_4, and trifluorochloroethylene, C_2F_3Cl.

halocline [OCEANOGR] A well-defined vertical gradient of salinity in the oceans and seas.

Halococcus [MICROBIO] A genus of bacteria in the family Halobacteriaceae; nonmotile cocci which occur in pairs, tetrads, or clusters of tetrads.

Halocypridacea [INV ZOO] A superfamily of ostracods in the suborder Myodocopa; individuals are straight-backed with a very thin, usually calcified carapace.

halo effect [IND ENG] A tendency when rating a person in regard to a specific trait to be influenced by a general impression or by another trait of the person.

haloform [ORG CHEM] CHX_3 A compound made by reaction of acetaldehyde or methyl ketones with NaOX, where X is a halogen; an example is iodoform, HCI_3, or bromoform, $HCBr_3$ or chloroform, $HCCl_3$.

haloform reaction [ORG CHEM] Halogenation of acetaldehyde or a methyl ketone in aqueous basic solution; the reaction is characteristic of compounds containing a CH_3CO group linked to a hydrogen or to another carbon.

halogen [CHEM] Any of the elements of the halogen family, consisting of fluorine, chlorine, bromine, iodine, and astatine.

halogenated hydrocarbon [ORG CHEM] One of a group of halogen derivatives of organic hydrogen- and carbon-containing compounds; the group includes monohalogen compounds (alkyl or aryl halides) and polyhalogen compounds that contain the same or different halogen atoms.

halogenation [ORG CHEM] A chemical process or reaction in which a halogen element is introduced into a substance, generally by the use of the element itself.

halogen counter [NUCLEO] A Geiger counter in which the self-quenching action is provided by a halogen gas, such as chlorine or bromine.

halogenic *See* halmeic.

halogen mineral [MINERAL] Any of the naturally occurring compounds containing a halogen as the sole or principal anionic constituent.

halohydrin [ORG CHEM] A compound with the general formula X—R—OH where X is a halide such as Cl^-; an example is chlorohydrin.

halokinesis *See* salt tectonics.

halomorphic [GEOCHEM] Referring to an intrazonal soil whose features have been strongly affected by either neutral or alkali salts, or both.

halonate [MYCOL] Pertaining to a spore surrounded by a colored circle. [PL PATH] A leaf spot surrounded by a halo.

halo of 22° [OPTICS] A halo phenomenon in the form of a prismatically colored circle of 22° angular radius around the sun or moon, exhibiting coloration from red on the inside to blue on the outside.

halo of 46° [OPTICS] A halo phenomenon in the form of a prismatically colored circle or incomplete arc thereof, centered on the sun or moon and having an angular radius of about 46°; the coloration is red on the inner edge to blue on the outer edge.

halo of 90° *See* Hevelian halo.

halo of Hevelius *See* Hevelian halo.

halo ore *See* fringe ore.

halophile [BIOL] An organism that requires high salt concentrations for growth and maintenance.

halophilism [BIOL] The phenomenon of demand for high salt concentrations for growth and maintenance.

halophone [ENG] A device that records patterns in time in a manner analogous to the way that optical holograms record space.

halophyte [ECOL] A plant or microorganism that grows well in soils having a high salt content.

Haloragaceae [BOT] A family of dicotyledonous plants in the order Haloragales distinguished by an apical ovary of 2–4 loculi, small inflorescences, and small, alternate or opposite or whorled, exstipulate leaves.

Haloragales [BOT] An order of dicotyledonous plants in the subclass Rosidae containing herbs with perfect or often unisexual, more or less reduced flowers, and a minute or vestigial perianth.

Halosauridae [VERT ZOO] A family of mostly extinct deep-sea teleost fishes in the order Notacanthiformes.

halosere [ECOL] The series of communities succeeding one another, from the pioneer stage to the climax, and commencing in salt water or on saline soil.

halothane [PHARM] $C_2HBrClF_3$ A colorless, nonflammable liquid used as a general anesthetic, by inhalation.

halotrichite [MINERAL] **1.** $FeAl_2(SO_4)_4 \cdot 22H_2O$ A mineral composed of hydrous sulfate of iron and aluminum. Also known as butter rock; feather alum; iron alum; mountain butter. **2.** Any sulfate mineral resembling halotrichite in structure and habit.

Halsey premium plan [IND ENG] A wage-incentive plan which sets a guaranteed daily rate to an employee and provides for predetermined compensation for superior performance.

Halsted's radical mastectomy [MED] Surgical removal of the breast, subcutaneous fat, muscle, lymph glands, and a wide area of skin for cancer.

halt [COMPUT SCI] The cessation of the execution of the sequence of operations in a computer program resulting from a halt instruction, hang-up, or interrupt.

haltere [INV ZOO] Either of a pair of capitate filaments representing rudimentary hindwings in Diptera. Also known as balancer.

halving [NAV] The process of adjusting magnetic compass correctors so as to remove half of the deviation on the opposite cardinal or adjacent intercardinal headings to those on which adjustment was originally made when all deviation was removed; this action is taken to equalize the error on opposite headings.

halyard [NAV ARCH] A rope or tackle used to raise or lower a flag, sail, or spar. Also spelled halliard.

Halysitidae [PALEON] A family of extinct Paleozoic corals of the order Tabulata.

Hamal [ASTRON] A second-magnitude star in the constellation Aries; the star α Ari.

Hamamelidaceae [BOT] A family of dicotyledonous trees or shrubs in the order Hamamelidales characterized by united carpels, alternate leaves, perfect or unisexual flowers, and free filaments.

Hamamelidae [BOT] A small subclass of plants in the class Magnoliopsida having strongly reduced, often unisexual flowers with poorly developed or no perianth.

Hamamelidales [BOT] A small order of dicotyledonous plants in the subclass Hamamelidae characterized by vessels in the wood and a gynoecium consisting either of separate carpels or of united carpels that open at maturity.

hamartoma [MED] An abnormal condition resulting in the formation of a mass of tissue of disproportionate size and distribution but composed of the normal tissue of the region.

hamartophobia [PSYCH] An abnormal fear of error or sin.

hamate [BIOL] Hook-shaped or hooked.

hambergite [MINERAL] Be_2BO_3OH A grayish-white or colorless mineral composed of beryllium borate and occurring as prismatic crystals; hardness is 7.5 on Mohs scale, and specific gravity is 2.35.

Hamel basis [MATH] For a normed space, a collection of vectors with every finite subset linearly independent, while any vector of the space is a linear combination of at most countably many vectors from this subset.

Hamilton-Cayley theorem *See* Cayley-Hamilton theorem.

Hamiltonian function [MECH] A function of the generalized coordinates and momenta of a system, equal in value to the sum over the coordinates of the product of the generalized momentum corresponding to the coordinate, and the coordinate's time derivative, minus the Lagrangian of the system; it is numerically equal to the total energy if the Lagrangian does not depend on time explicitly; the equations of motion of the system are determined by the functional dependence of the Hamiltonian on the generalized coordinates and momenta.

Hamiltonian operator *See* energy operator.

Hamilton-Jacobi equation [MATH] A particular partial differential equation useful in studying certain systems of ordinary equations arising in the calculus of variations, dynamics, and optics: $H(q_1, \ldots, q_n, \partial\phi/\partial q_1, \ldots, \partial\phi/\partial q_n, t) + \partial\phi/\partial t = 0$, where $q_1, \ldots, q_n$ are generalized coordinates, t is the time coordinate, H is the Hamiltonian function, and ϕ is a function that generates a transformation by means of which the generalized coordinates and momenta may be expressed in terms of new generalized coordinates and momenta which are constants of motion.

Hamilton-Jacobi theory [MATH] The study of the solutions of the Hamilton-Jacobi equation and the information they provide concerning solutions of the related systems of ordinary differential equations. [MECH] A theory that provides a means for discussing the motion of a dynamic system in terms of a single partial differential equation of the first order, the Hamilton-Jacobi equation.

Hamilton's equations of motion [MECH] A set of first-order, highly symmetrical equations describing the motion of a classical dynamical system, namely $\dot{q}_j = \partial H/\partial p_j$, $\dot{p}_j = -\partial H/\partial q_j$; here q_j ($j = 1, 2, \ldots$) are generalized coordinates of the system, p_j is the momentum conjugate to q_j, and H is the Hamiltonian. Also known as canonical equations of motion.

Hamilton's principle [MECH] A variational principle which states that the path of a conservative system in configuration space between two configurations is such that the integral of the Lagrangian function over time is a minimum or maximum relative to nearby paths between the same end points and taking the same time.

hammarite [MINERAL] $Pb_2Cu_2Bi_4S_9$ A monoclinic mineral whose color is a steel gray with red tone; consists of lead and copper bismuth sulfide.

hammer [DES ENG] **1.** A hand tool used for pounding and consisting of a solid metal head set crosswise on the end of a handle. **2.** An arm with a striking head for sounding a bell or gong. [MECH ENG] A power tool with a metal block or a drill for the head. [ORD] A metallic pivoted item in a firing mechanism designed to strike a firing pin or percussion cap and thus fire a gun.

hammer code *See* Hamming code.

hammer drill [MECH ENG] Any of three types of fast-cutting, compressed-air rock drills (drifter, sinker, and stoper) in which a hammer strikes rapid blows on a loosely held piston, and the bit remains against the rock in the bottom of the hole, rebounding slightly at each blow, but does not reciprocate.

hammer forging [MET] Forging by means of repeated blows of a hammer.

hammer gun [ORD] Gun with an outside, visible hammer.

hammerhead [DES ENG] The striking part of a hammer.

hammerhead crane [MECH ENG] A crane with a horizontal jib that is counterbalanced.

hammerless gun [ORD] Gun with a wholly enclosed hammer and firing mechanism.

hammer mill [MECH ENG] **1.** A type of impact mill or crusher in which materials are reduced in size by hammers revolving rapidly in a vertical plane within a steel casing. Also known as beater mill. **2.** A grinding machine which pulverizes feed and other products by several rows of thin hammers revolving at high speed.

hammer milling [MECH ENG] Crushing or fracturing materials in a hammer mill.

hammer pick [MIN ENG] A pneumatic hand-held machine used to break up the harder rocks in a mine; consists of a pick which is driven by a hammer set in a cylinder which receives compressed air.

hammer test [MET] An impact test conducted by dropping weights from increasing heights until a specified deflection of the weight is produced.

hammertoe [MED] A condition of the toe, usually the second, in which the proximal phalanx is extremely extended while the two distal phalanges are flexed.

hammer welding [MET] Forge welding by means of a hammer.

Hammett acidity function [CHEM] An expression for the acidity of a medium, defined as $h_0 = K_{BH^+}[BH^+]/[B]$, where K_{BH^+} is the dissociation constant of the acid form of the indicator, and $[BH^+]$ and $[B]$ are the concentrations of the protonated base and the unprotonated base respectively.

Hamming code [COMMUN] An error-correcting code used in data transmission. Also known as hammer code.

hamming distance *See* signal distance.

hammock *See* hummock.

Hamoproteidae [INV ZOO] A family of parasitic protozoans in the suborder Haemosporina; only the gametocytes occur in blood cells.

hamper [NAV ARCH] Articles of outfit, especially spars, rigging, and so on, above the deck.

ham radio *See* amateur radio.

hamster [VERT ZOO] The common name for any of 14 species of rodents in the family Cricetidae characterized by scent glands in the flanks, large cheek pouches, and a short tail.

hamstring muscles [ANAT] The biceps femoris, semitendinosus, and semimembranosus collectively.

hamulus [VERT ZOO] A hooklike process, especially a small terminal hook on the barbicel of a feather.

hamus [BIOL] A hook or a curved process.

hancockite [MINERAL] A complex silicate mineral containing lead, calcium, strontium, and other minerals; it is isomorphous with epidote.

Hancock jig [MIN ENG] A moving-screen jig used to treat lead-zinc ores; the material is jigged in a tank of water, and the heavy layer settles through slots.

hand [ANAT] The terminal part of the upper extremity modified for grasping. [TEXT] The quality or feel of a fabric.

hand-and-foot counter *See* hand-and-foot monitor.

hand-and-foot monitor [NUCLEO] An instrument routinely used to monitor the hands and feet of atomic energy workers as they leave locations in which radioactive materials are handled. Also known as hand-and-foot counter.

hand arm *See* hand weapon.

hand auger [DES ENG] A hand tool resembling a large carpenters' bit or comprising a short cylindrical container with cutting lips attached to a rod; used to bore shallow holes in the soil to obtain samples of it and other relatively unconsolidated near-surface materials.

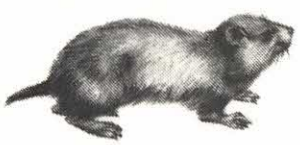
handbarrow [ENG] A flat, rectangular frame with handles at both ends, carried by two persons to transport objects. Also known as barrow.

hand brake [MECH ENG] A manually operated brake.

hand breadth [ANTHRO] The distance between the outside projections of the distal ends of the second and fifth metacarpals of the right hand, with the fingers extended and together.

hand cable [MIN ENG] A flexible cable for electrical connection between a mining machine and a truck carrying a reel of portable cable. Also known as butt cable; head cable.

HAMSTER



Hamster, *Cricetus cricetus*, with a body 8–12 inches (20–30 centimeters) long.

handcar [MECH ENG] A small, four-wheeled, hand-pumped car used on railroad tracks to transport men and equipment for construction or repair work; other cars for the same purpose are motor-operated.

hand drill [DES ENG] A small, portable drilling machine which is operated by hand.

handedness [PHYS] A division of objects, such as coordinate systems, screws, and circularly polarized light beams, into two classes (right and left), which distinguishes an object from a mirror image but not from a rotated object.

hand electric lamp [MIN ENG] In mining, a portable, battery operated hand lamp with a tungsten-filament light source that forms a self-contained unit.

hand feed [ENG] A drill machine in which the rate at which the bit is made to penetrate the rock is controlled by a hand-operated ratchet and lever or a hand-turned wheel meshing with a screw mechanism.

hand-feed punch *See* hand punch.

hand-foot-and-mouth disease [MED] An infectious disease of humans caused by a coxsackie virus and characterized by maculopapular and vesicular eruptions in the mouth and on the hands and feet.

hand forging [MET] Plastic deformation of a metal by manual force.

hand generator [ELEC] A manually cranked dynamo or alternator, usually used as the prime mover for emergency radio transmitters.

hand grenade [ORD] A grenade designed to be thrown by hand.

handguard [ORD] **1.** A wooden part on a rifle to protect the shooter's hand from the hot barrel. **2.** The part of a sword or dagger designed to protect the hand.

hand hammer drill [ENG] A hand-held rock drill.

handhole [ENG] A shallow access hole large enough for a hand to be inserted for maintenance and repair of machinery or equipment.

handie-talkie [ELECTR] Two-way radio communications unit small enough to be carried in the hand.

hand jig [MIN ENG] A moving-screen jig operated by hand and used to treat small batches of ore; the jig box is attached to a rocking beam and moved in a tank of water.

hand lance [ENG] A hand-held pipe with a nozzle through which steam or air is discharged; used to remove soot deposits from the external surfaces of boiler tubes.

handle [MECH ENG] The arm connecting the bucket with the boom in a dipper shovel or hoe.

hand lead [ENG] A light sounding lead (7–14 pounds or 3–6 kilograms) usually having a line not more than 25 fathoms (46 meters) in length.

hand length [ANTHRO] The distance measured from the end of the small wrist bone at the base of the thumb to the tip of the middle finger of the right hand, palm turned up, with the fingers extended and together.

hand lens *See* simple microscope.

hand level [ENG] A hand-held surveyor's level, basically a telescope with a bubble tube attached so that the position of the bubble can be seen when looking through the telescope.

handling time [IND ENG] The time needed to transport parts or materials to or from a work area.

hand loader [MIN ENG] A miner who uses a shovel, rather than a machine to load coal.

hand-operating device [ORD] Mechanism on certain automatic firing weapons that permits the piece to be prepared by hand for firing.

handpicking [MIN ENG] Manual removal of a selected fraction of coarse run-of-mine ore, after washing and screening away waste.

hand punch [COMPUT SCI] A device which punches holes in punch cards and moves the cards as they are punched as a direct result of pressure on the keys of a keyboard, and which requires feeding and removal of cards by hand, one at a time. Also known as hand-feed punch. [DES ENG] A hand-held device for punching holes in paper or cards.

handrail [ENG] A narrow rail to be grasped by a person for support.

hand-rammed [ORD] Indicating that the cartridge is intended to be rammed into the gun by hand rather than by power.

hand-reset [ELEC] Pertaining to a relay in which the contacts must be reset manually to their original positions when normal conditions are resumed.

hand rule [ELECTROMAG] The rule that, when grasping the conductor in the right hand with the thumb pointing in the direction of the current, the fingers will then point in the direction of the lines of flux.

hand sampling [MIN ENG] Using manual methods to detach and reduce in size representative samples of ore; one of the major methods in sampling small batches of ore, others being grab sampling, trench or channel sampling, fractional selection, coning and quartering, and pipe sampling.

handsaw [DES ENG] A saw operated by hand, with a backward and forward arm movement.

Hand-Schüller-Christian disease [MED] A childhood syndrome characterized by exopthalmos, diabetes insipidus, and softened or punched-out areas in the bones.

handset [DES ENG] A combination of a telephone-type receiver and transmitter, designed for holding in one hand.

handset bit [DES ENG] A bit in which the diamonds are manually set into holes that are drilled into a malleable-steel bit blank and shaped to fit the diamonds.

handshaking [COMMUN] The establishment of synchronization between sending and receiving equipment by means of exchange of specific character configurations.

hand-shoulder syndrome *See* shoulder-hand syndrome.

handspike [ORD] Handle attached to the trails of certain firearms for ease in handling.

hand sugar refractometer [ANALY CHEM] Portable device to read refractive indices of sugar solutions. Also known as proteinometer.

hand time [IND ENG] The time necessary to complete a manual element. Also known as manual time.

hand tool [ENG] Any implement used by hand.

hand tramming [MIN ENG] Pushing of mine cars by manpower; limited to small mines with low output.

hand truck [ENG] **1.** A manually operated, two-wheeled truck consisting of a rectangular frame with handles at the top and a plate at the bottom to slide under the load. **2.** Any of various small, manually operated, multiwheeled platform trucks for transporting materials.

hand type *See* foundry type.

hand viewer [OPTICS] An optical magnifying device small enough for hand use.

hand weapon [ORD] A weapon, such as a pistol, knife, or sword, used by one hand. Also known as hand arm.

hand winch [MECH ENG] A winch that is operated by hand.

hang [ORD] To lock the receiver or bolt of a gun in an open position.

hangar [CIV ENG] A building at an airport specially designed in height and width to enable aircraft to be stored or maintained in it.

hangar deck [NAV ARCH] A deck, below the flight deck of a carrier, where aircraft are parked and serviced.

hanger [CIV ENG] An iron strap which lends support to a joist beam or pipe. [GEOL] *See* hanging wall. [PETRO ENG] **1.** A device to seat in the bowl of a lowermost casing head to suspend the next-smaller casing string and form a seal between the two. Also known as casing hanger. **2.** A device to provide a seal between the tubing and the tubing head. Also known as tubing hanger.

hanger bolt [DES ENG] A bolt with a machine-screw thread on one end and a lag-screw thread on the other.

hangfire [ENG] Delay in the explosion of a charge.

hanging [GEOL] *See* hanging wall. [MET] Sticking or wedging of part of the charge in a blast furnace.

hanging bolt [MIN ENG] A bolt used to suspend wall plates in shaft construction.

hanging coal [MIN ENG] A portion of the coal seam which, by undercutting, has had its natural support removed.

hanging compass *See* inverted compass.

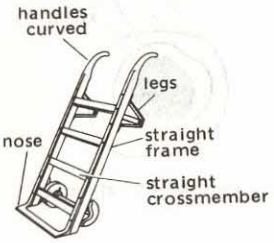
hanging-drop atomizer [MECH ENG] An atomizing device used in gravitational atomization; functions by quasi-static emission of a drop from a wetted surface. Also known as pendant atomizer.

hanging-drop preparation [MICROBIO] A technique used in microscopy in which a specimen is placed in a drop of a suitable fluid on a cover slip and the cover slip is inverted over a concavity on a slide.

hanging glacier [HYD] A glacier lying above a cliff or steep mountainside; as the glacier advances, calving can cause ice avalanches.

hanging load [MECH ENG] **1.** The weight that can be sus-

HAND TRUCK



An Eastern type of hand truck showing curved handles, straight frame, straight crossmember and other components.

pended on a hoist line or hook device in a drill tripod or derrick without causing the members of the derrick or tripod to buckle. **2.** The weight suspended or supported by a bearing.

hanging scaffold [CIV ENG] A movable platform suspended by ropes and pulleys; used by workers for above-ground building construction and maintenance.

hanging sets [MIN ENG] Timbers from which cribs are suspended in working through soft strata.

hanging sheave [MIN ENG] The grooved wheel or pulley which is suspended from the drill tripod clevis or from the roof or side of a haulage road, and over which the hoist line runs to minimize friction.

hanging side *See* hanging wall.

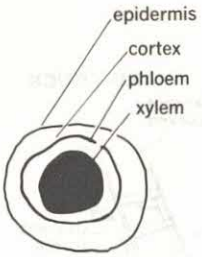
hanging valley [GEOL] A valley whose floor is higher than the level of the shore or other valley to which it leads.

hanging wall [GEOL] The rock mass above a fault plane, vein, lode, ore body, or other structure. Also known as hanger; hanging; hanging side.

hanging-wall drift [MIN ENG] A horizontal gallery that is driven in the hanging wall of a vein.

hangover [COMMUN] **1.** In television, overlapping and blurring of successive frames opposite to direction of subject motion, due to improper adjustment of transient response. **2.** In facsimile, distortion produced when the signal changes from maximum to minimum conditions at a slower rate than required, resulting in tailing on the lines in the recorded copy. [MED] Aftereffect following excessive intake of alcohol or certain drugs, such as barbiturates.

HAPLOSTELE



Cross section of a haplostele.

hang-up [COMPUT SCI] A nonprogrammed stop in a computer routine caused by a human mistake or a computer malfunction. [ENG] A virtual leak resulting from the release of entrapped tracer gas from a leak detector vacuum system. [MIN ENG] Blockage of the movement of ore by rock in an underground chute.

hangwire [ORD] A length of wire connecting the fuse assembly of an aerial flare or bomb to the structure of an aircraft; it removes the safety and arms the fuse at the beginning of the drop; it may also open a parachute or stabilizing sleeve.

hank [TEXT] A unit of measure of yarn or thread equal to 840 yards (768.096 meters) for cotton, and 560 yards (512.064 meters) for first-grade wool.

Hankel functions [MATH] The Bessel functions of the third kind, occurring frequently in physical studies.

Hankel transform [MATH] The Hankel transform of order m of a real function $f(t)$ is the function $F(s)$ given by the integral from 0 to ∞ of $f(t)tJ_m(st)dt$, where J_m denotes the mth-order Bessel function. Also known as Bessel transform; Fourier-Bessel transform.

hanksite [MINERAL] $Na_{22}K(SO_4)_9(CO_3)_2Cl$ A white or yellow mineral crystallizing in the hexagonal system; found in California.

hannayite [MINERAL] $Mg_3(NH_4)_2H_2(PO_4)_4{\cdot}8H_2O$ Mineral composed of hydrous acid ammonium magnesium phosphate; occurs as yellow crystals in guano.

Hansa yellow [ORG CHEM] Group of organic azo pigments with strong tinting power, but poor opacity in paints; used where nontoxicity is important.

Hansen's bacillus *See* Mycobacterium leprae.

Hansen's disease [MED] An infectious disease of humans thought to be caused by *Mycobacterium leprae*; common manifestations are cutaneous and neural lesions. Also known as leprosy.

Hanson unit [BIOL] A unit for the standardization of parathyroid hormone.

H antigen [MICROBIO] A general term for microbial flagellar antigens; former designation for species-specific flagellar antigens of *Salmonella*.

Hantzsch synthesis [ORG CHEM] The reaction whereby a pyrrole compound is formed when a β-ketoester, chloroacetone, and a primary amine condense.

Hanus solution [ANALY CHEM] Iodine monobromide in glacial acetic acid; used to determine iodine values in oils containing unsaturated organic compounds.

haplobiont [BOT] A plant that produces only sexual haploid individuals.

haplocaulescent [BOT] Having a simple axis with the reproductive organs on the principal axis.

Haplodoci [VERT ZOO] The equivalent name for Batrachoidiformes.

haploid [GEN] Having half of the diploid or full complement of chromosomes, as in mature gametes.

Haplolepidae [PALEON] A family of Carboniferous chondrostean fishes in the suborder Palaeoniscoidei having a reduced number of fin rays and a vertical jaw suspension.

Haplomi [VERT ZOO] An equivalent name for Salmoniformes.

haplomitosis [CYTOL] Type of primitive mitosis in which the nuclear granules form into threadlike masses rather than clearly differentiated chromosomes.

haplont [BOT] A plant with only haploid somatic cells; the zygote is diploid.

haplophase [BIOL] Haploid stage in the life cycle of an organism.

haplopore [PALEON] Any randomly distributed pore on the surface of fossil cystoid echinoderms.

Haplosclerida [INV ZOO] An order of sponges in the class Demospongiae including species with a skeleton made up of siliceous megascleres embedded in spongin fibers or spongin cement.

haplosis [CYTOL] Reduction of the chromosome number to half during meiosis.

Haplosporea [INV ZOO] A class of Protozoa in the subphylum Sporozoa distinguished by the production of spores lacking polar filaments.

Haplosporida [INV ZOO] An order of Protozoa in the class Haplosporea distinguished by the production of uninucleate spores that lack both polar capsules and filaments.

haplostele [BOT] A type of protostele with the core of xylem characterized by a smooth outline.

hapten [IMMUNOL] A simple substance that reacts like an antigen in vitro by combining with antibody; may function as an allergen when linked to proteinaceous substances of the tissue.

haptephobia [PSYCH] An abnormal fear of being touched.

hapteron [BOT] A disklike holdfast on the stem of certain algae.

haptochlamydeous [BOT] Having the sporophylls protected by rudimentary perianth leaves.

haptoglobin [BIOCHEM] An alpha globulin that constitutes 1–2% of normal blood serum; contains about 5% carbohydrate.

Haptophyceae [BOT] A class of the phylum Chrysophyta that contains the Coccolithophorida.

haptor [INV ZOO] The posterior organ of attachment in certain monogenetic trematodes characterized by multiple suckers and the presence of hooks.

haptotropism [BIOL] Movement of sessile organisms in response to contact, especially in plants.

harassing agent [ORD] A chemical agent that forces troops to wear gas masks and to cut down their efficiency; examples are an irritating gas or smoke.

harassing fire [ORD] Rifle or artillery fire designed to inflict losses, or to disturb the enemy troops by the threat of losses; the fire restricts movement and lowers troop morale.

harbor [GEOGR] Any body of water of sufficient depth for ships to enter and find shelter from storms or other natural phenomena. Also known as port.

harbor chart [NAV] A nautical chart for navigation and anchorage in small waterways and harbors.

harbor engineering [CIV ENG] Planning and design of facilities for ships to discharge or receive cargo and passengers.

harbor line [CIV ENG] The line beyond which wharves and other structures cannot be extended.

harbor reach [GEOGR] The stretch of a river or estuary which leads directly to the harbor.

hard [MATER] Quality of a material that is compact, solid, and difficult to deform.

hard acid [CHEM] A Lewis acid of low polarizability, small size, and high positive oxidation state; it does not have easily excitable outer electrons; some examples are H^+, Li^+, and Al^{+3}.

hard base [CHEM] A Lewis base (electron donor) that has high polarizability and low electronegativity, is easily oxidized, or possesses lowlying empty orbitals; some examples are H_2O, HO^-, OCH_3^-, and F^-. [ORD] A launching base that is protected against a nuclear explosion.

hard beach [CIV ENG] A portion of a beach especially prepared with a hard surface extending into the water, employed for the purpose of loading or unloading directly into or from landing ships or landing craft.

hardboard [MATER] A fiberboard formed to a density of

30–50 pounds per cubic foot (480–800 kilograms per cubic meter) and having one textured and one smooth face.

hard bottom [MIN ENG] A condition encountered in some opencut mines wherein the rock occasionally does not break down to grade because of an extra-hard streak of ground or because insufficient powder is used.

hard bronze [MET] A high-tensile-strength alloy containing 88% copper, 7% tin, 3% zinc, and 2% lead.

hard-burned brick [MATER] A brick that has been fired and sintered at high temperature.

hardcap [MIN ENG] In bauxite mining the uppermost foot or two (0.3-0.6 meter) deposit of bauxite; usually serves as a roof during mining.

hard chromium [MET] A thick coating of electrodeposited chromium on a base metal; increases wear resistance.

hard coal *See* anthracite.

hard-coal plough [MIN ENG] A plough-type cutter-loader consisting of rigid or swiveling kerfing bits which precut the coal in hard-coal seams.

hard copy [COMPUT SCI] Human-readable typewritten or printed characters produced on paper at the same time that information is being keyboarded in a coded machine language, as when punching cards or paper tape. [GRAPHICS] The typewritten or paper copy of material keyboarded into a computer, word processor, or typesetter.

hard cosmic ray [NUCLEO] A cosmic-radiation component that penetrates a moderate thickness of an absorber, such as 4 inches (10 centimeters) of lead.

hard data [SCI TECH] Data in the form of numbers or graphs, as opposed to qualitative information.

hard detergent [CHEM] A nonbiodegradable detergent.

hard disk [COMPUT SCI] A magnetic disk made of rigid material.

hard-drawn wire [MET] Cold-drawn metal wire, usually of high tensile strength.

hardenability [MET] In a ferrous alloy, the property that determines the depth and distribution of hardness induced by quenching from elevated temperatures.

hardened circuit [ELECTR] A circuit that uses components whose tolerance to radiation released by a nuclear explosion has been increased by various radiation-hardening procedures.

hardened links [COMMUN] Transmission links that require special construction or installation to assure a high probability of survival under nuclear attack.

hardened site [ORD] An underground missile-launching site, control center, or other facility that can withstand in varying degrees the effects of an enemy nuclear blast.

hardened steel [MET] Steel hardened by quenching from high temperatures.

hardener [MET] A master alloy added to a melt to control hardness. [ORG CHEM] Compound reacted with a resin polymer to harden it, such as the amines or anhydrides that react with epoxides to cure or harden them into plastic materials. Also known as curing agent.

hardener bath [GRAPHICS] A fixing bath containing chemicals such as formalin and chrome alum to toughen the emulsion of a film.

hardening [MET] **1.** Imparting hardness to carbon steel by abrupt cooling (quenching) through a critical temperature range. **2.** Heat-treating an age-hardening or precipitation-hardening alloy at intermediate temperatures.

Harderian gland [VERT ZOO] An accessory lacrimal gland associated with lower eyelid structures in all vertebrates except land mammals.

hard-face [MET] To apply a layer of hard, abrasion-resistant metal to a less resistant metal part by plating, welding, spraying, or other techniques. Also known as hard-surface.

hard fiber [BOT] A heavily lignified leaf fiber used in making cordage, twine, and textiles.

hard-fiber [MATER] Indicating vulcanization with zinc chloride; used of paper or boards.

hard freeze [HYD] A freeze in which seasonal vegetation is destroyed, the ground surface is frozen solid underfoot, and heavy ice is formed on small water surfaces such as puddles and water containers.

hard frost *See* black frost.

hard glass [MATER] A potash-lime glass with a high silica content, used for making brilliant glassware. Also known as Bohemian glass.

hard grease [MATER] A lubricating grease that flows at a temperature of about 90°C.

hard ground [MIN ENG] Ground that is difficult to work.

Hardgrove grindability index [ENG] The relative grindability of ores and minerals in comparison with standard coal, chosen as 100 grindability, as determined by a miniature ball-ring pulverizer. Also known as Hardgrove number.

Hardgrove number *See* Hardgrove grindability index.

hard hat [ENG] A safety hat usually having a metal crown; used by construction workers and miners.

hardhead [MET] A hard white deposit formed during tin refining by liquation.

Hardinge feeder-weigher [MECH ENG] A pivoted, short belt conveyor which controls the rate of material flow from a hopper by weight per cubic foot.

Hardinge mill [MECH ENG] A tricone type of ball mill; the cones become steeper from the feed end toward the discharge end.

Hardinge thickener [ENG] A machine for removing the maximum amount of liquid from a mixture of liquid and finally divided solids by allowing the solids to settle out on the bottom as sludge while the liquid overflows at the top.

hard iron [MET] Iron or steel which is not readily magnetized by induction, but which retains a high percentage of the magnetism acquired.

hard lac [MATER] Solvent-extracted shellac. Also known as hard-lac resin.

hard-lac resin *See* hard lac.

hard-laid [DES ENG] Pertaining to rope with strands twisted at a 45° angle.

hard landing [AERO ENG] A landing made without deceleration, as by impact on the moon.

hard lead [MET] Lead alloy with reduced malleability due to the presence of impurities, usually antimony.

hard-limiting [COMMUN] Limiting condition for which limiting takes place for at least 20 decibels into the signal noise.

hard magnetic material [MET] A metal having a high coercive force which gives a large magnetic hysteresis.

hardness [CHEM] The amount of calcium carbonate dissolved in water, usually expressed as parts of calcium carbonate per million parts of water. [ELECTROMAG] That quality which determines the penetrating ability of x-rays; the shorter the wavelength, the harder and more penetrating the rays. [ENG] Property of an installation, facility, transmission link, or equipment that will prevent an unacceptable level of damage. [MATER] Resistance of a metal or other material to indentation, scratching, abrasion, or cutting.

hardness number [ENG] A number representing the relative hardness of a mineral, metal, or other material as determined by any of more than 30 different hardness tests.

hardness test [ANALY CHEM] Test to determine the calcium and magnesium content of water. [ENG] A test to determine the relative hardness of a metal, mineral, or other material according to one of several scales, such as Brinell, Mohs, or Shore.

hard pad [VET MED] A disease of dogs, probably associated with the canine distemper virus; often characterized by encephalitis and hardening of the foot pads.

hard palate [ANAT] The anterior portion of the roof of the mouth formed by paired palatine processes of the maxillary bones and by the horizontal part of each palate bone.

hardpan *See* caliche.

hard paste porcelain *See* porcelain.

hard porcelain [MATER] A ceramic material having good resistance to thermal shock.

hard radiation [PHYS] Radiation whose particles or photons have a high energy and, as a result, readily penetrate all kinds of materials, including metals.

hard rime [HYD] Opaque, granular masses of rime deposited chiefly on vertical surfaces by a dense super-cooled fog; it is more compact and amorphous than soft rime, and may build out into the wind as glazed cones or feathers.

hard rock [GEOL] Rock which needs drilling and blasting for removal.

hard-rock driller [MIN ENG] A worker who operates a drill in a mine where the rocks are generally igneous or metamorphosed and considered hard, such as rocks in which coal and salt are generally found.

hard-rock mine [MIN ENG] A mine located in hard rock, especially a mine difficult to drill, blast, and square up.

hard-rock miner [MIN ENG] A worker competent to mine in hard rock, usually an expert miner.

hard-rock tunnel boring [MIN ENG] A tunneling method utilizing a mole to cut out 7-foot-diameter (2.1-meter-diameter) drifts in hard rock at an average rate of 5 feet (1.5 meters) per hour.

hard rot [PL PATH] **1.** Any plant disease characterized by lesions with hard surfaces. **2.** A fungus disease of gladiolus caused by *Septoria gladioli* which produces hard-surfaced lesions on the leaves and corms.

hard rubber [MATER] Rubber that has been vulcanized at high temperatures and pressures to give hardness; used as an electrical insulating material and in tool handles. Also known as ebonite.

hard silk [TEXT] Silk that has not been degummed, so that the finished fabric contains sericin, or silk gum.

hard site [ORD] Underground missile-launching site, control center, or other facility that can withstand in varying degrees the effects of an enemy nuclear blast.

hard solder [MET] *See* brazing alloy.

hard-solder *See* braze.

hard-sphere collision theory [PHYS CHEM] A theory for calculating reaction rate constants for biomolecular gas-phase reactions in which the molecules are considered to be colliding, hard spheres.

hardstand [CIV ENG] **1.** A paved or stabilized area where vehicles or aircraft are parked. **2.** Open ground area having a prepared surface and used for storage of material.

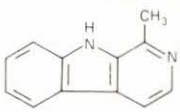
hard superconductor [CRYO] A superconductor that requires a strong magnetic field, over 1000 oersteds (79,577 amperes per meter), to destroy superconductivity; niobium and vanadium are examples.

hard-surface [CIV ENG] To treat a ground surface in order to prevent muddiness. [MET] *See* hard-face.

hard tube *See* high-vacuum tube.

hardware [COMPUT SCI] The physical, tangible, and permanent components of a computer or a data-processing system. [ENG] Items made of metal, such as tools, fittings, fasteners, and appliances. [ORD] Metal military items for use in combat.

HARMAN



Structural formula.

hardware check *See* machine check.

hardware compatibility [COMPUT SCI] Property of two computers such that the object code from one machine can be loaded and executed on the other to produce exactly the same results.

hardware control [COMPUT SCI] The control of, and communications between, the various parts of a computer system.

hardward diagnostic [COMPUT SCI] A computer program designed to determine whether the components of a computer are operating properly.

hardware monitor [COMPUT SCI] A system used to evaluate the performance of computer hardware; it collects information such as central processing unit usage from voltage level sensors that are attached to the circuitry and measure the length of time or the number of times various signals occur, and displays this information or stores it on a medium that is then fed into a special data-reduction program.

hardware multiplexing [COMPUT SCI] A procedure in which a servicing unit interleaves its attention among a family of serviced units in such a way that the serviced units appear to be receiving constant attention.

hard water [CHEM] Water that contains certain salts, such as those of calcium or magnesium, which form insoluble deposits in boilers and form precipitates with soap.

Hardwick conveyor loader head [MIN ENG] A dust collector for belt conveyors used at the loading station; a scraper chain runs at the bottom of a coal hopper and collects underbelt fines.

hard-wire [ELEC] To connect electric components with solid, metallic wires as opposed to radio links, and the like.

hard-wired [COMPUT SCI] Having a fixed wired program or control system built in by the manufacturer and not subject to change by programming.

hard-wire telemetry *See* wire-link telemetry.

hardwood [MATER] Dense, close-grained wood of an angiospermous tree, such as oak, walnut, cherry, and maple.

hardwood bearing [MECH ENG] A fluid-film bearing made of lignum vitae which has a natural gum, or of hard maple which is impregnated with oil, grease, or wax.

hardwood forest [ECOL] **1.** An ecosystem having deciduous trees as the dominant form of vegetation. **2.** An ecosystem consisting principally of trees that yield hardwood.

hard x-ray [ELECTR] An x-ray having high penetrating power.

Hardy plankton indicator [ENG] Metal-shrouded net sampler designed to collect specimens of plankton during normal passage of a ship.

Hardy-Schulz rule [PHYS CHEM] An increase in the charge of ions results in a large increase in their flocculating power.

hardystonite [MINERAL] $Ca_2ZnSi_2O_7$ A white mineral composed of zinc calcium silicate.

hare [VERT ZOO] The common name for a number of lagomorphs in the family Leporidae; they differ from rabbits in being larger with longer ears, legs, and tails.

Hare *See* Lepus.

harelip [MED] A congenital defect, sometimes hereditary, marked by an abnormal cleft between the upper lip and the base of the nose. Also known as cleft lip.

Hare's hygrometer [ENG] A type of hydrometer in which the ratio of the densities of two liquids is determined by measuring the heights to which they rise in two vertical glass tubes, connected at their upper ends, when suction is applied.

Hargreaves process [CHEM ENG] A process for the manufacture of salt cake (sodium sulfate) by passing a mixture of sulfur dioxide and air through sodium chloride brine in a countercurrent manner.

Haring cell [PHYS CHEM] An electrolytic cell with four electrodes used to measure electrolyte resistance and polarization of electrodes.

Harker diagram *See* variation diagram.

Harker-Kasper inequalities [SOLID STATE] Inequalities used in the analysis of crystal structure by x-ray diffraction which relate the structure factors and help to determine their phase factors.

Harkin's rule [PHYS] An empirical rule for the calculation of the nuclear abundances of an element's isotopes stating that isotopes with an odd mass number are less abundant than their even-mass-number neighbors.

Harlechian [GEOL] A European stage of geologic time: Lower Cambrian.

harman [ORG CHEM] $C_{12}H_{10}N_2$ Crystals that melt at 237-238°C; inhibits growth of molds and certain bacteria. Also known as arabine; loturine; 2-methyl-β-carboline; 3-methyl-4-carboline; passiflorin.

harmatan *See* harmattan.

harmattan [METEOROL] A dry, dust-bearing wind from the northeast or east which blows in West Africa especially from late November until mid-March; it originates in the Sahara as a desert wind and extends southward to about 5°N in January and 18°N in July. Also spelled harmatan; harmetan; hermitan.

harmetan *See* harmattan.

harmful interference [COMMUN] Radiation or induction which endangers the functioning of a radionavigation broadcasting service or of a safety broadcasting service, or obstructs or repeatedly interrupts a radio service operating in accordance with the appropriate regulations.

harmless-depth theory [MIN ENG] Formerly, hypothesis that there was a certain depth below which mining could be carried on without risk of damage to the surface.

harmonic [ACOUS] One of a series of sounds, each of which has a frequency which is an integral multiple of some fundamental frequency. [MATH] A solution of Laplace's equation which is separable in a specified coordinate system. [PHYS] A sinusoidal component of a periodic wave, having a frequency that is an integral multiple of the fundamental frequency. Also known as harmonic component.

harmonica bug [ELECTR] A surreptitious interception technique applied to telephone lines; the target instrument is modified so that a tuned relay bypasses the switch hook and ringing circuit when a 500-hertz tone is received; this tone was originally generated by use of a harmonica.

harmonic analysis [MATH] A study of functions by attempting to represent them as infinite series or integrals which involve functions from some particular well-understood family; it subsumes studying a function via its Fourier series. [PHYS] Any method of identifying and evaluating the harmonics that make up a complex waveform of sound pressure, voltage, current, or some other varying quantity.

harmonic analyzer [ELECTR] An instrument that measures

the strength of each harmonic in a complex wave. Also known as harmonic wave analyzer.

harmonic antenna [ELECTROMAG] An antenna whose electrical length is an integral multiple of a half-wavelength at the operating frequency of the transmitter or receiver.

harmonic attenuation [ELECTR] Attenuation of an undesired harmonic component in the output of a transmitter.

harmonic component *See* harmonic.

harmonic conjugates [MATH] **1.** Two points, P_3 and P_4, that are collinear with two given points, P_1 and P_2, such that P_3 lies in the line segment P_1P_2 while P_4 lies outside it, and, if x_1, x_2, x_3, and x_4 are the abscissas of the points, $(x_3 - x_1)/(x_3 - x_2) = Z(x_4 - x_1) / (x_4 - x_2)$. **2.** A pair of harmonic functions, u and v, such that $u + iv$ is an analytic function, or, equivalently, u and v satisfy the Cauchy-Riemann equations.

harmonic content [PHYS] The components remaining after the fundamental frequency has been removed from a complex wave.

harmonic conversion transducer [ELECTR] A conversion transducer of which the useful output frequency is a multiple or a submultiple of the input frequency.

harmonic decline [PETRO ENG] One of three types of decline in oil or gas production rate (the others are constant-percentage and hyperbolic), in which the nominal decline in production rate per unit of time expressed as a fraction of the production rate is proportional to the production rate itself.

harmonic detector [ELECTR] Voltmeter circuit so arranged as to measure only a particular harmonic of the fundamental frequency.

harmonic distortion [ELECTR] Nonlinear distortion in which undesired harmonics of a sinusoidal input signal are generated because of circuit nonlinearity.

harmonic division [MATH] The division of a line segment externally and internally in the same ratio; that is, the division of a line segment by the harmonic conjugates of its end points.

harmonic fields [ELECTROMAG] The sinusoidal Fourier components of a magnetic or other field confined to a finite region of space; their half-wavelengths are integral divisors of the length of the space in which the field is confined.

harmonic filter [ELECTR] A filter that is tuned to suppress an undesired harmonic in a circuit.

harmonic folding [GEOL] Folding in the earth's surface, with no sharp changes with depth in the form of the folds.

harmonic frequency [PHYS] An integral multiple of the fundamental frequency of a periodic wave.

harmonic function [MATH] **1.** A function of two real variables which is a solution of Laplace's equation in two variables. **2.** A function of three real variables which is a solution of Laplace's equation in three variables.

harmonic generator [ELECTR] A generator operated under conditions such that it generates strong harmonics along with the fundamental frequency.

harmonic interference [COMMUN] Interference due to the presence of harmonics in the output of a radio station.

harmonic loss [ELECTROMAG] Energy loss in a generator due to space harmonics of the magnetomotive force produced by armature current, especially losses resulting from the fifth and seventh harmonics.

harmonic mean [MATH] For n positive numbers $x_1, x_2, \ldots, x_n$ their harmonic mean is the number $n/(1/x_1 + 1/x_2 + \ldots + 1/x_n)$.

harmonic motion [MECH] A periodic motion that is a sinusoidal function of time, that is, motion along a line given by the equation $x = a\cos(kt + \theta)$, where t is the time parameter, and a, k, and θ are constants. Also known as harmonic vibration; simple harmonic motion (SHM).

harmonic oscillator [ELECTR] *See* sinusoidal oscillator. [MECH] Any physical system that is bound to a position of stable equilibrium by a restoring force or torque proportional to the linear or angular displacement from this position. [PHYS] Anything which has equations of motion that are the same as the system in the mechanics definition. Also known as linear oscillator; simple oscillator.

harmonic prediction [OCEANOGR] A method used in predicting the tides and tidal currents by combining the harmonic constituents into a single tide curve.

harmonic producer [ELECTR] Tuning-fork controlled oscillator device capable of producing odd and even harmonics of the fundamental tuning-fork frequency; used to provide carrier frequencies for broad-band carrier systems.

harmonic progression [MATH] A sequence of numbers whose reciprocals form an arithmetic progression.

harmonic selective ringing [COMMUN] Selective ringing which employs currents of several frequencies and ringers, each tuned mechanically or electrically to the frequency of one of the ringing currents, so that only the desired ringer responds.

harmonic speed changer [MECH ENG] A mechanical-drive system used to transmit rotary, linear, or angular motion at high ratios and with positive motion.

harmonic synthesizer [MECH] A machine which combines elementary harmonic constituents into a single periodic function; a tide-predicting machine is an example.

harmonic telephone ringer [ELECTR] Telephone ringer which responds only to alternating current within a very narrow frequency band.

harmonic tide plane *See* Indian spring low water.

harmonic vibration *See* harmonic motion.

harmonic vibration-rotation band [SPECT] A vibration-rotation band of a molecule in which the harmonic oscillator approximation holds for the vibrational levels, so that the vibrational levels are equally spaced.

harmonic wave [PHYS] A transverse waveform obtained by mapping onto a time base the periodic up and down excursions of simple harmonic motion.

harmonic wave analyzer *See* harmonic analyzer.

harmonize [ORD] **1.** To align the sights of a gun so that the curving path of the projectile will meet the straight line of sight at the target. **2.** To adjust or align the gunsight, guns, rocket launchers, or gun camera of a fighter aircraft so that an accurate aim is obtained at a given range, or so that the guns will produce a desired pattern of fire.

harmotome [MINERAL] $(K,Ba)(Al,Si)_2(Si_6O_{16})\cdot 6H_2O$ A zeolite mineral with ion-exchange properties that forms cruciform twin crystals. Also known as cross-stone.

Harnack's first convergence theorem [MATH] The theorem that if a sequence of functions harmonic in a common domain of three-dimensional space and continuous on the boundary of the domain converges uniformly on the boundary, then it converges uniformly in the domain to a function which is itself harmonic; the sequence of any partial derivative of the functions in the original sequence converges uniformly to the corresponding partial derivative of the limit function in every closed subregion of the domain.

Harnack's second convergence theorem [MATH] The theorem that if a sequence of functions is harmonic in a common domain of three-dimensional space and their values are monotonically decreasing at any point in the domain, then convergence of the sequence at any point in the domain implies uniform convergence of the sequence in every closed subregion of the domain to a function which is itself harmonic.

harness [AERO ENG] **1.** Straps arranged to hold an occupant of a spacecraft or aircraft in his seat. **2.** Straps worn by a parachutist or used to suspend a load from a parachute. [ELEC] Wire and cables so arranged and tied together that they may be inserted and connected, or may be removed after disconnection, as a unit. [TEXT] One of two or more frames on a loom which are raised to separate the warp from the filler yarns to allow the shuttle to pass between them.

Harpacticoida [INV ZOO] An order of minute copepod crustaceans of variable form, but generally being linear and more or less cylindrical.

harpago [INV ZOO] Part of the clasper on the copulatory organ of certain male insects.

Harpidae [INV ZOO] A family of marine gastropod mollusks in the order Neogastropoda.

harpoon [DES ENG] A barbed spear used to catch whales.

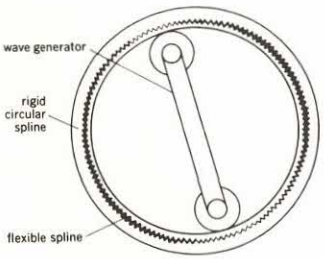
Harpoon [ORD] A U.S. Navy antiship guided missile that has a range of about 50 miles (80 kilometers), designed for firing from either a ship or plane.

harpoon log [ENG] A log which consists essentially of a rotator and distance registering device combined in a single unit, and towed through the water; it has been largely replaced by the taffrail log; the two types of logs are similar except that the registering device of the taffrail log is located at the taffrail and only the rotator is in the water.

Harris flow [ELECTR] Electron flow in a cylindrical beam in which a radial electric field is used to overcome space charge divergence.

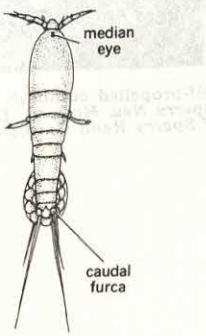
Harris process [MET] A method for refining lead in which the liquid bullion is sprayed through molten caustic soda and

HARMONIC SPEED CHANGER



Rotary-to-rotary harmonic speed changer that effects a speed reduction of 1:66.

HARPACTICOIDA



Harpacticus chelifer, a typical harpacticoid.

molten sodium nitrate; arsenic, antimony, and tin are oxidized, converted into sodium salts, and skimmed from the bath.

harrow [AGR] An implement that is pulled over plowed soil to break clods, level the surface, and destroy weeds.

harrowing [AGR] Cultivation of the soil with a harrow.

harstigite [MINERAL] $Be_2Ca_3Si_3O_{11}$ A mineral composed of silicate of beryllium and calcium.

Hartford loop [MECH ENG] A condensate return arrangement for low-pressure, steam-heating systems featuring a steady water line in the boiler.

hartite [GEOL] A white, crystalline, fossil resin that is found in lignites. Also known as bombiccite; branchite; hofmannite; josen.

hartley [COMMUN] A unit of information content, equal to the designation of 1 of 10 possible and equally likely values or states of anything used to store or convey information.

Hartley formula [COMMUN] The relationship expressing that as the time function is made narrower, the frequency spectrum must become broader.

Hartley oscillator [ELECTR] A vacuum-tube oscillator in which the parallel-tuned tank circuit is connected between grid and anode; the tank coil has an intermediate tap at cathode potential, so the grid-cathode portion of the coil provides the necessary feedback voltage.

Hartley principle [COMMUN] The principle that the total number of bits of information that can be transmitted over a channel in a given time is proportional to the product of channel bandwidth and transmission time.

Hartmann diaphragm [ANALY CHEM] Comparison device for positive-element-identification readings from emission spectra.

Hartmann dispersion formula [OPTICS] A semiempirical formula relating the index of refraction n and wavelengths λ; $n = n_0 + a/(\lambda - \lambda_0)$, where n_0, a, and λ_0 are empirical constants. Also known as Cornu-Hartmann formula.

Hartmann flow [PL PHYS] The steady flow of an electrically conducting fluid between two parallel plates when there is a uniform applied magnetic field normal to the plates.

Hartmann lines *See* Lüders lines.

Hartmann number [PL PHYS] A dimensionless number which gives a measure of the relative importance of drag forces resulting from magnetic induction and viscous forces in Hartmann flow, and determines the velocity profile for such flow.

Hartmann test [OPTICS] A test for telescope mirrors in which the mirror is covered with a screen with regularly spaced holes, and a photographic plate is placed near the focus; for a perfect mirror, this results in regularly spaced dots on the plate. [SPECT] A test for spectrometers in which light is passed through different parts of the entrance slit; any resulting changes of the spectrum indicate a fault in the instrument.

Hartman's solution [ANALY CHEM] Solution of thymol, ethyl alcohol, and sulfuric ether; used for selective dentin analysis.

Hartman unit [BIOL] A unit for the standardization of adrenal cortical hormone.

Hart-Park virus [VIROL] A ribonucleic acid–containing animal virus of the rhabdovirus group.

hartree [ATOM PHYS] A unit of energy used in studies of atomic spectra and structure, equal (in centimeter-gram-second units) to $4\pi^2me^4/h^2$, where e and m are the charge and mass of the electron, and h is Planck's constant; equal to approximately 27.21 electron volts or 4.360×10^{-18} joule.

Hartree equation [ELECTR] An equation which gives the lowest anode voltage at which it is theoretically possible to maintain oscillation in the different modes of a magnetron.

Hartree-Fock approximation [QUANT MECH] A refinement of the Hartree method in which one uses determinants of single-particle wave functions rather than products, thereby introducing exchange terms into the Hamiltonian.

Hartree method [QUANT MECH] An iterative variational method of finding an approximate wave function for a system of many electrons, in which one attempts to find a product of single-particle wave functions, each one of which is a solution of the Schrödinger equation with the field deduced from the charge density distribution due to all the other electrons. Also known as self-consistent field method.

Hartree units [ATOM PHYS] A system of units in which the unit of angular momentum is Planck's constant divided by 2π, the unit of mass is the mass of the electron, and the unit of charge is the charge of the electron. Also known as atomic units.

hartshorn oil *See* bone oil.

Harvard-Draper sequence [ASTRON] A system of classification of stellar spectra based on features that are found to vary in a smooth way from one star to another, and on the star's color.

harvester [AGR] A machine used to reap field crops.

harvester-thresher [AGR] A machine that combines the harvesting and threshing of grain crops.

harvesting [AGR] The gathering of mature field crops.

harvest moon [ASTRON] A full moon that is seen nearest the autumnal equinox.

harzburgite [PETR] A peridotite consisting principally of olivine and orthopyroxene.

Harz jig [MIN ENG] A device used to separate coal and foreign matter which gives pulsion intermittently with suction.

Hasche process [CHEM ENG] A thermal reforming process for hydrocarbon fuels; it is a noncatalytic regenerative method in which a mixture of hydrocarbon gas or vapor and air is passed through a regenerative mass that is progressively hotter in the direction of the gas flow; partial combustion occurs, liberating heat to crack the remaining hydrocarbons in a combustion zone.

Hasenclever turntable [MIN ENG] A turntable that is made to rotate by the friction between the positively driven pulley, the car, and the table; used as an alternative to the shunt-back or the traverser for changing the direction of mine cars or tubs, either on the surface or underground.

hash [COMPUT SCI] Data which are obviously meaningless, caused by human mistakes or computer malfunction. Also known as garbage; gibberish. [ELEC] Electric noise produced by the contacts of a vibrator or by the brushes of a generator or motor. [ELECTR] *See* grass.

hash coding *See* hashing

Hashimoto's disease *See* struma lymphomatosa.

Hashimoto's struma *See* struma lymphomatosa.

hashing [COMPUT SCI] **1.** A direct addressing technique which derives the required address from a random number table. **2.** Any computer operation which transforms one or more fields into a different arrangement which is usually more compact and easily manipulated. Also known as hash coding.

hashish [PHARM] A narcotic drug derived from the plant *Cannabis sativa;* can be smoked, chewed, or drunk.

hash total [COMPUT SCI] A sum obtained by adding together numbers having different meanings; the sole purpose is to ensure that the correct number of data have been read by the computer.

Hassal's body *See* thymic corpuscle.

hastate [BIOL] Shaped like an arrowhead with divergent barbs.

haster [METEOROL] In England, a violent rain storm.

hastingsite [MINERAL] $NaCa_2(Fe,Mg)_5Al_2Si_6O_{22}(OH)_2$ A mineral of the amphibole group crystallizing in the monoclinic system and composed chiefly of sodium, calcium, and iron, but usually with some potassium and magnesium.

hasty mine field [ORD] Field of mines quickly laid as a protection against an enemy attack; when practicable, it is laid in a definite pattern, as is a deliberate field, but measurements are approximate rather than exact.

hat [COMMUN] To arrange a fixed quantity of symbols or groups of symbols in an entirely haphazard sequence, as if they had been drawn from a hat.

HAT *See* height above touch-down.

hatch [ENG] A door or opening, especially on an airplane, spacecraft, or ship.

hatch battens [NAV ARCH] Flat bars used to fasten and make tight the edges of a tarpaulin covering a hatch.

hatch beam [ENG] A heavy, portable beam which supports a hatch cover.

hatch carlings [NAV ARCH] Fore and aft girders running under the coamings of hatches, to which the partial or half deck beams are attached.

hatch coaming [NAV ARCH] A raised frame around a hatch; it forms a support for the hatch cover and strengthens the edges of the opening.

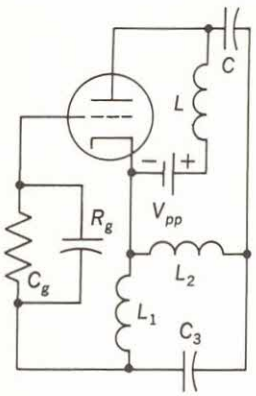
hatch cover [ENG] A steel or wooden cover for a hatch.

hatch end beam [NAV ARCH] The deck beam at the fore and aft end of a hatch.

hatchet [DES ENG] A small ax with a short handle and a hammerhead in addition to the cutting edge.

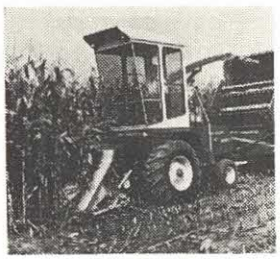
hatchettine *See* hatchettite.

HARTLEY OSCILLATOR



Circuit diagram for a Hartley oscillator.

HARVESTER



Self-propelled combine. *(Sperry New Holland, Division of Sperry Rand Corp.)*

hatchettite [MINERAL] $C_{38}H_{78}$ A yellow-white mineral paraffin wax, melting at 55–65°C in the natural state and 79°C in the pure state; occurs in masses in ironstone nodules or in cavities in limestone. Also known as adipocerite; adipocire; hatchettine; mineral tallow; mountain tallow; naphthine.

hatchettolite *See* ellsworthite.

hatching [GRAPHICS] Parallel lines drawn on sections of plans for buildings or machines to distinguish between different materials.

hatchite [MINERAL] A lead-gray mineral composed of sulfide of lead and arsenic; occurs in triclinic crystals.

Hatch-Slack pathway [BIOCHEM] A metabolic cycle involved in the non-light-requiring phase of photosynthesis in certain plants having specific metabolic and anatomical modifications in their mesophyll and bundle sheath cells which facilitate the temporary fixation of carbon dioxide (CO_2) into four-carbon organic acid; these acids are next broken down to three-carbon organic acids plus CO_2 in bundle sheath cells, where this freed CO_2 is then fixed into carbohydrates in a normal Calvin cycle pathway.

hatted code [COMMUN] Randomized code consisting of an encoding section; the plain text groups are arranged in alphabetical or other significant order, accompanied by their code groups arranged in a nonalphabetical or random order.

H attenuator *See* H network.

haud [METEOROL] In Scotland, a squall.

hauerite [MINERAL] MnS_2 A reddish-brown or brownish-black mineral composed of native manganese sulfide; occurs massive or in octahedral or pyritohedral crystals.

haughtonite [PETR] A black variety of biotite that is rich in iron.

haul [ENG] A single tow of a net or dredge. [NAV] To change the course of a vessel so as to bring the wind farther forward.

haulage [MIN ENG] The movement, in cars or otherwise, of men, supplies, ore, and waste, underground and on the surface.

haulage conveyor [MIN ENG] A conveyor used to transport material between the gathering conveyor and the outside.

haulage curve [MIN ENG] A bend in a haulage road in any direction.

haulage drum [MIN ENG] A cylinder on which steel haulage rope is coiled.

haulage level [MIN ENG] An underground level, either along and inside the ore body or closely parallel to it, and usually in the footwall, in which mineral is loaded into trams and moved out to the hoisting shaft.

haulage stage [MIN ENG] A mine roadway along which a load is moved by one form of haulage without coupling or uncoupling of cars.

haulageway [MIN ENG] The gangway, entry, or tunnel through which loaded or empty mine cars are hauled by animal or mechanical power.

haul-cycle time [MIN ENG] The time required for the scraper to haul a load to the dumping area and to return to its position in the loading area.

haul road [MIN ENG] A road built to carry heavily loaded trucks at a good speed; the grade is limited and usually kept to less than 17% of climb.

Hausdorff maximal principle [MATH] The principle that every partially ordered set has a linearly ordered subset S which is maximal in the sense that S is not a proper subset of another linearly ordered subset.

Hausdorff space [MATH] A topological space where each pair of distinct points can be enclosed in disjoint open neighborhoods.

hausmannite [MINERAL] Mn_3O_4 Brownish-black, opaque mineral composed of manganese tetroxide.

haustellum [INV ZOO] A proboscis modified for sucking.

haustorium [BOT] **1.** An outgrowth of certain parasitic plants which serves to absorb food from the host. **2.** Food-absorbing cell of the embryo sac in nonparasitic plants.

haustrum [ANAT] An outpocketing or pouch of the colon.

Hauterivian [GEOL] A European stage of geologic time, in the Lower Cretaceous, above Valanginian and below Barremian.

Haüy law [CRYSTAL] The law that for a given crystal there is a set of ratios such that the ratios of the intercepts of any crystal plane on the crystal axes are rational fractions of these ratios.

haüyne [MINERAL] $(Na,Ca)_{4\text{-}8}(Al_6Si_6O_{24})(SO_4,S)_{1\text{-}2}$ An isometric silicate mineral of the sodalite group occurring as grains embedded in various igneous rocks; hardness is 5.5–6 on Mohs scale, and specific gravity is 2.4–2.5. Also known as haüynite.

haüynite *See* haüyne.

Hauzeur furnace [MET] A double furnace for the distillation of zinc wherein waste heat from one set of retorts is utilized for heating the second set.

hav *See* haversine.

Havelock's law [OPTICS] The law that in a substance displaying the Kerr effect, $n_p - n = 2(n_s - n)$, where n is the index of refraction in the absence of an electric field, and n_p and n_s are the indices of refraction of light whose magnetic vector is parallel and perpendicular to the applied electric field.

haven [NAV] A place of safety for vessels; it is accessible in all states of weather and tides.

Haverhill fever [MED] An acute bacterial infection caused by *Streptobacillus moniliformis*, usually acquired by rat bite, and characterized by acute onset, intermittent fever, erythematous rash, and polyarthritis. Also known as streptobacillary fever.

Haversian canal [HISTOL] The central, longitudinal channel of an osteon containing blood vessels and connective tissue.

Haversian lamella [HISTOL] One of the concentric layers of bone composing a Haversian system.

Haversian system *See* osteon.

haversine [MATH] The haversine of an angle A is half of the versine of A, or is $\frac{1}{2}(1-\cos A)$. Abbreviated hav.

havgul *See* havgull.

havgula *See* havgull.

havgull [METEOROL] Cold, damp wind blowing from the sea during summer in Scotland and Norway. Also known as havgul; havgula.

HA virus *See* hemadsorption virus.

hawk [ENG] A board with a handle underneath used by a workman to hold mortar. [VERT ZOO] Any of the various smaller diurnal birds of prey in the family Accipitridae; some species are used for hunting hare and partridge in India and other parts of Asia.

Hawk [ORD] A U.S. Army surface-to-air guided missile that has a range of about 25 miles (40 kilometers), a maximum speed of about Mach 3, and a ceiling of about 45,000 feet (14,800 meters); originally guided by radio for attacking low-flying enemy aircraft, but newer models are radar-guided.

hawse [NAV ARCH] **1.** The area in the bow of the ship where the hawsepipes are located. **2.** The distance between the bow of a ship and the anchors.

hawse bolster [NAV ARCH] A steel ring or fairing at the end of or around a hawsepipe to aid the motion of a cable through the pipe, prevent its chafing, and guide the anchor into stowed position. Also known as anchor bolster.

hawsepipe [NAV ARCH] A pipe, made of heavy cast iron or steel, through which the anchor chain runs; placed in the ship's bow on each side of the stem, or in some cases also at the stern when a stern anchor is used.

hawser [NAV ARCH] A large rope or cable, usually over 5 inches (13 centimeters) in diameter, generally used to tow or moor a ship or secure it at a dock.

hay [AGR] Forage plants cut and dried for animal feed.

Hayashi track [ASTRON] A vertical track on the Hertzsprung-Russell diagram along which a star of small mass descends during its early stages of formation, when convective heat transport prevails over most of the star.

Hay bridge [ELEC] A four-arm alternating-current bridge used to measure inductance in terms of capacitance, resistance, and frequency; bridge balance depends on frequency.

haycock [HYD] An isolated ice cone created on land ice or shelf ice because of pressure or ice movement.

Hayden process [MET] A method of electrolytic copper refining; anodes of unrefined copper are suspended in an acid electrolyte, and one side of each then acts as an anode and the other as a cathode.

haydite [MATER] Expanded shale, slate, or clay characterized by low unit weight and satisfactory structural properties; used as an aggregate to produce lightweight structural concrete.

hay fever [MED] An allergic disorder of the nasal membranes and related structures due to sensitization by certain plant pollens. Also known as allergic rhinitis.

haymaker [AGR] A machine for curing hay.

Hay's test [PATH] A test for bile salts; the salts lower the surface tension of water, and therefore a light powder such as

HAWK

Rough-legged hawk (*Buteo lagopus*).

flowers of sulfur will not float in a solution containing a high concentration of the salts.

Hayward grab bucket [MECH ENG] A clamshell type of grab bucket used for handling coal, sand, gravel, and other flowable materials.

Hayward orange peel [MECH ENG] A grab bucket that operates like the clamshell type but has four blades pivoted to close.

hazard [IND ENG] Any risk to which a worker is subject as a direct result (in whole or in part) of his being employed.

hazard beacon *See* obstruction beacon.

hazardous material [MATER] A poison, corrosive agent, flammable substance, explosive, radioactive chemical, or any other material which can endanger human health or well-being if handled improperly.

haze [METEOROL] Fine dust or salt particles dispersed through a portion of the atmosphere; the particles are so small that they cannot be felt, or individually seen with the naked eye, but they diminish horizontal visibility and give the atmosphere a characteristic opalescent appearance that subdues all colors. [OPTICS] The degree of cloudiness in a solution, cured plastic material, or coating material.

haze droplet [METEOROL] Any small liquid droplet contributing to an atmospheric haze condition.

haze factor [METEOROL] The ratio of the luminance of a mist or fog through which an object is viewed to the luminance of the object.

haze horizon [METEOROL] The top of a haze layer which is confined by a low-level temperature inversion and has the appearance of the horizon when viewed from above against the sky.

haze layer [METEOROL] A layer of haze in the atmosphere, usually bounded at the top by a temperature inversion and frequently extending downward to the ground.

haze level *See* haze line.

haze line [METEOROL] The boundary surface in the atmosphere between a haze layer and the relatively clean, transparent air above the top of a haze layer. Also known as haze level.

hazelnut *See* filbert.

hazel sandstone [GEOL] An arkosic, iron-bearing redbed sandstone from the Precambrian found in western Texas.

hazemeter *See* transmissometer.

h-bar [QUANT MECH] A fundamental constant equal to $h/2\pi$, where h is Planck's constant. Symbolized $\hbar$. Also known as Dirac h; h-line.

H beacon [NAV] Nondirectional homing beacon which has a power output of 50 to 2000 watts.

H beam [CIV ENG] A beam similar to the I beam but with longer flanges.

H bend *See* H-plane bend.

H bit [DES ENG] A core bit manufactured and used in Canada having inside and outside diameters of 2.875 and 3.875 inches (73.025 and 98.425 millimeters), respectively; the matching reaming shell has an outside diameter of 3.906 inches (99.2124 millimeters).

H bomb *See* hydrogen bomb.

H-B virus [VIROL] A subgroup-A picornavirus associated with diseases in rodents.

H carrier system [COMMUN] Low-frequency carrier system which provides one carrier channel, using frequencies up to about 10 kilohertz, by means of effective four-wire transmission on a single open-wire pair.

HCB *See* hexachlorobenzene.

hcf *See* greatest common divisor.

HCG *See* human chorionic gonadotropin.

H chain *See* heavy chain.

hcp structure *See* hexagonal close-packed structure.

H display [NAV] In radar, a B display modified to include indication of angle of elevation.

HDX *See* half-duplex circuit.

He *See* helium.

head [ANAT] The region of the body consisting of the skull, its contents, and related structures. [ASTRON] *See* coma. [BUILD] The upper part of the frame on a door or window. [COMPUT SCI] A device that reads, records, or erases data on a storage medium such as a drum or tape; examples are a small electromagnet or a sensing or punching device. [ELECTR] The photoelectric unit that converts the sound track on motion picture film into corresponding audio signals in a motion picture projector. [ENG] The end section of a plastics blow-molding machine in which a hollow parison is formed from the melt. [ENG ACOUS] *See* cutter. [FL MECH] *See* pressure head. [GEOGR] *See* headland.

headache [MED] A deep form of pain, with a characteristic aching quality, localized in the head.

headblock [MIN ENG] **1.** A stop at the head of a slope or shaft to keep cars from going down the shaft or slope. **2.** A cap piece.

headboard [MIN ENG] **1.** A wooden wedge placed against the hanging wall, and against which one end of the stull is jammed. **2.** A board in the roof of a heading, contacting the earth above and supported by a headtree on each side.

head breadth [ANTHRO] Greatest horizontal breadth of the head above the ear openings, at whichever level is found, with moderate pressure applied on the caliper points.

head bulb [INV ZOO] A structure armed with spines behind the lips of spiruroid nematodes.

head cable *See* hand cable.

head circumference [ANTHRO] Maximum of three measurements taken above the eyebrows.

head crash [COMPUT SCI] The collision of the read-write head and the magnetic recording surface of a hard disk.

header [BUILD] A framing beam positioned between trimmers and supported at each end by a tail beam. [CIV ENG] Brick or stone laid in a wall with its narrow end facing the wall. [COMMUN] The first section of a message, which contains information such as the addressee, routing, and origination time. [ELEC] A mounting plate through which the insulated terminals or leads are brought out from a hermetically sealed relay, transformer, transistor, tube, or other device. [ENG] A pipe, conduit, or chamber which distributes fluid from a series of smaller pipes or conduits; an example is a manifold. [MECH ENG] A machine used for gathering or upsetting materials; used for screw, rivet, and bolt heads. [MIN ENG] **1.** An entry-boring machine that bores the entire section of the entry in one operation. **2.** A rock that heads off or delays progress. **3.** A blasthole at or above the head.

header bond [CIV ENG] A masonry bond consisting of header courses exclusively.

header card [COMPUT SCI] A card that contains supplemental information related to the data on the succeeding cards.

header course [CIV ENG] A masonry course of bricks laid as headers.

header label [COMPUT SCI] A block of data at the beginning of a magnetic tape file containing descriptive information to identify the file.

head erosion *See* headward erosion.

header record [COMPUT SCI] Computer input record containing common, constant, or identifying information for records that follow.

header-type boiler *See* straight-tube boiler.

head fold [EMBRYO] A ventral fold formed by rapid growth of the head of the embryo over the embryonic disk, resulting in the formation of the foregut accompanied by anteroposterior reversal of the anterior part of the embryonic disk.

headframe [MIN ENG] **1.** The frame at the top of a shaft, on which is mounted the hoisting pulley. Also known as gallows; gallows frame; headstock; hoist frame. **2.** The shaft frame, sheaves, hoisting arrangements, dumping gear, and connected works at the top of a shaft. Also known as headgear.

head gap [COMPUT SCI] The space between the read/write head and the recording medium, such as a disk in a computer.

head gate [CIV ENG] **1.** A gate on the upstream side of a lock or conduit. **2.** A gate at the starting point of an irrigation ditch.

headgear *See* headframe.

head height [ANTHRO] Average perpendicular distance between the tragion point and the mid-longitudinal line on top of the head, measured on both sides, when the head is positioned so that the line between the tragion point and the bottom of the bony orbit is horizontal.

headhouse [MIN ENG] **1.** A timber framing located at the top of a shaft and receiving the shaft guides that carry the cage or elevator. **2.** A structure that houses the headframe.

heading [NAV] **1.** The horizontal direction in which a ship actually points or heads at any instant, expressed in angular units from a reference direction, usually from 0° at the reference direction clockwise through 360°. **2.** In air navigation, the horizontal direction in which an aircraft points or heads, that is the direction of the longitudinal axis, measured as in the first definition.

heading-and-bench mining [MIN ENG] A stoping method used in thicker ore where it is customary first to take out a slice or heading 7 or 8 feet (2.1 or 2.4 meters) high directly under the top of the ore, and then to bench or stope down the ore between the bottom of the heading and the bottom of the ore or floor of the level.

heading angle [NAV] Heading measured from 0° at the reference direction clockwise or counterclockwise through 90 or 180° it is labeled with the reference direction as a prefix and the direction of measurement from the reference as a suffix; for example, heading angle S 107° E is 107° east of south, or heading 073°.

heading blasting *See* coyote blasting.

heading joint [BUILD] **1.** A joint between two pieces of timber which are joined in a straight line, end to end. **2.** A masonry joint formed between two stones in the same course.

heading line [NAV] The line extending in the direction of a heading.

heading–overhand bench method [MIN ENG] A tunneling method in which the heading is the lower part of the section and is driven at least a round or two in advance of the upper part (bench), which is taken out by overhand excavating. Also known as inverted heading and bench method.

heading side *See* footwall.

heading-upward plan position indicator [ELECTR] A plan position indicator in which the heading of the craft appears at the top of the indicator at all times.

heading wall *See* footwall.

headland [GEOGR] **1.** A high, steep-faced promontory extending into the sea. Also known as head; mull. **2.** High ground surrounding a body of water.

head length [ANTHRO] The distance measured between glabella and opisthocranion, with application of moderate pressure.

headline [MIN ENG] In dredging, the line which is anchored ahead of the dredge pond and holds the dredge up to its digging front.

head loss [FL MECH] The drop in the sum of pressure head, velocity head, and potential head between two points along the path of a flowing fluid, due to causes such as fluid friction.

headman [MIN ENG] **1.** A person who brings coal to the tramway from the workings. **2.** One who engages or disengages grips on mine cars at the top of a haulage slope.

head margin [GRAPHICS] The unprinted space left above the first line of printing on a page.

head mast [MIN ENG] The tower carrying the working lines of a cable excavator.

head meter [ENG] A flowmeter that is dependent upon change of pressure head to operate.

head motion [MECH ENG] The vibrator on a reciprocating table concentrator which imparts motion to the deck.

head organ [INV ZOO] One of the bulbous structures in the prohaptor of monogenetic trematodes which are openings for adhesive glands.

head-per-track [COMPUT SCI] An arrangement having one read/write head for each magnetized track on a disk or drum to eliminate the need to move a single head from track to track.

headphone [ENG ACOUS] An electroacoustic transducer designed to be held against an ear by a clamp passing over the head, for private listening to the audio output of a communications, radio, or television receiver or other source of audio-frequency signals. Also known as phone.

head process [EMBRYO] The notochord or notochordal plate formed as an axial outgrowth of the primitive node.

head pulley [MECH ENG] The pulley at the discharge end of a conveyor belt; may be either an idler or a drive pulley.

head-pulley-drive conveyor [MECH ENG] A conveyor having the belt driven by the head pulley without a snub pulley.

headroom [MIN ENG] **1.** Distance between the drill platform and the bottom of the sheave wheel. **2.** Height between the floor and the roof in a mine opening.

headrope [MIN ENG] In rope haulage, that rope used to pull the loaded transportation device toward the discharge point.

heads [MIN ENG] **1.** Material removed from the ore in the treatment plant and containing the valuable metallic constituents. **2.** The feed to a concentrating system in ore dressing.

head section [COMMUN] *See* end section. [ENG] That part of belt conveyor which consists of a drive pulley, a head pulley which may or may not be a drive pulley, belt idlers if included, and the necessary framing.

headset [ENG ACOUS] A single headphone or a pair of headphones, with a clamping strap or wires holding them in position.

head shaft [MECH ENG] The shaft driven by a chain and mounted at the delivery end of a chain conveyor; it serves as the mount for a sprocket which drives the drag chain.

head sheave [MIN ENG] Pulley in the headgear of a winding shaft over which the hoisting rope runs.

head shield [INV ZOO] A conspicuous structure arching over the lips of certain nematodes.

headsill [BUILD] A horizontal beam at the top of the frame of a door or window.

head smut [PL PATH] A fungus disease of corn and sorghum caused by *Sphacelotheca reiliana* which destroys the head of the plant.

headspace [ORD] Distance between the face of the locked bolt or breechblock of a gun and some specified point in the chamber; in guns using rimless bottlenecked cartridges, the space between the boltface and a specified point on the shoulder of the cartridge.

headstock [MECH ENG] **1.** The device on a lathe for carrying the revolving spindle. **2.** The movable head of certain measuring machines. **3.** The device on a cylindrical grinding machine for rotating the work. [MIN ENG] *See* headframe.

heads-up display [ELECTR] An electronic display that presents critical aircraft performance, such as speed and altitude, on a combining glass at the wind screen for pilot monitoring, while permitting the pilot to look out the window for other aircraft on the runway.

head tide [NAV] A tidal current setting in a direction approximately opposite to the heading of a vessel.

headtree [MIN ENG] The horizontal timber placed at each side of a rectangular heading to support the headboard.

head up [ENG] To tighten bolts on a hatch cover or access hole plate to prevent leakage from or into an operating vessel.

head value [MIN ENG] Assay value of the feed to a concentrating system.

headwall [CIV ENG] A retaining wall at the outlet of a drain or culvert. [GEOL] The steep cliff at the back of a cirque.

headward erosion [GEOL] Erosion caused by water flowing at the head of a valley. Also known as head erosion; headwater erosion.

headwater erosion *See* headward erosion.

headwaters [HYD] The source and upstream waters of a stream.

headway [MIN ENG] *See* cross heading. [NAV] Motion in a forward direction.

headworks [CIV ENG] Any device or structure at the head or diversion point of a waterway.

health [MED] A state of dynamic equilibrium between an organism and its environment in which all functions of mind and body are normal.

health physics [NUCLEO] The protection of personnel from harmful effects of ionizing radiation by such means as routine radiation surveys, area and personnel monitoring, and protective equipment and procedures.

heaped capacity [MIN ENG] In scraper loading, the volume of heaped material that a scraper will hold.

heap leaching [MET] A process used for the recovery of copper from weathered ore and material from mine dumps; material is laid to a thickness of 20 feet in alternately fine and coarse beds and treated with water at intervals during which oxidation occurs; liquor that runs off is treated with scrap iron to precipitate copper.

heap roasting [MIN ENG] A process in which ore with a high sulfur content is roasted by the combustion of the sulfur.

heap sampling [MIN ENG] Method of ore sampling in which the material is shoveled into a conical heap which is then flattened with a spade and shoveled into four equal heaps, two of which are retained, crushed, mixed, and formed into another, smaller cone; the process is repeated until the required small sample is produced.

hearing [PHYSIO] The general perceptual behavior and the specific responses made in relation to sound stimuli.

hearing aid [ENG ACOUS] A miniature, portable sound amplifier for persons with impaired hearing, consisting of a microphone, audio amplifier, earphone, and battery.

heart [ANAT] The hollow muscular pumping organ of the cardiovascular system in vertebrates.

heartbeat [PHYSIO] Pulsation of the heart coincident with ventricular systole.

heart block [MED] The cardiac condition resulting from defective transmission of impulses from atrium to ventricle.
heart bond [CIV ENG] A masonry bond in which two header stones meet in the middle of the wall, their joint being covered by another stone; no headers stretch across the wall.
heartburn [MED] A burning sensation emanating from the esophagus below the sternum.
heart cam [HOROL] A heart-shaped cam used in stopwatches and chronographs to return the recording hand to zero.
heart failure *See* cardiac failure.
heart-failure cells [PATH] Macrophages containing hemosiderin granules found in the lung in certain heart disorders.
hearth [BUILD] **1.** The floor of a fireplace or brick oven. **2.** The projection in front of a fireplace, made of brick, stone, or cement. [MET] The floor of a reverberatory, open-hearth, cupola, or blast furnace; it is made of refractory material able to support the charge and to collect the molten products.
hearth furnace [MET] A furnace designed to heat the charge, resting on the hearth, by passing hot gases over it.
hearth roasting [MIN ENG] A process in which ore or concentrate enters at the top of a multiple hearth roaster and drops from hearth until it is discharged at the bottom.
heart-lung machine [MED] A machine through which blood is shunted to maintain circulation during heart surgery.
heart pacemaker *See* pacemaker.
heart rate [PHYSIO] The number of heartbeats per minute.
heartrot [PL PATH] **1.** A rot involving disintegration of the heartwood of a tree. **2.** A fungus disease of beets and rutabagas caused by *Mycosphaerella tabifica* which results in decay of the central tissues of the plant. **3.** A boron-deficiency disease of sugarbeets that causes rot. **4.** A fatal disease of palms associated with a trypanosomatid flagellate *Phytomonas*. Also known as cedros wilt; marchitez sorpresiva.
heart valve [ANAT] Flaps of tissue that prevent reflux of blood from the ventricles to the atria or from the pulmonary arteries or aorta to the atria.
heartwater disease [VET MED] A septicemic infectious disease of cattle, sheep, and goats in Africa caused by the rickettsial microorganism *Cowdria ruminantium*.
heartwood [BOT] Xylem of an angiosperm.
heart worm [INV ZOO] *Dirofilaria immitis*. A filarial nematode parasitic on dogs and other carnivores.
heat [THERMO] Energy in transit due to a temperature difference between the source from which the energy is coming and a sink toward which the energy is going; other types of energy in transit are called work.
heat-activated battery *See* thermal battery.
heat-affected zone [MET] The zone within a base metal that undergoes structural changes but does not melt during welding, cutting, or brazing.
heat balance [GEOPHYS] The equilibrium which exists on the average between the radiation received by the earth and atmosphere from the sun and that emitted by the earth and atmosphere. [MET] The calculation used in fluidization roasting so that the addition or removal of heat can be controlled to maintain the optimum temperature in the reacting vessel. [THERMO] The equilibrium which is known to exist when all sources of heat gain and loss for a given region or body are accounted for.
heat barrier *See* thermal barrier.
heat budget [GEOPHYS] Amount of heat needed to raise a lake's water from the winter temperature to the maximum summer temperature. [THERMO] The statement of the total inflow and outflow of heat for a planet, spacecraft, biological organism, or other entity.
heat capacity [THERMO] The quantity of heat required to raise a system one degree in temperature in a specified way, usually at constant pressure or constant volume. Also known as thermal capacity.
heat check [MET] Parallel surface cracks forming a pattern on the surface of a metal as a result of thermal fatigue.
heat coil [ELEC] Protective device which uses a mechanical element which is allowed to move when the fusible substance that holds it in place is heated above a predetermined temperature by current in the circuit.
heat conduction [THERMO] The flow of thermal energy through a substance from a higher- to a lower-temperature region.
heat conductivity *See* thermal conductivity.
heat content *See* enthalpy.
heat convection [THERMO] The transfer of thermal energy by actual physical movement from one location to another of a substance in which thermal energy is stored. Also known as thermal convection.
heat cramps [MED] Painful voluntary-muscle spasm and cramps following strenuous exercise, usually in persons in good physical condition, due to loss of sodium chloride and water from excessive sweating.
heat cycle *See* thermodynamic cycle.
heat death [THERMO] The condition of any isolated system when its entropy reaches a maximum, in which matter is totally disordered and at a uniform temperature, and no energy is available for doing work.
heat dissipation *See* heat loss.
heat distortion point [ENG] The temperature at which a standard test bar (ASTM test) deflects 0.010 inch (0.254 millimeter) under a load of either 66 or 264 psi (4.55×10^5 or 18.20×10^5 newtons per square meter), as specified.
heat dump *See* heat sink.
heat energy *See* internal energy.
heat engine [MECH ENG] A machine that converts heat into work (mechanical energy). [THERMO] A thermodynamic system which undergoes a cyclic process during which a positive amount of work is done by the system; some heat flows into the system and a smaller amount flows out in each cycle.
heat equation [THERMO] A parabolic second-order differential equation for the temperature of a substance in a region where no heat source exists: $\partial t/\partial \tau = (k/\rho c)(\partial^2 t/\partial x^2 + \partial^2 t/\partial y^2 + \partial t^2/\partial z^2)$, where x, y, and z are space coordinates, τ is the time, $t(x,y,z,\tau)$ is the temperature, k is the thermal conductivity of the body, ρ is its density, and c is its specific heat; this equation is fundamental to the study of heat flow in bodies. Also known as Fourier heat equation; heat flow equation.
heat equator [METEOROL] **1.** The line which circumscribes the earth and connects all points of highest mean annual temperature for their longitudes. **2.** The parallel of latitude of 10°N, which has the highest mean temperature of any latitude. Also known as thermal equator.
heater [ELECTR] An electric heating element for supplying heat to an indirectly heated cathode in an electron tube. Also known as electron-tube heater. [ENG] A contrivance designed to give off heat.
heater oil *See* heating oil.
heater-type cathode *See* indirectly heated cathode.
heat exchange [CHEM ENG] A unit operation based on heat transfer which functions in the heating and cooling of fluids with or without phase change.
heat exchanger [ENG] Any device, such as an automobile radiator, that transfers heat from one fluid to another or to the environment. Also known as exchanger.
heat exhaustion [MED] A heat-exposure syndrome characterized by weakness, vertigo, headache, nausea, and peripheral vascular collapse, usually precipitated by physical exertion in a hot environment.
heat filter [OPTICS] Special glass in condenser lens systems to keep heat from film.
heat flow [THERMO] Heat thought of as energy flowing from one substance to another; quantitatively, the amount of heat transferred in a unit time. Also known as heat transmission.
heat flow equation *See* heat equation.
heat flow province [GEOPHYS] A geographic area in which the heat flow and heat production are linearly related.
heat flux [THERMO] The amount of heat transferred across a surface of unit area in a unit time. Also known as thermal flux.
heath *See* temperate and cold scrub.
heather [BOT] *Calluna vulgaris*. An evergreen heath of northern and alpine regions distinguished by racemes of small purple-pink flowers.
heating chamber [ENG] The part of an injection mold in which cold plastic feed is changed into a hot melt.
heating degree-day [METEOROL] A form of degree-day used as an indication of fuel consumption; in United States usage, one heating degree-day is given for each degree that the daily mean temperature departs below the base of 65°F (where the Celsius scale is used, the base is usually 19°C).
heating element [ELEC] The part of a heating appliance in which electrical energy is transformed into heat.
heating fuel *See* heating oil.
heating load [CIV ENG] The quantity of heat per unit time

that must be provided to maintain the temperature in a building at a given level.

heating oil [MATER] No. 2 fuel oil; used in domestic heating units. Also known as heater oil; heating fuel.

heating plant [CIV ENG] The whole system for heating an enclosed space. Also known as heating system.

heating surface [ENG] The surface for the absorption and transfer of heat from one medium to another.

heating system *See* heating plant.

heating value *See* heat of combustion.

heat insulator [MATER] A substance having relatively low heat conductivity.

heat lamp [ELEC] An infrared lamp used for brooders in farming, for drying paint or ink, for keeping food warm, and for therapeutic and other applications requiring heat with or without some visible light.

heat lightning [GEOPHYS] Nontechnically, the luminosity observed from ordinary lightning too far away for its thunder to be heard.

heat loss [PHYS] Energy or power transmitted out of a system in the form of heat. Also known as heat dissipation.

heat-loss flowmeter [ENG] Any of various instruments that determine gas velocities or mass flows from the cooling effect of the flow on an electrical sensor such as a thermistor or resistor; a second sensor is used to compensate for the temperature of the fluid. Also known as thermal-loss meter.

heat low *See* thermal low.

heat of ablation [THERMO] A measure of the effective heat capacity of an ablating material, numerically the heating rate input divided by the mass loss rate which results from ablation.

heat of activation [PHYS CHEM] The increase in enthalpy when a substance is transformed from a less active to a more reactive form at constant pressure.

heat of adsorption [THERMO] The increase in enthalpy when 1 mole of a substance is adsorbed upon another at constant pressure.

heat of aggregation [THERMO] The increase in enthalpy when an aggregate of matter, such as a crystal, is formed at constant pressure.

heat of association [PHYS CHEM] Increase in enthalpy accompanying the formation of 1 mole of a coordination compound from its constituent molecules or other particles at constant pressure.

heat of combustion [PHYS CHEM] The amount of heat released in the oxidation of 1 mole of a substance at constant pressure, or constant volume. Also known as heat value; heating value.

heat of compression [THERMO] Heat generated when air is compressed.

heat of condensation [THERMO] The increase in enthalpy accompanying the conversion of 1 mole of vapor into liquid at constant pressure and temperature.

heat of cooling [THERMO] Increase in enthalpy during cooling of a system at constant pressure, resulting from an internal change such as an allotropic transformation.

heat of crystallization [THERMO] The increase in enthalpy when 1 mole of a substance is transformed into its crystalline state at constant pressure.

heat of decomposition [PHYS CHEM] The change in enthalpy accompanying the decomposition of 1 mole of a compound into its elements at constant pressure.

heat of dilution [PHYS CHEM] **1.** The increase in enthalpy accompanying the addition of a specified amount of solvent to a solution of constant pressure. Also known as integral heat of dilution; total heat of dilution. **2.** The increase in enthalpy when an infinitesimal amount of solvent is added to a solution at constant pressure. Also known as differential heat of dilution.

heat of dissociation [PHYS CHEM] The increase in enthalpy at constant pressure, when molecules break apart or valence linkages rupture.

heat of emission [ELECTR] Additional heat energy that must be supplied to an electron-emitting surface to maintain it at a constant temperature.

heat of evaporation *See* heat of vaporization.

heat of formation [PHYS CHEM] The increase in enthalpy resulting from the formation of 1 mole of a substance from its elements at constant pressure.

heat of fusion [THERMO] The increase in enthalpy accompanying the conversion of 1 mole, or a unit mass, of a solid to a liquid at its melting point at constant pressure and temperature. Also known as latent heat of fusion.

heat of hydration [PHYS CHEM] The increase in enthalpy accompanying the formation of 1 mole of a hydrate from the anhydrous form of the compound and from water at constant pressure.

heat of ionization [PHYS CHEM] The increase in enthalpy when 1 mole of a substance is completely ionized at constant pressure.

heat of linkage [PHYS CHEM] The bond energy of a particular type of valence linkage between atoms in a molecule, as determined by the energy required to dissociate all bonds of the type in 1 mole of the compound divided by the number of such bonds in a compound.

heat of mixing [THERMO] The difference between the enthalpy of a mixture and the sum of the enthalpies of its components at the same pressure and temperature.

heat of reaction [PHYS CHEM] **1.** The negative of the change in enthalpy accompanying a chemical reaction at constant pressure. **2.** The negative of the change in internal energy accompanying a chemical reaction at constant volume.

heat of solidification [THERMO] The increase in enthalpy when 1 mole of a solid is formed from a liquid or, less commonly, a gas at constant pressure and temperature.

heat of solution [PHYS CHEM] The enthalpy of a solution minus the sum of the enthalpies of its components. Also known as integral heat of solution; total heat of solution.

heat of sublimation [THERMO] The increase in enthalpy accompanying the conversion of 1 mole, or unit mass, of a solid to a vapor at constant pressure and temperature. Also known as latent heat of sublimation.

heat of transformation [THERMO] The increase in enthalpy of a substance when it undergoes some phase change at constant pressure and temperature.

heat of vaporization [THERMO] The quantity of energy required to evaporate 1 mole, or a unit mass, of a liquid, at constant pressure and temperature. Also known as enthalpy of vaporization; heat of evaporation; latent heat of vaporization.

heat of wetting [THERMO] **1.** The heat of adsorption of water on a substance. **2.** The additional heat required, above the heat of vaporization of free water, to evaporate water from a substance in which it has been absorbed.

heat pipe [ENG] A heat-transfer device consisting of a sealed metal tube with an inner lining of wicklike capillary material and a small amount of fluid in a partial vacuum; heat is absorbed at one end by vaporization of the fluid and is released at the other end by condensation of the vapor.

heat pump [MECH ENG] A device which transfers heat from a cooler reservoir to a hotter one, expending mechanical energy in the process, especially when the main purpose is to heat the hot reservoir rather than refrigerate the cold one.

heat quantity [THERMO] A measured amount of heat; units are the small calorie, normal calorie, mean calorie, and large calorie.

heat radiation [THERMO] The energy radiated by solids, liquids, and gases in the form of electromagnetic waves as a result of their temperature. Also known as thermal radiation.

heat rash *See* miliaria.

heat rate [MECH ENG] An expression of the conversion efficiency of a thermal power plant or engine, as heat input per unit of work output; for example, Btu/kWhr.

heat reactor [NUCLEO] A nuclear reactor designed primarily to supply heat for industrial purposes.

heat release [THERMO] The quantity of heat released by a furnace or other heating mechanism per second, divided by its volume.

heat resistance *See* thermal resistance.

heat-resistant alloy [MET] An oxidation-resistant alloy.

heat-resistant glass [MATER] Glass, such as borosilicate glass, that is heat-treated or leached to remove alkali so that it withstands high heat and sudden cooling without shattering.

heat run [ELEC] A series of temperature measurements made on an electric device during operating tests under various conditions.

heat seal [ENG] A union between two thermoplastic surfaces by application of heat and pressure to the joint.

heatseeker [ORD] A guided missile incorporating an infrared device for homing on heat-radiating machines or installations, such as an aircraft engine or a blast furnace.

heat set [TEXT] A process to fix or set a crimp or texture in yarn by use of heat.

heat shield [MATER] Any protective layer that gives protection from heat; used on the front of a reentry capsule.

heat-shrinkable tubing [MATER] A type of plastic tubing that can be heated and shrink-fitted over terminals and other objects of varying sizes and shapes, for insulating and other purposes.

heat shunt [MET] A heatsink placed in contact with the lead of a delicate component to prevent overheating during soldering.

heatsink [AERO ENG] **1.** A type of protective device capable of absorbing heat and used as a heat shield. **2.** In nuclear propulsion, any thermodynamic device, such as a radiator or condenser, that is designed to absorb the excess heat energy of the working fluid. Also known as heat dump. [ELEC] A mass of metal that is added to a device for the purpose of absorbing and dissipating heat; used with power transistors and many types of metallic rectifiers. Also known as dissipator. [THERMO] Any (gas, solid, or liquid) region where heat is absorbed.

heatsink cooling [ENG] Cooling a body or system by allowing heat to be absorbed from it by another body.

heat source [THERMO] Any device or natural body that supplies heat.

heat sterilization [ENG] An act of destroying all forms of life on and in bacteriological media, foods, hospital supplies, and other materials by means of moist or dry heat.

heat storage [OCEANOGR] The tendency of the ocean to act as a heat reservoir; results in smaller daily and annual variations in temperature over the sea.

heat stress index [PHYSIO] Relation of the amount of evaporation or perspiration required for particular job conditions as related to the maximum evaporative capacity of an average person. Abbreviated HSI.

heatstroke [MED] A heat-exposure syndrome characterized by hyperpyrexia and prostration due to diminution or cessation of sweating, occurring most commonly in persons with underlying disease.

heat thunderstorm [METEOROL] In popular terminology, a thunderstorm of the air mass type which develops near the end of a hot, humid summer day.

heat time [MET] Duration of a single current impulse in pulsation welding.

heat tinting [MET] Oxidation of a polished metal surface by heating to reveal the microstructure.

heat transfer [THERMO] The movement of heat from one body to another (gas, liquid, solid, or combinations thereof) by means of radiation, convection, or conduction.

heat-transfer coefficient [THERMO] The amount of heat which passes through a unit area of a medium or system in a unit time when the temperature difference between the boundaries of the system is 1 degree.

heat-transfer oil [MATER] An oil used to transport heat or cold between two areas of process-equipment surface, and especially compounded to avoid heat degradation in the temperature range of application.

heat transmission *See* heat flow.

heat transport [THERMO] Process by which heat is carried past a fixed point or across a fixed plane, as in a warm current.

heat-treatable alloy [MET] An alloy that can be hardened by thermal treatment.

heat-treating film [MET] An oxide coating formed on a metal surface by heat treating.

heat treatment [MET] Heating and cooling a metal or alloy to obtain desired properties or conditions.

heat value *See* heat of combustion.

heat wave [ELECTROMAG] Infrared radiation, much higher in frequency than radio waves. [METEOROL] A period of abnormally and uncomfortably hot and usually humid weather; the condition must prevail at least 1 day to be a heat wave, but conventionally the term is reserved for periods of several days to several weeks. Also known as hot wave; warm wave.

heave [GEOL] **1.** The horizontal component of the slip, measured at right angles to the strike of the fault. **2.** A predominantly upward movement of the surface of the soil due to expansion or displacement. [MIN ENG] A rising of the floor of a mine caused by its being too soft to resist the weight on the pillars. [OCEANOGR] The motion imparted to a floating body by wave action.

heavenly body *See* celestial body.

heaves [VET MED] Chronic emphysema in horses marked by labored breathing due to overdistension of the alveoli. Also known as broken wind.

heave to [NAV] To bring a ship into such a position that there is no headway.

heavier-than-air craft [AERO ENG] Any aircraft weighing more than the air it displaces.

heaving [NAV ARCH] Vertical motion of a ship, as distinguished from pitching. [PETRO ENG] Partial or total collapse of drill hole walls resulting from internal pressures mainly due to swelling from hydration or formation gas pressures.

heaving plug [PETRO ENG] A plug at the bottom of an oil well which stops unconsolidated sand from mixing with the oil.

Heaviside calculus [MATH] A type of operational calculus that is used to completely analyze a linear dynamical system which represents some vibrating physical system.

Heaviside layer *See* E layer.

Heaviside-Lorentz system [ELECTROMAG] A system of electrical units which is the same as the Gaussian system except that the units of charge and current are smaller by a factor of $1/\sqrt{4\pi}$, and those of electric and magnetic field are larger by a factor by $\sqrt{4\pi}$. Also known as Lorentz-Heaviside system.

Heaviside's expansion theorem [MATH] A theorem providing an infinite series representation for the inverse Laplace transforms of functions of a particular type.

Heaviside unit function [MATH] The real function $f(x)$ whose value is 0 if x is negative and whose value is 1 otherwise.

heavy acid *See* phosphotungstic acid.

heavy alloy [MET] A tungsten-nickel alloy produced by pressing and sintering the metallic powders; used for screens for x-ray tubes and radioactivity units and for contact surfaces of circuit breakers.

heavy antiaircraft artillery [ORD] Conventional antiaircraft artillery pieces larger than 90-millimeter, the weight of which in a trailed mount is greater than 40,000 pounds (18,000 kilograms).

heavy artillery [ORD] Artillery other than antiaircraft artillery; consists of howitzers and longer-barreled cannon not classified as medium artillery.

heavy bombardment [ORD] A bombardment of great intensity, especially one with large aerial bombs or other missiles.

heavy bomber [AERO ENG] Any large bomber considered to be relatively heavy, such as a bomber having a gross weight, including bomb load, of 250,000 pounds (113,000 kilograms) or more, as the B-36 and the B-52.

heavy chain [IMMUNOL] The heavier of the two types of polypeptide chains occurring in immunoglobulin molecules, its molecular weight range being 50,000–70,000. Also known as A chain; H chain.

heavy concrete [MATER] Concrete in which some or all rock aggregate is replaced by metal aggregate.

heavy crude [PETRO ENG] Crude oil having a high proportion of viscous, high-molecular-weight hydrocarbons, and often having a high sulfur content.

heavy cruiser [NAV ARCH] A warship designed to operate with strike, antisubmarine-warfare, or amphibious forces against air and surface threats.

heavy drop [ORD] An airdrop in which heavy articles, such as trucks or artillery pieces, are dropped by parachute.

heavy-duty [ENG] Designed to withstand excessive strain.

heavy-duty car [MECH ENG] A railway motorcar weighing more than 1400 pounds (635 kilograms), propelled by an engine of 12–30 horsepower (8900–22,400 watts), and designed for hauling heavy equipment and for hump-yard service.

heavy-duty oil [MATER] Lubricating oil with good oxidation stability and corrosion-preventive and detergent-dispersant characterisitics; used in high-speed diesel and gasoline engines under heavy-duty service conditions.

heavy-duty tool block *See* open-side tool block.

heavy ends [MATER] The highest boiling portion of a petroleum fraction.

heavy field artillery [ORD] Field artillery of the largest calibers, such as the 155-millimeter gun, the 6-inch (152.4-millimeter) gun, the 8-inch (203.2-millimeter) howitzer, and the 240-millimeter howitzer.

heavy floe [OCEANOGR] A mass of sea ice that is more than 10 feet (3 meters) thick. Also known as heavy ice.

heavy force fit [DES ENG] A fit for heavy steel parts or shrink fits in medium sections.

heavy fraction [PETRO ENG] The final products retrieved from crude oil during the process of distillation. Also known as end cut.

heavy ground [MIN ENG] Dangerous hanging wall requiring vigilance against possible rock fall.

heavy howitzer [ORD] A complete projectile-firing weapon, with a medium muzzle velocity and a curved trajectory; the bore diameter is larger than 200 millimeters.

heavy hydrogen [NUC PHYS] Hydrogen consisting of isotopes whose mass number is greater than one, namely deuterium or tritium.

heavy ice *See* heavy floe.

heavy ion *See* large ion.

heavy-ion linac *See* heavy-ion linear accelerator.

heavy-ion linear accelerator [NUCLEO] A linear accelerator which produces a beam of heavy particles of high intensity and sharp energy; used to produce transuranic elements and short-lived isotopes, and to study nuclear reactions, nuclear spectroscopy, and the absorption of heavy ions in matter. Also known as heavy-ion linac; hilac.

heavy-ion source [ELECTR] Any source of ionized molecules or atoms of elements heavier than helium.

heavy-lift ship [NAV ARCH] A ship capable of loading and discharging large individual cargo units of up to 1000 metric tons.

heavy liquid [MATER] Any of a group of heavy organic liquids, inorganic solutions, and fused salts used for determination of specific gravity of mineral particles or for separation of minerals having lower and higher specific gravities than the liquids; examples are methylene iodide and bromoform.

heavy-liquid bubble chamber [NUCLEO] A bubble chamber which contains deuterium or an organic liquid such as propane or Freon.

heavy-liquid separation [MIN ENG] A laboratory technique for separating ore particles by allowing them to settle through, or float above, a fluid of intermediate density.

heavy machine gun [ORD] **1.** Any machine gun of relatively heavy weight, including caliber-.30 water-cooled machine guns and caliber-.50 machine guns. **2.** Any aircraft machine gun above caliber .30.

heavy-media separation [MIN ENG] A series of processes for the concentration of ore developed at one time, but now used in coal cleaning; uses suspensions of magnetic materials such as magnetite.

heavy meromyosin [BIOCHEM] The larger of two fragments obtained from the muscle protein myosin following limited proteolysis by trypsin or chymotrypsin.

heavy metal [MET] A metal whose specific gravity is approximately 5.0 or higher.

heavy mineral [MINERAL] A mineral with a density above 2.9, which is the density of bromoform, the liquid used to separate the heavy from the light minerals.

heavy-mineral prospecting [MIN ENG] Locating the source of an economic mineral by determining the relative amounts of the mineral in stream sediments and tracing the drainage upstream.

heavy naphtha [MATER] A dark amber to red liquid that is a mixture of xylene and higher homologs; it is flammable; used as a solvent for asphalt and in production of coumarone resins. Also known as high-flash naphtha.

heavy oil [MATER] The high-boiling, relatively viscous fractions of petroleum or coal tar oils.

heavy oxygen *See* oxygen-18.

heavy particle *See* baryon.

heavy resin oil [MATER] Reddish-brown, high-boiling, heavy coal tar oils.

heavy section car [MECH ENG] A railway motorcar weighing 1200–1400 pounds (544–635 kilograms) and propelled by an 8–12 horsepower (6000–8900 watts) engine.

heavy tank [ORD] A full-track combat tank with a weight of 56–85 tons.

heavy water [INORG CHEM] A compound of hydrogen and oxygen containing a higher proportion of the hydrogen isotope deuterium than does naturally occurring water. Also known as deuterium oxide.

heavy-water reactor [NUCLEO] A nuclear reactor in which heavy water serves as moderator and sometimes also as coolant.

heavy weapon [ORD] Any weapon such as a howitzer, mortar, heavy machine gun, and recoilless rifle that is usually part of infantry equipment.

heazelwoodite [MINERAL] Ni_3S_2 A meteorite mineral consisting of a sulfide of nickel.

Hebe [ASTRON] An asteroid with a diameter of about 200 kilometers, mean distance from the sun of 2.426 astronomical units, and S-type surface composition.

hebephrenia [PSYCH] A type of schizophrenia marked by disorganized thinking, mannerisms, and regressive caricaturing that is seen in some adolescents, such as silliness, unpredictable giggling, and posturing.

Heberden-Rosenbach node *See* Heberden's node.

Heberden's arthritis [MED] Degenerative joint disease of the terminal joints of the fingers, producing enlargement (Heberden's nodes) and flexion deformities.

Heberden's node [MED] Nodose deformity of the fingers in degenerative joint disease. Also known as Heberden-Rosenbach node.

Hebraic granite *See* graphic granite.

Hebrovellidae [INV ZOO] A family of hemipteran insects in the subdivision Amphibicorisae.

hecatolite *See* moonstone.

hectare [MECH] A unit of area in the metric system equal to 100 ares or 10,000 square meters. Abbreviated ha.

hecto- [SCI TECH] A prefix representing 10^2 or 100.

hectocotylus [INV ZOO] A specialized appendage of male cephalopods adapted for the transference of sperm.

hectogram [MECH] A unit of mass equal to 100 grams. Abbreviated hg.

hectoliter [MECH] A metric unit of volume equal to 100 liters or to 0.1 cubic meter. Abbreviated hl.

hectometer [MECH] A unit of length equal to 100 meters. Abbreviated hm.

hectometric wave [COMMUN] A radio wave between the wavelength limits of 100 and 1000 meters, corresponding to the frequency range of 3000 to 300 kilohertz.

hectorite [MINERAL] $(Mg,Li)_3Si_4O_{10}(OH)_2$ A trioctohedral clay mineral of the montmorillonite group composed of a hydrous silicate of magnesium and lithium.

heddle [TEXT] **1.** A twisted wire with an eye, attached to the harness to guide the warp threads. **2.** One of the sets of parallel cords or wires composing the harness of a loom.

hedenbergite [MINERAL] $CaFeSi_2O_6$ A black mineral consisting of calcium-iron pyroxene and occurring at the contacts of limestone with granitic masses.

hedeoma oil [MATER] A yellowish essential oil distilled from the leaves of *Hedeoma pulegioides;* soluble in two or more parts of 70% alcohol, ether, and chloroform; used in medicine and perfumery. Also known as American pennyroyal oil; pulegium oil.

hedgehog [ORD] **1.** A portable obstacle, made of crossed poles laced with barbed wire, in the general shape of an hourglass. **2.** A beach obstacle, usually made of steel bars or channel iron, imbedded in concrete and used to interfere with beach landings. **3.** A concentration of troops securely entrenched or fortified, with arms and defenses facing all directions. [VERT ZOO] The common name for members of the insectivorous family Erinaceidae characterized by spines on their back and sides.

hedgehog round [ORD] A small, mortarlike, antisubmarine projectile.

hedleyite [MINERAL] A mineral composed of an alloy of bismuth and tellurium.

hedonic gland [VERT ZOO] One of the mucus-secreting scent glands in many urodeles; functions in courtship.

hedonism [PSYCH] The doctrine that every act is motivated by the desire for pleasure or the aversion from pain and unpleasantness.

hedonophobia [PSYCH] An abnormal fear of pleasure.

hedreocraton [GEOL] A craton that influenced later continental development.

Hedvall effect I [SOLID STATE] A discontinuous change in the temperature dependence of the chemical reaction rate of certain substances at the Curie temperture.

Hedvall effect II [SOLID STATE] A discontinuous change in the activation energy of certain substances at the Curie temperature.

Hedwigiaceae [BOT] A family of mosses in the order Isobryales.

hedyphane [MINERAL] $(Ca,Pb)_5Cl(AsO_4)_3$ Yellowish-white mineral composed of lead and calcium arsenate and chloride; occurs in monoclinic crystals.

HEDGEHOG

Hedgehog *(Erinaceus europaeus)*, with well-developed ears and eyes, pointed snout, short legs, and spines.

HEED *See* high-energy electron diffraction.

heel [MECH ENG] *See* heel block. [NAV] Of a ship, to incline or to be inclined to one side. [ORD] Upper corner of the butt of a rifle stock held in firing position.

heel block [MECH ENG] A block or plate that is usually fixed on the die shoe to minimize deflection of a punch or cam. Also known as heel.

heeling adjuster [ENG] A dip needle with a sliding weight that can be moved along one of its arms to balance the magnetic force; used to determine the correct position of a heeling magnet. Also known as heeling error instrument; vertical force instrument.

heeling error [NAV] The change in the indication of a magnetic compass when a craft heels, due to the change in the position of the magnetic influences on the craft relative to the earth's magnetic field and to the compass.

heeling error instrument *See* heeling adjuster.

heeling magnet [ENG] A permanent magnet placed vertically in a tube under the center of a marine magnetic compass, to correct for heeling error.

heel of a shot [ENG] **1.** In blasting, the front or face of a shot farthest from the charge. **2.** The distance between the mouth of the drill hole and the corner of the nearest free face. **3.** That portion of a drill hole which is filled with the tamping. [MIN ENG] That portion of the coal to be fractured which is outside the powder.

heel plate [CIV ENG] A plate at the end of a truss.

heel post [CIV ENG] A post to which are secured the hinges of a gate or door.

Hefner candle [OPTICS] A luminous intensity standard, formerly used in Germany, equal to 0.9 international candle; produced by a Hefner lamp burning under standard conditions. Abbreviated HK. Also known as Hefnerkerze.

Hefnerkerze *See* Hefner candle.

Hefner lamp [CHEM] A flame lamp that burns amyl acetate.

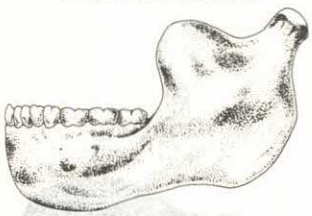
Hegeler furnace [MET] A muffle furnace having seven tiers of hearths; lower hearths are heated by gas burned in flues beneath them.

Hehner number [ANALY CHEM] Weight percent of water-insoluble fatty acids in fats and oils.

Heidelberg capsule [ELECTR] A radio pill for telemetering pH values of gastric acidity.

Heidelberg man [PALEON] An early type of European fossil man known from an isolated lower jaw; considered a variant of *Homo erectus* or an early stock of Neanderthal man.

HEIDELBERG MAN



Reconstruction of the Heidelberg jaw. *(From M. F. Ashley Montagu, An Introduction to Physical Anthropology, 2d ed., Charles C. Thomas, 1951)*

height [MATH] The perpendicular distance between horizontal lines or planes passing through the top and bottom of an object.

height above airport [NAV] In air operations, the height of the minimum descent altitude above the published airport elevation. Abbreviated HAA.

height above touch-down [NAV] In air operations, the height of the minimum descent altitude above the highest elevation in the touch-down zone. Abbreviated HAT.

height-change chart [METEOROL] A chart indicating the change in height of a constant-pressure surface over a specified previous time interval; comparable to a pressure-change chart.

height-change line [METEOROL] A line of equal change in height of a constant-pressure surface over a specified previous interval of time; the lines drawn on a height-change chart. Also known as contour-change line; isallohypse.

height control [ELECTR] The television receiver control that adjusts picture height.

height equivalent of theoretical plate [CHEM ENG] In a packed fractionating column, a height of packing that makes a separation equivalent to that of a theoretical plate; used in sorption and distillation calculations. Abbreviated HETP.

height finder [ENG] A radar equipment, used to determine height of aerial targets.

height finding [ENG] Determination of the height of an airborne object.

height-finding radar [ENG] A radar set that measures and determines the height of an airborne object.

height gage [ENG] A gage used to measure heights by either a micrometer or a vernier scale. [GRAPHICS] A C-shaped device for measuring foot-to-face height of printing type or mounted printing plates.

height gain [ELECTR] A radio-wave interference phenomenon which results in a more or less periodic signal strength variation with height; this specifically refers to interference between direct and surface-reflected waves; maxima or minima in these height-gain curves occur at those elevations at which the direct and reflected waves are exactly in phase or out of phase respectively.

height input [ELECTR] Radar height information on target received by a computer from height finders and relayed via ground-to-ground data link or telephone.

height of burst [ORD] Vertical distance from the ground, or target, to the point of burst.

height-of-eye correction [NAV] A correction applied to sextant altitude to compensate for the dip of the horizon. Also known as dip correction.

height of instrument [ENG] **1.** In survey leveling, the vertical height of the line of collimation of the instrument over the station above which it is centered, or above a specified datum level. **2.** In spirit leveling, the vertical distance from datum to line of sight of the instrument. **3.** In stadia leveling the height of center of transit above the station stake. **4.** In differential leveling, the elevation of the line of sight of the telescope when the instrument is leveled.

height of tide [OCEANOGR] Vertical distance from the chart datum to the level of the water at any time; it is positive if the water level is higher than the chart datum.

height of transfer unit [CHEM ENG] A dimensionless parameter used to calculate countercurrent sorption tower operations; it is proportional to the apparent resident time of the fluid. Abbreviated HTU.

height overlap coverage [ELECTR] Height-finder coverage within which there is an area of overlapping coverage from adjacent height finders or other radar stations.

height pattern [METEOROL] The general geometric characteristics of the distribution of height of a constant-pressure surface as shown by contour lines on a constant-pressure chart. Also known as baric topography; isobaric topography; pressure topography.

height-position indicator [ELECTR] Radar display which shows simultaneously angular elevation, slant range, and height of objects detected in the vertical sight plane.

height-range indicator [ELECTR] **1.** Radar display which shows an echo as a bright spot on a rectangular field, slant range being indicated along the X axis, height above the horizontal plane being indicated (on a magnified scale) along the Y axis, and height above the earth being shown by a cursor. **2.** Cathode-ray tube from which altitude and range measurements of flightborne objects may be viewed.

heiligenschein [OPTICS] A diffuse white ring surrounding the shadow cast by the observer's head upon a dew-covered lawn when the solar elevation is low and, therefore, the distance from observer to shadow is great.

Heine-Borel theorem [MATH] The theorem that the only compact subsets of the real line are those which are closed and bounded.

Heine-Medin disease *See* poliomyelitis.

Heinz bodies [PATH] Refractile spots seen in erythrocytes in hemolytic anemia that may represent denatured globulin.

Heisenberg algebra [QUANT MECH] The Lie algebra formed by the operators of position and momentum.

Heisenberg equation of motion [QUANT MECH] An equation which gives the rate of change of an operator corresponding to a physical quantity in the Heisenberg picture.

Heisenberg exchange coupling [SOLID STATE] The exchange forces between electrons in neighboring atoms which give rise to ferromagnetism in the Heisenberg theory.

Heisenberg force [NUC PHYS] A force between two nucleons derivable from a potential with an operator which exchanges both the positions and the spins of the particles.

Heisenberg picture [QUANT MECH] A mode of description of a system in which dynamic states are represented by stationary vectors and physical quantities are represented by operators which evolve in the course of time. Also known as Heisenberg representation.

Heisenberg representation *See* Heisenberg picture.

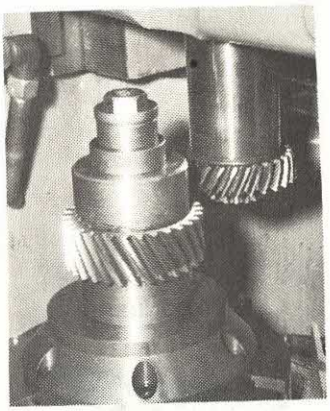
Heisenberg theory of ferromagnetism [SOLID STATE] A theory in which exchange forces between electrons in neighboring atoms are shown to depend on relative orientations of electron spins, and ferromagnetism is explained by the assumption that parallel spins are favored so that all the spins in a lattice have a tendency to point in the same direction.

Heisenberg uncertainty principle *See* uncertainty principle.

Heisenberg uncertainty relation *See* uncertainty relation.

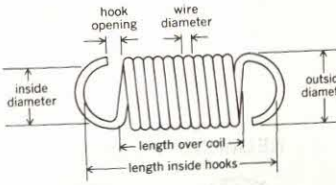
Heising modulation *See* constant-current modulation.
Heitler-London covalence theory [PHYS CHEM] A calculation of the binding energy and the distance between the atoms of a diatomic hydrogen molecule, which assumes that the two electrons are in atomic orbitals about each of the nuclei, and then combines these orbitals into a symmetric or antisymmetric function.
hekistotherm [ECOL] Plant adapted for conditions of minimal heat; can withstand long dark periods.
Hektor [ASTRON] An asteroid, believed to be the largest of the Trojan planets, which circles the sun in the orbit of and approximately 60° ahead of Jupiter; diameter is about 210 kilometers and surface composition is unusual.
HeLa cells [PATH] Human cancer cells maintained in tissue culture since 1953, originally excised from the cervical carcinoma of a patient named Helen Lane.
Helaletidae [PALEON] A family of extinct perissodactyl mammals in the superfamily Tapiroidea.
Helcionellacea [PALEON] A superfamily of extinct gastropod mollusks in the order Aspidobranchia.
helcosol *See* bismuth pyrogallate.
Helderbergian [GEOL] A North American stage of geologic time, in the lower Lower Devonian.
held in common [MIN ENG] Pertaining to a claim whereof there is more than one owner.
Heleidae [INV ZOO] The biting midges, a family of orthorrhaphous dipteran insects in the series Nematocera.
Helferich unit [BIOL] A unit for the standardization of phosphatase.
heliacal rising [ASTRON] The rising of a celestial body at the same time or just before that of the sun.
heliacal setting [ASTRON] The setting of a celestial body at the same time or just after that of the sun.
Heliarc welding *See* inert gas-shielded arc welding.
Heliasteridae [INV ZOO] A family of echinoderms in the subclass Asteroidea lacking pentameral symmetry but structurally resembling common asteroids.
helical [MATH] Pertaining to a cylindrical spiral, for example, a screw thread.
helical angle [MECH] In the study of torsion, the angular displacement of a longitudinal element, originally straight on the surface of an untwisted bar, which becomes helical after twisting.
helical antenna [ELECTROMAG] An antenna having the form of a helix. Also known as helix antenna.
helical conveyor [MECH ENG] A conveyor for the transport of bulk materials which consists of a horizontal shaft with helical paddles or ribbons rotating inside a stationary tube.
helical-fin section [CHEM ENG] Helical-shaped, extended-surface addition for the external surfaces of process-fluid tubes to increase heat-exchange efficiency; used for gas heating and cooling and in fuel oil residuum exchangers.
helical-flow turbine [MECH ENG] A steam turbine in which the steam is directed tangentially and radially inward by nozzles against buckets milled in the wheel rim; the steam flows in a helical path, reentering the buckets one or more times. Also known as tangential helical-flow turbine.
helical gear [MECH ENG] Gear wheels running on parallel axes, with teeth twisted oblique to the gear axis.
helical line [ELECTROMAG] A transmission line with a helical inner conductor.
helical milling [MECH ENG] Milling in which the work is simultaneously rotated and translated.
helical potentiometer [ELEC] A multiturn precision potentiometer in which a number of complete turns of the control knob are required to move the contact arm from one end of the helically wound resistance element to the other end.
helical rake angle [DES ENG] The angle between the axis of a reamer and a plane tangent to its helical cutting edge; also applied to milling cutters.
helical resonator [ELECTROMAG] A cavity resonator with a helical inner conductor.
helical scanning [COMMUN] A method of facsimile scanning in which a single-turn helix rotates against a stationary bar to give horizontal movement of an elemental area. [ENG] A method of radar scanning in which the antenna beam rotates continuously about the vertical axis while the elevation angle changes slowly from horizontal to vertical, so that a point on the radar beam describes a distorted helix.
helical spline broach [MECH ENG] A broach used to produce internal helical splines having a straight-sided or involute form.
helical spring [DES ENG] A bar or wire of uniform cross section wound into a helix.
helical steel support [MIN ENG] A continuous, screw-shaped steel joist lining used for staple shafts.
helical traveling-wave tube *See* helix tube.
helicin *See* salicylaldehyde.
Helicinidae [INV ZOO] A family of gastropod mollusks in the order Archeogastropoda containing tropical terrestrial snails.
helicity [QUANT MECH] The component of the spin of a particle along its momentum.
helicoid [INV ZOO] Of a gastropod shell, shaped like a flat coil or flattened spiral. [MATH] A surface generated by a curve which is rotated about a straight line and also is translated in the direction of the line at a rate that is a constant multiple of its rate of rotation.
helicoid cyme [BOT] A type of determinate inflorescence having a coiled cluster, with flowers on only one side of the axis.
Heliconiaceae [BOT] A family of monocotyledonous plants in the order Zingiberales characterized by perfect flowers with a solitary ovule in each locule, schizocarpic fruit, and capitate stigma.
Helicoplacoidea [PALEON] A class of free-living, spindle- or pear-shaped, plated echinozoans known only from the Lower Cambrian of California.
helicopter [AERO ENG] An aircraft fitted to sustain itself by motor-driven horizontal rotating blades (rotors) that accelerate the air downward, providing a reactive lift force, or accelerate the air at an angle to the vertical, providing lift and thrust.
helicopter yarding [FOR] A technique that uses a helicopter to bring logs from a forest to a wide level spot along a road where the logs can be loaded onto trucks for hauling to a sawmill; used where steep terrain and unstable ground makes it impossible to build roads without damaging watersheds.
Helicosporae [MYCOL] A spore group of the Fungi Imperfecti characterized by spirally coiled, septate spores.
helicospore [INV ZOO] Mature spore of the Helicosporida characterized by a peripheral spiral filament.
Helicosporida [INV ZOO] An order of protozoans in the class Myxosporidea characterized by production of spores with a relatively thick, single intrasporal filament and three uninucleate sporoplasms.
helicotrema [ANAT] The opening at the apex of the cochlea through which the scala tympani and the scala vestibuli communicate with each other.
Heligmosomidae [INV ZOO] A family of parasitic roundworms belonging to the Strongyloidea.
helimagnet [SOLID STATE] A metal, alloy, or salt that possesses helimagnetism.
helimagnetism [SOLID STATE] A property possessed by some metals, alloys, and salts of transition elements or rare earths, in which the atomic magnetic moments, at sufficiently low temperatures, are arranged in ferromagnetic planes, the direction of the magnetism varying in a uniform way from plane to plane.
heliocentric [ASTRON] Relative to the sun as a center.
heliocentric coordinates [ASTRON] A coordinate system relative to the sun as a center.
heliocentric latitude [ASTRON] Sun-centered coordinate of angular distance perpendicular to the ecliptic plane.
heliocentric longitude [ASTRON] The angular distance east or west from a given point on the sun's equator.
heliocentric orbit [ASTRON] An orbit relative to the sun as a center.
heliocentric parallax *See* annual parallax.
Heliodinidae [INV ZOO] A family of lepidopteran insects in the suborder Heteroneura.
heliogram [COMMUN] A message transmitted on a heliograph.
heliograph [COMMUN] An instrument for sending telegraphic messages by reflecting the sun's rays from a mirror. [ENG] An instrument that records the duration of sunshine and gives a qualitative measure of its amount by action of sun's rays on blueprint paper.
heliographic latitude [ASTRON] On the sun, angular distance north or south of its equator.
heliographic longitude [ASTRON] On the sun, angular distance east or west from given point on the equator of the sun.
heliolite *See* sunstone.

HELICAL GEAR



A helical gear. *(Fellows Corp.)*

HELICAL SPRING

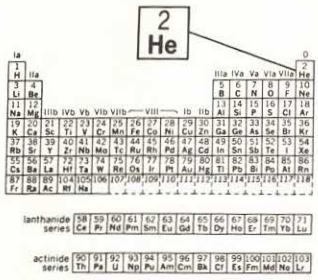


A helical spring wound tight to extend under axial tension.

HELICOID CYME

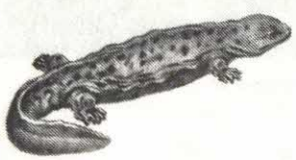
Drawing of a helicoid cyme.

HELIUM



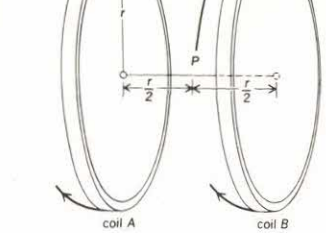
Periodic table of the chemical elements showing the position of helium.

HELLBENDER



The hellbender, with a maximum length of 18 inches (46 centimeters)

HELMHOLTZ COILS



Helmholtz coils showing the optimum arrangement in which the distance between the two coils is equal to the radius r of each of the coils. P = point of nearly uniform field strength. *(From L. B. Loeb, Fundamentals of Electricity and Magnetism, 3d ed., copyright © 1947 by John Wiley & Sons, Inc.; reprinted by permission)*

Heliolitidae [PALEON] A family of extinct corals in the order Tabulata.

heliometer [OPTICS] A split-lens telescope used to measure the sun's diameter as well as small distances between stars or other celestial bodies.

heliophilous [ECOL] Attracted by and adapted for a high intensity of sunlight.

heliophobe [MED] An individual who is extremely sensitive to the sun's rays. [PSYCH] One who has an abnormal fear of the sun's rays.

heliophobia [PSYCH] An abnormal fear of exposure to the sun's rays.

heliophyllite [MINERAL] $Pb_6As_2O_7Cl_4$ A yellow to greenish-yellow, orthorhombic mineral consisting of an oxychloride of lead and arsenic; occurs in massive and tabular form and as crystals.

heliophyte [ECOL] A plant that thrives in full sunlight.

Heliornithidae [VERT ZOO] The lobed-toed sun grebes, a family of pantropical birds in the order Gruiformes.

helioscope [OPTICS] A telescope for observing the sun that protects the observer's eyes from the sun's glare.

heliosphere [GEOPHYS] The region in the ionosphere where helium ions are predominant (sometimes there may be no region in which helium ions dominate).

heliostat [ENG] A clock-driven instrument mounting which automatically and continuously points in the direction of the sun; it is used with a pyrheliometer when continuous direct solar radiation measurements are required.

heliotaxis [BIOL] Orientation movement of an organism in response to the stimulus of sunlight.

heliotrope [BOT] A plant whose flower or stem turns toward the sun. [ENG] An instrument that reflects the sun's rays over long distances; used in geodetic surveys. [MINERAL] *See* bloodstone.

heliotropic wind [METEOROL] A subtle, diurnal component of the wind velocity leading to a diurnal shift of the wind or turning of the wind with the sun, produced by the east-to-west progression of daytime surface heating.

heliotropin *See* piperonal.

heliotropism [BIOL] Growth or orientation movement of a sessile organism or part, such as a plant, in response to the stimulus of sunlight.

heliotype *See* photogelatin printing plate.

heliox [MATER] A mixture of helium and a few percent of oxygen used for breathing during deep dives.

Heliozoia [INV ZOO] A subclass of the protozoan class Actinopodea; individuals lack a central capsule and have either axopodia or filopodia.

heliozooid [BIOL] Ameboid, but with distinct filamentous pseudopodia.

helipad [CIV ENG] The launch and landing area of a heliport.

heliport [CIV ENG] A place built for helicopter takeoffs and landings.

helitron [ELECTR] An electrostatically focused, low-noise backward-wave oscillator; the microwave output signal frequency can be swept rapidly over a wide range by varying the voltage applied between the cathode and the associated radio-frequency circuit.

helium [CHEM] A gaseous chemical element, symbol He, atomic number 2, and atomic weight 4.0026; one of the noble gases in group 0 of the periodic table.

helium I [CRYO] The phase of liquid helium-4 which is stable at temperatures above the lambda point (about 2.2 K) and has the properties of a normal liquid, except low density.

helium II [CRYO] The phase of liquid helium-4 which is stable at temperatures between absolute zero and the lambda point (about 2.2 K), and has many remarkable properties such as vanishing viscosity, extremely high heat conductivity, and the fountain effect.

helium-3 [NUC PHYS] The isotope of helium with mass number 3, constituting approximately 1.3 parts per million of naturally occurring helium.

helium-4 [NUC PHYS] The isotope of helium with mass number 4, constituting nearly all naturally occurring helium.

helium burning [NUC PHYS] The synthesis of elements in stars through the fusion of three alpha particles to form a carbon-12 nucleus, followed by further captures of alpha particles.

helium-cadmium laser [OPTICS] A metal-vapor ion laser in which cadmium vapor, produced by heat or other means, migrates through a high-voltage glow discharge in helium, generating a continuous laser beam at wavelengths in the ultraviolet and blue parts of the spectrum (about 0.3 to 0.5 micrometers).

helium liquefier [CRYO] Any one of several machines which liquefy helium by causing it to undergo adiabatic expansion and to do external work.

helium magnetometer [PHYS] A device for measuring magnetic fields by observing the Zeeman effect in the lowest triplet level of helium atoms subjected to the field.

helium-3 maser [PHYS] A gas maser in which the gas used is helium-3.

helium-neon laser [OPTICS] An atomic gas laser in which a combination of helium and neon gases is used.

helium-oxygen diving [ENG] Diving operations employing a breathing mixture of helium and oxygen.

helium refrigerator [MECH ENG] A refrigerator which uses liquid helium to cool substances to temperatures of 4 K or less.

helium spectrometer [SPECT] A small mass spectrometer used to detect the presence of helium in a vacuum system; for leak detection, a jet of helium is applied to suspected leaks in the outer surface of the system.

helium stars [ASTRON] The class B stars.

helix [ELEC] A spread-out, single-layer coil of wire, either wound around a supporting cylinder or made of stiff enough wire to be self-supporting. [MATH] A curve traced on a cylindrical or conical surface where all points of the surface are cut at the same angle; this screwlike winding curve is parametrically given by equations $x = a\cos\theta$, $y = a\sin\theta$, $z = b\theta$, where θ is the parameter and a and b are constants.

Helix [INV ZOO] A genus of pulmonate land mollusks including many of the edible snails; individuals have a coiled shell with a low conical spire.

helix angle [DES ENG] That angle formed by the helix of the thread at the pitch-diameter line and a line at right angles to the axis. [MATH] The constant angle between the tangent to a helix and a generator of the cylinder upon which the helix lies.

helix antenna *See* helical antenna.

helix tube [ELECTR] A traveling-wave tube in which the electromagnetic wave travels along a wire wound in a spiral about the path of the beam, so that the wave travels along the tube at a velocity approximately equal to the beam velocity. Also known as helical traveling-wave tube.

hellandite [MINERAL] Mineral composed of silicate of metals in the cerium group with aluminum, iron, manganese, and calcium.

Hellas [ASTRON] The largest impact basin on Mars, approximately 2000 kilometers across and 4 kilometers deep, appearing as a bright circular region in earth-based telescopes.

hellbender [VERT ZOO] *Cryptobranchus alleganiensis*. A large amphibian of the order Urodela which is the most primitive of the living salamanders, retaining some larval characteristics.

Heller's test [PATH] A test for albumin in urine; presence of albumin is indicated by formation of a white ring at the junction of the solution and a concentrate solution of nitric acid.

Hellespontus [ASTRON] A surface region of the planet Mars between the regions Hellas and Noachis.

Hell-Volhard-Zelinsky reaction [ORG CHEM] Preparation of an ester or α-halo substituted acid (chloro or bromo) by reacting the halogen on the acid in the presence of phosphorus or phosphorus halide, and then followed by hydrolysis or alcoholysis of the haloacyl halide resulting.

helm [NAV ARCH] **1.** The tiller or wheel controlling a ship's rudder. **2.** The entire apparatus for steering a ship.

Helmert's formula [GEOPHYS] A formula for the acceleration due to gravity in terms of the latitude and the altitude above sea level.

helmet [ENG] A globe-shaped head covering made of copper and supplied with air pumped through a hose; attached to the breastplate of a diving suit for deep-sea diving.

helmet-mounted display [ELECTR] An electronic display that presents, on a combining glass within the visor of the helmet of a helicopter gunner, primary information for directing firepower; the angular direction of the helmet is sensed and used to control weapons to point in the same direction as the gunner is looking. Also known as visually coupled display.

helmholtz [ELEC] A unit of dipole moment per unit area, equal to 1 Debye unit per square angstrom, or approximately 3.335×10^{-10} coulomb per meter.

Helmholtz coils [ELECTROMAG] A pair of flat, circular coils

having equal numbers of turns and equal diameters, arranged with a common axis, and connected in series; used to obtain a magnetic field more nearly uniform than the magnetic field of a single coil.

Helmholtz double layer [PHYS] An electrical double layer of positive and negative charges one molecule thick which occurs at a surface where two bodies of different materials are in contact, or at the surface of a metal or other substance capable of existing in solution as ions and immersed in a dissociating solvent.

Helmholtz equation [MATH] A partial differential equation obtained by setting the Laplacian of a function equal to the function multiplied by a negative constant. [OPTICS] An equation which relates the linear and angular magnifications of a spherical refracting interface. Also known as Lagrange-Helmholtz equation. [PHYS CHEM] The relationship stating that the emf (electromotive force) of a reversible electrolytic cell equals the work equivalent of the chemical reaction when charge passes through the cell plus the product of the temperature and the derivative of the emf with respect to temperature.

Helmholtz flow [FL MECH] Flow with free streamlines or vortex sheets.

Helmholtz free energy *See* free energy.

Helmholtz function *See* free energy.

Helmholtz instability [FL MECH] The hydrodynamic instability arising from a shear, or discontinuity, in current speed at the interface between two fluids in two-dimensional motion; the perturbation gains kinetic energy at the expense of that of the basic currents. Also known as shearing instability.

Helmholtz-Ketteler formula [OPTICS] A dispersion formula in which the difference between the square of the index of refraction and unity is set equal to a sum of terms each of which is associated with a resonant wavelength of the medium.

Helmholtz potential *See* free energy.

Helmholtz resonator [ENG ACOUS] An enclosure having a small opening consisting of a straight tube of such dimensions that the enclosure resonates at a single frequency determined by the geometry of the resonator.

Helmholtz's theorem [ELEC] *See* Thévenin's theorem. [FL MECH] The theorem that in the isentropic flow of a nonviscous fluid which is not subject to body forces, individual vortices always consist of the same fluid particles. [MATH] The theorem determining a general class of vector fields as being everywhere expressible as the sum of an irrotational vector with a divergence-free vector.

Helmholtz theory *See* Young-Helmholtz theory.

Helmholtz wave [FL MECH] An unstable wave in a system of two homogeneous fluids with a velocity discontinuity at the interface.

helminth [INV ZOO] Any parasitic worm.

helminthemesis [MED] Vomiting of worms.

helminthiasis [MED] Any disease caused by the presence of parasitic worms in the body.

helminthic abscess [MED] An abscess caused by worms.

helminthogogue [PHARM] An anthelminthic.

helminthoid [BIOL] Resembling a helminth.

helminthologist [BIOL] One who studies helminths.

helminthophobia [PSYCH] An abnormal fear of worms or becoming infested with worms.

helminthosporin [BIOCHEM] $C_{15}H_{10}O_5$ A maroon, crystalline pigment formed by certain fungi growing on a sugar substrate.

Helminthosporium [MYCOL] A genus of parasitic fungi of the family Dematiaceae having conidiophores which are more or less irregular or bent and bear conidia successively on new growing tips.

Helminthosporium leaf spot [PL PATH] Any leaf spot, commonly of grasses, caused by *Helminthosporium* species.

helm roof [ARCH] A steeply pitched roof with four faces rising from gables to a point.

helm wind [METEOROL] A strong, cold northeasterly wind blowing down into the Eden valley from the western slope of the Crossfell Range in northern England.

Helobiae [BOT] The equivalent name for Helobiales.

Helobiales [BOT] An order embracing most of the Alismatidae in certain systems of classification.

Heloderma [VERT ZOO] The single genus in the reptilian family Helodermatidae; contains the only known poisonous lizards, the Gila monster (*H. suspectum*) and the beaded lizard (*H. horridum*).

Helodermatidae [VERT ZOO] A family of lizards in the suborder Sauria.

Helodidae [INV ZOO] The marsh beetles, a family of coleopteran insects in the superfamily Dascilloidea.

Helodontidae [PALEON] A family of extinct ratfishes conditionally placed in the order Bradyodonti.

Helomyzidae [INV ZOO] The sun flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

helophyte [ECOL] A marsh plant; buds overwinter underwater.

helophytia [ECOL] Differences in ecological control by fluctuations in water level such as in marshes.

Heloridae [INV ZOO] A family of hymenopteran insects in the superfamily Proctotrupoidea.

Helotiales [MYCOL] An order of fungi in the class Ascomycetes.

Helotidae [INV ZOO] The metallic sap beetles, a family of coleopteran insects in the superfamily Cucujoidea.

helotism [ECOL] Symbiosis in which one organism is a slave to the other, as between certain species of ants.

Helotrephidae [INV ZOO] A family of true aquatic, tropical hemipteran insects in the subdivision Hydrocorisae.

helper grade [MIN ENG] A grade on which helper engines are required to assist road locomotives. Also known as pusher grade.

helper set [MIN ENG] A set of timbers to reinforce the normal set of timbers in a mine.

helper virus [VIROL] A virus that, by its infection of a cell, enables a defective virus to multiply by supplying one or more functions that the defective virus lacks.

help screen [COMPUT SCI] Instructions that explain how to use the software of a computer system and that can be presented on the screen of a video display terminal at any time.

help-yourself system [IND ENG] A tool-crib system for temporary issue of tools employed in small shops; employees have access to tools in the crib and help themselves.

helve hammer [MET] A belt-driven trip hammer with the hammer face or swage carried on the end of a beam; used for welding, forging, plating, drawing, and other metal-working operations.

helvine *See* helvite.

helvite [MINERAL] $(Mn,Fe,Zn)_4Be_3(SiO_4)_3S$ A silicate mineral isomorphous with danalite and genthelvite. Also known as helvine.

hem-, hema-, hemo-, haem- [HISTOL] Combining form for blood.

hemacytometer *See* hemocytometer.

hemadsorption virus [VIROL] A descriptive term for myxoviruses that agglutinate red blood cells and cause the cells to adsorb to each other. Abbreviated HA virus.

hemafibrite [MINERAL] $Mn_3(AsO_4)(OH)_3 \cdot H_2O$ A brownish to garnet-red mineral composed of basic manganese arsenate.

hemagglutination [IMMUNOL] Agglutination of red blood cells.

hemagglutination-inhibition test [IMMUNOL] A test to identify a virus antigen or to quantitate an antibody by adding virus-specific antibody to a mixture of agglutinating virus and red blood cells.

hemagglutinin [IMMUNOL] An erythrocyte-agglutinating antibody.

hemal arch [ANAT] **1.** A ventral loop on the body of vertebrate caudal vertebrae surrounding the blood vessels. **2.** In man, the ventral vertebral process formed by the centrum together with the ribs.

hemal ring [INV ZOO] A vessel in certain echinoderms, variously located, associated with the coelom and axial gland.

hemal sinus [INV ZOO] The two principal lacunae along the digestive tube in certain echinoderms.

hemal tuft [INV ZOO] Series of fine vessels in echioderms arising from the axial gland.

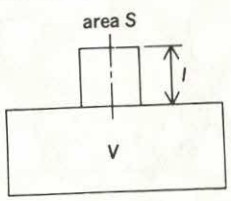
hemangioendothelioma [MED] A malignant tumor composed of anoplastic endothelial cells. Also known as hemangiosarcoma.

hemangioma [MED] A tumor composed of blood vessels. Also known as capillary angioma.

hemangiopericytoma [MED] A tumor composed of endothelium-lined tubes or cords of cells surrounded by spherical cells with supporting reticulin network.

hemangiosarcoma *See* hemangioendothelioma.

HELMHOLTZ RESONATOR



Schematic drawing of a Helmholtz resonator. Here l = length of straight tube, S = cross-sectional area of tube, V = closed volume. Resonant frequency is $f_0 = 1/2\pi \sqrt{c^2 S/l_e V}$ where c = speed of sound and l_e = effective length of tube, approximately $l + 0.8\sqrt{S}$.

HEMATITE

3.6 cm

Crystals of hematite from Saint Gothard, Switzerland. *(American Museum of Natural History Specimen)*

hemapodium [INV ZOO] The dorsal lobe of a parapodium.
hemarthrosis [MED] Passage of blood into a joint.
hematein [BIOCHEM] $C_{16}H_{12}O_6$ A brownish stain and chemical indicator obtained by oxidation of hematoxylin.
hematemesis [MED] Vomiting of blood.
hematidrosis [MED] The appearance of blood or blood products in sweat gland secretions.
hematin [ORG CHEM] $C_{34}H_{33}O_5N_4Fe$ The hydroxide of ferriheme derived from oxidized heme.
hematite [MINERAL] Fe_2O_3 An iron mineral crystallizing in the rhombohedral system; the most important ore of iron, it is dimorphous with maghemite, occurs in black metallic-looking crystals, in reniform masses or fibrous aggregates, or in reddish earthy forms. Also known as bloodstone; red hematite; red iron ore; red ocher; rhombohedral iron ore.
hematoblast [HISTOL] An immature erythrocyte.
hematocele [MED] Collection of blood in a body part.
hematochrome [BIOCHEM] A red pigment occurring in green algae, especially when plants are exposed to intense light on subaerial habitats.
hematocrit [PATH] The volume, after centrifugation, occupied by the cellular elements of blood, in relation to the total volume.
hematogenous [PHYSIO] **1.** Pertaining to the production of blood or of its fractions. **2.** Carried by way of the bloodstream. **3.** Originating in blood.
hematoidin crystals [PATH] Yellow to brown crystals in the feces following gastrointestinal hemorrhage.
hematolite [MINERAL] $(Mn,Mg)_4Al(AsO_4)(OH)_8$ A brownish-red mineral composed of aluminum manganese arsenate; occurs in rhombohedral crystals.
hematologist [MED] A specialist in the study of blood.
hematology [MED] The science of the blood, its nature, functions, and diseases.
hematoma [MED] A localized mass of blood in tissue; usually it clots and becomes encapsulated by connective tissue.
hematometra [MED] Accumulation of blood in the uterus.
hematomyelia [MED] Hemorrhage into the spinal cord.
hematopathology *See* hemopathology.
hematophagous [ZOO] Feeding on blood.
hematophanite [MINERAL] $Pb_5Fe_4O_{10}(Cl,OH)_2$ A mineral composed of oxychloride lead and iron.
hematopoiesis [PHYSIO] The process by which the cellular elements of the blood are formed. Also known as hemopoiesis.
hematopoietic system *See* reticuloendothelial system.
hematopoietic tissue [HISTOL] Blood-forming tissue, consisting of reticular fibers and cells. Also known as hemopoietic tissue.
hematopoietin [BIOCHEM] A substance which is produced by the juxtaglomerular apparatus in the kidney and controls the rate of red cell production. Also known as hemopoietin.
hematoporphyrin [BIOCHEM] $C_{34}H_{38}O_6N$ Iron-free heme, a porphyrin obtained by treating hemoglobin with sulfuric acid in vitro. Also known as hemoporphyrin.
hematorrhachis [MED] Hemorrhage into the spinal meninges, producing irritative phenomena.
hematosalpinx [MED] Accumulation of blood in a Fallopian tube. Also known as hemosalpinx.
hematoxylin [ORG CHEM] $C_{16}H_{14}O_6$ A colorless, crystalline compound occurring in hematoxylon; upon oxidation, it is converted to hematein which forms deeply colored lakes with various metals; used as a stain in microscopy.
hematoxylon [BOT] The heartwood of *Haematoxylon campechianum*. Also known as logwood.
hematuria [MED] A pathological condition in which the urine contains blood.
heme [BIOCHEM] $C_{34}H_{32}O_4N_4Fe$ An iron-protoporphyrin complex associated with each polypeptide unit of hemoglobin.
hemeralopia [MED] Day blindness.
hemerythrin *See* hemoerythrin.
heme synthetase [BIOCHEM] An enzyme which combines protoporphyrin IX, ferrous iron, and globin to form the intact hemoglobin molecule.
hemi- [BIOL] **1.** Prefix for half. **2.** Prefix denoting one side of the body.
hemiacetal [ORG CHEM] A class of compounds that have the grouping >C(OH)—(OR) and that result from the reaction of an aldehyde and alcohol.
hemianesthesia [MED] Loss of sensation on one side of the body.
hemianopsia [MED] Bilateral or unilateral blindness in one-half of the field of vision.
Hemiascomycetes [MYCOL] The equivalent name for Hemiascomycetidae.
Hemiascomycetidae [MYCOL] A subclass of fungi in the class Ascomycetes.
hemiazygous vein [ANAT] A vein on the left side of the vertebral column which drains blood from the left ascending lumbar vein to the azygos vein.
hemiballismus [MED] Sudden, violent, spasmodic movements involving particularly the proximal portions of the extremities of one side of the body; caused by a destructive lesion of the contralateral subthalamic nucleus or its neighboring structures or pathways.
Hemibasidiomycetes [MYCOL] The equivalent name for Heterobasidiomycetidae.
hemicellulose [BIOCHEM] $(C_6H_{10}O_5)_n$ A type of polysaccharide found in plant cell walls in association with cellulose and lignin; it is soluble in and extractable by dilute alkaline solutions. Also known as hexosan.
hemicephaly [MED] Congenital absence of the cerebrum.
Hemichordata [SYST] A group of marine animals categorized as either a phylum of deuterostomes or a subphylum of chordates; includes the Enteropneusta, Pterobranchia, and Graptolithina.
Hemicidaridae [PALEON] A family of extinct Echinacea in the order Hemicidaroida distinguished by a stirodont lantern, and ambulacra abruptly widened at the ambitus.
Hemicidaroida [PALEON] An order of extinct echinoderms in the superorder Echinacea characterized by one very large tubercle on each interambulacral plate.
hemic murmur [MED] Blowing or rasping sound heard in the heart or vessels, usually in association with systole, in abnormal conditions of increased velocity of blood flow.
hemicolectomy [MED] Surgical removal of a portion of the colon.
hemicone *See* alluvial cone.
hemicryptophyte [ECOL] A plant having buds at the soil surface and protected by scales, snow, or litter.
hemicrystalline *See* hypocrystalline.
hemicycle [MATH] A curve in the form of a semicircle.
hemicydic [BOT] Of flowers, having the floral leaves arranged partly in whorls and partly in spirals.
hemidiaphragm [ANAT] A lateral half of a diaphragm. [MED] Diaphragm with normal muscle development only on one side.
Hemidiscosa [INV ZOO] An order of sponges in the subclass Amphidiscophora distinguished by birotulates that are hemidiscs with asymmetrical ends.
hemihedral symmetry [CRYSTAL] The possession by a crystal of only half of the elements of symmetry which are possible in the crystal system to which it belongs.
hemiholohedral [CRYSTAL] Of hemihedral form but with half the octants having the full number of planes.
hemiketal [ORG CHEM] A carbonyl compound that results from the addition of an alcohol to the carbonyl group of a ketone, with the general formula (R)(R′)C(OH)(OR).
Hemileucinae [INV ZOO] A subfamily of lepidopteran insects in the family Saturnidae consisting of the buck moths and relatives.
hemimellitic acid [ORG CHEM] $C_6H_3(COOH)_3$ A compound crystallizing in colorless needles; melting point 196°C; slightly soluble in water. Also known as benzene-1,2,3-tricarboxylic acid.
Hemimetabola [INV ZOO] A division of the insect subclass Pterygota; members are characterized by hemimetabolous metamorphosis.
hemimetabolous metamorphosis [INV ZOO] An incomplete metamorphosis; gills are present in aquatic larvae, or naiads.
hemimorphic crystal [CRYSTAL] A crystal with no transverse plane of symmetry and no center of symmetry; composed of forms belonging to only one end of the axis of symmetry.
hemimorphite [MINERAL] $Zn_4Si_2O_7(OH)_2 \cdot H_2O$ A white, colorless, pale-green, blue, or yellow mineral having an orthorhombic crystal structure; an ore of zinc. Also known as calamine; electric calamine; galmei.
hemin [BIOCHEM] $C_{34}H_{32}O_4N_4FeCl$ The crystalline salt of ferriheme, containing iron in the ferric state.
hemiparasite [ECOL] A parasite capable of a saprophytic

existence, especially certain parasitic plants containing some chlorophyll. Also known as semiparasite.

hemiparesis [MED] Muscle weakness on one side of the body.

hemipelagic [ECOL] Of the biogeographic environment of the hemipelagic region with both neritic and pelagic qualities.

hemipelagic region [OCEANOGR] The region of the ocean extending from the edge of a shelf to the pelagic environment; roughly corresponds to the bathyal zone, in which the bottom is 200 to 1000 meters below the surface.

hemipelagic sediment [GEOL] Deposits containing terrestrial material and the remains of pelagic organisms, found in the ocean depths.

hemipenis [VERT ZOO] Either of a pair of nonerectile, evertible sacs that lie on the floor of the cloaca in snakes and lizards; used as intromittent organs.

Hemipeplidae [INV ZOO] An equivalent name for Cucujidae.

hemiplegia [MED] Unilateral paralysis of the body.

hemiprism [CRYSTAL] A pinacoid that cuts two crystallographic axes.

Hemiprocnidae [VERT ZOO] The crested swifts, a family comprising three species of perching birds found only in southeastern Asia.

Hemiptera [INV ZOO] The true bugs, an order of the class Insecta characterized by forewings differentiated into a basal area and a membranous apical region.

Hemisphaeriales [MYCOL] A group of ascomycetous fungi characterized by the wall of the fruit body being a stroma.

hemisphere [GEOGR] A half of the earth divided into north and south sections by the equator, or into an east section containing Europe, Asia, and Africa, and a west section containing the Americas. [MATH] One of the two pieces of a sphere divided by a great circle.

hemispherical candlepower [OPTICS] Luminous intensity of a hemispherical light source.

hemispherical pyrheliometer [ENG] An instrument for measuring the total solar energy from the sun and sky striking a horizontal surface, in which a thermopile measures the temperature difference between white and black portions of a thermally insulated horizontal target within a partially evacuated transparent sphere or hemisphere.

hemispheric wave number *See* angular wave number.

hemispheroid [MATH] One of the halves into which a spheroid is divided by a plane of symmetry.

Hemist [GEOL] A suborder of the soil order Histosol, consisting of partially decayed plant residues and saturated with water most of the time.

hemithorax [ANAT] One side of the chest.

hemitropic [CRYSTAL] Pertaining to a twinned structure in which, if one part were rotated 180°, the two parts would be parallel.

Hemizonida [PALEON] A Paleozoic order of echinoderms of the subclass Asteroidea having an ambulacral groove that is well defined by adambulacral ossicles, but with restricted or undeveloped marginal plates.

hemizygous [GEN] Pertaining to the condition or state of having a gene present in a single dose; for instance, in the X chromosome of male mammals.

hemlock [BOT] The common name for members of the genus *Tsuga* in the pine family characterized by two white lines beneath the flattened, needlelike leaves.

hemlock oil *See* spruce oil.

hemming [MECH ENG] Forming of an edge by bending the metal back on itself.

hemobilirubin [BIOCHEM] Bilirubin in normal blood serum before passage through the liver.

hemoblast *See* hemocytoblast.

hemochorial placenta [EMBRYO] A type of placenta having the maternal blood in direct contact with the chorionic trophoblast. Also known as labyrinthine placenta.

hemochromatosis [MED] A disorder of iron metabolism characterized by excessive accumulation of iron in the liver and other tissues and by development of severe cirrhosis.

hemocoel [INV ZOO] An expanded portion of the blood system in arthropods that replaces a portion of the coelom.

hemoconcentration [MED] An increase in the concentration of blood cells resulting from the loss of plasma or water from the bloodstream.

hemoconia [BIOCHEM] Round or dumbbell-shaped, refractile, colorless particles found in blood plasma.

hemoconiosis [MED] Condition of having an abnormal amount of hemoconia in the blood.

hemocyanin [BIOCHEM] A blue respiratory pigment found only in mollusks and in arthropods other than insects.

hemocyte [INV ZOO] A cellular element of blood, especially in invertebrates.

hemocytoblast [HISTOL] A pluripotential blast cell thought to be capable of giving rise to all other blood cells. Also known as hemoblast; stem cell.

hemocytolysis [PHYSIO] The dissolution of blood cells.

hemocytometer [PATH] A specifically designed, ruled and calibrated glass slide used with a microscope to count red and white blood cells. Also spelled hemacytometer.

hemodichorial placenta [EMBRYO] A placenta with a double trophoblastic layer.

hemodynamics [PHYSIO] A branch of physiology concerned with circulatory movements of the blood and the forces involved in circulation.

hemoendothelial placenta [EMBRYO] A placenta having the endothelium of vessels of chorionic villi in direct contact with the maternal blood.

hemoerythrin [BIOCHEM] A red respiratory pigment found in a few annelid and sipunculid worms and in the brachiopod *Lingula*. Also known as hemerythrin.

hemoflagellate [INV ZOO] A parasitic, flagellate protozoan that lives in the blood of the host.

hemoglobin [BIOCHEM] The iron-containing, oxygen-carrying molecule of the red blood cells of vertebrates comprising four polypeptide subunits in a heme group.

hemoglobin A [BIOCHEM] The type of hemoglobin found in normal adults, which moves as a single component in an electrophoretic field, is rapidly denatured by highly alkaline solutions, and contains two titratable sulfhydryl groups per molecule.

hemoglobin C [PATH] A slow-moving abnormal hemoglobin associated with intraerythrocytic crystal formation, target cells, and chronic hemolytic anemia.

hemoglobin E [PATH] An abnormal hemoglobin found in people of Southeast Asia, migrating slightly faster than hemoglobin C; in the homozygous form it causes a mild hemolytic anemia with normochromic target cells.

hemoglobinemia [MED] The presence of hemoglobin in the blood plasma.

hemoglobin H [PATH] An abnormal hemoglobin migrating more rapidly than normal hemoglobin on electrophoresis, and usually associated with thalassemia.

hemoglobin M [PATH] An abnormal hemoglobin associated with hereditary methemoglobinemia, differing from normal hemoglobin in its electrophoretic mobility by the starch-block method.

hemoglobinopathy [MED] Any blood dyscrasia resulting from the genetically determined alteration of the chemical nature of hemoglobin.

hemoglobin S *See* sickle-cell hemoglobin.

hemoglobinuria [MED] A pathological condition in which the urine contains hemoglobin.

hemoglobinuric nephrosis *See* lower nephron nephrosis.

hemogram [PATH] **1.** Erythrocyte and leukocyte count per cubic millimeter of blood plus the differential leukocyte count and hemoglobin level in grams per 100 milliliters of blood. **2.** The differential leukocyte count.

hemohistioblast [HISTOL] The hypothetical reticuloendothelial cell from which all the cells of the blood are eventually differentiated.

hemolymph [INV ZOO] The circulating fluid of the open circulatory systems of many invertebrates.

hemolysin [IMMUNOL] A substance that lyses erythrocytes.

hemolysis [PHYSIO] The lysis, or destruction, of erythrocytes with the release of hemoglobin.

hemolytic anemia [MED] A decrease in the blood concentration of hemoglobin and the number of erythrocytes, due to the inability of the mature erythrocytes to survive in the circulating blood.

hemolytic disease of newborn *See* erythroblastosis fetalis.

hemolytic jaundice [MED] Accumulation of bile pigments in the plasma as a result of excessive hemolysis.

hemomonochorial placenta [EMBRYO] A placenta with a single trophoblastic layer.

HEMLOCK

Branch and cone of Eastern hemlock (*Tsuga canadensis*).

HEMOCHORIAL PLACENTA

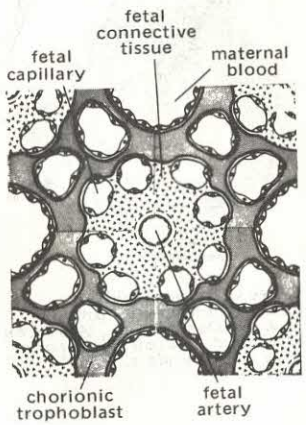


Diagram of a hemochorial placenta found in rodents, many insectivores, and tarsiers.

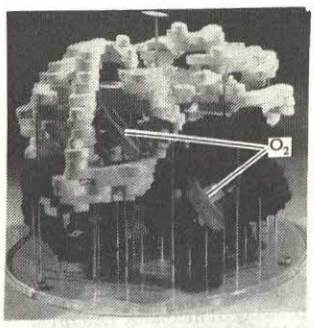
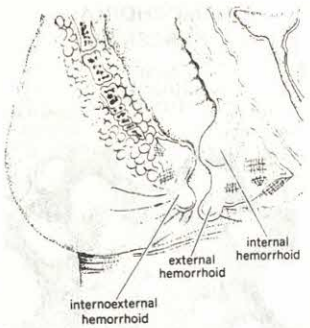
HEMOGLOBIN



Three-dimensional construction representing a hemoglobin molecule bound with two molecules of oxygen (O_2). (*From A. F. Cullis et al., Structures of haemoglobin IX: A three-dimensional Fourier synthesis at 5.5 resolution: Description of the structure, Proc. Roy. Soc. London Ser. A, 265:161, 1962*)

hemoparasite [INV ZOO] A parasitic animal that lives in the blood of a vertebrate.
hemopathology [MED] A branch of medicine dealing with blood diseases. Also known as hematopathology.
hemopathy [MED] Any disease of the blood.
hemopericardium [MED] The presence of blood or bloody effusion in the pericardial sac.
hemoperitoneum [MED] An effusion of blood in the peritoneal cavity.
hemopexin [BIOCHEM] A heme-binding protein in human plasma that may be a regulator of heme and drug metabolism, and a distributor of heme.
hemophilia [MED] A rare, hereditary blood disorder marked by a tendency toward bleeding and hemorrhages due to a deficiency of factor VIII.
hemophilic bacteria [MICROBIO] Bacteria of the genera *Hemophilus, Bordetella,* and *Moraxella;* all are small, gram-negative, nonmotile, parasitic rods, dependent upon blood factors for growth.
hemophilioid disease [MED] Any hemophilialike disease; it is the same as hemophilia clinically, but caused by a deficiency of factors IX, X, and XII.
Hemophilus [MICROBIO] A genus of hemophilic bacteria in the family Brucellaceae requiring hemin and nicotinamide nucleoside for growth.
Hemophilus aegyptius [MICROBIO] A nonhemolytic hemophilic bacterium that causes pinkeye. Also known as Koch-Weeks bacillus.
Hemophilus ducreyi [MICROBIO] A hemolytic hemophilic bacterium that causes chancroid in man. Also known as Ducrey bacillus.
Hemophilus influenzae [MICROBIO] A hemophilic bacterium that causes serious infections of man, especially infants, including influenza, purulent meningitis, and pneumonia.
Hemophilus parainfluenzae [MICROBIO] A nonpathogenic hemophilic bacterium found in the upper respiratory tract of man.
Hemophilus pertussis [MICROBIO] A pathogenic hemophilic bacterium that causes whooping cough. Also known as Bordet-Gengou bacillus.
hemophobia [PSYCH] An abnormal fear of the sight of blood.
hemopoiesis *See* hematopoiesis.
hemopoietic tissue *See* hematopoietic tissue.
hemopoietin *See* hematopoietin.
hemoporphyrin *See* hematoporphyrin.
hemoptysis [MED] Discharge of blood from the larynx, trachea, bronchi, or lungs.
hemorrhage [MED] The escape of blood from the vascular system.
hemorrhagic diathesis [MED] Any condition marked by abnormal bleeding tendency.
hemorrhagic fever virus [VIROL] Any of several arboviruses causing acute infectious human diseases characterized by fever, prostration, vomiting, and hemorrhage.
hemorrhagic measles [MED] A grave variety of measles with a hemorrhagic eruption and severe constitutional symptoms. Also known as black measles.
hemorrhagic pericarditis [MED] Inflammation of the pericardium accompanied by the hemorrhagic appearance of the exudate imparted by the presence of red cells.
hemorrhagic pleuritis [MED] Inflammation of the pleura characterized by the presence of bloody fluid in the pleural cavity.
hemorrhagic septicemia [VET MED] An infectious bacterial disease of fowl, rabbit, buffalo, and other animals caused by *Pasteurella mulfocida.* Also known as pasteurellosis.
hemorrhagic unit [BIOL] A unit for the standardization of snake venom.
hemorrhoid [MED] A varicosity of the external hemorrhoidal veins, causing painful swelling in the anal region.
hemorrhoidectomy [MED] Surgical removal of hemorrhoids.
hemosalpinx *See* hematosalpinx.
hemosiderin [BIOCHEM] An iron-containing glycoprotein found in most tissues and especially in liver.
hemosiderosis [PHYSIO] Deposition of hemosiderin in body tissues without tissue damage, reflecting an increase in body iron stores.

HEMORRHOID



Types of hemorrhoids. *(After Pennington, from W. A. N. Dorland, ed., American Illustrated Medical Dictionary, 19th ed., Saunders, 1942)*

HENBANE

Drawing of henbane. *(Adapted from Webster's New International Dictionary, 2d ed., Merriam, 1959)*

hemostasis [MED] **1.** The arrest of a flow of blood or hemorrhage. **2.** The stopping or slowing of circulation.
hemostat [MED] An instrument to compress a bleeding vessel.
hemostatic [MED] An agent that arrests or checks bleeding, especially by shortening clotting time.
hemothorax [MED] Accumulation of blood in the pleural cavity.
hemotrichorial placenta [EMBRYO] A placenta with a triple trophoblastic layer.
hemotrophe [BIOCHEM] The nutritive substance supplied via the placenta to embryos of viviparous animals.
hemp-core cable *See* standard wire rope.
hempseed oil [MATER] A fatty oil, light green or brownish yellow when dry, obtained from hempseed; used in soft soap, paints, and varnishes, and in Asia in foods.
hen [VERT ZOO] The female of several bird species, especially gallinaceous species.
henbane [BOT] *Hyoscyamus niger.* A poisonous herb containing the toxic alkaloids hyoscyamine and hyoscine; extracts have properties similar to belladonna.
hendecanal *See* undecanal.
hendecane *See* undecane.
hendecanoic acid *See* undecanoic acid.
10-hendecenyl acetate *See* undecylenyl acetate.
hendecyl *See* undecyl.
Henderson equation for pH [PHYS CHEM] An equation for the pH of an acid during its neutralization: $pH = pK_a + \log [salt]/[acid]$ where pK_a is the logarithm to base 10 of the reciprocal of the dissociation constant of the acid; the equation is found to be useful for the pH range 4–10, providing the solutions are not too dilute.
Henderson process [MET] The treatment of copper sulfide ores by roasting with salt to form chlorides, which are then leached out and precipitated.
heneicosane [ORG CHEM] $C_{21}H_{44}$ Saturated hydrocarbon of the methane series; the crystals melt at 40°C and boil at 215°C (at 15 mm Hg).
henequen [MATER] A hard plant fiber, obtained from the leaves of the American agave (*Agave fourcroydes*) and other agave species; used to make rope, twine, and cord.
Hengstebeck approximation [CHEM ENG] A method of calculation to estimate the distribution of non-key components in distillation column products.
Henicocephalidae [INV ZOO] A family of hemopteran insects of uncertain affinities.
Henle's loop *See* loop of Henle.
henna [BOT] *Lawsonia inermis.* An Old World plant having small opposite leaves and axillary panicles of white flowers; a reddish-brown dye extracted from the leaves is used in hair dyes. Also known as Egyptian henna.
henry [ELECTROMAG] The mks unit of self and mutual inductance, equal to the self-inductance of a circuit or the mutual inductance between two circuits if there is an induced electromotive force of 1 volt when the current is changing at the rate of 1 ampere per second. Symbolized H.
Henry's law [PHYS CHEM] The law that at sufficiently high dilution in a liquid solution, the fugacity of a nondissociating solute becomes proportional to its concentration.
Henry unit [BIOL] A unit for the standardization of thyroid extracts.
Hensen's node [EMBRYO] Thickening formed by a group of cells at the anterior end of the primitive streak in vertebrate gastrulas.
hentriacontane [ORG CHEM] $C_{31}H_{64}$ A hydrocarbon; a crystalline material melting at 68°C and boiling at 302°C (at 15 mm Hg); derived from roots of *Oenanthe crocata* and found in beeswax.
hepar calcies *See* calcium sulfide.
heparin [BIOCHEM] An acid mucopolysaccharide acting as an antithrombin, antithromboplastin, and antiplatelet factor to prolong the clotting time of whole blood; occurs in a variety of tissues, most abundantly in liver.
hepar lobatum [MED] The liver in syphilitic cirrhosis, having a nodular lobulated appearance.
hepar sulfuris *See* potassium sulfide.
HEPAT charge *See* high-explosive plastic antitank charge.
hepatectomy [MED] Surgical removal of the liver or a part of it.
Hepaticae [BOT] The equivalent name for Marchantiatae.

hepatic artery [ANAT] A branch of the celiac artery that carries blood to the stomach, pancreas, great omentum, liver, and gallbladder.

hepatic cecum [INV ZOO] A hollow outpocketing of the foregut of *Branchiostoma*; receives veins from the intestine.

hepatic coma [MED] Unconscious state associated with advanced liver disease.

hepatic duct [ANAT] The common duct draining the liver. Also known as common hepatic duct.

hepatic duct system [ANAT] The biliary tract including the hepatic ducts, gallbladder, cystic duct, and common bile duct.

hepatic encephalopathy [MED] Behavioral, psychological, and neurological changes associated with advanced liver disease.

hepatic glycogenosis *See* von Gierke's disease.

hepatic plexus [ANAT] Nerve network accompanying the hepatic artery to the liver.

hepatic portal system [ANAT] A system of veins in vertebrates which collect blood from the digestive tract and spleen and pass it through capillaries in the liver.

hepatic vein [ANAT] A blood vessel that drains blood from the liver into the inferior vena cava.

hepatitis [MED] Inflammation of the liver; commonly of viral origin but also occurring in association with syphilis, typhoid fever, malaria, toxemias, and parasitic infestations.

hepatitis virus [VIROL] Any of several viruses causing hepatitis in man and lower mammals.

hepatization [PATH] The conversion of tissue into a liverlike substance, as of the lungs during the exudative stage of pneumonia.

hepatocyte [HISTOL] An epithelial cell constituting the major cell type in the liver.

hepatolenticular degeneration *See* Wilson's disease.

hepatoma [MED] A usually malignant neoplasm arising from parenchymal cells of the liver.

hepatomegaly [MED] Enlargement of the liver.

hepatopancreas [INV ZOO] A gland in crustaceans and certain other invertebrates that combines the digestive functions of the liver and pancreas of vertebrates.

hepatorenal syndrome [MED] A complex of syndromes due to hepatic and renal failure, including hyperpyrexia, oliguria, and coma. Also known as Heyd's syndrome.

hepatoscopy [MED] Inspection of the liver, as by laparotomy or peritoneoscopy.

hepatotoxin [PHARM] An agent capable of damaging the liver.

Hepialidae [INV ZOO] A family of lepidopteran insects in the superfamily Hepialoidea.

Hepialoidea [INV ZOO] A superfamily of lepidopteran insects in the suborder Homoneura including medium- to large-sized moths which possess rudimentary mouthparts.

Hepplewhite-Gray lamp [MIN ENG] A lamp which drew its air from the top down through four tubular pillars into the base, where the air fed the flame through a gauze ring; the outlet was through a metal chimney closed by a gauze disk.

HEP projectile *See* high-explosive plastic projectile.

Hepsogastridae [INV ZOO] A family of parasitic insects in the order Mallophaga.

heptachlor [ORG CHEM] $C_{10}H_7Cl_7$ An insecticide; a white to tan, waxy solid; insoluble in water, soluble in alcohol and xylene; melts at 95–96°C.

heptacosane [ORG CHEM] $C_{27}H_{56}$ A hydrocarbon; water-insoluble crystals melting at 60°C and boiling at 270°C (at 15 mm Hg); soluble in alcohol; found in beeswax.

heptad [SCI TECH] A group of seven.

heptadecane [ORG CHEM] $C_{17}H_{36}$ A hydrocarbon; water-insoluble, alcohol-soluble solid melting at 23°C and boiling at 303°C; used as a chemical intermediate. Also known as dioctylmethane.

***n*-heptadecanoic acid** [ORG CHEM] $CH_3(CH_2)_{15}COOH$ A fatty acid that is saturated; soluble in ether and alcohol, insoluble in water; colorless crystals melt at 61°C. Also known as margaric acid.

heptadecanol [ORG CHEM] $C_{17}H_{35}OH$ An alcohol; colorless liquid boiling at 309°C; slightly soluble in water; used as a chemical intermediate, as a perfume fixative, in cosmetics and soaps, and to manufacture surfactants.

heptadione-2,3 *See* acetyl valeryl.

heptagon [MATH] A seven-sided polygon.

heptakaidecagon [MATH] A polygon with 17 sides.

heptaldehyde [ORG CHEM] $C_6H_{13}CHO$ An aldehyde; ether-soluble, colorless oil with fruity aroma; slightly soluble in water; boils at 153°C; used as a chemical intermediate and for perfumes and pharmaceuticals. Also known as heptanal.

heptanal *See* heptaldehyde.

heptane [ORG CHEM] $CH_3(CH_2)_5CH_3$ A hydrocarbon; water-insoluble, flammable, colorless liquid boiling at 98°C; soluble in alcohol, chloroform, and ether; used as an anesthetic, solvent, and chemical intermediate, and in standard octane-rating tests.

1,7-heptanedicarboxylic acid *See* azelaic acid.

heptanedioic acid *See* pimelic acid.

heptanoic acid [ORG CHEM] $CH_3(CH_2)_5COOH$ Clear oil boiling at 223°C; soluble in alcohol and ether, insoluble in water; used as a chemical intermediate. Also known as enanthic acid; oenanthic acid.

1-heptanol [ORG CHEM] $C_7H_{15}OH$ An alcohol; a fragrant, colorless liquid boiling at 174°C; soluble in water, ether, or alcohol; used as a chemical intermediate, as a solvent, and in cosmetics. Also known as heptyl alcohol.

2-heptanol *See* methyl amyl carbinol.

3-heptanol [ORG CHEM] $CH_3CH_2CH(OH)C_4H_9$ An alcohol; a liquid boiling at 156°C; used as a coating, solvent, and diluent, as a chemical intermediate, and as a flotation frother.

2-heptanone *See* methyl *n*-amyl ketone.

3-heptanone *See* ethyl butyl ketone.

4-heptanone [ORG CHEM] $(CH_3CH_2CH_2)_2CO$ A colorless liquid that is stable and has a pleasant odor; boils at approximately 98°C; used to put nitrocellulose and raw and blown oils into solution, and used in lacquers and as a flavoring in foods. Also known as butyrone; dipropyl ketone.

heptene [ORG CHEM] $C_{17}H_{14}$ A liquid that is a mixture of isomers; boils at 189.5°C; used as an additive in lubricants, as a catalyst, and as a surface active agent. Also known as heptylene.

heptode [ELECTR] A seven-electrode electron tube containing an anode, a cathode, a control electrode, and four additional electrodes that are ordinarily grids. Also known as pentagrid.

heptose [BIOCHEM] Any member of the group of monosaccharides containing seven carbon atoms.

heptoxide [CHEM] An oxide whose molecule contains seven atoms of oxygen.

heptulose [BIOCHEM] The generic term for a ketose formed from a seven-carbon monosaccharide.

heptyl [ORG CHEM] $CH_3(CH_2)_6$— The radical from heptane, $CH_3(CH_2)_5CH_3$.

***n*-heptylacetylene** *See* nonyne.

heptyl alcohol *See* 1-heptanol.

heptylene *See* heptene.

herb [BOT] **1.** A seed plant that lacks a persistent, woody stem aboveground and dies at the end of the season. **2.** An aromatic plant or plant part used medicinally or for food flavoring.

herbaceous [BOT] **1.** Resembling or pertaining to a herb. **2.** Pertaining to a stem with little or no woody tissue.

herbaceous dicotyledon [BOT] A type of dicotyledon in which the primary vascular cylinder forms an ectophloic siphonostele with widely separated vascular strands.

herbaceous monocotyledon [BOT] A type of monocotyledon with a vascular system composed of widely spaced strands arranged in one of four ways.

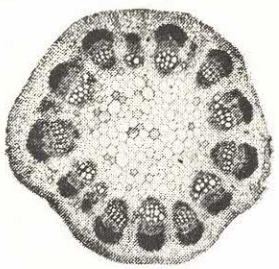
herbarium [BOT] A collection of plant specimens, pressed and mounted on paper or placed in liquid preservatives, and systematically arranged.

Herbert cloudburst test [MET] A hardness test in which a shower of steel balls, dropped from a predetermined height, dulls the surface of a hardened part in proportion to its softness and thus reveals defective areas.

Herbert pendulum method [MET] Hardness testing in which a 1-millimeter steel or jewel ball resting on the surface to be tested acts as the fulcrum for a 4-kilogram compound pendulum of 10-second period; the swinging of the pendulum causes a rolling indentation in the material, and several hardness factors, such as work hardenability, are determined.

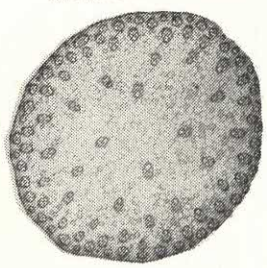
herbicide [MATER] A chemical agent that destroys or inhibits plant growth.

HERBACEOUS DICOTYLEDON



Cross section through the stem of the sunflower showing characteristics of ectophloic siphonostele. *(From J. B. Hill, L. O. Overholts, and H. W. Popp, Botany: A Textbook for Colleges, 2d ed., McGraw-Hill, 1950)*

HERBACEOUS MONOCOTYLEDON



Photomicrograph of transverse section through corn stem. *(From J. B. Hill, L. O. Overholts, and H. W. Popp, Botany: A Textbook for Colleges, 2d ed., McGraw-Hill, 1950)*

HERMAPHRODITE CALIPER

Hermaphrodite caliper. *(From R. J. Sweeney, Measurement Techniques in Mechanical Engineering, Wiley, 1953)*

herbicolous [ECOL] Living on herbs.

Herbig emission star [ASTRON] A relatively massive star in early stages of formation, still surrounded by a nebula which makes it variable in luminosity and renders its spectrum very peculiar.

herbivore [VERT ZOO] An animal that eats only vegetation.

Herbst corpuscle [VERT ZOO] A cutaneous sense organ found in the mucous membrane of the tongue of the duck.

herculare lining [MIN ENG] A German method of lining mine roadways subjected to heavy pressures; a closed circular arch of wedge-shaped precast concrete blocks made in two sizes are erected so that alternate blocks offer their wedge action in opposite direction, the larger blocks toward the center of the roadway and the smaller outward.

Hercules [ASTRON] A constellation with no stars brighter than third magnitude; right ascension 17 hours, declination 30° north.

Hercules stone *See* lodestone.

Hercules trap [ANALY CHEM] Water-measuring liquid trap used in aquametry when the material collected is heavier than water.

Hercules X-1 [ASTROPHYS] A source of x-rays that pulses with a period of 1.237 seconds, and is eclipsed for 6 of every 42 hours, associated with a variable star, designated HZ Herculis, that also has a period of 42 hours and faint 1.237-second pulsations; believed to be a binary star whose invisible member is a rotating neutron star. Abbreviated Her X-1.

Hercynian geosyncline [GEOL] A principal area of geosynclinal sediment accumulation in Devonian time; found in south-central and southern Europe and northern Africa.

Hercynian orogeny *See* Variscan orogeny.

hercynite [MINERAL] $(Fe, Mg)Al_2O_4$ A black mineral of the spinel group; crystallizes in the isometric system. Also known as ferrospinel; iron spinel.

herd [VERT ZOO] A number of one kind of wild, semidomesticated, or domesticated animals grouped or kept together under human control.

herderite [MINERAL] $CaBe(PO_4)(F,OH)$ A colorless to pale-yellow or greenish-white mineral consisting of phosphate and fluoride of calcium and beryllium; hardness is 7.5–8 on Mohs scale, and specific gravity is 3.92.

herd instinct [PSYCH] Psychic need for identification with a group.

hereditary [GEN] Of or pertaining to heredity or inheritance.

hereditary deforming chondrodysplasia *See* multiple hereditary exostoses.

hereditary disease [MED] A genetically determined illness transmitted from parent to child.

hereditary hemorrhagic telangiectasia [MED] An inherited disease characterized by dilatation of groups of capillaries and a tendency to hemorrhage. Also known as Osler-Rendu-Weber disease.

hereditary hypophosphatemic rickets [MED] Sex-linked syndrome involving defective bone growth and decreased concentrations of phosphates in the serum.

hereditary mechanics [MECH] A field of mechanics in which quantities, such as stress, depend not only on other quantities, such as strain, at the same instant but also on integrals involving the values of such quantities at previous times.

hereditary nephritis [MED] A familial disease characterized by recurrent attacks of interstitial inflammation of the kidneys and discharge of blood in the urine.

hereditary spherocytosis [MED] A chronic congenital disorder of the erythrocytopoietic system characterized by a preponderance of spherical erythrocytes, increased osmotic fragility, hemolytic anemia, and splenomegaly.

hereditary spinal ataxia *See* Friedrich's ataxia.

heredity [GEN] The sum of genetic endowment obtained from the parents.

heredofamilial [MED] Referring to a disease or disorder having a familial pattern of occurrence and thought to be hereditary.

Hering theory [PHYSIO] A theory of color vision which assumes that three qualitatively different processes are present in the visual system, and that each of the three is capable of responding in two opposite ways.

Hermann-Mauguin symbols [CRYSTAL] Symbols representing the 32 symmetry classes, consisting of series of numbers giving the multiplicity of symmetry axes in descending order, with other symbols indicating inversion axes and mirror planes.

hermaphrodite [BIOL] An individual (animal, plant, or higher vertebrate) exhibiting hermaphroditism. [PHYSIO] An abnormal condition, especially in humans and other higher vertebrates, in which both male and female reproductive organs are present in the individual.

hermaphrodite caliper [DES ENG] A layout tool having one leg pointed and the other like that of an inside caliper; used to locate the center of irregularly shaped stock or to lay out a line parallel to an edge.

hermaphroditic *See* monoecious.

hermaphroditic connector [ELEC] A connector in which both mating parts are exactly alike at their mating surfaces. Also known as sexless connector.

hermatype *See* hermatypic coral.

hermatypic coral [INV ZOO] Reef-building coral characterized by the presence of symbiotic algae within their endodermal tissue. Also known as hermatype.

Hermes [ASTRON] A very small asteroid which passed within 485×10^3 miles (780×10^3 kilometers) of the earth in 1937, the closest known approach of a celestial body other than the moon.

hermetic seal [ENG] An airtight seal.

hermitan *See* hermattan.

hermit crab [INV ZOO] The common name for a number of marine decapod crustaceans of the families Paguridae and Parapaguridae; all lack right-sided appendages and have a large, soft, coiled abdomen.

Hermite polynomials [MATH] A family of orthogonal polynomials which arise as solutions to Hermite's differential equation, a particular case of the hypergeometric differential equation.

Hermite's differential equation [MATH] A particular case of the hypergeometric equation; it has the form $w'' - 2zw' + 2nw = 0$, where n is an integer.

Hermitian conjugate of a matrix [MATH] The transpose of the complex conjugate of a matrix. Also known as adjoint of a matrix; associate matrix.

Hermitian conjugate operator *See* adjoint operator.

Hermitian form [MATH] A polynomial in n real or complex variables where the matrix constructed from its coefficients is Hermitian.

Hermitian inner product *See* inner product.

Hermitian kernel [MATH] A kernel $K(x,t)$ of an integral transformation or integral equation is Hermitian if $K(x,t)$ equals its adjoint kernel, $K^*(t,x)$.

Hermitian matrix [MATH] A matrix which equals its conjugate transpose matrix, that is, is self-adjoint.

Hermitian operator [MATH] A linear operator A on vectors in a Hilbert space, such that if x and y are in the range of A then the inner products (Ax,y) and (x,Ay) are equal.

Hermitian scalar product *See* inner product.

Hermitian space *See* inner product space.

hernia [MED] Abnormal protrusion of an organ or other body part through its containing wall. Also called rupture.

hernial sac [MED] A pouch of peritoneum containing a herniated organ or other body part.

herniated disk [MED] An intervertebral disk in which the pulpy center has pushed through the fibrocartilage. Also known as slipped disk.

herniation of the nucleus pulposus [MED] Occurrence of a herniated disk.

herniorrhaphy [MED] Operation for repair and suturing of a hernia.

herniotomy [MED] An operation for the relief of irreducible hernia, by cutting through the neck of the sac.

heroin [PHARM] $C_{21}H_{23}O_5N$ A white, crystalline powder made from morphine; the hydrochloride compound is used as a sedative and narcotic.

heron [VERT ZOO] The common name for wading birds composing the family Ardeidae characterized by long legs and neck, a long tapered bill, large wings, and soft plumage.

herpangia [MED] A mild viral disease of humans caused by a coxsackie virus and characterized by fever, anorexia, and grayish papules surrounded by a red areola in the mouth.

herpes [MED] An acute inflammation of the skin or mucous membranes, characterized by the development of groups of vesicles on an inflammatory base.

herpes simplex [MED] An acute vesicular eruption of the skin or mucous membranes caused by a virus, commonly seen as cold sores or fever blisters.

herpes simplex encephalitis *See* herpetic encephalitis.

herpes simplex virus [VIROL] Either of two types of subgroup A herpesviruses that are specific for humans; given the binomial designation *Herpesvirus hominis*.

herpesvirus [VIROL] A major group of deoxyribonucleic acid–containing animal viruses, distinguished by a cubic capsid, enveloped virion, and affinity for the host nucleus as a site of maturation.

herpes zoster [MED] A systemic virus infection affecting spinal nerve roots, characterized by vesicular eruptions distributed along the course of a cutaneous nerve. Also known as shingles; zoster.

herpetic encephalitis [MED] A type of meningoencephalitis characterized by large intranuclear inclusion bodies in the brain. Also known as herpes simplex encephalitis.

herpetic stomatitis [MED] Inflammation of the soft tissues of the mouth characterized by fever blisters.

herpetic tonsillitis [MED] Acute inflammation of the tonsils characterized by fever and vesicles caused by a herpesvirus.

Herpetosiphon [MICROBIO] A genus of bacteria in the family Cytophagaceae; cells are unbranched, sheathed rods or filaments; unsheathed segments are motile; microcysts are not known.

herpolhode [MECH] The curve traced out on the invariable plane by the point of contact between the plane and the inertia ellipsoid of a rotating rigid body not subject to external torque.

herpolhode cone *See* space cone.

Herreshoff furnace [MET] **1.** A rectangular-shaft blast furnace for smelting copper ore. **2.** A mechanical, cylindrical, multiple-deck muffle furnace of the McDougall type.

herring [VERT ZOO] The common name for fishes composing the family Clupeidae; fins are soft-rayed and have no supporting spines, there are usually four gill clefts, and scales are on the body but absent on the head.

Herring body [HISTOL] Any of the distinct colloid masses in the vertebrate pituitary gland, possibly representing greatly dilated endings of nerve fibers.

herringbone gear [MECH ENG] The equivalent of two helical gears of opposite hand placed side by side.

herringbone pattern [ELECTR] An interference pattern sometimes seen on television receiver screens, consisting of a horizontal band of closely spaced V- or S-shaped lines.

herringbone stoping [MIN ENG] Method used in flattish Rand stope panels 500–1000 feet (150–300 meters) long for breaking and moving the ore; the stope is divided into 20-foot (6-meter) panels, and a different gang works each panel; a tramming system delivers the cut rock to a central scraper system.

herringbone timbering [MIN ENG] A method of timber support in a roadway with a weak roof and strong sides, using neither arms nor side uprights; the crossbar is notched into the sides and supported at its center by a bar under it and parallel with the roadway; the bar is supported by struts notched into the sides at about half height.

herringbone weave [TEXT] Broken-twill weave giving a zigzag effect produced by alternating the direction of the twill, like the skeleton of a herring.

herring oil [MATER] Pale-yellow to dark-red liquid obtained from herring; soluble in carbon disulfide, chloroform, and ether, insoluble in water; used in soaps, in leather dressing, and as machinery lubricant.

Herschel-Cassegrain telescope [OPTICS] A modification of a Cassegrain telescope in which the primary paraboloidal mirror is slightly inclined to the optical axis, and both the secondary hyperboloidal mirror and the eyepiece are located off the axis, so that it is not necessary to pierce the primary.

Herschel effect [GRAPHICS] **1.** The reaction whereby a photographic image on silver chloride is destroyed by exposure to red light. Also known as visual Herschel effect. **2.** The reaction whereby a latent photographic image in gelatin emulsion which is not dye-sensitized is destroyed by exposure to red light. Also known as latent Herschel effect.

Herschel-type venturi tube [ENG] A type of venturi tube in which the converging and diverging sections are cones, the throat section is relatively short, the diverging cone is long, and the pressures preceding the inlet cone and in the throat are transferred through multiple openings into annular openings, called piezometer rings.

hertz [PHYS] Unit of frequency; a periodic oscillation has a frequency of n hertz if in 1 second it goes through n cycles. Also known as cycle per second (cps). Symbolized Hz.

Hertz antenna [ELECTROMAG] An ungrounded half-wave antenna.

Hertz effect [ELECTR] Increase in the length of a spark induced across a spark gap when the gap is irradiated with ultraviolet light.

Hertzian oscillator [ELECTROMAG] **1.** A generator of electric dipole radiation; consists of two capacitors joined by a conducting rod having a small spark gap; an oscillatory discharge occurs when the two halves of the oscillator are raised to a sufficiently high potential difference. **2.** A dumbbell-shaped conductor in which electrons oscillate from one end to the other, producing electric dipole radiation.

Hertzian wave *See* electric wave.

Hertz's law [MECH] A law which gives the radius of contact between a sphere of elastic material and a surface in terms of the sphere's radius, the normal force exerted on the sphere, and Young's modulus for the material of the sphere.

Hertzsprung gap [ASTRON] A gap on the Hertzsprung-Russell diagram between giant stars of spectral types *A*0 and *G*0, caused by the fact that the movement of stars across this region occupies a relatively brief time.

Hertzsprung-Russell diagram [ASTRON] A plot showing the relation between the luminosity and surface temperature of stars; other related quantities frequently used in plotting this diagram are the absolute magnitude for luminosity, and spectral type or color index for the surface temperatures. Abbreviated H-R diagram.

Hertz vector *See* polarization potential.

hervidero *See* mud volcano.

Her X-1 *See* Hercules X-1.

Hesionidae [INV ZOO] A family of small polychaete worms belonging to the Errantia.

hesitation [COMPUT SCI] A brief automatic suspension of the operations of a main program in order to perform all or part of another operation, such as rapid transmission of data to or from a peripheral unit.

hesperidium [BOT] A modified berry, with few seeds, a leathery rind, and membranous extensions of the endocarp dividing the pulp into chambers; an example is the orange.

Hesperiidae [INV ZOO] The single family of the superfamily Hesperioidea comprising butterflies known as skippers because of their rapid, erratic flight.

Hesperioidea [INV ZOO] A monofamilial superfamily of lepidopteran insects in the suborder Heteroneura including heavy-bodied, mostly diurnal insects with clubbed antennae that are bent, curved, or reflexed at the tip.

Hesperornithidae [PALEON] A family of extinct North American birds in the order Hesperornithiformes.

Hesperornithiformes [PALEON] An order of ancient extinct birds; individuals were large, flightless, aquatic diving birds with the shoulder girdle and wings much reduced and the legs specialized for strong swimming.

Hesperus [ASTRON] Greek name for the planet Venus as an evening star.

Hesser's variation [COMPUT SCI] A variation of a Kiviat graph in which all variables are arranged so that their plots approach the circumference of the graph as the system being evaluated approaches saturation, and the scales on the various axes may not cover the full 0–100% range, or may be in units other than percent.

hessian *See* burlap.

Hessian [MATH] For a function $f(x_1, \ldots, x_n)$ of n real variables, the real-valued function of $(x_1, \ldots, x_n)$ given by the determinant of the matrix with entry $\partial^2 f/\partial x_i \partial x_j$ in the ith row and jth column; used for analyzing critical points.

hessite [MINERAL] Ag_2Te A lead-gray sectile mineral crystallizing in the isometric system; usually massive and often auriferous.

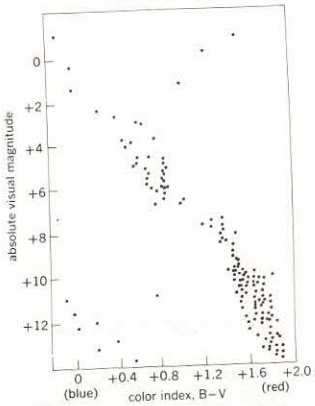
Hess's law [PHYS CHEM] The law that the evolved or absorbed heat in a chemical reaction is the same whether the reaction takes one step or several steps. Also known as the law of constant heat summation.

hetaerolite [MINERAL] $ZnMn_2O_4$ A black mineral consisting of zinc-manganese oxide found with chalcophanite.

Heteractinida [PALEON] A group of Paleozoic sponges with calcareous spicules; probably related to the Calcarea.

Heterakidae [INV ZOO] A group of nematodes assigned either to the suborder Oxyurina or the suborder Ascaridina.

HERTZSPRUNG-RUSSELL DIAGRAM



H-R diagram limited to all the stars within 10 parsecs from the sun. *(Adapted from H. L. Johnson and W. W. Morgan, Astrophys. J., 117:313, copyright © 1953 by the University of Chicago Press)*

heterandrous [BOT] Having stamens differing from each other in length or form.

heteravexesis *See* allometry.

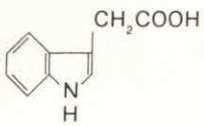
hetero- [CHEM] Chemical prefix meaning different; for example, a heterocyclic compound is one in which the ring is made of more than one kind of atom.

heteroagglutinin [IMMUNOL] An antibody in normal blood serum capable of agglutinating foreign particles and erythrocytes of other species.

heteroallele [GEN] An allele that carries mutational alterations at different sites.

heteroauxin [BIOCHEM] $C_{10}H_9O_2N$ A plant growth hormone with an indole skeleton.

HETEROAUXIN



Structural formula for heteroauxin.

heteroazeotrope [CHEM] Liquid mixture that is not completely miscible in all proportions in the liquid phase, yet does not form an azeotrope. Also known as heterogeneous zeotrope.

Heterobasidiomycetidae [MYCOL] A class of fungi in which the basidium either is branched or is divided into cells by cross walls.

heteroblastic [EMBRYO] Arising from different tissues or germ layers, in referring to similar organs in different species. [PETR] Pertaining to rocks in which the essential constituents are of two distinct orders of magnitude of size.

Heterocapsina [BOT] An order of green algae in the class Xanthophyceae. [INV ZOO] A suborder of yellow-green to green flagellate protozoans in the order Heterochlorida.

heterocarpous [BOT] Producing two distinct types of fruit.

Heterocera [INV ZOO] A formerly recognized suborder of Lepidoptera including all forms without clubbed antennae.

heterocercal [VERT ZOO] Pertaining to the caudal fin of certain fishes and indicating that the upper lobe is larger, with the vertebral column terminating in this lobe.

Heteroceridae [INV ZOO] The variegated mud-loving beetles, a family of coleopteran insects in the superfamily Dryopoidea.

Heterocheilidae [INV ZOO] A family of parasitic roundworms in the superfamily Ascaridoidea.

heterochlamydeous [BOT] Having the perianth differentiated into a distinct calyx and a corolla.

Heterochlorida [INV ZOO] An order of yellow-green to green flagellate oraganisms of the class Phytamastigophorea.

heterochromatin [CYTOL] Specialized chromosome material which remains tightly coiled even in the nondividing nucleus and stains darkly in interphase.

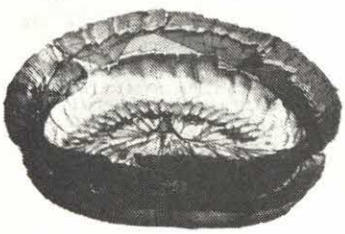
heterochromia [PHYSIO] A condition in which the two irises of an individual have different colors, or in which one iris has two colors.

heterochronism [EMBRYO] Deviation from the normal sequence of organ formation; a factor in evolution. [GEOL] A phenomenon in which two similar geologic deposits may not be of the same age even though they underwent like processes of formation.

heterochthonous [SCI TECH] Not indigenous to the area of present occurrence.

heterococcolith [BIOL] A coccolith with crystals arranged into boat, trumpet, or basket shapes.

HETEROCOCCOLITH



A heterococcolith whose crystals are arranged in a basket shape. *(A. McIntyre, Lamont-Doherty Geological Observatory of Columbia University)*

heterocoelous [ANAT] Pertaining to vertebrae with centra having saddle-shaped articulations.

Heterocorallia [PALEON] An extinct small, monofamilial order of fossil corals with elongate skeletons; found in calcareous shales and in limestones.

Heterocotylea [INV ZOO] The equivalent name for Monogenea.

heterocyclic compound [ORG CHEM] Compound in which the ring structure is a combination of more than one kind of atom; for example, pyridine, C_5H_5N.

heterocyst [BOT] Clear, thick-walled cell occurring at intervals along the filament of certain blue-green algae.

heterodactylous [VERT ZOO] Having the first two toes turned backward.

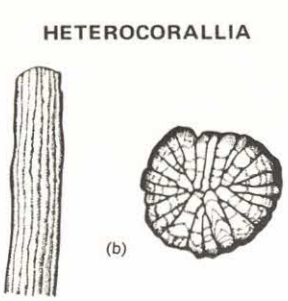
Heterodera [INV ZOO] The cyst nematodes, a genus of phytoparasitic worms that live in the internal root systems of many plants.

heterodesmic [CRYSTAL] Pertaining to those atoms bonded in more than one way in crystals.

heterodont [ANAT] Having teeth that are variable in shape and differentiated into incisors, canines, and molars. [INV ZOO] In bivalves, having two types of teeth on one valve which fit into depressions on the other valve.

Heterodonta [INV ZOO] An order of bivalve mollusks in some systems of classification; hinge teeth are few in number and variable in form.

HETEROCORALLIA



Heterocorallian skeleton. *(a)* External view. *(b)* Transverse thin section. *(From R. C. Moore, ed., Treatise on Invertebrate Paleontology, pt. F, Geological Society of America, University of Kansas Press, 1956)*

Heterodontoidea [VERT ZOO] A suborder of sharks in the order Selachii which is represented by the single living genus *Heterodontus*.

heteroduplex [GEN] A double-stranded deoxyribonucleic molecule comprising strands from different individuals. [MOL BIO] A double-stranded molecule of deoxyribonucleic acid in which the two strands show noncomplementary sections.

heterodyne [ELECTR] To mix two alternating-current signals of different frequencies in a nonlinear device for the purpose of producing two new frequencies, the sum of and difference between the two original frequencies.

heterodyne analyzer [ENG ACOUS] A type of constant-bandwidth analyzer in which the electric signal from a microphone beats with the signal from an oscillator, and one of the side bands produced by this modulation is then passed through a fixed filter and detected.

heterodyne conversion transducer *See* converter.

heterodyne detector [ELECTR] A detector in which an unmodulated carrier frequency is combined with the signal of a local oscillator having a slightly different frequency, to provide an audio-frequency beat signal that can be heard with a loudspeaker or headphones; used chiefly for code reception.

heterodyne frequency [COMMUN] Either of the two new frequencies resulting from heterodyne action between the two input frequencies of a heterodyne detector.

heterodyne frequency meter [ELECTR] A frequency meter in which a known frequency, which may be adjustable or fixed, is heterodyned with an unknown frequency to produce a zero beat or an audio-frequency signal whose value is measured by other means. Also known as heterodyne wavemeter.

heterodyne interference *See* heterodyne whistle.

heterodyne measurement [ELECTR] A measurement carried out by a type of harmonic analyzer which employs a highly selective filter, at a frequency well above the highest frequency to be measured, and a heterodyning oscillator.

heterodyne modulator *See* mixer.

heterodyne oscillator [ELECTR] **1.** A separate variable-frequency oscillator used to produce the second frequency required in a heterodyne detector for code reception. **2.** *See* beat-frequency oscillator.

heterodyne reception [ELECTR] Radio reception in which the incoming radio-frequency signal is combined with a locally generated rf signal of different frequency, followed by detection. Also known as beat reception.

heterodyne repeater [ELECTR] A radio repeater in which the received radio signals are converted to an intermediate frequency, amplified, and reconverted to a new frequency band for transmission over the next repeater section.

heterodyne wavemeter *See* heterodyne frequency meter.

heterodyne whistle [COMMUN] A steady, high-pitched audio tone heard in an ordinary amplitude-modulation radio receiver under certain conditions when two signals that differ slightly in carrier frequency enter the receiver and heterodyne to produce an audio beat. Also known as heterodyne interference.

heteroecious [BIOL] Pertaining to forms that pass through different stages of a life cycle in different hosts.

heteroerotism [PSYCH] Sexual desire directed away from one's self or sex.

heterogamete [BIOL] A gamete that differs in size, appearance, structure, or sex chromosome content from the gamete of the opposite sex. Also known as anisogamete.

heterogametic sex [GEN] That sex of some species in which the two sex chromosomes are different in gene content or size and which therefore produces two or more different kinds of gametes.

heterogamety [GEN] The production of different kinds of gametes by one sex of a species.

heterogamous [BIOL] Of or pertaining to heterogamy.

heterogamy [BIOL] **1.** Alternation of a true sexual generation with a parthenogenetic generation. **2.** Sexual reproduction by fusion of unlike gametes. Also known as anisogamy. [BOT] Condition of producing two kinds of flowers.

heterogeneity [BIOL] The condition or state of being different in kind or nature.

heterogeneous [CHEM] Pertaining to a mixture of phases such as liquid-vapor, or liquid-vapor-solid. [MATH] Pertaining to quantities having different degrees or dimen-

sions. [SCI TECH] Composed of dissimilar or nonuniform constituents.

heterogeneous catalysis [CHEM] Catalysis occurring at a phase boundary, usually a solid-fluid interface.

heterogeneous chemical reaction [CHEM] Chemical reaction system in which the reactants are of different phases; for example, gas with liquid, liquid with solid, or a solid catalyst with liquid or gaseous reactants.

heterogeneous fluid [FL MECH] A fluid within which the density varies from point to point; for most purposes the atmosphere must be treated as heterogeneous, particularly with regard to the decrease of density with height.

heterogeneous radiation [PHYS] Radiation having a number of different frequencies, different particles, or different particle energies.

heterogeneous reactor [NUCLEO] A nuclear reactor in which fissionable material and moderator are arranged in a regular pattern of discrete bodies with dimensions such that a nonhomogeneous medium is presented to neutrons.

heterogeneous reservoir [GEOL] Formation with two or more noncommunicating sand members, each possibly with different specific- and relative-permeability characteristics.

heterogeneous ribonucleic acid [MOL BIO] A large molecule of ribonucleic acid that is believed to be the precursor of messenger ribonucleic acid. Abbreviated H-RNA.

Heterogeneratae [BOT] A class of brown algae distinguished by a heteromorphic alteration of generations.

heterogenesis [BIOL] Alternation of generations in a complete life cycle, especially the alternation of a dioecious generation with one or more parthenogenetic generations.

heterogenetic antigen *See* heterophile antigen.

heterogenite [MINERAL] CoO(OH) A black cobalt mineral, sometimes with some copper and iron, found in mammillary masses. Also known as stainierite.

heterogenous [BIOL] Not originating within the body of the organism.

heterogenous vaccine [IMMUNOL] A vaccine derived from a source other than the patient.

Heterognathi [VERT ZOO] An equivalent name for Cypriniformes.

heterogony [BIOL] **1.** *See* allometry. **2.** Alteration of generations in a complete life cycle, especially of a dioecious and hermaphroditic generation. [BOT] Having heteromorphic perfect flowers with respect to lengths of the stamens or styles.

heterograft [IMMUNOL] A tissue or organ obtained from an animal of one species and transplanted to the body of an animal of another species. Also known as heterologous graft.

heterohemolysin [IMMUNOL] Hemolytic amboceptor against the erythrocytes of a species different from that used to obtain the amboceptor.

heterojunction [ELECTR] The boundary between two different semiconductor materials, usually with a negligible discontinuity in the crystal structure.

heterokaryon [MYCOL] A bi- or multinucleate cell having genetically different kinds of nuclei.

heterokaryosis [MYCOL] The condition of a bi- or multinucleate cell having nuclei of genetically different kinds.

heterokont [BIOL] An individual, especially among certain algae, having unequal flagella.

heterolactic fermentation [MICROBIO] A type of lactic acid fermentation by which small yields of lactic acid are produced and much of the sugar is converted to carbon dioxide and other products.

heterolalia [PSYCH] Saying one thing and meaning another as by an unconscious mechanism or in motor aphasia.

heterolateral [ANAT] Of, pertaining to, or located on the opposite side.

heterolecithal [CYTOL] Of an egg, having the yolk distributed unevenly throughout the cytoplasm.

heterologous graft *See* heterograft.

heterologous stimulus [PHYSIO] A form of energy capable of exciting any sensory receptor or form of nervous tissue.

heterologous tumor [MED] A neoplasm composed of tissues that differ from those of the organ at the site of the tumor.

heterolytic cleavage [ORG CHEM] Breaking of a covalent bond involving carbon to produce two oppositely charged fragments.

heteromedusoid [INV ZOO] A styloid type of sessile gonophore.

Heteromera [INV ZOO] The equivalent name for Tenebrionoidea.

heteromerous [BOT] Of a flower, having one or more whorls made up of a different number of members than the remaining whorls.

heterometaplasia [MED] Change in the character of an autograft.

Heteromi [VERT ZOO] An equivalent name for Notacanthiformes.

heteromixis [MYCOL] In Fungi, sexual reproduction which involves the fusion of genetically different nuclei, each from a different thallus.

heteromorphic [CYTOL] Having synoptic or sex chromosomes that differ in size or form. [MED] Differing from the normal in size or morphology. [ZOO] Having a different form at each stage of the life history.

heteromorphite [MINERAL] $Pb_7Sb_8S_{19}$ An iron black, monoclinic mineral consisting of lead antimony sulfide.

heteromorphosis [BIOL] Regeneration of an organ or part that differs from the original structure at the site. [EMBRYO] Formation of an organ at an abnormal site. Also known as homeosis.

Heteromyidae [VERT ZOO] A family of the mammalian order Rodentia containing the North American kangaroo mice and the pocket mice.

Heteromyinae [VERT ZOO] The spiny pocket mice, a subfamily of the rodent family Heteromyidae.

Heteromyota [INV ZOO] A monospecific order of wormlike animals in the phylum Echiurida.

Heterondontidae [VERT ZOO] The Port Jackson sharks, a family of aberrant modern elasmobranchs in the suborder Heterodontoidea.

Heteronemertini [INV ZOO] An order of the class Anopla; individuals have a middorsal blood vessel and a body wall composed of three muscular layers.

Heteroneura [INV ZOO] A suborder of Lepidoptera; individuals are characterized by fore- and hindwings that differ in shape and venation and by sucking mouthparts.

heteropelmous [VERT ZOO] Having bifid flexor tendons of the toes.

heterophagic vacuole *See* food vacuole.

heterophile agglutination test [PATH] A test for the presence of heterophile antibodies in the serum produced in infectious mononucleosis; agglutination of sheep red cells is a positive test. Also known as heterophile antibody test; Paul-Bunnell test.

heterophile antibody [IMMUNOL] Substance that will react with heterophile antigen; found in the serum of patients with infectious mononucleosis.

heterophile antibody test *See* heterophile agglutination test.

heterophile antigen [IMMUNOL] A substance that occurs in unrelated species of animals but has similar serologic properties among them. Also known as heterogenetic antigen.

heterophile leukocyte [HISTOL] A neutrophile of vertebrates other than humans.

heterophyiasis [MED] Presence of the minute intestinal fluke *Heterophyes heterophyes* in the small intestine of humans.

Heterophyllidae [PALEON] The single family of the extinct coelenterate order Heterocorallia.

heterophyllous [BOT] Having more than one form of foliage leaves on the same plant or stem.

heterophyte [BOT] A plant that depends upon living or dead plants or their products for food materials.

Heteropiidae [INV ZOO] A family of calcareous sponges in the order Sycettida.

heteroplasia [MED] **1.** The presence of a tissue in an abnormal location. **2.** A process whereby tissues are displaced to or developed in locations foreign to their normal habitats.

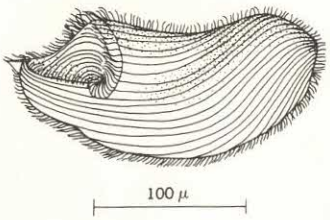
heteroploidy [GEN] The condition of a chromosome complement in which one or more chromosomes, or parts of chromosomes, are present in number different from the numbers of the rest.

heteropolar generator [ELECTROMAG] A generator whose active conductors successively pass through magnetic fields of opposite direction.

heteropoly acid [INORG CHEM] Complex acids of metals, whose specific gravity is greater than 4, with phosphoric acid; an example is phosphomolybdic acid.

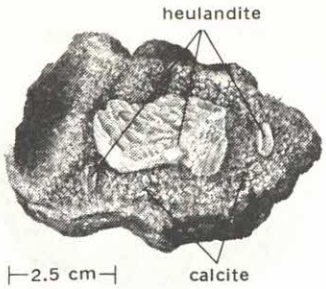
heteropoly compound [INORG CHEM] Polymeric compounds of molybdates with anhydrides of other elements such as

HETEROTRICHIDA



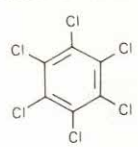
Climacostomum, an example of a heterotrich.

HEULANDITE



Crystals with calcite and quartz, Paterson, New Jersey. *(Specimen from Department of Geology, Bryn Mawr College)*

HEXACHLOROBENZENE



Structural formula.

phosphorus; the yellow precipitate $(NH_4)_3[P(Mo_3O_{10})_4]$ is such a compound.

heteropolysaccharide [BIOCHEM] A polysaccharide which is a polymer consisting of two or more different monosaccharides.

Heteroporidae [INV ZOO] A family of trepostomatous-like bryozoans in the order Cyclostomata.

Heteroptera [INV ZOO] The equivalent name for Hemiptera.

heteropycnosis [CYTOL] Differential condensation of certain chromosomes, such as sex chromosomes, or chromosome parts.

heterosexuality [PSYCH] Having sexual feeling toward members of the opposite sex.

heterosis [GEN] The increase in size, yield, and performance found in some hybrids, especially of inbred parents. Also known as hybrid vigor.

heterosite [MINERAL] A mineral composed of phosphate of iron and manganese; it is isomorphous with purpurite.

Heterosomata [VERT ZOO] The equivalent name for Pleuronectiformes.

Heterosoricinae [PALEON] A subfamily of extinct insectivores in the family Soricidae distinguished by a short jaw and hedgehoglike teeth.

heterosphere [METEOROL] The upper portion of a two-part division of the atmosphere (the lower portion is the homosphere) according to the general homogeneity of atmospheric composition; characterized by variation in composition, and in mean molecular weight of constituent gases; starts at 80–100 kilometers above the earth and therefore closely coincides with the ionosphere and the thermosphere.

Heterospionidae [INV ZOO] A monogeneric family of spioniform worms found in shallow and abyssal depths of the Atlantic and Pacific oceans.

heterospory [BOT] Development of more than one type of spores, especially relating to the microspores and megaspores in ferns and seed plants.

heterostatic [ELEC] Pertaining to the measurement of one electrostatic potential by means of a different potential.

heterostemony [BOT] Presence of two or more different types of stamens in the same flower.

Heterostraci [PALEON] An extinct group of ostracoderms, or armored, jawless vertebrates; armor consisted of bone lacking cavities for bone cells.

heterostyly [BOT] Condition or state of flowers having unequal styles.

heterosuggestion [PSYCH] A suggestion from a source outside an individual's mind.

Heterotardigrada [INV ZOO] An order of the tardigrades exhibiting wide morphologic variations.

heterothallic [BOT] Pertaining to a mycelium with genetically incompatible hyphae, therefore requiring different hyphae to form a zygospore; refers to fungi and some algae.

heterotopia [ECOL] An abnormal habitat. [MED] Displacement of an organ or other body part from its natural position.

heterotopic [MED] Occurring in an abnormal anatomic location.

heterotopic epithelium [MED] Intestinal epithelium and goblet cells occurring in the stomach.

heterotopic faces [ORG CHEM] On molecules, faces of double bonds where addition gives rise to isomeric structures.

heterotopic ligands [CHEM] Constitutionally identical ligands whose separate replacement by a different ligand gives rise to isomeric structures.

heterotopic pregnancy [MED] Double pregnancy with one fetus within and the other outside the uterus.

heterotopic transplantation [BIOL] A graft transplanted to an abnormal anatomical location on the host.

Heterotrichida [INV ZOO] A large order of large ciliates in the protozoan subclass Spirotrichia; buccal ciliature is well developed and some species are pigmented.

Heterotrichina [INV ZOO] A suborder of the protozoan order Heterotrichida.

heterotroph [BIOL] An organism that obtains nourishment from the ingestion and breakdown of organic matter.

heterotrophic effect [BIOCHEM] The interaction between different ligands, such as the effect of an inhibitor or activator on the binding of a substrate by an enzyme.

heterotropia *See* strabismus.

heterotropic enzyme [BIOCHEM] A type of allosteric enzyme in which a small molecule other than the substrate serves as the allosteric reflector.

heteroxenous [BIOL] Requiring more than one host to complete a life cycle.

heterozooid [INV ZOO] Any of the specialized, nonfeeding zooids in a bryozoan colony.

heterozygote [GEN] An individual that has different alleles at one or more loci and therefore produces gametes of two or more different kinds.

heterozygous [GEN] Of or pertaining to a heterozygote.

HETP *See* height equivalent of theoretical plate.

Hettangian [GEOL] A stage of Lower Jurassic geologic time.

heulandite [MINERAL] $CaAl_2Si_6O_{16}\cdot 5H_2O$ A zeolite mineral that crystallizes in the monoclinic system; often occurs as foliated masses or in crystal form in cavities of decomposed basic igneous rocks.

Heulinger equations [PHYS] Equations which relate the values of various quantities, such as the Hall coefficient, thermoelectric power, electrical resistivity, and thermal conductivity, in isothermal and adiabatic thermoelectric and thermomagnetic effects.

heuristic algorithm *See* dynamic algorithm.

heuristic method [MATH] A method of solving a problem in which one tries each of several approaches or methods and evaluates progress toward a solution after each attempt.

heuristic program [COMPUT SCI] A program in which a computer tries each of several methods of solving a problem and judges whether the program is closer to solution after each attempt. Also known as heuristic routine.

heuristic routine *See* heuristic program.

heuristics [PSYCH] The study of the mental processes involved in problem solving.

Heusler alloy [MET] Any of a group of ferromagnetic nonferrous alloys typically composed of 18–25% manganese, 10–25% aluminum, and the balance copper.

hevea rubber [MATER] Rubber made from latex obtained from the rubber tree (*Hevea brasiliensis*); used for electrical insulation.

Hevelian halo [OPTICS] A faint, white halo with an angular radius of 90°, centered on the sun or moon, and only occasionally seen; it is a member of the class of halos reported but not yet fully explained. Also known as halo of Hevelius; halo of 90°.

Hevelius's parhelia [OPTICS] Bright spots infrequently observed on the parhelic circle halfway around from the sun to the anthelion; these two brighter areas on the parhelic circle are probably a result of superposition of luminosity of the parhelic circle and the Hevelian halo.

hewettite [MINERAL] $CaV_6O_{16}\cdot 9H_2O$ A deep-red mineral composed of hydrated calcium vanadate; found in silky orthorhombic crystal aggregates in Colorado, Utah, and Peru.

hexacanth [INV ZOO] Having six hooks; refers specifically to the embryo of certain tapeworms.

hexachlorobenzene [ORG CHEM] C_6Cl_6 Colorless, needlelike crystals with a melting point of 231°C; used in organic synthesis and as a fungicide. Abbreviated HCB. Also known as perchlorobenzene.

hexachlorobutadiene [ORG CHEM] $Cl_2C{:}CClCCl{:}CCl_2$ A colorless liquid with mild aroma, boiling at 210–220°C; soluble in alcohol and ether, insoluble in water; used as solvent, heat-transfer liquid, and hydraulic fluid.

1,2,3,4,5,6-hexachlorocyclohexane [ORG CHEM] $C_6H_6Cl_6$ A white or yellow powder or flakes with a musty odor; a systemic insecticide toxic to flies, cockroaches, aphids, and boll weevils. Also known as benzene hexachloride (BHC); TBH.

hexachloroethane [ORG CHEM] Cl_3CCCl_3 Colorless crystals with a camphorlike odor, melting point 185°C, toxic; used in organic synthesis, as a retarding agent in fermentation, and as a rubber accelerator. Also known as carbon trichloride; perchloroethane.

6,7,8,9,10,10-hexachloro-1,5,5a,6,9,9a-hexahydro-6,9-methano-2,4,3,benzo(e)-dioxathiepin-3-oxide *See* endosulfan.

hexachlorophene [ORG CHEM] $(C_6HCl_3OH)_2CH_2$ A white powder melting at 161°C; soluble in alcohol, ether, acetone, and chloroform, insoluble in water; bacteriostat used in antiseptic soaps, cosmetics, and dermatologicals.

hexachloropropylene [ORG CHEM] $CCl_3CCl{:}CCl_2$ Water-white liquid boiling at 210°C, soluble in alcohol, ether, and chlorinated solvents, insoluble in water; used as a solvent, plasticizer, and hydraulic fluid.

hexacontane [ORG CHEM] $C_{60}H_{122}$ Solid, saturated hydrocarbon of the methane series; melts at 101°C.

Hexacorallia [INV ZOO] The equivalent name for Zoantharia.

hexacosane [ORG CHEM] $C_{26}H_{54}$ Saturated hydrocarbon of the methane series; colorless crystals melting at 57°C.

hexacosanoic acid *See* cerotic acid.

hexactin [INV ZOO] A spicule, especially in Porifera, having six equal rays at right angles to each other.

Hexactinellida [INV ZOO] A class of the phylum Porifera which includes sponges with a skeleton made up basically of hexactinal siliceous spicules.

Hexactinosa [INV ZOO] An order of sponges in the subclass Hexasterophora; parenchymal megascleres form a rigid framework and consist of simple hexactins.

***n*-hexadecane** [ORG CHEM] $C_{16}H_{34}$ A colorless, solid hydrocarbon, melting point 20°C; a standard reference fuel in determining the ignition quality (cetane number) of diesel fuels. Also known as cetane.

1-hexadecanol *See* cetyl alcohol.

1-hexadecene [ORG CHEM] $CH_3(CH_2)_{13}CH{:}CH_2$ A colorless liquid made by treating cetyl alcohol with phosphorous pentoxide; boils at 274°C; soluble in organic solvents such as alcohol, ether, and petroleum; used as an intermediate in organic synthesis. Also known as cetene; cetylene; α-hexadecylene.

***cis*-9-hexadecenoic acid** *See* palmitoleic acid.

hexadecimal [MATH] Pertaining to a number system using the base 16. Also known as sexadecimal.

hexadecimal notation [COMPUT SCI] A notation in the scale of 16, using decimal digits 0 to 9 and six more digits that are sometimes represented by *A*, *B*, *C*, *D*, *E*, and *F*.

hexadecimal number system [MATH] A digital system based on powers of 16, as compared with the use of powers of 10 in the decimal number system. Also known as sexadecimal number system.

α-hexadecylene *See* 1-hexadecene.

hexadentate ligand [INORG CHEM] A chelating agent having six groups capable of attachment to a metal ion. Also known as sexadentate ligand.

hexadiene [ORG CHEM] C_6H_{10} A group of unsaturated hydrocarbons with two double bonds; some members of the group are 1,4-hexadiene, 1,5-hexadiene, and 2,4-hexadiene.

2,4-hexadienoic acid *See* sorbic acid.

hexaflurate [INORG CHEM] $K(ASF_6)$ A white, crystalline compound with a melting point of 440°C; used as an herbicide for rangeland. Also known as potassium hexafluoroarsenate.

hexagon [MATH] A six-sided polygon.

hexagonal close-packed structure [CRYSTAL] Close-packed crystal structure characterized by the regular alternation of two layers; the atoms in each layer lie at the vertices of a series of equilateral triangles, and the atoms in one layer lie directly above the centers of the triangles in neighboring layers. Abbreviated hcp structure.

hexagonal column [METEOROL] One of the many forms in which ice crystals are found in the atmosphere; this crystal habit is characterized by hexagonal cross-section in a plane perpendicular to the long direction (principal axis, optic axis, or *c*-axis) of the columns; it differs from that found in hexagonal platelets only in that environmental conditions have favored growth along the principal axis rather than perpendicular to that axis.

hexagonal-head bolt [DES ENG] A standard wrench head bolt with a hexagonal head.

hexagonal lattice [CRYSTAL] A Bravais lattice whose unit cells are right prisms with hexagonal bases and whose lattice points are located at the vertices of the unit cell and at the centers of the bases.

hexagonal nut [DES ENG] A plain nut in hexagon form.

hexagonal platelet [METEOROL] A small ice crystal of the hexagonal tabular form; the distance across the crystal from one side of the hexagon to the opposite side may be as large as about 1 millimeter, and the thickness perpendicular to this dimension is of the order of one-tenth as great; this crystal form is usually formed at temperatures of −10 to −20°C by sublimation; at higher temperatures the apices of the hexagon grow out and develop dendritic forms.

hexagonal system [CRYSTAL] A crystal system that has three equal axes intersecting at 120° and lying in one plane; a fourth, unequal axis is perpendicular to the other three.

hexahedrite [GEOL] An iron meteorite composed of single crystals or aggregates of kamacite, usually containing 4–6% nickel in the metal phase.

hexahedron [MATH] A polyhedron with six faces.

hexahydric alcohol [ORG CHEM] A member of the mannitol-sorbitol-dulcitol sugar group; isomer of $C_6H_8(OH)_6$.

hexahydrite [MINERAL] $MgSO_4 \cdot 6H_2O$ A white or greenish-white monoclinic mineral composed of hydrous magnesium sulfate.

hexahydroaniline *See* cyclohexylamine.

hexahydrocresol *See* methyl cyclohexanol.

hexahydrocymene *See* menthane.

hexahydromethyl phenol *See* methyl cyclohexanol.

hexahydrophenol *See* cyclohexanol.

hexahydrothymol *See* menthol.

hexahydrotoluene *See* methyl cyclohexane.

hexakis(β,β-dimethylphenethyl) *See* fenbutatin oxide.

***n*-hexaldehyde** [ORG CHEM] $CH_3(CH_2)_4CHO$ Colorless liquid with sharp aroma, boiling at 128.6°C; used as an intermediate for plasticizers, dyes, insecticides, resins, and rubber chemicals. Also known as caproaldehyde; caproic aldehyde.

hexametapol [ORG CHEM] $C_6H_{18}N_3OP$ A liquid used as a solvent in organic synthesis, as a deicing additive for jet engine fuel, and as an insect pest chemosterilant and chemical mutagen. Also known as hexamethylphosphoramide (HMPA).

hexamethonium chloride [PHARM] One of a homologous series of polymethylene bis (trimethylammonium) ions, of the general formula $(CH_3)_3N^-(CH_2)_nN^-(CH_3)_3$, in which *n* is 6; possesses potent ganglion-blocking action, effecting reduction in blood pressure; used clinically as a salt, commonly bromide or iodide.

hexamethyldiaminoisopropanol diiodide *See* propiodal.

hexamethylene *See* cyclohexane.

hexamethylenediamine [ORG CHEM] $H_2N(CH_2)_6NH_2$ Colorless solid boiling at 205°C; slightly soluble in water, alcohol, and ether; used to make nylon and other high polymers. Also known as 1,6-diamino-hexane; 1,6-hexanediamine.

hexamethylene glycol *See* 1,6-hexanediol.

hexamethylene tetramine *See* cystamine.

hexamethylphosphoramide *See* hexametapol.

hexamethylphosphoric triamide *See* bempa.

Hexanchidae [VERT ZOO] The six- and seven-gill sharks, a group of aberrant modern elasmobranchs in the suborder Notidanoidea.

hexane [ORG CHEM] C_6H_{14} Water-insoluble, toxic, flammable, colorless liquid with faint aroma; forms include: *n*-hexane, a straight-chain compound boiling at 68.7°C and used as a solvent, paint diluent, alcohol denaturant, and polymerization-reaction medium; isohexane, a mixture of hexane isomers boiling at 54–61°C and used as a solvent and freezing-point depressant; and neohexane.

hexanedinitrile *See* adiponitrile.

hexanedioic acid *See* adipic acid.

1,6-hexanediol [ORG CHEM] $HO(CH_2)_6OH$ A crystalline substance, soluble in water and alcohol; used in gasoline refining, as an intermediate in nylon manufacturing, and in making polyesters and polyurethanes. Also known as 1,6-dihydroxyhexane; hexamethylene glycol.

hexanitrodiphenyl amine [ORG CHEM] $(NO_2)_3C_6H_2NHC_6H_2(NO_2)_3$ Explosive, yellow solid melting at 238–244°C; insoluble in water, ether, alcohol, or benzene; soluble in alkalies and acetic and nitric acids; used as an explosive and in potassium analysis.

hexanitromannite *See* mannitol hexanitrate.

hexanoic acid *See* caproic acid.

1-hexanol *See* hexyl alcohol.

hexapetalous [BOT] Having or being a perianth comprising six petaloid divisions.

hexaphenylethane [ORG CHEM] $(C_6H_5)_3CC(C_6H_5)_3$ The dimer of triphenylmethyl radical.

Hexapoda [INV ZOO] An equivalent name for Insecta.

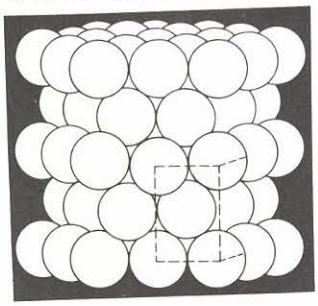
hexaster [INV ZOO] A type of hexactin with branching rays that form star-shaped figures.

Hexasterophora [INV ZOO] A subclass of sponges of the class Hexactinellida in which parenchymal microscleres are typically hexasters.

hexenbesen *See* witches'-broom disease.

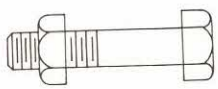
1-hexene [ORG CHEM] $CH_3(CH_2)_3HC{:}CH_2$ Colorless, olefinic hydrocarbon boiling at 64°C; soluble in alcohol, acetone, ether, and hydrocarbons, insoluble in water; used as a

HEXAGONAL CLOSE-PACKED STRUCTURE



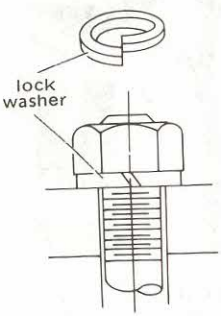
Hexagonal close packing of spheres that simulates the arrangement of the atoms in a crystal that is a hexagonal close-packed structure.

HEXAGONAL-HEAD BOLT



A drawing of a heavy-weight standard bolt that has a hexagonal head.

HEXAGONAL NUT



A hexagonal nut used with a lock washer.

HEXASTEROPHORA

A representative hexasterophoran, *Polylophus*. *(After Shulze, 1887)*

chemical intermediate and for resins, drugs, and insecticides. Also known as hexylene.

1,6-hexenediamine *See* hexamethylenediamine.

hex nut [DES ENG] A nut in the shape of a hexagon.

hexobarbital [PHARM] $C_{12}H_{16}N_2O_3$ A sedative and hypnotic of short duration of action; used also, as the sodium derivative, to induce surgical anesthesia.

hexoctahedron [CRYSTAL] A cubic crystal form that has 48 equal triangular faces, each of which cuts the three crystallographic axes at different distances.

hexode [ELECTR] A six-electrode electron tube containing an anode, a cathode, a control electrode, and three additional electrodes that are ordinarily grids.

***n*-hexoic acid** *See* caproic acid.

hexokinase [BIOCHEM] Any enzyme that catalyzes the phosphorylation of hexoses.

hexone *See* methyl isobutyl ketone.

hexosamine [BIOCHEM] A primary amine derived from a hexose by replacing the hydroxyl with an amine group.

hexosaminidase A [BIOCHEM] An enzyme which catalyzes the hydrolysis of the *N*-acetylgalactosamine residue from certain gangliosides.

hexosan *See* hemicellulose.

hexose [BIOCHEM] Any monosaccharide that contains six carbon atoms in the molecule.

hexose diphosphate pathway *See* glycolytic pathway.

hexose monophosphate cycle [BIOCHEM] A pathway for carbohydrate metabolism in which one molecule of hexose monophosphate is completely oxidized.

hexose phosphate [BIOCHEM] Any one of the phosphoric acid esters of a hexose, notably glucose, formed during the metabolism of carbohydrates by living organisms.

hextetrahedron [CRYSTAL] A 24-faced form of crystal in the tetrahedral group of the isometric system.

hexulose [BIOCHEM] A ketose made from a six-carbon-chain monosaccharide.

***n*-hexyl acetate** [ORG CHEM] $CH_3COOC_6H_{13}$ Colorless liquid boiling at 169°C; soluble in alcohol and ether, insoluble in water; used as a solvent for resins and cellulosic esters.

hexylacetic acid *See* caprylic acid.

hexylacetylene *See* octyne.

hexyl alcohol [ORG CHEM] $CH_3(CH_2)_4CH_2OH$ Colorless liquid boiling at 156°C; soluble in alcohol and ether, slightly soluble in water; used as a chemical intermediate for pharmaceuticals, perfume esters, and antiseptics. Also known as amyl carbinol; 1-hexanol.

hexylamine [ORG CHEM] $CH_3(CH_2)_5NH_2$ Poisonous, water-white liquid with amine aroma; boils at 129°C; a ptomaine base from the autolysis of protoplasm. Also known as aminohexane.

hexylene *See* 1-hexene.

hexylene glycol [ORG CHEM] $C_6H_{14}O_2$ Water-miscible, colorless liquid boiling at 198°C; used in hydraulic brake fluids, in printing inks, and in textile processing.

***n*-hexyl ether** [ORG CHEM] $C_6H_{13}OC_6H_{13}$ Faintly colored liquid with a characteristic odor, only slightly water-soluble; used in solvent extraction and in the manufacture of collodion and various cellulosic products.

***n*-hexylic acid** *See* caproic acid.

hexylresorcinol [ORG CHEM] $C_6H_{13}C_6H_3(OH)_2$ Sharp-tasting, white to yellowish crystals melting at 64°C; slightly soluble in water, soluble in glycerin, vegetable oils, and organic solvents; used in medicine.

1-hexyne [ORG CHEM] C_4H_9CCH A colorless, water-white liquid, either *n*-butylacetylene, boiling at 71.5°C, or methylpropylacetylene, boiling at 84°C.

Heyd's syndrome *See* hepatorenal syndrome.

Heyn's reagent [MET] Double chloride of copper and ammonia; used in microanalysis of carbon steels.

Hf *See* hafnium.

HF *See* high frequency.

HF akylation [CHEM ENG] Petroleum refinery alkylation process in which olefins (C_3, C_4, C_5) are reacted with isobutane in the presence of hydrofluoric acid catalyst.

HFIR *See* high-flux isotope reactor.

Hfr *See* high-frequency recombination.

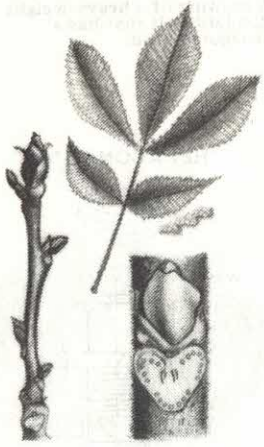
hfs *See* hyperfine structure.

HFS *See* type II superconductor.

hg *See* hectogram.

Hg *See* mercury.

HICKORY



Twig, bud, and leaf of the shagbark hickory, *Carya ovata*.

HH beacon [NAV] Nondirectional radio homing beacon which has a power output of 2000 watts or greater.

H hour [ORD] The hour at which some specified operation will begin, as an attack, amphibious assault, or movement.

hiascent [BIOL] Gaping.

hiatus [ANAT] A space or a passage through an organ. [GEOL] A gap in a rock sequence due to a lack of deposition of a bed or to erosion of beds.

hiatus hernia [MED] Hernia through the esophageal hiatus, usually of a portion of the stomach.

hibernaculum [BIOL] A winter shelter for plants or dormant animals. [BOT] A winter bud or other winter plant part. [INV ZOO] A winter resting bud produced by a few fresh-water bryozoans which grows into a new colony in the spring.

hibernal [METEOROL] Of or pertaining to winter.

hibernation [PHYSIO] **1.** Condition of dormancy and torpor found in cold-blooded vertebrates and invertebrates. **2.** *See* deep hibernation.

Hibernian orogeny *See* Erian orogeny.

hiccup *See* singultus.

hickey [ELEC] A threaded coupling for attaching an electrical fixture to an outlet box, used when wires from the fixture come out of the end of a stem on the fixture, rather than through an opening in the side of the stem. [GRAPHICS] A spot or imperfection in a printed item caused by dirt, dried ink membrane, or such.

hickory [BOT] The common name for species of the genus *Carya* in the order Fagales; tall deciduous tree with pinnately compound leaves, solid pith, and terminal, scaly winter buds.

Hidalgo [ASTRON] The asteroid with the largest known mean distance from the sun, about 5.8 astronomical units.

hiddenite [MINERAL] A transparent green or yellowish-green spodumene mineral containing chromium and valued as a gem.

hide [MATER] A raw or dressed pelt, especially from a large, adult animal such as a cow. [VERT ZOO] Outer covering of an animal.

hide glue [MATER] A strong, light-brown glue made from animal hides.

hidradenitis [MED] Inflammation of sweat glands.

hidradenoma papilliferum [MED] Benign tumor of sweat glands, usually on the vulva or perineum.

hidrosis [MED] Abnormally profuse sweat. [PHYSIO] The formation and excretion of sweat.

hiemal climate [CLIMATOL] Climate pertaining to winter.

hierarchical distributed processing system [COMPUT SCI] A type of distributed processing system in which processing functions are distributed outward from a central computer to intelligent terminal controllers or satellite information processors. Also known as host-centered system; host/satellite system.

hierarchical file [COMPUT SCI] A file with a grandfather-father-son structure.

hieratite [MINERAL] K_2SiF_6 A grayish mineral composed of potassium fluosilicate; occurs as deposits in volcanic holes.

hieroglyph [GEOL] Any sort of sedimentary mark or structure occurring on a bedding plane.

hierophobia [PSYCH] An abnormal fear of sacred objects.

hi-fi *See* high fidelity.

Hi-Fix [NAV] A Decca radio navigation system utilizing lightweight, portable stations, and used in either of two configurations; in the hyperbolic configuration, the relative phases of continuous-wave signals from the master and slave stations ashore, as measured at the receiver at the mobile station, provide hyperbolic lines of position; in the range configuration, the master station is located at the mobile receiver; phase comparison of continuous-wave signals from one shore station and the master provides range to the shore station.

Higbie model [CHEM ENG] Mass-transfer theory for packed absorption towers, stating that liquid flows across each packing piece in laminar flow and is mixed with other liquids meeting it at the points of discontinuity between packing elements.

Higgs bosons [PARTIC PHYS] Massive scalar mesons whose existence is predicted by certain unified gage theories of the weak and electromagnetic interactions; they are not eliminated by the Higgs mechanism.

Higgs mechanism [PARTIC PHYS] The feature of the spontaneously broken gage symmetries that the Goldstone bosons do not appear as physical particles, but instead constitute the zero

helicity states of gage vector bosons of nonzero mass (such as the intermediate vector boson).

high [METEOROL] An area of high pressure, referring to a maximum of atmospheric pressure in two dimensions (closed isobars) in the synoptic surface chart, or a maximum of height (closed contours) in the constant-pressure chart; since a high is, on the synoptic chart, always associated with anticyclonic circulation, the term is used interchangeably with anticyclone.

high-abrasion furnace black [MATER] A variety of carbon black made by burning oil in a deficiency of air and then quenching to stop the reaction short of equilibrium; particles are 26–30 nanometers in diameter; used in tires and mechanical rubber goods. Abbreviated HAF black.

high-alloy steel [MET] Steel containing large percentages of elements other than carbon.

high aloft *See* upper-level anticyclone.

high-altitude bombing [ORD] Bombing, especially horizontal bombing, from a high altitude, such as over 15,000 feet (4500 meters).

high-altitude disease *See* mountain sickness.

high-altitude erythremia *See* mountain sickness.

high-altitude method [NAV] The establishing of a circular line of position from the observation of the altitude of a celestial body; the geographical position and zenith distance of the body are used in constructing this line of position.

high-altitude radio altimeter *See* radar altimeter.

high-altitude station [METEOROL] A weather observing station at a sufficiently high elevation to be nonrepresentative of conditions near sea level; 6500 feet (about 2000 meters) has been given as a reasonable lower limit.

high-alumina brick [MATER] Refractory brick made from raw materials rich in alumina, such as diaspore and bauxite; when well fired, they contain a large amount of mullite; used for unusually severe temperature or load conditions.

high-alumina cement *See* aluminate cement.

high-angle fault [GEOL] A fault with a dip greater than 45°.

high-angle fire [ORD] **1.** Fire delivered at elevations greater than the elevation of maximum range. **2.** Fire whose range decreases as the angle of elevation is increased; typical of mortar and howitzer fire.

high-angle gun [ORD] A cannon, such as an antiaircraft cannon, capable of firing at a high angle of elevation.

high-angle strafing [ORD] Strafing from an airplane at a comparatively high dive angle; for example, approximately 45°.

high band [COMMUN] The television band extending from 174 to 216 megahertz, which includes channels 7 to 13.

high boiler [MATER] A solvent added to lacquer thinner to slow the rate of evaporation; boiling point 150–200°C.

high boost *See* high-frequency compensation.

high brass [MET] The most common commercial wrought brass containing about 35% zinc and 65% copper.

high-burst ranging [ORD] Adjustment of gunfire by observation of airbursts.

high-capacity projectile [ORD] A projectile with thin walls and high explosive loading, for use where no special penetrative qualities are required.

high-carbon chromium [MET] Chromium containing at least 86% chromium, 8–11% carbon, and a maximum of 0.5% each of iron and silicon.

high-carbon steel [MET] A cast or forged steel containing more than 0.5% carbon.

high clouds [METEOROL] Types of clouds whose mean lower level is above 20,000 feet (6100 meters); principal clouds in this group are cirrus, cirrocumulus, and cirrostratus.

high contrast [GRAPHICS] That area where the degree of difference between black and white approaches the maximum.

high-current rectifier [ELECTR] A solid-state device, gas tube, or vacuum tube used to convert alternating to direct current for powering low-impedance loads.

high-current switch [ELEC] A switch used to redirect heavy current flow; usually has a make-before-break feature to prevent excessive arcing.

high definition [COMMUN] Television or facsimile equivalent of high fidelity, in which the reproduced image contains such a large number of accurately reproduced elements that picture details approximate those of the original scene.

high enema [MED] An enema injected into the colon.

high-energy astrophysics [ASTROPHYS] A science concerned with studies of acceleration of charged particles to high energies in space, cosmic rays, radio galaxies, pulsars, and quasi-stellar sources.

high-energy bond [PHYS CHEM] Any chemical bond yielding a decrease in free energy of at least 5 kilocalories per mole.

high-energy electron diffraction [PHYS] The diffraction of electrons with high energies, usually in the range of 30,000–70,000 electron volts, mainly to study the structure of atoms and molecules in gases and liquids. Abbreviated HEED.

high-energy environment [GEOL] An aqueous sedimentary environment which features a high energy level and turbulent motion, created by waves, currents, or surf, which prevents the settling and piling up of fine-grained sediment.

high-energy fuel [MATER] Fuel that upon combustion provides greater energy than that from conventional carbonaceous fuels; specifically, a hydroboron.

high-energy particle [PARTIC PHYS] An elementary particle having an energy of hundreds of MeV (megaelectronvolts) or more.

high-energy physics *See* particle physics.

high-energy-rate forging [MET] The production of a forging by the use of a machine which utilizes a sudden surge of kinetic energy from compressed gas against a piston, causing a high ram velocity against the work.

high-energy scattering [PARTIC PHYS] Collisions of particles with energies of hundreds of Mev (million electron volts) or more, sufficient to produce new particles.

high-epithermal neutron range [NUCLEO] The neutron energy range of 1000 to 100,000 electron volts.

higher high water [OCEANOGR] The higher of two high tides occurring during a tidal day.

higher-level language *See* high-level language.

higher low water [OCEANOGR] The higher of two low tides occurring during a tidal day.

higher mode [ELECTROMAG] A waveguide mode whose frequency is higher than the lowest one.

higher-order language *See* high-level language.

higher pair [MECH ENG] A link in a mechanism in which the mating parts have surface (instead of line or point) contact.

higher plane curve [MATH] Any algebraic curve whose degree exceeds 2.

higher than high-level language [COMPUT SCI] A programming language, such as an application development language, report program, or financial planning language, that is oriented toward a particular application and is much easier to use for that application than a conventional programming language.

highest common factor *See* greatest common divisor.

high etch *See* dry-relief offset.

high-expansion alloy [MET] An alloy possessing a high coefficient of expansion.

high-expansion foam [MATER] Noncombustible foam made from ammonium lauryl sulfate; used in underground mine fire fighting.

high explosive [MATER] An explosive with a nitroglycerin base requiring a detonator; the explosion is violent and practically instantaneous.

high-explosive bomb [ORD] **1.** Any aerial bomb charged with a high explosive. **2.** Any bomb chiefly dependent upon its explosion or blast effect to create damage.

high-explosive plastic [MATER] High-explosive substance or mixture which, within normal ranges of atmospheric temperature, is capable of being molded into desired shapes. Also known as plastic explosive.

high-explosive plastic antitank charge [ORD] A shaped charge coupled with a high-explosive plastic charge, intended to produce jet penetration followed by a detonation of the plastic charge. Abbreviated HEPAT charge.

high-explosive plastic projectile [ORD] A thin-walled projectile, filled with plastic explosive; designed to squash against an armored target before detonation, and to defeat the armor by producing spalls which are detached with considerable velocity from the back of the target plate. Abbreviated HEP projectile.

high-explosive projectile [ORD] Projectile with a bursting charge of high explosive.

high fidelity [ENG ACOUS] Audio reproduction that closely approximates the sound of the original performance. Also known as hi-fi.

high-field superconductor *See* type II superconductor.

high-flash naphtha *See* heavy naphtha.

high-flux isotope reactor [NUCLEO] A thermal research re-

active at the Oak Ridge National Laboratory, used mainly in the production of isotopes with atomic numbers greater than that of plutonium. Abbreviated HFIR.

high fashion [HIGH-FASH-uhn] The occurrence of warm, dry air above the level of the general surface, accompanied by clear skies, resembling Indian summer. It is due to subsiding air in an anticyclone above a cold surface layer, in such circumstances the apparent peaks may be warmer than the lowlands. Also known as Dan fashion.

high fog [HIGH-FAWG] The frequent fog on the slopes of the coastal mountains of California, especially applied when the fog overlaps the range and extends as strata over the leeward valleys.

high frequency [HIGH-FREE-kwuhn-see] Federal Communications Commission designation for the band from 3 to 30 megahertz in the radio spectrum. Abbreviated HF.

high frequency carrier telegraphy [HIGH-FREE-kwuhn-see] Form of carrier telegraphy in which the carrier currents have their frequencies above the range transmitted over a voice-frequency telephone channel.

high frequency compensation [HIGH-FREE-kwuhn-see] Increasing the amplification at high frequencies with respect to that at low and middle frequencies in a given band, such as in a video band or an audio band. Also known as high boost.

high frequency furnace [HIGH-FREE-kwuhn-see] An induction furnace in which the heat is generated within the charge, within the walls of the containing crucible, or within both, by currents induced by high-frequency magnetic flux produced by a surrounding coil. Also known as coreless-type induction furnace; high-frequency heater.

high frequency heater See high frequency furnace.

high frequency hunting See electronic hearing.

high frequency propagation [HIGH-FREE-kwuhn-see] Propagation of radio waves in the high frequency band, which depends entirely on reflection from the ionosphere.

high frequency recombination [HIGH-FREE-kwuhn-see] A bacterial cell type, especially *Escherichia coli*, having an integrated F factor and characterized by a high frequency of recombination. Abbreviated Hfr.

high frequency resistance [HIGH-FREE-kwuhn-see] The total resistance offered by a device to an alternating current circuit, including the direct-current resistance and the resistance due to eddy current, hysteresis, dielectric, and copper losses. Also known as alternating-current resistance; effective resistance; radio-frequency resistance.

high frequency station [HIGH-FREE-kwuhn-see] A conductometric chamber in which two electrodes are mounted on the outside of the beaker or vessel containing the solution to be analyzed and an alternating current source in the megahertz range is used to measure the course of a titration.

high frequency transformer [HIGH-FREE-kwuhn-see] A transformer which matches impedances and transmits a frequency band in the carrier or higher frequency range.

high frequency triode [HIGH-FREE-kwuhn-see] A triode designed for operation at high frequency having small spacings between the grid and the cathode and anode, large emission and power densities, and low active and reactive capacitances.

high frequency voltmeter [HIGH-FREE-kwuhn-see] A voltmeter designed to measure currents alternating at high frequencies.

high frequency welding [HIGH-FREE-kwuhn-see] Resistance welding in which the heat is produced by the current flow induced by a high-frequency electromagnetic field. Also known as radio-frequency welding.

high front shovel [HIGH-FRUHNT-SHUH-vuhl] A power shovel with a dipper stick mounted high on the boom for stripping and overburden removal.

high-grade [HIGH-GRAYD] To steal or pilfer out or gold from a mine or mint.

high-grade dynamite [HIGH-GRAYD-DIE-nuh-mite] Dynamite of 80% strength or over.

high-gradient magnetic separation [HIGH-GRAY-dee-uhnt] A magnetic separation technique applicable to weakly paramagnetic components and to particle sizes down to the colloidal domain.

high hat [HIGH-HAT] A very low tripod head resembling a forma cup for in-flight.

high heat [HIGH-HEET] Heat absorbed by the cooling medium in a calorimeter when products of combustion are cooled to the initial atmospheric ambient temperature.

high-heat cement [HIGH-HEET-SUH-MENT] A type of cement which releases a large amount of heat during curing.

high-helix drill [HIGH-HEE-kuhs-DRIL] A two-flute twist drill with helix angle of 35–40°, used for drilling deep holes in metals, such as aluminum, copper, hard brass, and soft steel. Also known as fast-spiral drill.

high-impedance voltmeter [HIGH-IM-PEE-duhns-VOHL-MEE-tuhr] A voltage measuring device with a high-impedance input to reduce load on the circuit under test; a vacuum-tube voltmeter is one type.

high index [HIGH-IN-DEKS] A relatively high value of the refractive index which, in middle latitudes, indicates a relatively strong westerly component of wind flow and its characteristic weather features attending such motion; a complete circulation pattern of this type is commonly called a high index situation.

high-intensity atomizer [HIGH-IN-SEN-suh-tee-AT-uh-mie-zuhr] A type of atomizer used in electronic atomization, based on ultrasonic vibrations to overcome surface strength of the liquid.

high-K capacitor [HIGH-KAY-KUH-PAS-uh-tuhr] A capacitor whose dielectric material is a formulation having a high dielectric constant, up to about 6000.

high key [HIGH-KEE] A negative or print that has an overall light effect, with very few dark tones or shadows.

high-key lighting [HIGH-KEE-LIE-tuhng] In photography, lighting that produces tones that fall mostly between white and gray, with very few dark-gray or black tones.

highland [HIGH-luhnd] **1.** Any relatively large area of elevated mountainous land standing prominently above adjacent terrain. **2.** The higher land of a region. [1400's] **3.** A hill, headland, cliff, or other high position. **4.** A dominant mountain region composed of old folded rocks.

highland climate See mountain climate.

highland glacier [HIGH-luhnd GLAY-shuhr] A semicontinuous ice cap or glacier that covers the highest or central portion of a mountainous area and partly reflects irregularities of the land surface lying beneath it. Also known as highland ice.

highland halftone [HIGH-luhnd-HAF-TOHN] A halftone with elimination of the resultant dot formation in the pure highlights, done chemically by spotting the highlight areas on the negative with opaque and etching the printing plate.

highland ice See highland glacier.

high-lead bronze [HIGH-LEED-BRONZ] Bronze containing high percentages of lead to give a soft easily alloy.

high level [HIGH-LEV-uhl] The more positive of the two high-voltage states in a binary digital logic system.

high-level embryotome See upper-level embryotome.

high-level cyclone See upper-level cyclone.

high-level language [HIGH-LEV-uhl-LANG-wuhj] A computer language whose instructions or statements each correspond to several machine language instructions, designed to make coding easier. Also known as higher-level language; higher-order language.

high-level modulation [HIGH-LEV-uhl-MOJ-uh-LAY-shuhn] Modulation produced at a point in a system where the power level approximates that of the output of the system.

high-level ridge See upper-level ridge.

high-level thunderstorm [HIGH-LEV-uhl-THUHN-duhr-STAWRM] Generally, a thunderstorm based at a comparatively high altitude in the troposphere, roughly 8000 feet (2400 meters) or higher.

high-level trough See upper-level trough.

high-lift truck [HIGH-LIFT-TRUHK] A forklift truck with a hydraulic telescoping mast to permit high elevation of a load.

highlights [HIGH-LITS] Bright areas occurring in a television image. [1960's] The bright parts of a subject that show up as the densest part of the negative and the lightest or whitest part of a print.

high-low bias test [HIGH-LOH-BIE-uhs-TEST] A routine maintenance procedure that tests equipment over and under normal operating conditions in order to detect defective units.

highly skewed propeller [HIGH-LEE-SKYOOD-PRUH-PEL-uhr] A marine propeller whose blades are in the form of scimitars, typically with the tip of one blade aligning radially with the root of the following blade.

high-modulus furnace black [HIGH-MOJ-uh-luhs-FUHR-nuhs-BLAK] A variety of carbon black made by burning oil in a deficiency of air particularly to get an 80–85 carbon content; production is now negligible, as it was used in tire carcasses. Abbreviated HMF black.

high-moor bog [HIGH-MUHR-BAWG] A bog whose surface is covered by sphagnum mosses and is not dependent upon the water table.

high-mu tube [HIGH-MYOO-TOOB] A tube having a very high amplification factor.

high-octane [HIGH-AWK-TAYN] Having an octane number in the middle or high 90s and therefore having good antiknock properties.

high-order [ˈhaɪˌɔːdə wɜːd] · Pertaining to a digit location in a numeral, the leftmost digit being the highest-order digit.

high-pass filter [ˈhaɪˌpæs ˈfɪltə] · A filter that transmits all frequencies above a given cutoff frequency and attenuates all others.

high plain [ˈhaɪˌpleɪn] · A large area of level land situated above sea level.

high polymer [ˈhaɪ ˈpɒlɪmə] · A large molecule of molecular weight greater than 10,000 usually composed of repeat units of low molecular weight species, for example, ethylene or peptides.

high-positive indicator [ˈhaɪˌpɒzətɪv ˈɪndɪkeɪtə wɜːd] · A component in word computers whose status is "on" if the number stored is positive and nonzero.

high-potting [ˈhaɪˌpɒtɪŋ] · Testing with a high voltage, generally as a production test.

high-precision shoran for Hiran.

high-pressure area fair anticyclone.

high-pressure chemistry [ˈhaɪ ˈpreʃə ˈkemɪstrɪ] · The study of chemical reactions and phenomena that occur at pressures exceeding 10,000 bars (about 10,000 atmospheres or 147,000 pounds per square inch), mainly concerned with the properties of the solid state.

high-pressure cloud chamber [ˈhaɪˌpreʃə] · A cloud chamber in which the gas is maintained at high pressure to reduce the range of high-energy particles and thereby increase the probability of observing events.

high-pressure gage glass [ˈhaɪ] · A gage glass consisting of a metal tube with thick glass windows.

high-pressure gas injection [ˈhaɪˌpreʃə ˈgæs] · Oil recovery process supplemented by injection of gas at pressures higher than those used in conventional gas drives.

high-pressure laminate [ˈhaɪˌpreʃə] · A plastic-adhesive laminate molded and cured at pressures of, commonly, 1,000–2,000 psi (6.9–13.7 meganewtons per square meter).

high-pressure mercury-vapor lamp [ˈhaɪˌpreʃə] · A discharge tube containing an inert gas and a small quantity of liquid mercury; the initial glow discharge through the gas heats and vaporizes the mercury, after which the discharge through mercury vapor produces an intensely brilliant light.

high-pressure phenomena [ˈhaɪˌpreʃə] · Natural conditions and processes occurring at high pressure, and their duplication in the laboratory.

high-pressure physics [ˈhaɪˌpreʃə] · The study of the effects of high pressure on the properties of matter.

high-pressure process [ˈhaɪˌpreʃə] · A chemical process operating at elevated pressure, for example, phenol manufacture (4.136 gigapascals [1 atmosphere = 1.013 × 10⁵ newtons per square meter]); ethylene polymerization at 2000 atm; ammonia synthesis at 450–1000 atm; and synthetic diamond manufacture up to 10,000 atm.

high-pressure separator [ˈhaɪˌpreʃə sepəreɪtə] · A horizontal vessel through which a low temperature, high-pressure gas stream is fed, and in which free liquids separate out from the gas.

high-pressure torch [ˈhaɪˌpreʃə] · A type of torch in which both acetylene and oxygen are delivered to the welding chamber under pressure.

high-pressure weld [ˈhaɪˌpreʃə] · A weld with a shear strength greater than 2000 psi (1.4 × 10⁷ newtons per square meter, absolute).

high-Q [ˈhaɪ kjuː] · A characteristic wherein a component has a high ratio of inductance to effective resistance, so that its Q factor is high.

high-Q cavity [ˈhaɪˌkjuː ˈkævətɪ] · A cavity resonator which has a large Q factor, and thus has a small energy loss. Also known as high-Q resonator.

high-Q resonator See high-Q cavity.

high-quartz [ˈhaɪˌkwɔːts] · Quartz that was formed at high temperature.

high-rank coal [ˈhaɪ] · Coal containing of less than 8% volatile when calculated, or more than 84% carbon.

high-rank graywacke See biolithite; graywacke.

high relief [ˈhaɪrɪˌliːf] · Sculpture projecting from the background block to the extent of at least half of the natural depth of the represented forms.

high-resistivity phosphorus-oxygen [ˈhaɪrɪˌzɪstɪvɪtɪ] · Semiconductor material having reduced conductivity due to the presence of excess phosphorus, usually less than 0.15.

high-resistivity substrate [ˈhaɪ] · A substrate having a resistivity considerably higher than 1000 ohm-per-volt, as that is drawn into contact from the circuit in which a semiconductor is used.

high-resolution radar [ˈhaɪ] · A radar system which can discriminate between two close targets.

high-side capacitance coupling [ˈhaɪˌsaɪd] · Taking the output of an oscillator to amplifier from a point of high potential using a capacitor to block direct current flow.

high-solvency naphtha [ˈhaɪsɒlvənsɪ] · Any of the petroleum based solvents that boil in the naphtha range (not greater than 10-14°C) and have a high aromatic character content to give high solvency power for nitrocellulose, oil paints, and certain resins.

high-speed carry [ˈhaɪˌspiːd kærɪ] · A technique in parallel adders to speed up the propagation of carries.

high-speed cement See stabilizing cement.

high-speed data acquisition system [ˈhaɪˌspiːd deɪtə] · A system which collects and transmits data rapidly to a monitoring and controlling center.

high-speed excitation system [ˈhaɪˌspiːd] · A machine system capable of changing its voltage rapidly in response to a change in the excited generator field circuit.

high-speed machine [ˈhaɪˌspiːd məˈʃiːn] · A diamond drill capable of rotating a drill string at a minimum of 1200 revolutions per minute, as contrasted with the normal maximum speed of 1000 rpm. Synchronous gas engines attained by the average rig used drill.

high-speed oscilloscope [ˈhaɪˌspiːd] · An oscilloscope with a very fast sweep, capable of observing signals with rise times of pulses on the order of nanoseconds.

high-speed photography [ˈhaɪˌspiːd fəˈtɒgrəfɪ] · Photography of an act sufficiently to create that does not quickly to be sharply small visual or photographic image; motion pictures may be shot at high speeds (50–500 frames per second) and projected at normal rates, so that the action of the subject is extended to a point where it can be observed, or a series of still colour still photographs may be produced.

high-speed printer [ˈhaɪˌspiːd prɪntə] · A printer which can function at a high rate, relative to the rest of the set. Still later printers in consultant high speed · measurement field.

high-speed reader [ˈhaɪˌspiːd riːdə] · The feature input device sensing at a particular time in the area of the technology.

high-speed relay [ˈhaɪˌspiːd] · A relay specifically designed to close contacts fast, short release time, or both.

high-speed steel [ˈhaɪˌspiːd] · Any alloy steel that remains hard enough at red heat.

high-speed storage See rapid storage.

high-strength alloy See high-tensile alloy.

high-strength low-alloy steel [ˈhaɪ] · Steel containing small amounts of additional alloying elements and having higher strength, better low-temperature impact toughness, and in some grades, better atmospheric corrosion resistance than carbon steel; minimum yield 276 MPa.

high-strength steel See high-tensile steel.

high-temperature alloy [ˈhaɪ] · An alloy suitable for use at temperatures of 1000°F and above.

high-temperature cement [ˈhaɪtemprɪ] · A cement that retains strength, softening, or melting at elevated temperatures, such as basic refractory materials.

high-temperature chemistry [ˈhaɪtemprɪ] · The study of chemical phenomena occurring above about 700°K.

high-temperature coke [ˈhaɪtemprɪ] · Coke produced in coal processed at 900–1100°C, used mainly for metallurgical purposes.

high-temperature fuel cell [ˈhaɪtemprɪ] · A fuel cell which operates at temperatures above 650°C, can use nonpurified hydrocarbon fuels, and usually uses a molten salt as the electrolyte.

high-temperature gas-cooled reactor [ˈhaɪtemprɪ] · A gas-cooled reactor in which the coolant is pressurized helium gas with an inlet temperature of about 1275°C and an outlet temperature of about 750°C, and the fuel consists of TRISO coated uranium and thorium. Abbreviated HTGR.

high-temperature material [ˈhaɪtemprɪ] · A material with high temperature capability, including the superalloys, refractory alloys, and ceramics used in structural applications or service, thermal environments.

high-temperature photometer [ˈhaɪtemprɪ] · Photometer consisting of a monochromatic photocell.

high-temperature reactor [ˈhaɪtemprɪ] · A gas-cooled reactor in

which the temperature is high enough for efficient generation of mechanical power.

high-temperature water boiler [MECH ENG] A boiler which provides hot water, under pressure, for space heating of large areas.

high-tensile alloy [MET] An alloy having a high tensile strength. Also known as high-strength alloy.

high-tensile bolt [ENG] A bolt that is adjusted to a carefully controlled tension by means of a calibrated torsion wrench.

high-tensile steel [MET] Low-alloy steel having a yield strength range of 50,000–100,000 pounds per square inch (3.4×10^8 to 6.9×10^8 newtons per square meter). Also known as high-strength steel.

high tension *See* high voltage.

high-tension detonator [ENG] A detonator requiring an electric potential of about 50 volts for firing.

high-tension separation *See* electrostatic separation.

high-test chain [ENG] Chain made from heat-treatable plain-carbon steel, usually with a carbon content of 0.15–0.20%; used for load binding, tie-downs, and other applications where failure would be costly.

high tide [OCEANOGR] The maximum height reached by a rising tide. Also known as high water.

high vacuum [PHYS] A vacuum with a pressure between 1×10^{-3} and 1×10^{-6} mmHg (0.1333224 and 0.0001333 newton per square meter).

high-vacuum insulation [CHEM ENG] High vacuum between the walls of double-wall vessels to serve as thermal insulation at ultralow (cryogenic) temperatures, such as in Dewar vessels.

high-vacuum rectifier [ELECTR] Vacuum-tube rectifier in which conduction is entirely by electrons emitted from the cathode.

high-vacuum switching tube [ELECTR] A microwave transmit-receive (TR) tube of the high-vacuum variety, as contrasted with gas-tube or semiconductor devices.

high-vacuum tube [ELECTR] Electron tube evacuated to such a degree that its electrical characteristics are essentially unaffected by gaseous ionization. Also known as hard tube.

high-velocity stars [ASTRON] Those stars moving across the galactic track along which the majority of the stars execute their galactic rotation, thus exhibiting high velocity with respect to the sun, low velocity with respect to the galactic center.

high-volatile bituminous coal [GEOL] A bituminous coal composed of more than 31% volatile matter.

high voltage [ELEC] A voltage on the order of thousands of volts. Also known as high tension.

high-voltage direct current [ELEC] A long-distance direct-current power transmission system that uses direct-current voltages up to about 1 megavolt to keep transmission losses down. Abbreviated HVDC.

high-voltage electron microscope [ELECTR] An electron microscope whose accelerating voltage is on the order of 10^6 volts, as compared with 40–100 kilovolts for an ordinary electron microscope; it has the advantages of increased specimen penetration, reduced specimen damage, better theoretical resolution, and more efficient dark-field operation.

high-voltage insulation [ELEC] Electrical insulation designed to prevent breakdown in a circuit operating at high voltages.

highwall [MIN ENG] The unexcavated face of exposed overburden and coal or ore in an opencast mine or the face or bank of the uphill side of a contour strip-mine excavation.

high water *See* high tide.

high-water full and change [GEOPHYS] The average interval of time between the transit (upper or lower) of the full or new moon and the next high water at a place. Also known as common establishment; vulgar establishment.

high-water inequality [OCEANOGR] The difference between the heights of the two high tides during a tidal day.

high-water line [OCEANOGR] The intersection of the plane of mean high water with the shore.

high-water lunitidal interval [GEOPHYS] The interval of time between the transit (upper or lower) of the moon and the next high water at a place.

high-water platform *See* wave-cut bench.

high-water quadrature [OCEANOGR] The average high-water interval when the moon is at quadrature.

high-water springs *See* mean high-water springs.

high-water stand [OCEANOGR] The condition at high tide when there is no change in the height of the water.

highway [CIV ENG] A public road where traffic has the right to pass and to which owners of adjacent property have access.

highway engineering [CIV ENG] A branch of civil engineering dealing with highway planning, location, design, and maintenance.

Hikojima serotype [IMMUNOL] An immunologically distinct group of *Vibrio* somatic O antigens.

hilac *See* heavy-ion linear accelerator.

Hilbert cube [MATH] The topological space which is the cartesian product of a countable number of copies of I, the unit interval.

Hilbert-Schmidt theory [MATH] A body of theorems which investigates the kernel of an integral equation via its eigenfunctions, and then applies these functions to help determine solutions of the equation.

Hilbert space [MATH] A Banach space which also is an inner-product space with the inner product of a vector with itself being the same as the square of the norm of the vector.

Hilbert transform [MATH] The transform of a function $f(x)$ realized by taking the integral of $f(x)[1 + \cot(y-x)/2]dx$.

Hilda group [ASTRON] A group of asteroids whose periods of revolution about the sun are approximately two-thirds that of Jupiter, and whose motions are in resonance with Jupiter.

Hildebrand function [THERMO] The heat of vaporization of a compound as a function of the molal concentration of the vapor; it is nearly the same for many compounds.

hilgardite [MINERAL] $Ca_8(B_6O_{11})_3Cl_4 \cdot H_2O$ Colorless mineral composed of hydrous borate and chloride of calcium; occurs as monoclinic domatic crystals.

hill [GEOGR] A land surface feature characterized by strong relief; it is a prominence smaller than a mountain.

hill-and-dale recording *See* vertical recording.

hill bandwidth [ELECTR] The difference between the upper and lower frequencies at which the gain of an amplifier is 3 decibels less than its maximum value.

hill-climbing [MATH] Any numerical procedure for finding the maximum or maxima of a function. [MECH ENG] Adjustment, either continuous or periodic, of a self-regulating system to achieve optimum performance.

hill creep [GEOL] Slow gravity movement of rock and soil waste down a steep hillside. Also known as hillside creep.

hillebrandite [MINERAL] $Ca_2SiO_3(OH)_2$ A white mineral composed of hydrous calcium silicate; occurs in masses.

hillock [GEOL] A small, low hill.

Hill plot [BIOCHEM] A graphic representation of the Hill reaction.

Hill reaction [BIOCHEM] The release of molecular oxygen by isolated chloroplasts in the presence of a suitable electron receptor, such as ferricyanide. [ORG CHEM] Production of substituted phenylacetic acids by the oxidation of the corresponding alkylbenzene by potassium permanganate in the presence of acetic acid.

hill shading [MAP] Also known as hillwork; plastic shading; relief shading; shading. **1.** A method of showing relief on a map by simulating shadows by assuming oblique sunlight from the northwest so that slopes facing south and east are shaded. **2.** The pictorial effect created by this method.

hillside creep *See* hill creep.

hillside quarry [MIN ENG] A quarry cut along a hillside.

hillwork *See* hill shading.

Hiltner-Hall effect [ASTRON] The polarization of the light received from distant stars; this effect is thought to take place in interstellar space.

Hilt's law [GEOL] The law that in a small area the deeper coals are of higher rank than those above them.

hilum [ANAT] *See* hilus. [BOT] Scar on a seed marking the point of detachment from the funiculus.

hilus [ANAT] An opening or recess in an organ, usually for passage of a vessel or duct. Also known as hilum.

Himalia [ASTRON] A small satellite of Jupiter with a diameter of about 35 miles (56 kilometers), orbiting at a mean distance of 7.12×10^6 miles (11.46×10^6 kilometers). Also known as Jupiter VI.

Himantandraceae [BOT] A family of dicotyledonous plants in the order Magnoliales characterized by several, uniovulate carpels and laminar stamens.

himantioid [MYCOL] Pertaining to a mycelium arranged in spreading fanlike cords.

HILUM

The structure of a mature kidney bean showing the hilum.

Himantopterinae [INV ZOO] A subfamily of lepidopteran insects in the family Zygaenidae including small, brightly colored moths with narrow hindwings, ribbonlike tails, and long hairs covering the body and wings.

hindbrain *See* rhombencephalon.

hindered contraction [MET] Thermal contraction of a casting that is hindered locally due to the particular geometry.

hindered settling [MIN ENG] Settling of particles in a thick suspension in water through which their fall is hindered by rising water.

hindered-settling ratio [MIN ENG] The ratio of the specific gravity of a mineral to that of the suspension of ore raised to a power between one-half and unity.

hindgut [EMBRYO] The caudal portion of the embryonic digestive tube in vertebrates.

H indicator *See* H scope.

Hindley screw [DES ENG] An endless screw or worm of hourglass shape that fits a part of the circumference of a worm wheel so as to increase the bearing area and thus diminish wear. Also known as hourglass screw; hourglass worm.

hindrance factor *See* drag factor.

hinge [DES ENG] A pair of metal leaves forming a jointed device on which a swinging part turns.

hinged arch [CIV ENG] A structure that can rotate at its supports or in the center or at both places.

hinged bar [MIN ENG] A steel extension bar placed in contact with the mine roof perpendicular to the longwall face and supported by yielding steel props. Also known as link bar.

hinge fault [GEOL] A fault whose movement is an angular or rotational one on a side of an axis that is normal to the fault plane.

hinge joint *See* ginglymus.

hinge line [GEOL] **1.** The line separating the region in which a beach has been thrust upward from that in which it is horizontal. **2.** A line in the plane of a hinge fault separating the part of a fault along which thrust or reverse movement occurred from that having normal movement.

hinge moment [AERO ENG] The tendency of an aerodynamic force to produce motion about the hinge line of a control surface.

hinge plate [INV ZOO] **1.** In bivalve mollusks, the portion of a valve that supports the hinge teeth. **2.** The socket-bearing part of the dorsal valve in brachiopods.

hinge tooth [INV ZOO] A projection on a valve of a bivalve mollusk near the hinge line.

Hinsberg test [ANALY CHEM] A test to distinguish between primary and secondary amines; it involves reaction of an amine with benzene disulfoyl chloride in alkaline solution; primary amines give sulfonamides that are soluble in basic solution; secondary amines give insoluble derivatives; tertiary amines do not react with the reagent.

hinsdalite [MINERAL] $(Pb,Sr)Al_3(PO_4)(SO_4)(OH)_6$ A dark-gray or greenish rhombohedral mineral composed of basic lead and strontium aluminum sulfate and phosphate; occurs in coarse crystals and masses.

hinterland [GEOL] **1.** The region behind the coastal district. **2.** The terrain on the back of a folded mountain chain. **3.** The moving block which forces geosynclinal sediments toward the foreland.

Hiodontidae [VERT ZOO] A family of tropical, fresh-water actinopterygian fishes in the order Osteoglossiformes containing the mooneyes of North America.

hip [ANAT] **1.** The region of the junction of thigh and trunk. **2.** The hip joint, formed by articulation of the femur and hipbone.

hipbone [ANAT] A large broad bone consisting of three parts, the ilium, ischium, and pubis; makes up a lateral half of the pelvis in mammals. Also known as innominate.

hip joint [CIV ENG] The junction of an inclined head post and the top chord of a truss.

hi pot [ELEC] High potential voltage applied across a conductor to test the insulation or applied to an etched circuit to burn out tenuous conducting paths that might later fail in service.

Hippidea [INV ZOO] A group of decapod crustaceans belonging to the Anomura and including cylindrical or squarish burrowing crustaceans in which the abdomen is symmetrical and bent under the thorax.

Hippoboscidae [INV ZOO] The louse flies, a family of cyclorrhaphous dipteran insects in the section Pupipara.

hippocampal sulcus [ANAT] A fissure on the brain situated between the para hippocampal gyrus and the fimbria hippocampi. Also known as dentate fissure.

hippocampus [ANAT] A ridge that extends over the floor of the descending horn of each lateral ventricle of the brain.

Hippocampus [VERT ZOO] A genus of marine fishes in the order Gasterosteiformes which contains the sea horses.

Hippocrateaceae [BOT] A family of dicotyledonous plants in the order Celastrales distinguished by an extrastaminal disk, mostly opposite leaves, seeds without endosperm, and a well-developed latex system.

hippocrepiform [BIOL] Horseshoe-shaped.

Hippoglossidae [VERT ZOO] A family of actinopterygian fishes in the order Pleuronectiformes composed of the flounders and plaice.

Hippomorpha [VERT ZOO] A suborder of the mammalian order Perissodactyla containing horses, zebras, and related forms.

Hippopotamidae [VERT ZOO] The hippopotamuses, a family of palaeodont mammals in the superfamily Anthracotherioidea.

hippopotamus [VERT ZOO] The common name for two species of artiodactyl ungulates composing the family Hippopotamidae.

Hipposideridae [VERT ZOO] The Old World leaf-nosed bats, a family of mammals in the order Chiroptera.

hippuric acid [ORG CHEM] $C_6H_5CONHCH_2 \cdot COOH$ Colorless crystals melting at 188°C; soluble in hot water, alcohol, and ether; used in medicine and as a chemical intermediate.

hip rafter [BUILD] A diagonal rafter extending from the plate to the ridge of a roof.

hip roof [ARCH] A roof having four slopes; the two shorter ends are triangular.

hiran [NAV] A modification of the shoran system; special operating techniques permit distance measurements of an accuracy comparable to first-order triangulation. Derived from high-precision shoran.

Hirayama family [ASTRON] A clustering of asteroids whose orbits have similar values of semimajor axis, eccentricity, and inclination; over 100 such families have been tabulated.

Hirschback method [MIN ENG] A method for draining firedamp from coal seams by means of superjacent entries located 80–138 feet (24–42 meters) above the seams and supplemented by boreholes drilled at right angles to the entry walls. Also known as superjacent roadway system.

Hirschsprung's disease [MED] A disease caused by absence of the myenteric ganglion cells in a segment of rectum or distal colon, resulting in spasm of the affected part and dilation of the bowel proximal to the defect.

hirsute [BIOL] Shaggy; hairy.

hirsutism [MED] An abnormal condition characterized by growth of hair in unusual places and in unusual amounts.

Hirudinea [INV ZOO] A class of parasitic or predatory annelid worms commonly known as leeches; all have 34 body segments and terminal suckers for attachment and locomotion.

Hirudinidae [VERT ZOO] The swallows, a family of passeriform birds in the suborder Oscines.

hisingerite [MINERAL] $Fe_2^{3+}Si_2O_5(OH)_4 \cdot 2H_2O$ A black, amorphous mineral composed of hydrous ferric silicate; an iron ore.

his operon [GEN] A sequence of nine genes in the chromosomes of many bacteria which code for all the enzymes of histidine biosynthesis.

hispid [BIOL] Having a covering of bristles or minute spines.

hispidulous [BIOL] Hispid to a minute degree.

hiss [COMMUN] Random noise in the audio-frequency range, similar to prolonged sibilant sounds.

histamine [BIOCHEM] $C_5H_9N_3$ An amine derivative of histadine which is widely distributed in human tissues.

Histeridae [INV ZOO] The clown beetles, a large family of coleopteran insects in the superfamily Histeroidea.

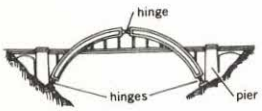
Histeroidea [INV ZOO] A superfamily of coleopteran insects in the suborder Polyphaga.

histidase [BIOCHEM] An enzyme found in the liver of higher vertebrates that catalyzes the deamination of histidine to urocanic acid.

histidine [BIOCHEM] $C_6H_9O_2N_3$ A crystalline basic amino acid present in large amounts in hemoglobin and resulting from the hydrolysis of most proteins.

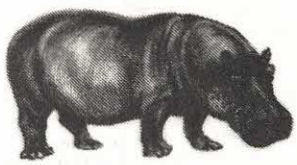
histidinemia [MED] An asymptomatic, hereditary meta-

HINGED ARCH



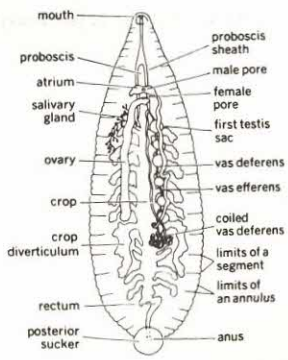
A three-hinged bridge arch, which has the advantage that it is statically determinate, and no stresses result from temperature, shrinkage, or rib-shortening effects.

HIPPOPOTAMUS



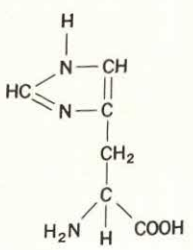
The great African hippopotamus, more at home in water than on land because of its size.

HIRUDINEA



General structure of a leech. Male reproductive system is shown on the right, the female on the left. *(From K. H. Mann, A key to the British freshwater leeches, Freshwater Biol. Assoc. Sci. Publ., 14:3–21, 1954)*

HISTIDINE



Structural formula of histidine.

bolic disorder involving a deficiency of histidase with high blood and urine levels of histidine, urocanic acid, and sometimes alanine.

histiocyte *See* macrophage.

histiocytoma [MED] **1.** Benign tumor composed of histiocytes. **2.** Dermatofibroma.

histiocytosis [MED] Abnormal proliferation of histiocytes, especially in hematopoietic tissues.

Histioteuthidae [INV ZOO] A family of cephalopod mollusks containing several species of squids.

histochemistry [BIOCHEM] A science that deals with the distribution and activities of chemical components in tissues.

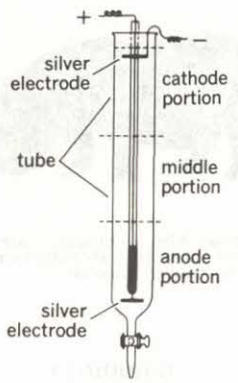
histocompatibility [IMMUNOL] The capacity to accept or reject a tissue graft.

histodifferentiation [EMBRYO] Differentiation of cell groups into tissues.

histogen [BOT] A clearly delimited region or primary tissue from which the specific parts of a plant organ are thought to be produced.

histogenesis [EMBRYO] The developmental process by which the definite cells and tissues which make up the body of an organism arise from embryonic cells.

HITTORF METHOD



The cell used in the Hittorf method.

histogram [STAT] A graphical representation of a distribution function by means of rectangles whose widths represent intervals into which the range of observed values is divided and whose heights represent the number of observations occurring in each interval.

histoincompatibility [IMMUNOL] The condition in which a recipient rejects a tissue graft.

histologist [ANAT] An individual who specializes in histology.

histology [ANAT] The study of the structure and chemical composition of animal and plant tissues as related to their function.

histolysis [PATH] Disintegration of organic tissue.

histomycosis [MED] Infection of deep tissues by a fungus.

histone [BIOCHEM] Any of the strong, soluble basic proteins of cell nuclei that are precipitated by ammonium hydroxide.

histopathology [PATH] A branch of pathology that deals with tissue changes associated with disease.

histophysiology [PHYSIO] The science of tissue functions.

Histoplasma [MYCOL] A genus of parasitic fungi.

Histoplasma capsulatum [MYCOL] The parasitic fungus that causes histoplasmosis in man.

histoplasmin [PHARM] A standardized liquid concentrate of soluble growth factors developed by the fungus *Histoplasma capsulatum*.

histoplasmin test [IMMUNOL] Skin test for hypersensitivity reaction to *Histoplasma capsulatum* products in the diagnosis of histoplasmosis.

histoplasmoma [MED] A tumorlike swelling caused by an inflammatory reaction to *Histoplasma capsulatum*.

histoplasmosis [MED] An infectious fungus disease of the lungs of man caused by *Histoplasma capsulatum*.

historadiography [BIOPHYS] A technique for taking x-ray pictures of cells, tissues, or sometimes whole small organisms.

historical climate [CLIMATOL] A climate of the historical period (the past 7000 years).

historical geology [GEOL] A branch of geology concerned with the systematic study of bedded rocks and their relations in time and the study of fossils and their locations in a sequence of bedded rocks.

Histosol [GEOL] An order of wet soils consisting mostly of organic matter, popularly called peats and mucks.

histotome [BIOL] A microtome used to cut tissue sections for microscopic examination.

Histriobdellidae [INV ZOO] A small family of errantian polychaete worms that live as ectoparasites on crayfishes.

histrionism [PSYCH] Dramatic affect, associated with some psychoneuroses and psychoses.

hit [COMPUT SCI] The obtaining of a correct answer in a mechanical information-retrieval system. [ELEC] A momentary electrical disturbance on a transmission line. [ORD] **1.** A blow or impact on a target by a bullet, bomb, or other projectile. **2.** An instance of striking something with a bomb or the like.

hitch [GEOL] **1.** A fault of strata common in coal measures, accompanied by displacement. **2.** A minor dislocation of a vein or stratum not exceeding in extent the thickness of the vein or stratum. [MIN ENG] **1.** A step cut in the rock face to hold timber support in an underground working. **2.** A hole cut in side rock solid enough to hold the cap of a set of timbers, permitting the leg to be dispensed with.

hitcher [MIN ENG] **1.** The worker who runs trams into or out of the cages, gives the signals, and attends at the shaft when workers are riding in the cage. **2.** A worker at the bottom of a haulage slope or plane who engages the clips or grips by means of which mine cars are attached to a hoisting cable or chain. Also known as hitcher-on.

hitcher-on *See* hitcher.

hitch timbering [MIN ENG] Installing timbers in hitches either cut or drilled in the rock.

hit-on-the-fly system [COMPUT SCI] A printer in a computer system where either the print roller or the paper is in continuous motion.

hit probability [ORD] The probability of hits being made on a target out of a given number of projectiles directed at the target.

hit rate [COMPUT SCI] The ratio of the number of records accessed in a run to the number of records in the file, expressed as a percentage.

Hittorf dark space *See* cathode dark space.

Hittorf method [PHYS CHEM] A procedure for determining transference numbers in which one measures changes in the composition of the solution near the cathode and near the anode of an electrolytic cell, due to passage of a known amount of electricity.

Hittorf principle [ELECTR] The principle that a discharge between electrodes in a gas at a given pressure does not necessarily occur between the closest points of the electrodes if the distance between these points lies to the left of the minimum on a graph of spark potential versus distance. Also known as short-path principle.

hive *See* beehive.

hives *See* urticaria.

hjelmite [MINERAL] A black mineral containing yttrium, iron, manganese, uranium, calcium, columbium, tantalum, tin, and tungsten oxide; often occurs with crystal structure disrupted by radiation.

HK *See* Hefner candle.

hl *See* hectoliter.

h-line *See* h-bar.

hm *See* hectometer.

HMF *See* 5-(hydroxymethyl)-2-furaldehyde.

H mode *See* transverse electric mode.

H Monel [MET] A Monel containing 3.2% silicon available in cast form; it is harder and stronger than Monel.

HMPA *See* hexametapol.

H network [ELECTR] An attenuation network composed of five branches and having the form of the letter H. Also known as H attenuator; H pad.

Ho *See* holmium.

hoar crystal [HYD] An individual ice crystal in a deposit of hoarfrost; always grows by sublimation.

hoarding behavior [VERT ZOO] The carrying of food to the home nest for storage, in quantities exceeding daily need.

hoarfrost [HYD] A deposit of interlocking ice crystals formed by direct sublimation on objects. Also known as white frost.

hoarhound *See* marrubium.

hoarse [MED] Having a harsh, discordant voice, caused by an abnormal condition of the larynx or throat.

hoary [BOT] Having grayish or whitish color, referring to leaves.

hob [DES ENG] A master model made from hardened steel which is used to press the shape of a plastics mold into a block of soft steel. [MECH ENG] A rotary cutting tool with its teeth arranged along a helical thread; used for generating gear teeth.

hobber *See* hobbing machine.

hobbing [DES ENG] In plastics manufacturing, the act of creating multiple mold cavities by pressing a hob into soft metal cavity blanks. [MECH ENG] Cutting evenly spaced forms, such as gear teeth, on the periphery of cylindrical workpieces.

hobbing machine [MECH ENG] A machine for cutting gear teeth in gear blanks or for cutting worm, spur, or helical gears. Also known as hobber.

hobbing steel [MET] A high-speed steel used to make gear teeth cutters.

hobnail [DES ENG] A short, large-headed, sharp-pointed nail; used to attach soles to heavy shoes.

hobo connection [ENG] A parallel electrical connection used in blasting.

hod [CIV ENG] A tray fitted with a handle by which it can be carried on the shoulder for transporting bricks or mortar.

Hodge conjecture [MATH] The $2p$-dimensional rational cohomology classes in an n-dimensional algebraic manifold M which are carried by algebraic cycles are those with dual cohomology classes representable by differential forms of bidegree $(n\text{-}p, n\text{-}p)$ on M.

Hodgkin's disease [MED] A disease characterized by a neoplastic proliferation of atypical histiocytes in one or several lymph nodes. Also known as lymphogranulomatosis.

hodgkinsonite [MINERAL] $MnZnSiO_5 \cdot H_2O$ A pink to reddish-brown mineral composed of hydrous zinc manganese silicate; occurs as crystals.

Hodgson number [CHEM ENG] Method of predicting the metering error during pulsating gas flow when a surge tank is located between the pulsation source (pump or compressor) and the meter (orifice, nozzle, or venturi).

hodograph [PHYS] **1.** The curve traced out in the course of time by the tip of a vector representing some physical quantity. **2.** In particular, the path traced out by the velocity vector of a given particle.

hodograph method [FL MECH] A method for studying two-dimensional steady fluid flow in which the independent variables are taken as the components of the velocity with respect to cartesian or polar coordinates, rather than the coordinates themselves.

hodoscope [NUCLEO] An array of small Geiger counters, scintillation counters, or other radiation counters used in tracing paths of high-energy particles in experiments with particle accelerators or in cosmic rays. [OPTICS] *See* conoscope.

Hodotermitidae [INV ZOO] A family of lower (primitive) termites in the order Isoptera.

hoe [DES ENG] An implement consisting of a long handle with a thin, flat, straight-edged blade attached transversely to the end; used for cultivating and weeding.

hoegbomite [MINERAL] $Mg(Al,Fe,Ti)_4O_7$ A black mineral composed of an oxide of magnesium, aluminum, iron, and titanium. Also spelled högbomite.

Hoepfner process *See* Hopfner process.

hoernesite [MINERAL] $Mg_3As_2O_8 \cdot H_2O$ A white, monoclinic mineral composed of hydrous magnesium arsenate; occurs as gypsumlike crystals.

hoe scraper [MIN ENG] A scraper-loader consisting of a box-sided hoe pulled by cables and used in mining to gather and transport severed rock.

hoe shovel [MECH ENG] A revolving shovel with a pull-type bucket rigidly attached to a stick hinged on the end of a live boom.

Hofbauer cell [HISTOL] A large, possibly phagocytic cell found in chorionic villi.

Hofmann amine separation [ORG CHEM] A technique to separate a mixture of primary, secondary, and tertiary amines; they are heated with ethyl oxalate; there is no reaction with tertiary amines, primary amines form a diamide, and the secondary amines form a monoamide; when the reaction mixture is distilled, the mixture is separated into components.

Hofmann degradation [ORG CHEM] The action of bromine and an alkali on an amide so that it is converted into a primary amine with one less carbon atom.

Hofmann exhaustive methylation reaction [ORG CHEM] The thermal decomposition of quaternary ammonium hydroxide compounds to yield an olefin and water; an exception is tetramethylammonium hydroxide, which decomposes to give an alcohol.

hofmannite *See* hartite.

Hofmann mustard-oil reaction [ORG CHEM] Preparation of alkylisothiocyanates by heating together a primary amine, mercuric chloride, and carbon disulfide.

Hofmann reaction [ORG CHEM] A reaction in which amides are degraded by treatment with bromine and alkali (caustic soda) to amines containing one less carbon; used commercially in the production of nylon.

Hofmann rearrangement [ORG CHEM] A chemical rearrangement of the hydrohalides of *N*-alkylanilines upon heating to give aminoalkyl benzenes.

Hofmeister series [CHEM] An arrangement of anions or cations in order of decreasing ability to produce coagulation when their salts are added to lyophilic sols. Also known as lyotopic series.

hog [AGR] A domestic swine.

hogback [GEOL] Alternate ridges and ravines in certain areas of mountains, caused by erosive action of mountain torrents.

högbomite *See* hoegbomite.

hog cholera [VET MED] A fatal infectious virus disease of swine characterized by fever, diarrhea, and inflammation and ulceration of the intestine; secondary infection by *Salmonella cholerae suis* is common. Also known as African swine fever.

hog frame [NAV ARCH] A rigid framework of beams, usually extending the length of a ship and above the deck, used to prevent hogging and increase longitudinal stiffness.

hogged fuel [MATER] Sawmill refuse that has been fed through a disintegrator, or hog, by which the various sizes and forms are reduced to a practically uniform size of chips or shreds.

hogging [ENG] Mechanical chipping of wood waste for fuel. [NAV ARCH] Sagging of the bow and stern of a ship with respect to the amidships section.

hog gum [MATER] A sticky gum, an exudate from various species of *Sterculia* trees, whose chief constituent is galactan; the gum is dried and marketed either as a powder or as white flakes; used in the food, cosmetic, and textile industry.

hoghorn antenna *See* horn antenna.

hohlraum *See* blackbody.

hohmannite [MINERAL] $Fe_2(SO_4)_2(OH)_2 \cdot 7H_2O$ A chestnut brown to burnt orange and amaranth red, triclinic mineral consisting of a hydrated basic sulfate of iron.

Hohmann orbit [AERO ENG] A minimum-energy-transfer orbit.

Hohmann trajectory [AERO ENG] The minimum-energy trajectory between two planetary orbits, utilizing only two propulsive impulses.

hoist [MECH ENG] **1.** To move or lift something by a rope-and-pulley device. **2.** A power unit for a hoisting machine, designed to lift from a position directly above the load and therefore mounted to facilitate mobile service.

hoist back-out switch [MECH ENG] A protective switch that permits hoist operation only in the reverse direction in case of overwind.

hoist cable [MECH ENG] A fiber rope, wire rope, or chain by means of which force is exerted on the sheaves and pulleys of a hoisting machine.

hoist frame *See* headframe.

hoist hook [DES ENG] A swivel hook attached to the end of a hoist cable for securing a load.

hoisting [MECH ENG] **1.** Raising a load, especially by means of tackle. **2.** Either of two power-shovel operations: the raising or lowering of the boom, or the lifting or dropping of the dipper stick in relation to the boom.

hoisting compartment [MIN ENG] The section of a shaft used for hoisting the mined mineral to the surface.

hoisting cycle [MIN ENG] The periods of acceleration, uniform speed, retardation, and rest; the deeper the shaft, the greater is the ratio of the time of full-speed hoisting to the whole cycle.

hoisting drum *See* drum.

hoisting machine [MECH ENG] A mechanism for raising and lowering material with intermittent motion while holding the material freely suspended.

hoisting power [MECH ENG] The capacity of the hoisting mechanism on a hoisting machine.

hoistman [ENG] One who operates steam or electric hoisting machinery to lower and raise cages, skips, or instruments into a mine or an oil or gas well. Also known as hoist operator; winch operator.

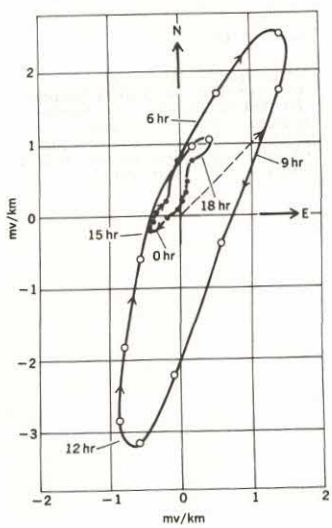
hoist operator *See* hoistman.

hoist overspeed device [MECH ENG] A device used to prevent a hoist from operating at speeds greater than predetermined values by activating an emergency brake when the predetermined speed is exceeded.

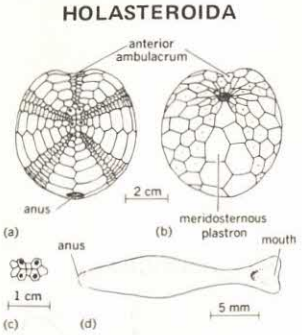
hoist overwind device [MECH ENG] A device which can activate an emergency brake when a hoisted load travels beyond a predetermined point into a danger zone.

hoist slack-brake switch [MECH ENG] A device that automatically cuts off power to the hoist motor and sets the brake if the links in the brake rigging require tightening or if the brakes require relining.

HODOGRAPH



Hodograph representing the potential-gradient vector of the average diurnal variation of earth currents at Tucson, Arizona, for 10 quiet days each month for 1932 to 1942 inclusive.



Diagnostic features of holasteroids. *(a)* Aboral aspect. *(b)* Adoral aspect. *(c)* Apical system. *(d) Echinosigra paradoxa*, a deep-sea species of Pourtalesiidae, aboral aspect. *(After T. Mortensen)*

hoist tower [CIV ENG] A temporary shaft of scaffolding used to hoist materials for building construction.

hoja blanca [PL PATH] A major virus disease of rice in Cuba and Venezuela.

holarctic zoogeographic region [ECOL] A major unit of the earth's surface extending from the North Pole to 30–45°N latitude and characterized by faunal homogeneity.

Holasteridae [INV ZOO] A family of exocyclic Euechinoidea in the order Holasteroida; individuals are oval or heart-shaped, with fully developed pore pairs.

Holasteroida [INV ZOO] An order of exocyclic Euechinoidea in which the apical system is elongated along the anteroposterior axis and teeth occur only in juvenile stages.

holcodont [VERT ZOO] Having the teeth fixed in a long, continuous groove.

hold [COMPUT SCI] To retain information in a computer storage device for further use after it has been initially utilized. [ELECTR] To maintain storage elements at equilibrium voltages in a charge storage tube by electron bombardment. [ENG] The interior of a ship or plane, especially the cargo compartment. [IND ENG] A therblig, or basic operation, in time-and-motion study in which the hand or other body member maintains an object in a fixed position and location.

hold back [GRAPHICS] In printing of photos, to shade certain portions of the image while printing.

holdback [MECH ENG] A brake on an inclined-belt conveyor system which is automatically activated in the event of power failure, thus preventing the loaded belt from running downward.

holdbeam [NAV ARCH] Any one of a tier of beams which go from side to side, spanning the hold from frame to frame, and upon which a deck is not attached.

hold circuit [ELECTR] A circuit in a sampled-data control system that converts the series of impulses, generated by the sampler, into a rectangular function, in order to smooth the signal to the motor or plant.

hold control [ELECTR] A manual control that changes the frequency of the horizontal or vertical sweep oscillator in a television receiver, so that the frequency more nearly corresponds to that of the incoming synchronizing pulses.

holddown [MET] A device that holds the outer portion of a metal sheet in place during deep-drawing operations in order to keep it from becoming wrinkled. [PETRO ENG] A device to anchor an oil well rod pump in its position.

holddown groove [ENG] A groove in the side wall of the molding surface which assists in holding the molded plastic article in place when the mold opens.

holdenite [MINERAL] A red, orthorhombic mineral composed of basic manganese zinc arsenate with a small amount of calcium, magnesium, and iron.

holder [ELEC] A device that mechanically and electrically accommodates one or more crystals, fuses, or other components in such a way that they can readily be inserted or removed.

Hölder condition [MATH] A function $f(x)$ satisfies the Hölder condition in a neighborhood of a point x_0 if $|f(x) - f(x_0)| \leq c|(x - x_0)|^n$, where c and n are constants.

Hölder's inequality [MATH] Generalization of the Schwarz inequality for real functions: $|\int f(x)g(x)dx| \leq (\int |f(x)|^p\, dx)^{1/p} \cdot (\int |g(x)|^q\, dx)^{1/q}$ where $1/p + 1/q = 1$.

hold facility [COMPUT SCI] The ability of a computer to operate in a hold mode.

holdfast [BOT] **1.** A suckerlike base which attaches the thallus of certain algae to the support. **2.** A disklike terminal structure on the tendrils of various plants used for attachment to a flat surface. [INV ZOO] An organ by which parasites such as tapeworms attach themselves to the host.

holding anode [ELECTR] A small auxiliary anode used in a mercury-pool rectifier to keep a cathode spot energized during the intervals when the main-anode current is zero.

holding beam [ELECTR] A diffused beam of electrons used to regenerate the charges stored on the dielectric surface of a cathode-ray storage tube.

holding coil [ELECTR] A separate relay coil that is energized by contacts which close when a relay pulls in, to hold the relay in its energized position after the orginal operating circuit is opened.

holding current [ELECTR] The minimum current required to maintain a switching device in a closed or conducting state after it is energized or triggered.

holding furnace [MET] A heated reservoir to hold molten metal preparatory to casting.

holding ground [NAV] The bottom ground of an anchorage; the term is usually preceded by an adjective to indicate the quality of the holding power of the material constituting the bottom.

holding magnet *See* lifting magnet.

holding point [NAV] An identifiable point designated by an air-traffic control center as the position in the vicinity of which an aircraft is instructed to remain.

holding time [COMMUN] Period of time a trunk or circuit is in use on a call, including operator's time in connecting and subscriber's or user's conversation time.

hold lamp [ELEC] Indicating lamp which remains lighted while a telephone connection is being held.

hold mode [COMPUT SCI] The state of an analog computer in which its operation is interrupted without altering the values of the variables it is handling, so that computation can continue when the interruption is over. Also known as interrupt mode.

hold-over command [COMPUT SCI] A command punched at the end of each card to cause machines to treat the several cards as if they were one continuous record.

hold time [MET] In resistance welding, the time that pressure is applied to the electrodes after the welding current is cut off.

holdup [CHEM ENG] **1.** Volume of material held or contained in a process vessel or line. **2.** Liquid held up (suspended) in a vertical process vessel or line by rising gas or vapor streams.

hole [SOLID STATE] A vacant electron energy state near the top of an energy band in a solid; behaves as though it were a positively charged particle. Also known as electron hole.

hole-burning spectroscopy [SPECT] A method of observing extremely narrow line widths in certain ions and molecules embedded in crystalline solids, in which broadening produced by crystal-site-dependent statistical field variations is overcome by having a monochromatic laser temporarily remove ions or molecules at selected crystal sites from their absorption levels, and observing the resulting dip in the absorption profile with a second laser beam.

hole conduction [ELECTR] Conduction occurring in a semiconductor when electrons move into holes under the influence of an applied voltage and thereby create new holes.

Holectypidae [PALEON] A family of extinct exocyclic Euechinoidea in the order Holectypoida; individuals are hemispherical.

Holectypoida [INV ZOO] An order of exocyclic Euechinoidea with keeled, flanged teeth, with distinct genital plates, and with the ambulacra narrower than the interambulacra on the adoral side.

hole deviation [ENG] The change in the course or direction that a borehole follows.

hole director [MIN ENG] A steel framework used in underground tunneling to set the angle at which holes for a blasting round are to be drilled.

hole injection [ELECTR] The production of holes in an *n*-type semiconductor when voltage is applied to a sharp metal point in contact with the surface of the material.

hole layout [MIN ENG] In quarrying, an arrangement of vertical and horizontal holes.

hole mobility [ELECTR] A measure of the ability of a hole to travel readily through a semiconductor, equal to the average drift velocity of holes divided by the electric field.

hole saw *See* crown saw.

hole site [COMPUT SCI] The area on a punch card where a hole may be punched.

hole-through [MIN ENG] The meeting of two approaching tunnel heads.

hole trap [ELECTR] A semiconductor impurity capable of releasing electrons to the conduction or valence bands, equivalent to trapping a hole.

holiday [ENG] An undesirable discontinuity or break in the anticorrosion protection on pipe or tubing.

holing [MIN ENG] **1.** The working of a lower part of a bed of coal to bring down the upper mass. **2.** The final act of connecting two workings underground. **3.** The meeting of two mine roadways driven to intersect. Also known as thirling.

holism [BIOL] The view that the whole of a complex system, such as a cell or organism, is functionally greater than the sum of its parts. Also known as organicism.

holistic masks [COMPUT SCI] In character recognition, that set of characters which resides within a character reader and theoretically represents the exact replicas of all possible input characters.

hollander [MECH ENG] An elongate tube with a central midfeather and a cylindrical beater roll; formerly used for stock preparation in paper manufacture.

Holland formula [ENG] A formula used to calculate the height of a plume formed by pollutants emitted from a stack in terms of the diameter of the stack exit, the exit velocity and heat emission rate of the stack, and the mean wind speed.

hollandite [MINERAL] $Ba(Mn^{2+},Mn^{4+})_8O_{16}$ A silvery-gray to black mineral composed of manganate of barium and manganese; occurs as crystals.

Hollerith code [COMPUT SCI] A code used to represent letters, numbers, or special symbols to be punched in standard 80-column punch cards.

Hollerith string [COMPUT SCI] A sequence of characters preceded by an H and a character count in FORTRAN, as 4HSTOP.

Hollinacea [PALEON] A dimorphic superfamily of extinct ostracods in the suborder Beyrichicopina including forms with sulci, lobation, and some form of velar structure.

Hollinidae [PALEON] An extinct family of ostracods in the superfamily Hollinacea distinguished by having a bulbous third lobe on the valve.

hollow [SCI TECH] **1.** Having a concave surface. **2.** Having an interior cavity.

hollow block *See* hollow tile.

hollow cathode [ELECTR] A cathode which is hollow and closed at one end in a discharge tube filled with inert gas, designed so that radiation is emitted from the cathode glow inside the cathode.

hollow drill [DES ENG] A drill rod or stem having an axial hole for the passage of water or compressed air to remove cuttings from a drill hole. Also known as hollow rod; hollow stem.

hollow ended [NAV ARCH] Pertaining to when the extremities of the waterlines in the neighborhood of the designed load line are concave to the surrounding water, and when the sectional area curve at the ends is fine, indicating relatively small displacement in these locations.

hollow gravity dam [CIV ENG] A fixed gravity dam, usually of reinforced concrete, constructed of inclined slabs or arched sections supported by transverse buttresses.

hollow mill [MECH ENG] A milling cutter with three or more cutting edges that revolve around the cylindrical workpiece.

hollow-pipe waveguide [ELECTROMAG] A waveguide consisting of a hollow metal pipe; electromagnetic waves are transmitted through the interior and electric currents flow on the inner surfaces.

hollow-plunger pump [MIN ENG] A pump for mining and quarrying in gritty and muddy water.

hollow reamer [ENG] A tool or bit used to correct the curvature in a crooked borehole.

hollow rod *See* hollow drill.

hollow-rod churn drill [MECH ENG] A churn drill with hollow rods instead of steel wire rope.

hollow-rod drilling [ENG] A modification of wash boring in which a check valve is introduced at the bit so that the churning action may be also used to pump the cuttings up the drill rods.

hollow shafting [MECH ENG] Shafting made from hollowed-out rods or hollow tubing to minimize weight, allow internal support, or permit other shafting to operate through the interior.

hollow stalk [PL PATH] Any plant disease characterized by deterioration of the pith in the stalk.

hollow stem *See* hollow drill.

hollow tile [MATER] A hollow building block of concrete or burnt clay used for making partitions, exterior walls, or suspended floors or roofs. Also known as hollow block.

hollow wall [BUILD] A masonry wall provided with an air space between the inner and outer wythes.

holly [BOT] The common name for the trees and shrubs composing the genus *Ilex*; distinguished by spiny leaves and small berries.

hollywood lignumvitae *See* lignumvitae.

Holman Airleg [MIN ENG] A drill support consisting of a cylinder in which the piston is actuated by compressed air controlled by a twist-grip valve.

Holman counterbalanced drill rig [MIN ENG] A drill rig consisting of a rail-track carriage with a counterbalanced boom 10 feet (3 meters) long.

Holman dust extractor [MIN ENG] A dust-trapping system in which the dust and chippings from percussive drilling operations are drawn back through the hollow drill rod and along a hose to a metal container with filter elements.

Holman stamp [MIN ENG] A crushing stamp raised by a crank and accelerated in its fall by compressed air.

Holme mud sampler [ENG] A scooplike device which can be lowered by cable to the ocean floor to collect sediment samples.

holmium [CHEM] A rare-earth element belonging to the yttrium subgroup, symbol Ho, atomic number 67, atomic weight 164.93, melting point 1400–1525°C.

holmquisite [MINERAL] $(Na,K,Ca)Li(Mg,Fe)_3Al_2Si_8O_{22}(OH)_2$ A bluish-black, orthorhombic mineral composed of alkali and silicate of iron, magnesium, lithium, and aluminum.

holoaxial [CRYSTAL] Having all possible axes of symmetry.

Holobasidiomycetes [MYCOL] An equivalent name for Homobasidiomycetidae.

holoblastic [EMBRYO] Pertaining to eggs that undergo total cleavage due to the absence of a mass of yolk.

holobranch [VERT ZOO] A gill with a row of filaments on each side of the branchial arch.

holocarpic [BOT] **1.** Having the entire thallus developed into a fruiting body or sporangium. **2.** Lacking rhizoids and haustoria.

holocellulose [BIOCHEM] The total polysaccharide fraction of wood, straw, and so on, that is composed of cellulose and all of the hemicelluloses and that is obtained when the extractives and the lignin are removed from the natural material.

Holocene *See* Recent.

Holocentridae [VERT ZOO] A family of nocturnal beryciform fishes found in shallow tropical and subtropical reefs; contains the squirrelfishes and soldierfishes.

Holocephali [VERT ZOO] The chimaeras, a subclass of the Chondrichthyes, distinguished by four pairs of gills and gill arches, an erectile dorsal fin and spine, and naked skin.

holoclastic [PETR] Being or belonging to ordinary (sedimentary) clastic rock.

holococcolith [BIOL] A coccolith with simple rhombic or hexagonal crystals arranged like a mosaic.

holocoenosis [ECOL] The nature of the action of the environment on living organisms.

holocrine gland [PHYSIO] A structure whose cells undergo dissolution and are entirely extruded, together with the secretory product.

holocrystalline [PETR] Pertaining to igneous rocks that are entirely crystallized minerals, without glass.

holoenzyme [BIOCHEM] A complex, fully active enzyme, containing an apoenzyme and a coenzyme.

hologamy [BIOL] Condition of having gametes similar in size and form to somatic cells. [BOT] Condition of having the whole thallus develop into a gametangium.

hologony [INV ZOO] Condition of having the germinal area extend the full length of a gonad; refers specifically to certain nematodes.

hologram [OPTICS] The special photographic plate used in holography; when this negative is developed and illuminated from behind by a coherent gas-laser beam, it produces a three-dimensional image in space. Also known as hologram interferometer.

hologram interferometer *See* hologram.

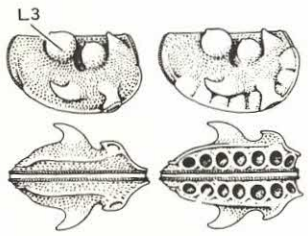
holographic interferometry [OPTICS] The study of the formation and interpretation of the fringe pattern which appears when a wave, generated at some earlier time and stored in a hologram, is later reconstructed and caused to interfere with a comparison wave.

holographic memory [COMPUT SCI] A memory in which information is stored in the form of holographic images on thermoplastic or other recording films.

holography [PHYS] A technique for recording, and later reconstructing, the amplitude and phase distributions of a wave disturbance; widely used as a method of three-dimensional optical image formation, and also with acoustical and radio waves; in optical image formation, the technique is accomplished by recording on a photographic plate the pattern of interference between coherent light reflected from the object of interest, and light that comes directly from the same source or is reflected from a mirror.

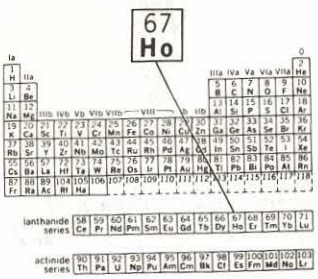
holohedral [CRYSTAL] Pertaining to a crystal structure having the highest symmetry in each crystal class. Also known as holosymmetric; holosystemic.

HOLLINIDAE



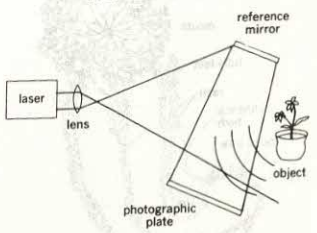
Abditoloculina pulchra Kesling, male (left) and female (right) carapaces showing bulbous L3 (lobe 3) typical of the Hollinidae.

HOLMIUM



Periodic table of the chemical elements showing the position of holmium.

HOLOGRAPHY



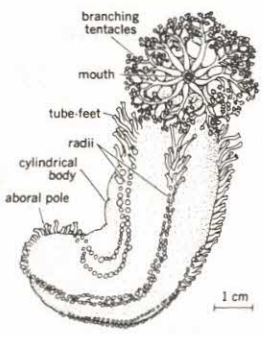
Interference pattern between light from laser source reflected from object of interest and light from same source reflected from mirror is recorded on photographic plate which, when developed, forms a hologram.

holohedron [CRYSTAL] A crystal form of the holohedral class, having all the faces needed for complete symmetry.
holohyaline [PETR] Pertaining to an entirely glassy rock.
Holometabola [INV ZOO] A division of the insect subclass Pterygota whose members undergo holometabolous metamorphosis during development.
holometabolous metamorphosis [INV ZOO] Complete metamorphosis, during which there are four stages; the egg, larva, pupa, and imago or adult.
holomicrography [OPTICS] The use of holography to produce three-dimensional images with various types of microscopes.
holomictic lake [HYD] A lake whose water circulates completely from top to bottom.
holomorphic function *See* analytic function.
holomorphosis [BIOL] Complete regeneration of a lost body structure.
holomyarian [INV ZOO] Having zones of muscle layers but no muscle cells; refers specifically to certain nematodes.
holonephros [VERT ZOO] Type of kidney having one nephron beside each somite along the entire length of the coelom; seen in larvae of myxinoid cyclostomes.
holonomic constraints [MECH] An integrable set of differential equations which describe the restrictions on the motion of a system; a function relating several variables, in the form $f(x_1, \ldots, x_n) = 0$, in optimization or physical problems.
holonomic system [MECH] A system in which the constraints are such that the original coordinates can be expressed in terms of independent coordinates and possibly also the time.
holophotal [OPTICS] **1.** Pertaining to a holophote. **2.** Reflecting all the light from a source in one direction.
holophote [OPTICS] An optical system consisting of lenses or reflectors that collect a large amount of the light from a source (such as the lamp of a lighthouse) and send it in a desired direction.
holophyte [BIOL] An organism that obtains food in the manner of a green plant, that is, by synthesis of organic substances from inorganic substances using the energy of light.
holoplankton [ZOO] Organisms that live their complete life cycle in the floating state.
Holoptychidae [PALEON] A family of extinct lobefin fishes in the order Osteolepiformes.
holopulping process [CHEM ENG] A process for making paper pulp by alkaline oxidation of extremely thin wood chips at low temperature and pressure and then solubilization of the lignin fraction.
holorhinal [VERT ZOO] Among birds, having a rounded anterior margin on the nasal bones.
Holostei [VERT ZOO] An infraclass of fishes in the subclass Actinopterygii descended from the Chondrostei and ancestral to the Teleostei.
holostome [INV ZOO] A type of adult digenetic trematode having a portion of the ventral surface modified as a complex adhesive organ.
holostratotype [GEOL] The originally defined stratotype.
holosymmetric *See* holohedral.
holosystemic *See* holohedral.
Holothuriidae [VERT ZOO] A family of aspidochirotacean echinoderms in the order Aspidochirotida possessing tentacular ampullae and only the left gonad.
Holothuroidea [INV ZOO] The sea cucumbers, a class of the subphylum Echinozoa characterized by a cylindrical body and smooth, leathery skin.
Holothyridae [INV ZOO] The single family of the acarine suborder Holothyrina.
Holothyrina [INV ZOO] A suborder of mites in the order Acarina which are large and hemispherical with a deep-brown, smooth, heavily sclerotized cuticle.
Holotrichia [INV ZOO] A major subclass of the protozoan class Ciliatea; body ciliation is uniform with cilia arranged in longitudinal rows.
holotype [SYST] A nomenclatural type for the single specimen designated as "the type" by the orginal author at the time of publication of the original description.
holozoic [ZOO] Obtaining food in the manner of most animals, by ingesting complex organic matter.
holster [ORD] A pocket-type device with a single compartment designed to be worn on a belt or shoulder harness, which may be furnished with it, and used to carry a pistol, revolver, or the like.

HOLOSTOME

Diagram of ventral surface of adult holostome showing adhesive organs. *(From R. M. Cable, An Illustrated Laboratory Manual of Parasitology, Burgess, 1940)*

HOLOTHUROIDEA



Cucumaria, a representative holothurian.

Holtz machine *See* Toepler-Holtz machine.
Holuridae [PALEON] A group of extinct chondrostean fishes in the suborder Palaeoniscoidei distinguished in having lepidotrichia of all fins articulated but not bifurcated, fins without fulcra, and the tail not cleft.
holystone [MATER] A soft sandstone that is used in scrubbing a ship's deck.
Homacodontidae [PALEON] A family of extinct palaeodont mammals in the superfamily Dichobunoidea.
Homalopteridae [VERT ZOO] A small family of cypriniform fishes in the suborder Cyprinoidei.
Homalorhagae [INV ZOO] A suborder of the class Kinorhyncha having a single dorsal plate covering the neck and three ventral plates on the third zonite.
Homalozoa [INV ZOO] A subphylum of echinoderms characterized by the complete absence of radial symmetry.
Homan's sign [MED] Pain in the calf and popliteal area on passive dorsiflexion of the foot, indicating deep venous thrombosis of the calf. Also known as dorsiflexion sign.
Homaridae [INV ZOO] A family of marine decapod crustaceans containing the lobsters.
Homarus [INV ZOO] A genus of the family Homaridae comprising most species of lobsters.
homatropine [ORG CHEM] $C_{16}H_{21}O_3N$ An alkaloid that causes pupil dilation and paralysis of accommodation.
homaxial [BIOL] Having all axes equal.
home [ELEC] To return to the starting position, as in a stepping relay or turning motor. [NAV] To navigate toward a point by maintaining constant some navigational parameter other than altitude. [ORD] To travel to a target by guidance of heat radiation, radar echoes, radio waves, sound waves, laser beams, or other phenomena reflected from or originating in the target, as in homing missiles and homing torpedoes.
home address [COMPUT SCI] A technique used to identify each disk track uniquely by means of a 9-byte record immediately following the index marker; the record contains a flag (good or defective track), cylinder number, head number, cyclic check, and bit count appendage.
home loop [COMMUN] A telephone pair terminating at the local central office. Also known as local loop.
homeoblastic [PETR] Of a metamorphic crystalloblastic texture, having constituent minerals of approximately the same size.
homeomorph [BIOL] An organism which exhibits a superficial resemblance to another organism even though they have different ancestors. [CRYSTAL] A crystal that displays a form similar to that of a crystal with a different chemical composition.
homeomorphic spaces [MATH] Two topological spaces with a homeomorphism existing between them; intuitively one can be obtained from the other by stretching, twisting, or shrinking.
homeomorphism [MATH] A continuous map between topological spaces which is one-to-one, onto, and its inverse function is continuous. Also known as bicontinuous function; topological mapping.
home-on-jam [ELECTR] A feature that permits radar to track a jamming source in angle.
homeopathy [MED] A system of medicine expounded by Samuel Hahnemann that treats disease by administering to the patient small doses of drugs which produce the signs and symptoms of the disease in a healthy person. Also known as Hahnemannism.
homeosis *See* heteromorphosis.
homeostasis [BIOL] In higher animals, the maintenance of an internal constancy and an independence of the environment.
homeotherm [PHYSIO] An endotherm that maintains a constant body temperature, as do most mammals and birds.
homeothermia [PHYSIO] The condition of being warm-blooded.
homer [NAV] A ground-based direction-finding station that utilizes radio transmissions from aircraft to determine their bearing, then guides the aircraft toward the station by voice communications. [ORD] *See* target seeker.
home range [ECOL] The physical area of an organism's normal activity.
home record [COMPUT SCI] The first record in the chaining method of file organization.
home signal [CIV ENG] A signal at the beginning of a block of railroad track that indicates whether the block is clear.

homespun [TEXT] **1.** A general term for cloth handwoven at home instead of in a mill such as the linsey-woolsey, butternut, and coarse flannels made on handlooms by early American settlers. **2.** Coarse fabrics woven from linen or cotton, for example, drapery fabrics.

hometaxial-base transistor [ELECTR] Transistor manufactured by a single-diffusion process to form both emitter and collector junctions in a uniformly doped silicon slice; the resulting homogeneously doped base region is free from accelerating fields in the axial (collector-to-emitter) direction, which could cause undesirable high current flow and destroy the transistor.

homeward bound [NAV] Of a vessel or person, headed for the home port or country.

homichlophobia [PSYCH] An abnormal fear of fog.

homidium bromide *See* ethidium bromide.

homilite [MINERAL] $(Ca_2(Fe,Mg)B_2Si_2O_{10}$ A black or blackish brown mineral composed of iron calcium borosilicate.

homing adapter [NAV] A device which, when used with an aircraft radio receiver, produces aural or visual signals which indicate the direction of a transmitting radio station with respect to the heading of the aircraft.

homing antenna [ELECTROMAG] A directional antenna array used in flying directly to a target that is emitting or reflecting radio or radar waves.

homing beacon [NAV] A radio beacon, either airborne or on the ground, toward which an aircraft can fly if equipped with a radio compass or homing adapter. Also known as radio homing beacon.

homing device [ELECTR] A control device that automatically starts in the correct direction of motion or rotation to achieve a desired change, as in a remote-control tuning motor for a television receiver. [ENG] A device incorporated in a guided missile or the like to home it on a target. [NAV] A transmitter, receiver, or adapter used for homing aircraft or used by aircraft for homing purposes.

homing guidance [ENG] A guidance system in which a missile directs itself to a target by means of a self-contained mechanism that reacts to a particular characteristic of the target.

homing range [NAV] The maximum distance from a target or homing beacon at which a homing device is effective.

homing relay [ELEC] A stepping relay that returns to a specified starting position before each operating cycle.

homing station [NAV] A station at which a beacon emits signals that may be used for homing.

homing torpedo [ORD] A torpedo having homing guidance, designed for homing on a surface vessel or a submerged submarine.

homing transponder [NAV] A small acoustic transponder used in navigation of a submersible vehicle, which can be carried by the vehicle and quickly dropped when an area of interest is reached; a single transponder and a dead reckoning system are used.

Hominidae [VERT ZOO] A family of primates in the superfamily Hominoidea containing one living species, *Homo sapiens*.

Hominoidea [VERT ZOO] A superfamily of the order Primates comprising apes and humans.

homo- [ORG CHEM] **1.** Indicating the homolog of a compound differing in formula from the latter by an increase of one CH_2 group. **2.** Indicating a homopolymer made up of a single type of monomer, such as polyethylene from ethylene. **3.** Indicating that a skeletal atom has been added to a well-known structure. [SCI TECH] Prefix indicating the same or similar.

Homo [VERT ZOO] The genus of human beings, including modern humans and many extinct species.

Homobasidiomycetidae [MYCOL] A subclass of basidiomycetous fungi in which the basidium is not divided by cross walls.

homobront *See* isobront.

homocentric [OPTICS] Pertaining to rays which have the same focal point, or which are parallel. Also known as stigmatic.

homocercal [VERT ZOO] Pertaining to the caudal fin of certain fishes which has almost equal lobes, with the vertebral column terminating near the middle of the base.

homochlamydeous [BIOL] Having all members of the perianth similar or not differentiated into calyx or corolla.

homochromy [ZOO] A form of protective coloration whereby the individual blends into the background.

homocline [GEOL] Any rock unit in which the strata exhibit the same dip.

homocyclic compound [ORG CHEM] A ring compound that has one type of atom in its structure; an example is benzene.

homocysteine [BIOCHEM] $C_4H_9O_2NS$ An amino acid formed in animals by demethylation of methionine.

homocystinuria [MED] A hereditary metabolic disorder in which homocysteine appears in the urine because cystathionine synthetase activity is absent; there is also malpositioning of the lens, and mental retardation.

homodesmic [CRYSTAL] Of a crystal, having atoms bonded in a single way.

homodont [VERT ZOO] Having all teeth similar in form; characteristic of nonmammalian vertebrates.

homodynamic [INV ZOO] Developing through continuous successive generations without a diapause; applied to insects.

homodyne reception [ELECTR] A system of radio reception for suppressed-carrier systems of radiotelephony, in which the receiver generates a voltage having the original carrier frequency and combines it with the incoming signal. Also known as zero-beat reception.

homoecious [BIOL] Having one host for all stages of the life cycle.

homoeomerous [BOT] Having algae distributed uniformly throughout the thallus of a lichen.

Homo erectus [PALEON] A type of fossil human from the Pleistocene of Java and China representing a specialized side branch in human evolution.

homoerotism [PSYCH] Sexual desire directed toward a member of the same sex; usually sublimated and not expressed.

homofermentative lactobacilli [MICROBIO] Bacteria that produce a single end product, lactic acid, from fermentation of carbohydrates.

homogametic sex [GEN] The sex of a species in which the paired sex chromosomes are of equal size and which therefore produces homogametes.

homogamety [GEN] The production of homogametes by one sex of a species.

homogamous [BIOL] Of or pertaining to homogamy.

homogamy [BIOL] Inbreeding due to isolation. [BOT] Condition of having all flowers alike.

homogenate [BIOL] A tissue that has been finely divided and mixed.

homogeneity [PHYS] Quality of a substance whose properties are independent of position. [STAT] Equality of the distribution functions of several populations.

homogeneous [CHEM] Pertaining to a substance having uniform composition or structure. [MATH] Pertaining to a group of mathematical symbols of uniform dimensions or degree. [SCI TECH] Uniform in structure or composition.

homogeneous atmosphere [METEOROL] A hypothetical atmosphere in which the density is constant with height.

homogeneous catalysis [CHEM] Catalysis occurring within a single phase, usually a gas or liquid.

homogeneous chemical reaction [CHEM] Chemical reaction system in which all constitutents (reactants and catalyst) are of the same phase.

homogeneous coordinates [MATH] To a point in the plane with cartesian coordinates (x,y) there corresponds the homogeneous coordinates (x_1,x_2,x_3), where $x_1/x_3 = x$, $x_2/x_3 = y$; any polynomial equation in cartesian coordinates becomes homogeneous if a change into these coordinates is made.

homogeneous differential equation [MATH] A differential equation where every scalar multiple of a solution is also a solution.

homogeneous equation [MATH] An equation that can be rewritten into the form having zero on one side of the equal sign and a homogeneous function of all the variables on the other side.

homogeneous function [MATH] A real function $f(x_1,x_2, \ldots,x_n)$ is homogeneous of degree r if $f(ax_1,ax_2, \ldots,ax_n) = a^r f(x_1,x_2, \ldots,x_n)$ for every real number a.

homogeneous integral equation [MATH] An integral equation where every scalar multiple of a solution is also a solution.

homogeneous polynomial [MATH] A polynomial all of whose terms have the same total degree; equivalently it is a homogenous function of the variables involved.

homogeneous radiation [PHYS] Radiation having an extremely narrow band of frequencies, or a beam of monoenerge-

tic particles of a single type, so that all components of the radiation are alike.

homogeneous reactor [NUCLEO] A nuclear reactor in which fissionable material and moderator (if used) are intimately mixed to form an effectively homogeneous medium for neutrons.

homogeneous space [MATH] A topological space having a group of transformations acting upon it, that is, a transformation group, where for any two points x and y some transformation from the group will send x to y.

homogeneous transformation *See* linear transformation.

homogenize [MET] To hold metal at a high temperature long enough to eliminate by diffusion any chemical segregation of the components.

homogenizer [MECH ENG] A machine that blends or emulsifies a substance by forcing it through fine openings against a hard surface.

homogentisase [BIOCHEM] The enzyme that catalyzes the conversion of homogentisic acid to fumaryl acetoacetic acid.

homogentisic acid [BIOCHEM] $C_8H_8O_4$ An intermediate product in the metabolism of phenylalanine and tyrosine; found in excess in persons with phenylketonuria and alkaptonuria.

homogony [BOT] Condition of having one type of flower, with stamens and pistil of uniform length.

homograft rejection [IMMUNOL] An immunologic process by which an individual destroys and casts off a tissue transplanted from a donor of the same species.

homographic transformations *See* Möbius transformations.

homoiochlamydeous [BOT] Having perianth leaves alike, not differentiated into sepals and petals.

homoiogenetic [EMBRYO] Of a determined part of an embryo, capable of inducing formation of a similar part when grafted into an undetermined field.

homoiothermal [PHYSIO] Referring to an organism which maintains a constant internal temperature which is often higher than that of the environment; common among birds and mammals. Also known as warm-blooded.

Homoistela [PALEON] A class of extinct echinoderms in the subphylum Homalozoa.

homokaryon [MYCOL] A bi- or multinucleate cell having nuclei all of the same kind.

homokaryosis [MYCOL] The condition of a bi- or multinucleate cell having nuclei all of the same kind.

homolateral [MED] Situated on the same side. Also known as ipsilateral.

homolecithal [CYTOL] Referring to eggs having small amounts of evenly distributed yolk. Also known as isolecithal.

homologation [ORG CHEM] A type of hydroformylation in which carbon monoxide reacts with certain saturated alcohols to yield either aldehydes or alcohols (or a mixture of both) containing one more carbon atom than the parent.

homological algebra [MATH] The study of the structure of modules, particularly by means of exact sequences; it has application to the study of a topological space via its homology groups.

homologous [BIOL] Pertaining to a structural relation between parts of different organisms due to evolutionary development from the same or a corresponding part, such as the wing of a bird and the pectoral fin of a fish. [GEOL] **1.** Referring to strata, in separated areas, that are correlatable (contemporaneous) and are of the same general character or facies, or occupy analogous structural positions along the strike. **2.** Pertaining to faults, in separated areas, that have the same relative position or structure.

homologous serum jaundice [MED] A type of hepatitis caused by a filtrable virus that exists in the blood plasma and may be passed to another person through blood transfusion.

homologous stimulus [PHYSIO] A form of energy to which a specific sensory receptor is most sensitive.

homologous transformation [ASTRON] A mathematical transformation in the study of stellar models.

homologous tumor [MED] A neoplasm composed of tissue identical with those of the organ at the site of the tumor.

homology [CHEM] The relation among elements of the same group, or family, in the periodic table. [ORG CHEM] That state, in a series of organic compounds that differ from each other by a CH_2 such as the methane series C_nH_{2n+2}, in which there is a similarity between the compounds in the series and a graded change of their properties.

homology group [MATH] Associated to a topological space X, one of a sequence of Abelian groups $H_n(X)$ that reflect how n-dimensional simplicial complexes can be used to fill up X and also help determine the presence of n-dimensional holes appearing in X. Also known as Betti group.

homology theory [MATH] Theory attempting to compare topological spaces and investigate their structures by determining the algebraic nature and interrelationships appearing in the various homology groups.

homolysis [CHEM] Symmetrical breaking of a covalent electron bond; for example, $A{:}B = A\cdot + B\cdot$.

homometric pair [CRYSTAL] A pair of crystal structures whose x-ray diffraction patterns are identical.

homomorphism [BOT] Having perfect flowers consisting of only one type. [MATH] A function between two algebraic systems of the same type which preserves the algebraic operations.

homomorphs [CHEM] Chemical molecules that are similar in size and shape, but not necessarily having any other characteristics in common.

Homoneura [INV ZOO] A suborder of the Lepidoptera with mandibulate mouthparts, and fore- and hindwings that are similar in shape and venation.

homonomous hemianopsia [MED] Partial blindness affecting the inner half of one field of vision or the outer half of the other; caused by optic nerve lesions posterior to the chiasma.

homopause [GEOPHYS] The level of transition between the homosphere and the heterosphere; it lies about 80 to 90 kilometers above the earth.

homopetalous [BOT] Having all petals identical.

homoplasy [BIOL] Correspondence between organs or structures in different organisms acquired as a result of evolutionary convergence or of parallel evolution.

homopolar [ELEC] **1.** Electrically symmetrical. **2.** Having equal distribution of charge.

homopolar bond [PHYS CHEM] A covalent bond whose total dipole moment is zero.

homopolar crystal [SOLID STATE] A crystal in which the bonds are all covalent.

homopolar generator [ELECTR] A direct-current generator in which the poles presented to the armature are all of the same polarity, so that the voltage generated in active conductors has the same polarity at all times; a pure direct current is thus produced, without commutation. Also known as acyclic machine; homopolar machine; unipolar machine.

homopolar machine *See* homopolar generator.

homopolymer [ORG CHEM] A polymer formed from a single monomer; an example is polyethylene, formed by polymerization of ethylene.

homopolysaccharide [BIOCHEM] A polysaccharide which is a polymer of one kind of monosaccharide.

Homoptera [INV ZOO] An order of the class Insecta including a large number of sucking insects of diverse forms.

***ortho*-homosalicylic acid** *See* 3-methylsalicylic acid.

Homo sapiens [VERT ZOO] Modern human species; a large, erect, omnivorous terrestrial biped of the primate family Hominidae.

homoscedastic [STAT] **1.** Pertaining to two or more distributions whose variances are equal. **2.** Pertaining to a variate in a bivariate distribution whose variance is the same for all values of the other variate.

Homosclerophorida [INV ZOO] An order of primitive sponges of the class Demospongiae with a skeleton consisting of equirayed, tetraxonid, siliceous spicules.

homoserine [BIOCHEM] $C_4H_9O_3N$ An amino acid formed as an intermediate product in animals in the metabolic breakdown of cystathionine to cysteine.

homosexual [BIOL] Of, pertaining to, or being the same sex. [PSYCH] **1.** Of, pertaining to, or exhibiting homosexuality. **2.** One who practices homosexuality.

homosexuality [PSYCH] **1.** State of being sexually attracted to members of the same sex. **2.** A form of homoerotism involving sexual interest without genital expression.

homosexual panic [PSYCH] An acute syndrome that comes as a climax of prolonged tension from unconscious homosexual conflicts or sometimes bisexual tendencies.

homosphere [METEOROL] The lower portion of a two-part division of the atmosphere (the upper portion is the heterosphere) according to the general homogeneity of atmospheric composition; the region in which there is no gross change in

atmospheric composition, that is, all of the atmosphere from the earth's surface to about 80–100 kilometers.

homospory [BOT] Production of only one kind of asexual spore.

4-homosulfanilamide *See para*-(aminomethyl)benzenesulfonamide.

homothallic [MYCOL] Having genetically compatible hyphae and therefore forming zygospores from two branches of the same mycelium.

homotopy [MATH] Between two mappings of the same topological spaces, a continuous function representing how, in a step-by-step fashion, the image of one mapping can be continuously deformed onto the image of the other.

homotopy groups [MATH] Associated to a topological space X, the groups appearing for each positive integer n, which reflect the number of different ways (up to homotopy) than an n-dimensional sphere may be mapped to X.

homotopy theory [MATH] The study of the topological structure of a space by examining the algebraic properties of its various homotopy groups.

homotropic enzyme [BIOCHEM] A type of allosteric enzyme in which the substrate serves as the allosteric reflector.

homotropous [BOT] Having the radicle directed toward the hilum.

homotype [SYST] A taxonomic type for a specimen which has been compared with the holotype by another than the author of the species and determined by him to be conspecific with it.

homotypy [BIOL] Protective device based on resemblance of shape to the background.

homovanillic acid [BIOCHEM] $HOC_6H_3(OCH_3)CH_2CO_2H$ A major metabolite of 3-*O*-methyl DOPA; used in enzyme determination. Abbreviated HVA. Also known as 4-hydroxy-3-methoxyphenylacetic acid.

homozeotrope [CHEM] Mixture in which the liquid components are miscible in all proportions in the liquid phase, and may be separated by ordinary distillation.

homozygote [GEN] An individual that has identical alleles at one or more loci and therefore produces gametes which are all identical.

homozygous [GEN] Of or pertaining to a homozygote.

hone [MATER] A fine-grit stone that is used for sharpening a cutting tool. [MECH ENG] A machine for honing that consists of a holding device containing several oblong stones arranged in a circular pattern.

Honest John [ORD] The 762-millimeter rocket system, a surface-to-surface tactical missile employing solid propellant, developed by the Army; it is released from a rail-type launcher at an elevation which can be varied to obtain the desired point of impact; it can carry either a conventional high-explosive warhead or a nuclear warhead.

honey [FOOD ENG] The sweet, viscous secretion composed principally of levulose and dextrose that is deposited in the honeycomb by the honeybee.

honeybee [INV ZOO] *Apis mellifera*. The bee kept for the commercial production of honey; a member of the dipterous family Apidae.

honeycomb [INV ZOO] A mass of wax cells in the form of hexagonal prisms constructed by honeybees for their brood and honey.

honeycomb coil [ELECTROMAG] A coil wound in a criss-cross manner to reduce distributed capacitance. Also known as duolateral coil; lattice-wound coil.

honeycomb coral [PALEON] The common name for members of the extinct order Tabulata; has prismatic sections arranged like the cells of a honeycomb.

honeycombing [MATER] **1.** Internal fiber separation in drying timber. **2.** Local roughness and weakening on the face of a concrete wall due to segregation of the concrete, with the result that there is little sand to fill in between the stone aggregate.

honeycomb lung [MED] **1.** Condition of the lung in emphysema. **2.** A lung containing small pus-filled cavities.

honeycomb radiator [MECH ENG] A heat-exchange device utilizing many small cells, shaped like a bees' comb, for cooling circulating water in an automobile.

honeycomb weave *See* waffle weave.

honeydew [INV ZOO] The viscous secretion deposited on leaves by many aphids and scale insects; an attractant for ants.

Honey Dew melon [BOT] A variety of muskmelon (*Cucumis melo*) belonging to the Violales; fruit is large, oval, smooth, and creamy yellow to ivory, without surface markings.

honey tube [INV ZOO] Either of a pair of cornicles on the dorsal aspect of one abdominal segment in certain aphids.

Honigmann process [MIN ENG] A method of shaft sinking through water-bearing sand; the shaft is bored in stages, increasing in size from the pilot hole, about 4 feet in diameter, to the final size.

honing [MECH ENG] The process of removing a relatively small amount of material from a cylindrical surface by means of abrasive stones to obtain a desired finish or extremely close dimensional tolerance.

hood [DES ENG] An opaque shield placed above or around the screen of a cathode-ray tube to eliminate extraneous light. [ENG] **1.** Close-fitting, rubber head covering that leaves the face exposed; used in scuba diving. **2.** A protective covering, usually providing special ventilation to carry away objectionable fumes, dusts, and gases, in which dangerous chemical, biological, or radioactive materials can be safely handled.

hoodmold [ARCH] A molding projecting over the hood of an arch.

hood test [ENG] A leak detection method in which the vessel under test is enclosed by a metallic casing so that a dynamic leak test may be carried out on a large portion of the external surface.

hoof [VERT ZOO] **1.** Horny covering for terminal portions of the digits of ungulate mammals. **2.** A hoofed foot, as of a horse.

hoof-and-mouth disease *See* foot-and-mouth disease.

hoof oil *See* neat's-foot oil.

hook [DES ENG] A piece of hard material, especially metal, formed into a curve for catching, holding, or pulling something. [ELECTR] A circuit phenomenon occurring in four-zone transistors, wherein hole or electron conduction can occur in opposite directions to produce voltage drops that encourage other types of conduction. [GEOGR] The end of a spit of land that is turned toward shore. Also known as recurved spit.

hookah [ENG] An air supply device used in free diving, comprising a demand regulator worn by the diver and a hose extending to a compressed air supply at the surface.

hook-and-eye hinge [DES ENG] A hinge consisting of a hook (usually attached to a gate post) over which an eye (usually attached to the gate) is placed.

hook bolt [DES ENG] A bolt with a hook or L band at one end and threads at the other to fit a nut.

hook collector transistor [ELECTR] A transistor in which there are four layers of alternating n- and p-type semiconductor material and the two interior layers are thin compared to the diffusion length. Also known as hook transistor; pn hook transistor.

Hookean deformation [MECH] Deformation of a substance which is proportional to the force applied to it.

Hookean solid [MECH] An ideal solid which obeys Hooke's law exactly for all values of stress, however large.

hooked spit *See* hook.

Hooke number *See* Cauchy number.

hooker [MIN ENG] A worker who detaches empty downcoming buckets and hook-loads buckets or cans onto the hoisting rope.

Hooker diaphragm cell [CHEM ENG] A device used in industry for the electrolysis of brine (sodium chloride) to make chlorine and caustic soda (sodium hydroxide) or caustic potash (potassium hydroxide); saturated purified brine fed around the anode passes through the diaphragm to the cathode; chlorine is formed at the anode and hydrogen released at the cathode, leaving sodium hydroxide and residual sodium chloride in the cell liquor; the diaphragm prevents the products from mixing.

Hookeriales [BOT] An order of the mosses with irregularly branched stems and leaves that appear to be in one plane.

Hooker process [MET] A forming process in which pierced slugs or cups are punched through a die to produce tubing and other shapes.

Hooke's joint [MECH ENG] A simple universal joint; consists of two yokes attached to their respective shafts and connected by means of a spider. Also known as Cardan joint.

Hooke's law [MECH] The law that the stress of a solid is directly proportional to the strain applied to it.

hook gage [ENG] An instrument used to measure changes in the level of the water in an evaporation pan; it consists of a pointed metal hook, mounted in the vertical, whose position with respect to its supporting member may be adjusted by means of a micrometer arrangement; the gage is placed on the still well,

HOOKER DIAPHRAGM CELL

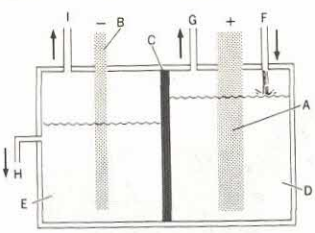


Diagram of diaphragm cell for making chlorine and caustic soda. A = graphite anode, B = iron screen cathode, C = asbestos diaphragm, D = anode compartment for brine and chlorine, E = cathode compartment for NaOHNaCl cell liquor, F = brine inlet, G = chlorine outlet, H = cell liquor (caustic soda) outlet, I = hydrogen outlet.

HOOKE'S JOINT

A drawing of a Hooke's joint. *(From C. W. Ham, E. J. Crane, and W. L. Rogers, Mechanics of Machinery, McGraw-Hill, 1958)*

and a measurement is taken when the point of the hook just breaks above the surface of the water.

hook tender [MIN ENG] In bituminous coal mining, a worker who attaches the hook of a hoisting cable to the link of a trip of cars to be hauled up or lowered down an incline. Also known as rope cutter.

hook transistor *See* hook collector transistor.

hookup [ELEC] An arrangement of circuits and apparatus for a particular purpose.

hookup wire [ELEC] Tinned and insulated solid or stranded soft-drawn copper wire used in making circuit connections.

hook-wall packer [PETRO ENG] Fluid-proof seal between the outside of oil well tubing and the inside of the casing; hooks hold it in place.

HOOKWORM

A typical hookworm.

hookworm [INV ZOO] The common name for parasitic roundworms composing the family Ancylostomidae.

hookworm disease [MED] Microcytic hypochromic anemia in humans produced by the nematodes *Necator americanus* or *Ancylostoma duodenale* in the the intestine.

hook wrench [DES ENG] A wrench with a hook for turning a nut or bolt.

hoop [CIV ENG] A ring-shaped binder placed around the main reinforcement in a reinforced concrete column.

hooped column [CIV ENG] A column of reinforced concrete with hoops around the main reinforcements.

Hooper jig [MIN ENG] A pneumatic jig, used when water is scarce or the ore must be kept dry, to concentrate values from sands.

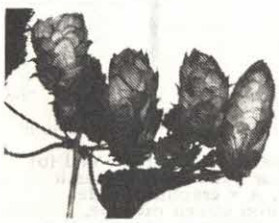
hoot stop [COMPUT SCI] A closed loop that generates an audible signal; usually employed to signal an error or for operating convenience.

hop [BOT] *Humulus lupulus*. A dioecious liana of the order Urticales distinguished by herbaceous vines produced from a perennial crown; the inflorescence, a catkin, of the female plant is used commercially for beer production. [COMMUN] A single reflection of a radio wave from the ionosphere back to the earth in traveling from one point to another.

hopeite [MINERAL] $Zn_3(PO_4)_2 \cdot 4H_2O$ A gray, orthorhombic mineral composed of hydrous phosphate of zinc; specific gravity is 2.76–2.85; dimorphous with parahopeite.

Hopfner process [MET] A process for the recovery of copper from its sulfide ores by leaching with a solution of cuprous chloride in sodium or calcium chloride and electrolyzing the resulting solution in tanks that are protected by diaphragms. Also spelled Hoepfner process.

HOP



Hop, female inflorescences. *(USDA)*

hophornbeam [BOT] Any tree of the genus *Ostrya* in the birch family recognized by its very scaly bark and the fruit which closely resembles that of the hopvine.

Hopkins-Cole reaction [ANALY CHEM] The appearance of a violet ring when concentrated sulfuric acid is added to a mixture that includes a protein and glyoxylic acid; however, gelatin and zein do not show the reaction.

Hopkinson's coefficient [ELECTROMAG] The average magnetic flux per turn of an induction coil divided by the average flux per turn of another coil linked with it.

Hoplocarida [INV ZOO] A superorder of the class Crustacea with the single order Stomatopoda.

Hoplonemertini [INV ZOO] An order of unsegmented, ribbonlike worms in the class Enopla; all species have an armed proboscis.

Hoplophoridae [INV ZOO] A family of prawns containing numerous bathypelagic representatives.

hopper [COMPUT SCI] *See* card hopper. [ENG] A funnel-shaped receptacle with an opening at the top for loading and a discharge opening at the bottom for bulk-delivering material such as grain or coal.

hopperburn [PL PATH] A disease of potato and peanut plants caused by a leafhopper which secretes a toxic substance on the leaves, causing browning and shriveling.

hopper car [ENG] A freight car with a permanent roof and a hinged floor sloping to one or more hoppers for discharging contents by gravity.

hopper dryer [ENG] In extrusion and injection molding of plastics, a combined feeding and drying device in which hot air flows through the hopper.

hoppit [MIN ENG] A large bucket, usually up to about 80 cubic feet (2.3 cubic meters), used in shaft sinking for hoisting men, rock, materials, and tools. Also known as bowk; kibble; sinking bucket.

hopsacking [TEXT] A fabric with an open, plied-yarn, coarse basket weave, similar to sacking used to gather hops.

hops oil [MATER] Greenish-yellow essential oil with strong aroma; soluble in alcohol, ether, and chloroform, insoluble in water; distilled from strobiles of the hop (*Humulus lupulus*); main components are humulene, geraniol, and terpenes; used to aromatize beer and tobacco.

horadiam drilling [MIN ENG] The drilling of a number of horizontal boreholes radiating outward from a common center. Also known as horizontal-ring drilling.

hordeolum [MED] A furuncular inflammation of the connective tissue of the eyelids near a hair follicle. Also known as sty.

Hordeum [BOT] A genus of the order Cyperales containing all species of barley.

horehound *See* marrubium.

horizon [ASTRON] The apparent boundary line between the sky and the earth or sea. Also known as apparent horizon. [GEOL] **1.** The surface separating two beds. **2.** One of the layers, each of which is a few inches to a foot thick, that make up a soil.

horizon bar [NAV] The gyro-stabilized line or bar in an artificial-horizon flight instrument.

horizon distance [GEOD] The distance, at any given azimuth, to the point on the earth's surface constituting the horizon for some specified observer.

horizon glass [NAV] That glass of a marine sextant, through which the horizon is observed.

horizon lights [NAV] Lights arranged to provide a ground reference for pilots taking off.

horizon mining [MIN ENG] A system of mining suitable for inclined, and perhaps faulted, coal seams; main stone headings are driven, at predetermined levels, from the winding shaft to intersect the seams to be developed.

horizon mirror [NAV] On a marine sextant, the mirror part of the horizon glass; the term is sometimes used loosely to refer to the horizon glass.

horizon prism [NAV] A prism which can be inserted in the optical path of an instrument, such as a bubble sextant, to permit observation of the visible horizon.

horizon scanner *See* horizon tracker.

horizon sensor [ENG] A passive infrared device that detects the thermal discontinuity between the earth and space; used in establishing a stable vertical reference for control of the attitude or orientation of a missile or satellite in space.

horizon system of coordinates [ASTRON] A set of celestial coordinates based on the celestial horizon as the primary great circle.

horizontal [SCI TECH] Being in a plane perpendicular to the gravitational field, that is, perpendicular to a plumb line, at a given point on the earth's surface.

horizontal auger [MECH ENG] A rotary drill, usually powered by a gasoline engine, for making horizontal blasting holes in quarries and opencast pits.

horizontal base-line method [ORD] Method of locating targets or other points by intersection from two observation stations located at opposite ends of a base line.

horizontal blanking [ELECTR] Blanking of a television picture tube during the horizontal retrace.

horizontal blanking pulse [ELECTR] The rectangular pulse that forms the pedestal of the composite television signal between active horizontal lines and causes the beam current of the picture tube to be cut off during retrace. Also known as line-frequency blanking pulse.

horizontal boiler [MECH ENG] A water-tube boiler having a main bank of straight tubes inclined toward the rear at an angle of 5 to 15° from the horizontal.

horizontal bombing [ORD] Bombing from an airplane in horizontal flight, as distinguished from dive bombing, glide bombing, toss bombing, and the like. Also known as level bombing.

horizontal borer [MIN ENG] A machine that makes holes 2–6 inches (5–15 centimeters) in diameter, used for drilling at opencut coal mines.

horizontal boring machine [MECH ENG] A boring machine adapted for work not conveniently revolved, for milling, slotting, drilling, tapping, boring, and reaming long holes and for making interchangeable parts that must be produced without jigs and fixtures.

horizontal broaching machine [MECH ENG] A pull-type

broaching machine having the broach mounted on the horizontal plane.

horizontal centering control [ELECTR] The centering control provided in a television receiver or cathode-ray oscilloscope to shift the position of the entire image horizontally in either direction on the screen.

horizontal chromatography [ANALY CHEM] Paper chromatography in which the chromatogram is horizontal instead of vertical.

horizontal circle [ENG] A graduated disk affixed to the base of a transit or theodolite which is used to measure horizontal angles.

horizontal control [MAP] A system of points whose horizontal positions and interrelationships have been accurately determined for use as fixed references in positioning and correlating map features.

horizontal convergence control [ELECTR] The control that adjusts the amplitude of the horizontal dynamic convergence voltage in a color television receiver.

horizontal crosscut *See* horizontal drive.

horizontal crusher [MECH ENG] Rotary size reducer in which the crushing cone is supported on a horizontal shaft; needs less headroom than vertical models.

horizontal danger angle [NAV] The maximum or minimum angle between two points on a chart, as observed from a craft, indicating the limit of safe approach to an off-lying danger. Also known as danger angle.

horizontal definition *See* horizontal resolution.

horizontal deflection electrode [ELECTR] One of a pair of electrodes that move the electron beam horizontally from side to side on the fluorescent screen of a cathode-ray tube employing electrostatic deflection.

horizontal deflection oscillator [ELECTR] The oscillator that produces, under control of the horizontal synchronizing signals, the sawtooth voltage waveform that is amplified to feed the horizontal deflection coils on the picture tube of a television receiver. Also known as horizontal oscillator.

horizontal displacement *See* strike slip.

horizontal distributed processing system [COMPUT SCI] A type of distributed system in which two or more computers which are logically equivalent are connected together, with no hierarchy or master/slave relationship.

horizontal drilling machine [MECH ENG] A drilling machine in which the drill bits extend in a horizontal direction.

horizontal drive [MIN ENG] An opening with a small inclination directed toward the shaft to drain the water and facilitate hauling of full cars to the shaft. Also known as horizontal crosscut.

horizontal drive control [ELECTR] The control in a television receiver, usually at the rear, that adjusts the output of the horizontal oscillator. Also known as drive control.

horizontal earth rate [NAV] The rate at which the spin axis of a gyroscope must be tilted about the horizontal axis to remain parallel to the earth's surface to compensate for the effect of earth rate; horizontal earth rate is maximum at the equator, zero at the poles, and varies as the cosine of the latitude.

horizontal engine [MECH ENG] An engine with horizontal stroke.

horizontal error [ORD] The error in range, deflection, or radius which a weapon may be expected to exceed as often as not.

horizontal feed [COMPUT SCI] A card feed in which punch cards are placed in a hopper and enter and pass through a card track, all in a horizontal position.

horizontal field balance [ENG] An instrument that measures the horizontal component of the magnetic field by means of the torque that the field component exerts on a vertical permanent magnet.

horizontal field-strength diagram [ELECTROMAG] Representation of the field strength at a constant distance from an antenna and in a horizontal plane; unless otherwise specified, this plane is that passing through the antenna.

horizontal firing [MECH ENG] The firing of fuel in a boiler furnace in which the burners discharge fuel and air into the furnace horizontally.

horizontal flow chart [COMPUT SCI] A graphical representation of the movement of forms, punch cards, and other recording media through an organization, showing the movement of each medium from the time it is first used to the time it is destroyed.

horizontal flyback [ELECTR] Flyback in which the electron beam of a television picture tube returns from the end of one scanning line to the beginning of the next line. Also known as horizontal retrace.

horizontal fold *See* nonplunging fold.

horizontal force instrument [ENG] An instrument used to make a comparison between the intensity of the horizontal component of the earth's magnetic field and the magnetic field at the compass location on board a craft; basically, it consists of a magnetized needle pivoted in a horizontal plane, as a dry-card compass; it settles in some position which indicates the direction of the resultant magnetic field; if the needle is started swinging, it damps down with a certain period of oscillation dependent upon the strength of the magnetic field. Also known as horizontal vibrating needle.

horizontal frequency *See* line frequency.

horizontal hold control [ELECTR] The hold control that changes the free-running period of the horizontal deflection oscillator in a television receiver, so that the picture remains steady in the horizontal direction.

horizontal instruction [COMPUT SCI] An instruction in machine language to carry out independent operations on various operands in parallel or in a well-defined time sequence.

horizontal intensity [GEOPHYS] The strength of the horizontal component of the earth's magnetic field.

horizontal intensity variometer [ENG] Essentially a declination variometer with a larger, stiffer fiber than in the standard model; there is enough torsion in the fiber to cause the magnet to turn 90° out of the magnetic meridian; the magnet is aligned with the magnetic prime vertical to within 0.5° so it does not respond appreciably to changes in declination. Also known as H variometer.

horizontal lathe [MECH ENG] A horizontally mounted lathe with which longitudinal and radial movements are applied to a workpiece that rotates.

horizontal linearity control [ELECTR] A linearity control that permits narrowing or expanding of the width of the left half of a television receiver image, to give linearity in the horizontal direction so that circular objects appear as true circles.

horizontal line frequency *See* line frequency.

horizontal magnetometer [ENG] A measuring instrument for ascertaining changes in the horizontal component of the magnetic field intensity.

horizontal milling machine [MECH ENG] A knee-type milling machine with a horizontal spindle and a swiveling table for cutting helices.

horizontal obstacle sonar [NAV] A constant-transmission, frequency-modulated sonar used in underwater navigation to detect objects ahead of a submersible vehicle and to determine the bearing and range of specially designed transponders. Abbreviated HOS.

horizontal oscillator *See* horizontal deflection oscillator.

horizontal output stage [ELECTR] The television receiver stage that feeds the horizontal deflection coils of the picture tube through the horizontal output transformer; may also include a part of the second-anode power supply for the picture tube.

horizontal output transformer [ELECTR] A transformer used in a television receiver to provide the horizontal deflection voltage, the high voltage for the second-anode power supply of the picture tube, and the filament voltage for the high-voltage rectifier tube. Also known as flyback transformer; horizontal sweep transformer.

horizontal parallax [ASTRON] The geocentric parallax of a celestial object when it is rising or setting. [GRAPHICS] *See* absolute stereoscopic parallax.

horizontal parity check *See* longitudinal parity check.

horizontal pendulum [MECH] A pendulum that moves in a horizontal plane, such as a compass needle turning on its pivot.

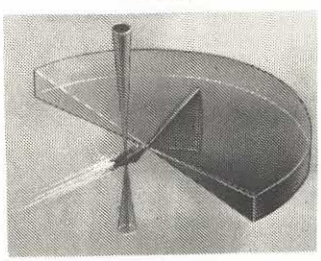
horizontal plane [ANAT] A transverse plane at right angles to the longitudinal axis of the body.

horizontal polarization [COMMUN] Transmission of radio waves so that the electric lines of force are horizontal, while the magnetic lines of force are vertical.

horizontal-position welding [MET] **1.** Making a fillet weld on the upper side of the intersection of a vertical surface and a horizontal surface. **2.** Making a horizontal groove weld on a vertical surface.

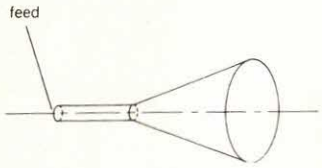
horizontal pressure force [GEOPHYS] The horizontal pressure gradient per unit mass, $-\alpha\nabla_H p$, where α is the specific volume, p the pressure, and ∇_H the horizontal component of the

HORIZONTAL OBSTACLE SONAR



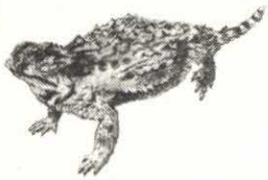
Configuration of horizontal obstacle sonar and configurations of vertical obstacle and altitude depth sonars.

HORN ANTENNA



Horn antenna, a type of direct-aperture antenna.

HORNED TOAD



Horned toad *(Phrynosoma)*, a lizard, uses its tongue to catch insects while on the run.

del operator; this force acts normal to the horizontal isobars toward lower pressure; it is one of the three important forces appearing in the horizontal equations of motion, the others being the Coriolis force and friction.

horizontal projection [GRAPHICS] A drawing of a structure as it would appear if projected on a horizontal plane.

horizontal range [ORD] The distance measured horizontally between a gun and its target; specifically in antiaircraft gunnery, the distance between a gun and a spot on the ground directly beneath the target.

horizontal resolution [ELECTR] The number of individual picture elements or dots that can be distinguished in a horizontal scanning line of a television or facsimile image. Also known as horizontal definition.

horizontal retort [MET] An intermittent unit made from a siliceous fireclay and formerly used for zinc smelting.

horizontal retort process [MET] A zinc-smelting process that employs vast, honeycomblike batteries of fireclay or silicon-carbide retorts set horizontally in a gas- or coal-fired furnace. Also known as Belgian retort process.

horizontal retrace *See* horizontal flyback.

horizontal return tubular boiler [MECH ENG] A fire-tube boiler having tubes within a cylindrical shell that are attached to the end closures; products of combustion are transported under the lower half of the shell and back through the tubes.

horizontal-ring drilling *See* horadiam drilling.

horizontal-rolled-position welding [MET] Top-side welding of a butt joint connecting two horizontal pieces of rotating pipe.

horizontal scanning [ENG] In radar scanning, rotating the antenna in azimuth around the horizon or in a sector. Also known as searching lighting.

horizontal scanning frequency [ELECTR] The number of horizontal lines scanned by the electron beam in a television receiver in 1 second.

horizontal screen [MECH ENG] Shaking screen with horizontal plates.

horizontal separation *See* strike slip.

horizontal separator [PETRO ENG] Horizontal tank used to separate free oil well gas from liquid hydrocarbons.

horizontal silo [AGR] A trench or bunker for storing silage.

horizontal sweep [ELECTR] The sweep of the electron beam from left to right across the screen of a cathode-ray tube.

horizontal sweep transformer *See* horizontal output transformer.

horizontal synchronizing pulse [ELECTR] The rectangular pulse transmitted at the end of each line in a television system, to keep the receiver in line-by-line synchronism with the transmitter. Also known as line synchronizing pulse.

horizontal system [COMPUT SCI] A programming system in which instructions are written horizontally, that is, across the page.

horizontal-tube evaporator [MECH ENG] A horizontally mounted tube-and-shell type of liquid evaporator, used most often for preparation of boiler feedwater.

horizontal vee [ELECTROMAG] An antenna consisting of two linear radiators in the form of the letter V, lying in a horizontal plane.

horizontal vibrating needle *See* horizontal force instrument.

horizon tracker [NAV] A device for establishing a vertical reference in a navigation system by precisely tracking the visible horizon. Also known as horizon scanner.

hormesis [BIOL] Providing stimulus by nontoxic amounts of a toxic agent.

hormogonium [BOT] Portion of a filament between heterocysts in certain algae; detaches as a reproductive body.

hormone [BIOCHEM] **1.** A chemical messenger produced by endocrine glands and secreted directly into the bloodstream to exert a specific effect on a distant part of the body. **2.** An organic compound that is synthesized in minute quantities in one part of a plant and translocated to another part, where it influences a specific physiological process.

horn [ELECTROMAG] *See* horn antenna. [ENG ACOUS] A tube whose cross-sectional area increases from one end to the other, used to radiate or receive sound waves and to intensify and direct them. Also known as acoustic horn. [GEOL] A topographically high, sharp, pyramid-shaped mountain peak produced by the headward erosion of mountain glaciers; the Matterhorn is the classic example. [MET] Holding arm for the electrode of a resistance spot-welding machine.

horn angle [MATH] A geometric figure formed by two tangent plane curves that lie on the same side of their mutual tangent line in the neighborhood of the point of tangency.

horn antenna [ELECTROMAG] A microwave antenna produced by flaring out the end of a circular or rectangular waveguide into the shape of a horn, for radiating radio waves directly into space. Also known as electromagnetic horn; flare (British usage); hoghorn antenna (British usage); horn; horn radiator.

horn arrester [ELEC] A lightning arrester in which the spark gap has thick wire horns that spread outward and upward; the arc forms at the narrowest bottom part of the gap, travels upward, and extinguishes itself when it reaches the widest part of the gap. Also known as horn lightning arrester.

hornbeam [BOT] Any tree of the genus *Carpinus* in the birch family distinguished by doubly serrate leaves and by small, pointed, angular winter buds with scales in four rows.

hornblende [MINERAL] A general name given to the monoclinic calcium amphiboles that form an extensive solid-solution series between the various metals in the generalized formula $(Ca,Na)_2(Mg,Fe,Al)_5(Al,Si)_8O_{22}(OH,F)_2$.

hornblendite [PETR] A plutonic rock consisting mainly of hornblende.

horn buoy [NAV] A buoy provided with a horn.

horned dinosaur [PALEON] Common name for extinct reptiles of the suborder Ceratopsia.

horned liverwort [BOT] The common name for bryophytes of the class Anthocerotae. Also known as hornwort.

horned toad [VERT ZOO] The common name for any of the lizards of the genus *Phrynosoma;* a reptile that resembles a toad but is less bulky.

horned-toad dinosaur [PALEON] The common name for extinct reptiles composing the suborder Ankylosauria.

horn equation [ACOUS] A second-order partial differential equation for the velocity potential as a function of time and of distance along an acoustic horn.

Horner's method [MATH] A technique for approximating the real roots of an algebraic equation; a root is located between consecutive integers, then a successive search is performed.

Horner's syndrome [MED] A complex of symptoms due to unilateral destruction of the cervical sympathetics.

hornet [INV ZOO] The common name for a number of large wasps in the hymenopteran family Vespidae.

hornfels [PETR] A common name for a class of metamorphic rocks produced by contact metamorphism and characterized by equidimensional grains without preferred orientation.

hornfels facies [PETR] Rock formed at depths in the earth's crust not exceeding 10 kilometers at temperatures of 250–800°C; includes albite-epidote hornfels facies, pyroxene-hornfels facies, and hornblende-hornfels facies.

horn gap [ELEC] Type of spark gap which is provided with divergent electrodes.

horn-gap switch [ELEC] Form of air switch provided with arcing horns.

horn lead *See* phosgenite.

horn lightning arrester *See* horn arrester.

horn loudspeaker [ENG ACOUS] A loudspeaker in which the radiating element is coupled to the air or another medium by means of a horn.

horn quicksilver *See* calomel.

horn radiator *See* horn antenna.

horn silver *See* cerargyrite.

horn socket [DES ENG] A cone-shaped fishing tool especially designed to recover lost collared drill rods, drill pipe, or tools in bored wells.

horn spacing [MET] Unobstructed work space in a resistance-welding machine between horns at right angles to the throat depth.

horn spoon [MIN ENG] A troughlike section cut from a cow horn and scraped thin; used for washing auriferous gravel and pulp when exacting tests are to be performed.

hornstone *See* chert.

hornwort *See* horned liverwort.

horny coral [INV ZOO] The common name for coelenterate members of the order Gorgonacea.

horography [HOROL] The making of watches and clocks.

Horologium [ASTRON] A constellation with right ascension 3 hours, declination 60° south. Also known as Clock.

horology [SCI TECH] The science of measuring time and the technology of constructing instruments for this measurement.

horse [GEOL] A large rock caught along a fault. [MIN

ENG] *See* horseback. [VERT ZOO] *Equus caballus*. A herbivorous mammal in the family Equidae; the feet are characterized by a single functional digit.

horseback [GEOL] A low and sharp ridge of sand, gravel, or rock. [MIN ENG] **1.** Shale or sandstone occurring in a channel that was cut by flowing water in a coal seam. Also known as cutout; horse; roll; swell; symon fault; washout. **2.** To move or raise a heavy piece of machinery or timber by using a pinch bar as a lever. Also known as pinch.

horse chestnut [BOT] *Aesculus hippocastanum*. An ornamental buckeye tree in the order Sapindales, usually with seven leaflets per leaf and resinous buds.

horsehair blight [PL PATH] A fungus disease of tea and certain other tropical plants caused by *Marasmius equicrinis* and characterized by black festoons of mycelia hanging from the branches.

horsehead [MIN ENG] Timbers or steel joists used to support planks in tunneling through loose ground.

Horsehead Nebula [ASTRON] A cloud of obscuring particles between the earth and a gaseous emission nebula in the constellation Orion.

horse latitudes [METEOROL] The belt of latitudes over the oceans at approximately 30–35°N and S where winds are predominantly calm or very light and weather is hot and dry.

horsepower [MECH] The unit of power in the British engineering system, equal to 550 foot-pounds per second, approximately 745.7 watts. Abbreviated hp.

horsepox [VET MED] A disease of horses such as pseudotuberculosis, contagious pustular stomatitis, or a vesicular exanthema.

horseradish [BOT] *Armoracia rusticana*. A perennial crucifer belonging to the order Capparales and grown for its pungent roots, used as a condiment.

horse serum [IMMUNOL] Immune serum obtained from the blood of horses.

horseshoe bend *See* oxbow.

horseshoe crab [INV ZOO] The common name for arthropods composing the subclass Xiphosurida, especially the subgroup Limulida.

horseshoe kidney [MED] Congenital fusion of two kidneys at one pole.

horseshoe lake *See* oxbow lake.

horseshoe magnet [ELECTROMAG] A permanent magnet or electromagnet in which the core is horseshoe-shaped or U-shaped, to bring the two poles near each other.

horsetail [BOT] The common name for plants of the genus *Equisetum* composing the order Equisetales.

horsetail ore [GEOL] An ore occurring in fractures which diverge from a larger fracture.

horsfordite [MINERAL] Cu_5Sb A silver-white mineral composed of copper-antimony alloy.

horst [GEOL] **1.** A block of the earth's crust uplifted along faults relative to the rocks on either side. **2.** A mass of the earth's crust limited by faults and standing in relief. **3.** One of the older mountain masses limiting the Alps on the west and north. **4.** A knobby ledge of limestone beneath a thin soil mantle.

horticultural crop [AGR] Any food-producing plant.

horticulture [BOT] The art and science of growing plants.

Horton number [HYD] A dimensionless number that is formed by the product of runoff intensity and erosion proportionality factor; expresses the relative intensity of erosion on the slopes of a drainage basin.

hortonolite [MINERAL] $(Fe,Mg,Mn)_2SiO_4$ A dark mineral composed of silicate of iron, magnesium, and manganese; a member of the olivine series.

Hortvet sublimator [ANALY CHEM] Device for the determination of the condensation temperature (sublimation point) of sublimed solids.

HOS *See* horizontal obstacle sonar.

hose [DES ENG] Flexible tube used for conveying fluids.

hose clamp [DES ENG] Band or brace to attach the raw end of a hose to a water outlet.

hose coupling [DES ENG] Device to interconnect two or more pieces of hose.

hose fitting [DES ENG] Any attachment or accessory item for a hose.

Hoskold formula [MIN ENG] A two-rate valuation formula formerly used to determine present value of mining properties or shares, with redemption of invested capital.

hospital information system [COMPUT SCI] The collection, evaluation or verification, storage, and retrieval of information about a patient.

hospital ship [NAV ARCH] An unarmed ship equipped as a hospital, in particular, one assigned only to assist sick and wounded men in time of war and protected from attack by international law.

host [BIOL] **1.** An organism on or in which a parasite lives. **2.** The dominant partner of a symbiotic or commensal pair.

host-centered system *See* hierarchical distributed processing system.

host computer [COMPUT SCI] The computer upon which depends a specialized computer handling the input/output functions in a real-time system.

hostile identification [PSYCH] The assumption by an individual, particularly a child, of socially undesirable characteristics of an older person important to the child so as to gain some special recognition from that person.

hostility [PSYCH] The feeling or display of anger, antagonism, or resistance toward an individual or group.

host language data-base management system [COMPUT SCI] A data-base management system that, from a programmer's point of view, represents an extension of an existing programming language.

host processor [COMPUT SCI] The central computer in a hierarchical distributed processing system, which is typically located at some central site where it serves as a focal point for the collection of data, and often for the provision of services which cannot economically be distributed.

host rock [GEOL] Rock which serves as a host for other rocks or for mineral deposits.

host/satellite system *See* hierarchical distributed processing system.

hot [ELEC] *See* energized. [NUCLEO] Being highly radioactive.

hot acid [PETRO ENG] The use of hot hydrochloric acid (200–300°F; 93–149°C) for oil well acidizing where wellbore scale is slow-dissolving and hard to remove.

hot-air engine [MECH ENG] A heat engine in which air or other gases, such as hydrogen, helium, or nitrogen, are used as the working fluid, operating on cycles such as the Stirling or Ericsson.

hot-air furnace [MECH ENG] An encased heating unit providing warm air to ducts for circulation by gravity convection or by fans.

hot-air soldering [MET] Soldering with a narrow blast of air whose temperature is closely controlled at the value required for soldering individual joints on printed circuit boards.

hot-air sterilization [ENG] A method of sterilization using dry heat for glassware and other heat-resistant materials which need to be dry after treatment; temperatures of 160–165°C are generated for at least 2 hours.

hot atom [NUCLEO] An atom that has high internal or kinetic energy as a result of a nuclear process such as beta decay or neutron capture.

hotbed [MET] An area where hot-rolled metal is placed to cool. Also known as cooling table.

hot belt [CLIMATOL] The belt around the earth within which the annual mean temperature exceeds 20°C.

hot-blast stove [MET] A retracting device for preheating the incoming air in an iron blast furnace by using heat from the burning gases of the furnace.

hot-bulb [MECH ENG] Pertaining to an ignition method used in semidiesel engines in which the fuel mixture is ignited in a separate chamber kept above the ignition temperature by the heat of compression.

hot carrier [ELECTR] A carrier, which may be either an electron or a hole, that has relatively high energy with respect to the carriers normally found in majority-carrier devices such as thin-film transistors.

hot-carrier diode *See* Schottky barrier diode.

hot cathode [ELECTR] A cathode in which electron or ion emission is produced by heat. Also known as thermionic cathode.

hot-cathode gas-filled tube *See* thyratron.

hot-cathode tube *See* thermionic tube.

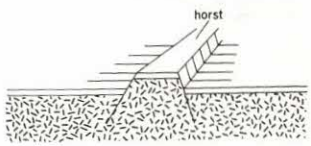
hot cell *See* cave.

hot chamber die casting [ENG] A die-casting process in which a piston is driven through a reservoir of molten metal and thereby delivers a quantity of molten metal to the die cavity.

HORSEHEAD NEBULA

Horsehead Nebula in Orion (IC 434, Bernard 33), which was photographed in red light with a 200-inch (508-centimeter) telescope. *(Hale Observatories)*

HORST



A simple horst with associated faults. *(From A. K. Lobeck, Geomorphology, McGraw-Hill, 1939)*

HOT-FILAMENT IONIZATION GAGE

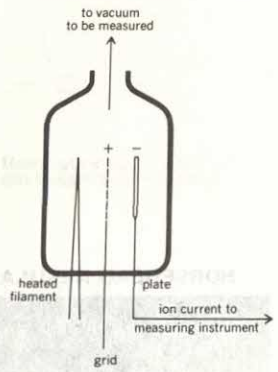


Diagram of hot-filament ionization gage.

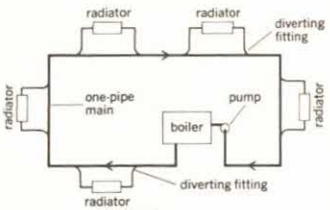
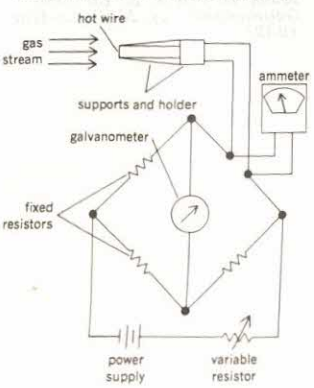
HOT-WATER HEATING



One-pipe hot-water heating system.

HOT-WIRE ANEMOMETER



Constant-resistance hot-wire anemometer.

Hotchkiss drive [MECH ENG] An automobile rear suspension designed to take torque reactions through longitudinal leaf springs.

Hotchkiss superdip [ENG] A sensitive dip needle consisting of a freely rotating magnetic needle about a horizontal axis and a nonmagnetic bar with a counterweight at the end which is attached to the pivot point of the needle.

hot-die steel [MET] A high-temperature, shock-resistant alloy steel used in forging machines.

hot dipping [MET] Coating metal components by immersion in a molten metal bath, such as tin or zinc.

hot-draw [ENG] To draw a material while it is hot.

hot electron [ELECTR] An electron that is in excess of the thermal equilibrium number and, for metals, has an energy greater than the Fermi level; for semiconductors, the energy must be a definite amount above that of the edge of the conduction band.

hot-electron triode [ELECTR] Solid-state, evaporated thin-film structure directly equivalent to a vacuum triode.

hot extrusion [MET] The process of extruding metal at very high temperatures.

hot-filament ionization gage [ELECTR] An ionization gage in which electrons emitted by an incandescent filament, and attracted toward a positively charged grid electrode, collide with gas molecules to produce ions which are then attracted to a negatively charged electrode; the ion current is a measure of the number of gas molecules.

hot flash [PHYSIO] A sudden transitory sensation of heat, often involving the whole body, due to cessation of ovarian function; a symptom of the climacteric.

hot forming [MET] Shaping operations performed at temperatures above the recrystallization temperature of the metal.

hot-gas welding [ENG] Joining of thermoplastic materials by softening first with a jet of hot air, then joining at the softened points.

hot hole [ELECTR] A hole that can move at much greater velocity than normal holes in a semiconductor.

hothouse [ENG] A greenhouse heated to grow plants out of season.

hot junction [ELECTR] The heated junction of a thermocouple.

hot laboratory [NUCLEO] A laboratory designed for research with radioactive materials that have such high strengths that special handling precautions are required.

hot line [COMMUN] Direct circuit between two points, available for immediate use without patching or switching.

hot patching [ENG] Repair of a hot refractory lining in a furnace, usually by spraying with a refractory slurry.

hot plate [MET] A heated surface on which joints are brought to soldering temperature.

hot press forge [MET] A press in which metal parts are formed by forcing hot metal into dies under high pressure.

hot pressing [ENG] Forming a metal-powder compact or a ceramic shape by applying pressure and heat simultaneously at temperatures high enough for sintering to occur.

hot-press printing *See* hot stamping.

hot-pressure welding [MET] A pressure welding process in which macrodeformation of the base material to produce coalescence results from the application of heat and pressure.

hot-quenching [MET] Quenching from high temperatures into a medium of lower but still high temperature.

hot rolling [MET] Rolling of metal bars or sheets when hot.

hot-runner mold [ENG] A plastics mold in which the runners are kept hot by insulation from the chilled cavities.

hot saw [MECH ENG] A power saw used to cut hot metal.

hot shortness [MET] Brittleness, usually of steel or wrought iron, when the metal is hot, due to a high sulfur content.

hotshot wind tunnel [AERO ENG] A wind tunnel in which electrical energy is discharged into a pressurized arc chamber, increasing the temperature and pressure in the arc chamber so that a diaphragm separating the arc chamber from an evacuated chamber is ruptured, and the heated gas from the arc chamber is then accelerated in a conical nozzle to provide flows with mach numbers of 10 to 27 for durations of 10 to 100 milliseconds.

hot-solder coating [ENG] The application of a protective finish to a printed circuit board by dip soldering in a solder bath.

hot spot [CHEM ENG] An area or point within a reaction system at which the temperature is appreciably higher than in the bulk of the reactor; usually locates the reaction front. [FOR] A forest region where fires occur at frequent intervals. [GRAPHICS] A region of excessive illumination on a photo. [MOL BIO] A site in a gene at which there is an unusually high frequency of mutation. [NUCLEO] **1.** A surface area of higher than average radioactivity. **2.** A part of a reactor fuel surface element that has become overheated. [PHYS] A localized region with temperature higher than the surroundings.

hot spring [HYD] A thermal spring whose water temperature is above 98°F (37°C).

hot stamp [ENG] An impression on a forging made in a heated condition.

hot stamping [GRAPHICS] A method of printing in which heated type or stamping dies are pressed against a thin leaf of gold or other metal, or against pigment upon a surface such as paper, board, plastic, or leather; the thin leaf contains a sizing agent that is set by heat; this system is sometimes used for making movie titles and artwork for slides. Also known as hot-press printing.

hot strength *See* tensile strength.

hot-swage [MET] To reduce the cross section of a hot metal tube or rod.

hot tear [MET] A separation either internally or externally in a casting due to loadings or internal stresses or both; it results from improper solidification, and shrinkage near the temperature at which the casting is completely solid.

hot trim [MET] Removal of flash in a heated forging.

hot-water heating [MECH ENG] A heating system for a building in which the heat-conveying medium is hot water and the heat-emitting means are radiators, convectors, or panel coils. Also known as hydronic heating.

hot wave *See* heat wave.

hot well [MECH ENG] A chamber for collecting condensate, as in a steam condenser serving an engine or turbine.

hot wind [METEOROL] General term for winds characterized by intense heat and low relative humidity, such as summertime desert winds or an extreme foehn.

hot-wire ammeter [ENG] An ammeter which measures alternating or direct current by sending it through a fine wire, causing the wire to heat and to expand or sag, deflecting a pointer. Also known as thermal ammeter.

hot-wire anemometer [ENG] An anemometer used in research on air turbulence and boundary layers; the resistance of an electrically heated fine wire placed in a gas stream is altered by cooling by an amount which depends on the fluid velocity.

hot-wire instrument [ENG] An instrument that depends for its operation on the expansion by heat of a wire carrying a current.

hot-wire microphone [ENG ACOUS] A velocity microphone that depends for its operation on the change in resistance of a hot wire as the wire is cooled by varying particle velocities in a sound wave.

hot working [MET] Plastic deformation of a metal at a rate and temperature such that strain hardening cannot occur.

Houben-Hoesch synthesis [ORG CHEM] Condensation of cyanides with polyhydric phenols in the presence of hydrogen chloride and zinc chloride to yield phenolic ketones.

Houdry butane dehydrogenation [CHEM ENG] A catalytic process for dehydrogenating light hydrocarbons from crude oil to their corresponding mono- or diolefins; chromia-alumina catalysts with inert material are used in pellet form.

Houdry fixed-bed catalytic cracking [CHEM ENG] A cyclic, regenerable process for cracking of petroleum distillates to produce high-octane gasoline from higher-boiling petroleum fractions; synthetic or natural bead catalysts of activated hydrosilicate of alumina may be used. Also known as Houdry process.

Houdry hydrocracking [CHEM ENG] A catalytic process combining cracking and desulfurization of crude petroleum oil in the presence of hydrogen; catalysts may be nickel oxide or nickel sulfide on silica alumina, and cobalt molybdate on alumina.

Houdry process *See* Houdry fixed-bed catalytic cracking.

Hound Dog [ORD] A U.S. Air Force air-to-surface guided missile having a range of several hundred miles, capable of carrying a nuclear warhead, and intended for launching from long-range bombers of the Strategic Air Command.

hour [MECH] A unit of time equal to 3600 seconds. Abbreviated hr.

hour angle [ASTRON] Angular distance west of a celestial

meridian or hour circle; the arc of the celestial equator, or the angle at the celestial pole, between the upper branch of a celestial meridian or hour circle and the hour circle of a celestial body or the vernal equinox, measured westward through 360°.

hour angle difference *See* meridian angle difference.

hour circle [ASTRON] An imaginary great circle passing through the celestial poles on the celestial sphere above which declination is measured. Also known as circle of declination; circle of right ascension.

hourglass [HOROL] An instrument for measuring time, consisting of two somewhat funnel-shaped vessels joined at their narrow points by a thin, hollow neck; one hour is required for a given quantity of sand to fall from the upper to the lower vessel.

hourglass screw *See* Hindley screw.

hourglass stomach [MED] A stomach with an equatorial constriction usually caused by formation of scar tissue around an ulcer.

hourglass worm *See* Hindley screw.

hour hand [HOROL] The pointer that indicates the hour on a timepiece.

hourly observation *See* record observation.

hour-out line *See* time front.

hour wheel [HOROL] The wheel carrying the hour hand of a timepiece.

houseboat [NAV ARCH] A barge-type craft with cabins on its deck, used as a dwelling and for leisurely cruising.

house drain [CIV ENG] Horizontal drain in a basement receiving waste from stacks.

housefly [INV ZOO] *Musca domestica*. A dipteran insect with lapping mouthparts commonly found near human habitations; a vector in the transmission of many disease pathogens.

housekeeping [COMPUT SCI] Those operations or routines which do not contribute directly to the solution of a computer program, but rather to the organization of the program.

housekeeping run [COMPUT SCI] The performance of a program or routine to maintain the structure of files, such as sorting, merging, addition of new records, or deletion or modification of existing records.

house physician [MED] A physician employed by a hospital.

house sewer [CIV ENG] Connection between house drain and public sewer.

housing [ENG] A case or enclosure to cover and protect a structure or a mechanical device.

Houskeeper seal [ENG] A vacuum-tight seal made between copper and glass by bringing the copper to a flexible feather edge before fusing it to the glass; the copper then flexes as the glass shrinks during cooling.

hovercraft *See* air-cushion vehicle.

howardite [GEOL] An achondritic stony meteorite composed chiefly of calcic plagioclase and orthopyroxene.

Howell-Bunger valve *See* cone valve.

Howell-Jolly bodies [PATH] Small, round basophilic inclusions of nuclear material in erythrocytes of splenectomized persons.

Howell's unit [BIOL] A unit for the standardization of heparin.

Howe truss [CIV ENG] A truss for spans up to 80 feet (24 meters) having both vertical and diagonal members; made of steel or timber or both.

howitzer [ORD] A complete projectile-firing weapon with a bore diameter greater than 30 millimeters; length of the bore is usually 25 to 30 caliber, and maximum angle of velocity about 65°; used to deliver curved fire with projectiles of lower muzzle velocities than those from the gun.

howl [ENG ACOUS] Undesirable prolonged sound produced by a radio receiver or audio-frequency amplifier system because of either electric or acoustic feedback.

howler [COMMUN] In telephone practice, an associated unit by which the test desk operator may connect a high tone of varying loudness to a subscriber's line to call the subscriber's attention to the fact that the phone receiver is off the hook. [ELECTR] An audio device used to warn a radar operator that signals are appearing on a radar screen.

howlite [MINERAL] $Ca_2Bi_5SiO_9(OH)_5$ A white mineral occurring in nodular or earthy form.

howl repeater [COMMUN] Condition in telephone repeater operation where more energy is returned than sent, resulting in an oscillation being set up on the circuit.

Howship's lacuna [HISTOL] Minute depressions in the surface of a bone undergoing resorption.

Hoyer method of prestressing *See* pretensioning.

hp *See* horsepower.

H pad *See* H network.

h parameter [ELECTR] One of a set of four transistor equivalent-circuit parameters that conveniently specify transistor performance for small voltages and currents in a particular circuit. Also known as hybrid parameter.

H pile [CIV ENG] A steel pile that is H-shaped in section.

H plane [ELECTROMAG] The plane of an antenna in which lies the magnetic field vector of linearly polarized radiation.

H-plane bend [ELECTROMAG] A rectangular waveguide bend in which the longitudinal axis of the waveguide remains in a plane parallel to the plane of the magnetic field vector throughout the bend. Also known as H bend.

H-plane T junction [ELECTROMAG] Waveguide T junction in which the change in structure occurs in the plane of the magnetic field. Also known as shunt T junction.

hr *See* hour.

H-R diagram *See* Hertzsprung-Russell diagram.

H I region [ASTRON] A region of interstellar space where neutral hydrogen is present.

H II region [ASTRON] A region of interstellar space occupied by gas that is largely atomic hydrogen and mostly ionized.

H-RNA *See* heterogeneous ribonucleic acid.

H rod [DES ENG] A drill rod having an outside diameter of 3½ inches (8.89 centimeters).

H scan *See* H scope.

H scope [NAV] A modified form of B scope on which the signal appears as two dots, the slope of the line joining them indicating elevation angle; the horizontal coordinate indicates bearing angle and the vertical coordinate range, with respect to the left-hand dot. Also known as H indicator; H scan.

HSI *See* heat stress index.

HSLA steel *See* high-strength low-alloy steel.

HSP *See* high-speed printer.

H substance [BIOCHEM] An agent similar to histamine and believed to play a role in local blood vessel response in tissue damage.

H system [NAV] A radar navigation system that uses two ground radar beacons, in conjunction with airborne equipment which gives the direction and distance to each beacon.

HTGR *See* high-temperature gas-cooled reactor.

H theorem of Boltzmann *See* Boltzmann H theorem.

HTU *See* height of transfer unit.

huangho deposit [GEOL] A coastal-plain deposit comprising alluvium spread over a level surface (such as a floodplain) but extending into marine beds of equivalent age.

huarizo [VERT ZOO] A hybrid offspring of a male llama and a female alpaca, bred for its fine fleece.

hub [COMPUT SCI] An electric socket in a plugboard into which one may insert or connect leads or may plug wires. [DES ENG] **1.** The cylindrical central part of a wheel, propeller, or fan. **2.** A piece in a lock that is turned by the knob spindle, causing the bolt to move. **3.** A short coupling that joins plumbing pipes. [MET] A steel punch used in making a working die for a coin or medal.

Hubbard Glacier [GEOL] A valley glacier which reaches tidewater from a source area of Mount St. Elias of Alaska and the Yukon.

Hubbard tank [MED] A large, specially designed tank in which a patient may be immersed for various therapeutic underwater exercises.

hubbing [MET] Forcing a male die into a blank to form a female die.

hubble [ASTRON] A unit of astronomical distance equal to 10^9 light-years or 9.4605×10^{24} meters.

Hubble constant [ASTROPHYS] The rate at which the velocity of recession of the galaxies increases with distance; the value is about 30 kilometers per second per million light-years (or 3.2×10^{-18} sec^{-1}) with an uncertainty of about ±15 km/sec.

Hubble effect *See* red shift.

Hubble flow [ASTRON] The mutual recession of celestial objects from each other by virtue of the cosmological expansion of the universe.

Hubble's Variable Nebula [ASTRON] A variable-brightness nebula associated with variable stars and fan-shaped in appearance.

HUBBARD GLACIER

Oblique air photograph of a 4-mile- (6-kilometer-) wide tidewater terminus of the Hubbard Glacier, a prototypical valley glacier. *(Photograph by H. B. Washburn, August, 1938)*

Hubble time [ASTRON] The reciprocal of the Hubble constant.

hub cannon [ORD] A cannon mounted through a propeller hub of an aircraft.

hubcap [DES ENG] A metal cap fastened or clamped to the end of an axle, as on motor vehicles.

Huber's reagent [ANALY CHEM] Aqueous solution of ammonium molybdate and potassium ferrocyanide used as a reagent to detect free mineral acid.

Hubl's reagent [ANALY CHEM] Solution of iodine and mercuric chloride in alcohol used to determine the iodine content of oils and fats.

Hübner rhomb [OPTICS] A glass rhombohedron used in photometry to compare two illuminated surfaces.

huckleberry [BOT] The common name for shrubs of the genus *Gaylussacia* in the family Ericaceae distinguished by an ovary with 10 locules and 10 ovules; the dark-blue berries are edible.

Hudsonian life zone [ECOL] A zone comprising the climate and biotic communities of the northern portions of North American coniferous forests and the peaks of high mountains.

hudsonite *See* cortlandite.

hue [OPTICS] The name of a color, such as red, yellow, green, blue, or purple, as perceived subjectively.

huebnerite [MINERAL] $MnWO_4$ A brownish-red to black manganese member of the wolframite series, occurring in short, monoclinic, prismatic crystals; isomorphous with ferberite.

hue control [ELECTR] A control that varies the phase of the chrominance signals with respect to that of the burst signal in a color television receiver, in order to change the hues in the image. Also known as phase control.

Huggenberger tensometer [ENG] A type of extensometer having a short gage length (10 to 20 millimeters) and employing a compound lever system that gives a magnification of about 1200.

Huggins-Talalay unit [BIOL] A unit for the standardization of phosphatase.

Hugoniot function [PHYS] A function specifying the locus of states which are possible immediately after the passage of a shock front; gives the state's pressure as a function of its specific volume.

hühnerkobelite [MINERAL] $(Na,Ca)(Fe,Mn)_2(PO_4)_2$ A mineral composed of phosphate of sodium, calcium, iron, and manganese; it is isomorphous with varulite.

Huhner's test [PATH] An examination of seminal fluid obtained from the vaginal fornix and cervical canal after a specified interval following coitus; used in fertility studies to evaluate spermatozoal survival and activity in the lower female genital tract.

hull [BOT] The outer, usually hard, covering of a fruit or seed. [FOOD ENG] **1.** To remove husks from fruits and seeds, as from ears of corn, nuts, or peas. **2.** To remove the shell of a crustacean or mollusk, as an oyster. [NAV ARCH] The body or shell of a ship. [ORD] **1.** The outer casing of a rocket, guided missile, or the like. **2.** Massive armored body of a tank, exclusive of tracks, motor, turret, and armament.

Hull cell [PHYS CHEM] An electrodeposition cell that operates within a simultaneous range of known current densities.

hulless buckwheat *See* tartary buckwheat.

hulsite [MINERAL] $(Fe^{2+},Mg)_2(Fe^{3+},Sn)(BO_3)O_2$ A black mineral composed of iron calcium magnesium tin borate.

hum [ELEC] A sound produced by an iron core of a transformer due to loose laminations or magnetostrictive effects; the frequency of the sound is twice the power line frequency. [ELECTR] An electrical disturbance occurring at the power supply frequency or its harmonics, usually 60 or 120 hertz in the United States.

human biogeography [ECOL] The science concerned with the distribution of human populations on the earth.

human chorionic gonadotropin [BIOCHEM] A gonadotropic and luteotropic hormone secreted by the chorionic vesicle. Abbreviated HCG. Also known as chorionic gonadotropin.

human community [ECOL] That portion of a human ecosystem composed of human beings and associated plant and animal species.

human ecology [ECOL] The branch of ecology that considers the relations of individual persons and of human communities with their particular environment.

human-factors engineering [ENG] The area of knowledge dealing with the capabilities and limitations of human performance in relation to design of machines, jobs, and other modifications of the human's physical environment.

human genetics [GEN] The study of human heredity and variation, including the physical basis, mechanisms of inheritance, inheritance patterns, and population analysis.

human measles immune serum [IMMUNOL] Serum from the blood of a person who has recovered from measles.

human threadworm *See* pinworm.

hum bar [ELECTR] A dark horizontal band extending across a television picture due to excessive hum in the video signal applied to the input of the picture tube.

Humble gage [PETRO ENG] Device to measure oil well bottom-hole pressure; a piston acts through a stuffing box against a helical spring in tension.

Humble relation [PETRO ENG] Equation used by oil companies to estimate porosity of the oil-bearing formation from measurements made with a contact resistivity device, such as a microlog.

Humboldt Current *See* Peru Current.

Humboldt Glacier [HYD] The largest Arctic iceberg, at latitude 79°, with a seaward front extending 65 miles (105 kilometers).

humboldtine [MINERAL] $FeC_2O_4 \cdot 2H_2O$ A mineral composed of hydrous ferrous oxalate. Also known as humboldtite; oxalite.

humboldtite *See* humboldtine.

Humboldt jig [MIN ENG] An ore jig with a movable screen.

hum-bucking coil [ENG ACOUS] A coil wound on the field coil of an excited-field loudspeaker and connected in series opposition with the voice coil, so that hum voltage induced in the voice coil is canceled by that induced in the hum-bucking coil.

humectant [CHEM] A substance which absorbs or retains moisture; examples are glycerol, propylene glycol, and sorbitol; used in preparing confectioneries and dried fruit.

humeral [ANAT] Of or pertaining to the humerus or the shoulder region.

humeroglandular effector system [PHYSIO] Glandular effector system in which the activating agent is a blood-borne chemical.

humeromuscular effector system [PHYSIO] Muscular effector system in which the activating agent is a blood-borne chemical.

Hume-Rothery compound *See* electron compound.

Hume-Rothery rule [SOLID STATE] The rule that the ratio of the number of valence electrons to the number of atoms in a given phase of an electron compound depends only on the phase, and not on the elements making up the compounds.

humerus [ANAT] The proximal bone of the forelimb in vertebrates; the bone of the upper arm in humans, articulating with the glenoid fossa and the radius and ulna.

humic [GEOL] Pertaining to or derived from humus.

humic acid [ORG CHEM] Any of various complex organic acids obtained from humus; insoluble in acids and organic solvents.

humic-cannel coal *See* pseudocannel coal.

humic coal [GEOL] A coal whose attritus is composed mainly of transparent humic degradation material.

humicolous [ECOL] Of or pertaining to plant species inhabiting medium-dry ground.

humid climate [CLIMATOL] A climate whose typical vegetation is forest. Also known as forest climate.

humidification [ENG] The process of increasing the water vapor content of a gas.

humidifier [MECH ENG] An apparatus for supplying moisture to the air and for maintaining desired humidity conditions.

humidistat [ENG] An instrument that measures and controls relative humidity. Also known as hydrostat.

humidity [METEOROL] Atmospheric water vapor content, expressed in any of several measures, such as relative humidity.

humidity capacitor [ELECTR] A device for measuring ambient relative humidity by sensing a change in capacitance.

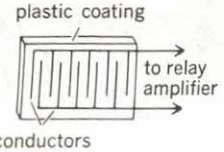
humidity coefficient [METEOROL] A measure of the precipitation effectiveness of a region; it recognizes the exponential relationship of temperature versus plant growth and is expressed as humidity coefficient $= P/(1.07)^t$, where P is the precipitation in centimeters, and t is the mean temperature in degrees Celsius for the period in question; the denominator approximately doubles with each 10°C rise in temperature.

HUEBNERITE

⊢ 2.5 cm ⊣

Radiating groups of huebnerite crystals in quartz vein, Silverton, Colorado. *(Specimen from Department of Geology, Bryn Mawr College)*

HUMIDISTAT



Electronic humidistat. *(Honeywell Inc.)*

humidity element [ENG] The transducer of any hygrometer, that is, that part of a hygrometer that quantitatively senses atmospheric water vapor.

humidity index [CLIMATOL] An index of the degree of water surplus over water need at any given station; it is calculated as humidity index $= 100s/n$, where s (the water surplus) is the sum of the monthly differences between precipitation and potential evapotranspiration for those months when the normal precipitation exceeds the latter, and where n (the water need) is the sum of monthly potential evapotranspiration for those months of surplus.

humidity indicator [INORG CHEM] Cobalt salt (for example, cobaltous chloride) that changes color as the surrounding humidity changes; changes from pink when hydrated, to greenish-blue when anhydrous.

humidity mixing ratio [METEOROL] The amount of water vapor mixed with one unit mass of dry air, usually expressed as grams of water vapor per kilogram of air.

humidity province [CLIMATOL] A region in which the precipitation effectiveness of its climate produces a definite type of biological consequence, in particular the climatic climax formations of vegetation (rain forest, tundra, and the like).

humidity strip [ENG] The humidity transducing element in a Diamond-Hinman radiosonde; it consists of a flat plastic strip bounded by electrodes on two sides and coated with a hygroscopic chemical compound such as lithium chloride; the electrical resistance of this coating is a function of the amount of moisture absorbed from the atmosphere and the temperature of the strip. Also known as electrolytic strip.

humidity test [MET] Corrosion test in which a specimen is exposed to an environment of controlled humidity and temperature.

humid transition life zone [ECOL] A zone comprising the climate and biotic communities of the northwest moist coniferous forest of the north-central United States.

humification [GEOL] Formation of humus.

humifuse [BIOL] Spread over the ground surface.

humin [GEOL] *See* ulmin. [ORG CHEM] An insoluble pigment formed in the acid hydrolysis of a protein that contains tryptophan.

Humiriaceae [BOT] A family of dicotyledonous plants in the order Linales characterized by exappendiculate petals, usually five petals, flowers with an intrastaminal disk, and leaves lacking stipules.

humite [MINERAL] **1.** A humic coal mineral. **2.** A series of magnesium neosilicate minerals closely related in crystal structure and chemical composition.

humivore [ECOL] An organism that feeds on humus.

hummer screen [MIN ENG] An electrically vibrated ore screen for sizing moderately small material.

hummingbird [VERT ZOO] The common name for members of the family Trochilidae; fast-flying, short-legged, weak-footed insectivorous birds with a tubular, pointed bill and a fringed tongue.

hummock [ECOL] A rounded or conical knoll frequently formed of earth and covered with vegetation. [GEOL] A rounded or conical knoll, mound, hillock, or other small elevation, generally of equal dimensions and not ridgelike. Also known as hammock. [HYD] A mound, hillock, or pile of broken floating ice, either fresh or weathered, that has been forced upward by pressure, as in an ice field or ice floe.

hummocked ice [OCEANOGR] Pressure ice, characterized by haphazardly arranged mounds or hillocks; it has less definite form, and show the effects of greater pressure, than either rafted ice or tented ice, but in fact may develop from either of those.

hummocky [GEOL] Any topographic surface characterized by rounded or conical mounds.

hum modulation [ELECTR] Modulation of a radio-frequency signal or detected audio-frequency signal by hum; heard in a radio receiver only when a station is tuned in.

Humod [GEOL] A suborder of the soil order Spodosol having an accumulation of humus, and of aluminum but not iron.

humodurite *See* translucent attritus.

humogelite *See* ulmin.

humor [PHYSIO] A fluid or semifluid part of the body.

Humox [GEOL] A suborder of the soil order Oxisol that is high in organic matter, well drained but moist all or nearly all year, and restricted to relatively cool climates and high altitudes for Oxisols.

Humpage gears [MECH ENG] A train of bevel gears used for speed reduction.

humpback *See* kyphosis.

Humphrey gas pump [MECH ENG] A combined internal combustion engine and pump in which the metal piston has been replaced by a column of water.

Humphreys series [SPECT] A series of lines in the infrared spectrum of atomic hydrogen whose wave numbers are given by $R_H[(1/36) - (1/n^2)]$, where R_H is the Rydberg constant for hydrogen, and n is any number greater than 6.

Humphrey's spiral [MIN ENG] An ore concentrator consisting of a stationary spiral trough through which ore pulp gravitates; heavy particles stay on the inside and lighter ones climb to the outside.

Humphries equation [THERMO] An equation which gives the ratio of specific heats at constant pressure and constant volume in moist air as a function of water vapor pressure.

hump yard [CIV ENG] A switch yard in a railway system that has a hump or steep incline down which freight cars can coast to prescheduled locations. Also known as gravity yard.

Humult [GEOL] A suborder of the soil order Ultisol, well drained with a moderately thick surface horizon; formed under conditions of high rainfall distributed evenly over the year; common in southeastern Brazil.

humus [GEOL] The amorphous, ordinarily dark-colored, colloidal matter in soil; a complex of the fractions of organic matter of plant, animal, and microbial origin that are most resistant to decomposition.

hundred-percent rectangle [ORD] A rectangle whose length is eight probable errors in range, and whose breadth is eight probable errors in direction; its center is the center of dispersion; it is the area in which all shots (except wild shots) will fall when fired with the same data under identical conditions. Also known as rectangle of dispersion.

hundredweight [SCI TECH] Abbreviated cwt. **1.** A unit of weight, in common use in the United States, equal to 100 pounds or the weight of 45.359237 kilograms. Also known as cental; centner; kintal; quintal; short hundredweight. **2.** A unit of weight in common use in the United Kingdom equal to 112 pounds or to the weight of 50.80234544 kilograms. Also known as long hundredweight. **3.** A unit of weight in troy measure equal to 100 troy pounds or the weight of 37.32417216 kilograms.

Hund rules [ATOM PHYS] Two rules giving the order in energy of atomic states formed by equivalent electrons: of the terms given by equivalent electrons, the ones with greatest multiplicity have the least energy, and of these the one with greatest orbital angular momentum is lowest; the state of a multiplet with lowest energy is that in which the total angular momentum is the least possible, if the shell is less than half-filled, and the greatest possible, if more than half filled.

Hundsdieke reaction [ORG CHEM] Production of an alkyl halide by boiling a silver carboxylate with an equivalent weight of bromine in carbon tetrachloride.

hunger [PSYCH] The need for food and the physiological and psychological mechanisms regulating food intake.

hungry joint *See* starved joint.

hung shot [ENG] A shot whose explosion is delayed after detonation or ignition.

Hunner's ulcer [MED] A chronic ulcer of the urinary bladder, frequently in association with interstitial cystitis. Also known as elusive ulcer.

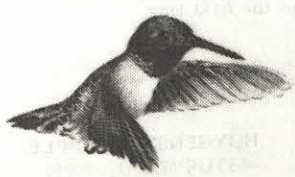
hunt [AERO ENG] **1.** Of an aircraft or rocket, to weave about its flight path, as if seeking a new direction or another angle of attack; specifically, to yaw back and forth. **2.** Of a control surface, to rotate up and down or back and forth without being detected by the pilot.

Hunt and Douglas process [MET] Smelting process involving the roasting of matte carrying copper, lead, gold, and silver to form copper sulfate and oxide (but not silver sulfate); this product is leached with sulfuric acid for copper; the resulting solution is treated with calcium chloride by passing sulfur dioxide through it; the cuprous chloride is then reduced to cuprous oxide by milk of lime, (regenerating calcium chloride), and the cuprous oxide is smelted.

Hunt continuous filter [MIN ENG] A continuous-vacuum filter consisting of a horizontally revolving, annular filter bed on which pulp is washed and then vacuum-dried.

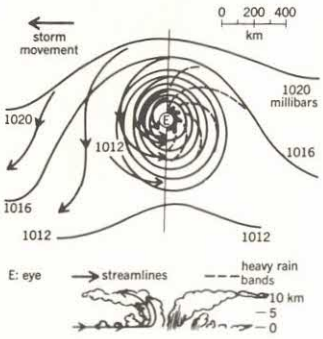
hunter's moon [ASTRON] The full moon next following the harvest moon.

HUMMINGBIRD



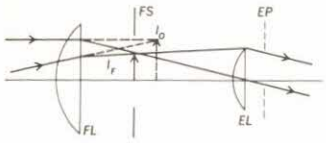
Hummingbird, capable of hovering in flight.

HURRICANE



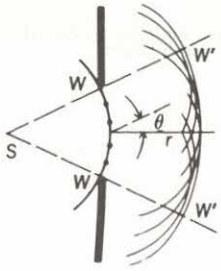
Simplified model diagram of circulation of a Northern Hemisphere hurricane. Isobars (in millibars) have been omitted near the cyclone center. On the left are streamlines of airflow; on the right are regions of heavy rain. Below is a vertical section through the center, showing clouds and vertical circulation.

HUYGENS EYEPIECE



Arrangement of lenses in Huygens eyepiece. FL = field lens; EL = eye lens; FS = field stop; EP = exit pupil or eye point; I_O = image formed by preceding system; I_f = image formed by preceding system and the field lens.

HUYGENS' PRINCIPLE



The construction for a spherical wave. WW = wave originating at S; $W'W'$ = envelope of secondary waves; θ = angle between the normal to the original wavefront and any point on the secondary wave; r = radius representing the distance wave would travel in time t.

hunting [CONT SYS] Undesirable oscillation of an automatic control system, wherein the controlled variable swings on both sides of the desired value. [ELECTR] Operation of a selector in moving from terminal to terminal until one is found which is idle. [MECH ENG] Irregular engine speed resulting from instability of the governing device.

hunting circuit *See* lockout circuit.

Hunting Dogs *See* Canes Venatici.

Huntington-Heberlein process [MIN ENG] A sink-float process employing a galena medium, which is recovered by froth flotation.

Huntington's chorea [MED] A rare hereditary disease of the basal ganglia and cerebral cortex resulting in choreiform (dancelike) movements, intellectual deterioration, and psychosis.

hunting tooth [DES ENG] An extra tooth on the larger of two gear wheels so that the total number of teeth will not be an integral multiple of the number on the smaller wheel.

huntite [MINERAL] $CaMg_3(CO_3)_4$ A white mineral consisting of calcium magnesium carbonate.

hurdle sheet [MIN ENG] A brattice-cloth screen across a roadway below a roof cavity or at the ripping lip to divert air current upward, thus diluting and removing firedamp.

hureaulite [MINERAL] $Mn_5H_2(PO_4)_4{\cdot}4H_2O$ A monoclinic mineral of varying colors consisting of a hydrated acid phosphate of manganese.

Hurler's syndrome [MED] Mucopolysaccharoidosis I, a hereditary condition transmitted as an autosomal recessive in which there is excessive chondroitin sulfate B and heparin sulfate in the urine and tissues, and which is marked clinically by a complex of symptoms including grotesque skeletal and facial deformities, skin and cardiac changes, clouding of the cornea, and mental deficiency. Also known as gargoylism; lipochondrodystrophy.

Huronian [GEOL] The lower system of the restricted Proterozoic.

hurricane [METEOROL] A tropical cyclone of great intensity; any wind reaching a speed of more than 73 miles per hour (117 kilometers per hour) is said to have hurricane force.

hurricane air stemmer [MIN ENG] A mechanical device for rapidly tamping shotholes; consists of a funnel connected by a T piece to the charge tube, with a connection to a compressed-air column; sand is put in the funnel and injected into the shothole as the charge tube is withdrawn.

hurricane band *See* spiral band.

hurricane beacon [ENG] An air-launched balloon designed to be released in the eye of a tropical cyclone, to float within the eye at predetermined levels, and to transmit radio signals.

hurricane deck *See* awning deck; promenade deck.

hurricane-force wind [METEOROL] In the Beaufort wind scale, a wind whose speed is 64 knots (117 kilometers per hour) or higher.

hurricane lamp [ENG] An oil lamp with a glass chimney and perforated lid to protect the flame, or a candle with a glass chimney.

hurricane monitoring buoy [METEOROL] A free-floating automatic weather station designed as an expendable instrument in connection with hurricane and typhoon monitoring and forecasting services.

hurricane radar band *See* spiral band.

hurricane surge *See* hurricane wave.

hurricane tide *See* hurricane wave.

hurricane tracking [ENG] Recording of the movement of individual hurricanes by means of airplane sightings and satellite photography.

hurricane warning [METEOROL] A warning of impending winds of hurricane force; for maritime interests, the stormwarning signals for this condition are two square red flags with black centers by day, and a white lantern between two red lanterns by night.

hurricane watch [METEOROL] An announcement for a specific area that hurricane conditions pose a threat; residents are cautioned to take stock of their preparedness needs but, otherwise, are advised to continue normal activities.

hurricane wave [OCEANOGR] As experienced on islands and along a shore, a sudden rise in the level of the sea associated with a hurricane. Also known as hurricane surge; hurricane tide.

hurricane wind [METEOROL] In general, the severe wind of an intense tropical cyclone (hurricane or typhoon); the term has no further technical connotation, but is easily confused with the strictly defined hurricane-force wind. Also known as typhoon wind.

Hurst formula [PETRO ENG] Relationship used in reservoir material-balance analysis; interrelates field pressure and production data at a number of different times.

Hurst method [PETRO ENG] A calculation method for the bottom-hole static pressure of a well; uses graphical extrapolation of pressure buildup over a short period of time.

Hurthle cells [PATH] Enlarged epithelial cells of the thyroid follicles containing acidophilic cytoplasm, seen most frequently in adenomas.

Hurtley's test [PATH] A test for the presence of acetoacetic acid in urine: take 10 cubic centimeters (cm^3) of a urine specimen and add 2.5 cm^3 of concentrated hydrochloric acid and 1 cm^3 of a freshly prepared 1% solution of sodium nitrite, then shake and let stand for 2 minutes; add 15 cm^3 of 0.880 ammonia and 5 cm^3 of 10% ferrous sulfate, then shake and pour into a large boiling tube, allowing it to stand; a violet or purple color confirms the presence of acetoacetic acid.

Hurwitz polynomial [MATH] A polynomial whose zeros all have negative real parts.

husk [BOT] The outer coat of certain seeds, particularly if it is a dry, membranous structure.

hutch [MIN ENG] The bottom compartment of a jig used in ore dressing.

hutchinsonite [MINERAL] $(Pb,Tl)_2(Cu,Ag)As_5S_{10}$ Red mineral composed of sulfide of lead, copper, and arsenic, with varying amounts of thallium and silver, occurring in small orthorhombic crystals.

Hutchinson's freckle *See* melanotic freckle.

Hutchinson's teeth [MED] Deformity of permanent incisor teeth associated with congenital syphilis; the crown of the incisor is wider in the cervical portion than at the incisal edge, and the incisal edge has a characteristic crescent-shaped notch.

hutch product [MIN ENG] Fine, heavy materials that pass through the screen of a jig and collect in the hutch.

Huttig equation [THERMO] An equation which states that the ratio of the volume of gas adsorbed on the surface of a nonporous solid at a given pressure and temperature to the volume of gas required to cover the surface completely with a unimolecular layer equals $(1 + r)\,c'/(1 + c')$, where r is the ratio of the equilibrium gas pressure to the saturated vapor pressure of the adsorbate at the temperature of adsorption, and c is the product of a constant and the exponential of $(q - q_l)/RT$, where q is the heat of adsorption into a first layer molecule, q_l is the heat of liquefaction of the adsorbate, T is the temperature, and R is the gas constant.

huttonite [MINERAL] $ThSiO_4$ A colorless to pale-green monoclinic mineral composed of silicate of thorium; it is dimorphous with thorite.

Huwood loader [MIN ENG] A machine consisting of a number of horizontal rotating flight bars working near the floor of the seam which push prepared coal up a ramp onto a low, bottom-loaded coveyor belt.

Huxley's anastomosis [HISTOL] Polyhedral cells forming the middle layer of a hair root sheath.

Huygens' approximation [MATH] The length of a small circular arc is approximately $\frac{1}{3}(8c' - c)$, where c is the chord of the arc and c' is the chord of half the arc.

Huygens eyepiece [OPTICS] An eyepiece in which there are two plano-convex lenses, and the plane sides of both lenses face the eye.

Huygens' principle [OPTICS] The principle that each point on a light wavefront may be regarded as a source of secondary waves, the envelope of these secondary waves determining the position of the wavefront at a later time.

Huygens wavelet [OPTICS] A secondary wave as used in Huygens' principle.

HVA *See* homovanillic acid.

HVAP *See* hypervelocity armor-piercing.

H variometer *See* horizontal intensity variometer.

HVDC *See* high-voltage direct current.

H vector [ELECTROMAG] A vector that is the magnetic field. For a plane wave in free space, it is perpendicular to the E vector and to the direction of propagation.

H wave *See* transverse electric wave.

hyacinth *See* zircon.

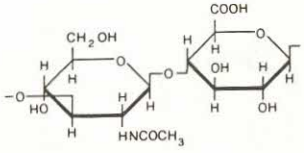
Hyades [ASTRON] A V-shaped open star cluster about 150 light-years from the sun, which appears in the constellation Taurus near the star Aldebaran.

Hyaenidae [VERT ZOO] A family of catlike carnivores in the superfamily Feloidea including the hyenas and aardwolf.
Hyaenodontidae [PALEON] A family of extinct carnivorous mammals in the order Deltatheridia.
Hyalellidae [INV ZOO] A family of amphipod crustaceans in the suborder Gammaridea.
hyaline [BIOCHEM] A clear, homogeneous, structureless material found in the matrix of cartilage, vitreous body, mucin, and glycogen. [GEOL] Transparent and resembling glass.
hyaline cartilage [HISTOL] A translucent connective tissue comprising about two-thirds clear, homogeneous matrix with few or no collagen fibrils.
hyaline cast [PATH] A clear, structureless mass of proteinaceous material found in the urine in association with certain kidney diseases.
hyaline degeneration [PATH] Degenerative change involving tissues and cells so that they become clear, structureless, and homogeneous.
hyaline membrane [HISTOL] **1.** A basement membrane. **2.** A membrane of a hair follicle between the inner fibrous layer and the outer root sheath.
hyaline membrane disease [MED] A disease occurring during the first few days of neonatal life, characterized by respiratory distress due to formation of a hyalinelike membrane within the alveoli.
hyaline test [INV ZOO] A translucent wall or shell of certain foraminiferans composed of layers of calcite interspersed with separating membranes.
hyalinization [PATH] Replacement of the normal components of cells or tissues by a hyaline material.
hyalinocrystalline [PETR] Of porphyritic rock texture, having the phenocrysts lying in a glassy ground mass.
hyalite [MINERAL] A colorless, clear or translucent variety of opal occurring as globular concretions or botryoidal crusts in cavities or cracks of rocks. Also known as Müller's glass; water opal.
hyalobasalt *See* tachylite.
hyaloclastite [GEOL] A tufflike deposit formed by the flowing of basalt under water and ice and its consequent fragmentation. Also known as aquagene tuff.
Hyalodictyae [MYCOL] A subdivision of the spore group Dictyosporae characterized by hyaline spores.
Hyalodidymae [MYCOL] A subdivision of the spore group Didymosporae characterized by hyaline spores.
hyalography [GRAPHICS] The art of engraving on glass, with diamond or emery cutting tools or with hydrofluoric acid or other etching solutions.
Hyalohelicosporae [MYCOL] A subdivision of the spore group Helicosporae characterized by hyaline spores.
hyaloid membrane [ANAT] The limiting membrane surrounding the vitreous body of the eyeball, and forming the suspensory ligament.
hyaloophitic [PETR] Of the texture of igneous rocks, being composed principally of a glassy ground mass with little interstitial texture.
hyalophane [MINERAL] $BaAl_2Si_2O_8$ A colorless feldspar mineral crystallizing in the monoclinic system; isomorphous with adularia. Also known as baryta feldspar.
hyalophobia [PSYCH] An abnormal fear of glass.
Hyalophragmiae [MYCOL] A subdivision of the spore group Phragmosporae characterized by hyaline spores.
hyaloplasm [CYTOL] The optically clear, viscous to gelatinous ground substance of cytoplasm in which formed bodies are suspended.
hyalopsite *See* obsidian.
Hyaloscolecosporae [MYCOL] A subdivision of the spore group Scalecosporae characterized by hyaline spores.
Hyalospongia [PALEON] A class of extinct glass sponges, equivalent to the living Hexactinellida, having siliceous spicules made of opaline silica.
Hyalosporae [MYCOL] A subdivision of the spore group Amerosporae characterized by hyaline spores.
Hyalostaurosporae [MYCOL] A subdivision of the spore group Staurosporae characterized by hyaline spores.
hyalotekite [MINERAL] $(Pb,Ca,Ba)_4BSi_6O_{17}(OH,F)$ A white gray mineral composed of borosilicate and fluoride of lead, barium, and calcium, occurring in crystalline masses.
hyaluronate [BIOCHEM] A salt or ester of hyaluronic acid.
hyaluronate lyase *See* hyaluronidase.
hyaluronic acid [BIOCHEM] A polysaccharide found as an integral part of the gellike substance of animal connective tissue.
hyaluronidase [BIOCHEM] Any one of a family of enzymes which catalyze the breakdown of hyaluronic acid. Also known as hyaluronate lyase; spreading factor.
Hybinette process [MET] A process used for refining of crude nickel anodes; anodes are placed in asphalt-lined, reinforced concrete tanks and dissolved electrochemically so that impurities such as copper and iron pass into solution while pure nickel electrolyte is continuously added.
Hybodontoidea [PALEON] An ancient suborder of extinct fossil sharks in the order Selachii.
hybrid [GEN] The offspring of genetically dissimilar parents. [PETR] Pertaining to a rock formed by the assimilation of two magmas. [SCI TECH] Having two or more different characteristics or types of structure.
hybrid algebraic manipulation language [COMPUT SCI] The most ambitious type of algebraic manipulation language, which accepts the broadest spectrum of mathematical expressions but possesses, in addition, special representations and special algorithms for particular special classes of expressions.
hybrid balance [ELEC] Loss between two conjugate sides of a hybrid set less the same loss when one of the other sides is open or shorted.
hybrid circuit [ELEC] A circuit in which two or more basically different types of components, such as tubes and transistors, performing similar functions are used together.
hybrid coil *See* hybrid transformer.
hybrid composite [MATER] A composite material in which two or more high-performance reinforcements are combined.
hybrid computer [COMPUT SCI] A computer designed to handle both analog and digital data. Also known as analog-digital computer.
hybrid distributed processing system [COMPUT SCI] A distributed processing system that includes both horizontal and hierarchical distribution.
hybrid electromagnetic wave [ELECTROMAG] Wave which has both transverse and longitudinal components of displacement.
hybrid enzyme [BIOCHEM] A form of polymeric enzyme occurring in heterozygous individuals that shows a hybrid molecular form made up of subunits differing in one or more amino acids.
hybrid hardware control [COMPUT SCI] The control of and communication between the various parts of a hybrid computer.
hybrid inlet noise reduction [ENG ACOUS] A method of reducing the noise from the inlet of a jet engine, which involves the use of both high-Mach-number flows to retard or block the passage of sound waves and acoustic treatment of the walls of the inlet.
hybrid input/output [COMPUT SCI] The routines required to handle inputs to and outputs from a computer system comprising digital and analog computers.
hybrid integrated circuit [ELECTR] A circuit in which one or more discrete components are used in combination with integrated-circuit construction.
hybrid interface [COMPUT SCI] A device that joins a digital to an analog computer, converting digital signals transmitted serially by the digital computer into analog signals that are transmitted simultaneously to the various units of the analog computer, and vice versa.
hybridization [GEN] The act or process of producing hybrids.
hybridized orbital [PHYS CHEM] A molecular orbital which is a linear combination of two or more orbitals of comparable energy (such as $2s$ and $2p$ orbitals), is concentrated along a certain direction in space, and participates in formation of a directed valence bond.
hybrid junction [ELECTR] A transformer, resistor, or waveguide circuit or device that has four pairs of terminals so arranged that a signal entering at one terminal pair divides and emerges from the two adjacent terminal pairs, but is unable to reach the opposite terminal pair. Also known as bridge hybrid.
hybrid magnet [CRYO] A type of superconducting magnet consisting of a large-bore NbTi (niobium-titanium) external coil, which provides an external field of about 5 teslas, and an inner Nb_3Sn (niobium-tin) coil which provides additional field strength.
hybrid merogony [EMBRYO] The fertilization of cytoplas-

HYAENODONTIDAE

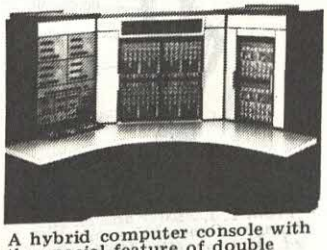
The deltatheridian *Hyaenodon*, original about 4 feet (1.2 meters) long *(after Scott)*. *(From A. S. Romer, Vertebrate Paleontology, 3d ed., University of Chicago Press, 1966)*

HYALURONIC ACID



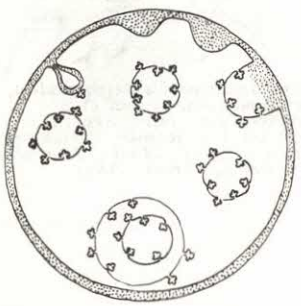
Repeating unit in hyaluronic acid molecule.

HYBRID COMPUTER



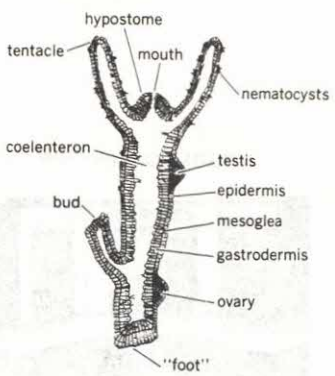
A hybrid computer console with the special feature of double patch bays: one bay for the analog circuits and one bay for the digital logic circuits. *(Applied Dynamics Computer Systems, Division of Reliance Electric Co.)*

HYDATID



A drawing of the hydatid cyst showing large numbers of attached and free-floating brood capsules, each with one or more scoleces.

HYDRA



Longitudinal section of *Hydra*. *(From T. I. Storer and R. L. Usinger, General Zoology, 4th ed., McGraw-Hill, 1965)*

mic fragments of the egg of one species by the sperm of a related species.

hybrid microcircuit [ELECTR] Microcircuit in which thin-film, thick-film, or diffusion techniques are combined with separately attached semiconductor chips to form the circuit.

hybrid molecule [BIOCHEM] A single molecule, usually protein, peculiar to heterozygotes and containing two structurally different polypeptide chains determined by two different alleles.

hybrid network [COMMUN] Nonhomogeneous communications network required to operate with signals of dissimilar characteristics (such as analog and digital modes).

hybridoma [IMMUNOL] A hybrid myeloma formed by fusing myeloma cells with lymphocytes that produce a specific antibody; the individual cells can be cloned, and each clone produces large amounts of identical (monoclonal) antibody.

hybrid parameter *See* h parameter.

hybrid problem analysis [COMPUT SCI] The determination of the parts of a problem best suited for the digital computer.

hybrid programming [COMPUT SCI] Hybrid system routines that handle timing, function generation, and simulation.

hybrid propellant [MATER] A propellant using a combination of liquid and solid materials to provide propulsion energy and working fluid.

hybrid propulsion [AERO ENG] Propulsion utilizing energy released by a liquid propellant with a solid propellant in the same rocket engine.

hybrid redundancy [COMPUT SCI] A synthesis of triple modular redundancy and standby replacement redundancy, consisting of a triple modular redundancy system (or, in general, an *N*-modular redundancy system) with a bank of spares so that when one of the units in the triple modular redundancy system fails it is replaced by a spare unit.

hybrid relay [ELEC] A relay in which solid-state elements are combined with moving contacts.

hybrid repeater *See* hybrid transformer.

hybrid rocket [AERO ENG] A rocket with an engine utilizing a liquid propellant with a solid propellant in the same rocket engine.

hybrid set [ELEC] Two or more transformers interconnected to form a hybrid junction. Also known as transformer hybrid.

hybrid simulation [COMPUT SCI] The use of a hybrid computer for purposes of simulation.

hybrid sterility [GEN] Inability to form functional gametes in a hybrid due to disturbances in sex-cell development or in meiosis, caused by incompatible genetic constitution.

hybrid system checkout [COMPUT SCI] The static check of a hybrid system and of the digital program and analog wiring required to solve a problem.

hybrid tee [ELECTROMAG] A microwave hybrid junction composed of an E-H tee with internal matching elements; it is reflectionless for a wave propagating into the junction from any arm when the other three arms are match-terminated. Also known as magic tee.

hybrid thin-film circuit [ELECTR] Microcircuit formed by attaching discrete components and semiconductor devices to networks of passive components and conductors that have been vacuum-deposited on glazed ceramic, sapphire, or glass substrates.

hybrid transformer [ELEC] A single transformer that performs the essential functions of a hybrid set. Also known as bridge transformer; hybrid coil; hybrid repeater.

hybrid vigor *See* heterosis.

hybrid wave function [QUANT MECH] A linear combination of wave functions of one problem used as an approximation to the wave function in another problem; for example, a linear combination of atomic orbitals used to represent a molecular bond.

hydantoin [ORG CHEM] $C_3N_2O_2H$ A white, crystalline compound, melting point 220°C; used as an intermediate in certain pharmaceutical manufacturing and as a textile softener and lubricant. Also known as glycolyurea.

hydathode [BOT] An opening of the epidermis of higher plants specialized for exudation of water.

hydatid [MED] **1.** A cyst formed in tissues due to growth of the larval stage of *Echinococcus granulosus*. **2.** A cystic remnant of an embryonal structure.

hydatid disease *See* echinococcosis.

hydatid of Morgagni *See* appendix testis.

hydatidosis *See* echinococcosis.

hydatiform mole [MED] A benign placental tumor formed as a cystic growth of the chorionic villi. Also known as hydatiform tumor.

hydatiform tumor *See* hydatiform mole.

hydatogenesis [GEOL] Crystallization and deposition of minerals from aqueous solutions.

hydatosis [MED] Multiple hydatid cysts.

hydnocarpic acid [ORG CHEM] $C_{16}H_{28}O_2$ A nonedible fat and oil isolated from chaulmoogra oil, forming white crystals that melt at 60°C; used to treat Hansen's disease. Also known as cyclopentenylundecylic acid.

hydra [INV ZOO] Any species of *Hydra* or related genera, consisting of a simple, tubular body with a mouth at one end surrounded by tentacles, and a foot at the other end for attachment.

Hydra [ASTRON] A large constellation of the Southern Hemisphere, right ascension 10 hours, declination 20° south. Also known as Water Monster. [INV ZOO] A common genus of coelenterates in the suborder Anthomedusae.

Hydrachnellae [INV ZOO] A family of generally fresh-water predacious mites in the suborder Trombidiformes, including some parasitic forms.

hydracrylic acid [ORG CHEM] $CH_2OH{\cdot}CH_2COOH$ An oily liquid that is an isomer of lactic acid and that breaks down on heating to acrylic acid. Also known as 3-hydroxypropanoic acid; β-hydroxypropionic acid.

Hydraenidae [INV ZOO] The equivalent name for Limnebiidae.

hydragogue [MED] Causing the discharge of watery fluid, especially from the bowel.

hydralazine [PHARM] $C_8H_8N_4$ An antihypertensive drug; used as the hydrochloride salt.

hydramnios *See* polyhydramnios.

hydranencephaly [MED] A congenital anomaly in which there are vestiges of a cerebellum, occipital lobes, and basal nuclei; frontal and parietal lobes are replaced by a cyst; and the neurocranium is undeveloped.

hydrant *See* fire hydrant.

hydranth [INV ZOO] Nutritive individual in a hydroid colony.

hydrargillite *See* gibbsite.

hydrargyrism *See* mercurialism.

hydrargyrum *See* mercury.

hydrarthrosis [MED] An accumulation of fluid in a joint.

hydrase [BIOCHEM] An enzyme that catalyzes removal or addition of water to a substrate without hydrolyzing it.

hydrastine [ORG CHEM] $C_{21}H_{21}NO_6$ An alkaloid isolated from species of the family Ranunculaceae and from *Hydrastis canadensis;* orthorhombic prisms crystallize from alcohol solution, melting point 132°C; highly soluble in acetone and benzene, soluble in chloroform, less soluble in ether and alcohol.

hydrastinine [ORG CHEM] $C_{11}H_{13}O_3N$ A compound formed by the decomposition of hydrastine; crystallizes as needles from petroleum-ether solution, soluble in organic solvents such as alcohol, chloroform, and ether; used in medicine as a stimulant in coronary disease and as a hemostatic in uterine hemorrhage.

hydrate [CHEM] **1.** A form of a solid compound which has water in the form of H_2O molecules associated with it; for example, anhydrous copper sulfate is a white solid with the formula $CuSO_4$, but when crystallized from water a blue crystalline solid with formula $CuSO_4{\cdot}5H_2O$ results, and the water molecules are an integral part of the crystal. **2.** A crystalline compound resulting from the combination of water and a gas; frequently a constituent of natural gas that is under pressure.

hydrate aluminum oxide *See* alumina trihydrate.

hydrated alumina *See* alumina trihydrate.

hydrated cellulose *See* hydrocellulose.

hydrated chloral *See* chloral hydrate.

hydrated electron [PHYS CHEM] An electron released during ionization of a water molecule by water and surrounded by water molecules oriented so that the electron cannot escape. Also known as aqueous electron.

hydrated grease [MATER] Grease made with a soap containing a hydrated alkali.

hydrated halloysite *See* endellite.

hydrated lime *See* calcium hydroxide.

hydrated manganic hydroxide *See* manganic hydroxide.

hydrated mercurous nitrate [INORG CHEM] $Hg_2(NO_3)_2{\cdot}2H_2O$ Poisonous, light-sensitive crystals, soluble in warm

water, decomposes at 70°C; used as an analytical reagent and in cosmetics and medicine.

hydrated silica *See* silicic acid.

hydrate inhibitor [CHEM] A material (such as alcohol or glycol) added to a gas stream to prevent the formation and freezing of gas hydrates in low-temperature systems.

hydration [CHEM] The incorporation of molecular water into a complex molecule with the molecules or units of another species; the complex may be held together by relatively weak forces or may exist as a definite compound.

hydraucone [DES ENG] A conical, spreading type of draft tube used on hydraulic turbine installations.

hydraulic [ENG] Operated or effected by the action of water or other fluid of low viscosity.

hydraulic accumulator [MECH ENG] A hydraulic flywheel that stores potential energy by accumulating a quantity of pressurized hydraulic fluid in a suitable enclosed vessel.

hydraulic actuator [MECH ENG] A cylinder or fluid motor that converts hydraulic power into useful mechanical work; mechanical motion produced may be linear, rotary, or oscillatory.

hydraulic air compressor [MECH ENG] A device in which water falling down a pipe entrains air which is released at the bottom under compression to do useful work.

hydraulic amplifier [CONT SYS] A device which increases the power of a signal in a hydraulic servomechanism or other system through the use of fixed and variable orifices. Also known as hydraulic intensifier.

hydraulic analog table [FL MECH] An experimental facility based on the hydraulic analogy; the water flows over a smooth horizontal surface and is bounded by vertical walls geometrically similar to the boundaries of the corresponding compressible gas flow; flow patterns are easily observed, and boundary changes may be made rapidly and inexpensively during exploratory studies.

hydraulic analogy [FL MECH] The analogy between the flow of a shallow liquid and the flow of a compressible gas; various phenomena such as shock waves occur in both systems; the analogy requires neglect of vertical accelerations in the liquid, and restrictions on the ratio of specific heats for the gas.

hydraulic backhoe [MECH ENG] A backhoe operated by a hydraulic mechanism.

hydraulic blasting [MIN ENG] Fracturing coal by means of a hydraulic cartridge.

hydraulic bottom-hole pump [PETRO ENG] Liquid power–operated oil production pump; the liquid is oil, piped under pressure to the bottom of the well to operate the engine that drives the pump.

hydraulic brake [MECH ENG] A brake in which the retarding force is applied through the action of a hydraulic press.

hydraulic cartridge [MIN ENG] A device used in mining to split coal or rock and having 8–12 small hydraulic rams in the sides of a steel cylinder.

hydraulic cement [MATER] Cement that hardens underwater.

hydraulic chock [MIN ENG] A steel face-support structure consisting of one to four hydraulic legs mounted in a steel frame with a large head and base plate.

hydraulic chuck *See* automatic chuck.

hydraulic circuit [MECH ENG] A circuit whose operation is analogous to that of an electric circuit except that electric currents are replaced by currents of water or other fluids, as in a hydraulic control.

hydraulic circulating system [MIN ENG] A method used to drill a borehole wherein water or a mud-laden liquid is circulated through the drill string.

hydraulic classification [ENG] Classification of particles in a tank by specific gravity, utilizing the action of rising water currents.

hydraulic classifier [MECH ENG] A classifier in which particles are sorted by specific gravity in a stream of hydraulic water that rises at a controlled rate; heavier particles gravitate down and are discharged at the bottom, while lighter ones are carried up and out. Also known as hydrosizer.

hydraulic clutch *See* fluid drive.

hydraulic computer [COMPUT SCI] A computer in which electric current and gates are replaced by fluid and valves.

hydraulic conductivity *See* permeability coefficient.

hydraulic conveyor [MECH ENG] A system for handling material, such as ash from a coal-fired furnace; refuse is flushed from a hopper or slag tank to a grinder which discharges to a pump for conveying to a disposal area or a dewatering bin.

hydraulic coupling *See* fluid coupling.

hydraulic current [OCEANOGR] A current in a channel, due to a difference in the water level at the two ends.

hydraulic cylinder [MECH ENG] The cylindrical chamber of a positive displacement pump.

hydraulic discharge [HYD] The direct discharge of groundwater from the zone of saturation upon the land or into a body of surface water.

hydraulic dredge [MECH ENG] A dredge consisting of a large suction pipe which is mounted on a hull and supported and moved about by a boom, a mechanical agitator or cutter head which churns up earth in front of the pipe, and centrifugal pumps mounted on a dredge which suck up water and loose solids.

hydraulic drill [MECH ENG] A rotary drill powered by hydrodynamic means and used to make shot-firing holes in coal or rock, or to make a well hole.

hydraulic drive [MECH ENG] A mechanism transmitting motion from one shaft to another, the velocity ratio of the shafts being controlled by hydrostatic or hydrodynamic means.

hydraulic ejector [ENG] A pipe for removing excavated material from a pneumatic caisson.

hydraulic elevator [MECH ENG] An elevator operated by water pressure. Also known as hydraulic lift.

hydraulic engineering [CIV ENG] A branch of civil engineering concerned with the design, erection, and construction of sewage disposal plants, waterworks, dams, water-operated power plants, and such.

hydraulic excavation *See* hydraulicking.

hydraulic excavator digger [MECH ENG] An excavation machine which employs hydraulic pistons to actuate mechanical digging elements.

hydraulic extraction *See* hydraulicking.

hydraulic filling [MIN ENG] The use of water to wash waste material into stopes in order to prevent failure of rock walls and subsidence.

hydraulic fluid [MATER] A low-viscosity fluid used in operating a hydraulic mechanism.

hydraulic flume transport [MIN ENG] The transport of coal, pulp, or minerals in water flowing in semicircular or rectangular channels.

hydraulic fracturing [PETRO ENG] A method in which sand-water mixtures are forced into underground wells under pressure; the pressure splits the petroleum-bearing sandstone, thereby allowing the oil to move toward the wells more freely.

hydraulic friction [FL MECH] Resistance to flow which is exerted on the surface of contact between a stream and its conduit and which induces a loss of energy.

hydraulic giant *See* hydraulic monitor.

hydraulic grade line [FL MECH] **1.** In a closed channel, a line joining the elevations that water would reach under atmospheric pressure. **2.** The free water surface in an open channel.

hydraulic gradient [FL MECH] With regard to an aquifer, the rate of change of pressure head per unit of distance of flow at a given point and in a given direction. [HYD] The slope of the hydraulic grade line of a stream.

hydraulic intensifier *See* hydraulic amplifier.

hydraulic jack [MECH ENG] A jack in which force is applied through the mechanism of a hydraulic press.

hydraulic jetting [ENG] Use of high-pressure water forced through nozzles to clean tube interiors and exteriors in heat exchangers and boilers.

hydraulic jump [FL MECH] A steady-state, finite-amplitude disturbance in a channel, in which water passes turbulently from a region of (uniform) low depth and high velocity to a region of (uniform) high depth and low velocity; when applied to hydraulic jumps, the usual hydraulic formulas governing the relations of velocity and depth do not conserve energy.

hydraulicking [MIN ENG] Excavating alluvial or other mineral deposits by means of high-pressure water jets. Also known as hydraulic excavation; hydraulic extraction; hydroextraction.

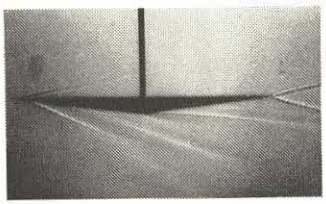
hydraulic lift *See* hydraulic elevator.

hydraulic lime [MATER] A hydraulic cementitious product that is produced by burning of hydraulic limestone.

hydraulic limestone [MATER] Limestone, containing silica and alumina, which produces lime that hardens in water.

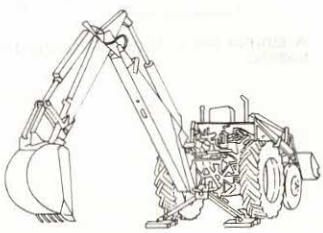
hydraulic loading [MIN ENG] The flushing of coal or other

HYDRAULIC ANALOG TABLE



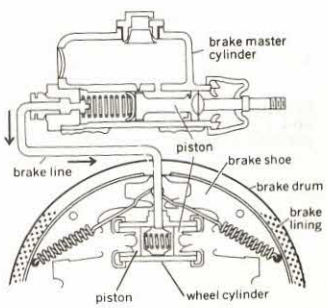
Shadowgraph of airfoil in hydraulic analog table.

HYDRAULIC BACKHOE



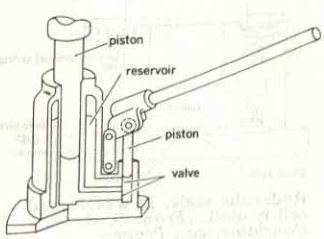
Hydraulic backhoe used in trenching. *(Case)*

HYDRAULIC BRAKE



Schematic view of hydraulic braking system for one wheel on an automobile. Brakes are shown applied. Arrows indicate direction of motion of hydraulic fluid. *(Pontiac Motor Division, General Motors Corp.)*

HYDRAULIC JACK



Hydraulic jack showing working parts.

material broken down by jets of water along the mine floor and into flumes.

hydraulic locomotive [MIN ENG] A diesel locomotive in which traction wheels are driven by hydraulic motors powered by a hydraulic system on the unit; used in mine haulage.

hydraulic loss [FL MECH] The loss in fluid power due to flow friction within the system.

hydraulic machine [MECH ENG] A machine powered by a motor activated by the confined flow of a stream of liquid, such as oil or water under pressure.

hydraulic mine [MIN ENG] A placer mine worked by means of a water stream directed against a bank.

hydraulic monitor [MIN ENG] A device for directing a high-pressure jet of water in hydraulicking; essentially, a swivel-mounted, counterweighted nozzle attached to a tripod or other type of stand and so designed that one worker can easily control and direct the vertical and lateral movements of the nozzle. Also known as giant; hydraulic giant; monitor.

hydraulic motor [MECH ENG] A motor activated by water or other liquid under pressure.

hydraulic nozzle [MECH ENG] An atomizing device in which fluid pressure is converted into fluid velocity.

HYDRAULIC NOZZLE

A simple jet, a type of hydraulic nozzle.

hydraulic packer holddown [PETRO ENG] A pressure-actuated anchor located below a production packer (the seal between tubing and casing) to prevent well pressure from forcing the packer upward in the casing.

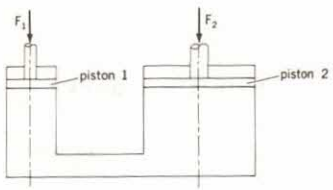
hydraulic packing [ENG] Packing material that resists the effects of water even under high pressure.

hydraulic power oil [MATER] Well production oil from which corrosive and abrasive impurities have been removed; used to power downhole hydraulic pumps.

hydraulic power system [MECH ENG] A power transmission system comprising machinery and auxiliary components which function to generate, transmit, control, and utilize hydraulic energy.

hydraulic press [MECH ENG] A combination of a large and a small cylinder connected by a pipe and filled with a fluid so that the fluid pressure created by a small force acting on the small-cylinder piston will result in a large force on the large piston. Also known as hydrostatic press.

HYDRAULIC PRESS



Principle of hydraulic press. F_1 and F_2 are forces applied to pistons 1 and 2.

hydraulic profile [HYD] A vertical section of an aquifer's potentiometric surface.

hydraulic prop [MIN ENG] A supporting device consisting of two telescoping steel cylinders extended by hydraulic pressure provided by a built-in hand pump.

hydraulic pump *See* hydraulic ram.

hydraulic radius [FL MECH] The ratio of the cross-sectional area of a conduit in which a fluid is flowing to the inner perimeter of the conduit.

hydraulic ram [MECH ENG] A device for forcing running water to a higher level by using the kinetic energy of flow; the flow of water in the supply pipeline is periodically stopped so that a small portion of water is lifted by the velocity head of a larger portion. Also known as hydraulic pump.

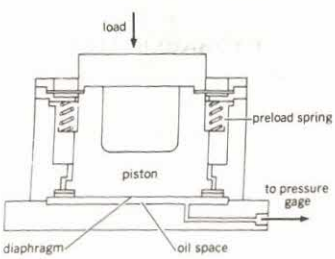
hydraulic ratio [GEOL] The weight of a heavy mineral multiplied by 100 and divided by the weight of a hydraulically equivalent light mineral.

hydraulic rope-geared elevator [MECH ENG] An elevator hoisted by a system of ropes and sheaves attached to a piston in a hydraulic cylinder.

hydraulics [FL MECH] The branch of science and technology concerned with the mechanics of fluids, especially liquids.

hydraulic scale [MECH ENG] An industrial scale in which the load applied to the load-cell piston is converted to hydraulic pressure.

HYDRAULIC SCALE



Hydraulic scale, in which load cell is used. *(From D. M. Considine, ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*

hydraulic separation [MECH ENG] Mechanical classification using a hydraulic classifier.

hydraulic shovel [MECH ENG] A revolving shovel in which hydraulic rams or motors are substituted for drums and cables.

hydraulic sprayer [MECH ENG] A machine that sprays large quantities of insecticide or fungicide on crops.

hydraulic spraying *See* airless spraying.

hydraulic stacker [MECH ENG] A tiering machine whose carriage is raised or lowered by a hydraulic cylinder.

hydraulic swivel head [MECH ENG] In a drill machine, a swivel head equipped with hydraulically actuated cylinders and pistons to exert pressure on and move the drill rod string longitudinally.

hydraulic telemetry [COMMUN] A form of mechanical telemetry in which signals are transmitted in the form of sound or other waves through water or some other liquid.

hydraulic transport [ENG] Movement of material by water.

hydraulic turbine [MECH ENG] A machine which converts the energy of an elevated water supply into mechanical energy of a rotating shaft.

hydrazide [INORG CHEM] An acyl hydrazine; a compound of the formula $R-\overset{\overset{O}{\|}}{C}-NH-NH_2$ where R may be an alkyl group.

hydrazine [INORG CHEM] H_2NNH_2 A colorless, hygroscopic liquid, boiling point 114°C, with an ammonialike odor; it is reducing, decomposable, basic, and bifunctional; used as a rocket fuel, in corrosion inhibition in boilers, and in the synthesis of biologically active materials, explosives, antioxidants, and photographic chemicals.

hydrazine hydrate [ORG CHEM] $H_2NNH_2OH_2O$ A colorless, fuming liquid that boils at 119.4°C; used as a component in jet fuels and as an intermediate in organic synthesis.

hydrazinobenzene *See* phenylhydrazine.

2-hydrazinoethanol *See* 2-hydroxyethylhydrazine.

hydrazobenzene [ORG CHEM] $C_{12}H_{12}N_2$ A colorless, crystalline compound, melts at 132°C, slightly soluble in water, soluble in alcohol; used as an intermediate in the synthesis of benzidine. Also known as *N,N'*-diphenylhydrazine.

hydrazoic acid [INORG CHEM] NHN:N Explosive liquid, a strong protoplasmic poison boiling at 37°C. Also known as azoimide; diazoimide; hydronitric acid.

hydrazone [ORG CHEM] A compound containing the grouping—NH·N:C—, and obtained from a condensation reaction involving hydrazines with aldehydes or ketones; has been used as an exotic fuel.

hydremia [MED] An excessive amount of water in the blood; disproportionate increase in plasma volume as compared with red blood cell volume.

hydric [ECOL] Characterized by or thriving in abundance of moisture.

hydride [INORG CHEM] A compound containing hydrogen and another element; examples are H_2S, which is a hydride although it may be properly called hydrogen sulfide, and lithium hydride, LiH.

hydride descaling [MET] Removing surface deposits of oxides from a metal by immersion in molten alkali that contains hydrides.

hydrindantin [ORG CHEM] $C_{18}H_{10}O_6$ A compound used as a reagent for the photometric determination of amino acids.

hydriodic acid [INORG CHEM] A yellow liquid that is a water solution of the gas hydrogen iodide; a solution of 59% hydrogen iodide produces a liquid that is constant-boiling; it is a strong acid used in organic synthesis and as a reagent in analytical chemistry.

hydriodic acid gas *See* hydrogen iodide.

hydroacoustics *See* underwater acoustics.

hydrobasaluminite [MINERAL] $Al_4(SO_4)(OH)_{10}\cdot 36H_2O$ Mineral composed of a hydrous sulfate and hydroxide of aluminum.

Hydrobatidae [VERT ZOO] The storm petrels, a family of oceanic birds in the order Procellariiformes.

hydrobenzoin [ORG CHEM] $C_{14}H_{14}O_2$ A colorless, crystalline compound formed by action of sodium amalgam on benzaldehyde, melts at 136°C, and is slightly soluble in water. Also known as benzyleneglycol; diphenyldihydroxyethane.

hydrobiotite [MINERAL] A light-green, trioctahedral clay mineral of mixed layers of biotite and vermiculite.

hydroboracite [MINERAL] $CaMgB_6O_{11}\cdot 6H_2O$ A white mineral composed of hydrous calcium magnesium borate, occurring in fibrous and foliated masses.

hydroboration [ORG CHEM] The process of producing organoboranes by the addition of a compound with a B-H bond to an unsaturated hydrocarbon; for example, the reaction of diborane ion with a carbonyl compound.

hydrobromic acid [INORG CHEM] HBr A solution of hydrogen bromide in water, usually 40%; a clear, colorless liquid; used in medicine, analytical chemistry, and synthesis of organic compounds.

hydrocalumite [MINERAL] $Ca_2Al(OH)_7\cdot 3H_2O$ A colorless to light-green mineral composed of a hydrous hydroxide of calcium and aluminum.

hydrocarbon [ORG CHEM] One of a very large group of

chemical compounds composed only of carbon and hydrogen; the largest source of hydrocarbons is from petroleum crude oil.

hydrocarbon blending value [ENG] Octane number rating for a 20% blend of a hydrocarbon with a 60:40 mixture of isooctane:*n*-heptane, which has been recalculated for a hypothetical 100% concentration of the tested hydrocarbon.

hydrocarbon-mud log [PETRO ENG] Record of oil, gas, or cuttings released into mud during rock drilling; used to detect the presence of hydrocarbon-bearing strata.

hydrocarbon pore volume [PETRO ENG] The pore volume in a reservoir formation available to hydrocarbon intrusion.

hydrocarbon resins [ORG CHEM] Brittle or gummy materials prepared by the polymerization of several unsaturated constituents of coal tar, rosin, or petroleum; they are inexpensive and find uses in rubber and asphalt formulations and in coating and caulking compositions.

hydrocarbon stabilization [PETRO ENG] The stepwise pressure reduction of a well stream to allow the release of dissolved gases until the liquid is stable at storage-tank conditions.

hydrocast [OCEANOGR] A series of water samplers on a single hydrographic wire which obtain samples simultaneously.

hydrocaulus [INV ZOO] Branched, upright stem of a hydroid colony.

hydrocele [MED] Accumulation of fluid in the membranes surrounding the testis.

hydrocellulose [MATER] A gelatinous mass formed from the reaction of cellulose with water either by grinding cellulose and mixing with water, or by using strong salt solutions, acids, or alkalies; used in the manufacture of artifical fibers such as rayon, mercerized cotton, paper, and vulcanized fiber. Also known as hydrated cellulose.

hydrocephaly [MED] Increased volume of cerebrospinal fluid in the skull.

hydrocerussite [MINERAL] $Pb_3(OH)_2(CO_3)_2$ A colorless mineral composed of basic lead carbonate, occurring as crystals in thin hexagonal plates.

Hydrocharitaceae [BOT] The single family of the order Hydrocharitales, characterized by an inferior, compound ovary with laminar placentation.

Hydrocharitales [BOT] A monofamilial order of aquatic monocotyledonous plants in the subclass Alismatidae.

hydrochinone *See* hydroquinone.

hydrochloric acid [INORG CHEM] HCl A solution of hydrogen chloride gas in water; a poisonous, pungent liquid forming a constant-boiling mixture at 20% concentration in water; widely used as a reagent, in organic synthesis, in acidizing oil wells, ore reduction, food processing, and metal cleaning and pickling. Also known as muriatic acid.

hydrochloric ether *See* ethyl chloride.

hydrochlorthiazide [PHARM] $C_7H_8ClN_3O_4S_2$ An orally effective diuretic and antihypertensive drug.

hydrocholeresis [MED] Choleresis characterized by an increase of water output, or of a bile relatively low in specific gravity, viscosity, and content of total solids.

hydrochory [BIOL] Dispersal of disseminules by water.

hydrocinnamic acid [ORG CHEM] $C_6H_5CH_2CH_2COOH$ A compound whose crystals have a floral odor (hyacinth-rose) and melt at 46°C; used in perfumes and flavoring. Also known as 3-phenylpropionic acid.

hydrocinnamic alcohol *See* phenylpropyl alcohol.

hydrocinnamic aldehyde *See* phenylpropyl aldehyde.

hydrocladium [INV ZOO] Branchlet of a hydrocaulus.

hydroclone [CHEM ENG] A device for separating a solid-liquid mixture during an industrial process by using a conical vortex and centrifugal force.

hydrocoele [INV ZOO] **1.** Water vascular system in Echinodermata. **2.** Embryonic precursor of the system.

hydrocooling [FOOD ENG] Removing heat from freshly harvested fruits and vegetables by immersion in ice water.

Hydrocorallina [INV ZOO] An order in some systems of classification set up to include the coelenterate groups Milleporina and Stylasterina.

Hydrocorisae [INV ZOO] A subdivision of the Hemiptera containing water bugs with concealed antennae and without a bulbus ejaculatorius in the male.

hydrocortisone [BIOCHEM] $C_{21}H_{30}O_5$ The generic name for 17-hydroxycorticosterone; an adrenocortical steroid occurring naturally and prepared synthetically; its effects are similar to cortisone, but it is more active. Also known as cortisol.

hydrocrackate [ORG CHEM] The product of a hydrocracker.

hydrocracker [CHEM ENG] A high-pressure processing unit that cracks long hydrocarbon molecules under a high-hydrogen-content atmosphere.

hydrocracking [CHEM ENG] A catalytic, high-pressure petroleum refinery process that is flexible enough to produce either high-octane gasoline or aviation jet fuel; the two main reactions are the adding of hydrogen to petroleum-derived molecules too massive and complex for gasoline and then the cracking of them to the required fuels; the catalyst is an acidic solid and a hydrogenating metal component.

hydrocyanic acid [INORG CHEM] HCN A highly toxic liquid that has the odor of bitter almonds and boils at 25.6°C; used to manufacture cyanide salts, acrylonitrile, and dyes, and as a fumigant in agriculture. Also known as formonitrile; hydrogen cyanide; prussic acid.

hydrocyanic ether *See* ethyl cyanide.

hydrocyanite *See* chalcocyanite.

hydrocyclone [MECH ENG] A cyclone separator in which granular solids are removed from a stream of water and classified by centrifugal force.

hydrocystoma [MED] A group of clear vesicles, usually located around the eyes, composed of cystic sweat glands.

Hydrodamalinae [VERT ZOO] A monogeneric subfamily of sirenian mammals in the family Dugongidae.

hydrodealkylation [CHEM ENG] A petroleum refining operation in which heat and pressure are used to remove methyl groups or larger alkyl groups from hydrocarbons, or to change positions of these groups on the molecule; used to upgrade low-value products.

hydrodesulfurization [CHEM ENG] A catalytic process in which the petroleum feedstock is reacted with hydrogen to reduce the sulfur content in the oil.

hydrodist [NAV] A navigation positioning system in which two separate tellurometers are mounted side by side on board a vessel and aimed at their respective remote units.

hydrodynamic equations [FL MECH] Three equations which express the net acceleration of a unit water particle as the sum of the partial accelerations due to pressure gradient force, frictional force, earth's deflecting force, gravitational force, and other factors.

hydrodynamic oscillator [ENG ACOUS] A transducer for generating sound waves in fluids, in which a continuous flow through an orifice is modulated by a reciprocating valve system controlled by acoustic feedback.

hydrodynamic pressure [FL MECH] The difference between the pressure of a fluid and the hydrostatic pressure; this concept is useful chiefly in problems of the steady flow of an incompressible fluid in which the hydrostatic pressure is constant for a given elevation (as when the fluid is bounded above by a rigid plate), so that the external force field (gravity) may be eliminated from the problem.

hydrodynamics [FL MECH] The study of the motion of a fluid and of the interactions of the fluid with its boundaries, especially in the incompressible inviscid case.

hydroecium [INV ZOO] The closed, funnel-shaped tube at the upper end of coelenterates belonging to the Siphonophora.

hydroelasticity [FL MECH] **1.** Theory of elasticity of a fluid. **2.** The interaction between the flow of water or other liquid and the elastic behavior of a body immersed in it.

hydroelectric generator [MECH ENG] An electric rotating machine that transforms mechanical power from a hydraulic turbine or water wheel into electric power.

hydroelectricity [ELEC] Electric power produced by hydroelectric generators.

hydroelectric plant [MECH ENG] A facility at which electric energy is produced by hydroelectric generators. Also known as hydroelectric power station.

hydroelectric power station *See* hydroelectric plant.

hydroextraction *See* hydraulicking.

hydrofining [CHEM ENG] A fixed-bed catalytic process to desulfurize and hydrogenate a wide range of charge stocks, from gases through waxes; the catalyst comprises cobalt oxide and molybdenum oxide on an extruded alumina support and may be regenerated in place by air and steam or flue gas.

hydrofluoric acid [INORG CHEM] An aqueous solution of hydrogen fluoride, HF; colorless, fuming, poisonous liquid; extremely corrosive, it is a weak acid as compared to hydrochloric acid, but will attack glass and other silica materials; used to polish, frost, and etch glass, to pickle copper, brass, and alloy

steels, to clean stone and brick, to acidize oil wells, and to dissolve ores.

hydrofluorosilicic acid *See* fluorosilicic acid.

hydrofoil [NAV ARCH] **1.** A flat or airfoil-shaped plate attached to a ship to stabilize it in roll. **2.** Foils attached by struts to the bottom of a hydrofoil boat to lift the hull out of the water as its speed is increased.

hydrofoil boat [NAV ARCH] A marine craft of generally conventional hull form which is supported above the water, when the craft is traveling at high speed, by dynamic lift produced by winglike surfaces (hydrofoils) below the hull.

hydroforming [CHEM ENG] A petroleum-refinery process in which naphthas are passed over a catalyst at elevated temperatures and moderate pressures in the presence of added hydrogen or hydrogen-containing gases, to form high-octane BTX aromatics for motor fuels or chemical manufacture.

hydroformylation [CHEM ENG] The reaction of adding hydrogen and the —CHO group to the carbon atoms across a double bond to yield oxygenated derivatives; an example is in the oxo process where the term hydroformylation applies to those reactions brought about by treating olefins with a mixture of hydrogen and carbon monoxide in the presence of a cobalt catalyst.

hydrofuge [ZOO] Of a structure, shedding water, as the hair on certain animals.

hydrogarnets [MINERAL] A group of minerals having the general formula $A''_3B''_2(SiO_4)_{3-y}(OH)_{4y}$; isomorphous with certain garnets.

hydrogasification [CHEM ENG] A technique to manufacture synthetic pipeline gas from coal; pulverized coal is reacted with hot, raw, hydrogen-rich gas containing a substantial amount of steam at 1000 psig (6.9×10^6 newtons per square meter, gage) to form methane.

hydrogel [CHEM] The formation of a colloid in which the disperse phase (colloid) has combined with the continuous phase (water) to produce a viscous jellylike product; for example, coagulated silicic acid.

hydrogen [CHEM] The first chemical element, symbol H, in the periodic table, atomic number 1, atomic weight 1.00797; under ordinary conditions it is a colorless, odorless, tasteless gas composed of diatomic molecules, H_2; used in manufacture of ammonia and methanol, for hydrofining, for desulfurization of petroleum products, and to reduce metallic oxide ores.

hydrogenase [BIOCHEM] Enzyme that catalyzes the oxidation of hydrogen.

hydrogenated oil [ORG CHEM] Unsaturated liquid vegetable oil that has had hydrogen catalytically added so as to convert the oil to a hydrogen-saturated solid.

hydrogenation [CHEM ENG] Saturation of diolefin impurities in gasolines to form a stable product. [ORG CHEM] Catalytic reaction of hydrogen with other compounds, usually unsaturated; for example, unsaturated cottonseed oil is hydrogenated to form solid fats.

hydrogen bacteria [MICROBIO] Bacteria capable of obtaining energy from the oxidation of molecular hydrogen.

hydrogen blistering [MET] Cracks or blisters caused when atomic hydrogen penetrates steel via submicroscopic discontinuities or voids and becomes molecular hydrogen and develops internal pressures.

hydrogen bomb [ORD] A device in which heavy hydrogen nuclei, under intense heat and pressure, undergo an uncontrolled, self-sustaining fusion reaction to produce an explosion. Also known as H bomb.

hydrogen bond [PHYS CHEM] A type of bond formed when a hydrogen atom bonded to atom A in one molecule makes an additional bond to atom B either in the same or another molecule; the strongest hydrogen bonds are formed when A and B are highly electronegative atoms, such as fluorine, oxygen, or nitrogen.

hydrogen brazing [MET] Brazing in an atmosphere rich in hydrogen.

hydrogen bromide [INORG CHEM] HBr A hazardous, toxic gas used as a chemical intermediate and as an alkylation catalyst; forms hydrobromic acid in aqueous solution.

hydrogen burning [ASTROPHYS] Thermonuclear reactions occurring in the cores of main-sequence stars, in which nuclei of hydrogen fuse to form helium nuclei.

hydrogen chloride [INORG CHEM] HCl A fuming, highly toxic, colorless gas soluble in water, alcohol, and ether; used in the production of vinyl chloride and alkyl chloride, and in polymerization, isomerization, and other reactions.

hydrogen cyanide *See* hydrocyanic acid.

hydrogen cyanide laser [OPTICS] A gas laser using hydrogen cyanide, which emits infrared radiation at wavelengths of 311 and 337 micrometers.

hydrogen cycle [CHEM] The complete process of a cation-exchange operation in which the adsorbent is used in the hydrogen or free acid form.

hydrogen damage [MET] Corrosion, common in boilers, caused by diffusion of hydrogen through steel reacting with carbon to form methane, which builds up local stresses at the interfaces between grains, forming voids that ultimately produce failure.

hydrogen-discharge lamp [ELECTR] A discharge lamp containing hydrogen and used as a source of ultraviolet radiation.

hydrogen disulfide *See* hydrogen sulfide.

hydrogen electrode [PHYS CHEM] A noble metal (such as platinum) of large surface area covered with hydrogen gas in a solution of hydrogen ion saturated with hydrogen gas; metal is used in a foil form and is welded to a wire sealed in the bottom of a hollow glass tube, which is partially filled with mercury; used as a standard electrode with a potential of zero to measure hydrogen ion activity.

hydrogen embrittlement *See* acid brittleness.

hydrogen equivalent [CHEM] The number of replaceable hydrogen atoms or hydroxyl groups in a molecule of an acid or a base.

hydrogen fluoride [INORG CHEM] HF The hydride of fluoride; anhydrous HF is a mobile, colorless, liquid that fumes in air, melts at −83°C, boils at 19.8°C; used to make fluorine-containing refrigerants (such as Freon) and organic fluorocarbon compounds, as a catalyst in alkylate gasoline manufacture, as a fluorinating agent, and in preparation of hydrofluoric acid.

hydrogenic rock *See* aqueous rock.

hydrogen iodide [INORG CHEM] HI A water-soluble, colorless gas that may be used in organic synthesis and as a reagent. Also known as hydriodic acid gas.

hydrogen ion *See* hydronium ion.

hydrogen ion concentration [CHEM] The normality of a solution with respect to hydrogen ions, H^+; it is related to acidity measurements in most cases by $pH = \log 1/2\,[1/(H^+)]$, where (H^+) is the hydrogen ion concentration in gram equivalents per liter of solution.

hydrogen ion exponent [CHEM] A way of expressing pH; namely, $pH = -\log c_H$, where c_H = hydrogen ion concentration.

hydrogen laser [OPTICS] A molecular gas laser in which hydrogen is used to generate coherent wavelengths near 0.6 micrometer in the vacuum ultraviolet region.

hydrogen line [SPECT] A spectral line emitted by neutral hydrogen having a frequency of 1420 megahertz and a wavelength of 21 centimeters; radiation from this line is used in radio astronomy to study the amount and velocity of hydrogen in the Galaxy.

hydrogen loss [MET] Loss of weight by a compact or a metal powder when heated in a hydrogen atmosphere; used as a measure of oxygen content of the sample.

hydrogen maser [PHYS] A maser in which hydrogen gas is the basis for providing an output signal with a high degree of stability and spectral purity.

hydrogenolysis [CHEM] A reaction in which hydrogen gas causes a chemical change that is similar to the role of water in hydrolysis.

hydrogenous [CHEM] Of, pertaining to, or containing hydrogen.

hydrogen overvoltage [MET] An overvoltage occurring at an electrode as a result of the liberation of hydrogen gas.

hydrogen oxide *See* water.

hydrogen peroxide [INORG CHEM] H_2O_2 Unstable, colorless, heavy liquid boiling at 158°C; soluble in water and alcohol; used as a bleach, chemical intermediate, rocket fuel, and antiseptic. Also known as peroxide.

hydrogen phosphide *See* phosphine.

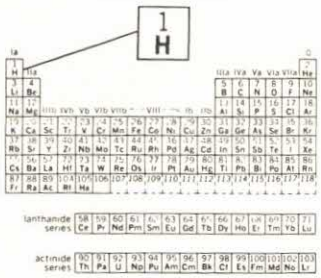
hydrogen-reduced powder [MET] Metal powder produced by hydrogen-reduction of a metal, metallic compound, or surface-contaminated metal particles.

hydrogen selenide [INORG CHEM] H_2Se A toxic, colorless gas, soluble in water, carbon disulfide, and phosgene; used

HYDROFOIL BOAT

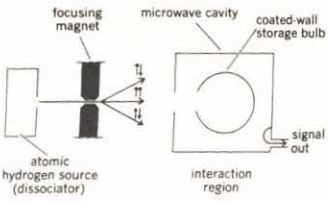
Hydrofoil boat *Denison*, with surface-piercing foils, designed by Grumman Aircraft Engineering Corp.

HYDROGEN



Periodic table of the chemical elements showing the position of hydrogen.

HYDROGEN MASER



Basic elements of the hydrogen maser. The hydrogen atoms in the upper hyperfine level are focused into the coated bulb, and the energy coupled out through a loop and coaxial cable.

to make metallic selenides and organoselenium compounds and in the preparation of semiconductor materials.

hydrogen star [ASTROPHYS] A star of spectral class A, a white star with a surface temperature of 8000 to 11,000 K.

hydrogen sulfide [INORG CHEM] H_2S Flammable, toxic, colorless gas with offensive odor, boiling at $-60°C$; soluble in water and alcohol; used as an analytical reagent, as a sulfur source, and for purification of hydrochloric and sulfuric acids. Also known as hydrogen disulfide.

hydrogen tellurate *See* telluric acid.

hydrogen thyratron [ELECTR] A thyratron containing hydrogen instead of mercury vapor to give freedom from effects of changes in ambient temperature; used in radar pulse circuits and stroboscopic photography.

hydrogeochemistry [GEOCHEM] The study of the chemical characteristics of ground and surface waters as related to areal and regional geology.

hydrogeology [HYD] The science dealing with the occurrence of surface and ground water, its utilization, and its functions in modifying the earth, primarily by erosion and deposition.

hydrograph [HYD] A graphical representation of stage, flow, velocity, or other characteristics of water at a given point as a function of time.

hydrographical theorem of Knudsen *See* Knudsen's hydrographical theorem.

hydrographic chart [MAP] A map designed from data obtained by hydrographic surveys for purposes of navigation.

hydrographic cruise [OCEANOGR] Exploration of a body of water for hydrographic surveys.

hydrographic sextant [ENG] A surveying sextant similar to those used for celestial navigation but smaller and lighter, constructed so that the maximum angle that can be read is slightly greater than that on the navigating sextant; usually the angles can be read only to the nearest minute by means of a vernier; it is fitted with a telescope with a large object glass and field of view. Also known as sounding sextant; surveying sextant.

hydrographic sonar [ENG] An echo sounder used in mapping ocean bottoms.

hydrographic survey [OCEANOGR] Survey of a water area with particular reference to tidal currents, submarine relief, and any adjacent land.

hydrographic table [OCEANOGR] Tabular arrangement of data relating sea-water density to salinity, temperature, and pressure.

hydrography [GEOGR] Science which deals with the measurement and description of the physical features of the oceans, lakes, rivers, and their adjoining coastal areas, with particular reference to their control and utilization. [NAV] Measurement of the tides and currents as an aid to navigation.

hydrohalite [MINERAL] $Na_2Cl \cdot 2H_2O$ A mineral composed of hydrated sodium chloride, formed only from salty water cooled below 0°C.

hydrohalloysite *See* endellite.

hydrohetaerolite [MINERAL] $Zn_2Mn_4O_8 \cdot H_2O$ A dark brown to brownish-black mineral consisting of a hydrated oxide of zinc and manganese; occurs in massive form.

hydroid [INV ZOO] **1.** The polyp form of a hydrozoan coelenterate. Also known as hydroid polyp; hydropolyp. **2.** Any member of the Hydroida.

Hydroida [INV ZOO] An order of coelenterates in the class Hydrozoa including usually colonial forms with a well-developed polyp stage.

hydroid polyp *See* hydroid.

hydroiodic ether *See* ethyl iodide.

hydrokaolin *See* endellite.

hydrokinematics [FL MECH] The study of the motion of a liquid apart from the cause of motion.

hydrokinetics [FL MECH] The study of the forces produced by a liquid as a consequence of its motion.

hydrolaccolith [GEOL] A frost mound, 0.1–6 meters in height, having a core of ice and resembling a laccolith in section. Also known as cryolaccolith.

HYDROLANT [NAV] An urgent notice of dangers to navigation in the Atlantic Ocean, originated by the U.S. Naval Oceanographic Office and disseminated for the immediate safeguarding of shipping.

hydrolase [BIOCHEM] Any of a class of enzymes which catalyze the hydrolysis of proteins, nucleic acids, starch, fats, phosphate esters, and other macromolecular substances.

hydrolith [PETR] **1.** A chemically precipitated aqueous rock, such as rock salt. **2.** A rock that is free of organic material.

hydrologic accounting [HYD] A systematic summary of the terms (inflow, outflow, and storage) of the storage equation as applied to the computation of soil-moisture changes, groundwater changes, and so forth; an evaluation of the hydrologic balance of an area. Also known as basin accounting; water budget.

hydrological civilization [ANTHRO] A civilization that depends on sophisticated water management to sustain its agriculture.

hydrologic cycle [HYD] The complete cycle through which water passes, from the oceans, through the atmosphere, to the land, and back to the ocean. Also known as water cycle.

hydrologic sequence [GEOL] A series of soil sections from differentiated parent material that shows increasing lack of drainage downslope.

hydrologist [HYD] An individual who specializes in hydrology.

hydrology [GEOPHYS] The science that treats the occurrence, circulation, distribution, and properties of the waters of the earth, and their reaction with the environment.

hydrolysis [CHEM] **1.** Decomposition or alteration of a chemical substance by water. **2.** In aqueous solutions of electrolytes, the reactions of cations with water to produce a weak base or of anions to produce a weak acid.

hydrolytic enzyme [BIOCHEM] A catalyst that acts like a hydrolase.

hydrolytic process [CHEM] A reaction of both organic and inorganic chemistry wherein water effects a double decomposition with another compound, hydrogen going to one compound and hydroxyl to another.

hydrolyzate [GEOL] A sediment characterized by elements such as aluminum, potassium, or sodium which are readily hydrolyzed.

hydromagnesite [MINERAL] $Mg_4(OH)_2(CO_3)_3 \cdot 3H_2O$ White, earthy mineral crystallizing in the monoclinic system and found in small crystals, amorphous masses, or chalky crusts.

hydromagnetic instability *See* magnetohydrodynamic instability.

hydromagnetics *See* magnetohydrodynamics.

hydromagnetic stability *See* magnetohydrodynamic stability.

hydromagnetic wave *See* magnetohydrodynamic wave.

hydromechanics [FL MECH] The study of liquids, traditionally water, as a medium for the transmission of forces.

hydrometallurgy [MET] Treatment of metals and metal-containing materials by wet processes.

hydrometamorphism [GEOL] Alteration of rocks by material carried in solution by water without the influence of high temperature or pressure.

hydrometeor [HYD] **1.** Any product of condensation or sublimation of atmospheric water vapor, whether formed in the free atmosphere or at the earth's surface. **2.** Any water particles blown by the wind from the earth's surface.

hydrometeorology [METEOROL] That part of meteorology of direct concern to hydrologic problems, particularly to flood control, hydroelectric power, irrigation, and similar fields of engineering and water resources.

hydrometer [ENG] A direct-reading instrument for indicating the density, specific gravity, or some similar characteristic of liquids.

Hydrometridae [INV ZOO] The marsh treaders, a family of hemipteran insects in the subdivision Amphibicorisae.

hydrometry [FL MECH] The science and technology of measuring specific gravities, particularly of liquids.

hydromica [GEOL] Any of several varieties of muscovite, especially illite, which are less elastic than mica, have a pearly luster, and sometimes contain less potash and more water than muscovite. Also known as hydrous mica.

hydromorphic [GEOL] Referring to an intrazonal soil with characteristics that were developed in the presence of excess water all or part of the time.

hydronephrosis [MED] Accumulation of urine in and distension of the renal pelvis and calyces due to obstructed outflow.

hydronic heating *See* hot-water heating.

hydronic radiation [COMMUN] A form of electromagnetic radiation used for communication underwater.

hydronitric acid *See* hydrazoic acid.

hydronium ion [INORG CHEM] H_3O^+ A proton combined

HYDROMETER

A plain hydrometer. *(Taylor Instrument Co.)*

with a molecule of water; found in pure water and in all aqueous solutions. Also known as hydrogen ion; oxonium ion.

HYDROPAC [NAV] An urgent notice of dangers to navigation in the Pacific Ocean, originated by the U.S. Naval Oceanographic Office and disseminated for the immediate safeguarding of shipping and life at sea.

hydropathy [MED] The system of internal and external use of water in attempting to cure disease.

hydropericardium [MED] Accumulation of serous fluid in the pericardial sac.

Hydrophiidae [VERT ZOO] A family of proglyphodont snakes in the suborder Serpentes found in Indian-Pacific oceans.

hydrophile-lipophile balance [ORG CHEM] The relative simultaneous attraction of an emulsifier for two phases of an emulsion system; for example, water and oil.

hydrophilic [CHEM] Having an affinity for, attracting, adsorbing, or absorbing water.

Hydrophilidae [INV ZOO] The water scavenger beetles, a large family of coleopteran insects in the superfamily Hydrophiloidea.

hydrophilite *See* chlorocalcite.

Hydrophiloidea [INV ZOO] A superfamily of coleopteran insects in the suborder Polyphaga.

hydrophilous [ECOL] Inhabiting moist places.

hydrophobia [MED] *See* rabies. [PSYCH] An abnormal fear of water.

hydrophobic [CHEM] Lacking an affinity for, repelling, or failing to adsorb or absorb water. [MED] Of, pertaining to, or suffering from hydrophobia.

hydrophobophobia [PSYCH] An abnormal fear of hydrophobia.

hydrophone [ENG ACOUS] A device which receives underwater sound waves and converts them to electric waves.

hydrophone array [COMMUN] A group of two or more hydrophones which feed into a common receiver.

hydrophone noise [ELEC] Any unwanted disturbance in the electric waves delivered by a hydrophone.

hydrophone response [ELEC] The electric waves delivered by a hydrophone in response to waterborne sound waves.

hydrophotometer [OPTICS] An instrument for measuring the attenuation coefficient of collimated light in sea water, in which light from a collimated source is directed through a column of sea water and is measured by a photocell or other electronic device at the other end of the column.

Hydrophyllaceae [BOT] A family of dicotyledonous plants in the order Polemoniales distinguished by two carpels, parietal placentation, and generally imbricate corolla lobes in the bud.

hydrophyllium [INV ZOO] A transparent body partly covering the spore sacs of siphonophoran coelenterates.

hydrophyte [BOT] **1.** A plant that grows in a moist habitat. **2.** A plant requiring large amounts of water for growth. Also known as hygrophyte.

hydroplane [NAV ARCH] **1.** A boat which when operated at high speed planes on the surface of the water; the bottom of such a craft is normally a prismatic surface. **2.** *See* diving rudder.

hydroplanula [INV ZOO] A coelenterate larval stage between the planula and actinula stages.

hydropneumatic [ENG] Operated by both water and air power.

hydropneumatic recoil system [MECH ENG] A recoil mechanism that absorbs the energy of recoil by the forcing of oil through orifices and returns the gun to battery by compressed gas.

hydropolyp *See* hydroid.

hydroponics [BOT] Growing of plants in a nutrient solution with the mechanical support of an inert medium such as sand.

hydropore [INV ZOO] In certain asteroids and echinoids, an opening on the aboral surface of a canal which extends from the ring canal in one of the interradii.

hydroquinol *See* hydroquinone.

hydroquinone [ORG CHEM] $C_6H_4(OH)_2$ White crystals melting at 170°C and boiling at 285°C; soluble in alcohol, ether, and water; used in photographic dye chemicals, in medicine, as an antioxidant and inhibitor, and in paints, varnishes, and motor fuels and oils. Also known as hydrochinone; hydroquinol; quinol.

hydroquinone carboxylic acid *See* gentisic acid.

hydroquinone dimethyl ether [ORG CHEM] $C_6H_4(OCH_3)_2$ White flakes with a melting point of 56°C; used as a weathering agent in paint, as a flavoring, and in dyes and cosmetics. Also known as 1,4-dimethoxybenzene (DMB); dimethyl hydroquinone.

hydroquinone monomethyl ether [ORG CHEM] $CH_3O\text{-}C_6H_4OH$ A white, waxy solid with a melting point of 52.5°C; soluble in benzene, acetone, and alcohol; used for antioxidants, pharmaceuticals, and dyestuffs. Also known as *para*-hydroxyanisole; 4-methoxyphenol.

hydroquinone monopentyl ether *See para*-pentyloxyphenol.

hydrorhiza [INV ZOO] Rootlike structure of a hydroid colony.

hydrosalpinx [MED] A distension of a fallopian tube with fluid.

Hydroscaphidae [INV ZOO] The skiff beetles, a small family of coleopteran insects in the suborder Myxophaga.

hydroscope [OPTICS] An instrument designed to observe objects an appreciable distance below the surface of water, consisting of a series of mirrors enclosed in a steel tube.

hydroseparator [MECH ENG] A separator in which solids in suspension are agitated by hydraulic pressure or stirring devices.

hydrosere [ECOL] Community in which the pioneer plants invade open water, eventually forming some kind of soil such as peat or muck.

hydrosilylation [ORG CHEM] The addition of a Si-H bond to a C-C double bond of an olefin.

hydrosizer *See* hydraulic classifier.

hydroskeleton [INV ZOO] Water contained within the coelenteron and serving a skeletal function in most coelenterate polyps.

hydrosol [CHEM] A colloidal system in which the dispersion medium is water, and the dispersed phase may be a solid, a gas, or another liquid.

hydrospace detection [ORD] Detection of underwater targets, as with sonar.

hydrosphere [HYD] The water portion of the earth as distinguished from the solid part (lithosphere) and from the gaseous outer envelope (atmosphere).

hydrospire [INV ZOO] Either of a pair of flattened tubes composing part of the respiratory system in blastoids.

hydrospore [INV ZOO] Opening into the hydrocoele on the right side in echinoderm larvae.

hydrostat *See* humidistat.

hydrostatic approximation [METEOROL] The assumption that the atmosphere is in hydrostatic equilibrium.

hydrostatic assumption [GEOPHYS] **1.** The assumption that the pressure of seawater increases by 1 atmosphere (101,325 newtons per square meter) over approximately 10 meters of depth, the exact value depending on the water density and the local acceleration of gravity. **2.** Specifically, the assumption that fluid is not undergoing vertical accelerations, hence the vertical component of the passive gradient force per unit mass is equal to g, the local acceleration due to gravity.

hydrostatic bearing [MECH ENG] A sleeve bearing in which high-pressure oil is pumped into the area between the shaft and the bearing so that the shaft is raised and supported by an oil film.

hydrostatic equation [PHYS] The form assumed by the vertical component of the vector equation of motion when all Coriolis force, earth curvature, frictional, and vertical acceleration terms are considered negligible compared with those involving the vertical pressure force and the force of gravity.

hydrostatic equilibrium [PHYS] The state of a fluid whose surfaces of constant mass (or density) coincide and are horizontal throughout; complete balance exists between the force of gravity and the pressure force; the relation between the pressure and the geometic height is given by the hydrostatic equation.

hydrostatic forging [MET] Forging a metal part by using pressure supplied by a liquid.

hydrostatic fuse [ORD] A fuse used with a depth bomb to cause an underwater explosion at a predetermined depth; initiation is caused by the pressure of the water as the depth bomb sinks.

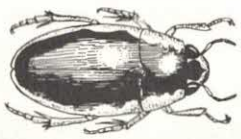
hydrostatic modulus *See* bulk modulus of elasticity.

hydrostatic press *See* hydraulic press.

hydrostatic pressing [ENG] Compacting ceramic or metal powders by packing them in a rubber bag which is subjected to hydrostatic press in a cylinder.

hydrostatic pressure [FL MECH] **1.** The pressure at a point in a fluid at rest due to the weight of the fluid above it. Also

HYDROPHILIDAE



A drawing of a water scavenger beetle. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

HYDROQUINONE

Structural formula of hydroquinone.

known as gravitational pressure. **2.** The negative of the stress normal to a surface in a fluid.

hydrostatic roller conveyor [MECH ENG] A portion of a roller conveyor that has rolls weighted with liquid to control the speed of the moving objects.

hydrostatics [FL MECH] The study of liquids at rest and the forces exerted on them or by them.

hydrostatic stability *See* static stability.

hydrostatic strength [MECH] The ability of a body to withstand hydrostatic stress.

hydrostatic stress [MECH] The condition in which there are equal compressive stresses or equal tensile stresses in all directions, and no shear stresses on any plane.

hydrostatic test [ENG] Test of strength and leak-resistance of a vessel, pipe, or other hollow equipment by internal pressurization with a test liquid.

hydrostatic weighing [FL MECH] A method of determining the density of a sample in which the sample is weighed in air, and then weighed in a liquid of known density; the volume of the sample is equal to the loss of weight in the liquid divided by the density of the liquid.

hydrosulfide [CHEM] A compound that has the SH— radical; for example, sulfhydrates, sulfhydryls, thioalcohols, thiols, sulfur alcohols, and mercaptans.

hydrotalcite [MINERAL] $Mg_6Al_2(OH)_{16}(CO_3)\cdot 4H_2O$ Pearly-white mineral composed of hydrous aluminum and magnesium hydroxide and carbonate.

hydrotheca [INV ZOO] Cup-shaped portion of the perisarc in some coelenterates that serves to hold and protect a withdrawn hydranth.

hydrotherapy [MED] Treatment of disease by external application of water.

hydrothermal [GEOL] Of or pertaining to heated water, to its action, or to the products of such action.

hydrothermal alteration [GEOL] Rock or mineral phase changes that are caused by the interaction of hydrothermal liquids and wall rock.

hydrothermal crystal growth [CHEM ENG] Formation of simple crystals of quartz at elevated temperatures and pressures in an autoclave with an alkaline solution.

hydrothermal deposit [GEOL] A mineral deposit precipitated from a hot, aqueous solution.

hydrothermal solution [GEOL] Hot, residual watery fluids derived from magmas during the later stages of their crystallization and commonly containing large amounts of dissolved metals which are deposited as ore veins in fissures along which the solutions often move.

hydrothermal synthesis [GEOL] Mineral synthesis in the presence of heated water.

hydrothorax [MED] Collection of serous fluid in the pleural spaces.

hydrotreating [CHEM ENG] Oil refinery catalytic process in which hydrogen is contacted with petroleum intermediate or product streams to remove impurities, such as oxygen, sulfur, nitrogen, or unsaturated hydrocarbons.

hydrotroilite [MINERAL] $FeS\cdot NH_2O$ A black, finely divided colloidal material reported in many muds and clays; thought to be formed by bacteria on bottoms of marine basins.

hydrotrope [CHEM] Compound with the ability to increase the solubilities of certain slightly soluble organic compounds.

hydrotropism [BIOL] Orientation involving growth or movement of a sessile organism or part, especially plant roots, in response to the presence of water.

hydrotungstite [MINERAL] $H_2WO_4\cdot H_2O$ A mineral composed of hydrous tungstic acid.

hydroureter [MED] Accumulation of urine in and distension of the ureter due to obstructed outflow.

hydrous [CHEM] Indicating the presence of an indefinite amount of water. [MINERAL] Indicating a definite proportion of combined water.

hydrous mica *See* hydromica.

hydrowire [ENG] A wire to which equipment is clamped so that it can be lowered over the side of the ship into the water.

hydroxamic acid [ORG CHEM] An organic compound that contains the group —C(=O)NHOH.

hydroxide [CHEM] Compound containing the OH^- group; the hydroxides of metals are usually bases and those of nonmetals are usually acids; a hydroxide can be organic or inorganic.

hydroximino *See* nitroso.

hydroxisoxazole [ORG CHEM] $C_4H_5NO_2$ A colorless, crystalline compound with a melting point of 86–87°C; used as a fungicide in soil and as a growth regulator for seeds. Also known as 3-hydroxy-5-methylisoxazole; hymexazol.

hydroxy- [ORG CHEM] Chemical prefix indicating the OH^- group in an organic compound, such as hydroxybenzene for phenol, C_6H_5OH; the use of just oxy- for the prefix is incorrect. Also spelled hydroxyl-.

***para*-hydroxyacetanilide** *See* acetaminophen.

hydroxyacetic acid *See* glycolic acid.

hydroxy acid [ORG CHEM] Any organic acid, with an OH^- group, such as hydroxyacetic acid.

hydroxyamphetamine [PHARM] $C_9H_{13}ON$ A sympathetic amine used as the hydrobromide salt orally as a drug and locally as a mydriatic and nasal decongestant.

2-hydroxy-3-amylene-α-naphthoquinone *See* lapachol.

3β-hydroxy-5-androsten-17-one *See* dehydroepiandrosterone.

***para*-hydroxyanilinoacetic acid** *See* glycin.

***ortho*-hydroxyanisole** *See* guaiacol.

***para*-hydroxyanisole** *See* hydroquinone monomethyl ether.

5-hydroxybarbituric acid *See* dialuric acid.

***ortho*-hydroxybenzaldehyde** *See* salicylaldehyde.

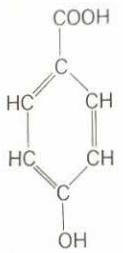
***ortho*-hydroxybenzamide** *See* salicylamide.

hydroxybenzoic acid [ORG CHEM] $C_7H_6O_3$ Any one of three crystalline derivatives of benzoic acid: ortho, meta, and para forms; the ester of the para compound is used as a bacteriostatic agent.

***ortho*-hydroxybenzoic acid** *See* salicylic acid.

***para*-hydroxybenzoic acid** [ORG CHEM] $C_6H_4(OH)$-$COOH\cdot 2H_2O$ Colorless crystals melting at 210°C; soluble in alcohol, water, and ether; used as a chemical intermediate and for synthetic drugs.

PARA-HYDROXYBENZOIC ACID



Structural formula.

2-hydroxybenzoic-5-sulfonic acid *See* sulfosalicylic acid.

***ortho*-hydroxybenzyl alcohol** *See* salicyl alcohol.

2-hydroxybiphenyl *See* phenylphenol.

3-hydroxybutanal *See* aldol.

3-hydroxy-2-butanone *See* acetoin.

β-hydroxybutyric dehydrogenase [BIOCHEM] The enzyme that catalyzes the conversion of L-β-hydroxybutyric acid to acetoacetic acid by dehydrogenation.

2-hydroxycamphane *See* borneol.

hydroxycarbamide *See* hydroxyurea.

***meta*-hydroxycarbanilate** *See* phenmediphan.

hydroxycarbonyl compound [ORG CHEM] A compound possessing one or more hydroxy (—OH) groups and one or more carbonyl (=C=O) groups.

2-hydroxy-5-chlorobenzoxazole *See* chlorzoxazone.

hydroxychloroquine [PHARM] $C_{18}H_{26}ClN_3O$ A drug used as the sulfate salt for the treatment of malaria, lupus erythematosus, and rheumatoid arthritis.

hydroxycholine *See* muscarine.

hydroxycinchonine *See* cupreine.

hydroxycitronellal [ORG CHEM] $C_{10}H_{20}O_2$ A colorless or light yellow, viscous liquid with a boiling range of 94–96°C; soluble in 50% alcohol and fixed oils; used in perfumery and flavoring. Also known as citronellal hydrate; 3,7-dimethyl-7-hydroxyoctanal.

1-hydroxy-2-cyanoethane *See* ethylene cyanohydrin.

2-hydroxy-*para*-cymene *See* carvacrol.

4-hydroxy-3,5-diiodobenzonitrile (4-cyano-2,6-diiodophenol) *See* ioxynil.

hydroxydimethylbenzene *See* xylenol.

***para*-hydroxydiphenyl** *See* phenylphenol.

2-(hydroxydiphenyl)methane [ORG CHEM] $C_6H_5CH_2$-C_6H_4OH A crystalline substance with a melting point of 20.2–20.9°C, or a liquid; used as a germicide, preservative, and antiseptic. Also known as *ortho*-benzylphenol.

hydroxyethylacetamide *See N*-acetylethanolamine.

α-(2-hydroxyethyl)acetoacetic acid γ-lactone *See* α-acetylbutyrolactone.

hydroxyethylcellulose [MATER] A white powder made from cellulose, used for textile finishes and as a thickener for water-base paints.

2-hydroxyethylhydrazine [ORG CHEM] $HOCH_2CH_2$-$NHNH_2$ A colorless, slightly viscous liquid with a melting point of − 70°C; soluble in lower alcohols; used as an abscission agent in fruit. Also known as 2-hydrazinoethanol.

β-hydroxyethyl phenyl ether *See* 2-phenoxyethanol.

1-hydroxy fenchane *See* fenchyl alcohol.

3-hydroxyflavone *See* flavanol.

hydroxyhydroquinone *See* 1,2,4-benzenetriol.

hydroxyline [PHARM] $C_{21}H_{27}ClN_2O_2$ A tranquilizer, also possessing antiemetic and antihistaminic effects; used as the hydrochloride salt.

hydroxyl- *See* hydroxy-.

hydroxylamine [INORG CHEM] NH_2OH A colorless, crystalline compound produced commercially by acid hydrolysis of nitroparaffins, decomposes on heating, melts at 33°C; used in organic synthesis and as a reducing agent.

hydroxylamine hydrochloride [ORG CHEM] $(NH_2OH)Cl$ A crystalline substance with a melting point of 151°C; soluble in glycerol and propylene glycol; used as a reducing agent in photography and in synthetic and analytic chemistry; as an antioxidant in fatty acids and soaps; and as a reagent for enzyme reactivation. Also known as oxammonium hydrochloride.

***ortho*-hydroxylaniline** [ORG CHEM] $C_6H_4NH_2OH$ White crystals that turn brownish upon standing for some time; melts at 172-173°C, and will sublime upon more heating; soluble in cold water and benzene; used as a dye for hair and furs, and as a dye intermediate. Also known as *ortho*-aminophenol; oxammonium.

hydroxylapatite [MINERAL] $Ca_5(PO_4)_3OH$ A rare form of the apatite group that crystallizes in the hexagonal system.

hydroxylase [BIOCHEM] Any of several enzymes that catalyze certain hydroxylation reactions involving atomic oxygen.

hydroxylation reaction [ORG CHEM] One of several types of reactions used to introduce one or more hydroxyl groups into organic compounds; an oxidation reaction as opposed to hydrolysis.

hydroxylherderite [MINERAL] $CaBe(PO_4)(OH)$ A monoclinic mineral composed of a phosphate and hydroxide of calcium and beryllium; isomorphous with herderite.

3-hydroxymenthane *See* menthol.

4-hydroxy-3-methoxyacetophenone *See* acetovanillon.

1-hydroxy-2-methoxybenzene *See* guaiacol.

4-hydroxy-3-methoxyphenylacetic acid *See* homovanillic acid.

2-hydroxy methyl furan *See* furfuryl alcohol.

7-hydroxy-4-methyl-2-oxo-3-chromene *See* hymecromone.

3-hydroxy-2-methyl-γ-pyrone *See* maltol.

1-hydroxynaphthalene *See* α-naphthol.

2-hydroxynaphthalene *See* β-naphthol.

3-hydroxy-2-naphthoic acid *See* β-hydroxynaphthoic acid.

β-hydroxynaphthoic acid [ORG CHEM] $C_{10}H_6OH$-COOH A yellow solid that is soluble in ether and alcohol and melts at about 218°C; used as a dye and a pigment. Also known as 3-hydroxy-2-naphthoic acid; 3-naphthol-2-carboxylic acid; β-oxynaphthoic acid.

4-hydroxy-3-nitrobenzenearsonic acid [ORG CHEM] $HOC_6H_3(NO_2)AsO(OH)_2$ Crystals used as a reagent for zirconium; also used to control enteric infections and to improve growth and feed efficiency in animals. Also known as 2-nitro-1-hydroxybenzene-4-arsonic acid; nitrophenolarsonic acid; roxarsone.

***cis*-12-hydroxyoctadec-9-enoic acid** *See* ricinoleic acid.

12-hydroxyoleic acid *See* ricinoleic acid.

15-hydroxypentadecanoic acid lactone *See* pentadecanolide.

1-hydroxy-2-phenoxyethane *See* 2-phenoxyethanol.

2-hydroxy-2-phenyl acetophenone *See* benzoin.

***para*-hydroxyphenylaminoacetic acid** *See* glycin.

α-(4-hydroxyphenyl)-β-aminoethane *See* tyramine.

***para*-hydroxyphenylethanolamine** *See* octopamine.

2-*para*-hydroxyphenylethylamine *See* tyramine.

hydroxyproline [BIOCHEM] $C_5H_9O_3N$ An amino acid that is essentially limited to structural proteins of the collagen type.

2-hydroxy-2 propanesulfonic acid sodium salt *See* acetone sodium bisulfite.

2-hydroxy-1,2,3-propane-tricarboxylic acid *See* isocitric acid.

2-hydroxypropanoic acid *See* lactic acid.

3-hydroxypropanoic acid *See* hydracrylic acid.

α-hydroxypropanoic acid *See* lactic acid.

1-hydroxy-2-propanone *See* acetol.

β-hydroxypropionic acid *See* hydracrylic acid.

α-hydroxypropionitrile *See* lactonitrile.

***para*-hydroxypropiophenone** [PHARM] HOC_6H_4CO-C_2H_5 A crystalline substance with a melting point of 149°C; soluble in alcohol and ether; used as an inhibitor of pituitary gonadotropic hormone. Also known as ethyl-*para*-hydroxyphenyl ketone; paroxypropione; paroxypropiophenone; *para*-propionylphenol.

hydroxypropyl alginate *See* propylene glycol alginate.

2-hydroxypropylamine *See* isopropanolamine.

α-hydroxypropylbenzene *See* 1-phenyl-1-propanol.

(2-hydroxypropyl)trimethyammonium chloride acetate *See* methacholine chloride.

hydroxyquinol *See* 1,2,4-benzenetriol.

8-hydroxyquinoline [ORG CHEM] C_9H_6NOH White crystals or powder that darken on exposure to light, slightly soluble in water, soluble in benzene, melting at 73–75°C; used in preparing fungicides and in the separation of metals by acting as a precipitating agent. Also known as oxine; oxyquinoline; 8-quinolinol.

8-hydroxyquinoline sulfate [PHARM] $C_{18}H_{16}N_2O_6S$ A pale yellow, crystalline powder with a melting point of 175–178°C; soluble in water; used as an antiseptic, deodorant, and antiperspirant. Also known as 8-hydroxyquinoline sulfuric acid salt; oxine sulfate; oxyquinoline sulfate.

8-hydroxyquinoline sulfuric acid salt *See* 8-hydroxyquinoline sulfate.

3-hydroxyquinuclidine *See* 3-quinuclidinol.

4-hydroxysalicylic acid *See* β-resorcylic acid.

5-hydroxysalicylic acid *See* gentisic acid.

4-hydroxy-3-(1,2,3,4-tetrahydro-1-naphthyl)coumarin *See* coumatetralyl.

2-hydroxy-*meta*-toluic acid *See* 3-methylsalicylic acid.

5-hydroxytryptamine *See* serotonin.

5-hydroxytryptophan [BIOCHEM] $C_{11}H_{12}N_2O_3$ Minute rods or needlelike crystals; the biological precursor of serotonin.

3-hydroxytyramine hydrobromide [ORG CHEM] $(HO)_2$-$C_6H_3CH_2CH_2NH_2 \cdot HBr$ A source of dopamine for the synthesis of catecholamine analogs.

hydroxyurea [PHARM] $HONHCONH_2$ Needlelike crystals with a melting point of 133–136°C; used as an antineoplastic agent. Also known as hydroxycarbamide.

8-hydroxyxanthine *See* uric acid.

hydrozincite [MINERAL] $Zn_5(OH)_5(CO_3)_2$ A white, grayish, or yellowish mineral composed of basic zinc carbonate, occurring as masses or crusts.

Hydrozoa [INV ZOO] A class of the phylum Coelenterata which includes the fresh-water hydras, the marine hydroids, many small jellyfish, a few corals, and the Portuguese man-of-war.

Hydrus [ASTRON] A southern constellation, right ascension 2 hours, declination 75°S. Also known as Water Snake.

hyena [VERT ZOO] An African carnivore represented by three species of the family Hyaenidae that resemble dogs but are more closely related to cats.

Hyeniales [PALEOBOT] An order of Devonian plants characterized by small, dichotomously forked leaves borne in whorls.

Hyeniatae *See* Hyeniopsida.

Hyeniopsida [PALEOBOT] An extinct class of the division Equisetophyta.

hyetal coefficient *See* pluviometric coefficient.

hyetal equator [CLIMATOL] A line (or transition zone) which encircles the earth (north of the geographical equator) and lies between two belts that typify the annual time distribution of rainfall in the lower latitudes of each hemisphere; a form of meteorological equator.

hyetal region [CLIMATOL] A region in which the amount and seasonal variation of rainfall are of a given type.

hyetograph [CLIMATOL] A map or chart displaying temporal or areal distribution of precipitation.

hyetography [CLIMATOL] The study of the annual variation and geographic distribution of precipitation.

hyetology [METEOROL] The science which treats of the origin, structure, and various other features of all the forms of precipitation.

Hygiea [ASTRON] The fourth largest asteroid, with a diameter of about 410 kilometers, mean distance from the sun of 3.151 astronomical units, and C-type surface composition.

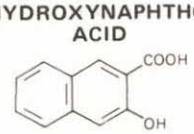
hygiene [MED] The science that deals with the principles and practices of good health.

hygristor [ELECTR] A resistor whose resistance varies with humidity; used in some types of recording hygrometers.

Hygrobiidae [INV ZOO] The squeaker beetles, a small family of coleopteran insects in the suborder Adephaga.

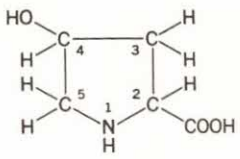
hygrodeik [ENG] A form of psychrometer with wet-bulb and

β-HYDROXYNAPHTHOIC ACID



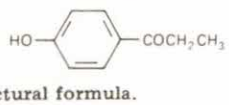
Structural formula.

HYDROXYPROLINE



Structural formula.

PARA-HYDROXYPROPIOPHENONE



Structural formula.

dry-bulb thermometers mounted on opposite edges of a specially designed graph of the psychrometric tables, arranged so that the intersections of two curves determined by the wet-bulb and dry-bulb readings yield the relative humidity, dew-point, and absolute humidity.

hygrogram [ENG] The record made by a hygrograph.

hygrograph [ENG] A recording hygrometer.

hygrokinematics [METEOROL] The descriptive study of the motion of water substances in the atmosphere.

hygrology [METEOROL] The study which deals with the water vapor content (humidity) of the atmosphere.

hygroma [MED] A congenital disorder in which a lymph-filled cystic cavity is formed from distended lymphatics.

hygrometer [ENG] An instrument for giving a direct indication of the amount of moisture in the air or other gas, the indication usually being in terms of relative humidity as a percentage which the moisture present bears to the maximum amount of moisture that could be present at the location temperature without condensation taking place.

hygrometry [ENG] The study which treats of the measurement of the humidity of the atmosphere and other gases.

hygromycin [MICROBIO] $C_{25}H_{33}O_{12}N$ A weakly acidic, soluble antibiotic with a fairly broad spectrum, produced by a strain of *Streptomyces hygroscopicus*.

hygrophobia [PSYCH] An abnormal fear of liquids or moisture.

hygrophyte *See* hydrophyte.

hygroscopic [BOT] Being sensitive to moisture, such as certain tissues. [CHEM] **1.** Possessing a marked ability to accelerate the condensation of water vapor; applied to condensation nuclei composed of salts which yield aqueous solutions of a very low equilibrium vapor pressure compared with that of pure water at the same temperature. **2.** Pertaining to a substance whose physical characteristics are appreciably altered by effects of water vapor. **3.** Pertaining to water absorbed by dry soil minerals from the atmosphere; the amounts depend on the physicochemical character of the surfaces, and increase with rising relative humidity.

hygroscopic coefficient [HYD] The percentage of water that a soil will absorb and hold in equilibrium in a saturated atmosphere.

hygroscopic depression [CHEM] The measure of a desiccant's capacity to take on water.

hygroscopic water [HYD] The component of soil water that is held adsorbed on the surface of soil particles and is not available to vegetation.

hygrothermograph [ENG] An instrument for recording temperature and humidity on a single chart.

hyl *See* metric-technical unit of mass.

hylaea *See* tropical rainforest.

Hylidae [VERT ZOO] The tree frogs, a large amphibian family in the suborder Procoela; many are adapted to arboreal life, having expanded digital disks.

Hylleraas coordinates [ATOM PHYS] Coordinates for two particles used in studying the helium atom; they comprise the distance between the two particles, the sum of the distances of the particles from the origin, and the difference of the distances of the particles from the origin.

Hylobatidae [VERT ZOO] A family of anthropoid primates in the superfamily Hominoidea including the gibbon and the siamang of southeastern Asia.

hylophagous [ZOO] Feeding on wood, as termites.

hylophobia [PSYCH] An abnormal fear of forests.

hylotomous [ZOO] Cutting wood, as wood-boring insects.

hymecromone [ORG CHEM] $C_{10}H_8O_3$ A crystalline substance with a melting point of 194–195°C; soluble in methanol and glacial acetic acid; used as choleretic and antispasmodic drugs and as a standard for the fluorometric determination of enzyme activity. Also known as 7-hydroxy-4-methyl-2-oxo-3-chromene; imecromone; β-methylumbelliferone.

hymen [ANAT] A mucous membrane partly closing off the vaginal orifice. Also known as maidenhead.

hymenium [MYCOL] The outer, sporebearing layer of certain fungi or their fruiting bodies.

hymenolepiasis [MED] Intestinal infection by tapeworms of the genus *Hymenolepis*.

Hymenolepis [INV ZOO] A genus of tapeworms parasitic in humans, birds, and mammals.

Hymenolepis nana [INV ZOO] The dwarf tapeworm that infests humans.

Hymenomycetes [MYCOL] A group of the Homobasidiomycetidae including forms such as mushrooms and pore fungi in which basidia are formed in an exposed layer (hymenium) and basidiospores are borne asymmetrically on slender stalks.

hymenophore [MYCOL] Portion of a sporophore that bears the hymenium.

hymenopodium [MYCOL] **1.** Tissue beneath the hymenium in certain fungi. **2.** A genus of the Moniliales.

Hymenoptera [INV ZOO] A large order of insects including ants, wasps, bees, sawflies, and related forms; head, thorax and abdomen are clearly differentiated; wings, when present, and legs are attached to the thorax.

Hymenostomatida [INV ZOO] An order of ciliated protozoans in the subclass Holotrichia having fairly uniform ciliation and a definite buccal ciliature.

hymenotomy [MED] Surgical incision of the hymen.

hymexazol *See* hydroxisoxazole.

Hynobiidae [VERT ZOO] A family of salamanders in the suborder Cryptobranchoidea.

hyobranchium [VERT ZOO] A Y-shaped bone supporting the tongue and tongue muscles in a snake.

Hyocephalidae [INV ZOO] A monospecific family of hemipteran insects in the superfamily Pentatomorpha.

hyoglossus [ANAT] An extrinsic muscle of the tongue arising from the hyoid bone.

hyoid [ANAT] **1.** A bone or complex of bones at the base of the tongue supporting the tongue and its muscles. **2.** Of or pertaining to structures derived from the hyoid arch.

hyoid arch [EMBRYO] Either of the second pair of pharyngeal segments or gill arches in vertebrate embryos.

hyoid tooth [VERT ZOO] One of a number of teeth on the tongue of fishes.

hyomandibular [VERT ZOO] The upper portion of the hyoid arch in fishes.

hyomandibular cleft [EMBRYO] The space between the hyoid arch and the mandibular arch in the vertebrate embryo.

hyomandibular pouch [EMBRYO] A portion of the endodermal lining of the pharyngeal cavity which separates the paired hyoid and mandibular arches in vertebrate embryos.

Hyopssodontidae [PALEON] A family of extinct mammalian herbivores in the order Condylarthra.

hyoscyamine [ORG CHEM] $C_{17}H_{23}O_3N$ A white, crystalline alkaloid isolated from henbane, belladonna, and other plants of the family Solanaceae, which is freely soluble in alcohol and dilute acids; used in medicine as an anticholinergic.

hyostylic [VERT ZOO] Having the jaws and cranium connected by the hyomandibular, as certain fishes.

hypabyssal rock [PETR] Those igneous rocks that rose from great depths as magmas but solidified as minor intrusions before reaching the surface.

hypacusia [MED] Impairment of hearing.

hypalgesia [PHYSIO] Diminished sensitivity to pain.

hypandrium [INV ZOO] A plate covering the genitalia on the ninth abdominal segment of certain male insects.

hypanthium [BOT] Expanded receptacle margin to which the sepals, petals, and stamens are attached in some flowers.

hypantrum [VERT ZOO] In reptiles, a notch on the anterior portion of the neural arch that articulates with the hyposphene.

hypautomorphic *See* hypidiomorphic.

hypaxial musculature [ANAT] The ventral portion of the axial musculature of vertebrates including subvertebral flank and ventral abdominal muscle groups.

hypengyophobia [PSYCH] An abnormal fear of responsibility.

hyperacid [PHYSIO] Containing more than the normal concentration of acid in the gastric juice.

hyperacoustic zone [GEOPHYS] The region in the upper atmosphere, between 100 and 160 kilometers, where the distance between the rarefied air molecules roughly equals the wavelength of sound, so that sound is transmitted with less volume than at lower levels.

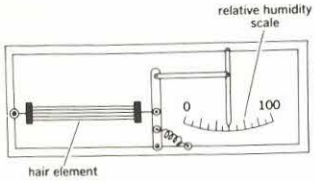
hyperactivity [PHYSIO] Excessive or pathologic activity.

hyperadrenalism [MED] Hypersecretion of adrenal hormones marked by increased basal metabolism, decreased sugar tolerance, and glycosuria. Also known as hypercorticism.

hyperadrenocorticism [MED] Hypersecretion of adrenocortical hormones resulting in Cushing's syndrome, or virilism.

hyperaldosteronism [MED] Hypersecretion of aldosterone by the adrenal cortex.

HYGROMETER

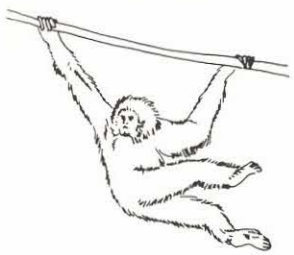


Hygrometer which uses hair as the sensing element. *(From D. M. Considine, ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*

HYLIDAE

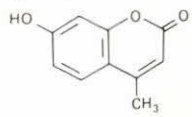
North American tree frogs. Green tree frog, *Hyla cinerea* (left), and gray tree frog, *H. versicolor* (right). *(American Museum of Natural History photograph)*

HYLOBATIDAE



A representative of the Hylobatidae.

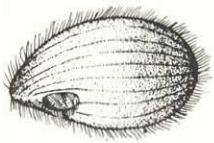
HYMECROMONE



Structural formula.

HYMENOSTOMATIDA

(a)



(b)

Hymenostomatida.
(a) Paramecium.
(b) Tetrahymena.

hyperalgesia [PHYSIO] Increased or heightened sensitivity to pain stimulation.

hyperbaric [MED] Pertaining to an anesthetic solution with a specific gravity greater than that of the cerebrospinal fluid.

hyperbaric chamber [ENG] A specially equipped pressure vessel used in medicine and physiological research to administer oxygen at elevated pressures.

hyperbaric medicine [PHARM] Any agent having a specific gravity greater than that of spinal fluid; used for spinal anesthesia.

hyperbaric oxygenation [MED] The administration of oxygen, under greater than atmospheric pressure, by placing the patient in a room or chamber especially designed for the purpose.

hyperbilirubinemia [MED] **1.** Excessive amounts of bilirubin in the blood. **2.** A severe, prolonged physiologic jaundice.

hyperbola [MATH] The plane curve obtained by intersecting a circular cone of two nappes with a plane parallel to the axis of the cone.

hyperbolic amplitude [COMMUN] Excursion of a signal measured along hyperbolic rather than cartesian coordinates.

hyperbolic antenna [ELECTROMAG] A radiator whose reflector in cross section describes a half hyperbola.

hyperbolic cosecant [MATH] A function whose value is equal to the reciprocal of the value of the hyperbolic sine. Abbreviated csch.

hyperbolic cosine [MATH] A function whose value at the complex number z is one-half the sum of the exponential of z and the exponential of $-z$. Abbreviated cosh.

hyperbolic cotangent [MATH] A function whose value is equal to the value of the hyperbolic cosine divided by the value of the hyperbolic sine. Abbreviated coth.

hyperbolic decline [PETRO ENG] One of three types of decline in oil or gas production rate (the others are constant-percentage and harmonic decline).

hyperbolic differential equation [MATH] A general type of second-order partial differential equation which includes the wave equation and has the form

$$\sum_{i,j=1}^{n} A_{ij}(\partial^2 u/\partial x_i \partial x_j) + \sum_{i=1}^{n} B_i(\partial u/\partial x_i) + Cu + F = 0$$

where the A_{ij}, B_i, C, and F are suitably differentiable real functions of $x_1, x_2, \ldots, x_n$, and there exists at each point $(x_1, x_2, \ldots, x_n)$ a real linear transformation on the x_i which reduces the quadratic form

$$\sum_{i,j=1}^{n} A_{ij} x_i x_j$$

to a sum of n squares not all of the same sign.

hyperbolic distance [ELECTROMAG] A function of pairs of points within a unit circle, where the interior of this circle is a conformal or projective representation of a hyperbolic space used in transmission line theory and waveguide analysis.

hyperbolic Dovap [NAV] System using four or more Dovap stations with a common reference signal that is not coherent with the interrogation signal.

hyperbolic fix [NAV] A fix established by means of hyperbolic lines of position.

hyperbolic flareout [AERO ENG] A flareout obtained by changing the glide slope from a straight line to a hyperbolic curve at an appropriate distance from touchdown at an airport.

hyperbolic functions [MATH] The real or complex functions sinh (x), cosh (x), tanh (x), coth (x), sech (x), csch (x); they are related to the hyperbola in somewhat the same fashion as the trigonometric functions are related to the circle, and have properties analogous to those of the trigonometric functions.

hyperbolic geometry *See* Lobachevski geometry.

hyperbolic guidance [ORD] Missile guidance in which the difference in the arrival times of radio signals transmitted simultaneously from two ground stations is used to control the position of the missile.

hyperbolic horn [ENG] Horn whose equivalent cross-sectional radius increases according to a hyperbolic law.

hyperbolic line of position [NAV] A line of position in the shape of a hyperbola, determined by measuring the difference in the phase or time of transit of radiations from fixed points; measurement may be made through the use of radio, sound, or light.

hyperbolic logarithm *See* logarithm.

hyperbolic navigation [NAV] Navigation by maintaining constant the indication of two parameters; the parameters can have any reasonable ratio to each other.

hyperbolic paraboloid [MATH] A surface which can be so situated that sections parallel to one coordinate plane are parabolas while those parallel to the other plane are hyperbolas.

hyperbolic point [FL MECH] A singular point in a streamline field which constitutes the intersection of a convergence line and a divergence line; it is analogous to a col in the field of a single-valued scalar quantity. Also known as neutral point. [MATH] A point on a surface where the Gaussian curvature is strictly negative.

hyperbolic secant [MATH] A function whose value is equal to the reciprocal of the value of the hyperbolic cosine. Abbreviated sech.

hyperbolic sine [MATH] A function whose value at the complex number z is one-half the difference between the exponential of z and the exponential of $-z$. Abbreviated sinh.

hyperbolic space [MATH] A space described by hyperbolic rather than cartesian coordinates.

hyperbolic spiral [MATH] A plane curve for which the radius vector is inversely proportional to the polar angle. Also known as reciprocal spiral.

hyperbolic sweep generator [ELECTR] A sweep generator that generates a waveform resembling a hyperbola.

hyperbolic tangent [MATH] A function whose value is equal to the value of the hyperbolic sine divided by the value of the hyperbolic cosine. Abbreviated tanh.

hyperbolic trajectory [AERO ENG] A trajectory entered by a spacecraft when its velocity exceeds the escape velocity of a planet, satellite, or star.

hyperbolic waveform [ELECTR] A waveform which is an approximate hyperbola.

hyperboloid of revolution [MATH] A surface generated by rotating a hyperboloid about one of its axes.

hyperboloids [MATH] Quadric surfaces given by equations of the form $(x^2/a^2) \pm (y^2/b^2) - (z^2/c^2) = 1$; in certain cases they can be realized by spinning the pieces of a hyperbola about an appropriate axis.

hyperbrachycephalic [ANTHRO] Having a round or broad head with a cephalic index of more than 85.

hyperbrachycranial [ANTHRO] Having a round or broad head with a cranial index of 85 to 90.

hyperbrachyskelic [ANTHRO] Having the legs 75% of the length of the trunk with a skelic index below 75.

hypercalcemia [MED] Excessive amounts of calcium in the blood. Also known as calcemia.

hypercapnia [MED] Excessive amount of carbon dioxide in the blood.

hyperchamaerrhine [ANTHRO] Having a short broad nose with a nasal index of 58 or over.

hypercharge [PARTIC PHYS] A quantum number conserved by strong interactions, equal to twice the average of the charges of the members of an isospin multiplet.

hyperchlorhydria [MED] Excessive secretion of hydrochloric acid in the stomach.

hypercholesteremia [MED] Elevated cholesterol levels in the blood.

hyperchromatic [BIOL] Staining more intensely than normal.

hyperchromatism [PATH] **1.** Excessive pigment formation in the skin. **2.** A condition in which cells or parts of cells stain more intensely than is normal.

hyperchromic [PATH] Pertaining to increased hemoglobin content in erythrocytes due to increased cell thickness, not increased hemoglobin concentration.

hyperchromic anemia [MED] Any of several blood disorders in which erythrocytes show an increase in hemoglobin and a reduction in number.

hyperchromicity [PHYS CHEM] An increase in the absorption of ultraviolet light by polynucleotide solutions due to a loss of the ordered secondary structure.

hypercoagulability [MED] Coagulation of blood more rapidly than normal.

hypercomplex number *See* quaternion.

hypercomplex system *See* algebra.

hyperconjugation [PHYS CHEM] An arrangement of bonds

in a molecule that is similar to conjugation in its formulation and manifestations, but the effects are weaker; it occurs when a CH_2 or CH_3 group (or in general, an AR_2 or AR_3 group where A may be any polyvalent atom and R any atom or radical) is adjacent to a multiple bond or to a group containing an atom with a lone π-electron, π-electron pair or quartet, or π-electron vacancy; it can be sacrificial (relatively weak) or isovalent (stronger).

hypercoracoid [VERT ZOO] The upper of two bones at the base of the pectoral fin in teleosts.

hypercorticism *See* hyperadrenalism.

hyperdisk [COMPUT SCI] A mass-storage technique which uses a large-capacity storage and a disk for overflow.

hyperdolichocephalic [ANTHRO] Having a long narrow head with a cephalic index of less than 70.

hyperdolichocranial [ANTHRO] Having a long narrow skull with a cranial index of 65 to 70.

hyperdynamic ileus *See* spastic ileus.

hyperemesis [MED] Excessive vomiting.

hyperemesis gravedorium [MED] Pernicious vomiting in pregnancy.

hyperemia [MED] An excess of blood within an organ or tissue caused by blood vessel dilation or impaired drainage, especially of the skin.

hyperergia [IMMUNOL] An altered state of reactivity to antigenic materials, in which the response is more marked than usual; one form of allery or pathergy.

hyperesthesia [PHYSIO] Increased sensitivity or sensation.

hypereuryene [ANTHRO] Having a high wide forehead with an upper facial index less than 45.

hypereutectic alloy [MET] Any binary alloy whose composition lies to the right of the eutectic on an equilibrium diagram and which contains some eutectic structure.

hypereutectoid steel [MET] Steel containing more than 0.8% carbon.

hyperfine enhanced nuclear cooling [CRYO] A version of adiabatic demagnetization in which a sample containing magnetic ions, embedded in a suitable crystal which quenches the hyperfine fields, is cooled in a moderate external field which reinduces the hyperfine fields, and is then thermally isolated and removed from the external field.

hyperfine structure [SPECT] A splitting of spectral lines due to the spin of the atomic nucleus or to the occurrence of a mixture of isotopes in the element. Abbreviated hfs.

hyperfocal distance [OPTICS] The distance from the camera lens to the nearest object in acceptable focus when the lens is focused on infinity.

hyperforming [CHEM ENG] A catalytic, petroleum-refinery hydrogenation process to improve naphtha octane number by removal of sulfur and nitrogen compounds; the catalyst is cobalt molybdate on a silica-alumina base.

hyperfrequency waves [ELECTROMAG] Microwaves having wavelengths in the range from 1 centimeter to 1 meter.

hypergammaglobulinemia [MED] Increased blood levels of gamma globulin, usually associated with hepatic disease.

hypergene *See* supergene.

hypergeometric differential equation *See* Gauss' hypergeometric equation.

hypergeometric distribution [STAT] The distribution of the number D of special items in a random sample of size s drawn from a population of size N that contains r of the special items:

$$P(D = d) = \binom{r}{d}\binom{N-r}{s-d}/\binom{N}{s}.$$

hypergeometric function [MATH] A function which is a solution to the hypergeometric equation and obtained as an infinite series expansion.

hypergeometric series [MATH] A particular infinite series which in certain cases is a solution to the hypergeometric equation, and having the form:

$$1 + \frac{ab}{c}z + \frac{1}{2!}\frac{a(a+1)b(b+1)}{c(c+1)}z^2 + \cdots$$

hyperglobulinemia [MED] Increased blood levels of globulin.

hyperglycemia [MED] Excessive amounts of sugar in the blood.

hyperglycemic factor *See* glucagon.

hyperglycemic glycogenolytic factor *See* glucagon.

hyperglycinenemia [MED] A hereditary metabolic disorder of males in which blood levels of glycine are excessive, resulting in vomiting, dehydration, osteoporosis, and mental retardation.

hypergolic [CHEM] Capable of igniting spontaneously upon contact.

hypergolic fuel [MATER] A combination of fuel and oxidizer that ignite spontaneously on contact, such as methanol and hydrogen peroxide; used as rocket propellant.

hyperhidrosis [MED] Excessive sweating, which may be localized or generalized, chronic or acute, and often accumulating in visible drops on the skin. Also known as ephidrosis; polyhidrosis; sudatoria.

Hyperiidea [INV ZOO] A suborder of amphipod crustaceans distinguished by large eyes which cover nearly the entire head.

hyperimmune antibody [IMMUNOL] An antibody having the characteristics of a blocking antibody.

hyperimmune serum [IMMUNOL] An antiserum that provides a very high degree of immunity due to a high antibody titer.

hyperinsulinism [MED] Condition caused by abnormally high levels of insulin in the blood.

Hyperion [ASTRON] A satellite of Saturn approximately 300 miles (480 kilometers) in diameter.

hyperkalemia *See* hyperpotassemia.

hyperkeratosis [MED] **1.** Hypertrophy of the cornea. **2.** Hypertrophy of the horny layer of the skin.

hyperkinesia [MED] Excessive and usually uncontrollable muscle movement.

hyperleptene [ANTHRO] Having a high narrow forehead with an upper facial index of 60 or more.

hyperleptoprosopic [ANTHRO] Having a long narrow face with a facial index of 93 or more on the living and of 95 or more on the skull.

hyperleptorrhine [ANTHRO] Having a long narrow nose with a nasal index of 40 to 55.

hyperlipemia [MED] Excessive amounts of fat in the blood.

hypermakroskelic [ANTHRO] Having long legs in proportion to the length of the trunk with a skelic index of 100 or more.

Hypermastigida [INV ZOO] An order of the multiflagellate protozoans in the class Zoomastigophorea; all inhabit the alimentary canal of termites, cockroaches, and woodroaches.

hypermenorrhea *See* menorrhagia.

hypermetabolism [MED] Any state in which there is an increase in basal metabolic rate.

hypermetamorphism [INV ZOO] Type of embryological development in certain insects in which one or more stages have been interpolated between the full-grown larva and the adult.

hypermetropia [MED] A defect of vision resulting from too short an eyeball so that unaccommodated rays focus behind the retina. Also known as farsightedness; hyperopia.

hypermotility [MED] Increased motility, as of the stomach or intestine.

hypernatremia [MED] Excessive amounts of sodium in the blood.

hypernephroma *See* renal-cell carcinoma.

Hyperoartii [VERT ZOO] A superorder in the subclass Monorhina distinguished by the single median dorsal nasal opening leading into a blind hypophyseal sac.

hyperoid axle [MECH ENG] A type of rear-axle drive gear set which generally carries the pinion 1.5–2 inches (38–51 millimeters) or more below the centerline of the gear.

hyperon [PARTIC PHYS] **1.** An elementary particle which has baryon number $B = +1$, that is, which can be transformed into a nucleon and some number of mesons or lighter particles, and which has nonzero strangeness number. **2.** A hyperon (as in the first definition) which is semistable (the lifetime is much longer than 10^{-22} second).

hyperopia *See* hypermetropia.

hyperorthognathous [ANTHRO] Having a face that is flat in profile with a facial angle of 93° or more.

hyperosmia [MED] An abnormally acute sense of smell.

hyperostosis [MED] Hypertrophy of bony tissue.

Hyperotreti [VERT ZOO] A suborder in the subclass Monorhina distinguished by the nasal opening which is located at the tip of the snout and communicates with the pharynx by a long duct.

hyperoxemia [MED] Extreme acidity of the blood.

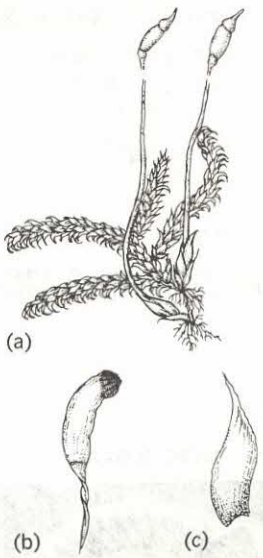
hyperparasite [ECOL] An organism that is parasitic on other parasites.

hyperparathyroidism [MED] Condition caused by increased functioning of the parathyroid glands.

hyperpathia [MED] An exaggerated or excessive perception of or response to any stimulus as being disagreeable or painful.
hyperperistalsis [MED] An increase in the rate and depth of the peristaltic waves.
hyperphagia *See* bulimia.
hyperphosphaturia [MED] An excess of phosphates in the urine. Also known as phosphaturia.
hyperpigmentation [MED] Increased pigmentation.
hyperpituitarism [MED] Any abnormal condition resulting from overactivity of the anterior pituitary.
hyperplane [MATH] A hyperplane is an $(n-1)$-dimensional subspace of an n-dimensional vector space.
hyperplasia [MED] Increase in cell number causing an increase in the size of a tissue or organ.
hyperplatycnemic [ANTHRO] Having a shinbone that is laterally flattened with a platycnemic index below 55.
hyperploid [GEN] Having one or more chromosomes or parts of chromosomes in excess of the haploid number, or of a whole multiple of the haploid number.
hyperploidy [GEN] The condition or state of being hyperploid.
hyperpnea [MED] Increase in depth and rate of respiration.
hyperpotassemia [MED] Excessive amounts of potassium in the blood. Also known as hyperkalemia.
hyperprognathous [ANTHRO] Having prominent jaws with a facial profile angle less than 70°.
hyperproteinemia [MED] Excessive protein levels in the blood.
hyperpure germanium detector [ELECTR] A variant of the lithium-drifted germanium crystal which uses high-purity germanium, making it possible to store the detector at room temperature rather than liquid nitrogen temperature.
hyperpycnal inflow [HYD] A denser inflow that occurs when a sediment-laden fluid flows down the side of a basin and along the bottom as a turbidity current.
hyperpyrexia [MED] Extremely high fever.
hyperreflexia [MED] A condition of abnormally increased reflex action.
hyperresonance [MED] Exaggeration of normal resonance on percussion of the chest; heard chiefly in pulmonary emphysema and pneumothorax.
hypersaline [GEOL] Geologic material with high salinity.
hypersensitivity [IMMUNOL] The state of being abnormally sensitive, especially to allergens; responsible for allergic reactions.
hypersensitization [GRAPHICS] Any of various techniques for increasing the sensitivity of a photographic plate; includes chemical treatments, removal of oxygen and water, baking, soaking in hydrogen gas, preflashing, and push development. [IMMUNOL] The process of producing hypersensitivity.
hypersensor [ELECTR] Single-component, resettable circuit breaker which operates as a majority-carrier tunneling device, and is used for overcurrent or overvoltage protection of integrated circuits.
hypersomnia [MED] Excessive sleepiness.
hypersonic [ACOUS] Pertaining to frequencies above 500 megahertz. [FL MECH] Pertaining to hypersonic speeds, or air currents moving at hypersonic speeds.
hypersonic flight [AERO ENG] Flight at speeds well above the local velocity of sound; by convention, hypersonic regime starts at about five times the speed of sound and extends upward indefinitely.
hypersonic flow [FL MECH] Flow of a fluid over a body at hypersonic speeds, and in which shock waves start at a finite distance from the surface of the body.
hypersonic glider [AERO ENG] An unpowered vehicle, specifically a reentry vehicle, designed to fly at hypersonic speeds.
hypersonic inlet [FL MECH] An entrance or orifice for admission of fluids at hypersonic speeds.
hypersonic nozzle [FL MECH] A supersonic nozzle designed to accelerate a fluid to hypersonic speeds.
hypersonics [ACOUS] Production and utilization of sound waves of frequencies above 500 megahertz.
hypersonic speed [FL MECH] A speed of an object greater than about five times the speed of sound in the fluid through which the object is moving.
hypersonic wind tunnel [ENG] A wind tunnel in which air flows at speeds roughly in the range from 5 to 15 times the speed of sound.
hypersorption [CHEM ENG] Process with recirculating bed of activated-carbon adsorbent for continuous recovery of ethylene from methane and other low-molecular-weight gases.
hypersplenism [MED] Condition caused by abnormal spleen activity.
hyperstereoscopy [MAP] Stereoscopic viewing of a map in which the scale (usually vertical) along the line of sight is exaggerated in comparison with the scale perpendicular to the line of sight. Also known as appearance ratio.
hypersthene [MINERAL] $(Mg,Fe)SiO_3$ A grayish, greenish, black, or dark-brown rock-forming mineral of the orthopyroxene group, with bronzelike luster on the cleavage surface.
hypersthenfels *See* norite.
hypertape control unit *See* tape control unit.
hypertape drive *See* cartridge tape drive.
hypertelorism [ANAT] An unusually large distance between paired body parts or organs.
hypertely [EVOL] An extreme overdevelopment of an organ or body part during evolution that is disadvantageous to the organism. [ZOO] An extreme degree of imitative coloration, beyond the aspect of utility.
hypertensin *See* angiotensin.
hypertension [MED] Abnormal elevation of blood pressure, generally regarded to be levels of 165 systolic and 95 diastolic.
hyperthecosis [PATH] Abnormal thickening of the inner layer of the Graafian follicle with increased leutein formation.
hyperthermia [PHYSIO] A condition of elevated body temperature.
hyperthyroidism [MED] The constellation of signs and symptoms caused by excessive thyroid hormone in the blood, either from exaggerated functional activity of the thyroid gland or from excessive administration of thyroid hormone, and manifested by thyroid enlargement, emaciation, sweating, tachycardia, exophthalmos, and tremor. Also known as exophthalmic goiter; Grave's disease; thyrotoxicosis; toxic goiter.
hyperthyrotropinism [MED] Excessive thyrotropic hormone secretion by the adenohypophysis.
hypertonia [MED] Abnormal increase in muscle tonicity.
hypertonic [PHYSIO] **1.** Excessive or above normal in tone or tension, as a muscle. **2.** Having an osmotic pressure greater than that of physiologic salt solution or of any other solution taken as a standard.
hypertonic bladder [MED] Hypertonia of the urinary bladder.
hypertonic contracture [MED] Prolonged muscular spasms in spastic paralysis.
Hypertragulidae [PALEON] A family of extinct chevrotainlike pecoran ruminants in the superfamily Traguloidea.
hypertrophic arthritis *See* degenerative joint disease.
hypertrophic gastritis [MED] Chronic inflammation of the stomach with hypertrophy of the mucosa and rugae.
hypertrophy [PATH] Increase in cell size causing an increase in the size of an organ or tissue.
hyperuricemia [MED] Abnormally high level of uric acid in the blood. Also known as lithemia.
hypervalent atom [CHEM] A central atom in a single-bonded structure that imparts more than eight valence electrons in forming covalent bonds.
hypervelocity [MECH] **1.** Muzzle velocity of an artillery projectile of 3500 feet per second (1067 meters per second) or more. **2.** Muzzle velocity of a small-arms projectile of 5000 feet per second (1524 meters per second) or more. **3.** Muzzle velocity of a tank-cannon projectile in excess of 3350 feet per second (1021 meters per second).
hypervelocity armor-piercing [ORD] Designating a type of artillery projectile consisting of a core of extremely hard, high-density material, such as tungsten carbide, contained within a lightweight carrier called a sabot. Abbreviated HVAP.
hypervelocity wind tunnel [ENG] A wind tunnel in which higher airspeeds and temperatures can be attained than in a hypersonic wind tunnel.
hyperventilation [MED] Increase in air intake or of the rate or depth of respiration.
hypervisor [COMPUT SCI] A control program enabling two operating systems to share a common computing system.
hypervitaminosis [MED] Condition caused by intake of toxic amounts of a vitamin.
hypesthesia [MED] Reduced or subnormal tactile sensibility.

hypha [MYCOL] One of the filaments composing the mycelium of a fungus.
hyphidium [MYCOL] A sterile hymenial structure of hyphal origin.
Hyphochytriales [MYCOL] An order of aquatic fungi in the class Phycomycetes having a saclike to limited hyphal thallus and zoospores with two flagella.
Hyphochytridiomycetes [MYCOL] A class of the true fungi; usually grouped with other classes under the general term Phycomycetes.
hyphoid [MYCOL] Hyphalike.
Hyphomicrobiaceae [MICROBIO] Formerly a family of bacteria in the order Hyphomicrobiales; cells occurring in free-floating groups with individual cells attached to each other by a slender filament.
Hyphomicrobiales [MICROBIO] Formerly an order of bacteria in the class Schizomycetes containing forms that multiply by budding.
Hyphomicrobium [MICROBIO] A genus of prosthecate bacteria; they reproduce by budding at hyphal tips; cells are rod-shaped with pointed ends, ovoid, or bean-shaped; hyphae are not septate.
Hyphomonas [MICROBIO] A genus of prosthecate bacteria; cells are oval or pear-shaped, and reproduction is by budding of the hyphae or by direct budding of cells.
hyphopodium [MYCOL] Hypha with a haustorium in certain ectoparasitic fungi.
hypidiomorphic [PETR] Of the texture of igneous rocks, having the crystals bounded partly by the crystal faces characteristic of the mineral species. Also known as hypautomorphic; subidiomorphic.
hypnagogic hallucination [PSYCH] Mental images occurring normally while falling asleep.
Hypnineae [BOT] A suborder of the Hypnobryales characterized by complanate, glossy plants with ecostate or costate leaves and paraphyllia rarely present.
hypnoanalysis [PSYCH] Technique used in psychotherapy combining hypnosis with psychoanalysis.
Hypnobryales [BOT] An order of mosses composed of procumbent and pleurocumbent plants with usually symmetrical leaves arranged in more than two rows.
hypnophobia [PSYCH] An abnormal fear of sleeping.
hypnosis [PSYCH] An altered state of consciousness in which the individual is more susceptible to suggestion and in which regressive behavior may spontaneously occur.
hypnotherapy [MED] Treatment of disease by means of hypnotism.
hypnotic [PHARM] A drug which induces sleep. Also known as somnificant; soporific.
hypnotism [PSYCH] The practice or study of inducing hypnosis.
hypnotize [PSYCH] To induce a state of hypnosis.
hypnotoxin [BIOCHEM] A supposed hormone produced by brain tissue and inducing sleep.
hypo [GRAPHICS] In photography, the common fixing agent sodium thiosulfate, which formerly was incorrectly called hyposulfate of soda. [INORG CHEM] *See* sodium thiosulfate. [PSYCH] Informal term for a hypochondriac or hypochondria.
hypoadrenalism *See* hypoadrenia.
hypoadrenia [MED] Reduced functioning of the adrenal glands. Also known as hypoadrenalism.
hypoadrenocorticism [MED] Lowered or subnormal adrenal cortex activity.
hypoalbuminemia [MED] Abnormally low levels of albumin in the blood.
hypoallergenic [PHARM] Having a low tendency to induce allergic reactions; used particularly for formulated dermatologic preparations.
hypobaric [MED] Pertaining to an anesthetic solution of specific gravity lower than the cerebrospinal fluid. [PHYS] Having less weight or pressure.
hypobasal [BOT] Located posterior to the basal wall.
hypoblast *See* endoderm.
hypobranchial musculature [ANAT] The ventral musculature in vertebrates extending from the pectoral girdle forward to the hyoid arch, chin, and tongue.
hypocalcemia [MED] Condition in which there are reduced levels of calcium in the blood.
hypocalcification [MED] Reduction of normal amounts of mineral salts in calcified tissue.
hypocalciuria [MED] Decreased excretion of calcium in the urine.
hypocapnia [MED] Reduced or subnormal blood levels of carbon dioxide.
hypochil [BOT] Lower portion of the lip in orchids. Also known as hypochillium.
Hypochilidae [INV ZOO] A family of true spiders in the order Araneida.
hypochillium *See* hypochil.
Hypochilomorphae [INV ZOO] A monofamilial suborder of spiders in the order Araneida.
hypochloremia [MED] Reduction in the amount of blood chlorides.
hypochlorhydria [MED] Reduction in the hydrochloric acid content of gastric juice.
hypochlorite [INORG CHEM] ClO_3^- A negative ion derived from hypochlorous acid, HClO; the ion is an oxidizing agent and a constituent of bleaching agents.
hypochlorite sweetening [CHEM ENG] A petroleum refinery process to oxidize gasoline mercaptans by agitation with an aqueous, alkaline hypochlorite solution.
hypochlorization [MED] Reduction of the dietary intake of sodium chloride.
hypochlorous acid [INORG CHEM] HOCl Weak, unstable acid existing in solution only; its salts (such as calcium hypochlorite) are used as bleaching agents.
hypochnoid [MYCOL] Having generally compacted hyphae.
hypocholesterolemia [MED] Subnormal levels of serum cholesterol.
hypochondriac [PSYCH] A person affected with hypochondriasis.
hypochondriac region [ANAT] The upper, lateral abdominal region just below the ribs on each side of the body.
hypochondriasis [PSYCH] A chronic condition in which the patient is morbidly concerned with his own health and believes himself suffering from grave bodily diseases.
hypochromia [PATH] Lack of complete saturation of the erythrocyte stroma with hemoglobin, as judged by pallor of the unstained or stained erythrocytes when examined microscopically.
hypochromicity [PHYS CHEM] A decrease in the absorption of ultraviolet light by polynucleotide solutions due to the formation of an ordered secondary structure.
hypochromic microcytic anemia [MED] An anemia associated with erythrocytes of reduced size and hemoglobin content.
hypocleidium [ANAT] The median, ventral bone between clavicles. [VERT ZOO] Median process on the wishbone of birds.
hypocone [ANAT] The posterior inner cusp of an upper molar. [INV ZOO] Region of a dinoflagellate posterior to the girdle.
Hypocopridae [INV ZOO] A small family of coleopteran insects in the superfamily Cucujoidea.
hypocoracoid [VERT ZOO] The lower of two bones at the base of the pectoral fin in teleosts.
hypocotyl [BOT] The portion of the embryonic plant axis below the cotyledon.
hypocrateriform [BIOL] Saucer-shaped.
Hypocreales [MYCOL] An order of fungi belonging to the Ascomycetes and including several entomophilic fungi.
hypocrystalline [PETR] Pertaining to the texture of igneous rock characterized by crystalline components in an amorphous groundmass. Also known as hemicrystalline; hypohyaline; merocrystalline; miocrystalline; semicrystalline.
hypocycloid [MATH] The curve which is traced in the plane as a given point fixed on a circle moves while this circle rolls along the inside of another circle.
Hypodermatidae [INV ZOO] The warble flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Calypteratae.
hypodermic needle [MED] A hollow needle, with a slanted open point, used for subcutaneous and intramuscular injections of fluid.
hypodermic syringe *See* syringe.
hypodermis [BOT] The outermost cell layer of the cortex of plants. Also known as exodermis. [INV ZOO] The layer of

HYPNINEAE



Hypnum reptile. **(a)** Portion of plant, with stems shortened. **(b)** Urn and peristome. **(c)** Faintly bicostate leaf. *(From W. H. Welch, Mosses of Indiana, Indiana Department of Conservation, 1957)*

cells that underlies and secretes the cuticle in arthropods and some other invertebrates.

hypodermoclysis [MED] Subcutaneous injections of large quantities of fluid for therapeutic purposes.

hypo eliminator [GRAPHICS] A solution used to facilitate the removal of fixer solutions during the wash bath.

hypoergia [IMMUNOL] A state of less than normal reactivity to antigenic materials, in which the response is less marked than usual; one form of allergy or pathergy.

hypoeutectic alloy [MET] Any binary alloy whose composition lies to the left of the eutectic.

hypoeutectoid steel [MET] Steel containing less than 0.8% carbon.

hypofibrinogenemia [MED] A decrease in plasma fibrogen level.

hypogammaglobulinemia [MED] Reduced blood levels of gamma globulin.

hypogene [GEOL] **1.** Of minerals or ores, formed by ascending waters. **2.** Of geologic processes, originating within or below the crust of the earth.

hypogeous [BIOL] Living or maturing below the surface of the ground.

hypoglossal nerve [ANAT] The twelfth cranial nerve; a paired motor nerve in tetrapod vertebrates innervating tongue muscles; corresponds to the hypobranchial nerve in fishes.

hypoglossal nucleus [ANAT] A long nerve nucleus throughout most of the length of the medulla oblongata; cells give rise to the hypoglossal nerve fibers.

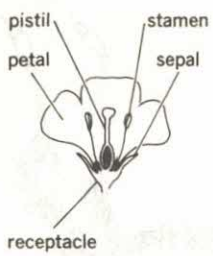
hypoglycemia [MED] Condition caused by low levels of sugar in the blood.

hypogonadism [MED] Reduced hormonal secretion by the testes or ovaries.

hypogynium [BOT] Structure that supports the ovary in plants such as sedges.

hypogynous [BOT] Having all flower parts attached to the receptacle below the pistil and free from it.

HYPOGYNOUS



Flower arrangement and parts on receptacle in hypogynous flowers.

hypohidrosis [MED] Deficient perspiration.

hypohyaline *See* hypocrystalline.

hypoid gear [MECH ENG] Gear wheels connecting nonparallel, nonintersecting shafts, usually at right angles.

hypoid generator [MECH ENG] A gear-cutting machine for making hypoid gears.

hypoiodous acid [INORG CHEM] HIO A very weak unstable acid that occurs as the result of the weak hydrolysis of iodine in water.

hypokalemia [PHYSIO] A reduction in the normal amount of potassium in the blood.

hypokinesia [MED] Subnormal muscular movements.

hypokinetic syndrome [MED] General decrease in motor functions due to a form of minimal brain dysfunction.

hypolimnion [HYD] The lower level of water in a stratified lake, characterized by a uniform temperature that is generally cooler than that of other strata in the lake.

hypomagma [GEOL] Relatively immobile, viscous lava that forms at depth beneath a shield volcano, is undersaturated with gases, and initiates volcanic activity.

hypomenorrhea [MED] A deficient amount of menstrual flow at the regular period.

hypomere [EMBRYO] The lateral or lower mesodermal plate zone in vertebrate embryos. [INV ZOO] The basal portion of certain sponges that contain no flagellated chambers.

hypometabolism [MED] Metabolism below the normal rate.

hypomorph [GEN] An allele having an effect similar to the normal allele, but being less active.

hypomorphic allele [GEN] An allele that has reduced levels of gene activity.

hypomotility [MED] Decreased motility, especially of the gastrointestinal tract.

hyponasty [BOT] A nastic movement involving inward and upward bending of a plant part.

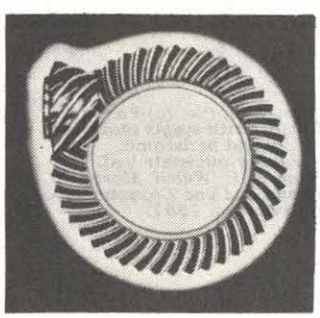
hyponatremia [MED] Subnormal or reduced blood sodium levels.

hyponeural sinus [INV ZOO] Tubular portion of the coelom containing hemal vessels and motor nerves in certain echinoderms.

hyponychium [HISTOL] The thickened stratum corneum of the epidermis, which lies under the free edge of the nail.

hypoovarianism [MED] Decrease in ovarian endocrine activity.

HYPOID GEAR



Picture of hypoid gear. *(Gleason Works)*

hypoparathyroidism [MED] Condition caused by insufficient functioning of the parathyroid gland.

hypophalangism [MED] Congenital absence of one or more phalanges in a finger or toe.

hypopharynx [ANAT] *See* laryngopharynx. [INV ZOO] A sensory, tonguelike structure on the floor of the mouth of many insects; sometimes modified for piercing.

hypophosphatasia [MED] **1.** Alkaline phosphatase deficiency. **2.** A hereditary metabolic disorder characterized by subnormal amounts of alkaline phosphatase in the tissues.

hypophrenia [PSYCH] Mental retardation.

hypophyseal cachexia *See* Simmonds' disease.

hypophyseal duct tumor [MED] Any tumor derived from epithelial remnants of Rathke's pouch.

hypophysectomy [MED] Surgical removal of the pituitary gland.

hypophysis [ANAT] A small rounded endocrine gland which lies in the sella turcica of the sphenoid bone and is attached to the floor of the third ventricle of the brain in all craniate vertebrates. Also known as pituitary gland.

hypopituitarism [MED] Condition caused by insufficient secretion of pituitary hormones, especially of the adenohypophysis. Also known as panhypopituitarism.

hypopituitary cachexia *See* Simmonds' disease.

hypoplankton [BIOL] Forms of marine life whose swimming ability lies somewhere between that of the plankton and the nekton; includes some mysids, amphipods, and cumacids.

hypoplasia [MED] Failure of a tissue or organ to achieve complete development.

hypoplastic dwarf [MED] A normally proportioned individual of subnormal size.

hypoplastron [VERT ZOO] Either of the third pair of lateral bony plates in the plastron of most turtles.

hypopleura [INV ZOO] Sclerite above and in front of the hind coxa in Diptera.

hypoploid [GEN] Having one or more less chromosomes, or parts of chromosomes, than a whole multiple of the haploid number.

hypoploidy [GEN] The condition or state of being hypoploid.

hypoproliferative anemia [MED] Decreased concentration of hemoglobin and number of red blood cells due to subnormal numbers of erythrocyte primordial cells in relation to the stimulus of anemia.

hypoproteinemia [MED] Abnormally low levels of protein in the blood.

hypoprothrombinemia [MED] Deficiency of prothrombin in the blood.

hypopus [INV ZOO] The resting larval stage of certain mites.

hypopycnal inflow [HYD] Flowing water of lower density than the body of water into which it flows.

hypopygium [INV ZOO] A modified ninth abdominal segment together with the copulatory apparatus in Diptera.

hypopyon [MED] A collection of pus in the anterior chamber of the eye.

hyporeactive [MED] Characterized by decreased responsiveness to stimuli.

hyporeflexia [MED] A condition in which reflexes are below normal, due to a variety of causes.

hyposensitivity [MED] Condition marked by diminished sensitivity to stimuli.

hyposensitization *See* desensitization.

hypospadias [MED] **1.** Congenital anomaly in which the urethra opens on the ventral surface of the penis or in the perineum. **2.** Congenital anomaly in which the urethra opens into the vagina.

hypospermatogenesis [MED] Decreased sperm production.

hypostasis [MED] A condition involving settling of blood in dependent parts of an organ.

hypostatic [GEN] Subject to being suppressed, as a gene that can be suppressed by a nonallelic gene.

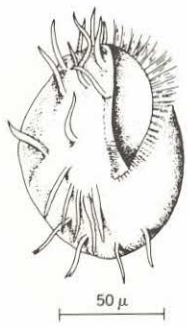
hyposthenia [MED] Weakness; subnormal strength.

hyposthenuria [MED] The secretion of urine of low specific gravity.

hypostome [INV ZOO] **1.** Projection surrounding the oral aperture in many coelenterate polyps. **2.** Anteroventral part of the head in Diptera. **3.** Median ventral mouthpart in ticks. **4.** Raised area on the posterior oral margin in crustaceans.

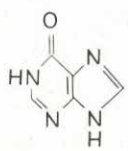
hypostracum [INV ZOO] The innermost layer of the cuticle of ticks lying above the hypodermis.
hyposulculus [INV ZOO] A groove of the siphonoglyph below the pharynx in anthozoans.
hyposynergia [MED] Defective coordination.
hypotarsus [VERT ZOO] A process on the tarsometatarsal bone in birds.
hypotelorism [MED] Decrease in distance between two organs or body parts.
hypotension [MED] Abnormally low blood pressure, commonly considered to be levels below 100 diastolic and 40 systolic.
hypotenuse [MATH] On a right triangle, the side opposite the right angle.
hypo test [GRAPHICS] A method of checking the washing efficiency of processed film or paper.
hypothalamic center [ANAT] Any of the neural centers which regulate autonomic functions.
hypothalamic releasing factor [BIOCHEM] Any of the hormones secreted by the hypothalamus which travel by way of nerve fibers to the anterior pituitary, where they cause selective release of specific pituitary hormones.
hypothalamoneurohypophyseal system [PHYSIO] The hormones and neurosecretory structures involved in the endocrine activity of the adenohypophysis, neurohypophysis, and hypothalamus.
hypothalamoneurohypophyseal tract [ANAT] A bundle of nerve fibers connecting the supraoptic and paraventricular neurons of the hypothalamus with the infundibular stem and neurohypophysis.
hypothalamus [ANAT] The floor of the third brain ventricle; site of production of several substances that act on the adenohypophysis.
hypotheca [INV ZOO] **1.** The lower valve of a diatom frustule. **2.** Covering on the hypocone in dinoflagellates.
hypothenar [ANAT] Of or pertaining to the prominent portion of the palm above the base of the little finger.
hypothermal [GEOL] Referring to the high-temperature (300–500°C) environment of hypothermal deposits.
hypothermal deposit [MINERAL] Mineral deposit formed at great depths and high (300–500°C) temperatures.
hypothermia [PHYSIO] Condition of reduced body temperature in homeotherms.
hypothesis [SCI TECH] **1.** A proposition which is assumed to be true in proving another proposition. **2.** A proposition which is thought to be true because its consequences are found to be true. [STAT] A statement which specifies a population or distribution, and whose truth can be tested by sample evidence.
hypothesis testing [STAT] The branch of statistics which considers the problem of choosing between two actions on the basis of the observed value of a random variable whose distribution depends on a parameter, the value of which would indicate the correct action.
hypothetical parallax *See* dynamic parallax.
hypothyroidism [MED] Condition caused by deficient secretion of the thyroid hormone.
hypotonia [MED] Decrease of normal tonicity or tension, especially diminution of intraocular pressure or of muscle tone.
hypotonic [PHYSIO] **1.** Pertaining to subnormal muscle strength or tension. **2.** Referring to a solution with a lower osmotic pressure than physiological saline.
Hypotrichida [INV ZOO] An order of highly specialized protozoans in the subclass Spirotrichia characterized by cirri on the ventral surface and a lack of ciliature on the dorsal surface.
hypotrochoid [MATH] A curve traced by a point rigidly attached to a circle at a point other than the center when the circle rolls without slipping on the inside of a fixed circle.
hypotype [SYST] A specimen of a species, which, though not a member of the original type series, is known from a published description or listing.
hypovitaminosis [MED] Condition due to deficiency of an essential vitamin.
hypovolemia [MED] Low blood volume.
hypovolemic shock [MED] Shock caused by reduced blood volume which may be due to loss of blood or plasma as in burns, the crush syndrome, perforating gastrointestinal wounds, or other trauma. Also known as wound shock.
hypoxanthine [BIOCHEM] $C_5H_4ON_4$ An intermediate product derived from adenine in the hydrolysis of nucleic acid.
hypoxanthylic acid *See* inosinic acid.
hypoxemia *See* hypoxia.
hypoxia [MED] Oxygen deficiency; any state wherein a physiologically inadequate amount of oxygen is available to or is utilized by tissue, without respect to cause or degree. Also known as hypoxemia.
hypoxic encephalopathy [MED] Brain damage syndrome caused by hypoxia.
hypozygal [INV ZOO] In comatulids, the proximal member of adjacent brachials in an articulation.
hypsicephalic [ANTHRO] Having a high forehead with a length-height index of 62.6 or more.
hypsiconch [ANTHRO] Having high orbits with an orbital index of 89 or more.
hypsicranial [ANTHRO] Having a high skull with a length-height index of 75 or more.
hypsidolichocephalic [ANTHRO] Having a head that is high and narrow, high and long, or high, long, and narrow.
hypsistenocephalic [ANTHRO] Having a very high and narrow head.
hypsodont [VERT ZOO] Of teeth, having crowns that are high or deep and roots that are short.
hypsographic map [MAP] A chart showing topographic relief in reference to a given datum, usually sea level.
hypsography [GEOGR] The science of measuring or describing elevations of the earth's surface with reference to a given datum, usually sea level.
hypsometer [ENG] **1.** An instrument for measuring atmospheric pressure to ascertain elevations by determining the boiling point of liquids. **2.** Any of several instruments for determining tree heights by triangulation.
hypsometric [ENG] Pertaining to hypsometry.
hypsometric formula [GEOPHYS] A formula, based on the hydrostatic equation, for either determining the geopotential difference or thickness between any two pressure levels, or for reducing the pressure observed at a given level to that at some other level.
hypsometric map [MAP] In topographic surveying, a map giving elevations by contours, or sometimes by means of shading, tinting, or batching.
hypsometric tinting [MAP] A technique of showing relief on maps and charts by coloring, in different shades, those parts which lie between different levels. Also known as altitude tints.
hypsometric tints *See* gradient tints.
hypsometry [ENG] The measuring of elevation with reference to sea level.
hypsophobia [PSYCH] An abnormal fear of being at a great height.
hypural [VERT ZOO] Of or pertaining to the bony structure formed by fusion of the hemal spines of the last few vertebrae in most teleost fishes.
Hyracodontidae [PALEON] The running rhinoceroses, an extinct family of perissodactyl mammals in the superfamily Rhinoceratoidea.
Hyracoidea [VERT ZOO] An order of ungulate mammals represented only by the conies of Africa, Arabia, and Syria.
hyster- [MED] A combining form that denotes either a relation to or a connection with the uterus, or hysteria.
hysterectomy [MED] Surgical removal of all or part of the uterus.
hysteresimeter [ENG] A device for measuring hysteresis.
hysteresis [ELECTR] An oscillator effect wherein a given value of an operating parameter may result in multiple values of output power or frequency. [ELECTROMAG] *See* magnetic hysteresis. [NUCLEO] A temporary change in the counting-rate-voltage characteristic of a radiation counter tube, caused by its previous operation. [PHYS] The dependence of the state of a system on its previous history, generally in the form of a lagging of a physical effect behind its cause.
hysteresis clutch [MECH ENG] A clutch in which torque is produced by attraction between induced poles in a magnetized iron ring and the control field.
hysteresis coefficient [PHYS] A constant, characteristic of a particular material, in a formula for hysteresis loss.
hysteresis damping [MECH] Damping of a vibration due to energy lost through mechanical hysteresis.
hysteresis error [PHYS] The maximum separation due to hysteresis between upscale-going and downscale-going indications of a measured variable.
hysteresis loop [PHYS] The closed curve followed by a material displaying hysteresis (such as a ferromagnet or fer-

HYPOTRICHIDA



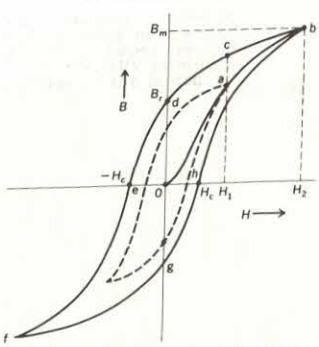
Euplotes, an example of Hypotrichida.

HYPOXANTHINE



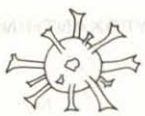
Structural formula of hypoxanthine.

HYSTERESIS LOOP



Hysteresis loop. H = magnetizing force; B = flux density; Oab = normal magnetization curve; H_c = coercive force; B_r = retentivity; B_m = maximum value of flux density; $bdefghb$ = the hysteresis loop.

HYSTRICHOSPHERIDA



A drawing of a hystrichospherid.

roelectric) on a graph of a driven variable (such as magnetic flux density or electric polarization) versus the driving variable (such as magnetic field or electric field).

hysteresis loss [PHYS] The energy converted to heat in a material because of magnetic or other hysteresis, accompanying cyclic variation of the magnetic field or other driving variable.

hysteresis motor [ELEC] A synchronous motor without salient poles and without direct-current excitation which utilizes the hysteresis and eddy-current losses induced in its hardened-steel rotor to produce rotor torque.

hysteretic damping [MECH] Damping of a vibrating system in which the retarding force is proportional to the velocity and inversely proportional to the frequency of the vibration.

hysteria [PSYCH] A type of neurosis characterized by extreme emotionalism involving disorders of somatic and psychological functions; the conversion type is associated with neuromuscular and sensory symptoms such as paralysis, tremors, seizures, or blindness, whereas the dissociative displays disorders of consciousness such as amnesia, somnolence, and multiple personalities.

hysteriaceous [MYCOL] Of, belonging to, or resembling the Hysteriales.

Hysteriales [BOT] An order of lichens in the class Ascolichenes including those species with an ascolocular structure.

hysterical anesthesia [MED] Loss of cutaneous pain sensation accompanying hysteria.

hysterical paralysis [MED] Muscle weakness or paralysis without loss of reflex activity, in which no organic nerve lesion can be demonstrated, but which is due to psychogenic factors. Also known as functional paralysis.

hysterics [PSYCH] **1.** Attack of hysteria. **2.** Extreme display of emotions.

hysterochroic [MYCOL] Having fruiting bodies which discolor progressively from base to apex with age.

hysterogram [MED] A roentgenogram with opacification of the cavity of the uterus by the injection of contrast medium.

hysterography [MED] Roentgenologic examination of the uterus after the introduction of a contrast medium.

hysteromania *See* nymphomania.

hystero-oophorectomy [MED] Surgical removal of the uterus and ovaries.

hysteropexy [MED] Fixation of the uterus by a surgical operation to correct displacement.

hysterorrhaphy [MED] The closure of a uterine incision by suture.

hysterorrhexis [MED] Rupture of the uterus.

hysterosalpingectomy [MED] Surgical removal of the uterus and oviducts.

hysterosalpingography [MED] Roentgenographic examination of the uterus and oviducts after injection of a radiopaque substance.

hysterosalpingo-oophorectomy [MED] The excision of the uterus, oviducts, and ovaries.

hysteroscope [MED] A uterine speculum with a reflector.

hysterosoma [INV ZOO] A body division of an acarid mite composed of the metapodosoma and opisthosoma.

hysterotomy [MED] **1.** Incision into the uterine wall. **2.** Cesarean section.

Hystrichospherida [PALEON] A group of protistan microfossils.

Hystricidae [VERT ZOO] The Old World porcupines, a family of Rodentia ranging from southern Europe to Africa and eastern Asia and into the Philippines.

Hystricomorpha [VERT ZOO] A superorder of the class Rodentia.

Hz *See* hertz.

H zone [HISTOL] The central portion of an A band in a sarcomere; characterized by the presence of myosin filaments.

I

I *See* iodine.

IA *See* international angstrom.

IAA *See* indoleacetic acid.

IAC *See* international analysis code.

ianthinite [MINERAL] $2UO_2 \cdot 7H_2O$ A violet mineral composed of hydrous uranium dioxide, occurring as orthorhombic crystals.

Iapetus [ASTRON] A satellite of Saturn that orbits at a mean distance of 3.560×10^6 kilometers and has a diameter of about 1500 kilometers.

IAS *See* indicated airspeed.

IAT *See* international atomic time.

iatrogenic [MED] Pertaining to an abnormal state or condition produced by a physician in a patient by inadvertent or incorrect treatment.

IBA *See* indolbutyric acid.

Iballidae [INV ZOO] A small family of hymenopteran insects in the superfamily Cynipoidea.

I band [HISTOL] The band on either side of a Z line; encompasses portions of two adjacent sarcomeres and is characterized by the presence of actin filaments.

I beam [CIV ENG] A rolled iron or steel joist having an I section, with short flanges.

Ibe wind [METEOROL] A local strong wind which blows through the Dzungarian Gate (western China), a gap in the mountain ridge separating the depression of Lakes Balkash and Ala Kul from that of Lake Ebi Nor; the wind resembles the foehn and brings a sudden rise of temperature, in winter from about −15 to about 30°F (−20 to −1°C).

IBIB *See* isobutyl isobutyrate.

ibis [VERT ZOO] The common name for wading birds making up the family Threskiornithidae and distinguished by a long, slender, downward-curving bill.

I blood group [IMMUNOL] The erythrocyte antigens defined by reactions with anti-I and anti-i antibodies, which occur both in acquired hemolytic anemia and naturally in normal persons of the rare phenotype i.

ibogaine [ORG CHEM] $C_{26}H_{32}O_2N_2$ An alkaloid isolated from the stems and leaves of the shrub *Tabernanthe iboga*, crystallizing from absolute ethanol as prismatic needles, melting at 152–153°C, soluble in ethanol, ether, and chloroform; used in medicine.

IC *See* integrated circuit.

Icacinaceae [BOT] A family of dicotyledonous plants in the order Celastrales characterized by haplostemonous flowers, pendulous ovules, stipules wanting or vestigial, a polypetalous corolla, valvate petals, and usually one (sometimes three) locules.

Icarus [ASTRON] An asteroid with an orbit of highest known eccentricity and smallest perihelion and distance of all the asteroids.

ICBM *See* intercontinental ballistic missile.

ice [PHYS CHEM] **1.** The dense substance formed by the freezing of water to the solid state; has a melting point of 32°F (0°C) and commonly occurs in the form of hexagonal crystals. **2.** A layer or mass of frozen water.

ice accretion [HYD] The process by which a layer of ice builds up on solid objects which are exposed to freezing precipitation or to supercooled fog or cloud droplets.

ice-accretion indicator [ENG] An instrument used to detect the occurrence of freezing precipitation, usually consisting of a strip of sheet aluminum about 1½ inches (4 centimeters) wide, and is exposed horizontally, face up, in the free air a few meters above the ground.

ice age [GEOL] **1.** A major interval of geologic time during which extensive ice sheets (continental glaciers) formed over many parts of the world. **2.** *(Capitalized) See* Pleistocene.

ice anchor [NAV ARCH] An anchor, usually with only one fluke, used for securing a vessel to ice.

ice apron [CIV ENG] A wedge-shaped structure which protects a bridge pier from floating ice. [HYD] **1.** The snow and ice attached to the walls of a cirque. **2.** The ice that is flowing from an ice sheet over the edge of a plateau. **3.** A piedmont glacier's lobe. **4.** Ice that adheres to a wall of a valley below a hanging glacier.

ice atlas [NAV] A publication containing a series of ice charts showing geographic distribution of ice, usually by seasons or months; used in navigation.

ice band [HYD] A layer of ice in firn or snow.

ice barrier [HYD] The periphery of the Antarctic ice sheet; or used generally for any ice dam.

ice bay [OCEANOGR] A baylike recess in the edge of a large ice floe or ice shelf. Also known as ice bight.

ice belt [OCEANOGR] A band of fragments of sea ice in otherwise open water. Also known as ice strip.

iceberg [OCEANOGR] A large mass of detached land ice floating in the sea or stranded in shallow water.

ice bight *See* ice bay.

ice blink [METEOROL] A relatively bright, usually yellowish-white glare on the underside of a cloud layer. produced by light reflected from an ice-covered surface such as pack ice; used in polar regions with reference to the sky map; ice blink is not as bright as snow blink, but much brighter than water sky or land sky.

icebound [NAV] Surrounded so closely by ice as to be incapable of proceeding.

ice boundary [HYD] At any given time, the boundary between fast ice and pack ice or between areas of different concentrations of pack ice.

icebreaker [NAV ARCH] A vessel designed for operating in and breaking heavy ice, having a special-shaped, reinforced bow, protected propellers, and powerful engines.

ice bridge [OCEANOGR] Surface river ice of sufficient thickness to impede or prevent navigation.

ice buoy [ENG] A sturdy buoy, usually a metal spar, used to replace a more easily damaged buoy during a period when heavy ice is anticipated.

ice cake [HYD] A single, usually relatively flat piece of ice of any size in a body of water.

ice calorimeter *See* Bunsen ice calorimeter.

ice calving *See* calving.

ice canopy *See* pack ice.

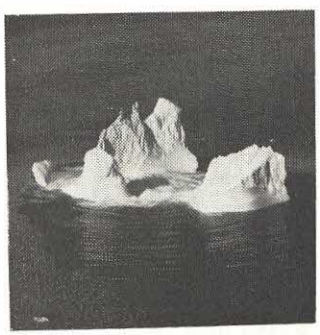
ice cap [HYD] **1.** A perennial cover of ice and snow in the shape of a dome or plate on the summit area of a mountain through which the mountain peaks emerge. **2.** A perennial cover of ice and snow on a flat land mass such as an Arctic island.

ice-cap climate *See* perpetual frost climate.

ice cascade *See* icefall.

ice cave [GEOL] A cave that is cool enough to hold ice through all or most of the warm season. [HYD] A cave in ice such as a glacier formed by a stream of melted water.

ICEBERG

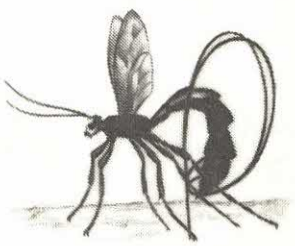


Arctic iceberg, eroded to form a valley or drydock type; grotesque shapes are common to the glacially produced icebergs of the North.

ice chart [NAV] A chart showing prevalence of ice, usually with reference to navigable waters.
ice clearing *See* polyn'ya.
ice color *See* azoic dye.
ice concentration [OCEANOGR] In sea ice reporting, the ratio of the areal extent of ice present and the total areal extent of ice and water. Also known as ice cover.
ice-contact delta [GEOL] A delta formed by a stream flowing between a valley slope and the margin of glacial ice. Also known as delta moraine; morainal delta.
ice cover *See* ice concentration.
ice crust [HYD] A type of snow crust; a layer of ice, thicker than a film crust, upon a snow surface, formed by the freezing of meltwater or rainwater which has flowed onto it.
ice crystal [PHYS CHEM] Any one of a number of macroscopic crystalline forms in which ice appears, including hexagonal columns, hexagonal platelets, dendritic crystals, ice needles, and combinations of these forms; although the crystal lattice of ice is hexagonal in its symmetry, varying conditions of temperature and vapor pressure can lead to growth of crystalline forms in which the simple hexagonal pattern is almost undiscernible.
ice-crystal cloud [METEOROL] A cloud consisting entirely of ice crystals, such as cirrus (in this sense distinguished from water clouds and mixed clouds), and having a diffuse and fibrous appearance quite different from that typical of water droplet clouds.
ice-crystal fog *See* ice fog.
ice-crystal haze [METEOROL] A type of very light ice fog composed only of ice crystals and at times observable to altitudes as great as 20,000 feet (6100 meters), and usually associated with precipitation of ice crystals.
ice-crystal theory *See* Bergeron-Findeisen theory.
ice day [CLIMATOL] A day on which the maximum air temperature in a thermometer shelter does not rise above 32°F (0°C), and ice on the surface of water does not thaw.
ice desert [CLIMATOL] Any polar area permanently covered by ice and snow, with no vegetation other than occasional red snow or green snow.
iced firn [HYD] A mixture of glacier ice and firn; firn permeated with meltwater and then refrozen. Also known as firn ice.
ice erosion [GEOL] **1.** Erosion due to freezing of water in rock fractures. **2.** *See* glacial erosion.
icefall [HYD] That portion of a glacier where a sudden steepening of descent causes a chaotic breaking up of the ice. Also known as ice cascade.
ice fat *See* grease ice.
ice feathers [HYD] A type of hoarfrost formed on the windward side of terrestrial objects and on aircraft flying from cold to warm air layers. Also known as frost feathers.
ice field [HYD] A mass of land ice resting on a mountain region and covering all but the highest peaks. [OCEANOGR] A flat sheet of sea ice that is more than 5 miles (8 kilometers) across.
ice floe *See* floe.
ice flowers [HYD] **1.** Formations of ice crystals on the surface of a quiet, slowly freezing body of water. **2.** Delicate tufts of hoarfrost that occasionally form in great abundance on an ice or snow surface. Also known as frost flowers. **3.** Frost crystals resembling a flower, formed on salt nuclei on the surface of sea ice as a result of rapid freezing of sea water. Also known as salt flowers.
ice fog [METEOROL] A type of fog composed of suspended particles of ice, partly ice crystals 20–100 micrometers in diameter but chiefly, especially when dense, droxtals 12–20 micrometers in diameter; occurs at very low temperatures and usually in clear, calm weather in high latitudes. Also known as frost flakes; frost fog; frozen fog; ice-crystal fog; pogonip; rime fog.
ice foot [OCEANOGR] Sea ice firmly frozen to a polar coast at the high-tide line and unaffected by tide; this fast ice is formed by the freezing of seawater during ebb tide, and of spray, and it is separated from the floating sea ice by a tide crack.
ice-free [HYD] **1.** Referring to a harbor, river, estuary, and so on, when there is not sufficient ice present to interfere with navigation. **2.** Descriptive of a water surface completely free of ice.
ice fringe [HYD] An ice deposit on plant surfaces, not of hoarfrost from atmospheric water vapor, but of moisture exuded from the stems of plants and appearing as frosted fringes or ribbons. Also known as ice ribbon. [OCEANOGR] A belt of sea ice extending a short distance from the shore.
ice front [HYD] The floating vertical cliff forming the seaward face or edge of an ice shelf or other glacier that enters water.
ice gland [HYD] A column of ice in the granular snow at the top of a glacier.
ice gruel [HYD] A type of slush formed by the irregular freezing together of ice crystals.
ice island [OCEANOGR] A large tabular fragment of shelf ice found in the Arctic Ocean and having an irregular surface, thickness of 15–50 meters, and an area between a few thousand square meters and 500 square kilometers or more.
ice island iceberg [OCEANOGR] An iceberg having a conical or dome-shaped summit, often mistaken by mariners for ice-covered islands.
ice jam [HYD] **1.** An accumulation of broken river ice caught in a narrow channel, frequently producing local floods during a spring breakup. **2.** Fields of lake or sea ice thawed loose from the shores in early spring, and blown against the shore, sometimes exerting great pressure.
ice-laid drift *See* till.
Iceland agate *See* obsidian.
Iceland crystal *See* Iceland spar.
Iceland disease *See* epidemic neuromyasthenia.
Icelandic low [METEOROL] **1.** The low-pressure center located near Iceland (mainly between Iceland and southern Greenland) on mean charts of sea-level pressure. **2.** On a synoptic chart, any low centered near Iceland.
Iceland spar [MINERAL] A pure, transparent form of calcite found particularly in Iceland; easily cleaved to form rhombohedral crystals that are doubly refracting. Also known as Iceland crystal.
ice layer [HYD] An ice crust covered with new snow; when exposed at a glacier front or in crevasses, the ice layers viewed in cross section are termed ice bands.
ice load [ENG] The weight of glaze deposited on an overhead wire in a power supply system; standard safety codes require allowance for ½-inch (12.7 millimeters) radial thickness in heavy loading districts and ¼-inch (6.35 millimeters) in medium.
ice mantle *See* ice sheet.
ice mine [ORD] A waterproof mine placed in or under the ice, detonated by a pressure device on the surface to break up river or lake ice.
ice mound *See* ground ice mound.
ice needle [PHYS CHEM] A long, thin ice crystal whose cross section perpendicular to its long dimension is typically hexagonal. Also called ice spicule.
ice nucleus [METEOROL] Any particle which may act as a nucleus in formation of ice crystals in the atmosphere.
ice pack *See* pack ice.
ice pellets [METEOROL] A type of precipitation consisting of transparent or translucent pellets of ice 5 millimeters or less in diameter; may be spherical, irregular, or (rarely) conical in shape.
ice period [CLIMATOL] The interval between the first appearance and the final dissipation of ice during any year in a given locale.
ice pick [DES ENG] A hand tool for chipping ice.
ice pillar [HYD] A column of glacial ice covered with stones or debris which tend to protect the ice from melting.
ice point [PHYS CHEM] The true freezing point of water; the temperature at which a mixture of air-saturated pure water and pure ice may exist in equilibrium at a pressure of 1 standard atmosphere (101,325 newtons per square meter).
ice pole [GEOGR] The approximate center of the most consolidated portion of the arctic pack ice, near 83 or 84°N and 160°W. Also known as pole of inaccessibility.
ice push [GEOL] Lateral pressure that is caused by expansion of shoreward-moving ice on a lake or a bay of the sea and that follows a rise in temperature. Also known as ice shove; ice thrust.
icequake [HYD] The crash or concussion that accompanies the breakup of ice masses, frequently owing to contraction from the extreme cold.
ice-rafting [GEOL] The transporting of rock and other minerals, of all sizes, on or within icebergs, ice floes, river drift, or other forms of floating ice.
ice ribbon *See* ice fringe.

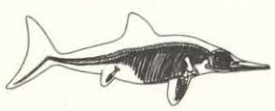
ice rind [HYD] A thin but hard layer of sea ice, river ice, or lake ice, which is either a new encrustation upon old ice or a single layer of ice usually found in bays and fiords, where fresh water freezes on top of slightly colder sea water.
ice run [HYD] The initial stage in the spring or summer breakup of river ice, being an exceedingly rapid process, seldom taking more than 1 day.
ice sheet [HYD] A thick glacier, more than 50,000 square kilometers in area, forming a cover of ice and snow that is continuous over a land surface and moving outward in all directions. Also known as ice mantle.
ice shelf [OCEANOGR] A thick sheet of ice with a fairly level or undulating surface, formed along a polar coast and in shallow bays and inlets, fastened to the shore along one side but mostly afloat and nourished by annual accumulation of snow and by the seaward extension of land glaciers.
ice shove *See* ice push.
ice spar *See* sanidine.
ice spicule *See* ice needle.
ice splinters [PHYS CHEM] Minute, electrically charged fragments of ice which have been observed under laboratory conditions to be torn away from dendritic crystals or spatial aggregates exposed to moving air.
ice stone *See* cryolite.
ice storm [METEOROL] A storm characterized by a fall of freezing precipitation, forming a glaze on terrestrial objects that creates many hazards. Also known as silver storm.
ice stream [HYD] A current of ice flowing in an ice sheet or ice cap; usually moves toward an ocean or to an ice shelf.
ice strip *See* ice belt.
ice thrust *See* ice push.
ice tongs [DES ENG] Tongs for handling cubes or blocks of ice.
ice tongue [HYD] Any narrow extension of a glacier or ice shelf, such as a projection floating in the sea or an outlet glacier of an ice cap.
ice wall [HYD] A cliff of ice forming the seaward margin of a glacier that is not afloat.
ice wedge *See* foliated ice.
ich [VET MED] A dermatitis of fresh-water fishes caused by the invasion of the skin by the ciliated protozoan *Ichthyophthirius multifiliis*.
ichneumon [INV ZOO] The common name for members of the family Ichneumonidae.
Ichneumonidae [INV ZOO] The ichneumon flies, a large family of cosmopolitan, parasitic wasps in the superfamily Ichneumonoidea.
Ichneumonoidea [INV ZOO] A superfamily of hymenopteran insects; members are parasites of other insects.
ichnofossil *See* trace fossil.
ichnography [GRAPHICS] **1.** The art of making decorative drawings by use of compass and rule, in a sense revived in Op art (optical art) techniques. **2.** The art of tracing plans and illustrations.
ichor [GEOL] A fluid rich in mineralizers. [MED] An acrid, watery or blood-tinged discharge from an ulcer or wound.
ichthammol [PHARM] A viscid fluid obtained by the destructive distillation of certain bituminous schists, followed by sulfonation of the distillate and neutralization with ammonia; used as a weak antiseptic and stimulant in skin diseases, and occasionally as an expectorant. Also known as ammonium bithiolicum; ammonium ichthosulfonate; ammonium sulfoichthyolate.
ichthyism [MED] Food poisoning caused by eating spoiled fish.
Ichthyobdellidae [INV ZOO] A family of leeches in the order Rhynchobdellae distinguished by cylindrical bodies with conspicuous, powerful suckers.
ichthyocolla *See* isinglass.
Ichthyodectidae [PALEON] A family of Cretaceous marine osteoglossiform fishes.
ichthyology [VERT ZOO] A branch of vertebrate zoology that deals with the study of fishes.
ichthyophagous [ZOO] Subsisting on a diet of fish.
ichthyophobia [PSYCH] An abnormal fear of fish.
Ichthyopterygia [PALEON] A subclass of extinct Mesozoic reptiles composed of predatory fish-finned and sea-swimming forms with short necks and a porpoiselike body.
Ichthyornis [PALEON] The type genus of Ichthyornithidae.
Ichthyornithes [PALEON] A superorder of fossil birds of the order Ichthyornithiformes according to some systems of classification.
Ichthyornithidae [PALEON] A family of extinct birds in the order Ichthyornithiformes.
Ichthyornithiformes [PALEON] An order of ancient fossil birds including strong flying species from the Upper Cretaceous that possessed all skeletal characteristics of modern birds.
ichthyosarcotoxism [MED] Poisoning caused by eating the flesh of fish containing toxic substances.
Ichthyosauria [PALEON] The only order of the reptilian subclass Ichthyopterygia, comprising the extinct predacious fish-lizards; all were adapted to a sea life in having tail flukes, paddles, and dorsal fins.
ichthyosis [MED] A congenital skin disease characterized by dryness and scales, especially on the extensor surfaces of the extremities.
ichthyosis congenita [MED] A severe form of ichthyosis characterized by cracked, thickened skin and mucous membranes.
ichthyosis simplex [MED] A common, childhood form of ichthyosis characterized by large, papery scales on the skin.
Ichthyostegalia [PALEON] An extinct Devonian order of labyrinthodont amphibians, the oldest known representatives of the class.
Ichthyotomidae [INV ZOO] A monotypic family of errantian annelids in the superfamily Eunicea.
icicle [HYD] Ice shaped like a narrow cone, hanging point downward from a roof, fence, or other sheltered or heated source from which water flows and freezes in below-freezing air.
icing [HYD] **1.** Any deposit or coating of ice on an object, caused by the impingement and freezing of liquid (usually supercooled) hydrometeors. **2.** A mass or sheet of ice formed on the ground surface during the winter by successive freezing of sheets of water that may seep from the ground, from a river, or from a spring. Also known as flood icing; flooding ice.
icing level [METEOROL] The lowest level in the atmosphere at which an aircraft in flight does, or could, encounter aircraft icing conditions over a given locality.
icing-rate meter [ENG] An instrument for the measurement of the rate of ice accretion on an unheated body.
ICL *See* lifting condensation level.
ICNI *See* integrated communications-navigation-identification.
iconic imagery [PSYCH] Fleeting images due perhaps to continuing activity of sensory organs following stimulation.
iconocenter [ELECTROMAG] The image of the reflection coefficient of a matched load as plotted on an Argand diagram.
iconometer [OPTICS] **1.** An instrument used to find the size of an object of known distance or the distance of an object of known size by measurement of the image of it produced by a lens whose focal length is known. **2.** A direct viewfinder with a metal frame.
iconoscope [ELECTR] A television camera tube in which a beam of high-velocity electrons scans a photoemissive mosaic that is capable of storing an electric charge pattern corresponding to an optical image focused on the mosaic. Also known as storage camera; storage-type camera tube.
icosahedral virus [VIROL] A virion in the form of an icosahedron.
icosahedron [MATH] A 20-sided polyhedron.
icositetrahedron *See* trapezohedron.
Icosteidae [VERT ZOO] The ragfishes, a family of perciform fishes in the suborder Stromateoidei found in high seas.
icotype [SYST] A typical, accurately identified specimen of a species, but not the basis for a published description.
ICP-AES *See* inductively coupled plasma-atomic emission spectroscopy.
ICSH *See* luteinizing hormone.
ICS system *See* intercarrier sound system.
ICT *See* International Critical Tables.
icteric [MED] Pertaining to or characterized by jaundice.
Icteridae [VERT ZOO] The troupials, a family of New World perching birds in the suborder Oscines.
icteroanemia [VET MED] A disease of swine characterized by jaundice, anemia, and erythrocytolysis.
icterogenic [MED] Causing icterus, or jaundice.
icterohematuria [VET MED] A disease of sheep caused by the protozoan *Babesia ovis* and characterized by hemolysis of erythrocytes accompanied by jaundice.
icterohemorrhagic fever *See* Weil's disease.

ICHNEUMON



Long-tailed ichneumon *(Megarhyssa lunator)*, about 6 inches (15 centimeters) long, of which more than 4 inches (10 centimeters) is "tail."

ICHTHYOSAURIA

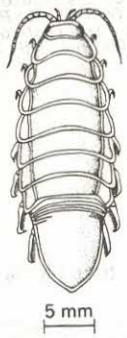


A Jurassic ichthyosaur, much reduced. *(Simplified from E. von Stromer, as used by A. S. Romer, Vertebrate Paleontology, 3d ed., University of Chicago Press, 1966)*

icterus *See* jaundice.
icterus gravis [MED] Acute yellow atrophy of the liver marked by jaundice and nervous system dysfunctions.
icterus gravis neonatorum [MED] Icterus gravis in the newborn caused by physiologic jaundice, erythroblastosis fetalis, and severe jaundice.
icterus index [PATH] Measure of serum bilirubin levels by comparing the yellow blood serum from a jaundiced patient with the colors of standard potassium dichromate solutions.
Ictidosauria [PALEON] An extinct order of mammallike reptiles in the subclass Synapsida including small carnivorous and herbivorous terrestrial forms.
ICW *See* interrupted continuous wave.
id [PSYCH] The primitive, psychic energy source of the unconscious.
ID *See* inside diameter.
ID_{50} *See* infective dose 50.
IDA *See* iminodiacetic acid.
iddingsite [MINERAL] A reddish-brown mixture of silicates, forming patches in basic igneous rocks.
idea [PSYCH] **1.** A mental impression or thought. **2.** An experience or thought not directly due to an external sensory stimulation.
ideal [MATH] A subset I of a ring R where $x - y$ is in I for every x, y in I and either rx is in I for every r in R and x in I or xr is in I for every r in R and x in I; in the first case I is called a left ideal, and in the second a right ideal; an ideal is two-sided if it is both a left and a right ideal.
ideal aerodynamics [FL MECH] A branch of aerodynamics that deals with simplifying assumptions that help explain some airflow problems and provide approximate answers. Also known as ideal fluid dynamics.
ideal bunching [ELECTR] Theoretical condition in which the bunching of electrons in a velocity-modulated tube would give a single infinitely large current peak during each cycle.
ideal dielectric [ELEC] Dielectric in which all the energy required to establish an electric field in the dielectric is returned to the source when the field is removed. Also known as perfect dielectric.
ideal exhaust velocity [FL MECH] The theoretical maximum velocity, relative to the nozzle, of the gas flow as it passes from a given nozzle inlet temperature and pressure to a given ambient pressure, when the combustion gas has a given mean molecular weight.
ideal flow [FL MECH] **1.** Fluid flow which is incompressible, two-dimensional, irrotational, steady, and nonviscous. **2.** *See* inviscid flow.
ideal fluid [FL MECH] **1.** A fluid which has ideal flow. **2.** *See* inviscid fluid.
ideal fluid dynamics *See* ideal aerodynamics.
ideal gas [THERMO] Also known as perfect gas. **1.** A gas whose molecules are infinitely small and exert no force on each other. **2.** A gas that obeys Boyle's law (the product of the pressure and volume is constant at constant temperature) and Joule's law (the internal energy is a function of the temperature alone).
ideal gas law [THERMO] The equation of state of an ideal gas which is a good approximation to real gases at sufficiently high temperatures and low pressures; that is, $PV = RT$, where P is the pressure, V is the volume per mole of gas, T is the temperature, and R is the gas constant.
ideal grain [ORD] Propellant granulation which produces the maximum obtainable velocity of a projectile without exceeding the permissible pressure at any point along the bore.
ideal line [MATH] The collection of all ideal points, each corresponding to a given family of parallel lines. Also known as line at infinity.
ideal network [ELECTR] An interconnection of lumped, constant electrical quantities analyzed without consideration of noise and distributed parameters that would exist in actual settings.
ideal point [MATH] In projective geometry, all lines parallel to a given line are hypothesized to meet at a point at infinity, called an ideal point. Also known as point at infinity.
ideal productivity index [PETRO ENG] Theoretical straight-line relationship between oil production from a reservoir and the resultant pressure drop within that reservoir.
ideal radiator *See* blackbody.
ideal rocket [AERO ENG] A rocket motor or rocket engine that would have a velocity equal to the velocity of its jet gases.
ideal solution [CHEM] A solution that conforms to Raoult's law over all ranges of temperature and concentration and shows no internal energy change on mixing and no attractive force between components.
ideal theory [MATH] The branch of algebra studying the properties of ideals.
ideal transducer [ELEC] Hypothetical passive transducer which transfers the maximum possible power from the source to the load.
ideal transformer [ELEC] A hypothetical transformer that neither stores nor dissipates energy, has unity coefficient of coupling, and has pure inductances of infinitely great value.
ideas of influence [PSYCH] A clinical manifestation of certain psychotic disorders in which the patients may believe that their thoughts are read, that their limbs move without their consent, or that they are under the control of someone else or some external force or influence.
ideas of reference [PSYCH] A symptom complex in which, through the mechanism of projection, an individual incorrectly believes himself or herself to be the direct object of casual remarks or incidents or of external events.
ideation [PSYCH] Conceptualization of an idea.
ideational apraxia [MED] Inability to perform meaningful motor functions or to use objects properly due to mental confusion caused by diffuse brain disease.
idem factor [MATH] The dyadic $I = ii + jj + kk$ such that scalar multiplication of I by any vector yields that vector.
I demodulator [ELECTR] Stage of a color television receiver which combines the chrominance signal with the color oscillator output to restore the I signal.
idempotent [MATH] **1.** An element x of an algebraic system satisfying the equation $x^2 = x$. **2.** An algebraic system in which every element x satisfies $x^2 = x$.
idempotent law [MATH] A law which states that an element x of an algebraic system satisfies $x^2 = x$.
idempotent matrix [MATH] A matrix E satisfying the equation $E^2 = E$.
identical twins *See* monozygotic twins.
identifiable flying object [SCI TECH] A reported event or sighting identifiable as such; a thing as a balloon, meteor, planet, aircraft, or mirage reflection. Abbreviated IFO.
identification [CONT SYS] The procedures for deducing a system's transfer function from its response to a step-function input or to an impulse. [PSYCH] **1.** The tendency of children to model their behavior after that of one or more selected adults. **2.** A defense mechanism in which a person likens himself or herself to someone else.
identification division [COMPUT SCI] The section of a program, written in the COBOL language, which contains the name of the program and the name of the programmer.
identification, friend or foe [ENG] A system using pulsed radio transmissions to which equipment carried by friendly forces automatically responds, by emitting a pulse code, thereby identifying themselves from enemy forces; a method of determining the friendly or unfriendly character of aircraft, ships, and army units by other aircraft, ships, or ground force units. Abbreviated IFF.
identifier [COMPUT SCI] A symbol whose purpose is to specify a body of data.
identifier word [COMPUT SCI] A full-length computer word associated with a search function.
identity [MATH] An equation satisfied for all possible choices of values for the variables involved.
identity crisis [PSYCH] The critical period in emotional maturation and personality development, occurring usually during adolescence, which involves the reworking and abandonment of childhood identifications and the integration of new personal and social identifications.
identity element [MATH] The unique element e of a group where $g \cdot e = e \cdot g = g$ for every element g of the group. Also known as identity of a group.
identity function [MATH] The function of a set to itself which assigns to each element the same element. Also known as identity operator.
identity gate *See* identity unit.
identity matrix [MATH] The square matrix all of whose entries are zero except along the principal diagonal where they all are 1.
identity of a group *See* identity element.
identity operator *See* identity function.

identity unit [COMPUT SCI] A logic element with several binary input signals and a single binary output signal whose value is 1 if all the input signals have the same value and 0 if they do not. Also known as identity gate.
ideogenous *See* syngenetic.
ideokinetic apraxia *See* ideomotor apraxia.
ideomotor [PHYSIO] **1.** Pertaining to involuntary movement resulting from or accompanying some mental activity, as moving the lips while reading. **2.** Pertaining to both ideation and motor activity.
ideomotor apraxia [MED] A nervous system disorder caused by lesions of the cerebral cortex in which simple single acts can be performed but not a sequence of associated acts. Also known as ideokinetic apraxia.
ideotype [SYST] A specimen identified as belonging to a specific taxon but collected from other than the type locality.
ID grinding [MET] The grinding of the inner diameter of a piece of tubing or piping.
idioblast [BOT] A plant cell that differs markedly in shape or function from neighboring cells within the same tissue. [GEOL] A mineral constituent of a metamorphic rock formed by recrystallization which is bounded by its own crystal faces.
idiochromatic [MINERAL] Having characteristic color, usually applied to minerals.
idiochromatin [CYTOL] The portion of the nuclear chromatin thought to function as the physical carrier of genes.
idiocy [PSYCH] The lowest grade of mental deficiency; the individual's mental age is less than 3 years.
idioglossia [PSYCH] Speech or other vocalizations unique to an individual and generally incomprehensible to others; may be normal, as during childhood development, or representative of a pathological process.
idiomorphic *See* automorphic.
idiomuscular [PHYSIO] Pertaining to any phenomenon occurring in a muscle which is independent of outside stimuli.
idiopathic arthritis *See* Reiter's syndrome.
idiopathic colitis [MED] Any form of colitis for which the causative agent is not identified.
idiopathic eunuchoidism [MED] A primary type of eunuchoidism in which there is no mammary gland enlargement and testes remain at a prepubertal stage of development.
idiopathic familial jaundice [MED] A familial form of obstructive jaundice of unknown cause in which there is decreased ability to excrete conjugated bilirubin into the bile ducts.
idiopathic hypercholesterolemia [MED] A genetic derangement of fat metabolism characterized by high blood, cell, and plasma levels of cholesterol.
idiopathic megacolon [MED] Hypertrophy and dilation of the colon.
idiopathic pulmonary hemisiderosis [MED] A disease of unknown etiology characterized by recurrent hemorrhaging from pulmonary capillaries.
idiopathic steatorrhea *See* celiac syndrome.
idiopathic thrombocytopenic purpura [MED] Thrombocytopenic purpura of unknown causes.
idiopathic ulcerative colitis [MED] A form of ulcerative colitis of unknown cause.
idiopathy [MED] **1.** A primary disease; one not a result of any other disease, but of spontaneous origin. **2.** Disease for which no cause is known.
idiosome [CYTOL] **1.** A hypothetical unit of a cell, such as the region of modified cytoplasm surrounding the centriole or centrosome. **2.** A sex chromosome.
Idiostolidae [INV ZOO] A small family of hemipteran insects in the superfamily Pentatomorpha.
idiosyncrasy [MED] A peculiarity of constitution that makes an individual react differently from most persons, to drugs, diet, treatment, or other situations. [PSYCH] Any special or peculiar characteristic or temperament by which a person differs from other persons.
idiot [PSYCH] A person afflicted with idiocy and requiring custodial or protective care.
idiot tape [GRAPHICS] Paper or magnetic tape used in computerized phototypesetting that has not been hyphenated or justified.
I display [ELECTR] A radarscope display in which a target appears as a complete circle when the radar antenna is correctly pointed at it, the radius of the circle being proportional to target distance; when the antenna is not aimed at the target, the circle reduces to a circle segment.
idle [MECH ENG] To run without a load.
idle component *See* reactive component.
idle current *See* reactive current.
idler frequency [ELECTR] Of a parametric device, a sum or difference frequency generated within the parametric device other than the input, output, or pump frequencies which require specific circuit consideration to achieve the desired device performance; it is called an idler frequency since, in conventional parametric amplifiers, it is more or less a useless by-product of the parametric process.
idler gear [MECH ENG] A gear situated between a driving gear and a driven gear to transfer motion, without any change of direction or of gear ratio.
idler pulley [MECH ENG] A pulley used to guide and tighten the belt or chain of a conveyor system.
idler wheel [MECH ENG] **1.** A wheel used to transmit motion or to guide and support something. **2.** A roller with a rubber surface used to transfer power by frictional means in a sound-recording or sound-reproducing system.
idle time [COMPUT SCI] The time during which a piece of hardware in good operating condition is unused. [IND ENG] A period of time during a regular work cycle when a worker is not active because of waiting for materials or instruction. Also known as waiting time.
idle trunk lamp [ELEC] Signal lamp associated with an outgoing trunk to indicate that the trunk is not busy.
idling jet [MECH ENG] A carburetor part that introduces gasoline during minimum load or speed of the engine.
idling system [MECH ENG] A system to obtain adequate metering forces at low airspeeds and small throttle openings in an automobile carburetor in the idling position.
idocrase *See* vesuvianite.
Idoteidae [INV ZOO] A family of isopod crustaceans in the suborder Valvifera having a flattened body and seven pairs of similar walking legs.
IDP *See* integrated data processing.
id reaction [MED] Papular and vesicular eruptions on the skin, occurring suddenly following exacerbation of foci of some cutaneous fungus infections.
idrialite [MINERAL] A mineral composed of crystalline hydrocarbon, $C_{22}H_{14}$.
IDU *See* 5-iodo-2′-deoxyuridine.
IDUR *See* 5-iodo-2′-deoxyuridine.
i-f *See* intermediate frequency.
i-f amplifier *See* intermediate-frequency amplifier.
IF canceler [ELECTR] In radar, a moving-target indicator canceler that operates at intermediate frequencies.
IFF *See* identification, friend or foe.
IFO *See* identifiable flying object.
IFR *See* instrument flight rules.
IFR terminal minimums [METEOROL] The operational weather limits concerned with minimum conditions of ceiling and visibility at an airport under which aircraft may legally approach and land under instrument flight rules; these minimums frequently are in the form of a sliding scale, and also vary with aircraft type, pilot experience, and from airport to airport.
IFR weather *See* instrument weather.
if then else [COMPUT SCI] A logic statement in a high-level programming language that defines the data to be compared and the actions to be taken as the result of a comparison.
i-f transformer *See* intermediate-frequency transformer.
Ig *See* immunoglobulin.
Igewsky's solution [MET] Etchant used to prepare carbon steels for microscopic analysis; consists of 5% picric acid in absolute alcohol.
igneous [PETR] Pertaining to rocks which have congealed from a molten mass.
igneous complex [PETR] An assemblage of igneous rocks that are intimately associated and roughly contemporaneous.
igneous facies [PETR] A part of an igneous rock differing in structure, texture, or composition from the main mass.
igneous meteor [GEOPHYS] A visible electric discharge in the atmosphere; lightning is the most common and important type, but types of corona discharge are also included.
igneous mineral [MINERAL] Mineral material forming igneous rock.
igneous petrology [PETR] The study of igneous rocks, their occurrence, composition, and origin.

IDOTEIDAE



Idotea neglecta, showing flattened body and seven pairs of legs. *(From G. O. Sars, An Account of the Crustacea of Norway, vol. 2, 1899)*

IGNITION SYSTEM

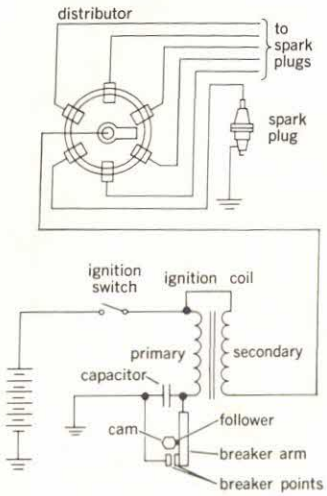


Diagram of battery ignition system. When switch and breaker parts are closed current flows through primary, inducing magnetic field in core of ignition coil. When breaker points open, as engine driven cam rotates, primary current falls rapidly and magnetic field collapses, inducing very high voltage (10,000–20,000 V) in secondary, which is led to spark plugs, in proper sequence, by distributor. *(Modified from A. R. Rogowski, Elements of Internal-combustion Engines, McGraw-Hill, 1953)*

IGNITRON

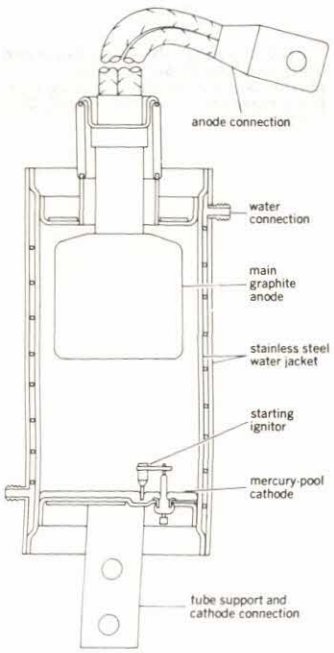

Diagram of a typical sealed ignitron for welding service. *(General Electric Co.)*

igneous province *See* petrographic province.

igneous theory *See* volcanic theory.

ignimbrite [PETR] A silicic volcanic rock that forms thick, compact, lavalike sheets over a wide area of New Zealand. Also known as flood tuff.

ignite [CHEM] To start a fuel burning.

igniter [ENG] **1.** A device for igniting a fuel mixture. **2.** A charge, as of black powder, to facilitate ignition of a propelling or bursting charge.

igniter cord [ENG] A cord which passes an intense flame along its length at a uniform rate to light safety fuses in succession.

igniter pad [ORD] A black powder charge in the form of a thin pad of cartridge cloth attached to separate-loading propelling charge to facilitate complete and uniform ignition.

igniter train [ORD] Step-by-step arrangement of charges in pyrotechnic munitions by which the initial fire from the primer is transmitted and intensified until it reaches and sets off the main charge. Also known as burning train.

igniting fuse [ORD] A fuse designed to initiate its main munition by an igniting action, as compared to the detonating action of a detonating fuse, and suitable only for munitions using a main charge of low explosive or other readily ignitable material.

igniting primer [ORD] An auxiliary primer that carries the fire from a primer to the propelling charge in certain subcaliber tubes.

ignition [CHEM] The process of starting a fuel mixture burning, or the means for such a process.

ignition charge [MATER] A small quantity of explosive, usually composed of black powder, that facilitates the firing of the main charge.

ignition coil [ELECTROMAG] A coil in an ignition system which stores energy in a magnetic field relatively slowly and releases it suddenly to ignite a fuel mixture.

ignition delay *See* ignition lag.

ignition interference [COMMUN] Radio interference due to the spark discharges in an automotive or other ignition system.

ignition lag [MECH ENG] In the internal combustion engine, the time interval between the passage of the spark and the inflammation of the air-fuel mixture. Also known as ignition delay.

ignition point *See* ignition temperature.

ignition system [MECH ENG] The system in an internal combustion engine that initiates the chemical reaction between fuel and air in the cylinder charge by producing a spark.

ignition temperature [CHEM] The lowest temperature at which combustion begins and continues in a substance when it is heated in air. Also known as autogenous ignition temperature; ignition point. [PL PHYS] The lowest temperature at which the fusion energy generated in a plasma exceeds the energy lost through bremsstrahlung radiation.

ignitor [ELECTR] **1.** An electrode used to initiate and sustain the discharge in a switching tube. Also known as keep-alive electrode (deprecated). **2.** A pencil-shaped electrode, made of carborundum or some other conducting material that is not wetted by mercury, partly immersed in the mercury-pool cathode of an ignitron and used to initiate conduction at the desired point in each alternating-current cycle.

ignitron [ELECTR] A single-anode pool tube in which an ignitor electrode is employed to initiate the cathode spot on the surface of the mercury pool before each conducting period.

ignitron contactor [ELECTR] A circuit containing an ignitron and control contacts that serves as a heavy-duty switch in the primary of a resistance-welding transformer.

ignorable coordinate *See* cyclic coordinate.

ignore character [COMPUT SCI] Also known as erase character. **1.** A character indicating that no action whatever is to be taken, that is, a character to be ignored; often used to obliterate an erroneous character. **2.** A character indicating that the preceding or following character is to be ignored, as specified. **3.** A character indicating that some specified action is not to be taken.

iguana [VERT ZOO] The common name for a number of species of herbivorous, arboreal reptiles in the family Iguanidae characterized by a dorsal crest of soft spines and a dewlap; there are only two species of true iguanas.

iguanid [VERT ZOO] The common name for members of the reptilian family Iguanidae.

Iguanidae [VERT ZOO] A family of reptiles in the order Squamata having teeth fixed to the inner edge of the jaws, a nonretractile tongue, a compressed body, five clawed toes, and a long but rarely prehensile tail.

IGY *See* International Geophysical Year.

I-head cylinder [MECH ENG] The internal combustion engine construction having both inlet and exhaust valves located in the cylinder head.

ihleite *See* copiapite.

ihp *See* indicated horsepower.

I indicator *See* I scope.

ijolite [PETR] A plutonic rock of nepheline and 30–60% mafic materials, generally sodic pyroxene, with accessory apatite, sphene, calcite, and titaniferous garnet.

I²L *See* integrated injection logic.

ilang-ilang oil [MATER] An oil made synthetically or derived from the flowers of the tree *Canangium odorata*, containing pinene, geraniol, and linalol. Also known as cananga oil; ylang-ylang oil.

ileitis [MED] Inflammation of the ileum.

ileocecal valve [ANAT] A muscular structure at the junction of the ileum and cecum which prevents reflex of the cecal contents.

ileocolic artery [ANAT] A branch of the superior mesenteric artery that supplies blood to the terminal part of the ileum and the beginning of the colon.

ileocolic intussusception [MED] Slipping of the ileum through the ileocecal valve into the colon.

ileocolitis [MED] Inflammation of both the ileum and the colon.

ileocolostomy [MED] Surgical formation of a bypass channel between the ileum and the colon.

ileocutaneous [MED] Pertaining to a joining of the ileum and the skin resulting from a fistulous connection.

ileostomy [MED] Surgical formation of an artificial anus through the abdominal wall into the ileum.

ilesite [MINERAL] $(Mn,Zn,Fe)SO_4 \cdot 4H_2O$ A green mineral composed of hydrous manganese zinc iron sulfate.

ileum [ANAT] The last portion of the small intestine, extending from the jejunum to the large intestine.

ileus [MED] Acute intestinal obstruction of neurogenic origin.

ILF *See* infralow frequency.

iliac artery [ANAT] Either of the two large arteries arising by bifurcation of the abdominal aorta and supplying blood to the lower trunk and legs (or hind limbs in quadrupeds). Also known as common iliac artery.

iliac crest height [ANTHRO] A measure of the vertical distance from the top of the iliac crest to the floor while the subject stands.

iliac fascia [ANAT] The fascia covering the pelvic surface of the iliacus muscle.

iliac index [ANTHRO] The ratio multiplied by 100 of the distance between the iliac spines and the distance between the lower margin of the acetabulum and the topmost crest of the ilium.

iliac region *See* inguinal region.

iliacus [ANAT] The portion of the iliopsoas muscle arising from the iliac fossa and sacrum.

iliac vein [ANAT] Any of the three veins on each side of the body which correspond to and accompany the iliac artery.

iliocostalis [ANAT] The lateral portion of the erector spinal muscle that extends the vertebral column and assists in lateral movements of the trunk.

iliofemoral ligament [ANAT] A strong band of dense fibrous tissue extending from the anterior inferior iliac spine to the lesser trochanter and the intertrochanteric line. Also known as Y ligament.

iliolumbar ligament [ANAT] A fibrous band that radiates laterally from the transverse processes of the fourth and fifth lumbar vertebrae and attaches to the pelvis by two main bands.

iliopsoas [ANAT] The combined iliacus and psoas muscles.

iliotibial tract [ANAT] A thickened portion of the fascia lata extending from the lateral condyle of the tibia to the iliac crest.

ilium [ANAT] Either of a pair of bones forming the superior portion of the pelvis bone in vertebrates.

Ilkovič equation [ANALY CHEM] Mathematical relationship between diffusion current, diffusion coefficient, and active-substance concentration; used for polarographic analysis calculations.

ill-conditioned problem [COMPUT SCI] A problem in which

a small error in the data or in subsequent calculation results in much larger errors in the answers.

illegal character [COMPUT SCI] A character or combination of bits that is not accepted as a valid representation by a computer or by a specific routine; commonly detected and used as an indication of a machine malfunction.

illepé fat *See* mowrah fat.

illinium *See* promethium-147.

Illinoian [GEOL] The third glaciation of the Pleistocene in North America, between the Yarmouth and Sangamon interglacial stages.

illite [MINERAL] A group of gray, green, or yellowish-brown micalike clay minerals found in argillaceous sediments; intermediate in composition and structure between montmorillonite and muscovite.

illness [MED] **1.** The state of being sick. **2.** A sickness, disease, or disorder.

illuminance [OPTICS] The density of the luminous flux on a surface. Also known as illumination; luminous flux density.

illuminating [GRAPHICS] The hand decoration of books, as done in medieval times, with drawings and miniature paintings, or with embellishments, usually in red, blue, and gold, added to initial letters and borders.

illuminating gas [MATER] Flammable mixture of gases suitable for illuminating purposes; contains hydrogen, methane, ethane, carbon monoxide, and some nitrogen and oxygen.

illuminating grenade [ORD] Hand grenade or rifle grenade designed to provide illumination by a burning action; used also as a trip flare or as an incendiary device.

illuminating oil [MATER] An oil such as kerosine suitable for burning to provide illumination.

illuminating projectile [ORD] Projectile, with a time fuse, that releases a parachute flare at any desired height; used for lighting up an area. Also known as star shell.

illumination [ELECTROMAG] **1.** The geometric distribution of power reaching various parts of a dish reflector in an antenna system. **2.** The power distribution to elements of an antenna array. [OPTICS] **1.** The science of the application of lighting. **2.** *See* illuminance.

illumination climate [METEOROL] Also known as light climate. **1.** The worldwide distribution of natural light from the sun and sky (direct solar radiation plus diffuse sky radiation) as received on a horizontal surface. **2.** The character of total illumination at any given place.

illumination control [ELECTR] A photoelectric control that turns on lights when outdoor illumination decreases below a predetermined level.

illumination design [ENG] Design of sources of lighting and of systems which distribute light in order to effect a comfortable and satisfactory environment for seeing.

illumination distribution [OPTICS] The manner in which light is dispersed on a surface.

illuminometer [OPTICS] A portable photometer which is used in the field or outside the laboratory and yields results of lower accuracy than a laboratory photometer.

illusion [PSYCH] A false interpretation of a real sensation; a perception that misinterprets the object perceived.

illustration board [GRAPHICS] A board made by mounting good drawing paper on a stiff backing, usually a filled pulpboard; surfaces vary from smooth to rough.

illuvial [GEOL] Pertaining to a region or material characterized by the accumulation of soil by the illuviation of another zone or material.

illuvial horizon *See* B horizon.

illuviation [GEOL] The deposition of colloids, soluble salts, and small mineral particles in an underlying layer of soil.

illuvium [GEOL] Material leached by chemical or other processes from one soil horizon and deposited in another.

ilmenite [MINERAL] $FeTiO_3$ An iron-black, opaque, rhombohedral mineral that is the principal ore of titanium. Also known as mohsite; titanic iron ore.

ILS *See* instrument landing system.

ilsemannite [MINERAL] A black, blue-black, or blue mineral composed of hydrous molybdenum oxide or perhaps sulfate, occurring in earthy massive form.

ILS reference point [NAV] A point that is on the centerline of a runway served by an ILS and that is designated as the optimum point of contact for the landing aircraft. Derived from instrument landing system reference point.

image [ACOUS] *See* acoustic image. [COMMUN] **1.** One of two groups of side bands generated in the process of modulation; the unused group is referred to as the unwanted image. **2.** The scene reproduced by a television or facsimile receiver. [COMPUT SCI] A copy of the information contained in a punched card (or other data record) recorded on a different data medium. [ELEC] *See* electric image. [ELECTROMAG] The input reflection coefficient corresponding to the reflection coefficient of a specified load when the load is placed on one side of a waveguide junction and a slotted line is placed on the other. [OPTICS] An optical counterpart of a self-luminous or illuminated object formed by the light rays that traverse an optical system; each point of the object has a corresponding point in the image from which rays diverge or appear to diverge. [PHYS] Any reproduction of an object produced by means of focusing light, sound, electron radiation, or other emanations coming from the object or reflected by the object. [PSYCH] A representation of a sensory experience, occurring in the brain.

image antenna [ELECTROMAG] A fictitious electrical counterpart of an actual antenna, acting mathematically as if it existed in the ground directly under the real antenna and served as the direct source of the wave that is reflected from the ground by the actual antenna.

image attenuation constant [ELECTR] The real part of the image transfer constant.

image card [COMPUT SCI] A representation in storage of the holes punched in a card, in such a manner that the holes are represented by one binary digit, and the unpunched spaces are represented by the other binary digit.

image converter [ELECTR] *See* image tube. [OPTICS] A converter that uses a fiber optic bundle to change the form of an image, for more convenient recording and display or for the coding of secret messages.

image converter camera [ELECTR] A camera consisting of an image tube and an optical system which focuses the image produced on the phosphorescent screen of the tube onto photographic film.

image dissection photography [ELECTR] A method of high-speed photography in which an image is split in any one of various ways into interlaced space and time elements which can be unscrambled or played back through the system either to be viewed or to give a master negative.

image dissector [COMPUT SCI] In optical character recognition, a device that optically examines an input character for the purpose of breaking it down into its prescribed elements.

image dissector tube [ELECTR] A television camera tube in which an electron image produced by a photoemitting surface is focused in the plane of the defining aperture and is scanned past that aperture. Also known as Farnsworth image dissector tube.

image effect [ELECTROMAG] Effect produced on the field of an antenna due to the presence of the earth; electromagnetic waves are reflected from the earth's surface, and these reflections often are accounted for by an image antenna at an equal distance below the earth's surface.

image enhancement [COMPUT SCI] Improvement of the quality of a picture, with the aid of a computer, by giving it higher contrast or making it less blurred or less noisy.

image force [ELEC] The electrostatic force on a charge in the neighborhood of a conductor, which may be thought of as the attraction to the charge's electric image.

image frequency [ELECTR] An undesired carrier frequency that differs from the frequency to which a superheterodyne receiver is tuned by twice the intermediate frequency.

image iconoscope [ELECTR] A camera tube in which an optical image is projected on a semitransparent photocathode, and the resulting electron image emitted from the other side of the photocathode is focused on a separate storage target; the target is scanned on the same side by a high-velocity electron beam, neutralizing the elemental charges in sequence to produce the camera output signal at the target. Also known as superemitron camera (British usage).

image impedance [ELECTR] One of the impedances that, when connected to the input and output of a transducer, will make the impedances in both directions equal at the input terminals and at the output terminals.

image intensifier *See* light amplifier.

image interference [COMMUN] Interference occurring in a superheterodyne receiver when a station broadcasting on the image frequency is received along with the desired station.

ILMENITE

Ilmenite crystals from Arendal, Norway. *(Specimen from Department of Geology, Bryn Mawr College)*

image isocon [ELECTR] A television camera tube which is similar to the image orthicon but whose return beam consists of scanning beam electrons that are scattered by positive stored charges on the target.

image load [ELECTR] Load parameters reflected back to the source by line discontinuities.

image orthicon [ELECTR] A television camera tube in which an electron image is produced by a photoemitting surface and focused on one side of a separate storage tube that is scanned on its opposite side by a beam of low-velocity electrons; electrons that are reflected from the storage tube, after positive stored charges are neutralized by the scanning beam, form a return beam which is amplified by an electron multiplier.

image parameter design [ELECTR] A method of filter design using image impedance and image transfer functions as the fundamental network functions.

image parameter filter [ELECTR] A filter constructed by image parameter design.

image phase constant [ELECTR] The imaginary part of the image transfer constant.

image plane [OPTICS] The plane in which an image produced by an optical system is formed; if the object plane is perpendicular to the optical axis, the image plane will ordinarily also be perpendicular to the axis.

image processing [COMPUT SCI] A technique in which the data from an image are digitized and various mathematical operations are applied to the data, generally with a digital computer, in order to create an enhanced image that is more useful or pleasing to a human observer, or to perform some of the interpretation and recognition tasks usually performed by humans. Also known as picture processing.

image ratio [ELECTR] In a heterodyne receiver, the ratio of the image frequency signal input at the antenna to the desired signal input for identical outputs.

image reject mixer [ELECTR] Combination of two balanced mixers and associated hybrid circuits designed to separate the image channel from the signal channels normally present in a conventional mixer; the arrangement gives image rejection up to 30 decibels without the use of filters.

image response [ELECTR] The response of a superheterodyne receiver to an undesired signal at its image frequency.

image restoration [COMPUT SCI] Operation on a picture with a digital computer to make it more closely resemble the original object.

image space [OPTICS] The region of space where real or virtual images are formed by an optical system.

image spacing [GRAPHICS] In microfilm technology, the area between the trailing edge of one image and the leading edge of the next.

image-storage array [ELECTR] A solid-state panel or chip in which the image-sensing elements may be a metal oxide semiconductor or a charge-coupled or other light-sensitive device that can be manufactured in a high-density configuration.

image transfer constant [ELECTR] One-half the natural logarithm of the complex ratio of the steady-state apparent power entering and leaving a network terminated in its image impedance.

image tube [ELECTR] An electron tube that reproduces on its fluorescent screen an image of the optical image or other irradiation pattern incident on its photosensitive surface. Also known as electron image tube; image converter.

imaginal disk [INV ZOO] Any of the thickened areas within the sac of the body wall in holometabolous insects which give rise to specific organs in the adult.

imaginary axis [MATH] All complex numbers $x + iy$ where $x = 0$; the vertical coordinate axis for the complex plane.

imaginary number [MATH] A complex number of the form $a + bi$, with b not equal to zero, where a and b are real numbers, and $i = \sqrt{-1}$; some writers require also that $a = 0$. Also known as imaginary quantity.

imaginary part [MATH] For a complex number $x + iy$ the imaginary part is the real number y.

imaginary quantity *See* imaginary number.

imaging [PHYS] The formation of images of objects.

imaging radar [ENG] Radar carried on aircraft which forms images of the terrain.

imago [INV ZOO] The sexually mature, usually winged stage of insect development. [PSYCH] An unconscious mental picture, usually idealized, of a parent or loved person important in the early development of an individual and carried into adulthood.

imbecile [PSYCH] A person of middle-grade mental deficiency; the individual's mental age is between 3 and 7 years.

imbed *See* embed.

imbedding [MATH] A homeomorphism of one topological space to a subspace of another topological space.

imbibition [PHYS CHEM] Absorption of liquid by a solid or a semisolid material.

imbricate [BIOL] Having overlapping edges, such as scales, or the petals of a flower.

imbricate structure [GEOL] **1.** A sedimentary structure characterized by shingling of pebbles all inclined in the same direction with the upper edge of each leaning downstream or toward the sea. Also known as shingle structure. **2.** Tabular masses that overlap one another and are inclined in the same direction. Also known as schuppen structure; shingle-block structure.

imbrication [GEOL] Formation of an imbricate structure. Also known as shingling.

imecromone *See* hymecromone.

imerinite [MINERAL] $Na_2(Mg,Fe)_6Si_8O_{22}(O,OH)_2$ A colorless to blue mineral composed of a basic silicate of sodium, iron, and magnesium, occurring as acicular crystals.

Imhoff cone [CIV ENG] A graduated glass vessel for measuring settled solids in testing the composition of sewage.

Imhoff tank [CIV ENG] A sewage treatment tank in which digestion and settlement take place in separate compartments, one below the other.

imidazole [ORG CHEM] $C_3H_4N_2$ One of a group of organic heterocyclic compounds containing a five-membered diunsaturated ring with two nonadjacent nitrogen atoms as part of the ring; the particular compound imidazole is a member of the group. Also known as 1,3-diazole; glyoxaline; iminazole.

imidazoletrione *See* parabanic acid.

imidazolyl [ORG CHEM] $C_3H_3N_2$ The radical from imidazole.

imide [ORG CHEM] **1.** A compound derived from acid anhydrides by replacing the oxygen (O) with the =NH group. **2.** A compound that has either the =NH group or a secondary amine in which R is an acyl radical, as R_2NH.

iminazole *See* imidazole.

imine [ORG CHEM] A class of compounds that are the product of condensation reactions of aldehydes or ketones with ammonia or amines; they have the NH radical attached to the carbon with the double bond, as R—HC=NH; an example is benzaldimine.

imino acid [ORG CHEM] Organic acid in which the =NH group is attached to one or two carbons; for example, acetic acid, $NH(CH_2COOH)_2$.

imino compound [ORG CHEM] A compound that has the =NH radical attached to one or two carbon atoms.

iminodiacetic acid [ORG CHEM] $C_4H_7NO_4$ A crystalline substance used as an intermediate in the manufacture of chelating agents, surface-active agents, and complex salts. Abbreviated IDA. Also known as diglycine; iminodiethanoic acid.

iminodiethanoic acid *See* iminodiacetic acid.

imino nitrogen [ORG CHEM] Nitrogen combined with hydrogen in the imino group. Also known as ammonia nitrogen.

iminourea *See* guanidine.

imipramine [PHARM] $C_{19}H_{24}N_2$ A water-soluble compound crystallizing from acetone solution, melting point 175°C; used in medicine as an antidepressant.

imitative deception [ELECTR] Introduction of electromagnetic radiations into enemy channels which imitate their own emissions, in order to mislead them.

immarginate [BIOL] Lacking a clearly defined margin.

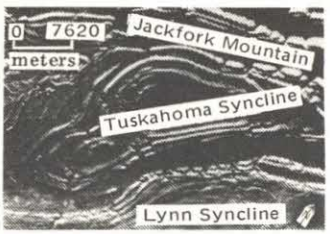
immature soil [GEOL] A soil in which erosion has exceeded the rate at which the soil develops downward.

immediate-access [COMPUT SCI] **1.** Pertaining to an access time which is relatively brief, or to a relatively fast transfer of information. **2.** Pertaining to a device which is directly connected with another device.

immediate address [COMPUT SCI] The value of an operand contained in the address part of an instruction and used as data by this instruction.

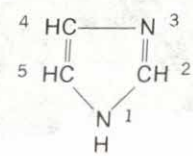
immediate hypersensitivity [IMMUNOL] A type of hypersensitivity in which the response rapidly occurs following exposure of a sensitized individual to the antigen.

IMAGING RADAR



Geologic structures in the Ouachita Mountains of Oklahoma mapped by imaging radar. The aircraft was flying NW–SE above the top of this area. The dark areas are radar shadow since the energy transmitted at low angle does not pick up terrain information on the southwest side of the ridges. *(NASA)*

IMIDAZOLE



Structural formula of imidazole; the positions on the five-membered ring are shown by arabic numbers.

immediate operand [COMPUT SCI] An operand contained in the instruction which specifies the operation.
immediate processing *See* demand processing.
immersion [ASTRON] The disappearance of a celestial body either by passing behind another or passing into another's shadow. [MATH] A mapping f of a topological space X into a topological space Y such that for every $x \in X$ there exists a neighborhood N of x, such that f is a homeomorphism of N onto $f(N)$. [SCI TECH] Placement into or within a fluid, usually water.
immersion cleaning [MET] Removing surface dirt from metal by dipping into a cleaning liquid.
immersion coating [ENG] Applying material to the surface of a metal or ceramic by dipping into a liquid.
immersion electron microscope [ELECTR] An emission electron microscope in which the specimen is a flat conducting surface which may be heated, illuminated, or bombarded by high-velocity electrons or ions so as to emit low-velocity thermionic, photo-, or secondary electrons; these are accelerated to a high velocity in an immersion objective or cathode lens and imaged as in a transmission electron microscope.
immersion electrostatic lens *See* bipotential electrostatic lens.
immersion foot [MED] A serious and disabling condition of the feet due to prolonged immersion in seawater at 60°F (15.6°C) or lower, but not at freezing temperature.
immersion heater [ELEC] An electric device for heating a liquid by direct immersion in the liquid.
immersion lens *See* immersion objective.
immersion objective [OPTICS] A high-power microscope objective designed to work with the space between the objective and the cover glass over the object filled with an oil whose index of refraction is nearly the same as that of the objective and the cover glass, in order to reduce reflection losses and increase the index of refraction of the object space. Also known as immersion lens.
immersion plating [MET] Applying an adherent layer of more-noble metal to the surface of a metal object by dipping in a solution of more-noble metal ions; a replacement reaction. Also known as dip plating; metal replacement.
immersion proof [ORD] An item of equipment when ready for field transport can be submerged for 2 hours in salt or fresh water to a covering depth of 3 feet (91 centimeters), and be capable of operating at normal effectiveness immediately after being removed from the water.
immersion refractometer [OPTICS] Device to measure refractive indices by immersing the prism portion in the sample being checked. Also known as dipping refractometer.
immersion sampling [ANALY CHEM] Collection of a liquid sample for laboratory or other analysis by immersing a container in the liquid and filling it.
immersion scanning [ENG] Ultrasonic scanning in which the ultrasonic transducer and the object being scanned are both immersed in water or some other liquid that provides good coupling while the transducer is being moved around the object.
immigrant [ECOL] An organism that settles in a zone where it was previously unknown.
immigration [ECOL] The one-way inward movement of individuals or their disseminules into a population or population area.
immiscible [CHEM] Pertaining to liquids that will not mix with each other.
immittance [ELEC] A term used to denote both impedance and admittance, as commonly applied to transmission lines, networks, and certain types of measuring instruments.
immittance bridge [ELECTROMAG] A modification of an admittance bridge which compares the output current of a four-terminal device with admittance standards in a T configuration in order to measure transfer admittance by a null method.
immobilize [MED] To render motionless or to fix in place, as by splints or surgery.
immune [IMMUNOL] **1.** Safe from attack; protected against a disease by an innate or an acquired immunity. **2.** Pertaining to or conferring immunity.
immune body *See* antibody.
immune hemolysin [IMMUNOL] A substance formed in blood in response to an injection of erythrocytes from another species.
immune horse serum [IMMUNOL] Serum obtained from the blood of an immunized horse.
immune lysin [IMMUNOL] An antibody that will disrupt a particular type of cell in the presence of complement and cofactors, such as magnesium or calcium ions.
immune opsonin [IMMUNOL] A substance produced in blood in response to an infection or to inoculation with dead cells of the infecting species of bacteria.
immune precipitation [IMMUNOL] A method of isolating a protein from mixtures by using a specific antibody as the precipitating agent.
immune protein [IMMUNOL] Any antibody.
immune serum [IMMUNOL] Blood serum obtained from an immunized individual and carrying antibodies.
immunity [IMMUNOL] The condition of a living organism whereby it resists and overcomes an infection or a disease. [MET] The ability of metal to resist corrosion as a result of thermodynamic stability.
immunization [IMMUNOL] Rendering an organism immune to a specific communicable disease.
immunization therapy [MED] The use of vaccines or antiserums to produce immunity against a specific disease.
immunochemistry [IMMUNOL] A branch of science dealing with the chemical changes associated with immunity factors.
immunodiffusion [IMMUNOL] A serological procedure in which antigen and antibody solutions are permitted to diffuse toward each other through a gel matrix; interaction is manifested by a precipitin line for each system.
immunoelectrophoresis [IMMUNOL] A serological procedure in which the components of an antigen are separated by electrophoretic migration and then made visible by immunodiffusion of specific antibodies.
immunofluorescence [IMMUNOL] Fluorescence as the result of, or identifying, an immune response; a specifically stained antigen fluoresces in ultraviolet light and can thus be easily identified with a homologous antigen.
immunogen [IMMUNOL] A substance which stimulates production of specific antibody or of cellular immunity, and which can react with these products.
immunogenetics [MED] A branch of immunology dealing with the relationships between immunity and genetic factors in disease.
immunogenic [IMMUNOL] Producing immunity.
immunoglobulin [IMMUNOL] Any of a set of serum glycoproteins which have the ability to bind other molecules with a high degree of specificity. Abbreviated Ig.
immunogranulomatous disease [MED] A condition in which a deviation from the standard immune mechanisms is considered to be associated with widespread granulomatosis.
immunological paralysis *See* acquired immunological tolerance.
immunologic suppression [IMMUNOL] The use of x-irradiation, chemicals, corticosteroid hormones, or antilymphocyte antisera to suppress antibody production, particularly in graft transplants.
immunologic tolerance [IMMUNOL] **1.** A condition in which an animal will accept a homograft without rejection. **2.** A state of specific unresponsiveness to an antigen or antigens in adult life as a consequence of exposure to the antigen in utero or in the neonatal period.
immunologist [IMMUNOL] A person who specializes in immunology.
immunology [BIOL] A branch of biological science concerned with the native or acquired resistance of higher animal forms and humans to infection with microorganisms.
immunonephelometry [IMMUNOL] The application of nephelometry to the quantification of antigen or antibody.
immunopathology [MED] The study of various human and animal diseases in which humoral and cellular immune factors seem important in causing pathological damage to cells, tissues, and the host.
immunosuppression [IMMUNOL] Suppression of an immune response by the use of drugs or radiation.
immunosuppressive [PHARM] Any drug or agent used to suppress antibody production.
immunotherapy [MED] **1.** Therapy utilizing immunosuppressives. **2.** *See* serotherapy.
impact [MECH] A forceful collision between two bodies which is sufficient to cause an appreciable change in the momentum of the system on which it acts. Also known as impulsive force.
impact avalanche and transit time diode *See* IMPATT diode.

impact bar [ENG] Specimen used to test the relative susceptibility of a plastic material to fracture by shock.
impact breaker [MECH ENG] A device that utilizes the energy from falling stones in addition to power from massive impellers for complete breaking up of stone. Also known as double impeller breaker.
impact cast *See* prod cast.
impact crater [GEOL] A crater formed on a planetary surface by the impact of a projectile.
impact crusher [MECH ENG] A machine for crushing large chunks of solid materials by sharp blows imposed by rotating hammers, or steel plates or bars; some crushers accept lumps as large as 28 inches (about 70 centimeters) in diameter, reducing them to ¼ inch (6 millimeters) and smaller.
impact energy [MECH] The energy necessary to fracture a material. Also known as impact strength.
impact excitation [ELEC] Starting of damped oscillations in a radio circuit by a sudden surge, such as that produced by a spark discharge.
impact extrusion [MET] A cold extrusion process for producing tubular components by striking a slug of the metal, which has been placed in the cavity of the die, with a punch moving at high velocity.
impact force *See* set forward force.
impact forging [MET] Plastic deformation of a metal using an impactive force.
impact fuse [ORD] A fuse that detonates upon striking an object. Also known as contact fuse.
impact grinding [MECH ENG] A technique used to break up particles by direct fall of crushing bodies on them.
impaction [MED] **1.** The state of being lodged and retained in a body part. **2.** Confinement of a tooth in the jaw so that its eruption is prevented. **3.** A condition in which one fragment of bone is firmly driven into another fragment so that neither can move against the other.
impact ionization [ELECTR] Ionization produced by the impact of a high-energy charge carrier on an atom of semiconductor material; the effect is an increase in the number of charge carriers.
impactite [GEOL] Glassy fused rock or meteor fragments resulting from heat of impact of a meteor on the earth.
impact law [PHYS] The relationship of fluid density, particle density, and fluid viscosity in the settling velocity of large particles in a given liquid: settling velocity is directly proportional to the square root of the particle diameter.
impact load [ENG] A force delivered by a blow, as opposed to a force applied gradually and maintained over a long period.
impact loss [FL MECH] Loss of head in a flowing stream due to the impact of water particles upon themselves or some bounding surface.
impact mark *See* prod mark.
impact microphone [ENG ACOUS] An instrument that picks up the vibration of an object impinging upon another, used especially on space probes to record the impact of small meteoroids.
impact mill [MECH ENG] A unit that reduces the size of rocks and minerals by the action of rotating blades projecting the material against steel plates.
impact-noise analyzer [ENG] An analyzer used with a sound-level meter to evaluate the characteristics of impact-type sounds and electric noise impulses that cannot be measured accurately with a noise meter alone.
impactometer *See* impactor.
impactor [ENG] A general term for instruments which sample atmospheric suspensoids by impaction; such instruments consist of a housing which constrains the air flow past a sensitized sampling plate. Also known as impactometer. [MECH ENG] A machine or part whose operating principle is striking blows. [MIN ENG] A rotary hammermill which crushes ore by impacting it against crushing plates or elements.
impact parameter [NUC PHYS] In a nuclear collision, the perpendicular distance from the target nucleus to the initial line of motion of the incident particle.
impact predictor [AERO ENG] A device which takes information from a trajectory measuring system and continuously computes the point (in real time) at which the rocket will strike the earth.
impact pressure *See* dynamic pressure.
impact printer [GRAPHICS] A line printer that has one or more character fonts, a ribbon or other inking device, a paper transport, and some means of impacting desired characters or character elements on the paper.
impact roll [MECH ENG] An idler roll protected by a covering of a resilient material from the shock of the loading of material onto a conveyor belt, so as to reduce the damage to the belt.
impact screen [MECH ENG] A screen designed to swing or rock forward when loaded and to stop abruptly by coming in contact with a stop.
impact strength [MECH] **1.** Ability of a material to resist shock loading. **2.** *See* impact energy.
impact stress [MECH] Force per unit area imposed on a material by a suddenly applied force.
impact test [ENG] Determination of the degree of resistance of a material to breaking by impact, under bending, tension, and torsion loads; the energy absorbed is measured in breaking the material by a single blow.
impact theory [ASTRON] A theory which holds that most features of the moon's surface were formed by the impact of meteorites. Also known as meteoric theory; meteoritic theory.
impact tube *See* pitot tube.
impact velocity [MECH] The velocity of a projectile or missile at the instant of impact. Also known as striking velocity.
impact wrench [MECH ENG] A compressed-air or electrically operated wrench that gives a rapid succession of sudden torques.
imparipinnate *See* odd-pinnate.
impasto [GRAPHICS] **1.** The thick, heavy application of oil paint to a canvas, often with a palette knife; impasto sections stand out in considerable relief. **2.** The thick application of polymer or other paint to any surface.
IMPATT amplifier [ELECTR] A diode amplifier that uses an IMPATT diode; operating frequency range is from about 5 to 100 gigahertz, primarily in the C and X bands, with power output up to about 20 watts continuous-wave or 100 watts pulsed.
IMPATT diode [ELECTR] A *pn* junction diode that has a depletion region adjacent to the junction, through which electrons and holes can drift, and is biased beyond the avalanche breakdown voltage. Derived from impact avalanche and transit time diode.
impedance [ELEC] *See* electrical impedance. [PHYS] **1.** The ratio of a sinusoidally varying quantity to a second quantity which measures the response of a physical system to the first, both being considered in complex notation; examples are electrical impedance, acoustic impedance, and mechanical impedance. Also known as complex impedance. **2.** The ratio of the greatest magnitude of a sinusoidally varying quantity to the greatest magnitude of a second quantity which measures the response of a physical system to the first; equal to the magnitude of the quantity in the first definition.
impedance-admittance matrix [ELECTR] A four-element matrix used to describe analytically a transistor in terms of impedances or admittances.
impedance bridge [ELEC] A device similar to a Wheatstone bridge, used to compare impedances which may contain inductance, capacitance, and resistance.
impedance coil [ELEC] A coil of wire designed to provide impedance in an electric circuit.
impedance compensator [ELEC] Electric network designed to be associated with another network or a line with the purpose of giving the impedance of the combination a desired characteristic with frequency over a desired frequency range.
impedance component [ELEC] **1.** Resistance or reactance. **2.** A device such as a resistor, inductor, or capacitor designed to provide impedance in an electric circuit.
impedance coupling [ELEC] Coupling of two signal circuits with an impedance.
impedance drop [ELEC] The total voltage drop across a component or conductor of an alternating-current circuit, equal to the phasor sum of the resistance drop and the reactance drop.
impedance irregularities [ELEC] Discontinuities or abrupt changes which result from junctions between unlike sections of a transmission line or irregularities on a line.
impedance match [ELEC] The condition in which the external impedance of a connected load is equal to the internal impedance of the source or to the surge impedance of a transmission line, thereby giving maximum transfer of energy from source to load, minimum reflection, and minimum distortion.
impedance-matching network [ELEC] A network of two or more resistors, coils, or capacitors used to couple two circuits

in such a manner that the impedance of each circuit will be equal to the impedance into which it locks. Also known as line-building-out network.

impedance matrix [ELEC] A matrix Z whose elements are the mutual impedances between the various meshes of an electrical network; satisfies the matrix equation $V = ZI$, where V and I are column vectors whose elements are the voltages and currents in the meshes.

impedance meter *See* electrical impedance meter.

impedometer [ELECTROMAG] An instrument used to measure impedances in waveguides.

impeller [MECH ENG] The rotating member of a turbine, blower, fan, axial or centrifugal pump, or mixing apparatus. Also known as rotor.

impeller pump [MECH ENG] Any pump using a mechanical agency to provide continuous power to move liquids.

Impennes [VERT ZOO] A superorder of birds for the order Sphenisciformes in some systems of classification.

imperative statement [COMPUT SCI] A statement in a symbolic program which is translated into actual machine-language instructions by the assembly routine.

imperfect flower [BOT] A flower lacking either stamens or carpels.

imperfect gas *See* real gas.

imperforate [BIOL] Lacking a normal opening. [GRAPHICS] In printing, no perforations between repeated designs, for example, stamps or labels, which are to be used separately.

imperforate anus [MED] A congenital malformation in which the large intestine ends blindly.

imperial gallon *See* gallon.

imperial pint *See* pint.

imperial red [INORG CHEM] Any of the red varieties of ferric oxide used as pigment.

imperial smelting process [MET] A pyrometallurgical process which treats a complex concentrated feed to a single furnace to recover zinc, copper, lead, cadmium, silver, gold, and other metals in one pass. Abbreviated ISP.

impermeable [SCI TECH] Not permitting water or other fluid to pass through. Also known as impervious.

impersonal micrometer [ENG] An instrument consisting of a vertical wire that is mounted in the focal plane of a transit circle and can be moved across the field of view to follow a star, and instrumentation to record the position of the wire as a function of time; used to reduce systematic observational errors.

impervious *See* impermeable.

impervious carbon [MATER] Carbon compressed with bituminous binder, then carbonized by sintering to produce a dense, impervious material; used as brick to line chemical process and storage vessels.

impetigo [MED] An acute, contagious, inflammatory skin disease caused by streptococcal or staphylococcal infections and characterized by vesicular or pustular lesions.

impingement [ENG] Removal of liquid droplets from a flowing gas or vapor stream by causing it to collide with a baffle plate at high velocity, so that the droplets fall away from the stream. Also known as liquid knockout.

impingement attack [MET] Accelerated corrosive attack on a metal by moving liquids, resulting usually from erosion of a protective surface layer.

impinger [ENG] A device used to sample dust in the air that draws in a measured volume of dusty air and directs it through a jet to impact on a wetted glass plate; the dust particles adhering to the plate are counted.

implant [MED] **1.** A quantity of radioactive material in a suitable container, intended to be embedded in a tissue or tumor for therapeutic purposes. **2.** A tissue graft placed in depth in the body.

implantation [MED] **1.** Placement of a tissue transplant in depth in the body. **2.** Placement in the body of a device for mechanical repair, such as for a ventral hernia or a fracture. **3.** Embedding of an embryo into the endometrium.

implanted atom [ELECTR] An atom introduced into semiconductor material by ion implantation.

implanted device [ELECTR] A resistor or other device that is fabricated within a silicon or other semiconducting substrate by ion implantation. [MED] A heart pacemaker or other medical electronic device that is surgically placed in the body.

implementation [COMPUT SCI] The installation of a computer system or an information system.

implexed [INV ZOO] In insects, having the integument infolded for muscle attachment.

implication [MATH] The logical relation between two statements p and q, usually expressed as "if p then q."

implicit enumeration [MATH] A method of solving integer programming problems, in which tests that follow conceptually from using implied upper and lower bounds on variables are used to eliminate all but a tiny fraction of the possible values, with implicit treatment of all other possibilities.

implicit function [MATH] A function defined by an equation $f(x,y) = 0$, when x is considered as an independent variable and y, called an implicit function of x, as a dependent variable.

implicit function theorem [MATH] A theorem that gives conditions under which an equation in variables x and y may be solved so as to express y directly as a function of x; it states that if $F(x,y)$ and $\partial F(x,y)/\partial y$ are continuous in a neighborhood of the point (x_0,y_0) and if $F(x,y) = 0$ and $\partial F(x,y)/\partial y \neq 0$, then there is a number $\epsilon > 0$ such that there is one and only one function $f(x)$ that is continuous and satisfies $F[x,f(x)] = 0$ for $|x - x_0| < \epsilon$, and satisfies $f(x_0) = y_0$.

implosion [CHEM] The sudden reduction of pressure by chemical reaction or change of state which causes an inrushing of the surrounding medium. [PHYS] A bursting inward, as in the inward collapse of an evacuated container (such as the glass envelope of a cathode-ray tube) or the compression of fissionable material by ordinary explosives in a nuclear weapon.

implosion weapon [ORD] A nuclear weapon in which a quantity of fissionable material, less than a critical mass in its untriggered configuration, has its volume suddenly reduced by compression with ordinary explosives, so that it becomes supercritical and a nuclear explosion can occur.

imposed load [CIV ENG] Any load which a structure must sustain, other than the weight of the structure itself.

imposition [GRAPHICS] The pattern of arranging pages for a signature of a book so that the pages will be in sequence when folding occurs.

impotence [MED] **1.** Inability in the male to perform the sexual act. **2.** Lack of sexual vigor.

impound [CIV ENG] To collect water for irrigation, flood control, or similar purpose.

impounding reservoir [CIV ENG] A reservoir with outlets controlled by gates that release stored surface water as needed in a dry season; may also store water for domestic or industrial use or for flood control. Also known as storage reservoir.

impregnate [ENG] To force a liquid substance into the spaces of a porous solid in order to change its properties, as the impregnation of turquoise gems with plastic to improve color and durability, the impregnation of porous tungsten with a molten barium compound to manufacture a dispenser cathode, or the impregnation of wood with creosote to preserve its integrity against water damage. [MED] To fertilize or cause to become pregnant.

impregnated bit [DES ENG] A sintered, powder-metal matrix bit with fragmented bort or whole diamonds of selected screen sizes uniformly distributed throughout the entire crown section.

impregnated timber [MATER] Timber which has been made flame-resistant, fungi-resistant, or insect-proof by forcing into it under vacuum or pressure a flame retardant or a fungal or insect poison.

impressed voltage [ELEC] Voltage applied to a circuit or device.

impression [GEOL] A form left on a soft soil surface by plant parts; the soil hardens and usually the imprint is a concave feature. [GRAPHICS] **1.** A print made from an engraved plate. **2.** A press run or printing of a book. [MET] A machined cavity in a forging die for production of a specific geometric shape in the workpiece.

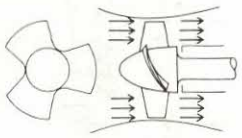
impression block [PETRO ENG] A block with wax or lead on the bottom run into a well and allowed to rest on a lost tool or other object so that an examination of the resultant impression is revelatory concerning the size, shape, or position of the object.

impression cylinder [GRAPHICS] A cylinder onto which an inked image is pressed, so that this image can be transferred to paper in the offset duplicating process.

imprint *See* overprint.

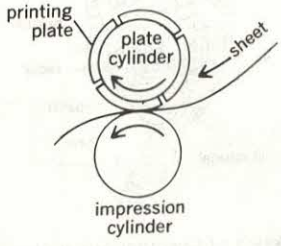
imprinter [GRAPHICS] Any device for entering markings onto a form, including, but not limited to, printing presses, typewriters, pressure imprinting devices such as those used with

IMPELLER



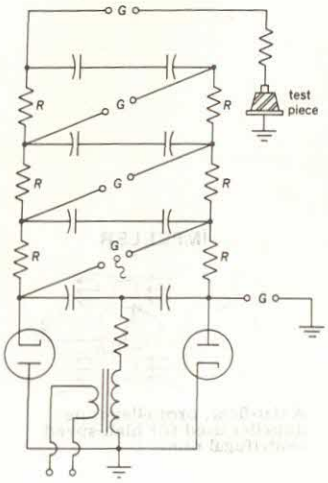
Axial-flow, propeller-type impeller used for high-speed centrifugal pumps.

IMPRESSION CYLINDER



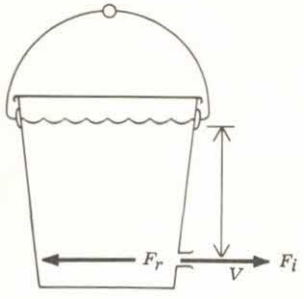
The plate and impression cylinders in a rotary press.

IMPULSE GENERATOR



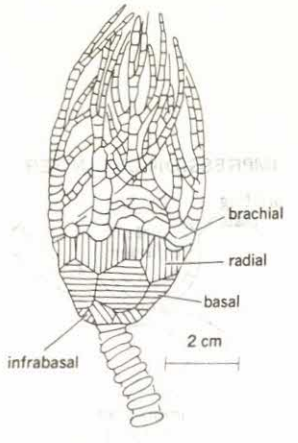
Typical four-stage Marx impulse generator circuit. R = resistor, G = spark gap.

IMPULSE TURBINE



Bucket used to demonstrate the impulse principle basic to many impulse turbines. Water escapes through a nozzle near the base illustrating the impulse F_i and reaction F_r forces of the jet issuing with a velocity V. Vertical arrow indicates distance from nozzle to water level.

INADUNATA



Sketch of *Cyathocrinus*, a dicyclic inadunate crinoid, showing the main plates.

credit cards and address plates, pencils, pens, cash registers, adding machines, and bookkeeping machines.

imprinting [PSYCH] The very rapid development of a response or learning pattern to a stimulus at an early and usually critical period of development; particularly characteristic of some species of birds.

improper fraction [MATH] **1.** In arithmetic, the quotient of two integers in which the numerator is greater than or equal to the denominator. **2.** In algebra, the quotient of two polynomials in which the degree of the numerator is greater than or equal to that of the denominator.

improper integral [MATH] Any integral in which either the integrand becomes unbounded on the domain of integration, or the domain of integration is itself unbounded.

improvement factor *See* noise improvement factor.

improvement threshold [COMMUN] The value of carrier-to-noise ratio below which the signal-to-noise ratio decreases more rapidly than the carrier-to-noise ratio.

improvised grenade [ORD] Any nonstandard type of grenade which is prepared by the user, for example, frangible grenades and fragmentation grenades composed of nails, cartridge cases, or other fragments taped to the sides of a trinitrotoluene block, with suitable detonating device.

improvised mine [ORD] A mine manufactured of available materials because standard mines are either unavailable or are incapable of producing the desired result.

impsonite [GEOL] A black, asphaltic pyrobitumen with a high fixed-carbon content derived from the metamorphosis of petroleum.

impulse [MECH] The integral of a force over an interval of time. [MET] A single pulse or several pulses in welding current used in resistance welding. [PHYS] A pulse which lasts for so short a time that its duration can be thought of as infinitesimal. [PSYCH] A sudden psychogenic urge to act.

impulse excitation *See* shock excitation.

impulse face [HOROL] Lifting surface of a club tooth on an escape wheel, or the surface of a pallet stone engaged by such a wheel.

impulse function [MATH] An idealized or generalized function defined not by its values but by its behavior under integration, such as the (Dirac) delta function.

impulse generator [ELEC] An apparatus which produces very short surges of high-voltage or high-current power by discharging capacitors in parallel or in series. Also known as pulse generator.

impulse modulation [CONT SYS] Modulation of a signal in which it is replaced by a series of impulses, equally spaced in time, whose strengths (integrals over time) are proportional to the amplitude of the signal at the time of the impulse.

impulse movement [HOROL] Clock movement in which the hands are driven by electromagnet impulses from the pendulum.

impulse noise [ELEC] Noise characterized by transient short-duration disturbances distributed essentially uniformly over the useful passband of a transmission system.

impulse pallet [HOROL] Pallet stone in a chronometer balance, driven by impulses from the escape wheel.

impulse period *See* pulse period.

impulse relay [ELEC] A relay that stores the energy of a short pulse, to operate the relay after the pulse ends.

impulse response [CONT SYS] The response of a system to an impulse which differs from zero for an infinitesimal time, but whose integral over time is unity; this impulse may be represented mathematically by a Dirac delta function.

impulse sealing [ENG] Heat-sealing of plastic materials by applying a pulse of intense thermal energy to the sealing area for a very short time, followed immediately by cooling.

impulse separator [ELECTR] In a television receiver, the circuit that separates the horizontal synchronizing impulses in the received signal from the vertical synchronizing impulses.

impulse signaling [COMMUN] Conveying information by means of on-off conditions transmitted down a line or over free space.

impulse solenoid [ELECTROMAG] A solenoid that operates on pulse power, at speeds up to several hundred strokes per second.

impulse strength [ELEC] Voltage breakdown of insulation under voltage surges on the order of microseconds in duration.

impulse tachometer [ENG] A tachometer in which each rotation of a shaft generates an electric pulse and the time rate of pulses is then measured; classified as capacitory-current, inductory, or interrupted direct-current tachometer.

impulse train [CONT SYS] An input consisting of an infinite series of unit impulses, equally separated in time.

impulse transmission [COMMUN] Form of signaling which employs impulses of either or both polarities for transmission to indicate the occurrence of transitions in the signals; used principally to reduce the effects of low-frequency interference; the impulses are generally formed by suppressing the low-frequency components, including direct current, of the signals.

impulse turbine [MECH ENG] A prime mover in which fluid under pressure enters a stationary nozzle where its pressure (potential) energy is converted to velocity (kinetic) energy and absorbed by the rotor.

impulse-type telemeter [COMMUN] A telemeter that employs electric impulses as the translating means.

impulse voltage [ELEC] A unidirectional voltage that rapidly rises to a peak value and then drops to zero more or less rapidly. Also known as pulse voltage.

impulsive force *See* impact.

impulsive sound equation [ACOUS] An equation which states that the total sound energy produced by a short burst of sound in a room is an exponentially decreasing function of time, whose decay constant depends on the speed of sound, the sound absorption coefficient, and the volume and surface area of the room.

impunctate [BIOL] Lacking pores.

impurity [SCI TECH] An undesirable foreign material in a pure substance. [SOLID STATE] A substance that, when diffused into semiconductor metal in small amounts, either provides free electrons to the metal or accepts electrons from it.

impurity scattering [SOLID STATE] Scattering of electrons by holes or phonons in the crystal.

impurity semiconductor [SOLID STATE] A semiconductor whose properties are due to impurity levels produced by foreign atoms.

IMVIC test [MICROBIO] A group of four cultural tests used to differentiate genera of bacteria in the family Enterobacteriaceae and to distinguish them from other bacteria; tests are indole, methyl red, Voges-Proskauer, and citrate.

In *See* indium.

in. *See* inch.

inactive front [METEOROL] A front, or portion thereof, that produces very little cloudiness and no precipitation, as opposed to an active front. Also known as passive front.

inactive tartaric acid *See* racemic acid.

inadequate personality [PSYCH] An individual showing no obvious mental or physical defect, but characterized by inappropriate or inadequate response to intellectual, emotional, and physical demand, and whose behavior pattern shows inadaptability, ineptitude, poor judgment, lack of stamina, and social incompatibility.

Inadunata [PALEON] An extinct subclass of stalked Paleozoic Crinozoa characterized by branched or simple arms that were free and in no way incorporated into the calyx.

inadunate [BIOL] Not united. [INV ZOO] In crinoids, having the arms free from the calyx.

in-and-out bond [CIV ENG] Masonry bond composed of vertically alternating stretchers and headers.

inanimate [MED] Lacking consciousness or life. [SCI TECH] A lifeless object.

inanition [MED] The exhausted, pathologic condition resulting from starvation.

inaperturate [BIOL] Lacking apertures.

inarching [BOT] A kind of repair grafting in which two plants growing on their own roots are grafted together and one plant is severed from its roots after the graft union is established.

Inarticulata [INV ZOO] A class of the phylum Brachiopoda; valves are typically not articulated and are held together only by soft tissue of the living animal.

inboard [ENG] Toward or close to the longitudinal axis of a ship or aircraft.

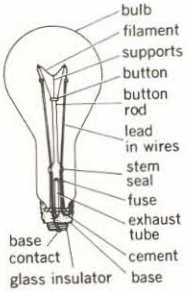
inboard profile [NAV ARCH] A plan having a longitudinal section through the center of a ship, showing all dimensions, positions of bulkheads, location of spaces, machinery, and fittings.

inbond [CIV ENG] Pertaining to bricks or stones laid as headers across a wall.

inborn [BIOL] Of or pertaining to a congenital or hereditary characteristic.

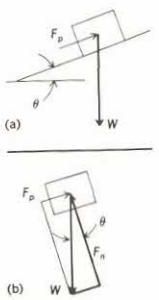
inbreeding [GEN] Breeding of closely related individuals; self-fertilization, as in some plants, is the most extreme form.
inby [MIN ENG] Away from the shaft or mine entrance and therefore toward the working face.
incandescence [OPTICS] The emission of visible radiation by a hot body.
incandescent lamp [ELEC] An electric lamp that produces light when a metallic filament is heated white-hot in a vacuum by passing an electric current through the filament. Also known as filament lamp; light bulb.
incandescent readout [ELECTR] A readout in which each character is formed by energizing an appropriate combination of seven bar-shaped incandescent lamps.
incandescent tuff flow *See* ash flow.
incarbonization *See* coalification.
incarcerated hernia [MED] A hernia in which the intestinal loop is permanently trapped in the hernia sac.
incendiary [ORD] Ammunition equipped so that an incendiary effect at the target occurs.
incendiary bomb [ORD] A bomb designed to be dropped from an aircraft to destroy or reduce the utility of a target by the effects of combustion.
incendiary file destroyer [ORD] An incendiary device designed for use in destroying combustible file material.
incendiary grenade [ORD] Hand grenade designed to be filled with incendiary materials, or used primarily for incendiary purposes.
incendiary rocket [ORD] A rocket with a warhead designed to produce an incendiary effect at the target.
incentive wage system *See* wage incentive plan.
Inceptisol [GEOL] A soil order characterized by soils that are usually moist, with pedogenic horizons of alteration of parent materials but not of illuviation.
incertae sedis [SYST] Placed in an uncertain taxonomic position.
inch [MECH] A unit of length in common use in the United States and Great Britain, equal to 1/12 foot or 2.54 centimeters. Abbreviated in.
inching *See* jogging.
inch of mercury [MECH] The pressure exerted by a 1-inch-high (2.54-centimeter-high) column of mercury that has a density of 13.5951 grams per cubic centimeter when the acceleration of gravity has the standard value of 9.80665 m/sec^2 or approximately 32.17398 ft/sec^2; equal to 3386.388640341 newtons per square meter; used as a unit in the measurement of atmospheric pressure.
incidence angle *See* angle of incidence.
incidence matrix [MATH] In a graph the p by q matrix (b_{ij}) for which $b_{ij} = 1$ if the ith vertex is an end point of the jth edge, and $b_{ij} = 0$ otherwise.
incidence plane *See* plane of incidence.
incidental element *See* irregular element.
incident field intensity [ELECTROMAG] Field strength of a sky wave without including the effects of earth reflections at the receiving location.
incident light [OPTICS] The direct light that falls on a surface.
incident power [ELEC] Product of the outgoing current and voltage, from a transmitter, traveling down a transmission line to the antenna.
incident wave [ELECTR] A current or voltage wave that is traveling through a transmission line in the direction from source to load. [PHYS] A wave that impinges on a discontinuity, particle, or body, or on a medium having different propagation characteristics.
incineration [CHEM] The process of burning a material so that only ashes remain.
incinerator [ENG] A furnace or other container in which materials are burned.
Incirrata [INV ZOO] A suborder of cephalopod mollusks in the order Octopoda.
incised [BIOL] Having a deeply and irregularly notched margin. [MED] Made by cutting, as a wound.
incised meander [GEOL] A deep, tortuous valley cut by a meandering stream that was rejuvenated.
incision [MED] A cut or wound of the body tissue, as an abdominal incision or a vertical or oblique incision.
incisional hernia [MED] Abnormal protrusion of an organ through an operative or accidental incision. Also known as postoperative hernia; posttraumatic hernia.
incisive canal [ANAT] The bifurcated bony passage from the floor of the nasal cavity to the incisive fossa.
incisive foramen [ANAT] One of the two to four openings of the incisive canal on the floor of the incisive fossa.
incisive fossa [ANAT] **1.** A bony pit behind the upper incisors into which the incisive canals open. **2.** A depression on the maxilla at the origin of the depressor muscle of the nose. **3.** A depression of the mandible at the origin of the mentalis muscle.
incisor [ANAT] A tooth specialized for cutting, especially those in front of the canines on the upper jaw of mammals.
inclination [GEOL] The angle at which a geological body or surface deviates from the horizontal or vertical; often used synonymously with dip. [GEOPHYS] In magnetic inclination, the dip angle of the earth's magnetic field. Also known as magnetic dip. [MATH] **1.** The inclination of a line in a plane is the angle made with the positive x axis. **2.** The inclination of a line in space with respect to a plane is the smaller angle the line makes with its orthogonal projection in the plane. **3.** The inclination of a plane with respect to a given plane is the smaller of the dihedral angles which it makes with the given plane. [SCI TECH] **1.** Angular deviation of a direction or surface from the true vertical or horizontal. **2.** The angle which a direction or surface makes with the vertical or horizontal. **3.** A surface which deviates from the vertical or horizontal.
inclination of axis [ASTRON] The angle between a planet's axis of rotation and the perpendicular to the plane of its orbit.
inclination of planetary orbits [ASTRON] The angle between the plane of the orbit and the plane of the ecliptic, which is the plane of the earth's orbit.
inclination of the wind [METEOROL] The angle between the direction of the wind and the isobars.
incline [SCI TECH] An upward- or downward-sloping surface.
inclined bedding [GEOL] A type of bedding in which the strata dip in the direction of current flow.
inclined cableway [MECH ENG] A monocable arrangement in which the track cable has a slope sufficiently steep to allow the carrier to run down under its own weight.
inclined contact [GEOL] A contact plane of gas or oil with water underlying, in which the plane slopes or is inclined.
inclined drilling [ENG] The drilling of blastholes at an angle with the vertical.
inclined extinction [OPTICS] Extinction in which the vibration directions are inclined to a crystal axis or direction of cleavage. Also known as oblique extinction.
inclined orbit [AERO ENG] A satellite orbit which is inclined with respect to the earth's equator.
inclined plane [MECH] A plane surface at an angle to some force or reference line.
inclined skip hoist [MIN ENG] A skip hoist that operates on steeply inclined rails placed on a mine pit slope or wall.
inclined-tube manometer [ENG] A glass-tube manometer with the leg inclined from the vertical to extend the scale for more minute readings.
incline shaft [MIN ENG] A shaft which has been dug at an angle to the vertical to follow the depth of the lode.
inclining experiment [NAV ARCH] An experimental determination of the weight of a ship and of the position of its center of gravity, in which a known weight, already aboard, is moved a measured distance perpendicular to the ship's centerline plane, and the resulting angle of list is measured.
inclinometer [ENG] **1.** An instrument that measures the attitude of an aircraft with respect to the horizontal. **2.** An instrument for measuring the angle between the earth's magnetic field vector and the horizontal plane. **3.** An apparatus used to ascertain the direction of the magnetic field of the earth with reference to the plane of the horizon.
inclusion [CRYSTAL] **1.** A crystal or fragment of a crystal found in another crystal. **2.** A small cavity filled with gas or liquid in a crystal. [CYTOL] A visible product of cellular metabolism within the protoplasm. [MET] An impure particle, such as sand, trapped in molten metal during solidification. [PETR] A fragment of older rock enclosed in an igneous rock.
inclusion blennorrhea *See* inclusion conjunctivitis.
inclusion body [VIROL] Any of the abnormal structures appearing within the cell nucleus or the cytoplasm during the course of virus multiplication.
inclusion complex [CHEM] Crystalline mixture in which

INCANDESCENT LAMP



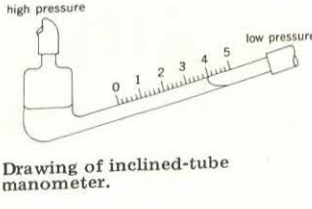
Parts of an incandescent lamp. *(General Electric Co.)*

INCLINED PLANE



Weight resting on an inclined plane *(a)* with principal forces applied, and *(b)* their resolution into normal force. θ is angle of inclination of plane, W is weight of body, F_p is force parallel to the surface, F_n is force normal to the surface.

INCLINED-TUBE MANOMETER



Drawing of inclined-tube manometer.

the molecules of one component are contained within the crystal lattice of another component. Also known as inclusion compound.

inclusion compound *See* inclusion complex.

inclusion conjunctivitis [MED] An acute inflammation of the conjunctiva with pus formation caused by a virus and identified from epithelial-cell inclusion bodies in conjunctival scrapings. Also known as inclusion blennorrhea; paratrachoma; swimmer's conjunctivitis; swimming pool conjunctivitis.

inclusion cyst [MED] A cyst formed by the implantation of epithelial tissue into another structure.

inclusion encephalitis [MED] A chronic inflammation of the brain in which large inclusion bodies occur in the nuclei of oligodendria and sometimes in nerve cells.

inclusive or *See* or.

incoalation *See* coalification.

incoherence [MED] Lack of coherence, relevance, or continuity of ideas or language.

incoherent [GEOL] Pertaining to a rock or deposit that is loose or unconsolidated, or that is unable to hold together firmly or solidly.

incoherent light [OPTICS] Electromagnetic radiant energy not all of the same phase, and possibly also consisting of various wavelengths.

incoherent scattering [PHYS] Scattering of particles or photons in which the scattering elements act independently of one another, so that there are no definite phase relationships among the different parts of the scattered beam.

incoherent waves [PHYS] Waves having no fixed phase relationship.

incoming first selector [ELEC] Connects incoming calls from outlying dial offices to local second selectors.

incoming selector [ELEC] Selector associated with trunk circuits from another central office.

incommensurable numbers [MATH] Two numbers whose ratio is irrational.

incompatible equations [MATH] Two or more equations that are not satisfied by any set of values for the variables appearing. Also known as inconsistent equations.

incompetence [MED] **1.** Insufficiency or inadequacy in performing natural functions. **2.** In forensic medicine, inability to function within the law, as the incompetence of an individual to drive when under the influence of alcohol.

incompetent bed [GEOL] A bed not combining sufficient firmness and flexibility to transmit a thrust and to lift a load by bending.

incompetent rock [ENG] Soft or fragmented rock in which an opening, such as a borehole or an underground working place, cannot be maintained unless artificially supported by casing, cementing, or timbering.

incomplete abortion [MED] Expulsion of only part of the product of conception, with some of the membranes or placenta remaining in the uterus.

incomplete beta function [MATH] The function $\beta_x(p,q)$ defined by

$$\beta_x(p,q) = \int_0^x t^{p-1}(1-t)^{q-1}\,dt$$

where $0 \leq x \leq 1$, $p > 0$, and $q > 0$.

incomplete combustion [CHEM] Combustion in which oxidation of the fuel is incomplete.

incomplete flower [BOT] A flower lacking one or more modified leaves, such as petals, sepals, pistils, or stamens.

incomplete fusion *See* quasi-fission.

incomplete gamma function [MATH] Either of the functions $\gamma(a,x)$ and $\Gamma(a,x)$ defined by

$$\gamma(a,x) = \int_0^x t^{a-1}e^{-t}\,dt$$

$$\Gamma(a,x) = \int_x^\infty t^{a-1}e^{-t}\,dt$$

where $0 \leq x \leq \infty$ and $a > 0$.

incomplete lubrication [MECH ENG] Lubrication that takes place when the load on the rubbing surfaces is carried partly by a fluid viscous film and partly by areas of boundary lubrication; friction is intermediate between that of fluid and boundary lubrication.

incompressibility [MECH] Quality of a substance which maintains its original volume under increased pressure.

incompressibility condition [FL MECH] The condition prevailing when dp/dt, the time rate of change of the density of a fluid, is zero; this is a valid assumption for most problems in dynamic oceanography.

incompressible flow [FL MECH] Fluid motion without any change in density.

incompressible fluid [FL MECH] A fluid which is not reduced in volume by an increase in pressure.

incongruous [GEOL] Of a drag fold, having an axis and axial surface not parallel to the axis and axial surface of the main fold to which it is related.

inconsistent equations *See* incompatible equations.

incontinence [MED] Inability to control the natural evacuations, as the feces or the urine; specifically, involuntary evacuation from organic causes.

incorporate [COMPUT SCI] To place in storage.

incrassate [BIOL] State of being swollen or thickened.

increaser [ENG] An adapter for connecting a small-diameter pipe to a larger-diameter pipe.

increasing function *See* monotone nondecreasing function.

increment [HYD] *See* recharge. [MATH] A change in the argument or values of a function, usually restricted to being a small positive or negative quantity. [SCI TECH] A small change in the value of a variable.

incremental compiler [COMPUT SCI] A compiler that generates code for a statement, or group of statements, which is independent of the code generated for other statements.

incremental computer [COMPUT SCI] A special-purpose computer designed to process changes in variables as well as absolute values; for instance, a digital differential analyzer.

incremental digital recorder [COMPUT SCI] Magnetic tape recorder in which the tape advances across the recording head step by step, as in a punched-paper-tape recorder; used for recording an irregular flow of data economically and reliably.

incremental dump tape [COMPUT SCI] A safety technique used in time-sharing which consists in copying all files (created or modified by a user during a day) on a magnetic tape; in case of system failure, the file storage can then be reconstructed. Also known as failsafe tape.

incremental frequency shift [COMMUN] Method of superimposing incremental intelligence on another intelligence by shifting the center frequency of an oscillator a predetermined amount.

incremental hysteresis loss [ELECTROMAG] Hysteresis loss when a magnetic material is subjected to a pulsating magnetizing force.

incremental induction [ELECTROMAG] The quantity lying between the highest and lowest value of a magnetic induction at a point in a polarized material, when subjected to a small cycle of magnetization.

incremental mode [COMPUT SCI] The plotting of a curve on a cathode-ray tube by illuminating a fixed number of points at a time.

incremental permeability [ELECTROMAG] The ratio of a small cyclic change in magnetic induction to the corresponding cyclic change in magnetizing force when the average magnetic induction is greater than zero.

incremental printer [GRAPHICS] A printer, such as a computer-controlled electric typewriter, that prints sequentially, character by character, on each line.

incremental representation [COMPUT SCI] A way of representing variables used in incremental computers, in which changes in the variables are represented instead of the values of the variables themselves.

incretion [PHYSIO] An internal secretion.

incubation [CHEM] Maintenance of chemical mixtures at specified temperatures for varying time periods to study chemical reactions, such as enzyme activity. [MED] The phase of an infectious disease process between infection by the pathogen and appearance of symptoms. [VERT ZOO] The act or process of brooding or incubating.

incubation period [MED] The period of time required for the development of symptoms of a disease after infection, or of altered reactivity after exposure to an allergen. [VERT ZOO] The brooding period required to bring an egg to hatching.

incubator [AGR] A device for the artificial hatching of eggs. [MED] A small chamber with controlled oxygen, temperature, and humidity for newborn infants requiring special care. [MICROBIO] A laboratory cabinet with controlled

temperature for the cultivation of bacteria, or for facilitating biologic tests.

incubator oil [MATER] Special grade of long-burning petroleum heating oil used to heat farm incubators.

incubatory carrier [MED] A person infected with a certain microorganism but in such an early stage of disease that clinical manifestations are not apparent.

incubous [BOT] The juxtaposition of leaves such that the anterior margins of older leaves overlap the posterior margins of younger leaves.

incudate [BIOL] Of, pertaining to, or having an incus.

incumbent [BIOL] Lying on or down. [GEOL] Lying above, said of a stratum that is superimposed or overlies another stratum.

incunabula printing *See* cradle printing.

incurrent canal [INV ZOO] A canal through which water enters a sponge.

incurrent siphon *See* inhalant siphon.

Incurvariidae [INV ZOO] A family of lepidopteran insects in the superfamily Incurvarioidea; includes yucca moths and relatives.

Incurvarioidea [INV ZOO] A monofamilial superfamily of lepidopteran insects in the suborder Heteroneura having wings covered with microscopic spines, a single genital opening in the female, and venation that is almost complete.

incus [ANAT] The middle one of three ossicles in the middle ear. Also known as anvil. [METEOROL] A supplementary cloud feature peculiar to cumulonimbus capillatus; the spreading of the upper portion of cumulonimbus when this part takes the form of an anvil with a fibrous or smooth aspect. Also known as anvil; thunderhead.

indamine [ORG CHEM] $HN{:}C_6H_4{:}N{\cdot}C_6H_4NH_2$ An unstable dye obtained by the reaction of *para*-phenylenediamine and aniline. Also known as phenylene blue.

indan [ORG CHEM] $C_6H_4(CH_2)_3$ Colorless liquid boiling at 177°C; soluble in alcohol and ether, insoluble in water; derived from coal tar.

indanthrene *See* indanthrone.

indanthrone [ORG CHEM] $C_{28}H_{14}N_2O_4$ A blue pigment or vat dye soluble in dilute base solutions; used in cotton dyeing and as a pigment in paints and enamels. Also known as 6,15-dihydro-5,9,14,18-anthrazinetetrone; indanthrene.

indeciduate placenta [EMBRYO] A placenta having the maternal and fetal elements associated but not fused.

indefinite ceiling [METEOROL] After United States weather observing practice, the ceiling classification applied when the reported ceiling value represents the vertical visibility upward into surface-based, atmospheric phenomena (except precipitation), such as fog, blowing snow, and all of the lithometeors. Formerly known as ragged ceiling.

indefinite integral [MATH] An indefinite integral of a function $f(x)$ is a function $F(x)$ whose derivative equals $f(x)$. Also known as antiderivative; integral.

indehiscent [BOT] **1.** Remaining closed at maturity, as certain fruits. **2.** Not splitting along regular lines.

indelible ink [MATER] An ink that cannot be removed, for example, India ink.

indene [ORG CHEM] C_9H_8 A colorless, liquid, polynuclear hydrocarbon; boils at 181°C and freezes at −2°C; derived from coal tar distillates; copolymers with benzofuran have been manufactured on a small scale for use in coatings and floor coverings.

indent [SCI TECH] To form a depression by forcing inward.

indentation hardness [MET] The resistance of a metal surface to indention when subjected to pressure by a hard pointed or rounded tool. Also known as penetration hardness.

indented bolt [DES ENG] A type of anchor bolt that has indentations to hold better in cemented grout.

independent assortment [GEN] The random assortment of the alleles at two or more loci on different chromosome pairs or far apart on the same chromosome pair which occurs at meiosis; first discovered by G. Mendel.

independent axioms [MATH] A list of axioms such that no axiom can be deduced as a theorem from the others.

independent chuck [DES ENG] A chuck for holding work by means of four jaws, each of which is moved independently of the others.

independent contractor [ENG] One who exercises independent control over the mode and method of operations to produce the results demanded by the contract.

independent equations [MATH] A system of equations such that no one of them is necessarily satisfied by a solution to the rest.

independent events [STAT] Two events in probability such that the occurrence of one of them does not affect the probability of the occurrence of the other.

independent footing [CIV ENG] A footing that supports a concentrated load, such as a single column.

independent functions [MATH] A set of functions such that knowledge of the values obtained by all but one of them at a point is insufficient to determine the value of the remaining function.

independent line of sighting [ORD] A system for laying a gun, whereby the angle of site and the angle of elevation (range) mechanisms work independently of each other.

independent migration law [ANALY CHEM] The law that each ion in a conductiometric titration contributes a definite amount to the total conductance, irrespective of the nature of the other ions in the electrolyte.

independent random variables [STAT] The discrete random variables $X_1, X_2, \ldots, X_n$ are independent if for arbitrary values $x_1, x_2, \ldots, x_n$ of the variables the probability that $X_1 = x_1$ and $X_2 = x_2$, etc., is equal to the product of the probabilities that $X_i = x_i$ for $i = 1, 2, \ldots, n$; random variables which are unrelated.

independent recoil system [ORD] A recoil mechanism for artillery that has an independent recuperator, that is, the recuperator is entirely independent of the recoil brake in the recoil mechanism.

independent sector [COMPUT SCI] A device on some punched-card tabulators that allows only the first of a series of similar data items to be printed and prevents printing of the rest.

independent-sideband modulation [COMMUN] Modulation in which the radio-frequency carrier is reduced or eliminated and two channels of information are transmitted, one on an upper and one on a lower sideband. Abbreviated ISB modulation.

independent-sideband receiver [ELECTR] A radio receiver designed for the reception of independent-sideband modulation, having provisions for restoring the carrier.

independent-sideband transmitter [ELECTR] A transmitter which produces independent-sideband modulated signals.

independent suspension [MECH ENG] In automobiles, a system of springs and guide links by which wheels are mounted independently on the chassis.

independent variable [MATH] In an equation $y = f(x)$, the input variable x. Also known as argument.

independent wire-rope core [DES ENG] A core of steel in a wire rope made in accordance with the best practice and design, either bright (uncoated) galvanized or drawn galvanized wire.

inderborite [MINERAL] $CaMgB_6O_{11}{\cdot}11H_2O$ A monoclinic mineral composed of hydrous calcium and magnesium borate.

inderite [MINERAL] $Mg_2B_6O_{11}{\cdot}15H_2O$ A hydrated borate mineral.

indeterminacy principle *See* uncertainty principle.

indeterminate cleavage [EMBRYO] Cleavage in which all the early cells have the same potencies with respect to development of the entire zygote.

indeterminate equations [MATH] A set of equations possessing an infinite number of solutions.

indeterminate forms [MATH] Products, quotients, differences, or powers of functions which are undefined when the argument of the function has a certain value, because one or both of the functions are zero or infinite; however, the limit of the product, quotient, and so on as the argument approaches this value is well defined.

indeterminate growth [BOT] Growth of a plant in which the axis is not limited by development of a reproductive structure, and therefore growth continues indefinitely.

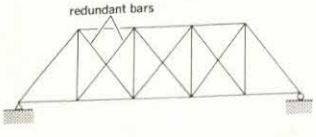
indeterminate truss [CIV ENG] A truss having redundant bars.

index [COMPUT SCI] **1.** A list of record surrogates arranged in order of some attribute expressible in machine-orderable form. **2.** To produce a machine-orderable set of record surrogates, as in indexing a book. **3.** To compute a machine location by indirection, as is done by index registers. **4.** The portion of a computer instruction which indicates what index register (if any) is to be used to modify the address of an instruction. [MATH] **1.** Unity of a logarithmic scale, as the C scale of a slide rule. **2.** A subscript or superscript used to indicate a specific

INDENE

Structural formula of indene.

INDETERMINATE TRUSS



Redundant bars in an indeterminate truss.

element of a set or sequence. [PHYS] A numerical quantity, usually dimensionless, denoting the magnitude of some physical effect, such as the refractive index.

index arithmetic unit [COMPUT SCI] A section of some computers that performs addition or subtraction operations on address parts of instructions for the purpose of indexing, boundary tests for memory protection, and so forth.

index arm [NAV] On a marine sextant, a slender bar carrying the index; the bar pivots at the center of curvature of the arc of the sextant and carries the index and the vernier or micrometer.

index array [COMPUT SCI] A group of registers corresponding one-for-one with the buffer registers, each register containing the main storage address of the data contained in the corresponding buffer register.

index bed *See* key bed.

index catalog [ASTRON] A supplement to the New General Catalog of nebulae.

index center [MECH ENG] One of two machine-tool centers used to hold work and to rotate it by a fixed amount.

index chart [MECH ENG] **1.** A chart used in conjunction with an indexing or dividing head, which correlates the index plate, hole circle, and index crank motion with the desired angular subdivisions. **2.** A chart indicating the arrangement of levers in a machine to obtain desired output speed or fuel rate. [NAV] In marine operations, an outline chart showing the limits and identifying designations of navigational charts, volumes of sailing directions, and so on.

index counter [ENG] A counter indicating revolutions of the tape supply reel, making it possible to index selections within a reel of tape.

index crank [MECH ENG] The crank handle of an index head used to turn the spindle.

index cycle [METEOROL] A roughly cyclic variation in the zonal index.

indexed address [COMPUT SCI] An address which is modified, generally by means of index registers, before or during execution of a computer instruction.

indexed sequential data set [COMPUT SCI] A collection of related data items that are stored sequentially on a key, but are also accessible through index tables maintained by the system.

indexed sequential organization [COMPUT SCI] A sequence of records arranged in collating sequence used with direct-access devices.

index ellipsoid [OPTICS] An ellipsoid whose three perpendicular axes are proportional in length to the principal values of the index of refraction of light in an anisotropic medium and point in the direction of the corresponding electric vector. Also known as ellipsoid of wave normals; indicatrix; optical indicatrix; polarizability ellipsoid; reciprocal ellipsoid.

index error [ENG] An error caused by the misalignment of the vernier and the graduated circle (arc) of an instrument.

index forest [FOR] A forest reaching the highest average in a given locality for density, volume, and increment.

index fossil [PALEON] The ancient remains and traces of an organism that lived during a particular geologic time period and that geologically date the containing rocks.

index glass *See* index mirror.

index head [MECH ENG] A headstock that can be affixed to the table of a milling machine, planer, or shaper; work may be mounted on it by a chuck or centers, for indexing.

indexing [MECH ENG] The process of providing discrete spaces, parts, or angles in a workpiece by using an index head.

indexing fixture [MECH ENG] A fixture that changes position with regular steplike movements.

index line *See* isopleth.

index liquid [OPTICS] A liquid whose index of refraction is known, used to find the index of refraction of powdered substances with a microscope.

index marker [COMPUT SCI] The beginning (and end) of each track in a disk, which is recognized by a special sensing device within the disk mechanism.

index mineral [PETR] A mineral whose first appearance in passing from low to higher grades of metamorphism indicates the outer limit of a zone.

index mirror [NAV] The mirror attached to the index arm of a marine sextant. Also known as index glass.

index number [STAT] A number indicating change in magnitude, as of cost or of volume of production, as compared with the magnitude at a specified time, usually taken as 100; for example, if production volume in 1970 was two times as much as the volume in 1950 (taken as 100), its index number is 200.

index of absorption *See* absorption index.

index of a radical [MATH] The number above and to the left of the radical sign indicating the root to be extracted.

index of aridity [CLIMATOL] A measure of the precipitation effectiveness or aridity of a region, given by the following relationship: index of aridity $= P/(T + 10)$, where P is the annual precipitation in centimeters, and T the annual mean temperature in degrees centigrade.

index of a subgroup [MATH] The quotient of the order of the group by the order of a subgroup.

index of cooperation [COMMUN] In rectilinear scanning or recording, the product of the total length of a scanning or recording line by the number of scanning or recording lines per unit length.

index of modulation *See* modulation factor.

index of precision [STAT] The constant h in the normal curve $y = K \exp[-h^2(x-u)^2]$; a large value of h indicates a high precision, or small standard deviation.

index of refraction [OPTICS] The ratio of the phase velocity of light in a vacuum to that in a specified medium. Also known as refractive index; refracture index.

index of unsaturation [ORG CHEM] A numerical value that represents the number of rings or double bonds in a molecule; a triple bond is considered to have the numerical value of 2.

index plane [GEOL] A surface used as a reference point in determining geological structure.

index plate [DES ENG] A plate with circular graduations or holes arranged in circles, each circle with different spacing; used for indexing on machines.

index point [COMPUT SCI] A hardware reference mark on a disk or drum for use in timing.

index prism [NAV] A sextant prism which can be rotated to any angle corresponding to altitudes between established limits; the bubble or pendulum sextant counterpart of the index mirror of a marine sextant.

index ratio [ELECTROMAG] The ratio of the radius of a conductor used in induction heating to its skin depth at the frequency used.

index register [COMPUT SCI] A hardware element which holds a number that can be added to (or, in some cases, subtracted from) the address portion of a computer instruction to form an effective address. Also known as base register; B box; B line; B register; B store; modifier register.

index stock [GRAPHICS] A stiff paper receptive to writing ink and to printing; available in smooth and antique finishes and used for index records and business cards.

index thermometer [ENG] A thermometer in which steel index particles are carried by mercury in the capillary and adhere to the capillary wall in the high and low positions, thus indicating minimum and maximum inertial scales.

index word *See* modifier.

india ink [MATER] A permanent black ink made of lampblack and blue binder; some varieties are waterproof. Also known as Chinese ink; sumi ink.

indialite [MINERAL] $Mg_2Al_4Si_5O_{18}$ A hexagonal cordierite mineral; it is isotypic with beryl.

Indian *See* Indus.

indianaite [MINERAL] A white porcelainlike clay mineral; a variety of halloysite found in Indiana.

Indiana limestone *See* spergenite.

Indian balsam *See* Peru balsam.

Indian grass oil *See* palmarosa oil.

Indian gum [MATER] Any of the gums, such as ghatti gum and sterculia gum, with mucilage consistency from trees in the forests in India and Ceylon.

Indian Ocean [GEOGR] The smallest and geologically the most youthful of the three oceans, whose surface area is 75,900,000 square kilometers; it is bounded on the north by India, Pakistan, and Iran; on the east by the Malay Peninsula; on the south by Antarctica; and on the west by the Arabian peninsula and Africa.

Indian red [MATER] Iron-oxide-base, maroon pigment; used to polish gold, silver, and other metals. Also known as iron saffron.

Indian spring low water [OCEANOGR] An arbitrary tidal datum approximating the level of the mean of the lower low waters at spring time, first used in waters surrounding India. Also known as harmonic tide plane; Indian tide plane.

Indian summer [CLIMATOL] A period, in mid- or late autumn, of abnormally warm weather, generally clear skies, sunny but hazy days, and cool nights; in New England, at least one killing frost and preferably a substantial period of normally cool weather must precede this warm spell in order for it to be considered a true Indian summer; it does not occur every year, and in some years there may be two or three Indian summers; the term is most often heard in the northeastern United States, but its usage extends throughout English-speaking countries.

Indian tide plane *See* Indian spring low water.

Indian tragacanth *See* karaya gum.

Indian yellow [MATER] A yellow pigment which may be aureolin, made of cobalt and potassium nitrates; or puree, the impure basic magnesium salt of euxanthic acid; or the synthetic dye primuline.

indican [BIOCHEM] C_8H_6NOSOK The potassium salt of indoxylsulfate found in urine as a result of bacterial action on tryptophan in the bowel. [ORG CHEM] $C_{14}H_{17}O_6N$ A glucoside of indoxyl occurring in the indigo plant; on hydrolysis indican gives rise to indoxyl, which is oxidized to indigo by air.

indicated airspeed [AERO ENG] The airspeed as shown by a differential-pressure airspeed indicator, uncorrected for instrument and installation errors; a simple computation for altitude and temperature converts indicated airspeed to true airspeed. Abbreviated IAS.

indicated air temperature [METEOROL] The uncorrected reading from the free air temperature gage. Also known as outside air temperature.

indicated altitude [AERO ENG] The uncorrected reading of a barometric altimeter.

indicated horsepower [MECH ENG] The horsepower delivered by an engine as calculated from the average pressure of the working fluid in the cylinders and the displacement. Abbreviated ihp.

indicated ore [MIN ENG] A known mineral deposit for which quantitative estimates are made partly from inference and partly from specific sampling. Also known as probable ore.

indicating gage [ENG] A gage consisting essentially of a case and mounting, a spindle carrying the contact point, an amplifying mechanism, a pointer, and a graduated dial; used to amplify and measure the displacement of a movable contact point.

indication [ENG] In ultrasonic testing, determination of the presence of a flaw by detection of a reflected ultrasonic beam.

indicative data [COMPUT SCI] Data which describe a specific item.

indicator [COMPUT SCI] A device announcing an error or failure. [ELECTR] A cathode-ray tube or other device that presents information transmitted or relayed from some other source, as from a radar receiver. [ENG] An instrument for obtaining a diagram of the pressure-volume changes in a running positive-displacement engine, compressor, or pump cylinder during the working cycle.

indicator card [ENG] A chart on which an indicator diagram is produced by an instrument called an engine indicator which traces the real-performance cycle diagram as the machine is running.

indicator diagram [ENG] A pressure-volume diagram representing and measuring the work done by or on a fluid while performing the work cycle in a reciprocating engine, pump, or compressor cylinder.

indicator element [ELECTR] A component whose variability under conditions of manufacture or use is likely to cause the greatest variation in some measurable parameter.

indicator function *See* characteristic function.

indicator gate [ELECTR] Rectangular voltage waveform which is applied to the grid or cathode circuit of an indicator cathode-ray tube to sensitize or desensitize it during a desired portion of the operating cycle.

indicator lamp [ELEC] A neon lamp whose on-off condition is used to convey information.

indicator medium [MICROBIO] A usually solid culture medium containing substances capable of undergoing a color change in the vicinity of a colony which has effected a particular chemical change, such as fermenting a certain sugar.

indicator plant [BOT] A plant used in geobotanical prospecting as an indicator of a certain geological phenomenon.

indicator tube [ELECTR] An electron-beam tube in which useful information is conveyed by the variation in cross section of the beam at a luminescent target.

indicator unit [ENG] An instrument which detects the presence of an electrical quantity without necessarily measuring it.

indicatrix *See* index ellipsoid.

indicolite [MINERAL] An indigo-blue variety of tourmaline that is used as a gemstone. Also known as indigolite.

indifferent equilibrium *See* neutral equilibrium; neutral stability.

indifferent stability *See* neutral stability.

indigenous [SCI TECH] Existing and having originated naturally in a particular region or environment.

indigenous coal *See* autochthonous coal.

indigenous limonite [MINERAL] Sulfide-derived limonite that remains fixed at the site of the parent sulfide.

indigo [ORG CHEM] **1.** A blue dye extracted from species of the *Indigofera* bush. **2.** *See* indigo blue.

indigo blue [ORG CHEM] $C_{16}H_{10}O_2N_2$ A component of the dye indigo, crystallizing as dark-blue rhomboids that break down at 30°C, that are soluble in hot aniline and hot chloroform, and that are also made synthetically; used as a reagent and a dye. Also known as indigo.

indigo carmine [ORG CHEM] $C_{16}H_8N_2Na_2O_8S_2$ A dark blue powder with coppery luster; used as a dye in testing kidney function and as a reagent in detecting chlorate and nitrate. Also known as disodium 5,5′-indigotin disulfonate; sodium indigotin disulfonate; soluble indigo blue.

indigo copper *See* covellite.

indigoid dye [ORG CHEM] Any of the vat dyes with $C_{16}H_{10}O_2N_2$ (indigo) or $C_{16}H_8S_2O_2$ (thioindigo) groupings; used to dye cotton and rayon, sometimes silk.

indigolite *See* indicolite.

indigo red [ORG CHEM] $C_{16}H_{10}O_2N_2$ A red isomer of indigo obtained in the manufacture of indigo. Also known as indirubin.

indirect address [COMPUT SCI] An address in a computer instruction that indicates a location where the address of the referenced operand is to be found. Also known as multilevel address.

indirect addressing [COMPUT SCI] A programming device whereby the address part of an instruction is not the address of the operand but rather the location in storage where the address of the operand may be found.

indirect-arc furnace [ENG] A refractory-lined furnace in which the burden is heated indirectly by the radiant heat from an electric arc.

indirect cell [METEOROL] A closed circulation in a vertical plane in which the rising motion occurs at lower potential temperature than the descending motion, thus forming an energy sink.

indirect control [COMPUT SCI] The control of one peripheral unit by another through some sequence of events that involves human intervention.

indirect Coombs test *See* Rh blocking test.

indirect cost [IND ENG] A cost that is not readily indentifiable with or chargeable to a specific product or service.

indirect cycle [NUCLEO] A nuclear reactor cycle in which a heat exchanger transfers heat from the reactor coolant to a second fluid, which then drives a prime mover.

indirect developing test *See* Rh blocking test.

indirect effect [PHYS CHEM] A chemical effect of ionizing radiation on a dilute solution caused by the interaction of solute molecules with highly reactive transient molecules or ions formed by reaction of the radiation with the solvent.

indirect extrusion [MET] An extrusion process in which the billet remains stationary while a hollow die stand forces the die back into the cylinder.

indirect fire [ORD] Gunfire delivered at a target that cannot be seen from the gun position or firing ship.

indirect hernia [MED] A form of inguinal hernia that passes out of the abdomen through the inguinal canal.

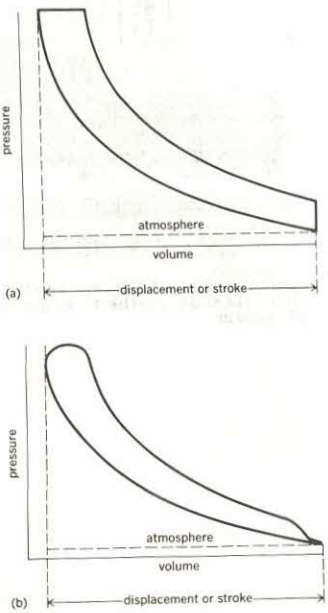
indirect immunofluorescence [IMMUNOL] The use of a labeled indicator antibody which reacts with an unlabeled detector antibody that has previously reacted with an antigen.

indirect labor [IND ENG] Labor not directly engaged in the actual production of the product or performance of a service.

indirect laying [ORD] Aiming a gun either by sighting at a fixed object called the aiming point instead of at the target or by using a means of pointing other than a sight, such as a gun director, when the target cannot be seen from the gun position.

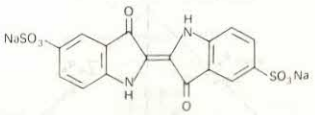
indirectly heated cathode [ELECTR] A cathode to which heat is supplied by an independent heater element in a ther-

INDICATOR DIAGRAM

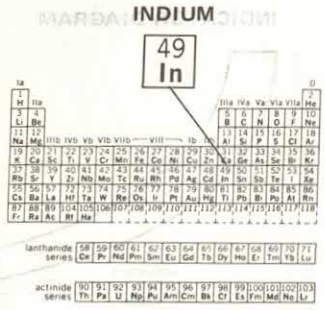


Pressure-volume diagrams for a diesel engine. *(a)* Theoretical ideal conditions; *(b)* actual two-cycle engine card. The areas outlined by the curve represent the effective work of the cycle.

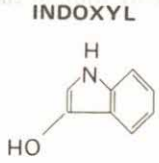
INDIGO CARMINE



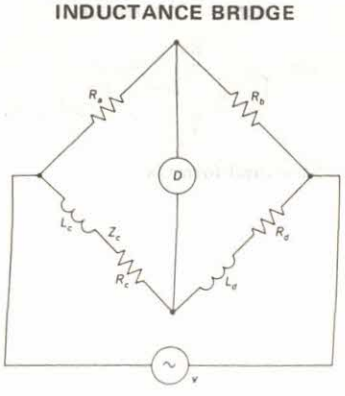
Structural formula.



Periodic table of the chemical elements showing the position of indium.



Structural formula of indoxyl.



Circuit diagram for a general inductance bridge (def. 1); R_{a-d} are resistors; L_{c-d} are inductances; Z_c is impedance; V is source of ac voltage; and D is a null detector.

mionic tube; this cathode has the same potential on its entire surface, whereas the potential along a directly heated filament varies from one end to the other. Also known as equipotential cathode; heater-type cathode; unipotential cathode.

indirect lighting [ENG] A system of lighting in which more than 90% of the light from luminaires is distributed upward toward the ceiling, from which it is diffusely reflected.

indirect material [IND ENG] Any material used in the manufacture of a product which does not itself become a part of the product and whose cost is indirect.

indirect stratification *See* secondary stratification.

indirect stroke [ELEC] A lightning stroke that induces a voltage in a power or communications system without actually striking it.

indirect vision *See* peripheral vision.

indirect wave [PHYS] Any radio wave which arrives by an indirect path, having undergone an abrupt change of direction by refraction or reflection.

indirubin *See* indigo red.

indium [CHEM] A metallic element, symbol In, atomic number 49, atomic weight 114.82; soluble in acids; melts at 156°C, boils at 1450°C. [MET] A ductile, silver-white, shiny metal that resists tarnishing and is used in precious-metal alloys for jewelry and dentistry, in glass-sealing alloys, lubricants, and bearing metals, and as an atomic-pile neutron indicator.

indium antimonide [INORG CHEM] InSb Crystals that melt at 535°C; an intermetallic compound having semiconductor properties and the highest room-temperature electron mobility of any known material; used in Hall-effect and magnetoresistive devices and as an infrared detector.

indium arsenide [INORG CHEM] InAs Metallic crystals that melt at 943°C; an intermetallic compound having semiconductor properties; used in Hall-effect devices.

indium chloride [INORG CHEM] $InCl_3$ Hygroscopic white powder, soluble in water and alcohol.

indium phosphide [INORG CHEM] InP A metallic mass that is brittle and melts at 1070°C; an intermetallic compound having semiconductor properties.

indium sulfate [INORG CHEM] $In_2(SO_4)_3$ Deliquescent, water-soluble, grayish powder; decomposes when heated.

individual line [COMMUN] Subscriber line arranged to serve only one main station, although additional stations may be connected to the line as extensions; an individual line is not arranged for discriminatory ringing with respect to the stations on that line.

individual psychology [PSYCH] A system of psychology in which traits of an individual are compared in terms of striving for superiority and then restated in the form of a composite of this single tendency.

indogen [ORG CHEM] The radical $C_6H_4(NH)COC{=}$; it occurs, for example, in the molecule indigo.

indogenide [ORG CHEM] A compound containing the radical $C_6H_4(NH)\cdot CO\cdot C{=}$ from indogen.

indole Also known as 2,3-benzopyrrole. [BIOCHEM] $C_6H_4(CHNH)CH$ A decomposition product of tryptophan formed in the intestine during putrefaction and by certain cultures of bacteria. [ORG CHEM] Carcinogenic, white to yellowish scales with unpleasant aroma; soluble in alcohol, ether, hot water, and fixed oils; melt at 52°C; used as a chemical reagent and in perfumery and medicine.

indoleacetic acid [BIOCHEM] $C_{10}H_9O_2N$ A decomposition product of tryptophan produced by bacteria and occurring in urine and feces; used as a hormone to promote plant growth. Abbreviated IAA.

indolebutyric acid [ORG CHEM] $C_{12}H_{13}O_2N$ A crystalline acid similar to indoleacetic acid in auxin activity. Abbreviated IBA.

indolent [MED] **1.** Of or relating to a slow-growing, nonpainful neoplasm. **2.** Slowness in the process of healing.

indole test [MICROBIO] A test for the production of indole from tryptophan by microorganisms; a solution of *para*-dimethylaminobenzaldehyde, amyl alcohol, and hydrochloric acid added to the incubated culture of bacteria shows a red color in the alcoholic layer if indole is present.

Indo-Pacific faunal region [ECOL] A marine littoral faunal region extending eastward from the east coast of Africa, passing north of Australia and south of Japan, and ending in the east Pacific south of Alaska.

indoxyl [ORG CHEM] $(C_8H_6N)OH$ A yellow crystalline glycoside, used as an intermediate in the manufacture of indigo.

Indriidae [VERT ZOO] A family of Madagascan prosimians containing wholly arboreal vertical clingers and leapers.

induced angle of attack [AERO ENG] The downward vertical angle between the horizontal and the velocity (relative to the wing of an aircraft) of the airstream passing over the wing.

induced anisotropy [SOLID STATE] A type of uniaxial anisotropy in a magnetic material produced by annealing the magnetic material in a magnetic field.

induced capacity *See* absolute permeability.

induced current [ELECTROMAG] A current produced in a conductor by a time-varying magnetic field, as in induction heating.

induced dipole [ELEC] An electric dipole produced by application of an electric field.

induced draft [MECH ENG] A mechanical draft produced by suction stream jets or fans at the point where air or gases leave a unit.

induced-draft cooling tower [MECH ENG] A structure for cooling water by circulating air where the load is on the suction side of the fan.

induced drag [FL MECH] That part of the drag caused by the downflow or downwash of the airstream passing over the wing of an aircraft, equal to the lift times the tangent of the induced angle of attack.

induced electromotive force [ELECTROMAG] An electromotive force resulting from the motion of a conductor through a magnetic field, or from a change in the magnetic flux that threads a conductor.

induced fission [NUC PHYS] Fission which takes place only when a nucleus is bombarded with neutrons, gamma rays, or other carriers of energy.

induced magnetism [ELECTROMAG] The magnetism acquired by magnetic material while it is in a magnetic field.

induced magnetization [GEOPHYS] That component of a rock's magnetization which is proportional to, and has the same direction as, the ambient magnetic field.

induced moment [ELEC] The average electric dipole moment per molecule which is produced by the action of an electric field on a dielectric substance.

induced potential *See* induced voltage.

induced precession *See* real precession.

induced radioactivity [NUCLEO] Radioactivity created by bombarding a substance with radiation. Also known as artificial radioactivity.

induced voltage [ELECTROMAG] A voltage produced by electromagnetic or electrostatic induction. Also known as induced potential.

inducer [EMBRYO] The cell group that functions as the acting system in embryonic induction by controlling the mode of development of the reacting system. Also known as inductor.

inducible enzyme [BIOCHEM] An enzyme which is present in trace quantities within a cell but whose concentration increases dramatically in the presence of substrate molecules.

inductance [ELECTROMAG] **1.** That property of an electric circuit or of two neighboring circuits whereby an electromotive force is generated (by the process of electromagnetic induction) in one circuit by a change of current in itself or in the other. **2.** Quantitatively, the ratio of the emf (electromotive force) to the rate of change of the current. **3.** *See* coil.

inductance bridge [ELECTROMAG] **1.** A device, similar to a Wheatstone bridge, for comparing inductances. **2.** A four-coil alternating-current bridge circuit used for transmitting a mechanical movement to a remote location over a three-wire circuit; half of the bridge is at each location.

inductance coil *See* coil.

inductance measurement [ELECTROMAG] The determination of the self-inductance of a circuit or the mutual inductance of two circuits.

inductance meter [ELECTROMAG] A device which measures the self-inductance of a circuit or the mutual inductance of two circuits.

inductance standards [ELECTROMAG] Two equal, multilayer coils, wound on toroidal cores of nonmagnetic materials, connected in series and located so that their interactions with external fields tend to cancel one another.

induction [ELEC] *See* electrostatic induction. [ELECTROMAG] *See* electromagnetic induction. [EMBRYO] *See* embryonic induction. [MED] The period from administration of the anesthetic to loss of consciousness by the patient. [SCI TECH] The act or process of causing.

induction accelerator *See* betatron.

induction brazing [MET] A brazing process in which coalescence is produced by heat generated within the work by an induced electric current.

induction burner [ENG] Fuel-air burner into which the fuel is fed under pressure to entrain needed air into the combustion nozzle area.

induction charging [ELEC] Production of electric charge on a body by means of electrostatic induction.

induction coil [ELECTROMAG] A device for producing high-voltage alternating current or high-voltage pulses from low-voltage direct current, in which interruption of direct current in a primary coil, containing relatively few turns of wire, induces a high voltage in a secondary coil, containing many turns of wire wound over the primary.

induction disk relay [ELECTROMAG] A unit widely used in regulating and protective relays, in which alternating current applied to a coil produces torque to rotate a disk.

induction-electrical survey [ENG] Study of subterranean formations by combined induction and electrical logging.

induction field [ELECTROMAG] A component of an electromagnetic field associated with an alternating current in a loop, coil, or antenna which carries energy alternately away from and back into the source, with no net loss, and which is responsible for self-inductance in a coil or mutual inductance with neighboring coils.

induction flowmeter [ENG] An instrument for measuring the flow of a conducting liquid passing through a tube, in which the tube is placed in a transverse magnetic field and the induced electromotive force between electrodes at opposite ends of a diameter of the tube perpendicular to the field is measured.

induction force [PHYS CHEM] A type of van der Waals force resulting from the interaction of the dipole moment of a polar molecule and the induced dipole moment of a nonpolar molecule. Also known as Debye force.

induction frequency converter [ELEC] Slip-ring induction machine which is driven by an external source of mechanical power and whose primary circuits are connected to a source of electric energy having a fixed frequency; the secondary circuits deliver energy at a frequency proportional to the relative speed of the primary magnetic field and the secondary member.

induction furnace [ENG] An electric furnace in which heat is produced in a metal charge by electromagnetic induction.

induction generator [ELEC] A nonsynchronous alternating-current generator whose construction is identical to that of an ac motor, and which is driven above synchronous speed by external sources of mechanical power.

induction hardening [MET] A quench-hardening technique in which the required elevated temperature is obtained by electromagnetic induction.

induction heating [ENG] Increasing the temperature in a material by induced electric current. Also known as eddy-current heating.

induction inclinometer *See* earth inductor.

induction instrument [ENG] Meter that depends for its operation on the reaction between magnetic flux set up by current in fixed windings, and other currents set up by electromagnetic induction in conducting parts of the moving system.

induction log [ENG] An electric log of the conductivity of rock with depth obtained by lowering into an uncased borehole a generating coil that induces eddy currents on the rocks and these are detected by a receiver coil.

induction loudspeaker [ENG ACOUS] Loudspeaker in which the current which reacts with the steady magnetic field is induced in the moving member.

induction machine [ELEC] An asynchronous alternating-current machine, such as an induction motor or induction generator, in which the windings of two electric circuits rotate with respect to each other and power is transferred from one circuit to the other by electromagnetic induction.

induction melting [MET] Converting a solid metal to the molten state in an induction furnace.

induction method [GEOPHYS] In studies of the radioactivity of the atmosphere, a technique for estimating the concentration of the radioactive gases by exposing a negatively charged wire to the air and then using an ionization chamber to count the activity of the radioactive deposit formed on the wire.

induction motor [ELEC] An alternating-current motor in which a primary winding on one member (usually the stator) is connected to the power source, and a secondary winding on the other member (usually the rotor) carries only current induced by the magnetic field of the primary.

induction noise [ACOUS] The noise caused by the periodic inrush of intake air into the cylinder of an automobile engine or an air compressor as the intake valve opens and the piston moves on the intake stroke.

induction period [PHYS CHEM] A time of acceleration of a chemical reaction from zero to a maximum rate.

induction problems [ELECTROMAG] The effects of potentials and currents induced in conductors of a telephone system by paralleling power facilities or power lines.

induction pump [MECH ENG] Any pump operated by electromagnetic induction.

induction salinometer [ENG] A device for measuring salinity by taking voltage readings of the current in seawater.

induction silencer [ENG] A device for reducing engine induction noise, which consists essentially of a low-pass acoustic filter with the inertance of the air-entrance tube and the acoustic compliance of the annular and central volumes providing acoustic filtering elements.

induction soldering [MET] A soldering process in which the metals are heated by an induced electric current.

induction valve *See* inlet valve.

induction voltage regulator [ELECTROMAG] A type of transformer having a primary winding connected in parallel with a circuit and a secondary winding in series with the circuit; the relative positions of the primary and secondary windings are changed to vary the voltage or phase relations in the circuit.

induction watthour meter [ELEC] A watthour meter used with alternating current; the energy taken by a circuit over a period of time is proportional to the rotation in that period of a light aluminum disk, in which a driving torque is developed by the joint action of the alternating magnetic flux produced by the potential circuit and by the load current.

induction welding [MET] A process of welding by means of heat generated within the work by induced electric currents.

inductive charge [ELEC] The charge that exists on an object as a result of its being near another charged object.

inductive circuit [ELEC] A circuit containing a higher value of inductive reactance than capacitive reactance.

inductive coordination [ELECTROMAG] Measures to reduce induction problems.

inductive coupler [ELEC] A mutual inductance electrically coupling two circuits; used in radio equipment.

inductive coupling [ELEC] Coupling of two circuits by means of the mutual inductance provided by a transformer. Also known as transformer coupling.

inductive divider [ELECTROMAG] A device for incorporating a desired fraction of an inductance into a circuit, usually consisting of an autotransformer with an intermediate tap.

inductive feedback [ELECTR] **1.** Transfer of energy from the plate circuit to the grid circuit of a vacuum tube by means of induction. **2.** Transfer of energy from the output circuit to the input circuit of an amplifying device through an inductor, or by means of inductive coupling.

inductive filter [ELECTR] A low-pass filter used for smoothing the direct-current output voltage of a rectifier; consists of one or more sections in series, each section consisting of an inductor on one of the pair of conductors in series with a capacitor between the conductors. Also known as LC filter.

inductive grounding [ELEC] Use of grounding connections containing an inductance in order to reduce the magnitude of short-circuit currents created by line-to-ground faults.

inductive interference [COMMUN] Effect arising from the characteristics and inductive relations of electric supply and communications systems of such character and magnitude as would prevent the communications circuits from rendering service satisfactorily and economically if methods of inductive coordination were not applied.

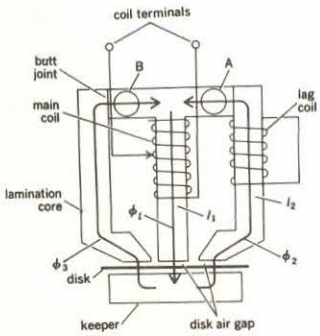
inductive line pair [COMMUN] A telephone line displaying induction whose effects are of consequence, as in crosstalk; opposed to twisted pair.

inductive load [ELEC] A load that is predominantly inductive, so that the alternating load current lags behind the alternating voltage of the load. Also known as lagging load.

inductively coupled plasma-atomic emission spectroscopy [SPECT] A type of atomic spectroscopy in which the light emitted by atoms and ions in an inductively coupled plasma is observed. Abbreviated ICP-AES.

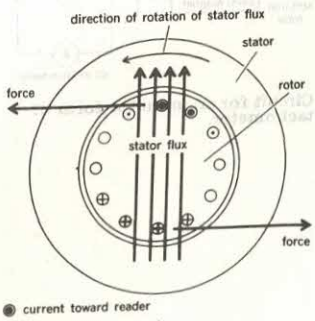
inductively coupled plasma discharge [PL PHYS] A high-

INDUCTION DISK RELAY



Schematic of the induction disk type of relay. I_1 = current in main coil, I_2 = current in lag coil, ϕ_1 = flux in main coil, ϕ_2 = flux in lag coil, ϕ_3 = differential induction flux, A = flux field about ϕ_3, B = flux field about ϕ_2.

INDUCTION MOTOR



Forces on the rotor winding in an induction motor.

temperature (8000–10,000 K) discharge generated by inducing a magnetic field in a flowing conducting gas, usually argon or argon and nitrogen, by means of a water-cooled copper coil which surrounds tubes through which the gas flows.

inductive neutralization [ELECTR] Neutralizing an amplifier whereby the feedback susceptance due to an interelement capacitance is canceled by the equal and opposite susceptance of an inductor. Also known as coil neutralization; shunt neutralization.

inductive post [ELECTROMAG] Metal post or screw extending across a waveguide parallel to the *E* field, to add inductive susceptance in parallel with the waveguide for tuning or matching purposes.

inductive pressure transducer [ELECTROMAG] A type of pressure transducer in which changes in pressure cause a bourdon tube or other pressure-sensing element to move a magnetic core, and this results in a change in inductance of one or more windings of a coil surrounding the core.

inductive reactance [ELEC] Reactance due to the inductance of a coil or circuit.

inductive relay [ELECTROMAG] A relay displaying inductance, as opposed to one wound to be noninductive.

inductive spacing [ELECTROMAG] Spacing of parallel transmission lines so that there is transfer of energy by mutual inductance.

inductive surge [ELECTROMAG] A surge in voltage caused by sudden interruption of current in an inductive circuit.

inductive susceptance [ELEC] In a circuit containing almost no resistance, the part of the susceptance due to inductance.

inductive tuning [ELECTR] Tuning involving the use of a variable inductance.

inductive waveform [ELEC] A graph or trace of the effect of current buildup across an inductive network; proportional to the exponential of the product of a negative constant and the time.

inductive window [ELECTROMAG] Conducting diaphragm extending into a waveguide from one or both sidewalls of the waveguide, to give the effect of an inductive susceptance in parallel with the waveguide.

inductometer [ELECTROMAG] A coil of wire of known inductance; the inductance may be fixed as in the case of primary standards, adjustable by means of switches, or continuously variable by means of a movable-coil construction.

inductor *See* coil; inducer.

inductor alternator [ELEC] A synchronous generator in which the field winding is fixed in magnetic position relative to the armature conductors.

inductor generator [ELEC] An alternating-current generator in which all the windings are fixed, and the flux linkages are varied by rotating an appropriately toothed ferromagnetic rotor; sometimes used for generating high power at frequencies up to several thousand hertz for induction heating.

inductor microphone [ENG ACOUS] Moving-conductor microphone in which the moving element is in the form of a straight-line conductor.

inductor tachometer [ENG] A type of impulse tachometer in which the rotating member, consisting of a magnetic material, causes the magnetic flux threading a circuit containing a magnet and a pickup coil to rise and fall, producing pulses in the circuit which are rectified for a permanent-magnet, movable-coil instrument.

inductura [INV ZOO] A layer of lamellar shell material along the inner lip of the aperture in gastropods.

indumentum [BOT] A covering, such as one that is woolly. [MYCOL] A covering of hairs. [VERT ZOO] The plumage covering a bird.

induplicate [BOT] Having the edges turned or rolled inward without twisting or overlapping; applied to the leaves of a bud.

induration [BIOL] The process of hardening, especially by increasing the fibrous elements. [GEOL] **1.** The hardening of a rock material by the application of heat or pressure or by the introduction of a cementing material. **2.** A hardened mass formed by such processes. **3.** The hardening of a soil horizon by chemical action to form a hardpan. [MED] Hardening of a tissue or organ due to an accumulation of blood, inflammation, or neoplastic growth.

Indus [ASTRON] A constellation, right ascension 21 hours, declination 55° south. Also known as Indian.

indusium [ANAT] A covering membrane such as the amnion. [BOT] An epidermal outgrowth covering the sori in many ferns. [MYCOL] The annulus of certain fungi.

industrial alcohol [ORG CHEM] Ethyl alcohol that has been denatured by acetates, ketones, gasoline, or other additives to make it unfit for beverage purposes.

industrial anthropometry [IND ENG] Application of the knowledge of physical anthropology to the design and construction of equipment for human use, such as automobiles.

industrial car [IND ENG] Any of various narrow-gage railcars used for indoor or outdoor handling of bulk and package materials.

industrial climatology [CLIMATOL] A type of applied climatology which studies the effect of climate and weather on industry's operations; the goal is to provide industry with a sound statistical basis for all administrative and operational decisions which involve a weather factor.

industrial cost control [IND ENG] A specific system or procedure used to keep manufacturing costs in line. Also known as cost control.

industrial crop [AGR] Any crop that provides materials for industrial processes and products such as soybeans, cotton (lint and seed), flax, and tobacco.

industrial diamond [MINERAL] Diamond that is too hard or too radial-grained to be used for jewel cutting.

industrial engineering [ENG] A branch of engineering concerned with the design, improvement, and installation of integrated systems of people, materials, and equipment. Also known as management engineering.

industrial frequency bands [COMMUN] The radio-frequency bands allocated in the United States for land mobile communications of private industries other than transportation.

industrial geography [GEOGR] A branch of geography that deals with location, raw materials, products, and distribution, as influenced by geography.

industrial glass [MATER] Any glass molded into shapes for product parts, for example, lime glass and lead glass.

industrial jewel [MINERAL] A hard stone, such as ruby or sapphire, used for bearings and impulse pins in instruments and for recording needles.

industrial meteorology [METEOROL] The application of meteorological information and techniques to industrial problems.

industrial microbiology [MICROBIO] The study, utilization, and manipulation of those microorganisms capable of economically producing desirable substances or changes in substances, and the control of undesirable microorganisms.

industrial microorganism [MICROBIO] Any microorganism utilized for industrial microbiology.

industrial mobilization [IND ENG] Transformation of industry and other productive facilities and contributory services from their peacetime activities to the fulfillment of the munitions program necessary to support a military effort.

industrial psychology [PSYCH] Psychology applied to problems in industry, dealing chiefly with the selection, efficiency, and mental health of personnel.

industrial railway [IND ENG] **1.** A usually short feeder line that is either owned or controlled and wholly operated by an industrial firm. **2.** Narrow-gage rail lines used on construction jobs or around industrial plants.

industrial revolution [IND ENG] A widespread change in industrial or production methods, toward production by machine and away from manual labor.

industrial security [IND ENG] The portion of internal security which refers to the protection of industrial installations, resources, utilities, materials, and classified information essential to protection from loss or damage.

industrial television [COMMUN] Closed-circuit television used for remote viewing of industrial processes and operations. Abbreviated ITV.

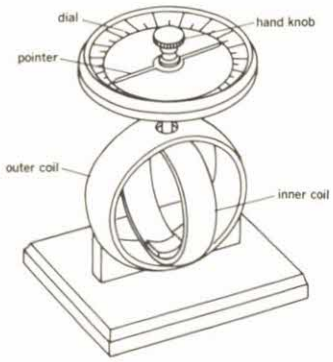
industrial waste [ENG] Worthless materials remaining from industrial operations.

industrial yeast [MICROBIO] Any yeast used for the production of fermented foods and beverages, for baking, or for the production of vitamins, proteins, alcohol, glycerol, and enzymes.

indwelling catheter [MED] A thin tube communicating to the body surface, inserted into the vascular system and positioned to permit pressure measurements or blood sampling over a long period of time.

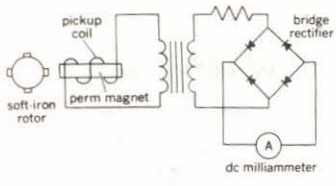
ineffective time [COMPUT SCI] Time during which a compu-

INDUCTOMETER



A variable inductometer showing the movable inner coil.

INDUCTOR TACHOMETER



Circuit for an inductor form of tachometer.

ter can operate normally but which is not used effectively because of mistakes or inefficiency in operating the installation or for other reasons.

inelastic [MECH] Not capable of sustaining a deformation without permanent change in size or shape.

inelastic buckling [MECH] Sudden increase of deflection or twist in a column when compressive stress reaches the elastic limit but before elastic buckling develops.

inelastic collision [MECH] A collision in which the total kinetic energy of the colliding particles is not the same after the collision as before it.

inelastic cross section [PHYS] The cross section for an inelastic collision.

inelastic scattering [PHYS] Scattering that results from inelastic collisions.

inelastic stress [MECH] A force acting on a solid which produces a deformation such that the original shape and size of the solid are not restored after removal of the force.

inequality [MATH] A statement that one quantity is less than, less than or equal to, greater than, or greater than or equal to another quantity.

inequality of Clausius *See* Clausius inequality.

inequilateral [BIOL] Having the two sides or ends unequal, as the ends of a bivalve mollusk on either side of a line from umbo to gape.

inermous [BIOL] Lacking mechanisms for defense or offense, especially spines.

inert [SCI TECH] Lacking an activity, reactivity, or effect.

inert atmosphere [CHEM ENG] A nonreactive gas atmosphere, such as nitrogen, carbon dioxide, or helium; used to blanket reactive liquids in storage, to purge process lines and vessels of reactive gases and liquids, and to cover a reaction mix in a partially filled vessel.

inert gas *See* noble gas.

inert-gas cutting [MET] Cutting of metal while inert gas flows around the cutting area to prevent oxidation.

inert gas–shielded arc welding [MET] An arc-welding process in which the weld area is shielded by an inert gas to prevent oxidation. Also known as Heliarc welding.

inertia [MECH] That property of matter which manifests itself as a resistance to any change in the momentum of a body. [MED] Sluggishness, especially of muscular activity.

inertia currents [OCEANOGR] Currents resulting after the cessation of wind in a generating area or after the water movement has left the generating area; circular currents with a period of one-half pendulum day.

inertia ellipsoid [MECH] An ellipsoid used in describing the motion of a rigid body; it is fixed in the body, and the distance from its center to its surface in any direction is inversely proportional to the square root of the moment of inertia about the corresponding axis. Also known as momental ellipsoid; Poinsot ellipsoid.

inertia governor [MECH ENG] A speed-control device utilizing suspended masses that respond to speed changes by reason of their inertia.

inertial circle [METEOROL] A loop in the path of an air parcel in inertial flow, which is approximately circular if the latitudinal displacement is small. Also known as circle of inertia. [OCEANOGR] The circle described by inertial motion in a body of ocean water and having a radius $R = C/f$, where C is the particle velocity in a given direction and f is the Coriolis parameter.

inertial coordinate system *See* inertial reference frame.

inertial flow [FL MECH] Flow in which no external forces are exerted on a fluid. [GEOPHYS] Frictionless flow in a geopotential surface in which there is no pressure gradient; the centrifugal and Coriolis accelerations must therefore be equal and opposite, and the constant inertial wind speed V_i is given by $V_i = fR$, where f is the Coriolis parameter and R the radius of curvature of the path.

inertial force [MECH] The fictitious force acting on a body as a result of using a noninertial frame of reference; examples are the centrifugal and Coriolis forces that appear in rotating coordinate systems. Also known as effective force.

inertial guidance [NAV] **1.** Guidance by means of accelerations measured and integrated within the craft. **2.** Guidance by the use of an inertial navigation system.

inertial instability [FL MECH] **1.** Generally, instability in which the only form of energy transferred between the steady state and the disturbance in the fluid is kinetic energy. **2.** The hydrodynamic instability arising in a rotating fluid mass when the velocity distribution is such that the kinetic energy of a disturbance grows at the expense of kinetic energy of the rotation. Also known as dynamic instability.

inertial mass [MECH] The mass of an object as determined by Newton's second law, in contrast to the mass as determined by the proportionality to the gravitational force.

inertial navigator [NAV] A device which determines position by automatic dead reckoning; this operation is performed by the double integration of the outputs of accelerometers stabilized with respect to inertial space.

inertial platform [NAV] In an inertial navigator a platform that maintains sensing instruments in a precise known angular orientation in space.

inertial reference frame [MECH] A coordinate system in which a body moves with constant velocity as long as no force is acting on it. Also known as inertial coordinate system.

inertial size *See* aerodynamic size.

inertial space [NAV] A coordinate system or frame of reference defined with respect to the stars whose apparent positions relative to surrounding stars appear to be fixed or unvarying for long periods of time.

inertial theory [OCEANOGR] The theory associated with the motion of an ocean current under the influences of inertia and the Coriolis force, which cause it to take a circular path.

inertia matrix [MECH] A matrix $\mathbf{M}$ used to express the kinetic energy T of a mechanical system during small displacements from an equilibrium position, by means of the equation $T = \frac{1}{2}\dot{\mathbf{q}}^T\mathbf{M}\dot{\mathbf{q}}$, where $\dot{\mathbf{q}}$ is the vector whose components are the derivatives of the generalized coordinates of the system with respect to time, and $\dot{\mathbf{q}}^T$ is the transpose of $\dot{\mathbf{q}}$.

inertia of energy [RELAT] The principle that the inertial properties of matter both determine and are determined by its total energy content.

inertia period [OCEANOGR] The time required for a given particle to complete an inertia circle.

inertia starter [MECH ENG] A device utilizing inertial principles to start the rotator of an internal combustion engine.

inertia switch [ELEC] A switch that is actuated by an abrupt change in the velocity of the item on which it is mounted.

inertia tensor [MECH] A tensor associated with a rigid body whose product with the body's rotation vector yields the body's angular momentum.

inertia wave [FL MECH] **1.** Any wave motion in which no form of energy other than kinetic energy is present; in this general sense, Helmholtz waves, barotropic disturbances, Rossby waves, and so forth, are inertia waves. **2.** More restrictedly, a wave motion in which the source of kinetic energy of the disturbance is the rotation of the fluid about some given axis; in the atmosphere a westerly wind system is such a source, the inertia waves here being, in general, stable.

inertia welding [MET] A form of friction welding which utilizes kinetic energy stored in a flywheel system to supply the power required for all of the heating and much of the forging.

inertinite [GEOL] A carbon-rich maceral group, which includes micrinite, sclerotinite, fusinite, and semifusinite.

inert primer [ENG] A cylinder which enshrouds a detonator but does not interfere with the detonation of the explosive charge.

inesite [MINERAL] $Ca_2Mn_7Si_{10}O_{28}(OH)_2 \cdot 5H_2O$ A pale-red mineral composed of hydrous manganese calcium silicate, occurring in small prismatic crystals or massive.

inevitable abortion [MED] An abortion that has progressed to a stage where termination of the pregnancy cannot be avoided.

inextensional deformation [MECH] A bending of a surface that leaves unchanged the length of any line drawn on the surface and the curvature of the surface at each point.

in extremis [MED] At the point of death.

inf *See* greater lower bound.

inface *See* scarp slope.

infall process [ASTROPHYS] A process in which gas falls upon a very compact object such as a neutron star or black hole, reaching a high velocity and forming a hot plasma; postulated as a model for x-ray sources such as Centaurus X-1 and Hercules X-1.

infancy [GEOL] The initial (youthful) or very early stage of the cycle of erosion characterized by smooth, nearly level erosional surfaces dissected by narrow stream gorges, numerous

depressions filled by marshy lakes and ponds, and shallow streams. Also known as topographic infancy.

infant [ANTHRO] **1.** A baby; child under 2 years of age. **2.** An individual under legal age.

infantile amaurotic familial idiocy *See* Tay-Sachs disease.

infantile autism [PSYCH] A disorder of children characterized by extreme withdrawal and introspection without regard for reality.

infantile celiac disease [MED] Celiac syndrome of infants and young children.

infantile cortical hyperostosis [MED] A condition occurring during the first 3 months of life in which there is fever and painful swelling of the soft tissue of the lower jaw, characterized by periosteal proliferation of the mandible.

infantile diarrhea [MED] An acute gastrointestinal disease in infants resulting from damage of the intestinal mucosa by an infectious organism.

infantile eczema [MED] An allergic inflammation of the skin in young children, usually due to common antigens such as food or inhalants.

infantile genitalia [ANAT] The genital organs of an infant. [MED] Underdevelopment of the adult genitals.

infantile neuroaxonal dystrophy [MED] A familial disease of the central nervous system occurring early in life and characterized by axonal swellings, arrested development, atrophy of the optic nerves, and eventual blindness.

infantile paralysis *See* poliomyelitis.

infantile scurvy [MED] Acute scurvy of infants and young children characterized by periosteal hemorrhage and swelling, especially of long bones. Also known as Cheadle's disease; Moeller-Barlow disease.

infantile sexuality [PSYCH] An infant's or child's capacity for and enjoyment of activities and experiences that are essentially sexual.

infantile spasm [MED] A type of seizure seen in infants and young children, characterized by a sudden, brief, massive myoclonic jerk.

infantilism [MED] Persistence of physical, behavioral, or mental infantile characteristics into childhood, adolescence, or adult life.

infarct [MED] Localized death of tissue caused by obstructed inflow of arterial blood. Also known as infarction.

infarction [MED] **1.** Condition or process leading to the development of an infarct. **2.** *See* infarct.

infauna [ZOO] Aquatic animals which live in the bottom sediment of a body of water.

infect [MED] To cause an infection, as by contamination with or invasion by a pathogen. [MICROBIO] To cause a phage infection of bacteria.

infection [MED] **1.** Invasion of the body by a pathogenic organism, with or without disease manifestation. **2.** Pathologic condition resulting from invasion of a pathogen.

infectious [MED] Caused by infection.

infectious abortion *See* contagious abortion.

infectious anemia [VET MED] A virus disease of horses and mules characterized by intermittent fever, weakness, jaundice, and hemorrhages of mucous membranes; it is often fatal. Also known as swamp fever.

infectious arthritis [MED] An inflammatory joint disease caused by microbial invasion of the articular tissue.

infectious bronchitis [VET MED] A highly contagious respiratory viral disease of chickens.

infectious canine hepatitis [VET MED] An acute inflammatory liver disease of dogs caused by a virus.

infectious chlorosis [PL PATH] A virus disease of plants characterized by yellowing of the green parts.

infectious conjunctivitis [MED] Conjunctivitis due to invasion by a microorganism.

infectious disease [MED] Any disease caused by invasion by a pathogen which subsequently grows and multiplies in the body.

infectious drug resistance [MICROBIO] A type of drug resistance that is transmissible from one bacterium to another by infectivelike agents referred to as resistance factors.

infectious endocarditis [MED] Inflammation of the endocardium due to an infectious microorganism.

infectious hepatitis [MED] Type A viral hepatitis, an acute infectious virus disease of the liver associated with hepatic inflammation and characterized by fever, liver enlargement, and jaundice. Also known as catarrhal jaundice; epidemic hepatitis; epidemic jaundice; virus hepatitis.

infectious laryngotracheitis [VET MED] A highly contagious respiratory disease of viral etiology affecting chickens.

infectious mononucleosis [MED] A disorder of unknown etiology characterized by irregular fever, pathology of lymph nodes, lymphocytosis, and high serum levels of heterophil antibodies against sheep erythrocytes. Also known as acute benign lymphoblastosis; glandular fever; kissing disease; lymphocytic angina; monocytic angina; Pfeiffer's disease.

infectious myocarditis [MED] Inflammation of the myocardium due to an infectious microorganism.

infectious myxomatosis [VET MED] An infectious virus disease of rabbits characterized by myxomatous lesions.

infectious papillomatosis [VET MED] A virus disease of cattle characterized by the appearance of warts on the body.

infectious rhinitis [MED] Inflammation of the nasal mucous membrane due to an infectious microorganism.

infectious uroarthritis *See* Reiter's syndrome.

infective dose 50 [MICROBIO] The dose of microorganisms required to cause infection in 50% of the experimental animals; a special case of the median effective dose. Abbreviated ID_{50}. Also known as median infective dose.

in-feed centerless grinding [MECH ENG] A metal-cutting process by which a cylindrical workpiece is ground to a prescribed surface smoothness and diameter by the insertion of the workpiece between a grinding wheel and a canted regulating wheel; the rotation of the regulating wheel controls the rotation and feed rate of the workpiece.

inferential flow meter [ENG] A flow meter in which the flow is determined by measurement of a phenomenon associated with the flow, such as a drop in static pressure at a restriction in a pipe, or the rotation of an impeller or rotor, rather than measurement of the actual mass flow.

inferential liquid-level meter [ENG] A liquid-level meter in which the level of a liquid is determined by measurement of some phenomenon associated with this level, such as the buoyancy of a solid partly immersed in the liquid, the pressure at a certain level, the conductance of the liquid, or its absorption of gamma radiation, rather than by direct measurement.

inferior [BIOL] The lower of two structures.

inferior alveolar artery [ANAT] A branch of the internal maxillary artery supplying the mucous membrane of the mouth and teeth of the lower jaw.

inferior alveolar nerve [ANAT] A branch of the mandibular nerve that innervates the teeth of the lower jaw.

inferior cerebellar peduncle [ANAT] A large bundle of nerve fibers running from the medulla oblongata to the cerebellum. Also known as restiform body.

inferior colliculus [ANAT] One of the posterior pair of rounded eminences arising from the dorsal portion of the mesencephalon.

inferior conjunction [ASTRON] A type of configuration in which two celestial bodies have their least apparent separation; the smaller body is nearer the observer than the larger body, about which it orbits; for example, Venus is closest to the earth at its inferior conjunction.

inferior ganglion [ANAT] **1.** The lower sensory ganglion in the glossopharyngeal nerve. **2.** The lower sensory ganglion on the vagus.

inferior hypogastric plexus [ANAT] A network of nerves in the pelvic fascia containing autonomic nerve elements.

inferiority [MED] An organic or psychic state or condition of being inferior or less adequate.

inferiority complex [PSYCH] Repressed unconsious fears and feelings of physical or social inadequacy or both, which may result in excessive anxiety, inability to function, or actual failure.

inferior mesenteric ganglion [ANAT] A sympathetic ganglion within the inferior mesenteric plexus at the origin of the inferior mesenteric artery.

inferior mirage [OPTICS] A spurious image of an object formed below the true position of that object by abnormal refraction conditions along the line of sight; one of the most common types of mirage, and the opposite of a superior mirage.

inferior planet [ASTRON] A planet that circles the sun in an orbit that is smaller than the earth's.

inferior temporal gyrus [ANAT] A convolution on the temporal lobe of the cerebral hemispheres lying below the middle temporal sulcus and extending to the inferior sulcus.

inferior vena cava [ANAT] A large vein which drains blood from the iliac veins, lower extremities, and abdomen into the right atrium.

inferior vena cava syndrome [MED] Edema and venous distention of the abdomen and legs due to obstruction of the inferior vena cava.

inferior vermis [ANAT] The inferior portion of the vermis of the brain.

inferior vestibular nucleus [ANAT] The terminal nucleus for the spinal vestibular nerve tract.

infernal machine [ORD] Disguised or cleverly concealed explosive device, usually intended for sabotage.

inferred ore [MIN ENG] An ore whose estimate of tonnage and grade is based largely on knowledge of the deposit's geological character and to a lesser degree on samples and other data.

infertility [MED] Involuntary reduction in reproductive ability.

infest [MED] To live on or within the host's body.

infestation [MED] The state or condition of having animal parasites on or in the body.

infiltrating lipoma *See* liposarcoma.

infiltration [GEOL] Deposition of mineral matter among the pores or grains of a rock by permeation of water carrying the matter in solution. [HYD] Movement of water through the soil surface into the ground. [MET] **1.** Filling the pores of a metal powder compact with metal having a lower melting point. **2.** Movement of molten metal into the pores of a fiber or foam metal.

infiltration capacity [HYD] The maximum rate at which water enters the soil or other porous material in a given condition.

infiltration gallery [CIV ENG] A large, horizontal underground conduit of porous material or with openings on the sides for collecting percolating water by infiltration.

infiltration vein [GEOL] Vein deposited in rock by percolating water.

infimum *See* greatest lower bound.

infinite [MATH] Larger than any fixed number.

infinite aquifer [HYD] The portion of a formation that contains water, and for which the exterior boundary is at an effectively infinite distance from the oil reservoir.

infinite baffle [ENG ACOUS] A loudspeaker baffle which prevents interaction between the front and back radiation of the loudspeaker.

infinite integral [MATH] An integral at least one of whose limits of integration is infinite.

infinite multiplication factor [NUCLEO] The multiplication factor of a theoretical system from which there is no leakage of neutrons, that is, a reactor of infinite size.

infinite reservoir [PETRO ENG] In reservoir unsteady-state liquid-diffusion calculations, a reservoir in which the outer boundary is considered to be effectively at an infinite distance from the inner boundary at the well of an aquifer.

infinite sequence *See* sequence.

infinite series [MATH] An indicated sum of an infinite sequence of quantities, written $a_1 + a_2 + a_3 + \ldots$, or

$$\sum_{k=1}^{\infty} a_k.$$

infinite set [MATH] A set with more elements than any fixed integer; such a set can be put into a one to one correspondence with a proper subset of itself.

infinitesimal generator [MATH] A closed linear operator defined relative to some semigroup of operators and which uniquely determines that semigroup.

infinity [COMPUT SCI] Any number larger than the maximum number that a computer is able to store in any register. [MATH] The concept of a value larger than any finite value.

infinity method [OPTICS] Method of adjusting two lines of sight to make them parallel; lines are adjusted on an object at great distance, for example, a star.

infinity transmitter [ELECTR] A device used to tap a telephone; the telephone instrument is so modified that an interception device can be actuated from a distant source without the caller's becoming aware.

infix operation [COMPUT SCI] An operation carried out within an operation, as the addition of a and b prior to the multiplication by c or division by d in the operation $(a+b)c/d$.

inflammability *See* flammability.

inflammation [MED] Local tissue response to injury characterized by redness, swelling, pain, and heat.

inflammatory carcinoma [MED] A carcinoma, usually of the breast, associated with inflammation and characterized by rapid metastasis.

inflammatory tissue [MED] Tissue characterized by exudation or cell proliferation caused by trauma.

inflatable packer [PETRO ENG] A packer (downhole pressure seal between tubing and casing) set and held in place by an element that is inflated with hydraulic pressure.

inflated [BIOL] **1.** Distended, applied to a hollow structure. **2.** Open and enlarged. [ENG] Filled or distended with air or gas.

inflected [BOT] Curved or bent sharply inward, downward, or toward the axis. Also known as inflexed.

inflected arch *See* inverted arch.

inflection point *See* point of inflection.

inflexed *See* inflected.

inflorescence [BOT] **1.** A flower cluster. **2.** The arrangement of flowers on a plant.

influence factor *See* telephone influence factor.

influence function [PETRO ENG] Mathematical statement of the influence on pressure and production of each oil reservoir pool in a multipool aquifer.

influence fuse *See* proximity fuse.

influence line [MECH] A graph of the shear, stress, bending moment, or other effect of a movable load on a structural member versus the position of the load.

influence mine [ORD] A mine that is detonated by methods that are different than target contact.

influent [ECOL] An organism that disturbs the ecological balance of a community. [SCI TECH] An input stream of a fluid, as water into a reservoir, or liquid into a process vessel.

influent stream [HYD] A stream that contributes water to the zone of saturation of groundwater and develops bank storage. Also known as losing stream.

influenza [MED] An acute virus disease of the respiratory system characterized by headache, muscle pain, fever, and prostration.

influenzal meningitis [MED] Inflammation of the meninges caused by *Hemophilus influenzae*.

influenzal pneumonia [MED] Pneumonia resulting from infection by *Hemophilus influenzae*.

influenza vaccine [IMMUNOL] A vaccine prepared from formaldehyde-attenuated mixtures of strains of influenza virus.

influenza virus [VIROL] Any of three immunological types, designated A, B, and C, belonging to the myxovirus group which cause influenza.

influx *See* mouth.

information [COMMUN] Data which has been recorded, classified, organized, related, or interpreted within a framework so that meaning emerges.

information bit [COMMUN] Bit that is generated by the data source but is not used by the data-transmission system.

information center [COMMUN] Center designed specifically for storing, processing, and retrieving information for dissemination at regular intervals, on demand or selectively, according to express needs of users.

information channel [COMMUN] A facility used to transmit information between data-processing terminals separated by large distances.

information content [COMMUN] A numerical measure of the information generated in selecting a specific symbol (or message), equal to the negative of the logarithm of the probability of the symbol (or message) selected. Also known as negentropy.

information feedback system [COMMUN] An information transmission system in which an echo check is used to verify the accuracy of the transmission.

information flow [COMPUT SCI] The graphic representation of data collection, data processing, and report distribution throughout an organization.

information function of a partition [MATH] If ξ is a finite partition of a probability space, the information function of ξ is a step function whose sets of constancy are the elements of ξ and whose value on an element of ξ is the negative of the logarithm of the probability of this element.

information interchange [COMMUN] The exchange of information in code between machines.

information link *See* data link.

information management [COMMUN] The science that deals with definitions, uses, value and distribution of information that is processed by an organization, whether or not it is handled by a computer.

information precedence relation [COMPUT SCI] A statement that some specified piece of data is required for the production of another piece of data.

information process analysis chart *See* form process chart.

information processing [COMPUT SCI] **1.** The manipulation of data so that new data (implicit in the original) appear in a useful form. **2.** *See* data processing.

Information Processing Language *See* IPL.

information rate [COMMUN] The information content generated per symbol or per second by an information source.

information redundancy [COMPUT SCI] The use of more information than is absolutely necessary, such as the application of error-detection and error-correction codes, in order to increase the reliability of a computer system.

information requirements [COMPUT SCI] Actual or anticipated questions which may be posed to an information retrieval system.

information retrieval [COMPUT SCI] The technique and process of searching, recovering, and interpreting information from large amounts of stored data.

information selection systems [COMPUT SCI] A class of information processing systems which carry out a sequence of operations necessary to locate in storage one or more items assumed to have certain specified characteristics and to retrieve such items directly or indirectly, in whole or in part.

information separator [COMPUT SCI] A character that separates items or fields of information in a record, especially a variable-length record.

information source [COMMUN] A system which produces messages by making successive selections from a group of symbols.

information system [COMMUN] Any means for communicating knowledge from one person to another, such as by simple verbal communication, punched-card systems, optical coincidence systems based on coordinate indexing, and completely computerized methods of storing, searching, and retrieving of information.

information theory [COMMUN] A branch of communications theory which is devoted to problems in coding, and which provides criteria for comparing different communications systems on the basis of signaling rate, using a numerical measure of the amount of information gained when the content of a message is learned. [MATH] The branch of probability theory concerned with the likelihood of the transmission of messages, accurate to within specified limits, when the bits of information composing the message are subject to possible distortion.

information unit [COMMUN] A unit of information content, equal to a bit, nit, or hartley, according to whether logarithms are taken to base 2, e, or 10.

information word *See* data word.

informosome [CYTOL] A type of cellular particle that is thought to be a complex of messenger ribonucleic acid with ribonucleoprotein.

infrabasal [BIOL] Inferior to a basal structure.

infrabranchial [VERT ZOO] Situated below the gills.

Infracambrian *See* Eocambrian.

infracentral [ANAT] Located below the centrum.

infracerebral gland [INV ZOO] A structure lying ventral to the brain in annelids which is thought to produce a hormone that inhibits maturation of the gametes.

infraciliature [INV ZOO] The neuromotor apparatus, silverline system, or neuroneme system of ciliates.

infraclass [SYST] A subdivision of a subclass; equivalent to a superorder.

infraclavicle [VERT ZOO] A bony element of the shoulder girdle located below the cleithrum in some ganoid and crossopterygian fishes.

infradyne receiver [ELECTR] A superheterodyne receiver in which the intermediate frequency is higher than the signal frequency, so as to obtain high selectivity.

infrafoliar [BOT] Located below the leaves.

infraglenoid [ANAT] Below the glenoid cavity of the scapula.

infraglenoid tubercle [ANAT] A rough impression below the glenoid cavity, from which the long head of the triceps muscle arises.

infragravity wave [FL MECH] A gravity wave whose period ranges from 30 seconds to 5 minutes.

infralateral tangent arcs [METEOROL] Two oblique, colored arcs, convex toward the sun and tangent to the halo of 46° at points below the altitude of the sun, produced by refraction (90° effective prism angle) in hexagonal columnar ice crystals whose principal axes are horizontal but randomly directed in azimuth; if the sun's elevation exceeds about 68°, the arcs cannot appear.

infralow frequency [COMMUN] A designation for the band from 0.3 to 3 kilohertz in the radio spectrum. Abbreviated ILF.

infraorbital [ANAT] Located beneath the orbit.

infrared [ELECTROMAG] Pertaining to infrared radiation.

infrared absorption [ELECTROMAG] The taking up of energy from infrared radiation by a medium through which the radiation is passing.

infrared astronomy [ASTROPHYS] The study of electromagnetic radiation in the spectrum between 0.75 and 1000 micrometers emanating from astronomical sources.

infrared beacon [NAV] A source of infrared radiation used to establish a geographical reference point, the bearings of which may be determined.

infrared binoculars [OPTICS] An instrument for viewing an enlarged infrared image with both eyes; it has two infrared telescopes whose lens systems are similar to those of ordinary binoculars.

infrared bolometer [ELECTR] A bolometer adapted to detecting infrared radiation, as opposed to microwave radiation.

infrared brazing [MET] A brazing process in which coalescence is produced by heat generated by infrared radiation.

infrared catastrophe [QUANT MECH] The logarithmic divergence in the cross section (which one would expect to be finite) for the emission of low-energy photons in bremsstrahlung and in the double Compton effect, according to quantum electrodynamics; the difficulty is resolved by taking radiative corrections to elastic scattering into account. Also known as infrared problem.

infrared communications set [ELECTR] Components required to operate a two-way electronic system using infrared radiation to carry intelligence.

infrared detector [ELECTR] A device responding to infrared radiation, used in detecting fires, or overheating in machinery, planes, vehicles, and people, and in controlling temperature-sensitive industrial processes.

infrared dome *See* irdome.

infrared emission [PHYS] The act of emitting infrared waves.

infrared-emitting diode [ELECTR] A light-emitting diode that has maximum emission in the near-infrared region, typically at 0.9 micrometer for *pn* gallium arsenide.

infrared film [GRAPHICS] Film that is sensitive to wavelengths in the near-infrared region.

infrared filter [OPTICS] A substance or device which is highly transparent to infrared radiation at certain wavelengths while absorbing other types of electromagnetic radiation.

infrared galaxy [ASTRON] A galaxy or quasar whose nucleus emits enormous amounts of infrared radiation, in some cases more than 1000 times the output of the entire Milky Way Galaxy at all wavelengths.

infrared heating [ENG] Heating by means of infrared radiation.

infrared heterodyne detector [ELECTR] A heterodyne detector in which both the incoming signal and the local oscillator signal frequencies are in the infrared range and are combined in a photodetector to give an intermediate frequency in the kilohertz or megahertz range for conventional amplification.

infrared homing [ENG] Homing in which the target is tracked by means of its emitted infrared radiation.

infrared image converter [ELECTR] A device for converting an invisible infrared image into a visible image, consisting of an infrared-sensitive, semitransparent photocathode on one end of an evacuated envelope and a phosphor screen on the other, with an electrostatic lens system between the two. Also known as infrared image tube.

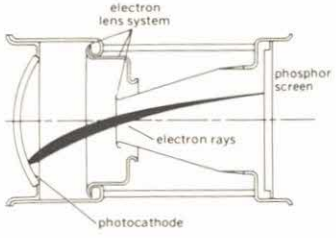
infrared image tube *See* infrared image converter.

infrared imaging device [ENG] Any device which converts an invisible infrared image into a visible image.

infrared jamming [ELECTR] An attempt to confuse heat-seeking missiles by emissions which overload their inputs or misdirect them.

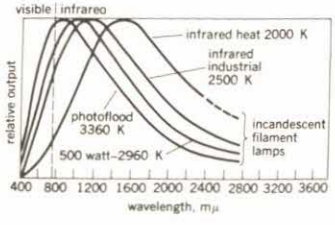
infrared lamp [ELEC] An incandescent lamp which operates

INFRARED IMAGE CONVERTER



Components of the infrared image converter.

INFRARED LAMP



Special distribution of energy from various types of infrared lamps. *(From Illuminating Engineering Society, IES Lighting Handbook, 5th ed., 1968)*

at reduced voltage with a filament temperature of 4000°F (2200°C) so that it radiates electromagnetic energy primarily in the infrared region.

infrared laser [PHYS] A laser which emits infrared radiation, especially in the near- and intermediate-infrared regions.

infrared mapping [MAP] Mapping in which a sensitive infrared detector is mounted on an infrared scanner, and the resulting thermal image is translated into varying shades of gray on photographic film, to give a line-pattern image much like that seen on a television screen.

infrared maser [PHYS] A laser which emits infrared radiation, especially in the far-infrared region, or which is pumped with radiation at infrared frequencies and emits radiation at millimeter wavelengths.

infrared microscope [OPTICS] A type of reflecting microscope which uses radiation of wavelengths greater than 700 nanometers and is used to reveal detail in materials that are opaque to light, such as molybdenum, wood, corals, and many red-dyed materials.

infrared optical material [ELECTROMAG] A material which is transparent to infrared radiation.

infrared phosphor [SOLID STATE] A phosphor which, when exposed to infrared radiation during or even after decay of luminescence resulting from its usual or dominant activator, emits light having the same spectrum as that of the dominant activator; sulfide and selenide phosphors are the most important examples.

infrared photoconductor [ELECTR] A conductor whose conductivity increases when it is exposed to infrared radiation.

infrared photography [GRAPHICS] Photography in which an infrared optical system projects an image directly on infrared film, to provide a record of point-to-point variations in temperature of a scene.

infrared problem *See* infrared catastrophe.

infrared radiation [ELECTROMAG] Electromagnetic radiation whose wavelengths lie in the range from 0.75 or 0.8 micrometer (the long-wavelength limit of visible red light) to 1000 micrometers (the shortest microwaves).

infrared receiver [ELECTR] A device that intercepts or demodulates infrared radiation that may carry intelligence. Also known as nancy receiver.

infrared scanner [ELECTR] An infrared detector mounted on a motor-driven platform which causes it to scan a field of view line by line, much as in television.

infrared searchlight [OPTICS] A device for illuminating a scene with infrared radiation so that it may be viewed through an infrared image converter tube, although it is invisible to the unaided eye.

infrared soldering [MET] Soldering in which infrared radiation furnishes the required heat.

infrared spectrometer [SPECT] Device used to identify and measure the concentrations of heteroatomic compounds in gases, in many nonaqueous liquids, and in some solids by arc or spark excitation and subsequent measurement of the electromagnetic emissions in the wavelength range of 0.78 to 300 micrometers.

infrared spectrophotometry [SPECT] Spectrophotometry in the infrared region, usually for the purpose of chemical analysis through measurement of absorption spectra associated with rotational and vibrational energy levels of molecules.

infrared spectroscopy [SPECT] The study of the properties of material systems by means of their interaction with infrared radiation; ordinarily the radiation is dispersed into a spectrum after passing through the material.

infrared spectrum [ELECTROMAG] **1.** The range of wavelengths of infrared radiation. **2.** A display or graph of the intensity of infrared radiation emitted or absorbed by a material as a function of wavelength or some related parameter.

infrared star [ASTROPHYS] A star that emits a large amount of radiant energy in the infrared portion of the electromagnetic spectrum.

infrared telescope [OPTICS] An instrument that converts an invisible infrared image into a visible image and enlarges this image, consisting of an infrared image converter tube, an objective lens for imaging the scene to be viewed onto the photocathode of the tube, and an ocular for viewing the phosphor screen of the tube.

infrared thermistor [ELECTR] A thermistor used to measure the power of infrared radiation.

infrared transmitter [ELECTR] A transmitter that emits energy in the infrared spectrum; may be modulated with intelligence signals.

infrared-transparent material [MATER] An optical material that transmits infrared radiation; examples include sodium chloride (0.25 to 16 micrometers), cesium iodide (1 to 50 micrometers), and high-density polyethylene (16 to 300 micrometers).

infrared vidicon [ELECTR] A vidicon whose photoconductor surface is sensitive to infrared radiation.

infrared window [GEOPHYS] A frequency region in the infrared where there is good transmission of electromagnetic radiation through the atmosphere.

infrasonic [ACOUS] Pertaining to signals, equipment, or phenomena involving frequencies below the range of human hearing, hence below about 15 hertz. Also known as subsonic (deprecated usage).

infrasound [ACOUS] Vibrations of the air at frequencies too low to be perceived as sound by the human ear, below about 15 hertz.

infraspinous [ANAT] Below the spine of the scapula.

infraspinous fossa [ANAT] The recess on the posterior surface of the scapula occupied by the infraspinatus muscle.

infratemporal [ANAT] Situated below the temporal fossa.

infratemporal fossa [ANAT] An irregular space situated below and medial to the zygomatic arch, behind the maxilla and medial to the upper part of the ramus of the mandible.

infructescence [BOT] An inflorescence's fruiting stage.

infundibular canal [INV ZOO] A pathway from the mantle cavity through the funnel for water in cephalopods.

infundibular ganglion [INV ZOO] A branch of pedal ganglion which supplies the funnel in cephalopods.

infundibular process [ANAT] The distal portion of the neural lobe of the pituitary.

infundibulum [ANAT] **1.** A funnel-shaped passage or part. **2.** The stalk of the neurohypophysis.

infusion [CHEM] The aqueous solution of a soluble constituent of a substance as the result of the substance's steeping in the solvent for a period of time. [MED] The slow injection of a solution into a vein or into subcutaneous or other tissue of the body.

infusorial earth [GEOL] Formerly, and incorrectly, a soft rock or an earthy substance composed of siliceous remains of diatoms.

infusoriform larva [INV ZOO] The final larval stage, arising from germ cells within the infusorigen, in the life cycle of dicyemid mesozoans.

infusorigen [INV ZOO] An individual that gives rise to the infusoriform larva in dicyemid mesozoans.

in-gate *See* gate.

Ingersoll-Rand jumbo columns [MIN ENG] Columns held in place by the pressure of air-operated pistons against the roof; drills are attached to movable arms mounted on the columns.

ingesta [BIOL] Food and other substances taken into an animal body.

ingestion [BIOL] The act or process of taking food and other substances into the animal body.

Ingolfiellidea [INV ZOO] A suborder of amphipod crustaceans in which both abdomen and maxilliped are well developed and the head often bears a separate ocular lobe lacking eyes.

ingot [MET] **1.** A solid metal casting suitable for remelting or working. **2.** A bar of gold or silver.

ingot iron [MET] Relatively pure iron produced in an open-hearth furnace.

ingrain color *See* azoic dye.

ingress [ASTRON] The entrance of the moon into the shadow of the earth in an eclipse, of a planet into the disk of the sun, or of a satellite (or its shadow) onto the disk of the parent planet. [SCI TECH] The act of entering, as of air into the lungs or a liquid into an orifice.

ingrown [MED] Of a hair or nail, grown inward so that the normally free end is embedded in or under the skin.

ingrown meander [GEOL] A meander of a stream with an undercut bank on one side and a gentle slope on the other.

inguinal canal [ANAT] A short, narrow passage between the abdominal ring and the inguinal ring in which lies the spermatic cord in males and the round ligament in females.

inguinal fold [EMBRYO] A fold of embryonic tissue on the urogenital ridge in which the gubernaculum testis develops.

inguinal gland [ANAT] Any of the superficial lymphatic glands in the groin.

inguinal hernia [MED] Protrusion of the abdominal viscera through the inguinal canal.

inguinal ligament [ANAT] The thickened lower portion of the aponeurosis of the external oblique muscle extending from the anterior superior spine of the ileum to the tubercle of the pubis and the pectineal line. Also known as Poupart's ligament.

inguinal region [ANAT] The abdominal region occurring on each side of the body as a depression between the abdomen and the thigh. Also known as iliac region.

inhabited building distance [ENG] The minimum distance permitted between an ammunition or explosive location and any building used for habitation or where people are accustomed to assemble, except operating buildings or magazines.

inhalant canal [INV ZOO] The incurrent canal in sponges and mollusks.

inhalant siphon [INV ZOO] A channel for water intake in the mantle of bivalve mollusks. Also known as incurrent siphon.

inhalation [PHYSIO] The process of breathing in.

inhalator [MED] A device for facilitating the inhalation of a gas or spray, as for providing oxygen or oxygen–carbon dioxide mixtures for respiration in resuscitation.

inhaler [MED] **1.** A device containing a solid medication through which air is drawn into the air passages. **2.** An atomizer containing a liquid medication. [MIN ENG] An apparatus, of different forms, for permitting the supply of fresh air to a miner.

inhaul cable [MECH ENG] In a cable excavator, the line that pulls the bucket to dig and bring in soil. Also known as digging line.

inherent bursts [MIN ENG] Rock bursts that occur in development.

inherent damping [MECH ENG] A method of vibration damping which makes use of the mechanical hysteresis of such materials as rubber, felt, and cork.

inherent noise pressure *See* equivalent noise pressure.

inherent storage [COMPUT SCI] Any type of storage in which the storage medium is part of the hardware of the computer medium.

inheritance [GEN] **1.** The acquisition of characteristics by transmission of germ plasm from ancestor to descendant. **2.** The sum total of characteristics dependent upon the constitution of the fertilized ovum.

inherited error [COMPUT SCI] The error existing in the data supplied at the beginning of a step in a step-by-step calculation as executed by a program.

inhibit-gate [ELECTR] Gate circuit whose output is energized only when certain signals are present and other signals are not present at the inputs.

inhibiting antibody [IMMUNOL] A substance sometimes produced in the blood of immunized persons which is thought to prevent the expected antigen-reagin reaction.

inhibiting input [ELECTR] A gate input which, if in its prescribed state, prevents any output which might otherwise occur.

inhibiting signal [ELECTR] A signal, which when entered into a specific circuit will prevent the circuit from exercising its normal function; for example, an inhibit signal fed into an AND gate will prevent the gate from yielding an output when all normal input signals are present.

inhibition [PSYCH] An unconscious mechanism for restraining an impulse by means of an opposing impulse. [SCI TECH] The act of repressing or restraining a physical or chemical action.

inhibition-action balance [PSYCH] Relative balance maintained in every individual between his experiencing of emotional feelings and his outward behavior in response to them.

inhibition index [BIOCHEM] The amount of antimetabolite that will overcome the biological effect of a unit weight of metabolite.

inhibitor [CHEM] A substance which is capable of stopping or retarding a chemical reaction; to be technically useful, it must be effective in low concentration.

inhibitor sweetening [CHEM ENG] Petroleum-refinery treating process to sweeten gasoline (convert mercaptans to disulfides) of low mercaptan content; uses a phenylenediamine inhibitor, air, and caustic.

inhibit pulse [ELECTR] A drive pulse that tends to prevent flux reversal of a magnetic cell by certain specified drive pulses.

inhour [NUCLEO] A unit of reactivity of a reactor; 1 inhour is the reactivity that will give the reactor a period of 1 hour. Derived from inverse hour.

inhour equation [NUCLEO] An equation relating the reactivity of a nuclear reactor to the parameters of the delayed-neutron emitters and the neutron lifetime of the reactor.

in-house [IND ENG] Pertaining to an operation produced or carried on within a plant or organization, rather than done elsewhere under contract.

Iniomi [VERT ZOO] An equivalent name for Salmoniformes.

inion [ANTHRO] The external occipital protuberance of the skull.

initial aiming point [ORD] Point on which a gun is sighted to establish a reference line from which direction angles for targets are measured; from this reference line, other aiming points that give the direction of the targets are measured off.

initial boiling point [CHEM ENG] According to ASTM petroleum-analysis distillation procedures, the recorded temperature when the first drop of distilled vapor is liquefied and falls from the end of the condenser.

initial condition [COMPUT SCI] *See* entry condition. [METEOROL] A prescription of the state of a dynamical system at some specified time; for all subsequent times the equations of motion and boundary conditions determine the state of the system; the appropriate synoptic weather charts, for example, constitute a (discrete) set of initial conditions for a forecast; in many contexts, initial conditions are considered as boundary conditions in the dimension of time.

initial condition mode *See* reset mode.

initial detention *See* surface storage.

initial dip *See* primary dip.

initial free space [MECH] In interior ballistics, the portion of the effective chamber capacity not displaced by propellant.

initial great-circle course [NAV] The direction, at the point of departure, of the great circle through that point and the destination, expressed as the angular distance from a reference direction, usually north, to that part of the great circle extending toward the destination. Also known as initial great-circle direction.

initial great-circle direction *See* initial great-circle course.

initial heading [NAV] The aircraft heading at the beginning of a rating period while using gyro steering.

initial instructions [COMPUT SCI] A routine stored in a computer to aid in placing a program in memory. Also known as initial orders.

initial inverse voltage [ELECTR] Of a rectifier tube, the peak inverse anode voltage immediately following the conducting period.

initialize [COMPUT SCI] **1.** To set counters, switches, and addresses to zero or other starting values at the beginning of, or at prescribed points in, a computer routine. **2.** To begin an operation, and more specifically, to adjust the environment to the required starting configuration.

initial landform [GEOL] A landform that is produced directly by epeirogenic, orogenic, or volcanic activity, and whose original features are only slightly modified by erosion.

initial lead [ORD] The amount a gun is pointed in front of, above, or below a moving target when opening fire; this amount allows for the distance the target will travel while the projectile is in flight.

initial lock mechanism [ORD] Device for preventing inadvertent motion of stroking member in a cartridge-actuated device prior to firing.

initial mass [AERO ENG] The mass of a rocket missile at the beginning of its flight.

initial nuclear radiation [NUCLEO] Radiation emitted from the fireball of a nuclear explosive during the first minute (an arbitrary time interval) after detonation.

initial orders *See* initial instructions.

initial program load button *See* bootstrap button.

initial saturation [PETRO ENG] A reservoir's initial relative content (saturation) of water, oil, and gas.

initial set [MATER] The onset of hardening after water has been added to concrete, cement, or plaster.

initial shot start pressure [MECH] In interior ballistics, the pressure required to start the motion of the projectile from its initial loaded position; in fixed ammunition, it includes pressure required to separate projectile and cartridge case and to start engraving the rotating band.

initial surge voltage [ELEC] A spike of voltage experienced when a noncompensated load is first connected to a generator.

initial-value problem [FL MECH] A dynamical problem whose solution determines the state of a system at all times

subsequent to a given time at which the state of the system is specified by given initial conditions; the initial-value problem is contrasted with the steady-state problem, in which the state of the system remains unchanged in time. Also known as transient problem. [MATH] An nth order ordinary or partial differential equation in which the solution and its first $(n - 1)$ derivatives are required to take on specified values at a particular value of a given independent variable.

initial-value theorem [MATH] The theorem that, if a function $f(t)$ and its first derivative have Laplace transforms, and if $g(s)$ is the Laplace transform of $f(t)$, and if the limit of $sg(s)$ as s approaches infinity exists, then this limit equals the limit of $f(t)$ as t approaches zero.

initial velocity [PHYS] The velocity of anything at the beginning of a specific phase of its motion.

initial yaw [MECH] The yaw of a projectile the instant it leaves the muzzle of a gun.

initiate *See* trigger.

initiating agent [MATER] An explosive material which has the necessary sensitivity to heat, friction, or percussion to make it suitable for use as the initial element in an explosive train.

initiation [ORD] **1.** As applied to an explosive item, the beginning of the deflagration or detonation of the explosive. **2.** The first action in a fuse which occurs as a direct result of the action of the functioning medium. **3.** In a time fuse, the starting of the action which is terminated in the functioning of the fused munition.

initiation codon [GEN] A codon that signals the first amino acid in a protein sequence; usually *AUG*, but sometimes *GUG*. Also known as start codon.

initiator [CHEM] The substance or molecule (other than reactant) that initiates a chain reaction, as in polymerization; an example is acetyl peroxide. [ORD] A device used as the first element of an explosive train, such as a detonator or squib, which upon receipt of the proper mechanical or electrical impulse produces a burning or detonating action; it generally contains a small quantity of a sensitive explosive.

initiator codon [MOL BIO] A codon that acts as a start signal for the synthesis of a polypeptide.

injected [PETR] Pertaining to intrusive igneous rock or other mobile rock that has erupted through rock walls to neighboring older rocks.

injected gas [PETRO ENG] Gas that has been pumped into an oil-producing reservoir to provide a gas-drive for increased oil production.

injected hole [MIN ENG] A borehole into which a cement slurry or grout has been forced by high-pressure pumps and allowed to harden.

injection [AERO ENG] The process of placing a spacecraft into a specific trajectory, such as an earth orbit or an encounter trajectory to Mars. [ELECTR] **1.** The method of applying a signal to an electronic circuit or device. **2.** The process of introducing electrons or holes into a semiconductor so that their total number exceeds the number present at thermal equilibrium. [GEOL] Also known as intrusion; sedimentary injection. **1.** A process by which sedimentary material is forced under abnormal pressure into a preexisting rock or deposit. **2.** A structure formed by an injection process. [MATH] A mapping f from a set A into a set B which has the property that for any element b of B there is at most one element a of A for which $f(a) = b$. Also known as injective mapping; one-to-one mapping. [MECH ENG] The introduction of fuel, fuel and air, fuel and oxidizer, water, or other substance into an engine induction system or combustion chamber. [MED] **1.** Introduction of a fluid into the skin, vessels, muscle, subcutaneous tissue, or any cavity of the body. **2.** The substance injected. [MIN ENG] The introduction under pressure of a liquid or plastic material into cracks, cavities, or pores in a rock formation.

injection blow molding [ENG] Plastics molding process in which a hollow-plastic tube is formed by injection molding.

injection carburetor [MECH ENG] A carburetor in which fuel is delivered under pressure into a heated part of the engine intake system. Also known as pressure carburetor.

injection efficiency [ELECTR] A measure of the efficiency of a semiconductor junction when a forward bias is applied, equal to the current of injected minority carriers divided by the total current across the junction.

injection electroluminescence [ELECTR] Radiation resulting from recombination of minority charge carriers injected in a *pn* or *pin* junction that is biased in the forward direction. Also known as Lossev effect; recombination electroluminescence.

injection fluid [PETRO ENG] Gas or water, depending on the nature of the reservoir and its fluid content, for injection into the formation to increase hydrocarbon production.

injection-fluid front [PETRO ENG] The moving interfacial contact between an injected fluid (gas or water) and the natural fluid content of the reservoir formation.

injection gas-fluid ratio [PETRO ENG] The ratio of gas injected into a reservoir formation to the fluid hydrocarbons produced by the resultant gas lift.

injection gneiss [PETR] A composite rock with banding entirely or partly caused by layer-by-layer injection of granitic magma into rock layers.

injection grid [ELECTR] Grid introduced into a vacuum tube in such a way that it exercises control over the electron stream without causing interaction between the screen grid and control grid.

injection laser [OPTICS] A laser in which a forward-biased gallium arsenide diode converts direct-current input power directly into coherent light, without optical pumping.

injection locking [ELECTR] The capture or synchronization of a free-running oscillator by a weak injected signal at a frequency close to the natural oscillator frequency or to one of its subharmonics; used for frequency stabilization in IMPATT or magnetron microwave oscillators, gas-laser oscillators, and many other types of oscillators.

injection luminescent diode [ELECTR] Gallium arsenide diode, operating in either the laser or the noncoherent mode, that can be used as a visible or near-infrared light source for triggering such devices as light-activated switches.

injection mold [ENG] A plastics mold into which the material to be formed is introduced from an exterior heating cylinder.

injection molding [ENG] Molding metal, plastic, or nonplastic ceramic shapes by injecting a measured quantity of the molten material into dies.

injection pressure [PETRO ENG] Pressure of fluid injected into oil formations for waterflood (water) or pressure maintenance (gas).

injection pump [MECH ENG] A pump that forces a measured amount of fuel through a fuel line and atomizing nozzle in the combustion chamber of an internal combustion engine.

injection ram [ENG] In injection molding, the ram that applies pressure to the feed plunger in the process of either injection or transfer molding.

injection signal [ENG ACOUS] The sawtooth frequency-modulated signal which is added to the first detector circuit for mixing with the incoming target signal.

injection temperature [NAV ARCH] The temperature of the sea water as measured at the sea-water intakes in the engine room of a vessel.

injection well [HYD] *See* recharge well. [PETRO ENG] In secondary recovery of petroleum, a well in which a fluid such as gas or water is injected to provide supplemental energy to drive the oil remaining in the reservoir to the vicinity of production wells.

injection-well plugging [PETRO ENG] Plugging of the sand face of an injection well because of lubricant or corrosion-product carryover from surface lines or well equipment.

injective mapping *See* injection.

injectivity index [PETRO ENG] The number of barrels per day of gross liquid pumped into an injection well per psi (pound per square inch) pressure differential between the mean injection pressure and the mean formation pressure.

injectivity test [PETRO ENG] A test series of reservoir water injection rates at different pressures to predict the performance of an injection well.

injector [ELECTR] An electrode through which charge carriers (holes or electrons) are forced to enter the high-field region in a spacistor. [MECH ENG] **1.** An apparatus containing a nozzle in an actuating fluid which is accelerated and thus entrains a second fluid, so delivering the mixture against a pressure in excess of the actuating fluid. **2.** A plug with a valved nozzle through which fuel is metered to the combustion chambers in diesel- or full-injection engines. **3.** A jet through which feedwater is injected into a boiler, or fuel is injected into a combustion chamber.

injector torch *See* low-pressure torch.

injury [MED] **1.** A structural or functional stress or trauma

that induces a pathologic process. **2.** Damage resulting from the stress.

injury current *See* injury potential.

injury potential [PHYSIO] The potential difference observed between the injured and the noninjured regions of an injured tissue or cell. Also known as demarcation potential; injury current.

ink [MATER] A dispersion of a pigment or a solution of a dye in a carrier vehicle, yielding a fluid, paste, or powder to be applied to and dried on a substrate; writing, marking, drawing, and printing inks are applied by several methods to paper, metal, plastic, wood, glass, fabric, or other substrate.

ink bleed [COMPUT SCI] In character recognition, the capillary extension of ink beyond the original edges of a printed or handwritten character.

ink disease [PL PATH] A fungus disease of the chestnut in Europe caused by *Phytophthora cambivora* which produces black cankers and a black exudate in the trunk. Also known as black canker.

ink fountain [GRAPHICS] A device on a printing press for storing ink and supplying it to the rollers.

ink-jet printer [GRAPHICS] A nonimpact printer that uses electrostatic acceleration and deflection of ink particles emerging from nozzles to form characters on plain paper in a dot-matrix format.

ink knife [GRAPHICS] An instrument resembling a large spatula, with a handle and a blade with square or rounded end; used for handling paste inks. Also known as ink slice.

ink-mist recording *See* ink-vapor recording.

inkometer [ENG] An instrument for measuring adhesion of liquids by rotating drums in contact with the liquid.

ink recorder [GRAPHICS] A recorder that employs an ink-filled pen or capillary tube to produce the graphic record.

ink sac [INV ZOO] An organ attached to the rectum in many cephalopods which secretes and ejects an inky fluid.

ink slice *See* ink knife.

ink smudge [COMPUT SCI] In character recognition, the overflow of ink beyond the original edges of a printed or handwritten character.

ink squeezeout [COMPUT SCI] In character recognition, the overflow of ink from the stroke centerline to the edges of a printed or handwritten character.

ink-vapor recording [GRAPHICS] A type of recording in which vaporized ink particles are directly deposited on the record sheet. Also known as ink-mist recording.

inland [GEOGR] Interior land, not bordered by the sea.

inland ice [HYD] Ice composing the inner portion of a continental glacier or large ice sheet; applied particularly to Greenland ice.

inland rules of the road [NAV] Rules to be followed by all vessels while navigating upon certain inland waters of the United States.

inland sea *See* epicontinental sea.

inland water [GEOGR] **1.** A lake, river, or other body of water wholly within the boundaries of a state. **2.** An interior body of water not bordered by the sea.

inlay [GRAPHICS] A picture or ornament made by inserting a material such as metal into a space in metal, stone, or wood; the material (such as wire) may be burnished, heated, or fused.

inlay cladding [MET] A mechanical process in which a groove, 7/100–1/8 inch (1.778–3.175 millimeters) wide, is cut into a base metal and filled with cladding metal; mechanical bonding of the metals is accomplished by passing them through the pressure rolls of a bonding mill.

inlet [ENG] An entrance or orifice for the admission of fluid. [GEOGR] **1.** A short, narrow waterway connecting a bay or lagoon with the sea. **2.** A recess or bay in the shore of a body of water. **3.** A waterway flowing into a larger body of water.

inlet box [MECH ENG] A closure at the fan inlet or inlets in a boiler for attachment of the fan to the duct system.

inlet of the pelvis [ANAT] The space within the brim of the pelvis.

inlet valve [MECH ENG] The valve through which a fluid is drawn into the cylinder of a positive-displacement engine, pump, or compressor. Also known as induction valve.

inlier [GEOL] A circular or elliptical area of older rocks surrounded by strata that are younger.

in line [ENG] **1.** Over the center of a borehole and parallel with its long axis. **2.** Of a drill motor, mounted so that its drive shaft and the drive rod in the drill swivel head are parallel, or mounted so that the shaft driving the drill-swivel-head bevel gear and the drill-motor drive shaft are centered in a direct line and parallel with each other. **3.** Having similar units mounted together in a line.

in-line assembly machine [IND ENG] An assembly machine that inserts components into a wiring board one at a time as the board is moved from station to station by a conveyor or other transport mechanism.

in-line coding [COMPUT SCI] Any group of instructions within the main body of a program.

in-line engine [MECH ENG] A multiple-cylinder engine with cylinders aligned in a row.

in-line equipment [ENG] **1.** A sequence of equipment or processing items mounted along the same vertical or horizontal plane. **2.** Equipment mounted within a process line, such as an in-line pump, pressure-drop flowmeter, or nozzle mixer.

in-line guns [ELECTR] An arrangement of three electron guns in a horizontal line; used in color picture tubes that have a slot mask in front of vertical color phosphor stripes.

in-line linkage [MECH ENG] A power-steering linkage which has the control valve and actuator combined in a single assembly.

in-line procedure [COMPUT SCI] A short body of coding or instruction which accomplishes some purpose.

in-line processing [COMPUT SCI] The processing of data in random order, not subject to preliminary editing or sorting.

in-line subroutine [COMPUT SCI] A subroutine which is an integral part of a program.

in-line tuning [ELECTR] Method of tuning the intermediate-frequency strip of a superheterodyne receiver in which all the intermediate-frequency amplifier stages are made resonant to the same frequency.

innage [ENG] The volume or the measured height of liquid introduced into a tank or container.

innate [BIOL] Pertaining to a natural or inborn character dependent on genetic constitution. [BOT] Positioned at the apex of a supporting structure. [MYCOL] Embedded in, especially of an organ such as the fruiting body embedded in the thallus of some fungi.

inner automorphism [MATH] An automorphism h of a group where $h(g) = g_0^{-1} \cdot g \cdot g_0$, for every g in the group with g_0 some fixed group element.

inner barrel *See* inner tube.

inner bottom [NAV ARCH] A watertight plating laid over the frames and longitudinals, forming the inner layer of the double bottom of the hull.

inner cell mass [EMBRYO] The cells at the animal pole of a blastocyst which give rise to the embryo and certain extra-embryonic membranes.

inner core [GEOL] The central part of the earth's core, extending from a depth of 5100 kilometers to the center of the earth. Also known as siderosphere.

inner ear [ANAT] The part of the vertebrate ear concerned with labyrinthine sense and sound reception; consists generally of a bony and a membranous labyrinth, made up of the vestibular apparatus, three semicircular canals, and the cochlea. Also known as internal ear.

inner function [MATH] A continuous open mapping of a topological space X into a topological space Y where the inverse image of each point in Y is zero dimensional.

inner harbor [GEOGR] The part of a harbor more remote from the sea, as contrasted with the outer harbor; this expression is normally used only in a harbor that is clearly divided into parts, by a narrow passageway or artificial structure; the inner harbor generally has additional protection and is often the principal berthing area.

inner hearth *See* back hearth.

inner keel [NAV ARCH] The inner plate of a double, flat plate keel.

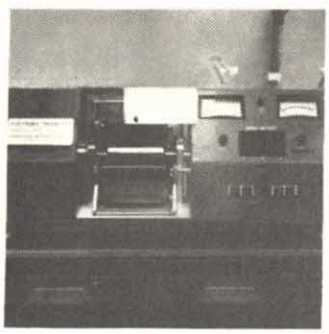
inner mantle *See* lower mantle.

inner marker [NAV] A 75-megahertz marker beacon normally used with the instrument landing system (ILS) to indicate that the aircraft is over the boundary of the airport.

inner planet [ASTRON] Any of the four planets (Mercury, Venus, Earth, and Mars) in the solar system whose orbits are closest to the sun.

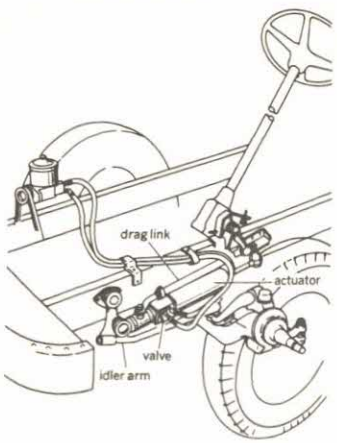
inner product [MATH] **1.** A scalar valued function of pairs of vectors from a vector space, denoted by (x,y) where x and y are vectors, and with the properties that (x,x) is always positive and

INKOMETER



The inkometer, used to measure ink tack.

IN-LINE LINKAGE



In-line linkage power steering.

is zero only if $x = 0$, that $(ax + by,z) = a(x,z) + b(y,z)$ for any scalars a and b, and that $(x,y) = (y,x)$ if the scalars are real numbers, $(x,y) = (\overline{y,x})$ if the scalars are complex numbers. Also known as Hermitian inner product; Hermitian scalar product. **2.** The inner product of vectors $(x_1, \ldots, x_n)$ and $(y_1, \ldots, y_n)$ from n-dimensional euclidean space is the sum of x_iy_i as i ranges from 1 to n. Also known as dot product; scalar product.

inner product of functions [MATH] For two functions f and g of a real or complex variable, this is defined to be the integral of $f(x)\overline{g(x)}dx$, where $\overline{g(x)}$ denotes the conjugate of $g(x)$.

inner product of tensors [MATH] The inner product of two tensors is the contracted tensor obtained from their product by means of pairing contravariant indices of one with covariant indices of the other.

inner product space [MATH] A vector space that has an inner product defined on it. Also known as Hermitian space; unitary space.

inner quantum number [ATOM PHYS] A quantum number J which gives an atom's total angular momentum, excluding the nuclear spin.

inner strake [NAV ARCH] The inner part of an in and out system of shell plating; the strakes adjacent to the molded frame line.

inner tube [ENG] A rubber tube used inside a pneumatic tire casing to hold air under pressure. [MIN ENG] The inside tube which acts as the core container of a double-tube core barrel; used to obtain core samples for analysis of an ore formation. Also known as inner barrel.

inner-tube extension *See* lifter case.

innervation [ANAT] The distribution of nerves to a part. [PHYSIO] The amount of nerve stimulation received by a part.

innominate *See* hip bone.

innominate artery [ANAT] The first artery branching from the aortic arch; distributes blood to the head, neck, shoulder, and arm on the right side of the body.

inoculant [MET] A substance which augments a melt, usually in the latter part of the melting operation, thus altering the solidification structure of the cast metal, as in grain refinement of aluminum alloys.

inoculation [BIOL] Introduction of a disease agent into an animal or plant to produce a mild form of disease and render the individual immune. [MET] Treating a molten material with another material before casting in order to nucleate crystals. [MICROBIO] Introduction of microorganisms onto or into a culture medium.

inoculum [MICROBIO] A small amount of substance containing bacteria from a pure culture which is used to start a new culture or to infect an experimental animal.

inoperculate [BIOL] Lacking an operculum.

inorganic [INORG CHEM] Pertaining to or composed of chemical compounds that do not contain carbon as the principal element (excepting carbonates, cyanides, and cyanates), that is, matter other than plant or animal.

inorganic acid [INORG CHEM] A compound composed of hydrogen and a nonmetal element or radical; examples are hydrochloric acid, HCl, sulfuric acid, H_2SO_4, and carbonic acid, H_2CO_3.

inorganic chemistry [CHEM] The study of chemical reactions and properties of all the elements and their compounds, with the exception of hydrocarbons, and usually including carbides, oxides of carbon, metallic carbonates, carbon-sulfur compounds, and carbon-nitrogen compounds.

inorganic chert [PETR] Chert derived from siliceous colloids precipitated from silica-saturated waters.

inorganic liquid laser [OPTICS] A liquid laser in which an inorganic liquid such as neodymium-selenium oxychloride or neodymium-doped phosphorus chloride is used as the active material. Also known as neodymium liquid laser.

inorganic peroxide [INORG CHEM] An inorganic compound containing an element at its highest state of oxidation (such as perchloric acid, $HClO_4$), or having the peroxy group, —O—O— (such as perchromic acid, $H_3CrO_8 \cdot 2H_2O$).

inorganic pigment [INORG CHEM] A natural or synthetic metal oxide, sulfide, or other salt used as a coloring agent for paints, plastics, and inks.

inorganic polymer [INORG CHEM] Large molecules, usually linear or branched chains with atoms other than carbon in their backbone; an example is glass, an inorganic polymer made up of rings and chains of repeating silicate units.

inosculation *See* anastomosis.

inosilicate [GEOL] A class or structural type of silicate in which the SiO_4 tetrahedrons are linked together by the sharing of oxygens to form linear chains of indefinite length.

inosine [BIOCHEM] $C_{10}H_{12}N_4O_5$ A compound occurring in muscle; a hydrolysis product of inosinic acid.

inosinic acid [BIOCHEM] $C_{10}H_{13}N_4O_8P$ A nucleotide constituent of muscle, formed by deamination of adenylic acid; on hydrolysis it yields hypoxanthine and D-ribose-5-phosphoric acid. Also known as hypoxanthine riboside-5-phosphoric acid; hypoxanthylic acid; inosine monophosphate (IMP).

inositol [ORG CHEM] $C_6H_6(OH)_6 \cdot 2H_2O$ A water-soluble alcohol often grouped with the vitamins; there are nine stereoisomers of hexahydroxycyclohexane, and the only one of biological importance is optically inactive *meso*-inositol, comprising white crystals, widely distributed in animals and plants; it serves as a growth factor for animals and microorganisms.

in phase [PHYS] Having waveforms that are of the same frequency and that pass through corresponding values at the same instant.

in-phase component [ELEC] The component of the phasor representing an alternating current which is parallel to the phasor representing voltage.

in-phase rejection *See* common-mode rejection.

in-phase signal *See* common-mode signal.

in-pile [NUCLEO] A term used to designate experiments or equipment inside a reactor.

in-pile loop [NUCLEO] An experiment inserted directly in a nuclear reactor (pile) incorporating a closed circuit (loop) of fluid usually for cooling purposes.

in-place stress field *See* ambient stress field.

input [COMPUT SCI] The information that is delivered to a data-processing device from the external world, the process of delivering this data, or the equipment that performs this process. [ELECTR] **1.** The power or signal fed into an electrical or electronic device. **2.** The terminals to which the power or signal is applied. [SCI TECH] Those resources and other environmental factors converted by a system.

input admittance [ELEC] The admittance measured across the input terminals of a four-terminal network with the output terminals short-circuited.

input area [COMPUT SCI] A section of internal storage reserved for storage of data or instructions received from an input unit such as cards or tape. Also known as input block; input storage.

input block [COMPUT SCI] **1.** A block of data read or transferred into a computer. **2.** *See* input area.

input capacitance [ELECTR] The short-circuited transfer capacitance that exists between the input terminals and all other terminals of an electron tube (except the output terminal) connected together.

input data [COMPUT SCI] Data employed as input.

input equipment [COMPUT SCI] **1.** The equipment used for transferring data and instructions into an automatic data-processing system. **2.** The equipment by which an operator transcribes original data and instructions to a medium that may be used in an automatic data-processing system.

input gap [ELECTR] An interaction gap used to initiate a variation in an electron stream; in a velocity-modulated tube it is in the buncher resonator.

input impedance [ELEC] The impedance across the input terminals of a four-terminal network when the output terminals are short-circuited.

input-limited [COMPUT SCI] Pertaining to a system or operation whose speed or efficiency depends mainly on the speed of input into the machine rather than the speed of the machine itself.

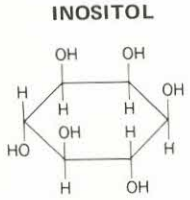
input magazine [COMPUT SCI] A part of a card-handling device which supplies the cards to the processing portion of the machine. Also known as magazine.

input/output [COMPUT SCI] Pertaining to all equipment and activity that transfers information into or out of a computer. Abbreviated I/O.

input/output adapter [COMPUT SCI] A circuitry which allows input/output devices to be attached directly to the central processing unit.

input/output bound [COMPUT SCI] Pertaining to a system or condition in which the time for input and output operation exceeds other operations. Also known as input/output limited.

input/output buffer [COMPUT SCI] An area of a computer memory used to temporarily store data and instructions trans-



Structural formula for inositol.

ferred into and out of a computer, permitting several such transfers to take place simultaneously with processing of data.

input/output channel [COMPUT SCI] The physical link connecting the computer to an input device or to an output device.

input/output controller [COMPUT SCI] An independent processor which provides the data paths between input and output devices and main memory.

input/output control system [COMPUT SCI] A set of flexible routines that supervise the input and output operations of a computer at the detailed machine-language level. Abbreviated IOCS.

input/output control unit [COMPUT SCI] The piece of hardware which controls the operation of one or more of a type of devices such as tape drives or disk drives; this unit is frequently an integral part of the input/output device itself.

input/output device [COMPUT SCI] A unit that accepts new data, sends it into the computer for processing, receives the results, and translates them into a usable medium.

input/output instruction [COMPUT SCI] An instruction in a computer program that causes transfer of data between peripheral devices and main memory, and enables the central processing unit to control the peripheral devices connected to it.

input/output interrupt [COMPUT SCI] A technique by which the central processor needs only initiate an input/output operation and then handle other matters, while other units within the system carry out the rest of the operation.

input/output interrupt identification [COMPUT SCI] The ascertainment of the device and channel taking part in the transfer of information into or out of a computer that causes a particular input/output interrupt, and of the status of the device and channel.

input/output interrupt indicator [COMPUT SCI] A device which registers an input/output interrupt associated with a particular input/output channel; it can be used in input/output interrupt identification.

input/output library [COMPUT SCI] A set of programs which take over the job from the programmer of creating the required instructions to access the various peripheral devices. Also known as input/output routines.

input/output limited *See* input/output bound.

input/output order [COMPUT SCI] A procedure of transferring data between main memory and peripheral devices which is assigned to and performed by an input/output controller.

input/output referencing [COMPUT SCI] The use of symbolic names in a computer program to indicate data on input/output devices, the actual devices allocated to the program being determined when the program is executed.

input/output register [COMPUT SCI] Computer register that provides the transfer of information from inputs to the central computer, or from it to output equipment.

input/output relation [SYS ENG] The relation between two vectors whose components are the inputs (excitations, stimuli) of a system and the outputs (responses) respectively.

input/output routines *See* input/output library.

input/output switching [COMPUT SCI] A technique in which a number of channels can connect input and output devices to a central processing unit; each device may be assigned to any available channel, so that several different channels may service a particular device during the execution of a program.

input/output traffic control [COMPUT SCI] The coordination, by both hardware and software facilities, of the actions of a central processing unit and the input, output, and storage devices under its control, in order to permit several input/output devices to operate simultaneously while the central processing unit is processing data.

input/output wedge [COMPUT SCI] The characteristic shape of a Kiviat graph of a system which is approaching complete input/output boundedness.

input record [COMPUT SCI] **1.** A record that is read from an input device into a computer memory during the performance of a program or routine. **2.** A record that has been stored in an input area and is ready to be processed.

input register [COMPUT SCI] A register that accepts input information from a computer at one speed and supplies the information to the central processing unit at another speed, usually much greater.

input resistance *See* transistor input resistance.

input resonator *See* buncher resonator.

input routine [COMPUT SCI] A routine which controls the loading and reading of programs, data, and other routines into a computer for storage or immediate use. Also known as loading routine.

input section [COMPUT SCI] **1.** The part of a program which controls the reading of data into a computer memory from external devices. **2.** *See* input area.

input station [COMPUT SCI] A terminal in an in-plant communications system at which data can be entered into the system directly as events take place, enabling files to be immediately updated.

input storage *See* input area.

inquartation [MET] A step in bullion assay that uses nitric acid to dissolve silver from associated gold. Also known as quartation.

inquiline [ZOO] An animal that inhabits the nest of another species.

inquiry [COMPUT SCI] A request for the retrieval of a particular item or set of items from storage.

inquiry and communications system [COMPUT SCI] A computer system in which centralized records are maintained with data transmitted to and from terminals at remote locations or in an in-plant system, and which immediately responds to inquiries from remote terminals.

inquiry and subscriber display [COMPUT SCI] An inquiry display unit that is distant from its computer and communicates with it over wire lines.

inquiry display terminal [COMPUT SCI] A cathode-ray-tube terminal which allows the user to query the computer through a keyboard, the answer appearing on the screen.

inquiry station [COMPUT SCI] A remote terminal from which an inquiry may be sent to a computer over wire lines.

inquiry unit [COMPUT SCI] Any terminal which enables a user to query a computer and get a hard-copy answer.

inradius [MATH] The radius of a circle or sphere inscribed in a given geometric figure.

insanity [PSYCH] **1.** Any mental disorder. **2.** In forensic psychiatry, a mental disorder which prevents one from managing one's affairs, impairs one's ability to distinguish right from wrong, or renders one harmful to oneself or others.

inscribe [COMPUT SCI] To rewrite data on a document in a form which can be read by an optical or magnetic ink character recognition machine.

inscribed [MATH] A polygon is inscribed in a circle or some curve if every vertex of the polygon lies on the circle or curve.

insect [INV ZOO] **1.** A member of the Insecta. **2.** An invertebrate that resembles an insect, such as a spider, mite, or centipede.

Insecta [INV ZOO] A class of the Arthropoda typically having a segmented body with an external, chitinous covering, a pair of compound eyes, a pair of antennae, three pairs of mouthparts, and two pairs of wings.

insect attractant [MATER] A chemical agent, usually associated with an insect's sexual drive, which may be used to attract pests to poisoned bait or for insect surveys.

insect control [ECOL] Regulation of insect populations by biological or chemical means.

insecticide [MATER] A chemical agent that destroys insects.

insectistasis [ECOL] The use of pheromones to trap, confuse, or inhibit insects in order to hold populations below a level where they can cause significant economic damage.

Insectivora [VERT ZOO] An order of mammals including hedgehogs, shrews, moles, and other forms, most of which have spines.

insectivorous [BIOL] Feeding on a diet of insects.

insectivorous plant [BOT] A plant that captures and digests insects as a source of nutrients by using specialized leaves. Also known as carnivorous plant.

insect pathology [INV ZOO] A biological discipline embracing the general principles of pathology as applied to insects.

insect physiology [INV ZOO] The study of the functional properties of insect tissues and organs.

inselberg [GEOL] A large, steep-sided residual hill, knob, or mountain, generally rocky and bare, rising abruptly from an extensive, nearly level lowland erosion surface in arid or semiarid regions. Also known as island mountain.

insemination [BIOL] The planting of seed. [PHYSIO] **1.** The introduction of sperm into the vagina. **2.** Impregnation.

insensitive time *See* dead time.

insequent stream [HYD] A stream that has developed on the present surface, but not consequent upon it, and seemingly

not controlled or adjusted by the rock structure and surface features.

insert [MET] **1.** The part of a die or mold that can be removed. **2.** A part, usually metal, which is placed in a mold and appears as an integral part of the final casting.

insert bit [DES ENG] A bit into which inset cutting points of various preshaped pieces of hard metal (usually a sintered tungsten carbide–cobalt powder alloy) are brazed or hand-peened into slots or holes cut or drilled into a blank bit. Also known as slug bit.

inserted [BIOL] United or attached to the supporting structure by natural growth.

inserted-tooth cutter [DES ENG] A milling cutter in which the teeth can be replaced.

insert film [GRAPHICS] A microfilm strip cut in lengths to fit a jacket channel length.

insertion [MOL BIO] The addition of an extranumerary base pair to double-stranded deoxyribonucleic acid; causes errors in transcription.

insertion gain [ELECTR] The ratio of the power delivered to a part of the system following insertion of an amplifier, to the power delivered to that same part before insertion of the amplifier; usually expressed in decibels.

insertion loss [ELECTR] The loss in load power due to the insertion of a component or device at some point in a transmission system; generally expressed as the ratio in decibels of the power received at the load before insertion of the apparatus, to the power received at the load after insertion.

insertion meter [ENG] A type of flowmeter which measures the rotation rate of a small propeller or turbine rotor mounted at right angles to the end of a support rod and inserted into the flowing stream or closed pipe.

insertion switch [COMPUT SCI] Process by which information is inserted into the computer by an operator who manually operates switches.

insert pump *See* rod pump.

inshore [GEOGR] **1.** Located near the shore. **2.** Indicating a shoreward position.

inshore current [OCEANOGR] The horizontal movement of water inside the surf zone, including longshore and rip currents.

inshore zone [GEOL] The zone of variable width extending from the shoreline at low tide through the breaker zone.

inside caliper [DES ENG] A caliper that has two legs with feet that turn outward; used to measure inside dimensions, as the diameter of a hole.

inside diameter [DES ENG] The length of a line which passes through the center of a hollow cylindrical or spherical object, and whose end points lie on the inner surface of the object. Abbreviated ID.

inside face [DES ENG] That part of the bit crown nearest to or parallel with the inside wall of an annular or coring bit.

inside gage [DES ENG] The inside diameter of a bit as measured between the cutting points, such as between inset diamonds on the inside-wall surface of a core bit.

inside micrometer [DES ENG] A micrometer caliper with the points turned outward for measuring the internal dimensions of an object.

inside work *See* internal work.

insight therapy [PSYCH] Treatment of a personality disorder by attempting to uncover the deep causes of the individual's problem and to help eliminate defense mechanisms.

in situ [SCI TECH] In the original location.

in situ combustion [PETRO ENG] A method of driving high-viscosity, low-gravity ore otherwise unrecoverable from a formation by setting fire to the oil sand and thereby heating the oil in the horizon to increase its mobility by reducing its viscosity.

in situ foaming [ENG] Depositing of the ingredients of a foamable plastic onto the location where foaming is to take place; for example, in situ foam insulation on equipment or walls.

insol *See* insoluble.

insolation [ASTRON] **1.** Exposure of an object to the sun. **2.** Solar energy received, often expressed as a rate of energy per unit horizontal surface.

insoluble [CHEM] Incapable of being dissolved in another material; usually refers to solid-liquid or liquid-liquid systems. Abbreviated insol.

insoluble anode [CHEM] An anode that resists dissolution during electrolysis.

insoluble residue [GEOL] Material remaining after a geological specimen is dissolved in hydrochloric or acetic acid.

insomnia [MED] Sleeplessness; disturbed sleep; prolonged inability to sleep.

insomniac [MED] A person who is susceptible to insomnia.

inspect [IND ENG] To examine an object to determine whether it conforms to standards; may employ sight, hearing, touch, odor, or taste.

inspection [IND ENG] The critical examination of a product to determine its conformance to applicable quality standards or specifications.

inspector [MIN ENG] One employed to make examinations of and to report upon mines and surface plants relative to compliance with mining laws, rules and regulations, and safety methods.

inspiration [PHYSIO] The drawing in of the breath.

inspiratory capacity [PHYSIO] Commencing from expiratory standstill, the maximum volume of gas which can be drawn into the lungs.

inspiratory reserve volume [PHYSIO] The amount of air that can be inhaled by forcible inspiration after completion of a normal inspiration.

inspirometer [MED] An instrument for measuring the amount of air inspired.

inspissation [CHEM] The process of thickening a liquid by evaporation. [GEOCHEM] Thickening of an oil deposit by evaporation or oxidation, resulting, for example, after long exposure in pitch or gum formation.

instability [CONT SYS] A condition of a control system in which excessive positive feedback causes persistent, unwanted oscillations in the output of the system. [PHYS] A property of the steady state of a system such that certain disturbances or perturbations introduced into the steady state will increase in magnitude, the maximum perturbation amplitude always remaining larger than the initial amplitude.

instability line [METEOROL] Any nonfrontal line or band of convective activity in the atmosphere; this is the general term and includes the developing, mature, and dissipating stages; however, when the mature stage consists of a line of active thunderstorms, it is properly termed a squall line; therefore, in practice, instability line often refers only to the less active phases.

installation [ENG] Procedures for setting up equipment for use or service.

installation kit [ORD] A collection of items, which are of a supplementary nature to a major component or equipment; the items within the collection are used to establish and install an accessory or equipment to an operational condition or to the component or equipment.

installation processing control [COMPUT SCI] A system that automatically schedules the processing of jobs by a computer installation, in order to minimize waiting time and time taken to prepare equipment for operation.

installation tape number [COMPUT SCI] A number that is permanently assigned to a reel of magnetic tape to identify it.

installed capacity [ELEC] The maximum runoff of a hydroelectric facility that can be constantly maintained and utilized by equipment.

instantaneous automatic gain control [ELECTR] Portion of a radar system that automatically adjusts the gain of an amplifier for each pulse to obtain a substantially constant output-pulse peak amplitude with different input-pulse peak amplitudes; the circuit is fast enough to act during the time a pulse is passing through the amplifier.

instantaneous axis [MECH] The axis about which a rigid body is carrying out a pure rotation at a given instant in time.

instantaneous carrying current [ELEC] The maximum value of current which a switch, circuit breaker, or similar apparatus can carry instantaneously.

instantaneous center [MECH] A point about which a rigid body is rotating at a given instant in time. Also known as instant center.

instantaneous companding [ELECTR] Companding in which the effective gain variations are made in response to instantaneous values of the signal wave.

instantaneous condition [PHYS] The condition of a system at a particular instant in time.

instantaneous cut [ENG] A cut that is set off by instantaneous detonators to be certain that all charges in the cut go off

INSIDE CALIPER

Inside caliper. *(From R. J. Sweeney, Measurement Techniques in Mechanical Engineering, Wiley, 1953)*

at the same time; the drilling and ignition are carried out so that all the holes break smaller top angles.

instantaneous description [COMPUT SCI] For a Turing machine, the set of machine conditions at a given point in the computation, including the contents of the tape, the position of the read-write head on the tape, and the internal state of the machine.

instantaneous detonator [ENG] A type of detonator that does not have a delay period between the passage of the electric current through the detonator and its explosion.

instantaneous effects [COMMUN] Impairment of telephone or telegraph transmission caused by instantaneous changes in phase or amplitude of the wave in a transmission line.

instantaneous field of view [OPTICS] The solid angle within which radiation is detected by an imaging system employing some form of scanning mechanism, at a given instant of time.

instantaneous frequency [COMMUN] The time rate of change, divided by 2π, of a phase angle whose sine is proportional to the amplitude of a frequency-modulated wave.

instantaneous frequency-indicating receiver [ELECTR] A radio receiver with a digital, cathode-ray, or other display that shows the frequency of a signal at the instant it is picked up anywhere in the band covered by the receiver.

instantaneous fuse [ENG] A fuse with an ignition rate of several thousand feet per minute; an example is PETN.

instantaneous power [ELEC] The product of the instantaneous voltage and the instantaneous current for a circuit or component.

instantaneous readout [COMMUN] Readout by a radio transmitter instantaneous with the computation of data to be transmitted.

instantaneous recording [ENG ACOUS] A recording intended for direct reproduction without further processing.

instantaneous recovery [MECH] The immediate reduction in the strain of a solid when a stress is removed or reduced, in contrast to creep recovery.

instantaneous sample [COMMUN] One of a sequence of instantaneous values of a wave taken at regular intervals.

instantaneous strain [MECH] The immediate deformation of a solid upon initial application of a stress, in contrast to creep strain.

instantaneous value [PHYS] The value of a sinusoidal or otherwise varying quantity at a particular instant.

instant center *See* instantaneous center.

instantizing [FOOD ENG] Redrying a wet agglomerate of nonfat dry milk powder to render the product more easily reconstituted.

instanton [PARTIC PHYS] A hypothetical pseudoparticle which provides solutions to equations describing the gauge fields of quantum chromodynamics, and represents large vacuum fluctuations in these fields that would exert forces on quarks.

instant-on switch [ELECTR] A switch that applies a reduced filament voltage to all tubes in a television receiver continuously, so the picture appears almost instantaneously after the set is turned on.

instant replay *See* video replay.

instar [INV ZOO] A stage between molts in the life of arthropods, especially insects.

instep [ANAT] The arch on the medial side of the foot.

instinct [PSYCH] A primary tendency or inborn drive, as toward life, sexual reproduction, and death. [ZOO] A precise form of behavior in which there is an invariable association of a particular series of responses with specific stimuli; an unconditioned compound reflex.

instinctive behavior [ZOO] Any species-typical pattern of responses not clearly acquired through training.

instinctual [PSYCH] Pertaining to an emotional, impulsive, and generally unreasoned behavior or mental process which is a function of the id. [ZOO] Of or pertaining to instincts.

instruction [COMPUT SCI] A pattern of digits which signifies to a computer that a particular operation is to be performed and which may also indicate the operands (or the locations of operands) to be operated on.

instruction address [COMPUT SCI] The address of the storage location in which a given instruction is stored.

instruction address register [COMPUT SCI] A special storage location, forming part of the program controller, in which addresses of instructions are stored in order to control their sequential retrieval from memory during the execution of a program.

instruction area [COMPUT SCI] A section of storage used for storing program instructions.

instruction card [IND ENG] A written description of the standard method used by a worker, to guide his activities.

instruction code [COMPUT SCI] That part of an instruction which distinguishes it from all other instructions and specifies the action to be performed.

instruction constant [COMPUT SCI] A dummy instruction of the type K = 1, where K is irrelevant to the program.

instruction counter [COMPUT SCI] A counter that indicates the location of the next computer instruction to be interpreted. Also known as location counter; program counter; sequence counter.

instruction deck [COMPUT SCI] Set of cards punched to contain a symbolic coded program to be read into a computer.

instruction format [COMPUT SCI] Any rule which assigns various functions to the various digits of an instruction.

instruction length [COMPUT SCI] The number of bits or bytes (eight bits per byte) which defines an instruction.

instruction lookahead [COMPUT SCI] A technique for speeding up the process of fetching and decoding instructions in a computer program, and of computing addresses of required operands and fetching them, in which the control unit fetches any unexecuted instructions on hand, to the extent this is feasible. Also known as fetch ahead.

instruction modification [COMPUT SCI] A change, carried out by the program, in an instruction so that, upon being repeated, this instruction will perform a different operation.

instruction pointer [COMPUT SCI] **1.** A component of a task descriptor that designates the next instruction to be executed by the task. **2.** An element of the control component of the stack model of block structure execution, which points to the current instruction.

instruction register [COMPUT SCI] A hardware element that receives and holds an instruction as it is extracted from memory; the register either contains or is connected to circuits that interpret the instruction (or discover its meaning). Also known as current-instruction register.

instruction repertory *See* instruction set.

instruction set [COMPUT SCI] Also known as instruction repertory. **1.** The set of instructions which a computing or data-processing system is capable of performing. **2.** The set of instructions which an automatic coding system assembles.

instruction time [COMPUT SCI] The time required to carry out an instruction having a specified number of addresses in a particular computer.

instruction transfer [COMPUT SCI] An instruction which transfers control to one or another subprogram, depending upon the value of some operation.

instruction word [COMPUT SCI] A computer word containing an instruction rather than data. Also known as coding line.

instrument [ENG] A device for measuring and sometimes also recording and controlling the value of a quantity under observation.

instrumental analysis [ENG] The use of an instrument to measure a component, to detect the completion of a quantitative reaction, or to detect a change in the properties of a system.

instrumental conditioning *See* operant conditioning.

instrument approach chart [NAV] An aeronautical chart designed for use under instrument flight conditions, for making instrument approach and letdown to contact flight conditions in the vicinity of an aerodrome.

instrument approach procedure [NAV] A series of predetermined maneuvers for the orderly transfer of an aircraft under instrument flight conditions from the initial approach to a landing, or to a point from which a landing can be made visually.

instrument approach system [NAV] An aircraft navigation system that furnishes guidance in the vertical and horizontal planes to aircraft during descent from an initial-approach altitude to a point near the landing area; completion of a landing requires guidance to touchdown by visual or other means.

instrumentation [ENG] Designing, manufacturing, and utilizing physical instruments or instrument systems for detection, observation, measurement, automatic control, automatic computation, communication, or data processing.

instrumentation amplifier [ELECTR] An amplifier that ac-

cepts a voltage signal as an input and produces a linearly scaled version of this signal at the output; it is a closed-loop fixed-gain amplifier, usually differential, and has high input impedance, low drift, and high common-mode rejection over a wide range of frequencies.

instrument correction [ENG] A correction of measurements made on a unit under test for either inaccuracy of the instrument or eroding effect of the instrument.

instrument flight [NAV] A flight in which the navigation of the aircraft is controlled solely by reference to instruments.

instrument flight rules [NAV] Regulations governing flying when weather conditions are below the minimum for visual flight rules. Abbreviated IFR.

instrument housing [ENG] A case or enclosure to cover and protect an instrument.

instrument landing [NAV] A landing made through the use of a system of electronic beacons and radar.

instrument landing system [NAV] A system of radio navigation which provides lateral and vertical guidance, as well as other navigational parameters required by a pilot in a low approach or a landing. Abbreviated ILS.

instrument landing system localizer [NAV] System of horizontal guidance embodied in the instrument landing system which indicates the horizontal deviation of the aircraft from its optimum path of descent along the axis of the runway.

instrument landing system reference point *See* ILS reference point.

instrument multiplier [ELEC] A highly accurate resistor used in series with a voltmeter to extend its voltage range. Also known as voltage multiplier; voltage-range multiplier.

instrument oil [MATER] Special grade of lubricating oil that has been refined to have oxidation resistance and gum resistance, that has compatibility with electrical insulation, and that prevents tarnish or oxidation of contacted metal surfaces; used to lubricate instruments and other intricate mechanisms.

instrument panel [ENG] A panel or board containing indicating meters.

instrument reading time [ENG] The time, after a change in a measured quantity, which it takes for the indication of an instrument to come and remain within a specified percentage of its final value.

instrument resistor [ELEC] A high-accuracy, four-terminal resistor used to bypass the major portion of currents around the low-current elements of an instrument, such as a direct-current ammeter.

instrument shelter [ENG] A boxlike structure designed to protect certain meteorological instruments from exposure to direct sunshine, precipitation, and condensation, while providing adequate ventilation. Also known as thermometer screen; thermometer shelter; thermoscreen.

instrument shunt [ELEC] A resistor designed to be connected in parallel with an ammeter to extend its current range.

instrument system [ENG] A system which integrates one or more instruments with auxiliary or associated devices for detection, observation, measurement, automatic control, automatic computation, communication, or data processing.

instrument transformer [ELEC] A transformer that transfers primary current, voltage, or phase values to the secondary circuit with sufficient accuracy to permit connecting an instrument to the secondary rather than the primary; used so only low currents or low voltages are brought to the instrument.

instrument-type relay [ELEC] A relay constructed like a meter, with one adjustable contact mounted on the scale and the other contact mounted on the pointer. Also known as contact-making meter.

instrument weather [METEOROL] Route or terminal weather conditions of sufficiently low visibility to require the operation of aircraft under instrument flight rules (IFR). Also known as IFR weather.

insulated [ELEC] Separated from other conducting surfaces by a nonconducting material.

insulated conductor [ELEC] A conductor surrounded by insulation to prevent current leakage or short circuits. Also known as insulated wire.

insulated-gate field-effect transistor *See* metal oxide semiconductor field-effect transistor.

insulated-return power system [ELEC] A system for distributing electric power to trains or other vehicles, in which both the outgoing and return conductors are insulated, in contrast to a track-return system.

insulated-substrate monolithic circuit [ELECTR] Integrated circuit which may be either an all-diffused device or a compatible structure so constructed that the components within the silicon substrate are insulated from one another by a layer of silicon dioxide, instead of reverse-biased *pn* junctions used for isolation in other techniques.

insulated wire *See* insulated conductor.

insulating board [MATER] Any board used in a wall or ceiling to provide insulation.

insulating compound [MATER] A liquid, at low temperatures, which is poured into joint boxes and allowed to solidify; as a poor conductor of heat and electricity, it provides good insulation.

insulating concrete [MATER] Concrete with insulating properties, often made with asbestos fibers and in the form of blocks, corrugated slabs, or sheathing.

insulating oil [MATER] A chlorinated hydrocarbon, such as trichlorobenzene, mixed with fluorinated hydrocarbons, whose high dielectric strength and high flash point allow it to be used in switches, circuit breakers, and transformers as an insulator and cooling medium. Also known as electrical oil.

insulating paper [MATER] A standard material for insulating electrical equipment, usually consisting of bond or kraft paper coated with black or yellow insulating varnish on both sides. Also known as electrical insulating paper; varnish paper.

insulating strength [ELEC] Measure of the ability of an insulating material to withstand electric stress without breakdown; it is defined as the voltage per unit thickness necessary to initiate a disruptive discharge; usually measured in volts per centimeter.

insulating tape [MATER] Tape impregnated with insulating material, and usually adhesive; used to cover joints in insulated wires or cables. Also known as electrical tape.

insulation [BUILD] Material used in walls, ceilings, and floors to retard the passage of heat and sound. [ELEC] A material having high electrical resistivity and therefore suitable for separating adjacent conductors in an electric circuit or preventing possible future contact between conductors. Also known as electrical insulation.

insulation coordination [ELEC] Steps taken to ensure that electric equipment is not damaged by overvoltages and that flashovers are localized in regions where no damage results from them.

insulation porcelain [MATER] Any of the various insulating materials consisting of molded silica, molded steatite, or specially compounded ceramics, often containing zirconia or beryllia. Also known as electrical porcelain.

insulation protection [ELEC] Use of devices to protect insulators of power transmission lines from damage by heavy arcs.

insulation resistance [ELEC] The electrical resistance between two conductors separated by an insulating material.

insulation sampler [ENG] A device for collecting deep water which prevents any significant conduction of heat from the water sample so that it maintains its original temperature as it is hauled to the surface.

insulation testing set [ENG] An instrument for measuring insulation resistance, consisting of a high-range ohmmeter having a hand-driven direct-current generator as its voltage source.

insulator [ELEC] A device having high electrical resistance and used for supporting or separating conductors to prevent undesired flow of current from them to other objects. Also known as electrical insulator. [MATER] A material that is a poor conductor of heat, sound, or electricity. [SOLID STATE] A substance in which the normal energy band is full and is separated from the first excitation band by a forbidden band that can be penetrated only by an electron having an energy of several electron volts, sufficient to disrupt the substance.

insulator arc-over [ELEC] Discharge of power current in the form of an arc, following a surface discharge over an insulator.

insulator arrangement [ELECTROMAG] The placement of insulators on a transmission mast.

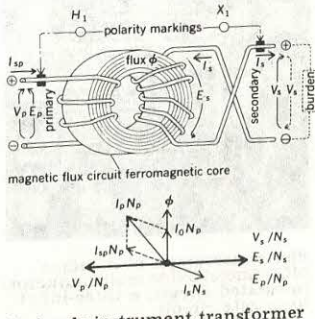
insulin [BIOCHEM] A protein hormone produced by the beta cells of the islets of Langerhans which participates in carbohydrate and fat metabolism.

insulinase [BIOCHEM] An enzyme produced by the liver which is able to inactivate insulin.

insulinoma *See* islet-cell tumor.

insulin shock [MED] Clinical manifestation of hypoglycemia due to excess amounts of insulin in the blood.

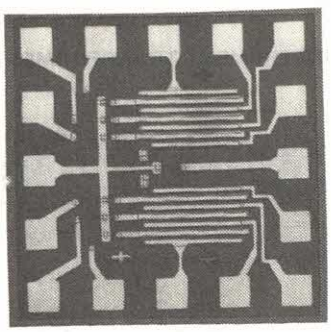
INSTRUMENT TRANSFORMER



A simple instrument transformer and its phasor diagram. Coreloss components and impedance drops have been omitted from the diagram. Subscripts p and s = primary and secondary windings respectively; E = induced voltage; V = applied voltage; N = number of turns; I = current. *(General Electric Co.)*

insulin shock therapy [MED] Administration of large doses of insulin to induce hypoglycemic comas, followed by administration of glucose, in the treatment of certain psychotic disorders.
insuloma *See* islet-cell tumor.
intaglio [LAP] A type of carved gemstone in which the figure is engraved on the surface of the stone rather than left in relief by cutting away the background, as in a cameo.
intaglio plate [GRAPHICS] A metal surface into which the printing elements are formed in intaglio printing.
intaglio printing [GRAPHICS] A printing method in which the printing elements are all below the plate surface, having been cut, scratched, engraved, or etched into the metal to form ink-retaining grooves or cups; surplus ink on the surface must be wiped or scraped off after each inking and before each printing impression.
intake [ENG] **1.** An entrance for air, water, fuel, or other fluid, or the amount of such fluid taken in. **2.** A main passage for air in a mine. [HYD] *See* recharge.
intake area *See* recharge area.
intake chamber [CIV ENG] A large chamber that gradually narrows to an intake tunnel; designed to avoid undesirable water currents.
intake gate [CIV ENG] A movable partition for opening or closing a water intake opening.
intake manifold [MECH ENG] A system of pipes which feeds fuel to the various cylinders of a multicylinder internal combustion engine.
intake stroke [MECH ENG] The fluid admission phase or travel of a reciprocating piston and cylinder mechanism as, for example, in an engine, pump, or compressor.
intake valve [MECH ENG] The valve which opens to allow air or an air-fuel mixture to enter an engine cylinder.
intarsia [GRAPHICS] Decorative designs of inlaid wood in a background of wood; often used in furniture making. Also known as tarsia. FA[text] A pattern in several colors, usually geometrical, in a knitted fabric in which both sides of the fabric are alike.
integer [MATH] Any positive or negative counting number or zero.
integer constant [COMPUT SCI] A constant that uses the values 0, 1, . . . , 9 with no decimal point in FORTRAN.
integer data type [COMPUT SCI] A scalar date type which is used to represent whole numbers, that is, values without fractional parts.
integer programming [SYS ENG] A series of procedures used in operations research to find maxima or minima of a function subject to one or more constraints, including one which requires that the values of some or all of the variables be whole numbers.
integer spin [QUANT MECH] Property of a particle whose spin angular momentum is a whole number times Planck's constant divided by 2π; bosons have this property; in contrast, fermions have half-integer spin.
integer variable [COMPUT SCI] A variable in FORTRAN whose first character is normally I, J, K, L, M, or N.
integral [MATH] **1.** A solution of a differential equation is sometimes called an integral of the equation. **2.** *See* definite Riemann integral; indefinite integral.
integral absorbed dose *See* integral dose.
integral action [CONT SYS] A control action in which the rate of change of the correcting force is proportional to the deviation.
integral calculus [MATH] The study of integration and its applications to finding areas, volumes, or solutions of differential equations.
integral compensation [CONT SYS] Use of a compensator whose output changes at a rate proportional to its input.
integral control [CONT SYS] Use of a control system in which the control signal changes at a rate proportional to the error signal.
integral discriminator [ELECTR] A circuit which accepts only pulses greater than a certain minimum height.
integral domain [MATH] A commutative ring with identity where the product of nonzero elements is never zero. Also known as entire ring.
integral dose [NUCLEO] The total energy imparted to an irradiated body by an ionizing radiation; usually expressed in gram-rads or gram-roentgens. Also known as integral absorbed dose; volume dose.

INTEGRATED CIRCUIT



Photomicrograph of a simple MOS (metal oxide semiconductor) integrated circuit, a three-input logic gate circuit.

integral equation [MATH] An equation where the unknown function occurs under an integral sign.
integral function [MATH] **1.** A function taking on integer values. **2.** *See* entire function.
integral-furnace boiler [MECH ENG] A type of steam boiler which incorporates furnace water-cooling in the circulatory system.
integral heat of dilution *See* heat of dilution.
integral heat of solution *See* heat of solution.
integral-joint casing [PETRO ENG] Oil well casing lengths on whose ends the connection joints are integrally formed.
integral-mode controller [CONT SYS] A controller which produces a control signal proportional to the integral of the error signal.
integral network [CONT SYS] A compensating network which produces high gain at low input frequencies and low gain at high frequencies, and is therefore useful in achieving low steady-state errors. Also known as lagging network; lag network.
integral operator [MATH] A rule for transforming one function into another function by means of an integral; this often is in context a linear transformation on some vector space of functions.
integral procedure decomposition temperature [PHYS CHEM] Decomposition temperatures derived from graphical integration of the thermogravimetric analysis of a polymer.
integral square error [CONT SYS] A measure of system performance formed by integrating the square of the system error over a fixed interval of time, this performance measure and its generalizations are frequently used in linear optimal control and estimation theory.
integral test [MATH] If $f(x)$ is a function that is positive and decreasing for positive x, then the infinite series with nth term $f(n)$ and the integral of $f(x)$ from 1 to ∞ are either both convergent (finite) or both infinite.
integral transform *See* integral transformation.
integral transformation [MATH] A transform of a function $F(x)$ given by the function

$$f(y) = \int_a^b K(x,y)F(x)\,dx$$

where $K(x,y)$ is some function. Also known as integral transform.
integral-type flange [DES ENG] A flange which is forged or cast with, or butt-welded to, a nozzle neck, pressure vessel, or piping wall.
integral waterproofing [ENG] Waterproofing concrete by adding the waterproofing material to the cement or to the mixing water.
integrand [MATH] The function which is being integrated in a given integral.
integraph [ENG] A device used for completing a mathematical integration by graphical methods.
integrated circuit [ELECTR] An interconnected array of active and passive elements integrated with a single semiconductor substrate or deposited on the substrate by a continuous series of compatible processes, and capable of performing at least one complete electronic circuit function. Abbreviated IC. Also known as integrated semiconductor.
integrated-circuit capacitor [ELECTR] A capacitor that can be produced in a silicon substrate by conventional semiconductor production processes.
integrated-circuit memory *See* semiconductor memory.
integrated-circuit resistor [ELECTR] A resistor that can be produced in or on an integrated-circuit substrate as part of the manufacturing process.
integrated communications-navigation-identification [NAV] The concept of coordinating the electronic units of a system to improve the efficiency of providing communications, navigation, and identification for civilian and military aircraft. Abbreviated ICNI.
integrated communications system [COMMUN] Communications system on either a unilateral or joint basis in which a message can be filed at any communications center in that system and be delivered to the addressee by any other appropriate communications center in that system without reprocessing enroute.
integrated console [COMMUN] Computer control console that is capable of controlling the operation of the switching center equipment of an integrated communications system.

integrated data processing [COMPUT SCI] Data processing that has been organized and carried out as a whole, so that intermediate outputs may serve as inputs for subsequent processing with no human copying required. Abbreviated IDP.

integrated data retrieval system [COMPUT SCI] A section of a data-processing system that provides facilities for simultaneous operation of several video-data interrogations in a single line and performs required communications with the rest of the system; it provides storage and retrieval of both data subsystems and files and standard formats for data representation.

integrated drainage [HYD] Drainage resulting after folding and faulting of a surface under arid conditions; the streams by working headward have joined basins across intervening mountains or ridges.

integrated electronics [ELECTR] A generic term for that portion of electronic art and technology in which the interdependence of material, device, circuit, and system-design consideration is especially significant; more specifically, that portion of the art dealing with integrated circuits.

integrated fire control system [ORD] A system which combines target acquisition and tracking data computation, and weapon laying and firing, primarily using electronic means assisted by electromechanical devices.

integrated information processing [COMPUT SCI] System of computers and peripheral systems arranged and coordinated to work concurrently or independently on different problems at the same time.

integrated information system [COMMUN] An expansion of a basic information system achieved through system design of an improved or broader capability by functionally or technically relating two or more information systems, or by incorporating a portion of the functional or technical elements of one information system into another.

integrated injection logic [ELECTR] Integrated-circuit logic that uses a simple and compact bipolar transistor gate structure which makes possible large-scale integration on silicon for logic arrays, memories, watch circuits, and various other analog and digital applications. Abbreviated I^2L. Also known as merged-transistor logic.

integrated neutron flux [NUCLEO] A measure of radiation exposure, equal to the product of the number of free neutrons per unit volume, the average speed of neutrons, and the exposure time.

integrated optics [OPTICS] A thin-film device containing tiny lenses, prisms, and switches to transmit very thin laser beams, and serving the same purposes as the manipulation of electrons in thin-film devices of integrated electronics.

integrated semiconductor *See* integrated circuit.

integrated train [MIN ENG] A long string of cars, permanently coupled together, that shuttles endlessly between one mine and one generating plant, not even stopping to load and unload, since rotary couplers permit each car to be flipped over and dumped as the train moves slowly across a trestle.

integrating accelerometer [ENG] A device whose output signals are proportional to the velocity of the vehicle or to the distance traveled (depending on the number of integrations) instead of acceleration.

integrating amplifier [ELECTR] An operational amplifier with a shunt capacitor such that mathematically the waveform at the output is the integral (usually over time) of the input.

integrating detector [ELECTR] A frequency-modulation detector in which a frequency-modulated wave is converted to an intermediate-frequency pulse-rate modulated wave, from which the original modulating signal can be recovered by use of an integrator.

integrating factor [MATH] A factor which when multiplied into a differential equation makes the portion involving derivatives an exact differential.

integrating filter [ELECTR] A filter in which successive pulses of applied voltage cause cumulative buildup of charge and voltage on an output capacitor.

integrating frequency meter [ENG] An instrument that measures the total number of cycles through which the alternating voltage of an electric power system has passed in a given period of time, enabling this total to be compared with the number of cycles that would have elapsed if the prescribed frequency had been maintained. Also known as master frequency meter.

integrating galvanometer [ENG] A modification of the d'Arsonval galvanometer which measures the integral of current over time; it is designed to be able to measure changes of flux in an exploring coil which last over periods of several minutes.

integrating gyroscope [ENG] A gyroscope that senses the rate of angular displacement and measures and transmits the time integral of this rate.

integrating meter [ENG] An instrument that totalizes electric energy or some other quantity consumed over a period of time.

integrating network [ELECTR] A circuit or network whose output waveform is the time integral of its input waveform. Also known as integrator.

integrating-sphere photometer [OPTICS] An instrument for measuring the total luminous flux of a lamp or luminaire; the source is placed inside a sphere whose inside surface has a diffusely reflecting white finish, and the light reflected from this surface onto a window is measured by an ordinary photometer. Also known as sphere photometer.

integrating water sampler [ENG] A water sampling device comprising a cylinder with a free piston whose movement is regulated by the evacuation of a charge of fresh water.

integration [GEN] Recombination involving insertion of a genetic element.

integration by parts [MATH] A technique used to find the integral of the product of two functions by means of an identity involving another simpler integral; for functions of one variable the identity is

$$\int_a^b fg'\,dx + \int_a^b gf'\,dx = f(b)g(b) - f(a)g(a);$$

for functions of several variables the technique is tantamount to using Stokes' theorem or the divergence theorem.

integrator [ELECTR] **1.** A computer device that approximates the mathematical process of integration. **2.** *See* integrating network.

integrity [COMPUT SCI] Property of data which can be recovered in the event of its destruction through failure of the recording medium, user carelessness, program malfunction, or other mishap.

integrodifferential equation [MATH] An equation relating a function, its derivatives, and its integrals.

integument [ANAT] An outer covering, especially the skin, together with its various derivatives.

integumentary musculature [VERT ZOO] Superficial skeletal muscles which are spread out beneath the skin and are inserted into it in some terrestrial vertebrates.

integumentary pattern [ANAT] Any of the features of the skin and its derivatives that are arranged in designs, such as scales, epidermal ridges, feathers coloration, or hair.

integumentary system [ANAT] A system encompassing the integument and its derivatives.

intelligence [COMMUN] Data, information, or messages that are to be transmitted. [PSYCH] **1.** The intellect or astuteness of the mind. **2.** Ability to recognize and understand qualities and attributes of the physical world and of mankind. **3.** Ability to solve problems and engage in abstract thought processes.

intelligence quotient [PSYCH] The numerical designation for intelligence expressed as a ratio of an individual's performance on a standardized test to the average performance according to age. Abbreviated IQ.

intelligence test [PSYCH] A series of standardized tasks or problems presented to an individual to measure his innate capacity to think, conceive, or reason; examples are the Stanford-Binet test and the Wechsler-Bellevue intelligence test.

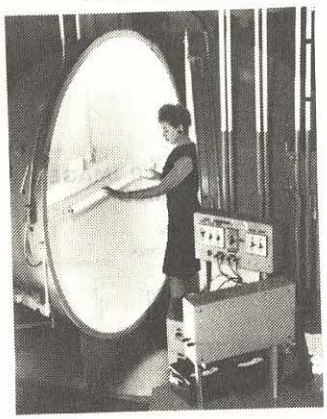
intelligent terminal [COMPUT SCI] A computer input/output device with its own memory and logic circuits which can perform certain operations normally carried out by the computer. Also known as smart terminal.

intelligibility [COMMUN] The percentage of speech units understood correctly by a listener in a communications system; customarily used for regular messages where the context aids the listener, in distinction to articulation. Also known as speech intelligibility.

intelligible crosstalk [COMMON] Crosstalk which is sufficiently understandable under pertinent circuit and room noise conditions that meaningful information can be obtained by more sensitive listeners.

Intelsat [COMMUN] A satellite network under international control, used for global communication by more than 80 countries; the system requires stationary satellites over the Atlantic,

INTEGRATING-SPHERE PHOTOMETER

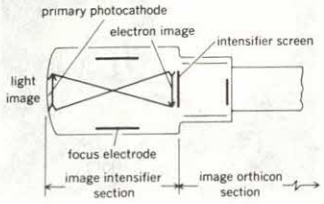


Uhlbricht sphere for measuring luminous flux and efficiency. *(Westinghouse Electric Corp.)*

INTEGUMENT

The characteristic strata of thick skin of the human finger as seen in cross section at high magnification. *(From J. F. Nonidez and W. F. Windle, Textbook of Histology, McGraw-Hill, 1949)*

INTENSIFIER IMAGE ORTHICON



Components of an intensifier image orthicon.

Pacific, and Indian oceans and highly directional antennas at earth stations. Derived from international telecommunications satellite.

intensifier [GRAPHICS] In photography, a means used to strengthen the image of either a negative or a positive; usually, metal is added to the silver image, and the increase in density is proportional to the existing density; thus when a negative is intensified, the highlights are always intensified more than the shadows. [PETRO ENG] Hydrofluoric acid added to hydrochloric acid for oil well acidizing; the fluoride destroys silica films that are insoluble by hydrochloric acid.

intensifier electrode [ELECTR] An electrode used to increase the velocity of electrons in a beam near the end of their trajectory, after deflection of the beam. Also known as post-accelerating electrode; post-deflection accelerating electrode.

intensifier image orthicon [ELECTR] An image orthicon combined with an image intensifier that amplifies the electron stream originating at the photocathode before it strikes the target.

intensity [PHYS] **1.** The strength or amount of a quantity, as of electric field, current, magnetization, radiation, or radioactivity. **2.** The power transmitted by a light or sound wave across a unit area perpendicular to the wave.

intensity control *See* brightness control.

intensity level [PHYS] The logarithm of the ratio of two intensities, powers or energies, usually expressed in decibels.

intensity modulation [ELECTR] Modulation of electron beam intensity in a cathode-ray tube in accordance with the magnitude of the received signal.

intensity of magnetization *See* intrinsic induction.

intensity of turbulence *See* gustiness components.

intensive properties [CHEM] Properties independent of the quantity or shape of the substance under consideration; for example, temperature, pressure, or composition.

intention tremor [MED] A clinical manifestation of certain diseases of the nervous system characterized by involuntary trembling of the limbs brought on by voluntary movements, and ceasing on rest.

interaction [FL MECH] With respect to wave components, the nonlinear action by which properties of fluid flow (such as momentum, energy, vorticity), are transferred from one portion of the wave spectrum to another, or viewed in another manner, between eddies of different size-scales. [PHYS] A process in which two or more bodies exert mutual forces on each other. [STAT] The phenomenon which causes the response to applying two treatments not to be the simple sum of the responses to each treatment.

interaction balance method *See* goal coordination method.

interaction picture [QUANT MECH] A mode of description of a system in which the time dependence is carried partly by the operators and partly by the state vectors, the time dependence of the state vectors being due entirely to that part of the Hamiltonian arising from interactions between particles. Also known as interaction representation.

interaction prediction method [CONT SYS] A method for coordinating the subproblem solutions in plant decomposition, in which the interaction variables are specified by the second-level controller according to overall optimality conditions, and the subproblems are solved to satisfy local optimality conditions constrained by the specified values of the interaction variables. Also known as feasible method.

interaction representation *See* interaction picture.

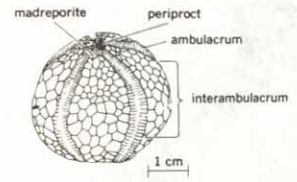
interaction space [ELECTR] A region of an electron tube in which electrons interact with an alternating electromagnetic field.

interactive graphical input [COMPUT SCI] Information which is delivered to a computer by using hand-held devices, such as writing styli used with electronic tablets and light-pens used with cathode-ray tube displays, to sketch a problem description in an on-line interactive mode in which the computer acts as a drafting assistant with unusual powers, such as converting rough freehand motions of a pen or stylus to accurate picture elements.

interactive information system [COMPUT SCI] An information system in which the user communicates with the computing facility through a terminal and receives rapid responses which can be used to prepare the next input.

interactive processing [COMPUT SCI] Computer processing in which the user can modify the operation appropriately while observing results at critical steps.

INTERAMBULACRUM



Morphological features of *Aulechinus grayae*, an echinocystitoid example from the Upper Ordovician of Scotland.

interactive terminal [COMPUT SCI] A computer terminal designed for two-way communication between operator and computer.

interambulacrum [INV ZOO] In echinoderms, an area between two ambulacra.

Interamnia [ASTRON] An asteroid with a diameter of about 320 kilometers, mean distance from the sun of 3.057 astronomical units, and C-type surface composition.

interarticular [ANAT] Situated between articulating surfaces.

interatrial [ANAT] Located between the atria of the heart.

interatrial septal defect [MED] A congenital malformation of the septum between the atria of the heart.

interatrial septum *See* atrial septum.

interaxillary [BOT] Located within or between the axils of leaves.

interbase current [ELECTR] The current that flows from one base connection of a junction tetrode transistor to the other, through the base region.

interbedded [GEOL] Having beds lying between other beds with different characteristics.

interblock [COMPUT SCI] A device or system that prevents one part of a computing system from interfering with another.

interblock gap [COMPUT SCI] A space separating two blocks of data on a magnetic tape.

intercalary [BOT] Referring to growth occurring between the apex and leaf. [SCI TECH] Inserted between two original components.

intercalary day [ASTRON] A day inserted or introduced among others in a calendar, as February 29 during leap years.

intercalary meristem [BOT] A meristem that is forming between regions of permanent or mature meristem.

intercalated disc [HISTOL] A dense region at the junction of cellular units in cardiac muscle.

intercalated nucleus [ANAT] A nucleus of the medulla oblongata in the central gray matter of the ventricular floor located between the hypoglossal nucleus and the dorsal motor nucleus of the vagus.

intercalation [GEOL] A layer located between layers of different character.

intercapillary [ANAT] Located between capillaries.

intercapillary glomerulosclerosis [PATH] Nodular eosinophilic hyalin deposits on the periphery of glomeruli in individuals with diabetes. Also known as diabetic glomerulosclerosis; Kimmelstiel-Wilson disease.

intercardinal heading [NAV] A heading in the direction of any of the intercardinal points.

intercardinal point [GEOD] Any of the four directions midway between the cardinal points, that is, northeast, southeast, southwest, and northwest. Also known as quadrantal point.

intercardinal rolling error [NAV] Quadrantal error of a gyro compass.

intercarpal [ANAT] Located between the carpal bones.

intercarrier channel [COMMUN] A carrier telegraph channel in the available frequency spectrum between carrier telephone channels.

intercarrier noise suppression [ELECTR] Means of suppressing the noise resulting from increased gain when a high-gain receiver with automatic volume control is tuned between stations; the suppression circuit automatically blocks the audio-frequency input of the receiver when no signal exists at the second detector. Also known as interstation noise suppression.

intercarrier sound system [ELECTR] A television receiver arrangement in which the television picture carrier and the associated sound carrier are amplified together by the video intermediate-frequency amplifier and passed through the second detector, to give the conventional video signal plus a frequency-modulated sound signal whose center frequency is the 4.5 megahertz difference between the two carrier frequencies. Abbreviated ICS system.

intercavernous sinuses [ANAT] Venous sinuses located on the median line of the dura mater, connecting the cavernous sinuses of each side.

intercellular [HISTOL] Of or pertaining to the region between cells.

intercellular cement [HISTOL] A substance bonding epithelial cells together.

intercellular plexus [HISTOL] A network of neuronal processes surrounding the cells in a sympathetic ganglion.

intercellular space [HISTOL] A space between adjacent cells.

intercellular substance [HISTOL] Tissue component that lies between cells.

intercentrum [VERT ZOO] A type of crescentic intervertebral structure between successive centra in certain reptilian and mammalian tails.

intercept [CRYSTAL] One of the distances cut off a crystal's reference axis by planes. [MAP] *See* altitude difference. [MATH] The point where a straight line crosses one of the axes of a cartesian coordinate system.

intercepting [COMMUN] In telephone practice, routing of a call placed to a disconnected or nonexisting telephone number, to an operator, or to a machine answering device.

intercepting sewer [CIV ENG] A sewer that receives flow from transverse sewers and conducts the water to a treatment plant or disposal point.

interception [COMMUN] Tapping or tuning in to a telephone or radio message not intended for the listener. [HYD] **1.** The process by which precipitation is caught and retained on vegetation or structures and subsequently evaporated without reaching the ground. **2.** That part of the precipitation intercepted by vegetation. [METEOROL] **1.** The loss of sunshine, a part of which may be intercepted by hills, trees, or tall buildings. **2.** The depletion of part of the solar spectrum by atmospheric gases and suspensoids; this commonly refers to the absorption of ultraviolet radiation by ozone and dust. [ORD] Meeting or interrupting the course of a moving vessel, aircraft, or missile.

intercept method [MET] A method for determining grain size or the quantity of a phase in a microstructure by measuring the number of grains or phase particles per unit length intersected by straight lines. [NAV] *See* St. Hilaire method.

interceptometer [ENG] A rain gage which is placed under trees or in foliage to determine the rainfall in that location; by comparing this catch with that from a rain gage set in the open, the amount of rainfall which has been intercepted by foliage is found.

interceptor [AERO ENG] A manned aircraft utilized for the identification or engagement of airborne objects.

intercept station [COMMUN] Provides service for subscribers whereby calls to disconnected stations or dead lines are either routed to an intercept operator for explanation, or the calling party receives a distinctive tone that informs him that he has made such a call.

intercept tape [COMMUN] A tape used for temporary storage of messages for trunk channels and tributary stations that are having equipment or circuit trouble.

intercept trunk [COMMUN] Trunk to which a call for a vacant number, a changed number, or a line out of order is connected for action by an operator.

interchange [CIV ENG] A junction of two or more highways at a number of separate levels so that traffic can pass from one highway to another without the crossing at grade of traffic streams. [ELEC] The current flowing into or out of a power system which is interconnected with one or more other power systems.

interchangeability [ENG] The ability to replace the components, parts, or equipment of one manufacturer with those of another, without losing function or suitability.

interchangeable lens [OPTICS] A lens which can be used in place of another, generally of different magnification.

interchange coefficient *See* exchange coefficient.

interchannel crosstalk [COMMUN] Crosstalk between channels in a multiplex system.

interclavicle [VERT ZOO] A membrane bone in front of the sternum and between the clavicles in monotremes and most reptiles.

intercloud discharge *See* cloud-to-cloud discharge.

intercolumnation [ARCH] Distance between columns, measured between the bottoms of shafts, just above the apophyge, and expressed in terms of the lower diameter of the column.

intercom *See* intercommunicating system.

intercommunicating porosity [MET] The type of porosity in a sintered metal powder compact that allows fluid to pass from pore to pore.

intercommunicating system Also known as intercom. [COMMUN] **1.** A telephone system providing direct communication between telephones on the same premises. **2.** A two-way communication system having a microphone and loudspeaker at each station and providing communication within a limited area.

intercommunication [PETRO ENG] Flow interconnection between the reservoir areas being drained by adjacent wells.

intercondenser [MECH ENG] A condenser between stages of a multistage steam jet pump.

interconnection [ELEC] A link between power systems enabling them to draw on one another's reserves in time of need and to take advantage of energy cost differentials resulting from such factors as load diversity, seasonal conditions, time-zone differences, and shared investment in larger generating units.

intercontinental ballistic missile [ORD] A missile flying a ballistic trajectory after guided powered flight, usually over ranges in excess of 4000 miles (6500 kilometers). Abbreviated ICBM.

intercontinental sea [GEOGR] A large body of salt water extending between two continents.

interconversion [COMMUN] Changing the representation of information from one code to another, as from six-bit to ASCII.

intercooler [MECH ENG] A heat exchanger for cooling fluid between stages of a multistage compressor with consequent saving in power.

intercostal [ANAT] Situated or occurring between adjacent ribs. [NAV ARCH] Situated or fitted between adjacent members of a ship's frame.

intercostal floor [NAV ARCH] A ship's floor constructed of a range of plates fitted between and clipped to longitudinal or side keelsons.

intercostal muscles [ANAT] Voluntary muscles between adjacent ribs.

intercostal nerve [ANAT] Any of the branches of the thoracic nerves in the intercostal spaces.

intercourse *See* coitus.

intercrescence [BIOL] A growing together of tissues.

intercropping [AGR] A form of multiple cropping in which two or more crops simultaneously occupy the same field.

intercrystalline corrosion [MET] Localized attack occurring along the crystal boundaries of a metal or alloy. Also known as intergranular corrosion.

intercycle [COMPUT SCI] A cycle of operation of a punched-card tabulator or other punched-card machine during which card feeding is stopped to permit calculation and printing of control totals or to effect a change in control.

interdendritic attack *See* interdendritic corrosion.

interdendritic corrosion [MET] Preferential corrosion of the metal immediately surrounding dendrites in unworked or slightly worked alloys caused by composition gradients. Also known as interdendritic attack.

interdiction [ORD] The prevention or destruction of, or interference with, enemy movements, communications, and lines of communication, as by gunfire, shelling, or bombing.

interdiction bombing [ORD] Bombing done for purposes of interdiction.

interdiction fire [ORD] Gunfire delivered in the process of interdiction; for example, firing on a specified place, as a rail yard, assembly area, crossroad, or the like, to prevent effective use of that area.

interdiffusion [PHYS CHEM] The self-mixing of two fluids, initially separated by a diaphragm.

interdigital magnetron [ELECTR] Magnetron having axial anode segments around the cathode, alternate segments being connected together at one end, remaining segments connected together at the opposite end.

interdigital structure [ELECTR] A structure in which the length of the region between two electrodes is increased by an interlocking-finger design for metallization of the electrodes. Also known as interdigitated structure.

interdigital transducer [ELECTR] Two interlocking comb-shaped metallic patterns applied to a piezoelectric substrate such as quartz or lithium niobate, used for converting microwave voltages to surface acoustic waves, or vice versa.

interdigitated structure *See* interdigital structure.

interelectrode capacitance [ELECTR] The capacitance between one electrode of an electron tube and the next electrode on the anode side. Also known as direct interelectrode capacitance.

interelectrode transit time [ELECTR] Time required for an electron to traverse the distance between the two electrodes.

interface [COMPUT SCI] **1.** Some form of electronic device that enables one piece of gear to communicate with or control

another. **2.** A device linking two otherwise incompatible devices, such as an editing terminal of one manufacturer to typesetter of another. [GEOPHYS] *See* seismic discontinuity. [PHYS CHEM] The boundary between any two phases: among the three phases (gas, liquid, and solid), there are five types of interfaces: gas-liquid, gas-solid, liquid-liquid, liquid-solid, and solid-solid. [SCI TECH] A shared boundary; it may be a piece of hardware used between two pieces of equipment, a portion of computer storage accessed by two or more programs, or a surface that forms the boundary between two types of materials.

interface connection *See* feedthrough.

interface control module [COMPUT SCI] Relocatable modularized compiler allowing for efficient operation and easy maintenance.

interface mixing [PHYS CHEM] The mixing of two immiscible or partially miscible liquids at the plane of contact (interface).

interface resistance [THERMO] **1.** Impairment of heat flow caused by the imperfect contact between two materials at an interface. **2.** Quantitatively, the temperature difference across the interface divided by the heat flux through it.

interfacial angle [CRYSTAL] The angle between two crystal faces.

interfacial energy [PHYS] The free energy of the surfaces at an interface, resulting from differences in the tendencies of each phase to attract its own molecules; equal to the surface tension. Also known as surface energy.

interfacial force *See* interfacial tension.

interfacial polarization [ELEC] *See* space-charge polarization. [OPTICS] Polarization of light by reflection from the surface of a dielectric at Brewster's angle.

interfacial tension [PHYS] A kind of surface tension, occurring at the interface between two liquids. Also known as interfacial force.

interfacility transfer trunk [COMMUN] Trunk interconnecting switching centers of two different facilities.

interfacing [TEXT] A woven or nonwoven fabric used between the outer fabric and lining to reinforce or stiffen a feature or detail on a garment.

interference [COMMUN] Any undesired energy that tends to interfere with the reception of desired signals. Also known as electrical interference; radio interference. [PHYS] The variation with distance or time of the amplitude of a wave which results from the superposition (algebraic or vector addition) of two or more waves having the same, or nearly the same, frequency. Also known as wave interference.

interference analyzer [ELECTR] An instrument that discloses the frequency and amplitude of unwanted input.

interference blanker [ELECTR] Device that permits simultaneous operation of two or more pieces of radio or radar equipment without confusion of intelligence, or that suppresses undesired signals when used with a single receiver.

interference colors [OPTICS] Colors formed by interference of a beam of light passed through a thin section of a mineral placed in a polarizing microscope.

interference fading [COMMUN] Fading of the signal produced by different wave components traveling slightly different paths in arriving at the receiver.

interference figure [OPTICS] A pattern of light and dark areas observed with a conoscope when a birefringent crystal is placed in a convergent beam of linearly polarized light.

interference filter [ELECTR] **1.** A filter used to attenuate artificial interference signals entering a receiver through its power line. **2.** A filter used to attenuate unwanted carrier-frequency signals in the tuned circuits of a receiver. [OPTICS] An optical filter in which the wavelengths that are not transmitted are removed by interference phenomena rather then by absorbtion or scattering.

interference fit [DES ENG] A fit wherein one of the mating parts of an assembly is forced into a space provided by the other part in such a way that the condition of maximum metal overlap is achieved.

interference fringes [OPTICS] A series of light and dark bands produced by interference of light waves.

interference microscope [OPTICS] A microscope used for visualizing and measuring differences in phase or optical paths in transparent or reflecting specimens; it differs from the phase contrast microscope in that the incident and diffracted waves are not separated, but interference is produced between the transmitted wave and another wave which originates from the same source.

interference pattern [ELECTR] Pattern produced on a radarscope by interference signals. [PHYS] Resulting space distribution of pressure, particle density, particle velocity, energy density, or energy flux when progressive waves of the same frequency and kind are superimposed.

interference phenomenon [VIROL] Inhibition by a virus of the simultaneous infection of host cells by some other virus.

interference prediction [ELECTR] Process of estimating the interference level of a particular equipment as a function of its future electromagnetic environment.

interference reduction [ELECTR] Reduction of interference from such causes as power lines and equipment, radio transmitters, and lightning, usually through the use of electric filters. Also known as interference suppression.

interference region [COMMUN] That region in space in which interference between wave trains occurs; in microwave propagation, it refers to the region bounded by the ray path and the surface of the earth which is above the radio horizon.

interference rejection [ELECTR] Use of a filter to reject (to bypass to ground) unwanted input.

interference ripple mark [GEOL] A pattern resulting from two sets of symmetrical ripples formed by waves crossing at right angles.

interference source suppression [ELECTR] Techniques applied at or near the source to reduce its emission of undesired signals.

interference spectrum [ELECTR] Frequency distribution of the jamming interference in the propagation medium external to the receiver. [SPECT] A spectrum that results from interference of light, as in a very thin film.

interference suppression *See* interference reduction.

interference test [PETRO ENG] Test of pressure interrelationships (interference) between wells serving the same formation.

interference time [IND ENG] Idle machine time occurring when a machine operator, assigned to two or more semiautomatic machines, is unable to service a machine requiring attention.

interference wave [COMMUN] A radio wave reflected by the lower atmosphere which produces an interference pattern when combined with the direct wave.

interference wiggler *See* undulator.

interferogram [GRAPHICS] A photograph of a shock wave or other fluid flow, produced with the aid of an interferometer, in which the displacement of interference fringes is proportional to the density change across the fluid.

interferometer [OPTICS] An instrument in which light from a source is split into two or more beams, which are subsequently reunited after traveling over different paths and display interference.

interferometer systems [ELECTR] Method of determining the position of a target in azimuth by using an interferometer to compare the phases of signals at the output terminals of a pair of antennas receiving a common signal from a distant source.

interferometry [OPTICS] The design and use of optical interferometers; uses include precise measurement of wavelength, measurement of very small distances and thicknesses, study of hyperfine structure of spectral lines, precise measurement of indices of refraction, and determination of separations of binary stars and diameters of very large stars.

interferon [BIOCHEM] A protein produced by intact animal cells when infected with viruses; acts to inhibit viral reproduction and to induce resistance in host cells.

interferonogen [VIROL] A preparation made of inactivated virus particles used as an inoculant to stimulate formation of interferon.

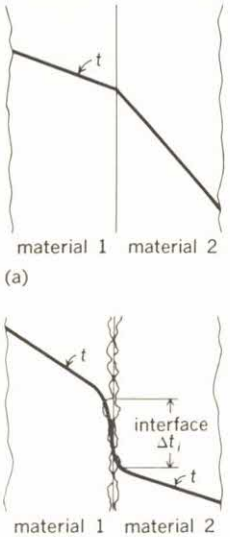
interfix [COMPUT SCI] A technique for describing relationships of key words in an item or document in a way which prevents crosstalk from causing false retrievals when very specific entries are made.

interflow [HYD] The water, derived from precipitation, that infiltrates the soil surface and then moves laterally through the upper layers of soil above the water table until it reaches a stream channel or returns to the surface at some point downslope from its point of infiltration.

interfoliaceous [BOT] Between a pair of leaves, such as between those which are opposite or verticillate.

intergalactic matter [ASTRON] The material between the galaxies.

INTERFACE RESISTANCE



Distribution of temperature t through composite wall. *(a)* With perfect interface contact. *(b)* For typical actual surfaces. Δt_i is temperature difference across interface. Interface resistance equals Δt_i divided by heat flux.

INTERFERENCE FRINGES

Interference fringes formed with Fresnel biprism and mercury-arc light source.

intergelisol *See* pereletok.

intergenic crossing-over [MOL BIO] Recombination between distinct genes or cistrons.

intergenic suppression [GEN] The restoration of a suppressed function or character by a second mutation that is located in a different gene than the original or first mutation.

interglacial [GEOL] Pertaining to or formed during a period of geologic time between two successive glacial epochs or between two glacial stages.

intergranular [SCI TECH] Occurring between grains.

intergranular corrosion *See* intercrystalline corrosion.

intergranular fracture [MET] Propagation of a crack along the grain boundaries of a metal or alloy.

intergranular pressure *See* effective stress.

intergrowth [MINERAL] A state of interlocking of different mineral crystals because of simultaneous crystallization.

interhalogen [INORG CHEM] Any of the compounds formed from the elements of the halogen family that react with each other to form a series of binary compounds; for example, iodine monofluoride.

interhemispheric integration [PSYCH] The process by which information is exchanged between the cerebral hemispheres.

interionic attraction [PHYS CHEM] The coulomb attraction between ions of opposite sign in a solution.

interior angle [MATH] **1.** An angle between two adjacent sides of a polygon that lies within the polygon. **2.** For a line (called the transversal) that intersects two other lines, an angle between the transversal and one of the two lines that lies within the space between the two lines.

interior ballistics [MECH] The science concerned with the combustion of powder, development of pressure, and movement of a projectile in the bore of a gun.

interior distribution [ELEC] Distribution of electric power within a building or plant.

interior label [COMPUT SCI] A label attached to the data that it identifies.

interior of a set [MATH] The set of all interior points of a set in a topological space.

interior point [MATH] A point p in a topological space is an interior point of a set S if there is some open neighborhood of p which is contained in S.

interkinesis *See* interphase.

interlabium [INV ZOO] A small lobe situated between the lips in certain nematodes.

interlace [COMPUT SCI] To assign successive memory location numbers to physically separated locations on a storage tape or magnetic drum of a computer, usually to reduce access time.

interlaced scanning [ELECTR] A scanning process in which the distance from center to center of successively scanned lines is two or more times the nominal line width, so that adjacent lines belong to different fields. Also known as line interlace.

interlace operation [COMPUT SCI] System of computer operation where data can be read out or copied into memory without interfering with the other activities of the computer.

interlacing arches [ARCH] Arches with intersecting curved moldings that appear to be interlaced.

interlaminated [SCI TECH] **1.** Having insertions between laminae. **2.** Arranged in alternate laminae.

interleave [COMPUT SCI] **1.** To alternate parts of one sequence with parts of one or more other sequences in a cyclic fashion such that each sequence retains its identity. **2.** To arrange the members of a sequence of memory addresses in different memory modules of a computer system, in order to reduce the time taken to access the sequence.

interleaved windings [ELEC] An arrangement of winding coils around a transformer core in which the coils are wound in the form of a disk, with a group of disks for the low-voltage windings stacked alternately with a group of disks for the high-voltage windings.

interlobate moraine *See* intermediate moraine.

interlock [COMPUT SCI] **1.** A mechanism, implemented in hardware or software, to coordinate the activity of two or more processes within a computing system, and to ensure that one process has reached a suitable state such that the other may proceed. **2.** *See* deadlock. [ENG] A switch or other device that prevents activation of a piece of equipment when a protective door is open or some other hazard exists.

interlocking cutter [DES ENG] A milling cutter assembly consisting of two mating sections with uniform or alternate overlapping teeth.

interlocking ring structures [ASTRON] Two lunar craters that overlap, but both have their walls intact, indicating that they were formed at the same time.

interlock relay [ELEC] A relay composed of two or more coils, each with its own armature and associated contacts, so arranged that movement of one armature or the energizing of its coil is dependent on the position of the other armature.

interlock switch [ELEC] A switch designed for mounting on a door, drawer, or cover so that it opens automatically when the door or other part is opened.

interlude [COMPUT SCI] A small routine or program which is designed to carry out minor preliminary calculations or housekeeping operations before the main routine begins to operate, and which can usually be overwritten after it has performed its function.

intermediary metabolism [BIOCHEM] Intermediate steps in the chemical synthesis and breakdown of foodstuffs within body cells.

intermediate [CHEM] A precursor to a desired product; ethylene is an intermediate for polyethylene, and ethane is an intermediate for ethylene. [GRAPHICS] That print which is used as a master for further reproduction.

intermediate annealing [MET] Softening of a metal by heat treatment at one or more stages during cold working and before final treatment.

intermediate control change [COMPUT SCI] A change of function that is of average or relatively moderate magnitude of importance such as the printing of intermediate totals by a punched-card tabulator, resulting from a change in intermediate control data between one card and the next.

intermediate control data [COMPUT SCI] Control data at a level which is neither the most nor the least significant, or which is used to sort records into groups that are neither the largest nor the smallest used; for example, if control data are used to specify state, town, and street, then the data specifying town would be intermediate control data.

intermediate distributing frame [ELEC] Frame in a local telephone central office, the primary purpose of which is to cross-connect the subscriber line multiple to the subscriber line circuit; in a private exchange, the intermediate distributing frame is for similar purposes.

intermediate flux [MET] A flux consisting of organic halide compounds whose residues are decomposed by the heat of soldering; fluxing action approaches that of corrosive flux.

intermediate frequency [ELECTR] The frequency produced by combining the received signal with that of the local oscillator in a superheterodyne receiver. Abbreviated i-f.

intermediate-frequency amplifier [ELECTR] The section of a superheterodyne receiver that amplifies signals after they have been converted to the fixed intermediate-frequency value by the frequency converter. Abbreviated i-f amplifier.

intermediate-frequency jamming [ELECTR] Form of continuous wave jamming that is accomplished by transmitting two continuous wave signals separated by a frequency equal to the center frequency of the radar receiver intermediate-frequency amplifier.

intermediate-frequency response ratio [ELECTR] In a superheterodyne receiver, the ratio of the intermediate-frequency signal input at the antenna to the desired signal input for identical outputs. Also known as intermediate-interference ratio.

intermediate-frequency signal [ELECTR] A modulated or continuous-wave signal whose frequency is the intermediate-frequency value of a superheterodyne receiver and is produced by frequency conversion before demodulation.

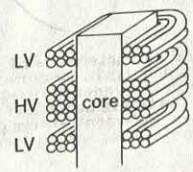
intermediate-frequency stage [ELECTR] One of the stages in the intermediate-frequency amplifier of a superheterodyne receiver.

intermediate-frequency strip [ELECTR] A receiver subassembly consisting of the intermediate-frequency amplifier stages, installed or replaced as a unit.

intermediate-frequency transformer [ELECTR] The transformer used at the input and output of each intermediate-frequency amplifier stage in a superheterodyne receiver for coupling purposes and to provide selectivity. Abbreviated i-f transformer.

intermediate ganglion [ANAT] Any of certain small groups

INTERLEAVED WINDINGS



Interleaved windings arrangement. LV = low voltage, HV = high voltage.

of nerve cells found along communicating branches of spinal nerves.

intermediate gear [MECH ENG] An idler gear interposed between a driver and driven gear.

intermediate haulage *See* relay haulage.

intermediate haulage conveyor [MIN ENG] A type of conveyor, usually 500 to 3000 feet (150 to 900 meters) in length, that transports material between the gathering conveyor and the main haulage conveyor.

intermediate horizon [ELECTROMAG] Screening object (hill, mountain, ridge, building, and so on) similar to the radar horizon, but not the most distant.

intermediate host [BIOL] The host in which a parasite multiplies asexually.

intermediate-infrared radiation [ELECTROMAG] Infrared radiation having a wavelength between about 2.5 micrometers and about 50 micrometers; this range includes most molecular vibrations.

intermediate-interference ratio *See* intermediate-frequency response ratio.

intermediate ion [METEOROL] An atmospheric ion of size and mobility intermediate between the small ion and the large ion.

intermediate layer *See* sima.

intermediate lobe [ANAT] The intermediate portion of the adenohypophysis.

intermediate memory storage [COMPUT SCI] An electronic device for holding working figures temporarily until needed and for releasing final figures to the output.

intermediate moraine [GEOL] A type of lateral moraine formed at the junction of two adjacent glacial lobes. Also known as interlobate moraine.

intermediate neutron [NUCLEO] A neutron having energy in a range from about 100 to 100,000 electronvolts.

intermediate phase [MET] In an alloy system, a distinct phase whose composition ranges do not extend to any of the pure constituents of the system.

intermediate-range ballistic missile [ORD] A missile flying a ballistic trajectory after guided powered flight and having a range of about 200 to 1500 miles (300 to 2500 kilometers). Abbreviated IRBM.

intermediate reactor [NUCLEO] A reactor in which the chain reaction is sustained mainly by intermediate neutrons.

intermediate repeater [ELECTR] Repeater for use in a trunk or line at a point other than an end.

intermediate result [COMPUT SCI] A quantity or value derived from an operation performed in the course of a program or subroutine which is itself used as an operand in further operations.

intermediate state [CRYO] A state of partial superconductivity that occurs when a magnetic field of approximate strength is applied to a superconducting material below its critical temperature. [QUANT MECH] A state through which a system may pass during transition from an initial state to a final state.

intermediate storage [COMPUT SCI] The portion of the computer storage facilities that usually stores information in the processing stage.

intermediate total [COMPUT SCI] A sum that is produced when there is a change in the value of control data at a level that is neither the most nor the least significant.

intermediate trunk distributing frame [ELEC] A frame which mounts terminal blocks for connecting linefinders and first selectors.

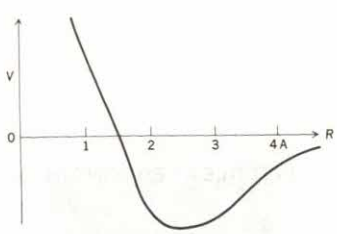
intermediate value theorem [MATH] If $f(x)$ is a continuous real-valued function on the closed interval from a to b, then, for any y between the least upper bound and the greatest lower bound of the values of f, there is an x between a and b with $f(x) = y$.

intermediate vector boson [PARTIC PHYS] One of the hypothetical particles with spin quantum number 1 and negative parity, which would interact with weak currents and mediate the weak interactions in the same way that photons interact with electromagnetic currents and mediate the electromagnetic interactions.

intermedin [BIOCHEM] A hormonal substance produced by the intermediate portion of the hypophysis of certain animal species which influences pigmentation; similar to melanocyte-stimulating hormone in humans.

intermembranous ossification [HISTOL] Ossification within connective tissue with no prior formation of cartilage.

INTERMOLECULAR FORCE



General characteristics of intermolecular force curve. V = potential energy between two interacting molecules; R = distance between centers of two molecules; A = angstroms.

intermeningeal [ANAT] Between any two of the three meninges covering the brain and spinal cord.

intermenstrual [PHYSIO] Between periods of menstruation.

intermenstrual flow *See* metrorrhagia.

intermetallic compound *See* electron compound.

intermetameric [ANAT] Between adjacent metameres.

intermetatarsal [ANAT] Between adjacent bones of the metatarsus.

intermitotic [CYTOL] Of or pertaining to a stage of the cell cycle between two successive mitoses.

intermittent current [ELEC] A unidirectional current that flows and ceases to flow at irregular or regular intervals. [OCEANOGR] A unidirectional current interrupted at intervals.

intermittent defect [ENG] A defect that is not continuously present.

intermittent-duty rating [ENG] An output rating based on operation of a device for specified intervals of time rather than continuous duty. Also known as intermittent rating.

intermittent firing [MECH ENG] Cyclic firing whereby fuel and air are burned in a furnace for frequent short time periods.

intermittent gas lift [PETRO ENG] A gas-drive oil reservoir that is valved and timed for intermittent activity.

intermittent light [NAV] In marine operations, a light having equal periods of light and darkness.

intermittent operation [ENG] Condition in which a device operates normally for a time, then becomes defective for a time, with the process repeating itself at regular or irregular intervals.

intermittent quick flashing light [NAV] In marine operations, a light showing flashes for several seconds, followed by an equal period of darkness.

intermittent rating *See* intermittent-duty rating.

intermittent scanning [ELECTR] Scans of an antenna beam at irregular intervals to increase difficulty of detection by intercept receivers.

intermittent spring [HYD] A spring that ceases flow after a long dry spell but flows again after heavy rains.

intermittent stream [HYD] A stream which carries water a considerable portion of the time, but which ceases to flow occasionally or seasonally because bed seepage and evapotranspiration exceed the available water supply.

intermittent weld [MET] A weld in which the continuity is broken by recurring unwelded spaces.

intermodulation [ELECTR] Modulation of the components of a complex wave by each other, producing new waves whose frequencies are equal to the sums and differences of integral multiples of the component frequencies of the original complex wave.

intermodulation distortion [ELECTR] Nonlinear distortion characterized by the appearance of output frequencies equal to the sums and differences of integral multiples of the input frequency components; harmonic components also present in the output are usually not included as part of the intermodulation distortion.

intermodulation interference [ELECTR] Interference that occurs when the signals from two undesired stations differ by exactly the intermediate-frequency value of a superheterodyne receiver, and both signals are able to pass through the preselector due to poor selectivity.

intermolecular force [PHYS CHEM] The force between two molecules; it is that negative gradient of the potential energy between the interacting molecules, if energy is a function of the distance between the centers of the molecules.

intermontane [GEOL] Located between or surrounded by mountains.

intermontane glacier [GEOL] A glacier that is formed by the confluence of several valley glaciers and occupies a trough between separate ranges of mountains.

intermontane trough [GEOL] **1.** A subsiding area in an island arc of the ocean, lying between the stable elements of a region. **2.** A basinlike area between mountains.

intermural [ANAT] Between the walls of an organ.

intermuscular [ANAT] Between muscles.

intermuscular hernia *See* interstitial hernia.

intermuscular septum [ANAT] A connective-tissue partition between muscles.

internal acoustic meatus [ANAT] An opening in the hard portion of the temporal bone for passage of the facial and acoustic nerves and internal auditory vessels.

internal ankle height [ANTHRO] The measure of the vertical distance from the lower end of the tibia to the floor.

internal arithmetic [COMPUT SCI] Arithmetic operations carried out in a computer's arithmetic unit within the central processing unit.

internal brake [MECH ENG] A friction brake in which an internal shoe follows the inner surface of the rotating brake drum, wedging itself between the drum and the point at which it is anchored; used in motor vehicles.

internal broaching [MECH ENG] The removal of material on internal surfaces, by means of a tool with teeth of progressively increasing size moving in a straight line or other prescribed path over the surface, other than for the origination of a hole.

internal capsule [ANAT] A layer of nerve fibers on the outer side of the thalamus and caudate nucleus, which it separates from the lenticular nucleus.

internal carotid [ANAT] A main division of the common carotid artery, distributing blood through three sets of branches to the cerebrum, eye, forehead, nose, internal ear, trigeminal nerve, dura mater, and hypophysis.

internal carotid nerve [ANAT] A sympathetic nerve which forms networks of branches around the internal carotid artery and its branches.

internal cast *See* steinkern.

internal combustion engine [MECH ENG] A prime mover in which the fuel is burned within the engine and the products of combustion serve as the thermodynamic fluid, as with gasoline and diesel engines.

internal conversion [NUC PHYS] A nuclear de-excitation process in which energy is transmitted directly from an excited nucleus to an orbital electron, causing ejection of that electron from the atom.

internal conversion coefficient *See* conversion coefficient.

internal cycle time [COMPUT SCI] The time required to change the information in a single register of a computer, usually a fraction of the cycle time of the main memory. Also known as clock time.

internal diffusion [CHEM ENG] The diffusion of liquid or gaseous reactants to the innermost pore depths of an adsorbent-base catalyst, necessary for full catalytic effect.

internal drift current [OCEANOGR] Motion in an underlying layer of water caused by shearing stresses and friction created by current in a top layer that has different density.

internal-drum laser scanning [GRAPHICS] A method for the direct exposure of printing plates in which a laser beam is swept across a plate that is placed on the inside of a stationary drum by a rotating mirror inclined at an angle of 45° to the axis of the drum; the beam is modulated by video signals from a similar reading system or digital signals from a computer.

internal ear *See* inner ear.

internal elastic membrane [HISTOL] A sheet of elastin found between the tunica intima and the tunica media in medium-and small-caliber arteries.

internal energy [THERMO] A characteristic property of the state of a thermodynamic system, introduced in the first law of thermodynamics; it includes intrinsic energies of individual molecules, kinetic energies of internal motions, and contributions from interactions between molecules, but excludes the potential or kinetic energy of the system as a whole; it is sometimes erroneously referred to as heat energy.

internal erosion [GEOL] Erosion effected within a compacting sediment by movement of water through the larger pores.

internal fertilization [PHYSIO] Fertilization of the egg within the body of the female.

internal fistula [ANAT] A fistula which has no opening through the skin.

internal floating-head exchanger [MECH ENG] Tube-and-shell heat exchanger in which the tube sheet (support for tubes) at one end of the tube bundle is free to move.

internal force [MECH] A force exerted by one part of a system on another.

internal friction [FL MECH] *See* viscosity. [MECH] Conversion of mechanical strain energy to heat within a material subjected to fluctuating stress.

internal furnace [MECH ENG] A boiler furnace having a firebox within a water-cooled heating surface.

internal gas drive [PETRO ENG] A primary oil recovery process in which oil is displaced from the reservoir by the expansion of the gas originally dissolved in the liquid. Also known as dissolved-gas drive; gas depletion drive; solution gas drive.

internal gear [DES ENG] An annular gear having teeth on the inner surface of its rim.

internal granular layer [HISTOL] The fourth layer of the cerebral cortex.

internal grinder [MECH ENG] A machine designed for grinding the surfaces of holes.

internal hemorrhage [MED] Bleeding within a body cavity or organ that is concealed from an observer.

internal hernia [MED] A hernia of intraabdominal contents occurring within the abdominal cavity.

internal hydrocephaly *See* obstructive hydrocephaly.

internal iliac artery [ANAT] The medial terminal division of the common iliac artery.

internalization [PSYCH] A mental mechanism operating outside of and beyond conscious awareness by which certain external attributes, attitudes, or standards are taken within oneself.

internal loss *See* loss.

internally fired boiler [MECH ENG] A fire-tube boiler containing an internal furnace which is water-cooled.

internally stored program [COMPUT SCI] A sequence of instructions, stored inside the computer in the same storage facilities as the computer data, as opposed to external storage on tape, disk, drum, or cards.

internal memory *See* internal storage.

internal mix atomizer [MECH ENG] A type of pneumatic atomizer in which gas and liquid are mixed prior to the gas expansion through the nozzle.

internal oxidation [MET] The subsurface oxidation of components of an alloy due to oxygen diffusion into the metal.

internal phase *See* disperse phase.

internal photoelectric effect [SOLID STATE] A process in which the absorption of a photon in a semiconductor results in the excitation of an electron from the valence band to the conduction band.

internal pressure *See* intrinsic pressure.

internal reflectance spectroscopy *See* attenuated total reflectance.

internal resistance [ELEC] The resistance within a voltage source, such as an electric cell or generator.

internal respiration [PHYSIO] The gas exchange which occurs between the blood and tissues of an organism.

internal secretion [PHYSIO] A secreted substance that is absorbed directly into the blood.

internal sedimentation [GEOL] Accumulation of clastic or chemical sediments derived from the surface of, or within, a more or less consolidated carbonate sediment (mud or silt); deposited in secondary cavities formed in the host rock (after its deposition) by bending of laminae or by internal erosion or solution.

internal sorting [COMPUT SCI] The sorting of a list of items by a computer in which the entire list can be brought into the main computer memory and sorted in memory.

internal spring safety relief valve [ENG] A spring-loaded valve with a portion of the operating mechanism located inside the pressure vessel.

internal standard [SPECT] The principal line in spectrum analysis by the logarithmic sector method, a quantitative spectroscopy procedure.

internal storage [COMPUT SCI] The total memory or storage that is accessible automatically to a computer without human intervention. Also known as internal memory.

internal storage capacity [COMPUT SCI] The quantity of data that can be retained simultaneously in internal storage.

internal stress [MECH] A stress system within a solid that is not dependent on external forces. Also known as residual stress.

internal thread [DES ENG] A screw thread cut on the inner surface of a hollow cylinder.

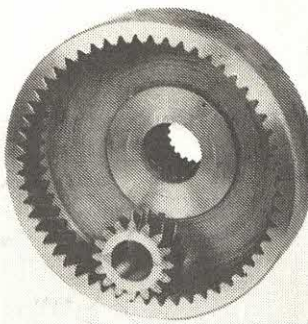
internal vibrator [MECH ENG] A vibrating device which is drawn vertically through placed concrete to achieve proper consolidation.

internal wave [FL MECH] A wave motion of a stably stratified fluid in which the maximum vertical motion takes place below the surface of the fluid.

internal work [IND ENG] Manual work done by a machine operator while the machine is automatically operating. Also known as fill-up work; inside work. [THERMO] The work done in separating the particles composing a system against their forces of mutual attraction.

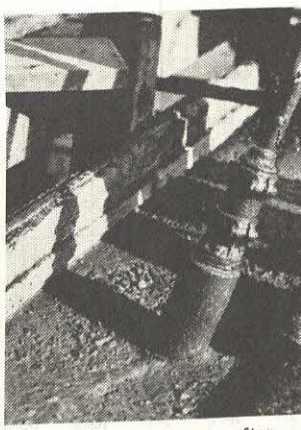
international ampere [ELEC] The current that, when flowing through a solution of silver nitrate in water, deposits silver at

INTERNAL GEAR



A helical internal gear and pinio
(Fellows Corp.)

INTERNAL VIBRATOR



Appearance of concrete after internal vibrator has consolidate it; vibrator appears on the right.

a rate of 0.001118 gram per second; it has been superseded by the ampere as a unit of current, and is equal to approximately 0.999850 ampere.

international analysis code [METEOROL] An internationally recognized code for communicating details of synoptic chart analyses. Abbreviated IAC.

international angstrom [PHYS] A unit of length, equal to 1/6438.4696 of the wavelength of the red cadmium line in dry air at standard atmospheric pressure, at a temperature of 15°C containing 0.03% by volume of carbon dioxide; equal to 1.0000002 angstroms. Abbreviated IA.

international atomic time [HOROL] Time based on atomic clocks operating in conformity with the definition of the second as the International System unit of time. Abbreviated IAT.

international broadcasting [COMMUN] Radio broadcasting for public entertainment between different countries, on frequency bands between 5950 and 21, 750 kilohertz, assigned by international agreement.

international cable code *See* Morse cable code.

international call sign [COMMUN] Call sign assigned according to the provisions of the International Telecommunication Union to identify a radio station; the nationality of the radio station is identified by the first or the first two characters.

international candle [OPTICS] A unit of luminous intensity, now replaced by the candela; as defined in the United States, it was a specified fraction of the average luminous intensity radiated in a horizontal direction by a group of 45 carbon-filament lamps preserved at the National Bureau of Standards when the lamps were operated at a specified voltage. Also known as standard candle.

international code signal [COMMUN] Code adopted by many nations for international communications; it uses combinations of letters in lieu of words, phrases, and sentences; the letters are transmitted by the hoisting of international alphabet flags or by transmitting their dot and dash equivalents in the international Morse code. Also known as international signal code.

international control frequency bands [COMMUN] Radio-frequency bands assigned in the United States to links between stations used for international communication and their associated control centers.

international control station [COMMUN] Fixed station in the fixed public control service associated directly with the international fixed public radio communications service.

International Critical Tables [PHYS] A seven-volume series of tables of numerical data in physics, chemistry, and technology, published in 1926–1930, prepared by experts who gave the "best" value which could be derived from all the data available at the time. Abbreviated ICT.

international date line [ASTRON] A jagged arbitrary line, roughly equal to the 180° meridian, where a date change occurs; if the line is crossed from east to west a day is skipped, if from west to east the same day is repeated.

international ellipsoid of reference [GEOD] The reference ellipsoid, based upon the Hayford spheroid, the semimajor axis of which is 6,378,388 meters; the flattening or ellipticity equals 1/297; by computation the semiminor axis is 6,356,911.946 meters. Also known as international spheroid.

international fixed public radio communications service [COMMUN] Fixed service, the stations of which are open to public correspondence; this service is intended to provide radio communications between the United States and its territories and foreign or overseas points.

International Geophysical Year [GEOPHYS] An internationally accepted period, extending from July 1957 through December 1958, for concentrated and coordinated geophysical exploration, primarily of the solar and terrestrial atmospheres. Abbreviated IGY.

international gravity formula [GEOD] A formula for the acceleration of gravity at the earth's surface, stating that the acceleration of gravity is equal to $9.780318[1 + 5.3024 \times 10^{-3} \sin^2 \phi - 5.8 \times 10^{-6} \sin^2 2\phi]$ m/s^2, where ϕ is the latitude.

international henry [ELECTROMAG] A unit of electrical inductance which has been superseded by the henry, and is equal to 1.00049 henry. Also known as quadrant; secohm.

International Ice Patrol [OCEANOGR] An organization established in 1914 to protect shipping by providing iceberg warnings.

international index numbers [METEOROL] A system of designating meteorological observing stations by number, established and administered by the World Meteorological Organization; under this scheme, specified areas of the world are divided into blocks, each bearing a two-number designator; stations within each block have an additional unique three-number designator, the numbers generally increasing from east to west and from south to north.

international Morse code *See* continental code.

international nautical mile [NAV] A unit of length equal to 1852 meters.

international ohm [ELEC] A unit of resistance, equal to that of a column of mercury of uniform cross section that has a length of 160.3 centimeters and a mass of 14.4521 grams at the temperature of melting ice; it has been superseded by the ohm, and is equal to 1.00049 ohms.

International Polar Year [METEOROL] The years 1882 and 1932, during which participating nations undertook increased observations of geophysical phenomena in polar (mostly arctic) regions; the observations were largely meteorological, but included such as auroral and magnetic studies.

international practical temperature scale [THERMO] Temperature scale based on six points; the water triple point, the boiling points of oxygen, water, sulfur, and the solidification points of silver and gold; designated as °C, degrees Celsius, or t_{int}.

International Quiet Sun Year [GEOPHYS] An international cooperative effort, similar to the International Geophysical Year and extending through 1964 and 1965, to study the sun and its terrestrial and planetary effects during the minimum of the 11-year cycle of solar activity. Abbreviated IQSY. Also known as the International Year of the Quiet Sun.

international radio silence [COMMUN] Three-minute periods of radio silence, on the frequency of 500 kilohertz only, commencing 15 and 45 minutes after each hour, during which all marine radio stations must listen on that frequency for distress signals of ships and aircraft.

international rules of the road [NAV] In marine operations, international regulations for preventing collisions at sea.

international signal code *See* international code signal.

international spheroid *See* international ellipsoid of reference.

international standard annealed copper [MET] An annealed pure copper having a resistivity of 1.7241 microhm-centimeter at 20°C, which is taken as 100% conductivity.

international synoptic code [METEOROL] A synoptic code approved by the World Meteorological Organization in which the observable meteorological elements are encoded and transmitted in words of five numerical digits length.

international system of electrical units [ELEC] System of electrical units based on agreed fundamental units for the ohm, ampere, centimeter, and second, in use between 1893 and 1947, inclusive; in 1948, the Giorgi, or meter-kilogram-second-absolute system, was adopted for international use.

International System of Units [PHYS] A system of physical units in which the fundamental quantities are length, time, mass, electric current, temperature, luminous intensity, and amount of substance, and the corresponding units are the meter, second, kilogram, ampere, kelvin, candela, and mole; it has been given official status and recommended for universal use by the General Conference on Weights and Measures. Also known (in French) as Système International d'Unités. Abbreviated SI (in all languages).

international table British thermal unit *See* British thermal unit.

international table calorie *See* calorie

international telecommunications service [COMMUN] Telecommunications service between offices or stations of different states, or between mobile stations which are not in the same state, or are subject to different states.

international telegraph alphabet *See* CCIT2 code.

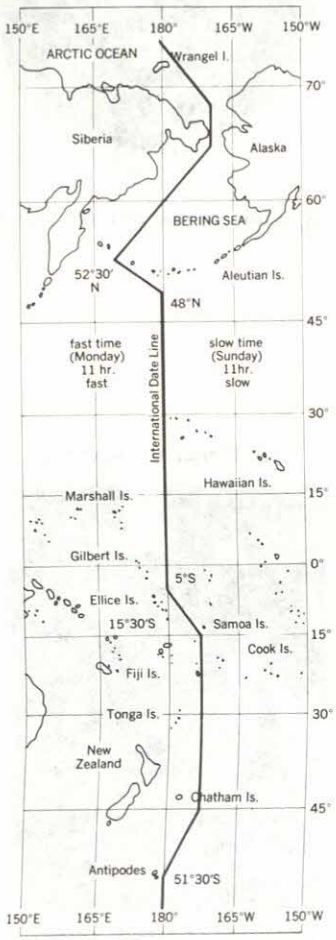
International Telegraphic Consultative Committee code 2 *See* CCIT2 code.

international thread [DES ENG] A standardized metric system in which the pitch and diameter of the thread are related, with the thread having a rounded root and flat crest.

international unit [BIOL] A quantity of a vitamin, hormone, antibiotic, or other biological that produces a specific internationally accepted biological effect.

international volt [ELEC] A unit of potential difference or electromotive force, equal to 1/1.01858 of the electromotive force of a Weston cell at 20°C; it has been superseded by the volt, and is equal to 1.00034 volts.

INTERNATIONAL DATE LINE



Map showing the international date line.

International Year of the Quiet Sun *See* International Quiet Sun Year.

internides [GEOL] The internal part of an orogenic belt, farthest away from the craton, which is commonly the site of a eugeosyncline during its early phases and is later subjected to plastic folding and plutonism. Also known as primary arc.

internode [BIOL] The interval between two nodes, as on a stem or along a nerve fiber.

internuclear [SCI TECH] Located between nuclei.

internuclear distance [PHYS CHEM] The distance between two nuclei in a molecule.

internuncial neuron [HISTOL] A neuron located in the spinal cord which connects motor and sensory neurons.

interoceptor [PHYSIO] A sense receptor located in visceral organs and yielding diffuse sensations.

interocular diameter [ANTHRO] The measure of the distance between the internal canthi.

interocular distance [ANAT] The distance between the centers of rotation of the human eyes.

interoffice trunk [COMMUN] A direct trunk between local central offices in the same exchange.

interorbital [ANAT] Between the orbits of the eyes.

interparietal [ANAT] Between the parietal bones.

interparietal hernia *See* interstitial hernia.

interpass temperature [MET] In a multiple-pass weld, the lowest temperature of the deposited weld metal before the next run is started.

interpenetration twin [CRYSTAL] Two or more individual crystals so twinned that they appear to have grown through one another. Also known as penetration twin.

interphase [CYTOL] Also known as interkinesis. **1.** The period between succeeding mitotic divisions. **2.** The period between the first and second meiotic divisions in those organisms where nuclei are reconstituted at the end of the first division.

interphase reactor [ELEC] A type of current-equalizing reactor that is connected between two parallel silicon controlled rectifier converters and provides balanced system operation when both converters are conducting by acting as an inductive voltage divider.

interphase transformer [ELECTR] Autotransformer or a set of mutually coupled reactors used in conjunction with three-phase rectifier transformers to modify current relations in the rectifier system to increase the number of anodes of different phase relations which carry current at any instant.

interphone [COMMUN] An intercommunication system using headphones and microphones for communication between adjoining or nearby studios or offices, or between crew locations on an aircraft, vessel, or tank or other vehicle. Also known as talk-back circuit.

interplanetary dust [ASTRON] Dust particles between the planets.

interplanetary flight [AERO ENG] Flight through the region of space between the planets, under the primary gravitational influence of the sun.

interplanetary magnetic field [ASTROPHYS] The magnetic field between the planets.

interplanetary medium [ASTRON] That part of space containing electromagnetic radiation, dust, gas, and plasma between the planets.

interplanetary probe [AERO ENG] An instrumented spacecraft that flies through the region of space between the planets.

interplanetary space [ASTRON] The region that extends beyond near-space away from earth to the other planets in the solar system.

interplanetary spacecraft [AERO ENG] A spacecraft designed for interplanetary flight.

interplanetary transfer orbit [AERO ENG] An elliptical trajectory tangent to the orbits of both the departure planet and the target planet.

interpluvial [GEOL] Pertaining to an episode or period of geologic time that was dryer than the pluvial period occurring before or after it.

interpolation [MATH] A process used to estimate an intermediate value of one (dependent) variable which is a function of a second (independent) variable when values of the dependent variable corresponding to several discrete values of the independent variable are known.

interpole *See* commutating pole.

interpolymer [ORG CHEM] A mixed polymer made from two or more starting materials.

interposition trunk [COMMUN] Trunk which connects two positions of a large switchboard so that a line on one position can be connected to a line on another position.

interpret [COMPUT SCI] To print on a punched card the infomation punched in that card.

interpreter [COMPUT SCI] **1.** A program that translates and executes each source program statement before proceeding to the next one. Also known as interpretive routine. **2.** A machine that senses a punched card and prints the punched information on that card. Also known as punched-card interpreter. **3.** *See* conversational compiler.

interpretive code *See* interpretive language.

interpretive language [COMPUT SCI] A computer programming language in which each instruction is immediately translated and acted upon by the computer, as opposed to a compiler which decodes a whole program before a single instruction can be executed. Also known as interpretive code; pseudocode.

interpretive programming [COMPUT SCI] The writing of computer programs in an interpretive language, which generally uses mnemonic symbols to represent operations and operands and must be translated into machine language by the computer at the time the instructions are to be executed.

interpretive trace program [COMPUT SCI] An interpretive routine that provides a record of the machine code into which the source program is translated and of the result of each step, or of selected steps, of the program.

interproglottid gland [INV ZOO] Any of a number of cell clusters or glands arranged transversely along the posterior margin of the proglottids of certain tapeworms.

interpterygoid [ZOO] A space between palatal plates in certain chordates.

interpulmonary [ANAT] Located between the lungs.

interpulse time [MET] In resistance welding, the time between successive pulses of an impulse.

interpupillary diameter [ANTHRO] A measure of the distance between the centers of the pupils, as the subject looks straight ahead.

interquartile range [STAT] The distance between the top of the lower quartile and the bottom of the upper quartile of a distribution.

interradial canal [INV ZOO] Any of the radially arranged gastrovascular canals in certain jellyfishes and ctenophores.

interradius [INV ZOO] The area between two adjacent arms in echinoderms.

interray [INV ZOO] A division of the radiate body of echinoderms.

interrecord gap *See* record gap.

interrenal [ANAT] Located between the kidneys.

interrogating typewriter [COMPUT SCI] A typewriter designed to insert data into a computer program in main memory or receive output from the program.

interrogation [COMMUN] The transmission of a radio-frequency pulse, or combination of pulses, intended to trigger a transponder or group of transponders, a racon system, or an IFF system, in order to elicit an electromagnetic reply. Also known as challenging signal.

interrogation suppressed time delay [COMMUN] Overall fixed time delay between transmission of an interrogation and reception of the reply to this interrogation at zero distance.

interrogator [ELECTR] **1.** A radar transmitter which sends out a pulse that triggers a transponder; usually combined in a single unit with a responsor, which receives the reply from a transponder and produces an output suitable for actuating a display of some navigational parameter. Also known as challenger; interrogator-transmitter. **2.** *See* interrogator-responsor.

interrogator-responsor [ELECTR] A transmitter and receiver combined, used for sending out pulses to interrogate a radar beacon and for receiving and displaying the resulting replies. Also known as interrogator.

interrogator-transmitter *See* interrogator.

interrupt [COMPUT SCI] **1.** To stop a running program in such a way that it can be resumed at a later time, and in the meanwhile permit some other action to be performed. **2.** The action of such a stoppage.

interrupt-driven system [COMPUT SCI] An operating system in which the interrupt system is the mechanism for reporting all changes in the states of hardware and software resources,

and such changes are the events that induce new assignments of these resorces to meet work-load demands.

interrupted aging [MET] A technique for aging material in several steps; the material is brought to room temperature after each step.

interrupted continuous wave [COMMUN] A continuous wave that is interrupted at a constant audio-frequency rate high enough to give several interruptions for each keyed code dot. Abbreviated ICW.

interrupted current [ELEC] A current produced by opening and closing at regular intervals a circuit that would otherwise carry a steady current or one that varied continuously with time.

interrupted dc tachometer [ENG] A type of impulse tachometer in which the frequency of pulses generated by the interrupted direct current of an ignition-circuit primary of an internal combustion engine is used to measure the speed of the engine.

interrupted fire [ORD] Automatic fire delivered in short series of bursts.

interrupted quenching [MET] Quenching in which a material is intermittently removed from the quenching medium while it is still at a higher temperature than the medium.

interrupted quick flashing light [NAV] In marine operations, a light showing quick flashes for several seconds, followed by a period of darkness.

interrupted screw [DES ENG] A screw with longitudinal grooves cut into the thread, and which locks quickly when inserted into a similar mating part.

interrupter [ELEC] An electric, electronic, or mechanical device that periodically interrupts the flow of a direct current so as to produce pulses. [ORD] A barrier in a fuse which prevents transmission of an explosive effect to some element beyond the interrupter.

interrupter gear [ORD] A synchronizing gear for machine guns, so called because it interrupts the firing mechanism of the gun or guns to allow a propeller blade to pass the muzzle.

interrupter vibrator [ELEC] A mechanical device used to change direct current to alternating current.

interrupt handling [COMPUT SCI] A computer system's accepting and storing interrupt requests and responding to the requests by calling appropriate programs.

interrupting capacity [ELEC] Maximum power in the arc that a circuit breaker or fuse can successfully interrupt without restrike or violent failure; rated in volt-amperes for alternating-current circuits and watts for direct-current circuits.

interrupt mask [COMPUT SCI] A technique of suppressing certain interrupts and allowing the control program to handle these masked interrupts at a later time.

interrupt mode *See* hold mode.

interrupt signal [COMPUT SCI] A control signal which requests the immediate attention of the central processing unit.

interrupt system [COMPUT SCI] The means of interrupting a program and proceeding with it at a later time; this is accomplished by saving the contents of the program counter and other specific registers, storing them in reserved areas, starting the new instruction sequence, and upon completion, reloading the program counter and registers to return to the original program, and reenabling the interrupt.

interrupt trap [COMPUT SCI] A program-controlled technique which either recognizes or ignores an interrupt, depending upon a switch setting.

interscapular [ANAT] Between the shoulders or shoulder blades.

intersect [ENG] To find a position by the triangulation method. [SCI TECH] To pass through or across.

Intersecting Storage Rings [NUCLEO] Proton storage rings, located at Geneva, Switzerland, in which counterrotating protons with energies of up to 31 giga-electron-volts injected from a proton synchrotron are made to undergo nearly head-on collisions. Abbreviated ISR.

intersection [CIV ENG] **1.** A point of junction or crossing of two or more roadways. **2.** A surveying method in which a plane table is used alternately at each end of a measured baseline. [MATH] The intersection of two sets is the set consisting of all elements common to both of the two sets.

intersection angle [CIV ENG] The angle of deflection at the intersection point between the straights of a railway or highway curve.

intersection data [COMPUT SCI] Data which are meaningful only when associated with the concatenation of two segments.

intersection point [CIV ENG] That point where two straights or tangents to a railway or road curve would meet if extended.

intersegmental [BIOL] Situated between or involving segments. [EMBRYO] Situated between the primordial segments of the embryo.

intersegmental reflex [PHYSIO] An unconditioned reflex arc connecting input and output by means of afferent pathways in the dorsal spinal roots and efferent pathways in the ventral spinal roots.

intersertal [PETR] Referring to the texture of a porphyritic igneous rock in which the groundmass forms a small proportion of the rock, filling the interstices between unoriented feldspar laths.

intersex [PHYSIO] An individual who is intermediate in sexual constitution between male and female.

interspace [ANAT] An interval between the ribs or the fibers or lobules of a tissue or organ. [BUILD] An air space. [PHYS] An interval of space or time.

interspersion [ECOL] **1.** An intermingling of different organisms within a community. **2.** The level or degree of intermingling of one kind of organism with others in the community.

interspinal [ANAT] Situated between or connecting spinous processes; interspinous.

interstadial [GEOL] Pertaining to a period during a glacial stage in which the ice retreated temporarily.

interstage punching [COMPUT SCI] A system of card punching in which only odd-numbered rows of the cards are used.

interstage transformer [ELECTR] A transformer used to provide coupling between two stages.

interstation noise suppression *See* intercarrier noise suppression.

interstellar [ASTRON] Between the stars.

interstellar communication [COMMUN] Hypothetical communication between beings in different stellar systems.

interstellar lines [ASTRON] Dark, narrow lines in the spectra of stars, caused by absorption of radiation by a gaseous medium in space.

interstellar matter [ASTRON] The gaseous and dust material between the stars.

interstellar probe [AERO ENG] An instrumentated spacecraft propelled beyond the solar system to obtain specific information about interstellar environment.

interstellar space [ASTRON] The space between the stars.

interstellar travel [AERO ENG] Space flight between stars.

intersternite [INV ZOO] An intersegmental plate on the ventral surface of the abdomen in insects.

interstice [SOLID STATE] A space or volume between atoms of a lattice, or between groups of atoms or grains of a solid structure.

interstitial [CRYSTAL] A crystal defect in which an atom occupies a position between the regular lattice positions of a crystal. [SCI TECH] Of, pertaining to, or situated in a space between two things.

interstitial atom [CRYSTAL] A displaced atom which is forced into a nonequilibrium site within a crystal lattice.

interstitial cell [HISTOL] A cell that is not peculiar to or characteristic of a particular organ or tissue but which comprises fibrous tissue binding other cells and tissue elements; examples are neuroglial cells and Leydig cells.

interstitial cell–stimulating hormone *See* luteinizing hormone.

interstitial-cell tumor [MED] A benign tumor of the testes composed of Leydig cells. Also known as interstitioma; Leydig-cell tumor.

interstitial emphysema [MED] Escape of air from the alveoli into the interstices of the lung, commonly due to trauma or violent cough.

interstitial endometrosis [MED] The presence of endometrial tissue in the form of the stroma thoughout the myometrium. Also known as endolymphatic stromomyosis; fibromyosis; parathelioma; stromal endometriosis; stromal myosis; stromatosis.

interstitial gland [HISTOL] **1.** Groups of Leydig cells which secrete angiogens. **2.** Groups of epithelioid cells in the ovarian medulla of some lower animals.

interstitial hepatitis [MED] Pathologic deterioration and death of parenchymal cells in the liver associated with infiltration of lymphocytes and monocytes in the portal canals. Also known as acute nonsuppurative hepatitis; nonspecific hepatitis.

interstitial hernia [MED] Protrusion of the intestine between the muscular planes of the abdominal wall. Also known as intermuscular hernia; interparietal hernia.

interstitial implants [MED] Solid or encapsulated radiation sources, made in the form of seeds, wires, or other shapes, to be inserted directly into tissue that is to be irradiated.

interstitial impurity [SOLID STATE] An atom which is not normally found in a solid, and which is located at a position in the lattice structure where atoms or ions normally do not exist.

interstitial inflammation [MED] Inflammation of the interstitial tissues of an organ.

interstitial keratitis [MED] Inflammation of the cornea in which the iris is almost completely hidden by the diffuse haziness of the corneal tissue.

interstitial lamella [HISTOL] Any of the layers of bone between adjacent Haversian systems.

interstitial myocarditis [MED] Inflammation of the myocardium accompanied by cellular infiltration of interstitial tissues. Also known as Fiedler's myocarditis.

interstitial nephritis *See* pyelonephritis.

interstitial plasma-cell pneumonia *See* Pneumocystis carinii pneumonia.

interstitial pneumonia [MED] Inflammation of the lungs, particularly the stroma, including peribronchial tissue and interalveolar septa.

interstitial radiation [MED] Radiation of tissues by implantation of a radioactive source material.

interstitial water [HYD] Subsurface water contained in pore spaces between the grains of rock and sediments.

interstitial water saturation [HYD] The water content of a subterranean reservoir formation.

interstitioma *See* interstitial-cell tumor.

intersymbol interference [COMMUN] In a transmission system, extraneous energy from the signal in one or more keying intervals which tends to interfere with the reception of the signal in another keying interval, or the disturbance which results.

intersystem communications [COMPUT SCI] The ability of two or more computer systems to share input, output, and storage devices, and to send messages to each other by means of shared input and output channels or by channels that directly connect central processors.

intertergite [INV ZOO] One of the small plates between the tergites of certain insects.

interterminal switching [CIV ENG] Moving railroad cars from one line to another within a switching area.

intertidal zone [OCEANOGR] The part of the littoral zone above low-tide mark.

intertoll trunk [COMMUN] A trunk between toll offices in different telephone exchanges.

intertropical convergence zone [METEOROL] The axis, or a portion thereof, of the broad trade-wind current of the tropics; this axis is the dividing line between the southeast trades and the northeast trades (of the Southern and Northern hemispheres, respectively). Also known as equatorial convergence zone; meteorological equator.

intertropical front [METEOROL] The interface or transition zone occurring within the equatorial trough between the Northern and Southern hemispheres. Also known as equatorial front; tropical front.

intertube burner [MECH ENG] A burner which utilizes a nozzle that discharges between adjacent tubes.

intertubercular sulcus [ANAT] A deep groove on the anterior surface of the upper end of the humerus, separating the greater and lesser tubercles; contains the tendon of the long head of the biceps brachii muscle. Also known as bicipital groove.

interurban [GEOGR] Connecting or extending between urban areas.

interval [ACOUS] The spacing in pitch or frequency between two sounds; the frequency interval is the ratio of the frequencies or the logarithm of this ratio. [MATH] A set of numbers which consists of those numbers that are greater than one fixed number and less than another, and that may also include one or both of the end numbers. [PHYS] The time separating two events, or the distance between two objects. [RELAT] **1.** In special relativity, the Lorentz invariant quantity $c^2(\Delta t)^2 - (\Delta x)^2 - (\Delta y)^2 - (\Delta z)^2$, where c is the speed of light, Δt is the difference in the time coordinates of two specified events, and Δx, Δy, and Δz are differences in their x, y, and z coordinates, respectively. **2.** In general relativity, a generalization of this concept, namely the sum over the indices μ and ν of $g_{\mu\nu}dx^{\mu}dx^{\nu}$, where dx^{μ} and dx^{ν} are the differences in the x^{μ} and x^{ν} coordinates of two specified neighboring events, and $g_{\mu\nu}$ is an element of the metric tensor.

interval arithmetic [COMPUT SCI] A method of numeric computation in which each variable is specified as lying within some closed interval, and each arithmetic operation computes an interval containing all values that can result from operating on any numbers selected from the intervals associated with the operands. Also known as range arithmetic.

intervallum [INV ZOO] The space between the walls of pleosponges.

intervalometer [ORD] An electrical device used in bombing, by which data is preset in order to drop a desired number of bombs at a constant predetermined interval.

interval scale [STAT] A rule or system for assigning numbers to objects in such a way that the difference between any two objects is reflected in the difference in the numbers assigned to them; used in interval measurement.

interval timer [ENG] A device which operates a set of contacts during a preset time interval and, at the end of the interval, returns the contacts to their normal positions. Also known as timer.

intervascular [ANAT] Located between or surrounded by blood vessels.

intervening sequence [GEN] A region of a gene that is transcribed but is not included in the final transcript of a ribonucleic acid.

interventricular foramen [ANAT] Either one of the two foramens that connect the third ventricle of the brain with each lateral ventricle. Also known as foramen of Monro.

interventricular septal defect [MED] A congenital malformation of the septum between the ventricles of the heart.

interventricular septum [ANAT] The muscular wall between the heart ventricles. Also known as ventricular septum.

intervertebral [ANAT] Being or located between the vertebrae.

intervillous spaces [HISTOL] Spaces in the placenta which communicate with the maternal blood vessels.

intestinal crura [INV ZOO] The main intestinal branches in certain trematodes.

intestinal digestion [PHYSIO] Conversion of food to an assimilable form by the action of intestinal juices.

intestinal dyspepsia [MED] Disturbed digestion due to diminished secretion of intestinal juices or lack of tonus in the wall of the intestine.

intestinal hormone [BIOCHEM] Either of two hormones, secretin and cholecystokinin, secreted by the intestine.

intestinal juice [PHYSIO] An alkaline fluid composed of the combined secretions of all intestinal glands.

intestinal lipodystrophy *See* Whipple's disease.

intestinal villi [ANAT] Fingerlike projections of the small intestine, composed of a core of vascular tissue covered by epithelium and containing smooth muscle cells and an efferent lacteal end capillary.

intestine [ANAT] The tubular portion of the vertebrate digestive tract, usually between the stomach and the cloaca or anus.

in-the-seam mining [MIN ENG] The usual method of mining characterized by the driving of development shafts into the coal seam.

in the wind [NAV] In the direction from which the wind is blowing; windward; used particularly in reference to a heading or to the position of an object.

intima [HISTOL] The innermost coat of a blood vessel. Also known as tunica intima.

intimate blend [TEXT] A combination of two or more staple fibers in a spun yarn that has been blended so that the individual fibers do not retain their individual characteristics.

intimate ion pair *See* tight ion pair.

intorsion [BIOL] Inward rotation of a structure about a fixed point or axis.

into the solid [MIN ENG] Of a shot, going into the coal beyond the point to which the coal can be broken by the blast. Also known as on the solid.

intoxication [MED] **1.** Poisoning. **2.** The state produced by overindulgence in alcohol.

intraabdominal [ANAT] Occurring or being within the cavity of the abdomen.

intraatrial heart block [MED] A type of heart block which

shows a broad, notched P wave of longer than normal duration on the electrocardiographic record.

intracartilaginous ossification *See* endochondral ossification.

intracavernous aneurysm [MED] A dilation of the wall of the internal carotid artery within the cavernous sinus.

intracavity absorption spectroscopy [SPECT] A highly sensitive technique in which an absorbing sample is placed inside the resonator of a broad-band dye laser, and absorption lines are detected as dips in the laser emission spectrum.

intracellular [CYTOL] Within a cell.

intracellular canaliculi [CYTOL] A system of minute canals within certain gland cells which are thought to drain the glandular secretions.

intracellular digestion [PHYSIO] Digestion which takes place within the cytoplasm of the organism, as in many unicellular protozoans.

intracellular enzyme [BIOCHEM] An enzyme that remains active only within the cell in which it is formed. Also known as organized ferment.

intracellular symbiosis [CYTOL] Existence of a self-duplicating unit within the cytoplasm of a cell, such as a kappa particle in *Paramecium*, which seems to be an infectious agent and may influence cell metabolism.

intracervical [ANAT] Located within the cervix of the uterus.

intracistron complementation [GEN] The process whereby two different mutant alleles, each of which determines in homozygotes an inactive enzyme, determine the formation of the active enzyme when present in the same nucleus.

intraclast [GEOL] A fragment of limestone formed by erosion within a basin of deposition and redeposited there to form a new sediment.

intracloud discharge *See* cloud discharge.

Intracoastal Waterway [NAV] An inside protected route extending through New Jersey; from Norfolk, Virginia to Key West, Florida; across Florida from St. Lucie Inlet to Fort Myers, Charlotte Harbor, Tampa Bay, and Tarpon Springs; and from Carabelle, Florida, to Brownsville, Texas.

Intracoastal Waterway charts [NAV] Charts of scale 1:40,000, for navigating the Intracoastal Waterway, and designed especially for small-boat and yacht operators.

intracortical [ANAT] Occurring or located within the cortex.

intracranial [ANAT] Within the cranium.

intracranial aneurysm [MED] Dilation of a cerebral artery.

intracranial angiography [MED] Roentgenography of the blood vessels within the cranial cavity following the intravascular injection of a radiopaque material.

intracratonic basin *See* autogeosyncline.

intracrystalline *See* transcrystalline.

intracytoplasmic [CYTOL] Being or occurring within the cytoplasm of a cell.

intradermal [ANAT] Within the skin.

intradermal nevus [MED] A lesion containing melanocytes and located principally or completely within the derma.

intrados [ARCH] The inner curved surface of an arch.

intraductal [ANAT] Within a duct.

intradural [ANAT] Within the dura mater.

intraembryonic [EMBRYO] Within the embryo.

intraepidermal [ANAT] Within the epidermis.

intraepidermal epithelioma [MED] Carcinoma in situ, of either the squamous-cell or basal-cell type.

intraepithelial [ANAT] Within the epithelium.

intraesophageal [ANAT] Within the esophagus.

intrafascicular [BOT] Located or occurring within a vascular bundle.

intraformational breccia [PETR] A rock resulting from cracking and desiccation-shrinking of a mud after withdrawal of water followed by almost contemporaneous sedimentation.

intraformational conglomerate [GEOL] **1.** A conglomerate in which clasts and the matrix are contemporaneous in origin. **2.** A conglomerate formed in the midst of a geologic formation.

intraformational fold [GEOL] A minor fold confined to a sedimentary layer lying between undeformed beds.

intrafusal fiber [HISTOL] Any of the striated muscle fibers contained in a muscle spindle.

intragenic [MOL BIO] Within a gene, in referring to certain events.

intragenic recombination [MOL BIO] Recombination occurring between the mutons of one cistron.

intragenic suppression [GEN] The restoration of a suppressed function or character as a consequence of a second mutation located within the same gene as the original or first mutation.

intrahepatic [ANAT] Within the liver.

intrajugular process [ANAT] **1.** A small, curved process on some occipital bones which partially or completely divides the jugular foramen into lateral and medial parts. **2.** A small process on the hard portion of the temporal bone which completely or partly separates the jugular foramen into medial and lateral parts.

intralaminar nuclei [ANAT] A diffuse group of nuclei located in the internal medullary lamina of the thalamus.

intraline distance [ENG] The minimum distance permitted between any two buildings within an explosives operating line; to protect buildings from propagation of explosions due to blast effect.

intraluminal [ANAT] Within the lumen of a structure.

intramarginal [BIOL] Within a margin.

intramedullary [ANAT] **1.** Within the tissues of the spinal cord or medulla oblongata. **2.** Within the bone marrow. **3.** Within the adrenal medulla.

intramembranous [HISTOL] Formed or occurring within a membrane.

intramembranous ossification [HISTOL] Formation of bone tissue directly from connective tissue without a preliminary cartilage stage.

intramural [ANAT] Within the substance of the walls of an organ.

intramuscular [ANAT] Lying within or going into the substance of a muscle.

intraocular [ANAT] Occurring within the globe of the eye.

intraocular pressure [PHYSIO] The hydrostatic pressure within the eyeball.

intraoptical light sighting system [OPTICS] A target sighting system used with infrared pyrometers in which a visible, pulsating light is directed through the infrared optics, and gives an indication of the exact field of view, not just the centerpoint.

intraparietal [ANAT] **1.** Within the wall of an organ or cavity. **2.** Within the parietal region of the cerebrum. **3.** Within the body wall.

intrapartum [MED] Occurring during parturition.

intraperitoneal [ANAT] **1.** Within the peritoneum. **2.** Within the peritoneal cavity.

intrapetiolar [BOT] **1.** Enclosed by the base of the petiole. **2.** Between the petiole and the stem.

intrapulmonic [ANAT] Being or occurring within the lungs.

intraspecific [BIOL] Being within or occurring among the members of the same species.

intraspinal block [MED] Anesthesia of the spinal column by injection of an anesthetic into the spinal canal.

intrastratal solution [GEOCHEM] A chemical attrition of the constituents of a rock after deposition.

intratelluric [GEOL] **1.** Pertaining to a phenocryst that is formed earlier than its matrix. **2.** Pertaining to a period in which igneous rocks crystallized prior to their eruption. **3.** Located, formed, or originating at great depths within the earth.

intrathecal [ANAT] Within the subarachnoid space.

intrathoracic [ANAT] Within the thoracic cavity.

intratracheal [ANAT] Being or occurring within the trachea.

intrauterine [ANAT] Being or occurring within the uterus.

intravaginal [ANAT] **1.** Being or occurring within the vagina. **2.** Located within a tendon sheath. [BOT] Located within a sheath, referring to branches of grass.

intravenous [ANAT] Located within, or going into, the veins.

intraventricular heart block [MED] Prolongation of the process of ventricular excitation, measured by the QRS complex of the electrocardiogram. Also known as arborization block; parietal block; peri-infarction block.

intravesical [ANAT] Within the urinary bladder.

intravital [BIOL] Occurring while the cell or organism is alive.

intravital stain [BIOL] A nontoxic dye injected into the body to selectively stain certain cells or tissues.

intrazonal soil [GEOL] A group of soils with well-developed characteristics that reflect the dominant influence of some local factor of relief, parent material, or age over the usual effect of vegetation and climate.

intrinsic asthma [MED] Asthma caused by a respiratory tract infection.

intrinsic-barrier diode [ELECTR] A *pin* diode, in which a thin region of intrinsic material separates the *p*-type region and the *n*-type region.

intrinsic-barrier transistor [ELECTR] A *pnip* or *npin* transistor, in which a thin region of intrinsic material separates the base and collector.

intrinsic conductivity [SOLID STATE] The conductivity of a semiconductor or metal in which impurities and structural defects are absent or have a very low concentration.

intrinsic contact potential difference [ELEC] True potential difference between two perfectly clean metals in contact.

intrinsic equations of a curve [MATH] The equations describing the radius of curvature and torsion of a curve as a function of arc length; these equations determine the curve up to its position in space.

intrinsic factor [BIOCHEM] A substance, produced by the stomach, which combines with the extrinsic factor (vitamin B_{12}) in food to yield an antianemic principle; lack of the intrinsic factor is believed to be a cause of pernicious anemia. Also known as Castle's intrinsic factor.

intrinsic flux density *See* intrinsic induction.

intrinsic geometry of a surface [MATH] The description of the intrinsic properties of a surface.

intrinsic induction [ELECTROMAG] The vector difference between the magnetic flux density at a given point and the magnetic flux density which would exist there, for the same magnetic field strength, if the point were in a vacuum. Symbol B_i. Also known as intensity of magnetization; intrinsic flux density; magnetic polarization.

intrinsic layer [ELECTR] A layer of semiconductor material whose properties are essentially those of the pure undoped material.

intrinsic luminosity [ASTROPHYS] The total amount of radiation emitted by a star over a specified range of wavelengths.

intrinsic mobility [SOLID STATE] The mobility of the electrons in an intrinsic semiconductor.

intrinsic nerve supply [ANAT] The nerves contained entirely within an organ or structure.

intrinsic parity [PARTIC PHYS] A quantum number, equal to $+1$ or -1, which is assigned to particles so that the product of the intrinsic parities of the particles composing a system times the parity of the system's wave function yields the total parity.

intrinsic photoconductivity [SOLID STATE] Photoconductivity associated with excitation of charge carriers across the band gap of a material.

intrinsic photoemission [SOLID STATE] Photoemission which can occur in an ideally pure and perfect crystal, in contrast to other types of photoemission which are associated with crystal defects.

intrinsic pressure [PHYS] Pressure in a fluid resulting from inward forces on molecules near the fluid surface, caused by attraction between molecules. Also known as internal pressure.

intrinsic procedure *See* built-in function.

intrinsic properties of a surface [MATH] A property of a surface which can be described without reference to the surrounding space.

intrinsic semiconductor [SOLID STATE] A semiconductor in which the concentration of charge carriers is characteristic of the material itself rather than of the content of impurities and structural defects of the crystal. Also known as *i*-type semiconductor.

intrinsic temperature range [SOLID STATE] In a semiconductor, the temperature range in which its electrical properties are essentially not modified by impurities or imperfections within the crystal.

intrinsic tracer [NUC PHYS] An isotope that is present naturally in a form suitable for tracing a given element through chemical and physical processes.

intrinsic variable star [ASTRON] A star that is variable not because of an eclipse.

intrinsic viscosity [PHYS CHEM] The ratio of a solution's specific viscosity to the concentration of the solute, extrapolated to zero concentration. Also known as limiting viscosity number.

introductory column [MIN ENG] The highest and first column that is inserted in casing a borehole.

introfaction [CHEM] Change in fluidity and specific wetting properties (for impregnation acceleration) of an impregnating compound, caused by an introfier (impregnation accelerator).

introgressive hybridization [GEN] The spreading of genes of a species into the gene complex of another due to hybridization between numerically dissimilar populations, the extensive backcrossing preventing formation of a single stable population.

introitus [ANAT] An opening or entryway, especially the opening into the vagina.

introjection [PSYCH] The symbolic absorption into and toward oneself of concepts and feelings generated toward another person or object; motivates irrational behavior toward oneself.

intromission [ZOO] The act or process of inserting one body into another, specifically, of the penis into the vagina.

intromittent [ZOO] Adapted for intromission; applied to a copulatory organ.

intron [GEN] A noncoding segment of a gene.

introrse [BIOL] Turned inward or toward the axis.

introspective diplopia *See* physiologic diplopia.

introversion [MED] The act or process of turning in upon itself, as a hollow organ. [PSYCH] Preoccupation with the self associated with diminished interest in external events.

introvert [PSYCH] An individual whose interests are self-directed, and not directed toward the outside world. [ZOO] **1.** A structure capable of introversion. **2.** To turn inward.

intrusion [GEOL] **1.** The process of emplacement of magma in preexisting rock. Also known as injection; invasion; irruption. **2.** A large-scale sedimentary injection. Also known as sedimentary intrusion. **3.** Any rock mass formed by an intrusive process.

intrusion grouting [ENG] A method of placing concrete by intruding the mortar component in position and then converting it into concrete as it is introduced into voids.

intrusive [PETR] Pertaining to material forced while still in a fluid state into cracks or between layers of rock.

intubation [MED] The introduction of a tube into a hollow organ to keep it open, especially into the larynx to ensure the passage of air.

intumescence [MATER] The property of a material to swell when heated; intumescent materials in bulk and sheet form are used as fireproofing agents.

intussusception [MED] Passing of a portion of a structure into another part of the same structure, such as the invagination of a part of the intestine.

inulase [BIOCHEM] An enzyme produced by certain molds that catalyzes the conversion of inulin to levulose.

inulin [BIOCHEM] A polysaccharide made up of polymerized fructofuranose units.

inunction [MED] Act of applying an oil or fatty material, especially rubbing an ointment into the skin as a therapeutic measure.

inundation [HYD] Flooding, by the rise and spread of water, of a land surface that is not normally submerged.

in utero [EMBRYO] Within the uterus, referring to the fetus.

in vacuo [PHYS] In a vacuum.

invaded zone [PETRO ENG] Transitional downhole area between the area invaded completely by drilling mud and uncontaminated bulk of the reservoir.

invagination [EMBRYO] The enfolding of a part of the wall of the blastula to form a gastrula. [PHYSIO] **1.** The act of ensheathing or becoming ensheathed. **2.** The process of burrowing or enfolding to form a hollow space within a previously solid structure, as the invagination of the nasal mucosa within a bone of the skull to form a paranasal sinus.

invariable line [MECH] A line which is parallel to the angular momentum vector of a body executing Poinsot motion, and which passes through the fixed point in the body about which there is no torque.

invariable plane [MECH] A plane which is perpendicular to the angular momentum vector of a rotating rigid body not subject to external torque, and which is always tangent to its inertia ellipsoid.

invariance [MATH] *See* invariant property. [PHYS] The property of a physical quantity or physical law of being unchanged by certain transformations or operations, such as reflection of spatial coordinates, time reversal, charge conjugation, rotations, or Lorentz transformations. Also known as symmetry.

invariance principle [PHYS] Any principle which states that a physical quantity or physical law possesses invariance under certain transformations. Also known as symmetry law; symmetry principle. [RELAT] In general relativity, the principle that the laws of motion are the same in all frames of reference, whether accelerated or not.

invariant property [MATH] A mathematical property of some space unchanged after the application of any member from some given family of transformations. Also known as invariance.

invariant subgroup *See* normal subgroup.

invasion [GEOL] **1.** The movement of one material into a porous reservoir area that has been occupied by another material. **2.** *See* intrusion; transgression. [MED] **1.** The phase of an infectious disease during which the pathogen multiplies and is distributed; precedes signs and symptoms. **2.** The process by which microorganisms enter the body.

invasion efficiency [PETRO ENG] Completeness of invasion of a reservoir formation by a fluid.

inventory [ENG] The amount of plastic in the heating cylinder or barrel in injection molding or extrusion.

inventory control [IND ENG] Systematic management of the balance on hand of inventory items, involving the supply, storage, distribution, and recording of items.

inverna [METEOROL] A southeast wind of Lake Maggiore, Italy.

inverse beta decay [NUC PHYS] A reaction providing evidence for the existence of the neutrino, in which an antineutrino (or neutrino) collides with a proton (or neutron) to produce a neutron (or proton) and a positron (or electron).

inverse cam [MECH ENG] A cam that acts as a follower instead of a driver.

inverse Compton effect [QUANT MECH] A process in which relativistic particles give up some of their energy to long-wavelength radiation, converting it to shorter-wavelength radiation.

inverse current [ELECTR] The current resulting from an inverse voltage in a contact rectifier.

inverse cylindrical orthomorphic chart *See* transverse Mercator chart.

inverse cylindrical orthomorphic projection *See* transverse Mercator projection.

inverse direction [ELECTR] The direction in which the electron flow encounters greater resistance in a rectifier, going from the positive to the negative electrode; the opposite of the conducting direction. Also known as reverse direction.

inverse electrode current [ELECTR] Current flowing through an electrode in the direction opposite to that for which the tube is designed.

inverse element [MATH] In a group G the inverse of an element g is the unique element g^{-1} such that $g \cdot g^{-1} = g^{-1} \cdot g = e$, where $\cdot$ denotes the group operation and e is the identity element.

inverse feedback *See* negative feedback.

inverse function [MATH] An inverse function for a function f is a function g whose domain is the range of f and whose range is the domain of f with the property that both f composed with g and g composed with f give the identity function.

inverse function theorem [MATH] If f is a continuously differentiable function of euclidean n-space to itself and at a point x_0 the matrix with the entry $\partial f_i/\partial x_j(x_0)$ in the ith row and jth column is nonsingular, then there is a continuously differentiable function $g(y)$ defined in a neighborhood of $f(x_0)$ which is an inverse function for $f(x)$ at all points near x_0.

inverse hour *See* inhour.

inverse latitude *See* transverse latitude.

inverse limiter [ELECTR] A transducer, the output of which is constant for input of instantaneous values within a specified range and a linear or other prescribed function of the input for inputs above and below that range.

inverse logarithm of a number *See* antilogarithm of a number.

inverse matrix [MATH] The inverse of a nonsingular matrix A is the matrix A^{-1} where $A \cdot A^{-1} = A^{-1} \cdot A = I$, the identity matrix.

inverse Mercator chart *See* transverse Mercator chart.

inverse Mercator projection *See* transverse Mercator projection.

inverse network [ELEC] Two two-terminal networks are said to be inverse when the product of their impedances is independent of frequency within the range of interest.

inverse neutral telegraph transmission [COMMUN] Form of transmission in which marking signals are zero current intervals and spacing signals are current pulses of either polarity.

inverse of a number [MATH] The additive inverse of a real or complex number a is the number which when added to a gives 0; the multiplicative inverse of a is the number which when multiplied with a gives 1.

inverse operator [MATH] The inverse of an operator L is the operator which is the inverse function of L.

inverse parallel *See* transverse parallel.

inverse peak voltage [ELECTR] **1.** The peak value of the voltage that exists across a rectifier tube or x-ray tube during the half cycle in which current does not flow. **2.** The maximum instantaneous voltage value that a rectifier tube or x-ray tube can withstand in the inverse direction (with anode negative) without breaking down and becoming conductive.

inverse piezoelectric effect [SOLID STATE] The contraction or expansion of a piezoelectric crystal under the influence of an electric field, as in crystal headphones; also occurs at pn junctions in some semiconductor materials.

inverse points [MATH] A pair of points lying on a diameter of a circle or sphere such that the product of the distances of the points from the center equals the square of the radius.

inverse problem [CONT SYS] The problem of determining, for a given feedback control law, the performance criteria for which it is optimal.

inverse ranks [STAT] Ranking responses to treatments from largest response to smallest response.

inverse rhumb line *See* transverse rhumb line.

inverse segregation [MET] Segregation in a cast metal in which an excess of lower-melting metal occurs in the earlier-freezing portions because liquid metal enters cavities developed in the earlier-solidified metal.

inverse-square law [PHYS] Any law in which a physical quantity varies with distance from a source inversely as the square of that distance.

inverse Stark effect [SPECT] The Stark effect as observed with absorption lines, in contrast to emission lines.

inverse voltage [ELECTR] The voltage that exists across a rectifier tube or x-ray tube during the half cycle in which the anode is negative and current does not normally flow.

inverse Zeeman effect [SPECT] A splitting of the absorption lines of atoms or molecules in a static magnetic field; it is the Zeeman effect observed with absorption lines.

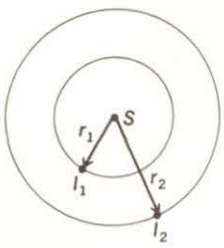
inversion [CHEM] Change of a compound into an isomeric form. [COMMUN] The process of scrambling speech for secrecy by beating the voice signal with a fixed, higher audio frequency and using only the difference frequencies. [CRYSTAL] A change from one crystal polymorph to another. Also known as transformation. [ELEC] The solution of certain problems in electrostatics through the use of the transformation in Kelvin's inversion theorem. [GEN] A type of chromosomal rearrangement in which two breaks take place in a chromosome and the fragment between breaks rotates 180° before rejoining. [GEOL] **1.** Development of inverted relief through which anticlines are transformed into valleys and synclines are changed into mountains. **2.** The occupancy by a lava flow of a ravine or valley that occurred in the side of a volcano. **3.** A diagenetic process in which unstable minerals are converted to a more stable form without a change in chemical composition. [MECH ENG] The conversion of basic four-bar linkages to special motion linkages, such as parallelogram linkage, slider-crank mechanism, and slow-motion mechanism by successively holding fast, as ground link, members of a specific linkage (as drag link). [MED] The act or process of turning inward or upside down. [METEOROL] A departure from the usual decrease or increase with altitude of the value of an atmospheric property, most commonly temperature. [OPTICS] The formation of an inverted image by an optical system. [PHYS] The simultaneous reflection of all three directions in space, so that each coordinate is replaced by the negative of itself. Also known as space inversion. [SOLID STATE] The production of a layer at the surface of a semiconductor which is of opposite type from that of the bulk of the semiconductor, usually as the result of an applied electric field. [THERMO] A reversal of the usual direction of a variation or process, such as the change in sign of the expansion coefficient of water at 4°C, or a change in sign in the Joule-Thomson coefficient at a certain temperature.

inversion axis *See* rotation-inversion axis.

inversion layer [METEOROL] The atmosphere layer through which an inversion occurs.

inversion spectrum [SPECT] Lines in the microwave spectra of certain molecules (such as ammonia) which result from the quantum-mechanical analog of an oscillation of the mole-

INVERSE-SQUARE LAW



Point source S emitting energy of intensity I. The inverse-square law states that $I_1/I_2 = r_2^2/r_1^2$.

cule between two configurations which are mirror images of each other.

inversion symmetry [PHYS] The principle that the laws of physics are unchanged by the operation of inversion; it is violated by the weak interactions.

inversion temperature [ENG] The temperature to which one junction of a thermocouple must be raised in order to make the thermoelectric electromotive force in the circuit equal to zero, when the other junction of the thermocouple is held at a constant low temperature. [THERMO] The temperature at which the Joule-Thomson effect of a gas changes sign.

invert [CIV ENG] The floor or bottom of a conduit.

invertase *See* saccharase.

invertebrata [INV ZOO] A division of the animal kingdom including all animals which lack a spinal column; has no taxonomic status.

invertebrate [INV ZOO] An animal lacking a backbone and internal skeleton.

invertebrate pathology [INV ZOO] All studies having to do with the principles of pathology as applied to invertebrates.

invertebrate zoology [ZOO] A branch of biology that deals with the study of Invertebrata.

inverted *See* overturned.

inverted amplifier [ELECTR] A two-tube amplifier in which the control grids are grounded and the input signal is applied between the cathodes; the grid then serves as a shield between the input and output circuits.

inverted arch [CIV ENG] An arch with the crown downward, below the line of the springings; commonly used in tunnels and foundations. Also known as inflected arch.

inverted compass [NAV] A marine magnetic compass designed and installed for observation from below the compass card; frequently used as a telltale compass. Also known as hanging compass; overhead compass.

inverted engine [MECH ENG] An engine in which the cylinders are below the crankshaft.

inverted file [COMPUT SCI] **1.** A file, or method of file organization, in which labels indicating the locations of all documents of a given type are placed in a single record. **2.** A file whose usual order has been inverted.

inverted heading and bench method *See* heading–overhand bench method.

inverted image [OPTICS] An image in which up and down, as well as left and right, are interchanged; that is, an image that results from rotating the object 180° about a line from the object to the observer; such images are formed by most astronomical telescopes. Also known as reversed image.

inverted L antenna [ELECTROMAG] An antenna consisting of one or more horizontal wires to which a connection is made by means of a vertical wire at one end.

inverted microscope [OPTICS] A microscope in which the body of the microscope, including the objective and the ocular, are below the stage, the illumination for transmitted light is above the stage, and with opaque materials, the vertical illuminator is used under the stage near the objective.

inverted plunge [GEOL] A plunge of a fold whose inclination has been carried past the vertical, so that the plunge is less than 90° in the direction opposite from the original attitude; younger rocks plunge beneath the older rocks.

inverted siphon [CIV ENG] A pressure pipeline crossing a depression or passing under a highway; sometimes called a sag line from its U-shape.

inverted vee [ELECTROMAG] **1.** A directional antenna consisting of a conductor which has the form of an inverted V, and which is fed at one end and connected to ground through an appropriate termination at the other. **2.** A center-fed horizontal dipole antenna whose arms have ends bent downward 45°.

inverter [ELEC] A device for converting direct current into alternating current; it may be electromechanical, as in a vibrator or synchronous inverter, or electronic, as in a thyratron inverter circuit. Also known as dc-to-ac converter; dc-to-ac inverter. [ELECTR] *See* phase inverter.

inverter circuit *See* NOT circuit.

invertin *See* saccharase.

inverting amplifier [ELECTR] Amplifier whose output polarity is reversed as compared to its input; such an amplifier obtains its negative feedback by a connection from output to input, and with high gain is widely used as an operational amplifier.

inverting function [ELECTR] A logic device that inverts the input signal, so that the output is out of phase with the input.

inverting parametric device [ELECTR] Parametric device whose operation depends essentially upon three frequencies, a harmonic of the pump frequency and two signal frequencies, of which the higher signal frequency is the difference between the pump harmonic and the lower signal frequency.

inverting telescope [OPTICS] A telescope that inverts the usual telescopic image, allowing the object to be seen right side up.

inverting terminal [ELECT] The negative input terminal of an operational amplifier; a positive-going voltage at the inverting terminal gives a negative-going output voltage.

invert level [ENG] The level of the lowest portion at any given section of a liquid-carrying conduit, such as a drain or a sewer, and which determines the hydraulic gradient available for moving the contained liquid.

invert sugar [FOOD ENG] A mixture consisting of 50% glucose and 50% fructose, obtained by hydrolysis of sucrose, which absorbs water readily; used in the food industry.

investing bone *See* dermal bone.

investment casting [MET] A casting method designed to achieve high dimensional accuracy for small castings by making a mold of refractory slurry, which sets at room temperature, surrounding a wax pattern which is then melted out to leave a mold without joints.

investment compound [MATER] A mixture containing a refractory filler, a binder, and a liquid vehicle which is used to make molds for investment casting.

inviscid flow [FL MECH] Flow of an inviscid fluid. Also known as frictionless flow; ideal flow; nonviscous flow.

inviscid fluid [FL MECH] A fluid which has no viscosity; it therefore can support no shearing stress, and flows without energy dissipation. Also known as ideal fluid; nonviscous fluid; perfect fluid.

invisible image [PHYS] An image having a form which cannot be perceived by unaided vision, such as a latent image on a photographic emulsion.

invisible writing ink [GRAPHICS] Ink that remains invisible until the color is brought out by the application of heat or chemical; made with sal ammoniac or salts of metals.

in vitro [BIOL] Pertaining to a biological reaction taking place in an artificial apparatus.

in vivo [BIOL] Pertaining to a biological reaction taking place in a living cell or organism.

involucrate [BOT] Having an involucre.

involucre [BOT] Bracts forming one or more whorls at the base of an inflorescence or fruit in certain plants.

involucrum [ANAT] **1.** The covering of a part. **2.** New bone laid down by periosteum around a sequestrum in osteomyelitis.

involuntary fibers *See* smooth muscle fibers.

involuntary muscle [PHYSIO] Muscle not under the control of the will; usually consists of smooth muscle tissue and lies within a vescus, or is associated with skin.

involute [BIOL] Being coiled, curled, or rolled in at the edge. [MATH] A curve produced by any point of a perfectly flexible inextensible thread that is kept taut as it is wound upon or unwound from another curve.

involute gear tooth [DES ENG] A gear tooth whose profile is established by an involute curve outward from the base circle.

involute spline [DES ENG] A spline having the same general form as involute gear teeth, except that the teeth are one-half the depth and the pressure angle is 30°.

involute spline broach [MECH ENG] A broach that cuts multiple keys in the form of internal or external involute gear teeth.

involution [BIOL] A turning or rolling in. [EMBRYO] Gastrulation by ingrowth of blastomeres around the dorsal lip. [MED] **1.** The retrogressive change to their normal condition that organs undergo after fulfilling their functional purposes, as the uterus after pregnancy. **2.** The period of regression or the processes of decline or decay which occur in the human constitution after middle life.

involutional melancholia *See* involutional psychosis.

involutional psychosis [PSYCH] A prolonged psychotic reaction occurring in late middle life, characterized by depression and paranoid ideas. Also known as involutional melancholia.

involution form [CYTOL] A cell with a bizarre configuration caused by abnormal culture conditions.

involucel [BOT] A secondary involucre.

INVOLUTE SPLINE

Diagram of an involute spline profile.

involvucellate [BOT] Possessing an involvucel.

inward bound [NAV] Heading toward the land or up a harbor, away from the open sea.

inward-outward dialing system [COMMUN] Dialing system whereby calls within the local exchange area may be dialed directly to and from base private branch exchange telephone stations without the assistance of the base private branch exchange operator; CENTREX, a service offered by some telephone companies, is a form of inward-outward dialing.

inyoite [MINERAL] $Ca_2B_6O_{11}{\cdot}13H_2O$ A colorless, monoclinic mineral consisting of a hydrous calcium borate; hardness is 2 on Mohs scale, and specific gravity is 2.

Io [ASTRON] A satellite of Jupiter; its diameter is 2300 miles (3700 kilometers). Also known as Jupiter I. [NUC PHYS] *See* ionium.

I/O *See* input/output.

IOCS *See* input/output control system.

iodargyrite [MINERAL] AgI A yellowish or greenish hexagonal mineral composed of native silver iodide, usually occurring in thin plates. Also known as iodyrite.

iodate [INORG CHEM] A salt of iodic acid containing the IO_3^- radical; sodium and potassium iodates are the most important salts and are used in medicine.

iodcyanin *See* cyanine dye.

iodic acid [INORG CHEM] HIO_3 Water-soluble, moderately strong acid; colorless or white powder or crystals; decomposes at 110°C; used in analytical chemistry and medicine.

iodic acid anhydride *See* iodine pentoxide.

iodide [CHEM] **1.** A compound which contains the iodine atom in the −1 oxidation state and which may be considered to be derived from hydriodic acid (HI); examples are KI and NaI. **2.** A compound of iodine, such as CH_3CH_2I, in which the iodine has combined with a more electropositive group.

iodide process [MET] A refining process in which a metal, such as titanium or zirconium, is combined with iodine vapor and then the iodide volatilized and decomposed at high temperatures to yield a pure solid metal.

iodine [CHEM] A nonmetallic halogen element, symbol I, atomic number 53, atomic weight 126.9044; melts at 114°C, boils at 184°C; the poisonous, corrosive, dark plates or granules are readily sublimed; insoluble in water, soluble in common solvents; used as germicide and antiseptic, in dyes, tinctures, and pharmaceuticals, in engraving lithography, and as a catalyst and analytical reagent.

iodine-131 [NUC PHYS] A radioactive, artificial isotope of iodine, mass number 131; its half-life is 8 days with beta and gamma radiation; used in medical and industrial radioactive tracer work; moderately radiotoxic.

iodine bisulfide *See* sulfur iodine.

iodine cyanide [INORG CHEM] ICN Poisonous, colorless needles with pungent aroma and acrid taste; melts at 147°C; soluble in water, alcohol, and ether; used in taxidermy as a preservative. Also known as cyanogen iodide.

iodine disulfide *See* sulfur iodine.

iodine number [ANALY CHEM] A measure of the iodine absorbed in a given time by a chemically unsaturated material, such as a vegetable oil or a rubber; used to measure the unsaturation of a compound or mixture. Also known as iodine value.

iodine pentoxide [INORG CHEM] I_2O_5 White crystals, decomposing at 275°C, very soluble in water, insoluble in absolute alcohol, ether, and chloroform; used as an oxidizing agent to oxidize carbon monoxide to dioxide at ordinary temperatures, and in organic synthesis. Also known as iodic acid anhydride.

iodine solution *See* tincture of iodine.

iodine test [ANALY CHEM] Placing a few drops of potassium iodide solution on a sample to detect the presence of starch; test is positive if sample turns blue.

iodine tincture *See* tincture of iodine.

iodine value *See* iodine number.

iodisan *See* propiodal.

iodized oil [MATER] A thick, viscous, oily liquid with a garliclike odor that is an iodine addition product of vegetable oil, containing about 40% organically combined iodine; used in medicine as a radiopaque medium for radiography.

iodized salt [FOOD ENG] Common table salt which has been treated with iodide to provide iodine as nutritional supplement.

iodoacetic acid [ORG CHEM] CH_2ICOOH White or colorless crystals that are soluble in water and alcohol, and melt at 82–83°C; used in biological research for its inhibitive effect on enzymes.

iodoalkane [ORG CHEM] An alkane hydrocarbon in which an iodine atom replaces one or more hydrogen atoms in the molecule; an example is iodomethane, CH_3I, better known as methyl iodide.

iodobromite [MINERAL] Ag(Br,Cl,I) An isometric mineral composed of chloride, iodide, and bromide of silver; it is isomorphous with cerargyrite and bromyrite.

5-iodo-2′-deoxyuridine [PHARM] $C_9H_{11}IN_2O_5$ A crystalline substance, used as an antiviral agent for the eye. Abbreviated IDU; IDUR; IUDR. Also known as 1-(2-deoxy-β-D-ribofuranosyl)-5-iodouracil; idoxuridine.

iodoeasin *See* easin.

iodoethane *See* ethyl iodide.

iodoethylene *See* tetraiodoethylene.

iodofenphos *See* jodfenphos.

iodoform [ORG CHEM] CHI_3 A yellow, hexagonal solid; melting point 119°C; soluble in chloroform, ether, and water; has weak bactericidal qualities and is used in ointments for minor skin diseases. Also known as triiodomethane.

iodohydrocarbon [ORG CHEM] A hydrocarbon in which an iodine atom replaces one or more hydrogen atoms in the molecule, as in an alkane, aromatic, or olefin.

iodomethane *See* methyl iodide.

iodometry [ANALY CHEM] An application of iodine chemistry to oxidation-reduction titrations for the quantitative analysis in certain chemical compounds, in which iodine is used as a reductant and the iodine freed in the associated reaction is titrated, usually in neutral or slightly acid mediums with a standard solution of a reductant such as sodium thiosulfate or sodium arsenite; examples of chemicals analyzed are copper(III), gold(VI), arsenic(V), antimony(V), chlorine, and bromine.

iodophor [CHEM] Any compound that is a carrier of iodine.

iodopsin [BIOCHEM] The visual pigment found in the retinal cones, consisting of retinene, combined with photopsin.

iodosobenzene [ORG CHEM] C_6H_5IO A yellowish-white amorphous solid that explodes at 200°C, soluble in hot water and alcohol; a strong oxidizing agent.

iodoxybenzene [ORG CHEM] $C_6H_5IO_2$ Clear white crystals that explode at 227–228°C, slightly soluble in water, insoluble in chloroform, acetone, and benzene; a strong oxidizing agent.

iodyrite *See* iodargyrite.

Ioffe bars [PL PHYS] Heavy current-carrying bars that are used to increase plasma stability in some types of controlled fusion reactor.

ion [CHEM] An isolated electron or positron or an atom or molecule which by loss or gain of one or more electrons has acquired a net electric charge.

ion accelerator [NUCLEO] A linear accelerator in which ions are accelerated by an electric field in a standing-wave pattern that is set up in a resonant cavity by external oscillators or amplifiers.

ion-acoustic wave [PL PHYS] A longitudinal compression wave in the ion density of a plasma which can occur at high electron temperatures and low frequencies, caused by a combination of ion inertia and electron pressure.

ion atmosphere *See* ion cloud.

ion backscattering [SOLID STATE] Large-angle elastic scattering of monoenergetic ions in a beam directed at a metallized film on silicon or some other thin multilayer system.

ion-beam scanning [ELECTR] The process of analyzing the mass spectrum of an ion beam in a mass spectrometer either by changing the electric or magnetic fields of the mass spectrometer or by moving a probe.

ion burn *See* ion spot.

ion chamber *See* ionization chamber.

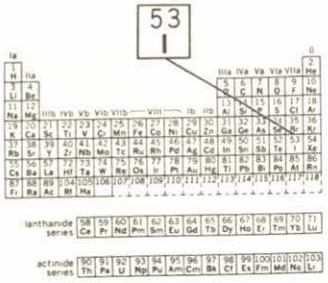
ion cloud [GEOPHYS] An inhomogeneity or patch of unusually great ion density in one of the regular regions of the ionosphere; such patches occur quite often in the E region. [PHYS CHEM] A slight preponderance of negative ions around a positive ion in an electrolyte, and vice versa, according to the Debye-Hückel theory. Also known as ion atmosphere.

ion column [GEOPHYS] The trail of ionized gases in the trajectory of a meteoroid entering the upper atmosphere; a part of the composite phenomenon known as a meteor. Also known as meteor trail.

ion concentration *See* ion density.

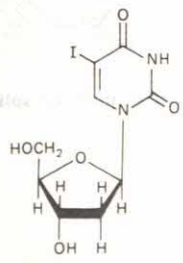
ion counter *See* ionization counter.

IODINE



Periodic table of the chemical elements showing the position of iodine.

5-IODO-2′-DEOXYURIDINE



Structural formula.

ion current [PHYS] The electric current resulting from motion of ions.
ion density [PHYS] The number of ions per unit volume. Also known as ion concentration.
ion detector [ANALY CHEM] Device for detection of presence or concentration of liquid solution ions, such as with a pH meter or by conductimetric techniques.
ion emission [PHYS] The ejection of ions from the surface of a substance into the surrounding space.
ion engine [AERO ENG] An engine which provides thrust by expelling accelerated or high velocity ions; ion engines using energy provided by nuclear reactors are proposed for space vehicles.
ion exchange [PHYS CHEM] A chemical reaction in which mobile hydrated ions of a solid are exchanged, equivalent for equivalent, for ions of like charge in solution; the solid has an open, fishnetlike structure, and the mobile ions neutralize the charged, or potentially charged, groups attached to the solid matrix; the solid matrix is termed the ion exchanger.
ion-exchange chromatography [ANALY CHEM] A chromatographic procedure in which the stationary phase consists of ion-exchange resins which may be acidic or basic.
ion-exchange electrolyte cell [ELEC] Fuel cell which operates on hydrogen and oxygen in the air, similar to the standard hydrogen-oxygen fuel cell with the exception that the liquid electrolyte is replaced by an ion-exchange membrane; operation is at atmospheric pressure and room temperature.
ion-exchange resin [MATER] A synthetic resin that can combine or exchange ions with a solution; such a resin produces the exchange of sodium for calcium ions in the softening of hard water.
ion exclusion [CHEM] Ion-exchange resin system in which the mobile ions in the resin-gel phase electrically neutralize the immobilized charged functional groups attached to the resin, thus preventing penetration of solvent electrolyte into the resin-gel phase; used in separations where electrolyte is to be excluded from the resin, but not nonpolar materials, as the separation of salt from nonpolar glycerin.
ion-exclusion chromatography [ANALY CHEM] Chromatography in which the adsorbent material is saturated with the same mobile ions (cationic or anionic) as are present in the sample-carrying eluent (solvent), thus repelling the similar sample ions.
ion fractionation [CHEM ENG] Separation of cations or anions from an ionic solution by use of a membrane permeable to the desired ion; equipment includes electrodialyzers and ion-fractionation stills.
ion gage *See* ionization gage.
ion gun *See* ion source.
ionic bond [PHYS CHEM] A type of chemical bonding in which one or more electrons are transferred completely from one atom to another, thus converting the neutral atoms into electrically charged ions; these ions are approximately spherical and attract one another because of their opposite charge. Also known as electrovalent bond.
ionic charge [PHYS] **1.** The total charge of an ion. **2.** The charge of an electron; the charge of any ion is equal to this electron charge in magnitude, or is an integral multiple of it.
ionic column [ARCH] A column characterized by the spiral ornament of its head.
ionic conductance [PHYS CHEM] The contribution of a given type of ion to the total equivalent conductance in the limit of infinite dilution.
ionic conduction [SOLID STATE] Electrical conduction of a solid due to the displacement of ions within the crystal lattice.
ionic crystal [CRYSTAL] A crystal in which the lattice-site occupants are charged ions held together primarily by their electrostatic interaction.
ionic equilibrium [PHYS CHEM] The condition in which the rate of dissociation of nonionized molecules is equal to the rate of combination of the ions.
ionic equivalent conductance [PHYS CHEM] The contribution made by each ion species of a salt toward an electrolyte's equiviconductance.
ionic focusing *See* gas focusing.
ionic gel [CHEM] A gel with ionic groups attached to the structure of the gel; the groups can not diffuse out into the surrounding solution.
ionic-heated cathode [ELECTR] Hot cathode heated primarily by ionic bombardment of the emitting surface.
ionicity [CHEM] The ionic character of a solid.
ionic lattice [CRYSTAL] The lattice of an ionic crystal.
ionic membrane [CHEM ENG] Semipermeable membrane that conducts electricity; the application of an electric field to the membrane achieves an electrophoretic movement of ions through the membrane; used in electrodialysis.
ionic mobility [PHYS] The ratio of the average drift velocity of an ion in a liquid or gas to the electric field.
ionic polymerization [ORG CHEM] Polymerization that proceeds via ionic intermediates (carbonium ions or carbanions) than through neutral species (olefins or acetylenes).
ionic radii [PHYS CHEM] Radii which can be assigned to ions because the rapid variation of their repulsive interaction with distance makes them repel like hard spheres; these radii determine the dimensions of ionic crystals.
ionic ratios [OCEANOGR] The ratios by weight of major constituents of seawater to the chloride ion content; for example, $SO_4/Cl = 0.1396$, $Ca/Cl = 0.02150$, $Mg/Cl = 0.06694$.
ionic semiconductor [SOLID STATE] A solid whose electrical conductivity is due primarily to the movement of ions rather than that of electrons and holes.
ionic strength [PHYS CHEM] A measure of the average electrostatic interactions among ions in an electrolyte; it is equal to one-half the sum of the terms obtained by multiplying the molality of each ion by its valence squared.
ion implantation [ENG] A process of introducing impurities into the near-surface regions of solids by directing a beam of ions at the solid.
ion irradiation [PHYS] Bombardment of a substance by high-velocity ions.
ionite *See* anauxite.
ionium [NUC PHYS] A naturally occurring radioisotope, symbol Io, of thorium, atomic weight 230.
ionization [CHEM] A process by which a neutral atom or molecule loses or gains electrons, thereby acquiring a net charge and becoming an ion; occurs as the result of the dissociation of the atoms of a molecule in solution ($NaCl \rightarrow Na^+ + Cl^-$) or of a gas in an electric field ($H_2 \rightarrow 2H^+$).
ionization arc-over [ELEC] **1.** Arcing across terminals or contacts due to ionization of the adjacent air or gas. **2.** Arcing across satellite antenna terminals as the satellite passes through the ionized regions of the ionosphere.
ionization chamber [NUCLEO] A particle detector which measures the ionization produced in the gas filling the chamber by the fast-moving charged particles as they pass through. Also known as ion chamber.
ionization constant [PHYS CHEM] Analog of the dissociation constant, where $k = [H^+][A^-]/[HA]$; used for the application of the law of mass action to ionization; in the equation HA represents the acid, such as acetic acid.
ionization counter [NUCLEO] An ionization chamber in which there is no internal amplification by gas multiplication; used for counting ionizing particles. Also known as ion counter.
ionization cross section [PHYS] The cross section for a particle or photon to undergo a collision with an atom, thus removing or adding one or more electrons to the atom.
ionization current *See* gas current.
ionization degree [PHYS CHEM] The proportion of potential ionization that has taken place for an ionizable material in a solution or reaction mixture.
ionization density [ELECTR] The density of ions in a gas.
ionization energy [ATOM PHYS] The amount of energy needed to remove an electron from a given kind of atom or molecule to an infinite distance; usually expressed in electron volts, and numerically equal to the ionization potential in volts.
ionization gage [ELECTR] An instrument for measuring low gas densities by ionizing the gas and measuring the ion current. Also known as ion gage; ionization vacuum gage.
ionization potential [ATOM PHYS] The energy per unit charge needed to remove an electron from a given kind of atom or molecule to an infinite distance; usually expressed in volts. Also known as ion potential.
ionization radiation *See* ionizing radiation.
ionization source *See* ion source.
ionization spectrometer *See* Bragg spectrometer.
ionization time [ELECTR] Of a gas tube, the time interval between the initiation of conditions for and the establishment of conduction at some stated value of tube voltage drop.
ionization vacuum gage *See* ionization gage.

ionized atom [CHEM] An atom with an excess or deficiency of electrons, so that it has a net charge.
ionized gas [PHYS] A gas, some of whose atoms or molecules have undergone ionization.
ionized layers [GEOPHYS] Layers of increased ionization within the ionosphere produced by cosmic radiation; responsible for absorption and reflection of radio waves and important in connection with communications and tracking of satellites and other space vehicles.
ionizing event [PHYS] Any occurrence in which an ion or group of ions is produced; for example, by passage of charged particles through matter.
ionizing radiation [NUCLEO] **1.** Particles or photons that have sufficient energy to produce ionization directly in their passage through a substance. Also known as ionization radiation. **2.** Particles that are capable of nuclear interactions in which sufficient energy is released to produce ionization.
ion kinetic energy spectrometry [SPECT] A spectrometric technique that uses a beam of ions of high kinetic energy passing through a field-free reaction chamber from which ionic products are collected and energy analyzed; it is a generalization of metastable ion studies in which both unimolecular and bimolecular reactions are considered.
ion laser [OPTICS] A gas laser in which stimulated emission takes place between two energy levels of an ion; gases used include argon, krypton, neon, and xenon; examples include helium-cadmium lasers and metal vapor lasers.
ion machining [ENG] Use of a high-velocity ion beam to remove material from a surface.
ion mean life [PHYS CHEM] The average time between the ionization of an atom or molecule and its recombination with one or more electrons, or its loss of excess electrons.
ion microprobe *See* secondary ion mass spectrometer.
ion microprobe mass spectrometer [ENG] A type of secondary ion mass spectrometer in which primary ions are focused on a spot 1–2 micrometers in diameter, mass-charge separation of secondary ions is carried out by a double focusing mass spectrometer or spectrograph, and a magnified image of elemental or isotopic distributions on the sample surface is produced using synchronous scanning of the primary ion beam and an oscilloscope.
ion microscope *See* field-ion microscope.
ion migration [ELEC] Movement of ions produced in an electrolyte, semiconductor, and so on, by the application of an electric potential between electrodes.
ionogram [ENG] A record produced by an ionosonde, that is, a graph of the virtual height of the ionosphere plotted against frequency.
ionography [ANALY CHEM] A type of electrochromatography involving migration of ions.
ionomer [ORG CHEM] Polymer with covalent bonds between the elements of the chain, and ionic bonds between the chains.
ionomer resin [ORG CHEM] A polymer which has ethylene as the major component, but which contains both covalent and ionic bonds.
ionone [ORG CHEM] $C_{13}H_{20}O$ A colorless to light yellow liquid with a boiling point of 126–128°C at 12 mmHg (1600 newtons per square meter); soluble in alcohol, ether, and mineral oil; used in perfumery, flavoring, and vitamin A production. Also known as irisone.
ionophone [ENG ACOUS] A high-frequency loudspeaker in which the audio-frequency signal modulates the radio-frequency supply to an arc maintained in a quartz tube, and the resulting modulated wave acts directly on ionized air to create sound waves.
ionophore [BIOCHEM] Any of a class of compounds, generally cyclic, having the ability to carry ions across lipid barriers due to the property of cation selectivity; examples are valinomycin and nonactin.
ionosonde [ENG] A radar system for determining the vertical height at which the ionosphere reflects signals back to earth at various frequencies; a pulsed vertical beam is swept periodically through a frequency range from 0.5 to 20 megahertz, and the variation of echo return time with frequency is photographically recorded.
ionosphere [GEOPHYS] That part of the earth's upper atmosphere which is sufficiently ionized by solar ultraviolet radiation so that the concentration of free electrons affects the propagation of radio waves; its base is at about 70 or 80 kilometers and it extends to an indefinite height.
ionospheric disturbance [GEOPHYS] A temporal variation in electron concentration in the ionosphere that is caused by solar activity and that makes the heights of the ionosphere layers go beyond the normal limits for a location, date, and time of day.
ionospheric D scatter meteor burst [GEOPHYS] Phenomenon affecting ionospheric scatter communications resulting from the penetration of meteors through the D region of the ionospheric layer.
ionospheric error [COMMUN] Variation in the character of the ionospheric transmission path or paths used by the radio waves of electronic navigation systems which if not compensated will produce an error in the information generated by the system.
ionospheric propagation [COMMUN] Propagation of radio waves over long distances by reflection from the ionosphere, useful at frequencies up to about 25 megahertz.
ionospheric recorder [ELECTR] A radio device for determining the distribution of virtual height with frequency, and the critical frequencies of the various layers of the ionosphere.
ionospheric scatter [COMMUN] A form of scatter propagation in which radio waves are scattered by the lower E layer of the ionosphere to permit communication over distances from 600 to 1400 miles (1000 to 2250 kilometers) when using the frequency range of about 25 to 100 megahertz.
ionospheric storm [GEOPHYS] A turbulence in the F region of the ionosphere, usually due to a sudden burst of radiation from the sun; it is accompanied by a decrease in the density of ionization and an increase in the virtual height of the region.
ionospheric wave *See* sky wave.
ion pair [NUCLEO] A positive ion and an equal-charge negative ion, usually an electron, that are produced by the action of radiation on a neutral atom or molecule.
ion-permeable membrane [MATER] A film or sheet of a substance which is preferentially permeable to some species or types of ions.
ion potential *See* ionization potential.
ion probe *See* secondary ion mass spectrometer.
ion propulsion [AERO ENG] Vehicular motion caused by reaction from the high-speed discharge of a beam of electrically equally charged minute particles ejected behind the vehicle.
ion pump [ELECTR] A vacuum pump in which gas molecules are first ionized by electrons that have been generated by a high voltage and are spiraling in a high-intensity magnetic field, and the molecules are then attracted to a cathode, or propelled by electrodes into an auxiliary pump or an ion trap.
ion retardation [CHEM ENG] Sorbent extraction of strong electrolytes with an anion-exchange resin in which a cationic monomer has been polymerized, or vice versa.
ion scattering spectroscopy [SPECT] A spectroscopic technique in which a low-energy (about 1000 electronvolts) beam of inert-gas ions in directed at a surface, and the energies and scattering angles of the scattered ions are used to identify surface atoms. Abbreviated ISS.
ion source [ELECTR] A device in which gas ions are produced, focused, accelerated, and emitted as a narrow beam. Also known as ion gun; ionization source.
ion spot [ELECTR] Of a cathode-ray tube screen, an area of localized deterioration of luminescence caused by bombardment with negative ions. Also known as ion burn.
iontophoresis [MED] A medical treatment used to drive positive or negative ions into a tissue, in which two electrodes are placed in contact with tissue, one of the electrodes being a pad of absorbent material soaked with a solution of the material to be administered, and a voltage is applied between the electrodes.
ion trap [ELECTR] **1.** An arrangement whereby ions in the electron beam of a cathode-ray tube are prevented from bombarding the screen and producing an ion spot, usually employing a magnet to bend the electron beam so that it passes through the tiny aperture of the electron gun, while the heavier ions are less affected by the magnetic field and are trapped inside the gun. **2.** A metal electrode, usually of titanium, into which ions in an ion pump are absorbed.
iophobia [PSYCH] An abnormal fear of poison.
Iospilidae [INV ZOO] A small family of pelagic polychaetes assigned to the Errantia.
Iowan glaciation [GEOL] The earliest substage of the Wisconsin glacial stage; occurred more than 30,000 years ago.
ioxynil [ORG CHEM] $C_7H_3I_2NO$ A colorless solid with a melting point of 212–213°C; used for postemergence control of

seedling weeds in cereals and sports turf. Also known as 4-hydroxy-3,5-diiodobenzonitrile(4-cyano-2,6-diiodophenol).

ioxynil octanoate [ORG CHEM] $C_{15}H_{17}I_2NO_2$ A waxy solid with a melting point of 59–60°C; insoluble in water; used as an insecticide for cereals and sugarcane.

IPC *See* propham.

ipecac [BOT] Any of several low, perennial, tropical South American shrubs or half shrubs in the genus *Cephaelis* of the family Rubiaceae; the dried rhizome and root, containing emetine, cephaeline, and other alkaloids, is used as an emetic and expectorant.

Ipidae [INV ZOO] The equivalent name for Scolytidae.

IPL [COMPUT SCI] Collective term for a series of list-processing languages developed principally by Newell, Simon, and Shaw. Derived from Information Processing Language.

IPL button *See* bootstrap button.

ipsilateral *See* homolateral.

ipsonite [GEOL] The final stage of weathered asphalt; a black, infusible substance, only slightly soluble in carbon disulfide, containing 50–80% fixed carbon and very little oxygen.

IQ *See* intelligence quotient.

IQSY *See* International Quiet Sun Year.

Ir *See* iridium.

IRBM *See* intermediate-range ballistic missile.

irdome [OPTICS] A dome used to protect an infrared detector and its optical elements, generally made from quartz, silicon, germanium, sapphire, calcium aluminate, or other material having high transparency to infrared radiation. Derived from infrared dome.

IR drop *See* resistance drop.

IRG *See* record gap.

Iridaceae [BOT] A family of monocotyledonous herbs in the order Liliales distinguished by three stamens and an inferior ovary.

iridectomy [MED] Surgical removal of part of the iris.

iridescence [OPTICS] A rainbow color effect exhibited in various bodies as a result of interference in a thin film (as of soap bubbles or mother of pearl) or of diffraction of light reflected from a ribbed surface (as of the plumage of some birds).

iridescent clouds [METEOROL] Ice-crystal clouds which exhibit brilliant spots or borders of colors, usually red and green, observed up to about 30° from the sun.

iridic chloride [INORG CHEM] $IrCl_4$ A hygroscopic brownish-black mass, soluble in water and alcohol; used to analyze for nitric acid, HNO_3, and in analytical microscopic work. Also known as iridium chloride; iridium tetrachloride.

iridium [CHEM] A metallic element, symbol Ir, atomic number 77, atomic weight 192.2, in the platinum group; insoluble in acids, melting at 2454°C. [MET] A silver-white, brittle, hard metal used in jewelry, electric contacts, electrodes, resistance wires, and pen tips.

iridium-192 [NUC PHYS] Radioactive isotope of iridium with a 75-day half-life; β and γ radiation; used in cancer treatment and for radiography of light metal castings.

iridium chloride *See* iridic chloride.

iridium tetrachloride *See* iridic chloride.

iridocele [MED] A rupture of the cornea through which a portion of the iris protrudes.

iridocyclitis [MED] Inflammation of the iris and the ciliary body.

iridocyclochoroiditis [MED] Inflammation of the iris, the ciliary body, and the choroid. Also known as uveitis.

iridocyte [HISTOL] A specialized cell in the integument of certain animal species which is filled with iridescent crystals of guanine and a variety of lipophores. Also known as guanophore; iridophore.

iridophore *See* iridocyte.

iridosmine [MET] A natural iridium-osmium alloy composed of 10–77% iridium, 17–80% osmium, 0–10% platinum, 0–17% rhodium, 0–9% ruthenium, 0–2% iron, and 0–1% copper; used for surgical needles and compass bearings and for hardening platinum.

iris [ANAT] A pigmented diaphragm perforated centrally by an adjustable pupil which regulates the amount of light reaching the retina in vertebrate eyes. [BOT] Any plant of the genus *Iris*, the type genus of the family Iridaceae, characterized by linear or sword-shaped leaves, erect stalks, and bright-colored flowers with the three inner perianth segments erect and the outer perianth segments drooping. [ELECTROMAG] A conducting plate mounted across a waveguide to introduce impedance; when only a single mode can be supported, an iris acts substantially as a shunt admittance and may be used for matching the waveguide impedance to that of a load. Also known as diaphragm; waveguide window. [OPTICS] A circular mechanical device, whose diameter can be varied continuously, which controls the amount of light reaching the film of a camera. Also known as iris diaphragm.

irisation [METEOROL] The coloration exhibited by iridescent clouds and at times along the borders of lenticular clouds.

iris diaphragm *See* iris.

Irish linen [TEXT] Thin linen fabric woven of Irish flax.

Irish potato *See* potato.

Irish Sea [GEOGR] A marginal sea of the Atlantic Ocean between Ireland and England, approximately 53°N latitude and 5°W longitude.

irisone *See* ionone.

iritis [MED] Inflammation of the iris.

I^2R loss *See* copper loss.

IRM *See* isothermal remanent magnetization.

Irminger Current [OCEANOGR] An ocean current that is one of the terminal branches of the Gulf Stream system, flowing west off the southern coast of Iceland.

iron [CHEM] A silvery-white metallic element, symbol Fe, atomic number 26, atomic weight 55.847, melting at 1530°C. [MET] A heavy, magnetic, malleable and ductile metal occurring in meteorites and combined in a wide range of ores and most igneous rocks; it is one of the most widely used metals, and plays a role in biological processes.

iron-55 [NUC PHYS] Radioactive isotope of iron, symbol Fe^{55}, with a 2.91-year half-life; highly toxic.

iron-59 [NUC PHYS] Radioactive isotope of iron, symbol Fe^{59}, 46.3-day half-life; β and γ radiation; highly toxic; used to study metallic welds, corrosion mechanisms, engine wear, and bodily functions.

iron acetate *See* ferrous acetate.

iron acetate liquor [MATER] Black liquor containing 5–5.5% iron and sometimes copperas or tannin; results from pyroligneous acid attack on iron filings; used for dyeing and printing with logwood, and as a mordant for alizarine and nitroso dyes. Also known as black liquor; black mordant; iron liquor.

Iron Age [ARCHEO] Period characterized by production and widespread use of iron, starting approximately 1000 B.C.

iron alloy [MET] An alloy having iron as the principal component.

iron alum *See* halotrichite.

iron ammonium sulfate *See* ferric ammonium sulfate; ferrous ammonium sulfate.

iron and steel sheet piling [MIN ENG] A technique that uses iron and steel piling instead of wood to drive a shaft through loose, wet ground near the surface.

ironarc process [MET] An ultra-high-temperature smelting process employing plasma chemistry to process refractory materials, such as zirconia.

iron arsenate *See* ferrous arsenate.

iron bacteria [MICROBIO] The common name for bacteria capable of oxidizing ferrous iron to the ferric state.

iron-binding protein [BIOCHEM] A serum protein, such as hemoglobin, for the transport of iron ions.

iron black [CHEM] Fine black antimony powder used to give a polished-steel look to papier-maché and plaster of paris; made by reaction of zinc with acid solution of an antimony salt and precipitation of black antimony powder.

iron blue [INORG CHEM] Ferric ferrocyanide used as blue pigment by the paint industry for permanent body and trim paints; also used in blue ink, in paper dyeing, and as a fertilizer ingredient.

iron bromide *See* ferric bromide.

iron carbide *See* cementite.

iron carbonyl *See* iron pentacarbonyl.

iron castings [MET] Shapes cast in molds from iron.

iron cement [MATER] A mixture of small iron pieces with ammonium chloride, used to join iron or steel surfaces.

iron chloride *See* ferric chloride; ferrous chloride.

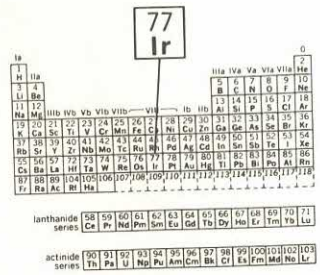
iron citrate *See* ferric citrate.

iron-Constantan [MET] Dual-metal combination for thermocouple junctions, used for temperature measurement in oxidizing or reducing atmospheres.

iron cordierite *See* sekaninaite.

iron core [ELECTROMAG] A core made of solid or laminated

IRIDIUM

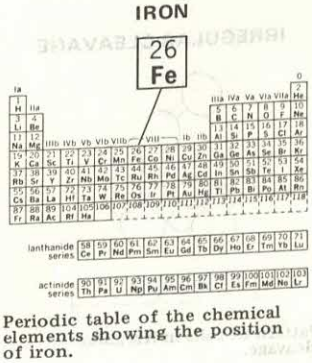


Periodic table of the chemical elements showing the position of iridium.

IRIS

The iris, an ornamental flower.

IRON



Periodic table of the chemical elements showing the position of iron.

iron, or some other magnetic material which may contain very little iron.

iron-core choke *See* iron-core coil.

iron-core coil [ELECTROMAG] A coil in which solid or laminated iron or other magnetic material forms part or all of the magnetic circuit linking its winding. Also known as iron-core choke; magnet coil.

iron-core transformer [ELECTROMAG] A transformer in which laminations of iron or other magnetic material make up part or all of the path for magnetic lines of force that link the transformer windings.

iron-deficiency anemia [MED] Hypochromic microcytic anemia due to excessive loss, deficient intake, or poor absorption of iron. Also known as nutritional hypochromic anemia.

iron dichloride *See* ferrous chloride.

iron-dust core [ELECTROMAG] A core made by mixing finely powdered magnetic material with an insulating binder and molding under pressure to form a rod-shaped core that can be moved into or out of a coil or transformer to vary the inductance or degree of coupling for tuning purposes.

irone [ORG CHEM] $C_{14}H_{22}O$ A colorless liquid terpene; a component of essential oil from the orrisroot; used in perfumes.

iron ferrocyanide *See* ferric ferrocyanide.

iron fluoride *See* ferric fluoride.

iron formation [GEOL] Sedimentary, low-grade iron ore bodies consisting mainly of chert or fine-grained quartz and ferric oxide segregated in bands or sheets irregularly mingled.

iron foundry [MET] A building in which iron castings are made.

iron glance *See* specularite.

iron hat *See* gossan.

iron hydroxide *See* ferric hydroxide.

ironing [MET] Reducing the wall thickness of a deep-drawn object by reducing the clearance between punch and die.

iron liquor *See* iron acetate liquor.

iron loss *See* core loss.

iron metabolism [BIOCHEM] The chemical and physiological processes involved in absorption of iron from the intestine and in its role in erythrocytes.

iron metavanadate *See* ferric vanadate.

iron meteorite [ASTRON] A type of meteorite that consists mainly of iron and nickel and is several times heavier than any ordinary rock.

iron mica *See* lepidomelane.

iron monoxide *See* ferrous oxide.

iron-nickel alloy [MET] An iron alloy containing 20–80% nickel; it has high permeability and low hysteresis losses at low flux densities and is more readily rolled into thin laminations than silicon steels.

iron nitrate *See* ferric nitrate.

iron nonacarbonyl [INORG CHEM] $Fe_2(CO)_9$ Orange-yellow crystals that break down at 100°C to yield tetracarbonyl, slightly soluble in alcohol and acetone, almost insoluble in water, ether, and benzene. Also known as di-iron enneacarbonyl.

iron ore [GEOL] Rocks or deposits containing compounds from which iron can be extracted.

iron-ore cement [MATER] A cement in which iron ore is used instead of clay or shale.

iron oxalate *See* ferrous oxalate.

iron oxide [INORG CHEM] Any of the hydrated, synthetic, or natural oxides of iron: ferrous oxide, ferric oxide, ferriferous oxide.

iron oxide process [CHEM ENG] A process by which a gas is passed through iron oxide and wood shavings to remove sulfides.

iron pentacarbonyl [INORG CHEM] $Fe(CO)_5$ An oily liquid that decomposes upon exposure to light, soluble in most organic solvents; used as a source of a pure iron catalyst and for magnet cores. Also known as iron carbonyl.

iron phosphate *See* ferric phosphate.

iron-porphyrin protein [BIOCHEM] Any protein containing iron and porphyrin; examples are hemoglobin, the cytochromes, and catalase.

iron pyrite *See* pyrite.

iron red [MATER] Any of the pigments made from red varieties of ferric oxide.

iron resinate *See* ferric resinate.

iron-retention agent [MATER] Complexing agent that ties dissolved iron into complex ions to prevent reprecipitation and wellbore plugging after well acidizing.

iron saffron *See* Indian red.

iron scurf [MATER] Glazing material used to color blue bricks; a mixture of stone and iron particles from grinding of gun barrels.

ironshot [MINERAL] Pertaining to a mineral with streaks or spots of iron or iron ore.

iron sight [ORD] Any metallic gunsight, such as a blade sight, as distinguished from an optical or computing sight.

iron soldering [MET] Soldering in which a soldering iron provides the required heat.

iron spar *See* siderite.

iron spinel *See* hercynite.

iron stearate *See* ferric stearate.

ironstone [PETR] An iron-rich sedimentary rock, either deposited directly as a ferruginous sediment or resulting from chemical replacement.

iron-stony meteorite *See* stony-iron meteorite.

iron sulfate *See* ferric sulfate; ferrous sulfate.

iron sulfide *See* ferrous sulfide.

iron tetracarbonyl [INORG CHEM] $Fe_3(CO)_{12}$ Dark-green lustrous crystals that break down at 140–150°C; soluble in organic solvents. Also known as tri-iron dodecacarbonyl.

iron whiskers [MET] Single-crystal pure iron filaments or fibers.

iron winds [METEOROL] Northeasterly winds of Central America, prevalent during February and March, and blowing steadily for several days at a time.

ironwood [BOT] Any of a number of hardwood trees in the United States, including the American hornbeam, the buckwheat, and the eastern hophornbeam.

irradiance *See* radiant flux density.

irradiation [BIOPHYS] Subjection of a biological system to sound waves of sufficient intensity to modify their structure or function. [ENG] The exposure of a material, object, or patient to x-rays, gamma rays, ultraviolet rays, or other ionizing radiation. [OPTICS] An optical illusion which makes bright objects appear larger than they really are.

irradiation cataract [MED] A cataract that develops slowly following prolonged or intense irradiation, as by radium or roentgen rays. Also known as cyclotron cataract; radiation cataract.

irradiation correction [NAV] A correction to the readings of sextant altitudes made necessary by irradiation that is caused by the apparent enlargement of the bright surface of a celestial body against the darker background of the sky.

irradiation cystitis [MED] Inflammation of the urinary bladder following radiation therapy of pelvic organs.

irrational equation [MATH] An equation having an unknown raised to some fractional power. Also known as radical equation.

irrational number [MATH] A number which is not the quotient of two integers.

irreducible equation [MATH] An equation that is equivalent to one formed by setting an irreducible polynomial equal to zero.

irreducible function *See* irreducible polynomial.

irreducible lambda expression [MATH] A lambda expression that cannot be converted to a reduced form by a sequence of applications of the renaming and reduction rules.

irreducible polynomial [MATH] A polynomial is irreducible over a field K if it cannot be written as the product of two polynomials of lesser degree whose coefficients come from K. Also known as irreducible function.

irreducible representation of a group [MATH] A representation of a group as a family of linear operators of a vector space V where there is no proper closed subspace of V invariant under these operators.

irreducible saturation [PETRO ENG] In a permeable reservoir, that condition in which the nonwetting phase saturation is so large that the wetting phase can be reduced no more.

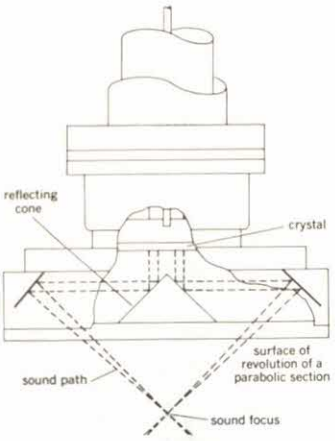
irreducible tensor [MATH] A tensor that cannot be written as the inner product of two tensors of lower degree.

irregular [BOT] Lacking symmetry, as of a flower having petals unlike in size or shape.

irregular cleavage [EMBRYO] Division of a zygote into random masses of cells, as in certain coelenterates.

irregular connective tissue [HISTOL] A loose or dense

IRRADIATION



Reflector-type focusing irradiator, a device for producing irradiation by sound waves in the megahertz range. The sound waves emanating from the circular crystal plate impinge on a 90° included angle cone, from which surface they are directed to a surface of revolution generated by a section of a parabola. Focusing is obtained by reflection of the waves from this surface.

IRREGULAR CLEAVAGE

Pattern of cells in irregular cleavage.

connective tissue with fibers irregularly woven and irregularly distributed; collagen is the dominant fiber type.

irregular crystal [METEOROL] A snow particle, sometimes covered by a coating of rime, composed of small crystals randomly grown together; generally, component crystals are so small that the crystalline form of the particle can be seen only through a magnifying glass or microscope.

irregular element [IND ENG] An element whose frequency of occurrence is irregular but predictable. Also known as incidental element.

irregular galaxy [ASTRON] A galaxy which shows no definite order or shape, except that of a general flattened appearance.

Irregularia [INV ZOO] An artificial assemblage of echinoderms in which the anus and periproct lie outside the apical system, the ambulacral plates remain simple, the primary radioles are hollow, and the rigid test shows some degree of bilateral symmetry.

irregular iceberg *See* pinnacled iceberg.

irregular variable star [ASTRON] A star with no fixed period.

irrespirable atmosphere [MIN ENG] Atmosphere in a coal mine requiring workers to wear breathing apparatus because of poisonous gas or insufficient oxygen as a result of an explosion from firedamp or coal dust, or mine fires.

irreversible energy loss [THERMO] Energy transformation process in which the resultant condition lacks the driving potential needed to reverse the process; the measure of this loss is expressed by the entropy increase of the system.

irreversible process [THERMO] A process which cannot be reversed by an infinitesimal change in external conditions.

irreversible thermodynamics *See* nonequilibrium thermodynamics.

irrigation [CIV ENG] Artificial application of water to arable land for agricultural use. [MED] Therapeutic washing out by means of a continuous stream of water.

irrigation canal [CIV ENG] An artificial open channel for transporting water for crop irrigation.

irrigation pipe [CIV ENG] A conduit of connected pipes for transporting water for crop irrigation.

irritability [PHYSIO] **1.** A condition or quality of being excitable; the power of responding to a stimulus. **2.** A condition of abnormal excitability of an organism, organ, or part, when it reacts excessively to a slight stimulation.

irritable colon [MED] Any of several disturbed colonic functions associated with anxiety or emotional stress. Also known as adaptive colitis; mucous colitis; spastic colon; unstable colon.

irritant gas [MATER] A nonlethal gas, causing irritation of the skin and flow of tears; any one of the family of tear gases used for training and riot control.

irrotational flow [FL MECH] Fluid flow in which the curl of the velocity function is zero everywhere, so that the circulation of the velocity about any closed curve vanishes. Also known as acyclic motion; irrotational motion.

irrotational motion *See* irrotational flow.

irrotational strain [GEOL] Strain in which the orientation of the axes of strain does not change. Also known as nonrotational strain.

irrotational vector field [MATH] A vector field whose curl is identically zero; every such field is the gradient of a scalar function. Also known as lamellar vector field.

irrotational wave *See* compressional wave.

irruption *See* intrusion.

Irvngtonian [GEOL] A stage of geologic time in southern California, in the lower Pleistocene, below the Rancholabrean.

isallobar [METEOROL] A line of equal change in atmospheric pressure during a specified time interval; an isopleth of pressure tendency; a common form is drawn for the three-hourly local pressure tendencies on a synoptic surface chart.

isallobaric [METEOROL] Of equal or constant pressure change; this may refer either to the distribution of equal pressure tendency in space or to the constancy of pressure tendency with time.

isallobaric high *See* pressure-rise center.

isallobaric low *See* pressure-fall center.

isallobaric maximum *See* pressure-rise center.

isallobaric minimum *See* pressure-fall center.

isallobaric wind [METEOROL] The wind velocity whose Coriolis force exactly balances a locally accelerating geostrophic wind. Also known as Brunt-Douglas isallobaric wind.

isallohypse *See* height-change line.

isallohypsic wind [METEOROL] An isallobaric wind, using height tendency in a constant-pressure surface instead of pressure tendency in a constant-height surface.

isallotherm [METEOROL] A line connecting points of equal change in temperature within a given time period.

isanabat [METEOROL] A line drawn through points of equal vertical component of wind velocity; positive values indicate upward motion, negative values indicate downward motion.

isanakatabar [METEOROL] A line on a chart of equal atmospheric-pressure range during a specified time interval.

isanomal *See* isanomalous line.

isanomalous line [METEOROL] A line drawn through geographical points having equal anomaly of some meteorological quantity. Also known as isanomal.

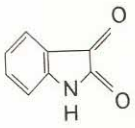
isano oil [MATER] A pale-yellow, viscous drying oil obtained from the nut of an African tree; used as a varnish oil.

isanthous [BOT] Having regular flowers.

isarithm *See* isopleth.

isatin [ORG CHEM] $C_6H_5NO_2$ An indole substituted with oxygen at carbon position 2 and 3; crystallizes as red needles that are soluble in hot water; used in dye manufacture.

ISATIN



Structural formula of isatin.

isaurore *See* isochasm.

ISB modulation *See* independent-sideband modulation.

I scan *See* I scope.

ischemia [MED] Localized tissue anemia as a result of obstruction of the blood supply or to vasoconstriction.

ischemic necrosis [MED] Local tissue death due to impaired blood supply.

ischemic neuropathy [MED] Nerve lesions characterized by numbness, tingling, and pain with loss of sensory and motor functions of the parts involved, due to obstruction of the blood supply to the nerves.

ischemic paralysis [MED] Impaired motor function due to obstructed circulation to the area.

ischemic tubulorrhexis *See* lower nephron nephrosis.

ischiopodite [INV ZOO] The segment nearest the basipodite of walking legs in certain crustaceans. Also known as ischium.

ischiorectal region [ANAT] The region between the ischium and the rectum.

ischium [ANAT] Either of a pair of bones forming the dorsoposterior portion of the vertebrate pelvis; the inferior part of the human pelvis upon which the body rests in sitting. [INV ZOO] *See* ischiopodite.

ischium-pubis index [ANAT] The ratio (length of pubis × 100/length of ischium) by which the sex of an adult pelvis may usually be determined; the index is greater than 90 in females, and less than 90 in males.

Ischnacanthidae [PALEON] The single family of the acanthodian order Ischnacanthiformes.

Ischnacanthiformes [PALEON] A monofamilial order of extinct fishes of the order Acanthodii; members were slender, lightly armored predators with sharp teeth, deeply inserted fin spines, and two dorsal fins.

I scope [ELECTR] A cathode-ray scope on which a single signal appears as a circular segment whose radius is proportional to the range and whose circular length is inversely proportional to the error of aiming the antenna, true aim resulting in a complete circle; the position of the arc, relative to the center, indicates the position of the target relative to the beam axis. Also known as broken circle indicator; I indicator; I scan.

Isectolophidae [PALEO] A family of extinct ceratomorph mammals in the superfamily Tapiroidea.

isenthalpic expansion [THERMO] Expansion which takes place without any change in enthalpy.

isentrope [THERMO] A line of equal or constant entropy.

isentropic [THERMO] Having constant entropy; at constant entropy.

isentropic chart [METEOROL] A constant-entropy chart; a synoptic chart presenting the distribution of meteorological elements in the atmosphere on a surface of constant potential temperature (equivalent to an isentropic surface); it usually contains the plotted data and analysis of such elements as pressure (or height), wind, temperature, and moisture at that surface.

isentropic compression [THERMO] Compression which occurs without any change in entropy.

isentropic condensation level *See* lifting condensation level.

isentropic expansion [THERMO] Expansion which occurs without any change in entropy.
isentropic flow [THERMO] Fluid flow in which the entropy of any part of the fluid does not change as that part is carried along with the fluid.
isentropic map [GEOL] A map indicating constant entropy function for facies.
isentropic mixing [METEOROL] Any atmospheric mixing process which occurs within an isentropic surface; the fact that many atmospheric motions are reversible adiabatic processes renders this type of mixing important, and exchange coefficients have been computed therefor.
isentropic process [THERMO] A change that takes place without any increase or decrease in entropy, such as a process which is both reversible and adiabatic.
isentropic surface [METEOROL] A surface in space in which potential temperature is everywhere equal.
isentropic thickness chart [METEOROL] A thickness chart of an atmospheric layer bounded by two selected isentropic surfaces (surfaces of constant potential temperature); the thickness of such a layer is directly proportional to the static instability of that layer; hence, these charts have been called instability charts. Also known as thick-thin chart.
isentropic weight chart [METEOROL] A chart of atmospheric pressure difference between two selected isentropic surfaces (surfaces of constant potential temperature); the greater the pressure difference the greater the weight of the air column separating the two surfaces.
isethionic acid [ORG CHEM] $CH_2OH{\cdot}CH{\cdot}SO_2OH$ A water-soluble liquid, boiling at 100°C; used in the manufacture of detergents. Also known as ethylenehydrinsulfonic acid; oxyethylsulfonic acid.
ishikawaite [MINERAL] A black, orthorhombic mineral consisting essentially of uranium, iron, rare earth, and columbium oxide.
ishkyldite [MINERAL] $Mg_{15}Si_{11}O_{27}(OH)_{20}$ A mineral composed of a basic silicate of magnesium.
I signal [ELECTR] The in-phase component of the chrominance signal in color television, having a bandwidth of 0 to 1.5 megahertz, and consisting of $+0.74(R - Y)$ and $-0.27(B - Y)$, where Y is the luminance signal, R is the red camera signal, and B is the blue camera signal.
Ising coupling [SOLID STATE] A model of coupling between two atoms in a lattice, used to study ferromagnetism, in which the spin component of each atom along some axis is taken to be $+1$ or -1, and the energy of interaction is proportional to the negative of the product of the spin components along this axis.
isinglass [MATER] A gelatin made from the dried swim bladders of sturgeon and other fishes; used in glues, cements, and printing inks. Also known as fish gelatin; ichthyocolla. [MINERAL] Sheet mica, usually in the form of single cleavage plates; used in furnace and stove doors.
Ising model [SOLID STATE] A crude model of a ferromagnetic material or an analogous system, used to study phase transitions, in which atoms in a one-, two-, or three-dimensional lattice interact via Ising coupling between nearest neighbors, and the spin components of the atoms are coupled to a uniform magnetic field.
island [GEOGR] A tract of land smaller than a continent and surrounded by water; normally in an ocean, sea, lake, or stream.
island arc [GEOGR] A group of islands usually with a curving archlike pattern, generally convex toward the open ocean, having a deep trench or trough on the convex side and usually enclosing a deep basin on the concave side.
island mountain *See* inselberg.
island of Langerhans *See* islet of Langerhans.
island of Reil [ANAT] The insula of the cerebral hemisphere.
islet-cell carcinoma [MED] A metastatic tumor of pancreatic cells of the islet of Langerhans in the pancreas.
islet-cell tumor [MED] A benign tumor of the pancreatic islet cells. Also known as insulinoma; insuloma; Langerhansian adenoma.
islet of Langerhans [HISTOL] A mass of cell cords in the pancreas that is of an endocrine nature, secreting insulin and a minor hormone like lipocaic. Also known as island of Langerhans; islet of the pancreas.
islet of the pancreas *See* islet of Langerhans.
iso- [CHEM] A prefix indicating an isomer of an element in which there is a difference in the nucleus when compared to the most prevalent form of the element. [ORG CHEM] A prefix indicating a single branching at the end of the carbon chain.
isoacceptor [MOL BIO] Any of several species of transfer ribonucleic acid that can accept the same amino acid.
isoactyl thioglycolate [ORG CHEM] $HSCH_2COOCH_2{\cdot}C_7H_{15}$ A colorless liquid with a slight fruity odor and a boiling point of 125°C; used in antioxidants, insecticides, oil additives, and plasticizers.
isoagglutinin [IMMUNOL] An agglutinin which acts upon the red blood cells of members of the same species. Also known as isohemagglutinin.
isoalkane [ORG CHEM] An alkane with a branched chain whose next-to-last carbon atom is bonded to a single methyl group.
isoalkyl group [ORG CHEM] A group of atoms resulting from the removal of a hydrogen atom from a methyl group situated at the end of the straight-chain segment of an isoalkane.
isoallele [GEN] An allele that carries mutational alterations at the same site.
isoalloxazine mononucleotide *See* riboflavin 5′-phosphate.
isoamyl acetate *See* amyl acetate.
isoamyl alcohol *See* isobutyl carbinol.
isoamyl benzoate [ORG CHEM] $C_6H_5COOC_5H_{11}$ Colorless liquid with fruity aroma; boils at 260°C; soluble in alcohol, insoluble in water; used in flavors and perfumes. Also known as amyl benzoate.
isoamyl bromide [ORG CHEM] $(CH_3)_2CHCH_2CH_2Br$ A colorless liquid with a boiling point of 120–121°C; miscible with alcohol and with ether; used in organic synthesis. Also known as 1-bromo-3-methylbutane.
isoamyl butyrate [ORG CHEM] $C_5H_{11}COOC_3H_7$ A water-white liquid boiling at 150–180°C; soluble in alcohol and ether; used as a solvent and plasticizer for cellulose acetate and in flavor extracts.
isoamyl chloride [ORG CHEM] $C_5H_{11}Cl$ Water-insoluble, colorless liquid boiling at 100°C; it can be any one of several compounds, such as 1-chloro-3-methylbutane, $(CH_3)_2{\cdot}CH(CH_2)_2Cl$, or mixtures thereof; used as a solvent, in inks, for soil fumigation, and as a chemical intermediate.
isoamyl isovalerate *See* isoamyl valerate.
isoamyl nitrite *See* amyl nitrite.
isoamyl salicylate *See* amyl salicylate.
isoamyl valerate [ORG CHEM] $C_4H_9CO_2C_5H_{11}$ Clear liquid with apple aroma; boils at 204°C; soluble in alcohol and ether, insoluble in water; used in medicine and fruit flavors. Also known as apple essence; apple oil; isoamyl isovalerate.
isoantigen [IMMUNOL] An antigen in an individual capable of stimulating production of a specific antibody in another member of the same species. Also known as alloantigen.
isobar [METEOROL] A line drawn through all points of equal atmospheric pressure along a given reference surface, such as a constant-height surface (notably mean sea level on surface charts), an isentropic surface, or the vertical plan of a synoptic cross section. [NUC PHYS] One of two or more nuclides having the same number of nucleons in their nuclei but differing in their atomic numbers and chemical properties. [PHYS] **1.** A line connecting points of equal pressure along a given surface in a physical system. **2.** A line connecting points of equal pressure on a graph plotting thermodynamic variables.
isobaric [THERMO] Of equal or constant pressure, with respect to either space or time.
isobaric chart *See* constant-pressure chart.
isobaric contour chart *See* constant-pressure chart.
isobaric divergence [METEOROL] The horizontal divergence in a constant-pressure surface; expressed in a system of coordinates with pressure as an independent variable.
isobaric equivalent temperature *See* equivalent temperature.
isobaric map [METEOROL] A map depicting points in the atmosphere of equal barometric pressure.
isobaric process [THERMO] A thermodynamic process of a gas in which the heat transfer to or from the gaseous system causes a volume change at constant pressure.
isobaric spin *See* isotopic spin.
isobaric surface [METEOROL] A surface on which the pressure is uniform. Also known as constant-pressure surface.
isobaric topography *See* height pattern.
isobaric vorticity [METEOROL] Relative vorticity in a constant-pressure surface, that is, expressed in a system of coordinates with pressure as an independent variable.

isobath [OCEANOGR] A contour line connecting points of equal water depths on a chart. Also known as depth contour; depth curve; fathom curve.

isobathytherm [OCEANOGR] A line or surface showing the depth in oceans or lakes at which points have the same temperatures.

isobiochore [ECOL] A boundary line on a map connecting world environments that have similar floral and faunal constituents.

isobits [COMPUT SCI] Binary digits having the same value.

isobornyl acetate [ORG CHEM] $C_{10}H_{17}OOCCH_3$ A colorless liquid with an odor of pine needles and a boiling point of 220–224°C; soluble in fixed oils and mineral oil; used in toiletries and soaps and antiseptics, and as a flavoring agent.

isobornyl thiocyanoacetate [ORG CHEM] $C_{10}H_{17}OOCCH_2SCN$ An oily, yellow liquid; soluble in alcohol, benzene, chloroform, and ether; used in medicine and as an insecticide.

isobront [METEOROL] A line drawn through geographical points at which a given phase of thunderstorm activity occurred simultaneously. Also known as homobront.

isobryales [BOT] An order of mosses in which the plants are slender to robust and up to 90 centimeters in length.

isobutane [ORG CHEM] $(CH_3)_2CHCH_3$ A colorless, stable gas, noncorrosive to metals, nonreactive with water; boils at −11.7°C; used as a chemical intermediate, refrigerant, and fuel. Also known as 2-methyl propane.

isobutanol *See* isobutyl alcohol.

isobutene *See* isobutylene.

isobutyl [ORG CHEM] The radical $(CH_3)_2CHCH_2-$, occurring, for example, in isobutanol (isobutyl alcohol), $(CH_3)_2CHCH_2OH$.

isobutyl acetate [ORG CHEM] $C_4H_9OOCCH_3$ Colorless liquid with fruitlike aroma; soluble in alcohols, ether, and hydrocarbons, insoluble in water; boils at 116°C; used as a solvent for lacquer and nitrocellulose.

isobutyl alcohol [ORG CHEM] $(CH_3)_2CHCH_2OH$ A colorless liquid that is a by-product of the synthetic production of methanol, boils at 107°C; soluble in water, ether, and alcohol; used as a solvent in paints and lacquers, in organic synthesis, and in resin coatings. Also known as isobutanol; isopropylcarbinol; 2-methyl-1-propanol.

isobutyl aldehyde [ORG CHEM] $(CH_3)_2CHCHO$ Colorless, transparent liquid with pungent aroma; soluble in alcohol, insoluble in water; boils at 64°C; used as a chemical intermediate. Also known as isobutyraldehyde.

isobutyl carbinol [ORG CHEM] $(CH_3)_2CH(CH_2)_2OH$ Colorless liquid with pungent taste and disagreeable aroma; soluble in alcohol and ether, slightly soluble in water; boils at 132°C; used as a chemical intermediate and solvent, and in pharmaceutical products and medicines. Also known as isoamyl alcohol; 3-methyl-1-butanol; primary isoamyl alcohol.

isobutylene [ORG CHEM] $(CH_3)_2CCH_2$ Flammable, colorless, volatile liquid boiling at −7°C; easily polymerized; used in gasolines, as a chemical intermediate, and to make butyl rubber. Also known as isobutene; 2-methylpropene.

isobutyl isobutyrate [ORG CHEM] $(CH_3)_2CHCOOCH_2CH(CH_3)_2$ A colorless liquid with a fruity odor and a boiling point of 148.7°C; soluble in alcohol and ether; used for flavoring and as an insect repellent. Abbreviated IBIB.

isobutyraldehyde *See* isobutyl aldehyde.

isobutyric acid [ORG CHEM] $(CH_3)_2CHCOOH$ Colorless liquid boiling at 154°C; soluble in water, alcohol, and ether; used as a chemical intermediate and disinfectant, in flavor and perfume bases, and for leather treating.

isobutyryl [ORG CHEM] $(CH_3)_2C{\cdot}CHO$ The radical group from isobutyric acid, $(CH_3)_2CHCOOH$.

isocarb [GEOCHEM] A line on a map that connects points of equal content of fixed carbon in coal.

isocarpic [BOT] Having the same number of carpels and perianth divisions.

isocenter [GRAPHICS] The unique point common to the principal plane of a tilted photograph and the plane of an assumed truly vertical photograph taken from the same camera station and having an equal principal distance.

isoceraunic [METEOROL] Indicating or having equal frequency or intensity of thunderstorm activity. Also spelled isokeraunic.

isoceraunic line [METEOROL] A line drawn through geographical points at which some phenomenon connected with thunderstorms has the same frequency or intensity; used for lines of equal frequency of lightning discharges.

isocercal [VERT ZOO] Of the tail fin of a fish, having the upper and lower lobes symmetrical and the vertebral column gradually tapering.

isocetyl laurate [ORG CHEM] $C_{11}H_{23}COOC_{16}H_{33}$ An oily, combustible liquid, soluble in most organic solvents; used in cosmetics and pharmaceuticals and as a plasticizer and textile softener.

isochasm [GEOPHYS] A line connecting points on the earth's surface at which the aurora is observed with equal frequency. Also known as isaurore.

isochela [INV ZOO] **1.** A chela having two equally developed parts. **2.** A chelate spicule with both ends identical.

isochemical metamorphism [PETR] Theoretically, a metamorphism involving no great change in its chemical composition. Also known as treptomorphism.

isochemical series [PETR] A series of rocks with identical chemical compositions.

isochor *See* isochore.

isochore [PHYS] A graph that shows the variation of one quantity with another; for example, the variation of pressure with temperature, when the volume of the substance is held constant. Also known as isochor; isometric.

isochoric [PHYS] Taking place without change in volume. Also known as isovolumic.

isochromatic [OPTICS] **1.** Pertaining to a variation of certain quantities related to light (such as density of the medium through which the light is passing, index of refraction), in which the color or wavelength of the light is held constant. **2.** Pertaining to lines connecting points of the same color.

isochromatic fringe pattern [OPTICS] A pattern of bands, each of uniform color, observed when a plate is placed in a polariscope and subjected to stress, making it birefringent.

isochromosome [CYTOL] An abnormal chromosome with a medial centromere and identical arms formed as a result of transverse, rather than longitudinal, splitting of the centromere.

isochronal test [PETRO ENG] Short-time back-pressure test for low-permeability reservoirs that otherwise require excessively long times for pressure stabilization when wells are shut in.

isochrone [PHYS] A line on a chart connecting all points having the same time of occurrence of particular phenomena or of a particular value of a quantity.

isochronism [MECH] The property of having a uniform rate of operation or periodicity, for example, of a pendulum or watch balance.

isochronon [HOROL] A clock designed to keep very accurate time.

isochronous [PHYS] Having a fixed frequency or period.

isochronous circuits [ELEC] Circuits having the same resonant frequency.

isochronous governor [MECH ENG] A governor that keeps the speed of a prime mover constant at all loads. Also known as astatic governor.

isocitric acid [BIOCHEM] $HOOCCH_2CH(COOH)CH(OH)COOH$ An isomer of citric acid that is involved in the Krebs tricarboxylic acid cycle in bacteria and plants. Also known as 2-hydroxy-1,2,3-propanetricarboxylic acid.

isoclasite [MINERAL] $Ca_2(PO_4)(OH)\cdot 2H_2O$ A white mineral composed of a basic hydrous calcium phosphate; occurring in small crystals or columnar forms.

isoclinal *See* isoclinic line.

isoclinal chart [GEOPHYS] A chart showing isoclinic lines. Also known as isoclinic chart.

isocline [GEOL] A fold of strata so tightly compressed that parts on each side dip in the same direction.

isoclinic chart *See* isoclinal chart.

isoclinic line [GEOPHYS] A line connecting points on the earth's surface which have the same magnetic dip. Also known as isoclinal. [SOLID STATE] A line joining points in a plate at which the principal stresses have parallel directions.

isoconcentration [CHEM ENG] Constant concentration values.

isoconcentration map [CHEM ENG] Map or diagram or a liquid or gas system's concentration with respect to a single component of the system, shown by constant-concentration contour lines.

isocrackate [MATER] The liquid products of the process of isocracking.

ISOCHRONOUS GOVERNOR

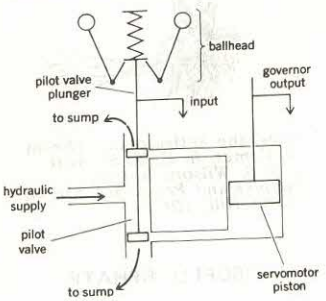


Diagram of isochronous governor.

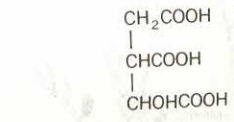
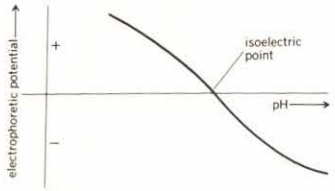
ISOCITRIC ACID



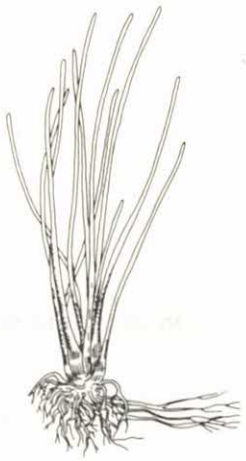
Structural formula.

ISOELECTRIC POINT



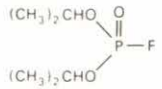
Graph showing the isoelectric point where particles are electrophoretically inert.

ISOETALES



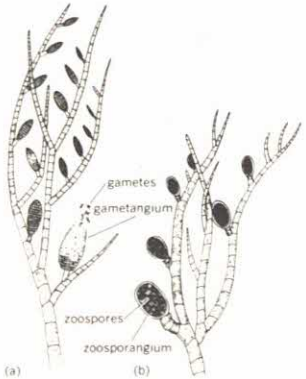
Isoetes, the entire plant. *(From A. J. Eames, in E. W. Sinnott and K. S. Wilson, Botany: Principles and Problems, 6th ed., McGraw-Hill, 1963)*

ISOFLUORPHATE



Structural formula.

ISOGENERATAE



Ectocarpus, an example of Isogeneratae showing the isomorphic alteration of generations. *(a)* Branched filament with multicellular gametangia. A gametangium is releasing biflagellate gametes. *(b)* Branched filament with unicellular zoosporangia with zoospores. *(From H. J. Fuller and O. Tippo, College Botany, rev. ed., Holt, 1954)*

isocracking [CHEM ENG] A hydrocracking process for conversion of hydrocarbons into more valuable, lower-boiling products; operates at relatively low temperatures and pressures in the presence of hydrogen and a catalyst.

Isocrinida [INV ZOO] An order of stalked articulate echinoderms with nodal rings of cirri.

isocyanate [ORG CHEM] **1.** One of a group of neutral derivatives of primary amines; its formula is R—N═C═O, where R may be an alkyl or aryl group; an example is 2,4-toluene diisocyanate. **2.** Any compound containing the isocyanato functional group.

isocyanate resin [ORG CHEM] A linear alkyd resin lengthened by reaction with isocyanates, then treated with a glycol or diamine to cross-link the molecular chain; the product has good abrasion resistance.

isocyanato group [ORG CHEM] A functional group (—N═C—O) which forms isocyanates by replacing the hydrogen atom of a hydrocarbon.

isocyanic acid [ORG CHEM] HN═C═O One of two forms of cyanic acid; a gas used as an intermediate in the preparation of polyurethane and other resins.

isocyanide [ORG CHEM] A compound with the general formula RN≡C in which the hydrogen of a hydrocarbon has been replaced by the —N≡C group.

isocyanine [ORG CHEM] Any one of a series of dyes whose structure has two heterocyclic or quinoline rings connected by an odd number chain of carbon atoms containing conjugated double bonds; for example, cyanine blue.

isocyanuric acid *See* fulminuric acid.

isocyclic compound [ORG CHEM] A compound in which the ring structure is made up of one kind of atom.

isodecyl chloride [ORG CHEM] $C_{10}H_{21}Cl$ A colorless liquid with a boiling point of 210.6°C; used as a solvent and in extractants, cleaning compounds, pharmaceuticals, insecticides, and plasticizers.

isodiametric [BIOL] Having equal diameters or dimensions.

isodiaspheres [NUC PHYS] Nuclides which have the same difference in the number of neutrons and protons.

isodont [VERT ZOO] **1.** Having all teeth alike. **2.** Of a snake, having the maxillary teeth of equal length.

isodose curve [NUCLEO] A curve, drawn on a chart of an object, connecting points receiving equal doses of radiation.

isodrosotherm [METEOROL] An isogram of dew-point temperature.

isodulcitol *See* rhamnose.

isodynamic [MECH] Pertaining to equality of two or more forces or to constancy of a force.

isodynamic line [GEOPHYS] One of the lines on a map of a magnetic field that connect points having equal strengths of the earth's field.

isoelectric [ELEC] Pertaining to a constant electric potential.

isoelectric focusing [PHYS CHEM] Protein separation technique in which a mixture of protein molecules is resolved into its components by subjecting the mixture to an electric field in a supporting gel having a previously established pH gradient. Also known as electrofocusing.

isoelectric point [PHYS CHEM] The pH value of the dispersion medium of a colloidal suspension at which the colloidal particles do not move in an electric field.

isoelectric precipitation [CHEM] Precipitation of materials at the isoelectric point (the pH at which the net charge on a molecule in solution is zero); proteins coagulate best at this point.

isoelectronic [ATOM PHYS] Pertaining to atoms having the same number of electrons outside the nucleus of the atom.

isoelectronic sequence [SPECT] A set of spectra produced by different chemical elements ionized so that their atoms or ions contain the same number of electrons.

isoenzyme [BIOCHEM] Any of the electrophoretically distinct forms of an enzyme, representing different polymeric states but having the same function. Also known as isozyme.

Isoetaceae [BOT] The single family assigned to the order Isoetales in some systems of classification.

Isoetales [BOT] A monotypic order of the class Isoetopsida containing the single genus *Isoetes*, characterized by long, narrow leaves with a spoonlike base, spirally arranged on an underground cormlike structure.

Isoetatae *See* Isoetopsida.

Isoetopsida [BOT] A class of the division Lycopodiophyta; members are heterosporous and have a distinctive appendage, the ligule, on the upper side of the leaf near the base.

isoeugenol [ORG CHEM] $C_{10}H_{12}O_2$ An oily liquid prepared from eugenol by heating, slightly soluble in water; used in the manufacture of vanillin.

isoeugenol acetate *See* acetylisoeugenol.

isofacies map [GEOL] A stratigraphic map showing the distribution of one or more facies within a particular stratigraphic unit.

isoflavone [BIOCHEM] $C_{15}H_{10}O_2$ A colorless, crystalline ketone, occurring in many plants, generally in the form of a hydroxy derivative.

isofluorphate [PHARM] $[(CH_3)_2CHO]_2P(O)F$ A liquid which forms hydrofluoric acid in the presence of moisture; used as a cholinergic drug in eye diseases in humans and as a miotic drug in animals. Also known as DFP; diisopropyl fluorophosphate; diisopropyl fluorophosphonate; diisopropylphosphorofluoridate; fluostigmine; isopropyl fluophosphate.

isofootcandle *See* isolux.

isoforming [CHEM ENG] A petroleum refinery process in which olefinic naphtha is contacted with an alumina catalyst at high temperature and low pressure to produce isomers of higher octane number.

isofronts-preiso code [METEOROL] A code in which data on isobars and fronts at sea level (or earth's surface) are encoded and transmitted; a modified form of the international analysis code.

isogal [GEOPHYS] A contour line on a map connecting points of equal gravity values on the earth's surface.

isogamete [BIOL] A reproductive cell that is morphologically similar in both male and female and cannot be distinguished on form alone.

isogamy [BIOL] Sexual reproduction by union of gametes or individuals of similar form or structure.

isogeneic [GEN] Having the same origin and thus being genetically identical, as an inbred strain. Also known as isogenic; syngeneic. [IMMUNOL] Referring to cells, tissues, or organs used in transplantation that originate in identical species.

Isogeneratae [BOT] A class of brown algae distinguished by having an isomorphic alternation of generations.

isogenic *See* isogeneic.

isogeotherm *See* geoisotherm.

isogonic line [GEOPHYS] **1.** Any of the lines on a chart or map showing the same direction of the wind vector. **2.** Any of the lines on a chart or map connecting points of equal magnetic variation.

isogony [BIOL] Growth of parts at such a rate as to maintain relative size differences.

isogor [PETRO ENG] Constant gas-oil ratio.

isogor map [PETRO ENG] Oil reservoir contour-line map that shows constant gas-oil ratios.

isograd [GEOL] A line on a map joining those rocks comprising the same metamorphic grade.

isogradient [METEOROL] A line connecting points having the same horizontal gradient of atmospheric pressure, temperature, and so on.

isograft [BIOL] A tissue transplant from one organism to another organism which is genetically identical.

isogram *See* isopleth.

isograph [ELECTR] An electronic calculator that ascertains both real and imaginary roots for algebraic equations. [GRAPHICS] An instrument combining the functions of a protractor and a set square and comprising two short straightedges connected by a large circular joint with an angular-degree scale.

isogriv [NAV] A line drawn on a map or chart joining points of equal grivation.

isogriv chart [NAV] A chart showing isogrivs.

isogyre [OPTICS] A dark band in an interference figure located at those points that correspond to directions of transmission through the crystal plate in which the polarization of the incident light is not affected by passing through the plate.

isohaline [OCEANOGR] **1.** Of equal or constant salinity. **2.** A line on a chart connecting all points of equal salinity.

isoheight *See* contour line.

isohel [METEOROL] A line drawn through geographical points having the same duration of sunshine (or other function of solar radiation) during any specified time period.

isohemagglutinin *See* isoagglutinin.

isohemolysin [IMMUNOL] A hemolysin produced by an in-

dividual injected with erythrocytes from another individual of the same species.

isohemolysis [IMMUNOL] Hemolysis induced by the action of an isohemolysin.

isohexane [ORG CHEM] C_6H_{14} A liquid mixture of isomeric hydrocarbons, flammable and explosive, insoluble in water, soluble in most organic solvents, boils at 54–61°C; used as a solvent, freezing-point depressant, and chemical intermediate.

isohume [GEOL] A line of a map or chart connecting points of equal moisture content in a coal bed. [METEOROL] A line drawn through points of equal humidity on a given surface; an isopleth of humidity; the humidity measures used may be the relative humidity or the actual moisture content (specific humidity or mixing ratio).

isohydric [CHEM] Referring to a set of solutions with the same hydrogen ion concentration and not affecting the conductivity of each of the various solutions on mixing.

isohyet [METEOROL] A line drawn through geographic points recording equal amounts of precipitation for a specified period or for a particular storm.

isohypse *See* contour line.

isohypsic chart *See* constant-height chart.

isohypsic surface *See* constant-height surface.

isoimmunization [IMMUNOL] Immunization of an individual by the introduction of antigens from another individual of the same species.

isokeraunic *See* isoceraunic.

isokinetic *See* isotach.

isokinetic sampling [ENG] Any technique for collecting airborne particulate matter in which the collector is so designed that the airstream entering it has a velocity equal to that of the air passing around and outside the collector.

isolate [CHEM ENG] To separate two portions of a process system by means of valving or line blanks; used as safety measure during maintenance or repair, or to redirect process flows. [ELEC] To disconnect a circuit or piece of equipment from an electric supply system.

isolated camera [ELECTR] **1.** A television camera that views a particular portion of a scene of action and produces a tape which can then be used either immediately for instant replay or for video replay at a later time. **2.** The technique of video replay involving such a camera.

isolated footing [CIV ENG] A concrete slab or block under an individual load or column.

isolated location [COMPUT SCI] A location in a computer memory which is protected by some hardware device so that it cannot be addressed by a computer program and its contents cannot be accidentally altered.

isolated point [MATH] A point p in a topological space is an isolated point of a set if p is in the set and there is a neighborhood of p which contains no other points of the set.

isolated set [MATH] A set consisting entirely of isolated points.

isolating switch [ELEC] A switch intended for isolating an electric circuit from the source of power; it has no interrupting rating and is intended to be operated only after the circuit has been opened by some other means.

isolation [CHEM] Separation of a pure chemical substance from a compound or mixture; as in distillation, precipitation, or absorption. [COMPUT SCI] The ability of a logic circuit having more than one input to ensure that each input signal is not affected by any of the others. [MED] Separation of an individual with a communicable disease from other, healthy individuals. [MICROBIO] Separation of an individual or strain from a natural, mixed population. [PHYSIO] Separation of a tissue, organ, system, or other part of the body for purposes of study. [PSYCH] Dissociation of a memory or thought from the emotions or feelings associated with it.

isolation amplifier [ELECTR] An amplifier used to minimize the effects of a following circuit on the preceding circuit.

isolation diode [ELECTR] A diode used in a circuit to allow signals to pass in only one direction.

isolation network [ELEC] A network inserted in a circuit or transmission line to prevent interaction between circuits on each side of the insertion point.

isolation test [ENG] A leak detection method which isolates the evacuated system from the pump, followed by observation of the rate of pressure rise.

isolation transformer [ELEC] A transformer inserted in a system to separate one section of the system from undesired influences of other sections.

isolator [ELECTR] A passive attenuator in which the loss in one direction is much greater than that in the opposite direction; a ferrite isolator for waveguides is an example. [ENG] Any device that absorbs vibration or noise, or prevents its transmission.

isolead curve [ORD] A curved line, on a chart or diagram, used to show how far ahead of a moving target a weapon must be aimed to allow for the time the projectile takes to reach the target; the isolead curve connects points of equal lead on the chart or diagram.

isolecithal *See* homolecithal.

isoleucine [BIOCHEM] $C_6H_{13}O_2$ An essential monocarboxylic amino acid occurring in most dietary proteins.

isolith [ELECTR] Integrated circuit of components formed on a single silicon slice, but with the various components interconnected by beam leads and with circuit parts isolated by removal of the silicon between them. [GEOL] A line on a contour-type map that denotes the aggregate thickness of a single lithology in a stratigraphic succession composed of one or more lithologies.

isolith map [GEOL] A contour-line map depicting the thickness of an exclusive lithology.

isolux [OPTICS] A curve or surface connecting points at which light intensity is the same. Also known as isofootcandle; isophot.

isomagnetic [GEOPHYS] Of or pertaining to lines connecting points of equality in some magnetic element.

isomer [CHEM] One of two or more chemical substances having the same elementary percentage composition and molecular weight but differing in structure, and therefore in properties; there are many ways in which such structural differences occur; one example is provided by the compounds *n*-butane, $CH_3(CH_2)_2CH_3$, and isobutane, $CH_3CH(CH_3)_2$. [NUC PHYS] One of two or more nuclides having the same mass number and atomic number, but existing for measurable times in different quantum states with different energies and radioactive properties.

isomerase [BIOCHEM] An enzyme that catalyzes isomerization reactions.

isomeric shift [PHYS CHEM] Shift in the Mössbauer resonance caused by the effect of the valence of the atom on the interaction of the electron density at the nucleus with the nuclear charge. Also known as chemical shift.

isomeric transition [NUC PHYS] A radioactive transition from one nuclear isomer to another of lower energy.

isomerism [BIOL] The condition of having two or more comparable parts made up of identical numbers of similar segments. [CHEM] The phenomenon whereby certain chemical compounds have structures that are different although the compounds possess the same elemental composition. [NUC PHYS] The occurrence of nuclear isomers.

isomerization [CHEM] A process whereby a compound is changed into an isomer; for example, conversion of butane into isobutane.

isomerous [BIOL] Characterized by isomerism.

Isometopidae [INV ZOO] A family of hemipteran insects in the superfamily Cimicimorpha.

isometric *See* isochore.

isometric contraction [PHYSIO] A contraction in which muscle tension is increased, but the muscle is not shortened because the resistance cannot be overcome. Also known as static contraction.

isometric drawing [GRAPHICS] A method of nonperspective pictorial drawing in which the object being drawn is turned so that three mutually perpendicular edges are equally foreshortened.

isometric particle [VIROL] A plant virus particle that appears at first sight to be spherical when viewed in the electron microscope, but which is actually an icosahedron, possessing 20 sides.

isometric process [THERMO] A constant-volume, frictionless thermodynamic process in which the system is confined by mechanically rigid boundaries.

isometric projection *See* axonometric projection.

isometric system [CRYSTAL] The crystal system in which the forms are referred to three equal, mutually perpendicular axes. Also known as cubic system.

isometry [MATH] A mapping f from a metric space X to a

metric space Y where the distance between any two points of X equals the distance between their images under f in Y.

isomolecule *See* nonlinear molecule.

isomorph *See* isomorphic mineral.

isomorphic mineral [MINERAL] Any two or more crystalline mineral compounds having different chemical composition but identical structure, such as the garnet series or the feldspar group Also known as isomorph.

isomorphism [MATH] A one to one function of an algebraic structure (for example, group, ring, module, vector space) onto another of the same type, preserving all algebraic relations; its inverse function behaves likewise. [PHYS CHEM] A condition present when an ion at high dilution is incorporated by mixed crystal formation into a precipitate, even though such formation would not be predicted on the basis of crystallographic and ionic radii; an example is coprecipitation of lead with potassium chloride. [SCI TECH] The quality or state of being identical or similar in form, shape, or structure, such as between organisms resulting from evolutionary convergence, or crystalline forms of similar composition.

isoneph [METEOROL] A line drawn through all points on a map having the same amount of cloudiness.

isoniazid [PHARM] $C_6H_7N_3O$ A drug used as a tuberculostatic. Also known as isonicotinic acid hydrazide.

isonicotinic acid [ORG CHEM] $C_6H_5NO_2$ White platelets or powder, slightly soluble in water, sublimes at 260°C; used in the manufacture of isonicotinic acid hydrazide, an antitubercular agent. Also known as pyridine-4-carboxylic acid.

isonicotinic acid hydrazide *See* isoniazid.

isonitrosoacetophenone [ORG CHEM] $C_8H_7NO_2$ Platelike crystals with a melting point of 126–128°C; soluble in alkalies and alkali carbonates; used to detect ferrous ions and palladium. Also known as benzoylformaldoxime.

isooctane [ORG CHEM] $(CH_3)_2CHCH_2C(CH_3)_3$ Flammable, colorless liquid boiling at 99°C; slightly soluble in alcohol and ether, insoluble in water; used in motor fuels and as a chemical intermediate. Also known as 2,2,4-trimethylpentane.

isooctyl alcohol [ORG CHEM] $C_7H_{15}CH_2OH$ Mixture of isomers from oxo-process synthesis; boils at 182–195°C; used as a chemical intermediate, resin solvent, emulsifier, and antifoaming agent.

isopach map [GEOL] Map of the areal extent and thickness variation of a stratigraphic unit; used in geological exploration for oil and for underground structural analysis.

isopachous line [GEOL] One of the lines drawn on a map to indicate equal thickness.

isoparaffin [ORG CHEM] A branched-chain version of a straight-chain (normal) saturated hydrocarbon; for example, isooctane, or 2,2,4-trimethyl pentane, $(CH_3)_3C_5H_9$, is the branched-chain version of *n*-octane, $CH_3(CH_2)_6CH_3$.

isopathic principle [PSYCH] The apparently paradoxical rule according to which the cause cures the effect, as when a feeling of guilt is relieved by an exhibition of guilt, namely hate.

isopectic [CLIMATOL] A line on a map connecting points at which ice begins to form at the same time of winter.

isopentane [ORG CHEM] $CH_3CHCH_3CH_2CH_3$ Flammable, colorless liquid with pleasant aroma; boils at 28°C; soluble in oils, ether, and hydrocarbons, insoluble in water; used as a solvent and chemical intermediate. Also known as 2-methylbutane.

isopentanoic acid [ORG CHEM] C_4H_9COOH A colorless, combustible liquid with a boiling point of 183.2°C; used for manufacture of plasticizers, pharmaceuticals, and synthetic lubricants.

isoperimetric figures [MATH] Figures whose perimeters are equal.

isoperimetric line [MAP] A line on a map projection that indicates no variation from exact scale.

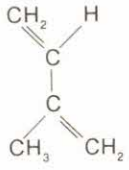
isoperimetric problem [MATH] In the calculus of variations this problem deals with finding a closed curve in the plane which encloses the greatest area given its length as fixed.

isoperm [PETRO ENG] One of the lines of equal (constant) permeability plotted on a reservoir map.

isophene [BIOL] A line on a chart connecting those places within a given region where a particular biological phenomenon (as the flowering of a certain plant) occurs at the same time.

isophorone [ORG CHEM] $COCHC(CH_3)CH_2C(CH_3)_2CH_2$ A water-white liquid boiling at 215°C; used as a solvent for lacquers and polyvinyl and nitrocellulose resins.

ISOPRENE



Structural formula of isoprene.

isophot *See* isolux.

isophotometer [OPTICS] A direct-recording photometer that automatically scans and measures optical density of all points in a film transparency or plate, and plots the measured density values in a quantitative two-dimensional isodensity tracing of the scanned areas.

isophthalic acid [ORG CHEM] $C_6H_4(COOH)_2$ Colorless crystals subliming at 345°C; slightly soluble in water, soluble in alcohol and acetic acid, and insoluble in benzene; used as an intermediate for polyester and polyurethane resins, and as a plasticizer. Also known as *meta*-phthalic acid.

isophyllous [BOT] Having foliage leaves of similar form on a plant or stem.

isopiestic [PHYS] Denoting equal or constant pressure.

isopiestic line [HYD] A line indicating on a map the piezometric surface of an aquifer.

isopleth [MATH] The straight line which cuts the three scales of a nomograph at values satisfying some equation. Also known as index line. [METEOROL] **1.** A line of equal or constant value of a given quantity with respect to either space or time. Also known as isogram. **2.** More specifically, a line drawn through points on a graph at which a given quantity has the same numerical value (or occurs with the same frequency) as a function of the two coordinate variables. Also known as isarithm.

isopluvial [METEOROL] A line on a map drawn through geographical points having the same pluvial index.

Isopoda [INV ZOO] An order of malacostracan crustaceans characterized by a cephalon bearing one pair of maxillipeds in addition to the antennae, mandibles, and maxillae.

isopolymolybdate [INORG CHEM] A class of compounds formed by the acidification of a molybdate solution, or in some cases by heating normal molybdates.

isopolytungstate [INORG CHEM] A compound formed by the condensation of tungstate compounds, usually classified into metatungstates, such as $Na_6W_{12}O_{40}\cdot xH_2O$, and paratungstates, such as $Na_{10}W_{12}O_{41}\cdot xH_2O$.

isopor [GEOPHYS] An imaginary line connecting points on the earth's surface having the same annual change in a magnetic element.

isopotential level *See* potentiometric surface.

isopotential map [PETRO ENG] A contour-line map to show the initial or calculated daily rate of oil well production in a multiwell field.

isoprecipitin [IMMUNOL] A precipitin effective only against the serum of individuals of the same species from which it is derived.

isoprene [ORG CHEM] C_5H_8 A conjugated diolefin; a mobile, colorless liquid having a boiling point of 34.1°C; insoluble in water, soluble in alcohol and ether; polymerizes readily to form dimers and high-molecular-weight elastomer resins.

isopropaline [ORG CHEM] $C_{15}H_{23}N_3O_4$ An orange liquid with limited solubility in water; used as a preemergence herbicide for control of grass and broadleaf weeds on tobacco. Also known as 2,6-dinitro-*N*,*N*-dipropylcumidine.

isopropanol *See* isopropyl alcohol.

isopropanolamine [ORG CHEM] $CH_3CH(OH)CH_2NH_2$ A combustible liquid with a faint ammonia odor and a boiling point of 159.9°C; soluble in water; used as an emulsifying agent and for dry-cleaning soaps, wax removers, cosmetics, plasticizers, and insecticides. Also known as 1-amino-2-propanol; 2-hydroxypropylamine.

isopropenyl acetate [ORG CHEM] $CH_3CO_2C(CH_3)=CH_2$ A liquid with a boiling point of 97°C; used for acylation of potential enols. Also known as 1-propen-2-yl acetate.

2-isopropoxyphenyl *N*-methylcarbamate [ORG CHEM] $C_{11}H_{15}O_3N$ A colorless solid with a melting point of 91°C; used as an insecticide for cockroaches, flies, mosquitoes, and lawn insects.

isopropyl [ORG CHEM] The radical $(CH_3)_2CH$, from isopropane; an example of its occurrence is in isopropyl alcohol, $(CH_3)_2CHOH$.

isopropyl acetate [ORG CHEM] $CH_3COOCH(CH_3)_2$ A colorless, aromatic liquid with a boiling point of 89.4°C; used as a solvent and for paints and printing inks.

isopropyl alcohol [ORG CHEM] $(CH_3)_2CHOH$ A colorless liquid that boils at 82.4°C; soluble in water, ether, and ethanol; used in manufacturing of acetone and its derivatives, of glycerol, and as a solvent. Also known as isopropanol; 2-propanol; *sec*-propyl alcohol.

isopropylamine [ORG CHEM] $(CH_3)_2CHNH_2$ A volatile, colorless liquid with a boiling point of 32.4°C; used as a solvent and in the manufacture of pharmaceuticals, dyes, insecticides, and bactericides. Also known as 2-aminopropane.

***para*-isopropylaniline** *See* cumidine.

isopropyl arterenol *See* isoproterenol.

isopropylbenzene *See* cumene.

isopropyl-2 (*N*-benzoyl-3-chloro-4-fluoroanilino)propionate [ORG CHEM] $C_{19}H_{19}O_3NClF$ Off-white crystals with a melting point of 56–57°C; used as a postemergence herbicide for wild oats and barley.

isopropylcarbinol *See* isobutyl alcohol.

isopropyl *meta*-chlorocarbanilate *See* chlorpropham.

isopropyl-*meta*-cresol *See* thymol.

isopropyl-*ortho*-cresol *See* carvacrol.

isopropyl 4,4′-dibromobenzilate [ORG CHEM] $C_{17}H_{16}O_3Br_2$ A brownish solid with a melting point of 77°C; solubility in water is less than 0.5 part per million at 20°C; used as a miticide for deciduous fruit and citrus.

isopropyl 4,4′-dichlorobenzilate [ORG CHEM] $C_{17}H_{16}O_3Cl_2$ A white powder with a melting point of 70–72°C; solubility in water is less than 10 parts per million at 20°C; used as a miticide for spider mites on apple and pear trees.

isopropyl ether [ORG CHEM] $(CH_3)_2CHOCH(CH_3)_2$ Water-soluble, flammable, colorless liquid with etherlike aroma; boils at 68°C; used as a solvent and extractant, in paint and varnish removers, and in spotting formulas. Also known as diisopropyl ether.

isopropyl fluophosphate *See* isofluorphate.

isopropylideneacetone *See* mesityl oxide.

isopropylidene glycerol *See* 2,2-dimethyl-1,3-dioxolane-4-methanol.

2-isopropyl-5-methylbenzoquinone *See para*-thymoquinone.

4-isopropyl-1-methylcyclohexane *See* menthane.

7-isopropyl-1-methyl phenanthrene *See* retene.

isopropyl-*N*-phenylcarbamate *See* propham.

***N*-4-isopropylphenyl-*N′,N′*-dimethylurea** [ORG CHEM] $(CH_3)_2CHC_6H_4NHCON(CH_3)_2$ A crystalline solid with a melting point of 151–153°C; solubility in water is 170 parts per million; used as an herbicide for wheat, barley, and rye.

***ortho*-isopropylphenyl-methylcarbamate** [ORG CHEM] $C_{11}H_{15}O_2N$ A white, crystalline compound with a melting point of 88–89°C; used as an insecticide for rice and cacao crops. Also known as MIPC.

***para*-isopropyltoluene** *See* cymene.

isoproterenol [PHARM] $C_{11}H_{17}NO_3$ A sympathomimetic amine used as a bronchodilator. Also known as isopropylarterenol.

Isoptera [INV ZOO] An order of Insecta containing morphologically primitive forms characterized by gradual metamorphosis, lack of true larval and pupal stages, biting and prognathous mouthparts, two pairs of subequal wings, and the abdomen joined broadly to the thorax.

isopulegol [ORG CHEM] $C_{10}H_{17}OH$ An alcohol derived from terpene as a water-white liquid that has a mintlike odor; used in making perfumes.

isopulse system [COMMUN] In adaptive communications, a pulse coding system wherein the number of information pulses transmitted is indicated by special inserted pulses.

isopurpurin *See* anthrapurpurin.

isopycnic [METEOROL] A line on a chart connecting all points of equal or constant density. [PHYS] Of equal or constant density, with respect to either space or time.

isopycnic level [METEOROL] Specifically, a level surface in the atmosphere, at about 8 kilometers altitude, where the air density is approximately constant in space and time; this level corresponds to the maximum upper-tropospheric interdiurnal pressure variation.

isopygous [INV ZOO] Having a pygidium and a cephalon of equal size, as in certain trilobites.

isoquinoline [ORG CHEM] $C_6H_4CHNCHCH$ Colorless liquid boiling at 243°C; soluble in most organic solvents and dilute mineral acids, insoluble in water; derived from coal tar or made synthetically; used to make dyes, insecticides, pharmaceuticals, and rubber accelerators, and as a chemical intermediate.

isosafrole [ORG CHEM] $C_{10}H_{10}O_2$ A liquid with the odor of anise that is obtained from safrole, and that boils at 253°C; used to make perfumes and flavors. Also known as 1,2-methylenedioxy-4-propenylbenzene.

isosceles triangle [MATH] A triangle with two sides of equal length.

isoseismal [GEOPHYS] Pertaining to points having equal intensity of earthquake shock, or to a line on a map of the earth's surface connecting such points.

isoshear [METEOROL] A line on a chart of equal magnitude of vertical wind shear.

isospin *See* isotopic spin.

isospin multiplet [PARTIC PHYS] A collection of elementary particles which have approximately the same mass and the same quantum numbers except for charge, but have a sequence of charge values, $Y/2 - I$, $Y/2 - I + 1$,..., $Y/2 + I$ times the proton charge, where Y is an integer known as the hypercharge, and I is an integer or half-integer known as the isospin; examples are the pions ($Y = 0$, $I = 1$) and the nucleons ($Y = 1$, $I = \frac{1}{2}$). Also known as charge multiplet; particle multiplet.

Isospondyli [VERT ZOO] A former equivalent name for Clupeiformes.

isospore [BIOL] A spore that does not display sexual dimorphism.

isostasy [GEOPHYS] A theory of the condition of approximate equilibrium in the outer part of the earth, such that the gravitational effect of masses extending above the surface of the geoid in continental areas is approximately counterbalanced by a deficiency of density in the material beneath those masses, while deficiency of density in ocean waters is counterbalanced by an excess in density of the material under the oceans.

isostatic adjustment *See* isostatic compensation.

isostatic anomaly [GEOPHYS] A gravity anomaly based on a generalized hypothesis that the gravitational effect of masses above sea level is approximately compensated by a density deficiency of the subsurface materials.

isostatic compensation [GEOL] The process in which lateral transport at the surface of the earth by erosion or deposition is compensated by lateral movements in a subcrustal layer. Also known as isostatic adjustment; isostatic correction.

isostatic correction *See* isostatic compensation.

isostatics [MECH] In photoelasticity studies of stress analyses, those curves, the tangents to which represent the progressive change in principal-plane directions. Also known as stress trajectories. Also known as stress lines.

isostatic surface [MECH] A surface in a three-dimensional elastic body such that at each point of the surface one of the principal planes of stress at that point is tangent to the surface.

isostemonous [BOT] Having the number of stamens of a flower equal to the number of perianth divisions.

isosteric [CHEM] Referring to similar electronic arrangements in chemical compounds. [PHYS] Of equal or constant specific volume with respect to either time or space.

isosterism [PHYS CHEM] A similarity in the physical properties of ions, compounds, or elements, as a result of electron arrangements that are identical or similar.

isostructural [CRYSTAL] Pertaining to crystalline materials that have corresponding atomic positions, and have a considerable tendency for ionic substitution.

isosulfur map [PETRO ENG] A contour-line map to show the percentage of sulfur in underground crude oil.

isosynthesis [ORG CHEM] A process in which mixtures of hydrogen and carbon monoxide are reacted over a thorium oxide catalyst (sometimes mixed with additional substances) to produce branched hydrocarbons.

isotach [METEOROL] A line in a given surface connecting points with equal wind speed. Also known as isokinetic; isovel.

isotach chart [METEOROL] A synoptic chart showing the distribution of wind by means of isotachs.

isotachophoresis [PHYS CHEM] A variant of electrophoresis in which ionic species move with equal velocity in the presence of an electric field.

isotactic [ORG CHEM] Designating crystalline polymers in which substituents in the asymmetric carbon atoms have the same (rather than random) configuration in relation to the main chain.

isothere [CLIMATOL] A line on a map connecting points having the same mean summer temperature.

isotherm [GEOPHYS] A line on a chart connecting all points of equal or constant temperature. [THERMO] A curve or formula showing the relationship between two variables, such

as pressure and volume, when the temperature is held constant. Also known as isothermal.

isothermal [THERMO] **1.** Having constant temperature; at constant temperature. **2.** *See* isotherm.

isothermal annealing [MET] Transformation of an austenitic steel to ferrite and pearlite at constant temperature. Also known as isothermal transformation.

isothermal atmosphere [METEOROL] An atmosphere in hydrostatic equilibrium, in which the temperature is constant with height and the pressure decreases exponentially upward. Also known as exponential atmosphere.

isothermal calorimeter [THERMO] A calorimeter in which the heat received by a reservoir, containing a liquid in equilibrium with its solid at the melting point or with its vapor at the boiling point, is determined by the change in volume of the liquid.

isothermal chart [GEOPHYS] A map showing the distribution of air temperature (or sometimes sea-surface or soil temperature) over a portion of the earth or at some level in the atmosphere; places of equal temperature are connected by lines called isotherms.

isothermal compression [THERMO] Compression at constant temperature.

isothermal equilibrium [METEOROL] The state of an atmosphere at rest, uninfluenced by any external agency, in which the conduction of heat from one part to another has produced, after a sufficient length of time, a uniform temperature throughout its entire mass. Also known as conductive equilibrium. [THERMO] The condition in which two or more systems are at the same temperature, so that no heat flows between them.

isothermal expansion [THERMO] Expansion of a substance while its temperature is held constant.

isothermal flow [THERMO] Flow of a gas in which its temperature does not change.

isothermal layer [METEOROL] The approximately isothermal region of the atmosphere immediately above the tropopause. [THERMO] A layer of fluid, all points of which have the same temperature.

isothermal magnetization [THERMO] Magnetization of a substance held at constant temperature; used in combination with adiabatic demagnetization to produce temperatures close to absolute zero.

isothermal process [THERMO] Any constant-temperature process, such as expansion or compression of a gas, accompanied by heat addition or removal from the system at a rate just adequate to maintain the constant temperature.

isothermal remanent magnetization [GEOPHYS] A spurious magnetization induced by lightning strikes that produce large surface electrical currents. Abbreviated IRM.

isothermal transformation [MET] *See* isothermal annealing. [THERMO] Any transformation of a substance which takes place at a constant temperature.

isothermal treatment [MET] Heat treatment of metals at constant temperature.

isothermobath [OCEANOGR] A line connecting points having the same temperature in a diagram of a vertical section of the ocean.

isotherm ribbon [METEOROL] A zone of crowded isotherms on a synoptic upper-level chart; the temperature gradient is many times greater than normally encountered in the atmosphere.

isothiocyanate [ORG CHEM] A compound of the type R—N=C=S, where R may be an alkyl or aryl group; an example is mustard oil. Also known as sulfocarbimide.

isotimic [METEOROL] Pertaining to a quantity which has equal value in space at a particular time.

isotimic line [METEOROL] On a given reference surface in space, a line connecting points of equal value of some quantity; most of the lines drawn in the analysis of synoptic charts are isotimic lines.

isotimic surface [METEOROL] A surface in space on which the value of a given quantity is everywhere equal; isotimic surfaces are the common reference surfaces for synoptic charts, principally constant-pressure surfaces and constant-height surfaces.

isotone [NUC PHYS] One of several nuclides having the same number of neutrons in their nuclei but differing in the number of protons.

isotonic [PHYSIO] **1.** Having uniform tension, as the fibers of a contracted muscle. **2.** Of a solution, having the same osmotic pressure as the fluid phase of a cell or tissue.

isotonic sodium chloride solution *See* normal saline.

isotope [NUC PHYS] One of two or more atoms having the same atomic number but different mass number.

isotope abundance [NUC PHYS] The ratio of the number of atoms of a particular isotope in a sample of an element to the number of atoms of a specified isotope, or to the total number of atoms of the element.

isotope dilution [NUCLEO] The introduction of a radioisotope into stable isotopes of an element in order to make volume, mass, and age measurements of the element.

isotope-dilution analysis [ANALY CHEM] Variation on paper-chromatography analysis; a labeled radioisotope of the same type as the one being quantitated is added to the solution, then quantitatively analyzed afterward via radioactivity measurement.

isotope effect [PHYS CHEM] The effect of difference of mass between isotopes of the same element on nonnuclear physical and chemical properties, such as the rate of reaction or position of equilibrium, of chemical reactions involving the isotopes. [SOLID STATE] Variation of the transition temperatures of the isotopes of a superconducting element in inverse proportion to the square root of the atomic mass.

isotope exchange [NUCLEO] **1.** Exchange of places by two atoms, but different isotopes, of the same element in two different molecules, or in different locations of the same molecule. **2.** The transfer of isotopically tagged atoms from one chemical form or valence state to another, without net chemical reaction.

isotope exchange reaction [CHEM] A chemical reaction in which interchange of the atoms of a given element between two or more chemical forms of the element occurs, the atoms in one form being isotopically labeled so as to distinguish them from atoms in the other form.

isotope farm [BOT] A carbon-14 growth chamber, or greenhouse, arranged as a closed system in which plants can be grown in a carbon-14 dioxide (CO_2^{14}) atmosphere and thus become labeled with C^{14}; isotope farms also can be used with other materials, such as heavy water (D_2O), phosphorus-35 (P^{35}), and so forth, to produce biochemically labeled compounds.

isotope fractionation [NUCLEO] Natural or artificial alteration of the isotopic composition of an element via processes of diffusion, evaporation, and chemical exchange, utilizing small differences in physical and chemical properties of isotopes.

isotope separation [NUCLEO] The physical separation of different stable isotopes of an element from one another.

isotope shift [SPECT] A displacement in the spectral lines due to the different isotopes of an element.

isotopic age determination *See* radiometric dating.

isotopic carrier *See* carrier.

isotopic chronometer [NUCLEO] A method of determining the age of geological, archeological, or other samples by measuring the amount of a particular radioisotope and of its daughter isotope in a sample.

isotopic element [NUC PHYS] An element which has more than one naturally occurring isotope.

isotopic enrichment [NUCLEO] The process by which the relative abundances of the isotopes of a given element are altered in a batch, thus producing a form of the element enriched in a particular isotope.

isotopic indicator *See* isotopic tracer.

isotopic irradiation [NUCLEO] The subjection of a material to radiation from radioactive isotopes for therapeutic or other purposes.

isotopic label *See* isotopic tracer.

isotopic molecule [NUCLEO] A molecule in which the nucleus of one of the atoms is a special isotope.

isotopic number *See* neutron excess.

isotopic parity *See* G parity.

isotopic spin [NUC PHYS] A quantum-mechanical variable, resembling the angular momentum vector in algebraic structure whose third component distinguished between members of groups of elementary particles, such as the nucleons, which apparently behave in the same way with respect to strong nuclear forces, but have different charges. Also known as isobaric spin; isospin; i-spin.

isotopic tracer [CHEM] An isotope of an element, either radioactive or stable, a small amount of which may be incorporated into a sample material (the carrier) in order to follow the

course of that element through a chemical, biological, or physical process, and also follow the larger sample. Also known as isotopic indicator; isotopic label; label; tag.

isotron [NUCLEO] A device for sorting isotopes of an element in which ions are accelerated to a fixed energy in a strong electric field, and a radio-frequency field then selects ions according to their velocity, which is inversely proportional to the square root of their mass.

isotropic [BIOL] Having a tendency for equal growth in all directions. [CYTOL] An ovum lacking any predetermined axis. [PHYS] Having identical properties in all directions.

isotropic antenna *See* unipole.

isotropic dielectric [ELEC] A dielectric whose polarization always has a direction that is parallel to the applied electric field, and a magnitude which does not depend on the direction of the electric field.

isotropic fabric [PETR] A random orientation in space of the elements that compose a rock.

isotropic fluid [FL MECH] A fluid whose properties are not dependent on the direction along which they are measured.

isotropic flux [PHYS] Radiation, or a flow of particles or matter, which reaches a location from all directions with equal intensity.

isotropic gain of an antenna *See* absolute gain of an antenna.

isotropic material [PHYS] A material whose properties are not dependent on the direction along which they are measured.

isotropic noise [ELECTROMAG] Random noise radiation which reaches a location from all directions with equal intensity.

isotropic plasma [PL PHYS] A plasma whose properties, such as pressure, are not dependent on the direction along which they are measured.

isotropic radiation [ELECTROMAG] Radiation which is emitted by a source in all directions with equal intensity, or which reaches a location from all directions with equal intensity.

isotropic radiator [PHYS] An energy source that radiates uniformly in all directions.

isotropic turbulence [FL MECH] Turbulence whose properties, especially statistical correlations, do not depend on direction.

isotropic universe [ASTRON] A universe postulated to have the same properties when viewed from all directions.

isotropy [PHYS] The quality of a property which does not depend on the direction along which it is measured, or of a medium or entity whose properties do not depend on the direction along which they are measured.

isotypes [GEN] A series of antigens, for example, blood types, common to all members of a species but differentiating classes and subclasses within the species.

isotypic [CRYSTAL] Pertaining to a crystalline substance whose chemical formula is analogous to, and whose structure is like, that of another specified compound.

isovalent conjugation [PHYS CHEM] An arrangement of bonds in a conjugated molecule such that alternative structures with an equal number of bonds can be written; an example occurs in benzene.

isovalent hyperconjugation [PHYS CHEM] An arrangement of bonds in a hyperconjugated molecule such that the number of bonds is the same in the two resonance structures but the second structure is energetically less favorable than the first structure; examples are $H_3{\equiv}C{-}C^{+}H_2$ and $H_3{\equiv}C{-}CH_2$.

isovaleral *See* isovaleraldehyde.

isovaleraldehyde [ORG CHEM] $(CH_3)_2CHCH_2CHO$ A colorless liquid with an applelike odor and a boiling point of 92°C; soluble in alcohol and ether; used in perfumes and pharmaceuticals and for flavoring. Also known as isovaleral; isovaleric aldehyde; 3-methylbutyraldehyde.

isovaleric acid [ORG CHEM] $(CH_3)_2CHCH_2COOH$ Colorless liquid with disagreeable taste and aroma; boils at 176°C; soluble in alcohol and ether; found in valeriana, hop, tobacco, and other plants; used in flavors, perfumes, and medicines.

isovaleric aldehyde *See* isovaleraldehyde.

2-isovaleryl-1,3-indandione [ORG CHEM] $C_{14}H_{14}O_3$ A yellow, crystalline compound with a melting point of 67–68°C; insoluble in water; used as a rodenticide.

isovel *See* isotach.

isovolumic *See* isochoric.

isoxathion [ORG CHEM] $C_{13}H_{16}NO_4PS$ A yellow liquid, insoluble in water; used as an insecticide for crops such as rice, citrus, vegetables, and tobacco. Also known as *O,O*-diethyl-*O*-(5-phenyl-3-isoxazolyl)phosphorothioate.

isozyme *See* isoenzyme.

ISP *See* imperial smelting process.

i-spin *See* isotopic spin.

ISR *See* Intersecting Storage Rings.

ISS *See* ion scattering spectroscopy.

isthmus [BIOL] A passage or constricted part connecting two parts of an organ. [GEOGR] A narrow strip of land having water on both sides and connecting two large land masses. [MATH] *See* bridge.

Istiophoridae [VERT ZOO] The billfishes, a family of oceanic perciform fishes in the suborder Scombroidei.

Isuridae [VERT ZOO] The mackerel sharks, a family of pelagic, predacious galeoids distinguished by a heavy body, nearly symmetrical tail, and sharp, awllike teeth.

itabirite [GEOL] A laminated, metamorphosed, oxide-facies iron formation in which the original chert or jasper bands have been recrystallized into megascopically distinguished grains of quartz and in which the iron is present as thin layers of hematite, magnetite, or martite.

itacolumite [PETR] A fine-grained, thin-bedded sandstone or a schistose quartzite that contains mica, chlorite, and talc and that exhibits flexibility when split into slabs. Also known as articulite.

itaconic acid [ORG CHEM] $CH_2{:}C(COOH)CH_2COOH$ A colorless crystalline compound that decomposes at 165°C, prepared by fermentation with *Aspergillus terreus;* used as an intermediate in organic synthesis and in resins and plasticizers. Also known as methylene succinic acid.

itatartaric acid [ORG CHEM] $C_5H_8O_6$ A compound produced experimentally by fermentation; formed as a minor product, 5.8% of total acidity produced, of an itaconic–acid producing strain of *Aspergillus niger.*

IT calorie *See* calorie.

itch [PHYSIO] An irritating cutaneous sensation allied to pain.

item [COMPUT SCI] A set of adjacent digits, bits, or characters which is treated as a unit and conveys a single unit of information.

item advance [COMPUT SCI] A technique of efficiently grouping records to optimize the overlap of read, write, and compute times.

item design [COMPUT SCI] The specification of what fields make up an item, the order in which the fields are to be recorded, and the number of characters to be allocated to each field.

item size [COMPUT SCI] The length of an item expressed in characters, words, or blocks.

iterated integral [MATH] An integral over an area or volume designated to be performed by successive integrals over line segments.

iteration *See* iterative method.

iteration process [COMPUT SCI] The process of repeating a sequence of instructions with minor modifications between successive repetitions.

iterations per second [COMPUT SCI] In computers, the number of approximations per second in iterative division; the number of times an operational cycle can be repeated in 1 second.

iterative array [COMPUT SCI] In a computer, an array of a large number of interconnected identical processing modules, used with appropriate driver and control circuits to permit a large number of simultaneous parallel operations.

iterative division [COMPUT SCI] In computers, a method of dividing by use of the operations of addition, subtraction, and multiplication; a quotient of specified precision is obtained by a series of successively better approximations.

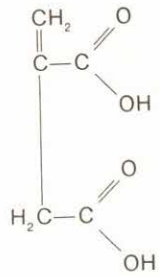
iterative filter [ELECTR] Four-terminal filter that provides iterative impedance.

iterative impedance [ELECTR] Impedance that, when connected to one pair of terminals of a four-terminal transducer, will cause the same impedance to appear between the other two terminals.

iterative method [MATH] Any process of successive approximation used in such problems as numerical solution of algebraic equations, differential equations, or the interpolation of the values of a function. Also known as iteration.

iterative process [MATH] A process for calculating a desired result by means of a repeated cycle of operations, which comes closer and closer to the desired result; for example, the arithmetical square root of N may be approximated by an iterative process using additions, subtractions, and divisions only.

ITACONIC ACID



Structural formula of itaconic acid.

iterative routine [COMPUT SCI] A computer program that obtains a result by carrying out a series of operations repetitiously until some specified condition is met.

Ithomiinae [INV ZOO] The glossy-wings, a subfamily of weak-flying lepidopteran insects having on the wings broad, transparent areas in which the scales are reduced to short hairs.

Itonididae [INV ZOO] The gall midges, a family of orthorrhaphous dipteran insects in the series Nematocera; most are plant pests.

Itô's formula *See* stochastic chain rule.

Itô's integral *See* stochastic integral.

ITV *See* industrial television.

I-type magma [GEOL] Magma formed from igneous source materials.

i-type semiconductor *See* intrinsic semiconductor.

ium ion [ORG CHEM] A positively charged group of atoms in which a charged nonmetallic ion other than carbon or silicon possesses a closed-shell electron configuration; often joined to a root word, as in carbonium ion.

Ivanov reagent [ORG CHEM] A reagent that is similar to a Grignard reagent, and that is formed by reacting an arylacetic acid or its sodium salt with isopropyl magnesium halide.

ivory [MATER] The ivory-white material composing the tusks and teeth of the elephant; specific gravity is 1.87; takes a high polish and is used for ornamental parts and art objects, and formerly for piano keys.

ivory black [MATER] Animal black made by calcining ivory; used as a pigment.

ivory board [MATER] A highly finished cardboard that is clay-coated on both sides; used for art printing and menu cards.

ivory point [ENG] A small pointer extending downward from the top of the cistern of a Fortin barometer; the level of the mercury in the cistern is adjusted so that it just comes in contact with the end of the pointer, thus setting the zero of the barometer scale.

Ixion [PHYS] An experimental magnetic-mirror device used for research on controlled fusion; involves study of plasma rotation in a magnetic-mirror confinement system using crossed electric and magnetic fields.

Ixodides [INV ZOO] The ticks, a suborder of the Acarina distinguished by spiracles behind the third or fourth pair of legs.

Izod test [MET] An impact test in which a falling pendulum strikes a fixed, usually notched specimen with 120 foot-pounds (163 joules) of energy at a velocity of 11.5 feet (3.5 meters) per second; the height of the pendulum swing after striking is a measure of the energy absorbed and thus indicates impact strength.

J

J *See* joule.

jaagsiekte [VET MED] A contagious disease of sheep, sometimes of goats and guinea pigs, resembling the more benign and diffuse forms of bronchiolar carcinoma in humans.

Jablochkoff candle [ELECTR] An early type of arc lamp in which carbons were placed side by side and separated by plaster of Paris.

Jacanidae [VERT ZOO] The jacanas or lily-trotters, the single family of the avian superfamily Jacanoidea.

Jacanoidea [VERT ZOO] A monofamilial superfamily of colorful marshbirds distinguished by greatly elongated toes and claws, long legs, a short tail, and a straight bill.

jacaranda *See* carob wood.

J acid *See* 2-amino-5-naphthol-7-sulfonic acid.

jacinth *See* zircon.

jack [ELEC] A connecting device into which a plug can be inserted to make circuit connections; may also have contacts that open or close to perform switching functions when the plug is inserted or removed. [MECH ENG] A portable device for lifting heavy loads through a short distance, operated by a lever, a screw, or a hydraulic press. [MINERAL] *See* sphalerite. [TEXT] **1.** A frame in lace-manufacturing equipment that has horizontal bars to support fixed vertical wires, against which bobbins containing the yarn can freely revolve. **2.** An oscillating lever that raises the harness of a dobby loom.

jackal [VERT ZOO] **1.** *Canis aureus*. A wild dog found in southeastern Europe, southern Asia, and northern Africa. **2.** Any of various similar Old World wild dogs; they resemble wolves but are smaller and more yellowish.

jackbit [DES ENG] A drilling bit used to provide the cutting end in rock drilling; the bit is detachable and either screws on or is taper-fitted to a length of drill steel. Also known as ripbit.

jack chain [DES ENG] **1.** A chain made of light wire, with links arranged in figure-eights with loops at right angles. **2.** A toothed endless chain for moving logs.

jacket [MECH ENG] The space around an engine cylinder through which a cooling liquid circulates. [NUCLEO] A thin container for one or more fuel slugs, used to prevent the fuel from escaping into the coolant of a reactor. Also known as can; cartridge. [ORD] **1.** Cylinder of steel covering and strengthening the breech end of a gun or howitzer tube. **2.** The water jacket on some machine guns. [PETRO ENG] The support structure of a steel offshore production platform; it is fixed to the seabed by piling, and the superstructure is mounted on it.

jacket crown [MED] An artificial crown of a tooth consisting of a covering of porcelain or resin.

jacket face [GRAPHICS] The index-readable side of a microfilm.

jacket gage [GRAPHICS] Acetate thickness measurement of microfilm in thousandths of an inch.

jackhammer [MECH ENG] A hand-held rock drill operated by compressed air.

jacking [TEXT] A process in spinning to provide extra twist or draft to the roving in a mule.

jack ladder [ENG] A V-shaped trough holding a toothed endless chain, and used to move logs from pond to sawmill. [NAV ARCH] *See* Jacob's ladder.

jackleg [ENG] A supporting bar used with a jackhammer.

jack line [PETRO ENG] A steel cable or rod that connects the arms of the central pumping engine to the two or more wells that are being pumped.

jack plane [DES ENG] A general-purpose bench plane measuring over 1 foot (30 centimeters) in length.

jack post [MIN ENG] Timber used where a coal seam is separated by a rock band and one bench is loaded out before the other.

jack rafter [BUILD] A short, secondary, or simulated rafter.

jackscrew [MECH ENG] **1.** A jack operated by a screw mechanism. Also known as screw jack. **2.** The screw of such a jack.

jackshaft [MECH ENG] A countershaft, especially when used as an auxiliary shaft between two other shafts.

Jacksonian epilepsy [MED] Recurrent Jacksonian seizures.

Jacksonian seizure [MED] A focal seizure originating in one part of the motor or sensorimotor cortex and manifested usually by spasmodic contractions of or crawling or burning sensations of the skin; may become generalized, leading to loss of consciousness.

jack spool [TEXT] A large spool used to hold wool strands or yarn.

jack staff [NAV ARCH] A staff or flagpole attached to the bow of a ship, or the end of a spar projecting from the bow.

jackstay [NAV ARCH] A rope, rod, or pipe rove through the eyebolts fitted on a yard or mast for the purpose of attaching sails to the yard or mast.

jack timber [MIN ENG] A timber such as a rafter that is shorter than others with which it is used.

jack truss [BUILD] A minor truss in a hip roof where the roof has a reduced section.

Jacobian [MATH] The Jacobian of functions $f_i(x_1, x_2, \ldots, x_n)$, $i = 1, 2, \ldots, n$, of real variables x_i is the determinant of the matrix whose ith row lists all the first-order partial derivatives of the function $f_i(x_1, x_2, \ldots, x_n)$. Also known as Jacobian determinant.

Jacobian determinant *See* Jacobian.

Jacobian elliptic function [MATH] For m a real number between 0 and 1, and u a real number, let ϕ be that number such that

$$\int_0^{\phi} d\theta / (1 - m \sin^2 \theta)^{1/2} = u;$$

the 12 Jacobian elliptic functions of u with parameter m are $\mathrm{sn}(u|m) = \sin \phi$, $\mathrm{cn}(u|m) = \cos \phi$, $\mathrm{dn}(u|m) = (1 - m \sin^2 \phi)^{1/2}$, the reciprocals of these three functions, and the quotients of any two of them.

Jacobian matrix [MATH] The matrix used to form the Jacobian.

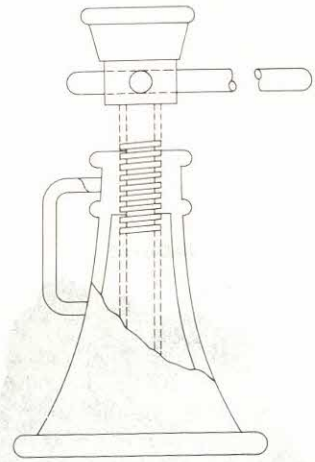
Jacobi condition [MATH] In the calculus of variations, a differential equation used to study the extremals in a variational problem.

Jacobi polynomials [MATH] Polynomials that are constructed from the hypergeometric function and satisfy the differential equation $(1-x^2)y'' + [\beta - \alpha - (\alpha + \beta + 2)x]y' + n(\alpha + \beta + n + 1)y = 0$, where n is an integer and α and β are constants greater than -1; in certain cases these generate the Legendre and Chebyshev polynomials.

Jacobi's transformations [MATH] Transformations of Jacobian elliptic functions to other Jacobian elliptic functions given by change of parameter and variable.

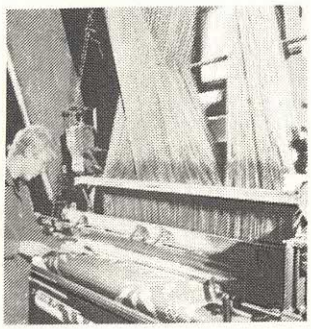
Jacobshavn Glacier [HYD] A glacier on the west coast of Greenland at latitude 68°N; it is the most productive glacier in the Northern Hemisphere, calving about 1400 icebergs yearly.

JACKSCREW



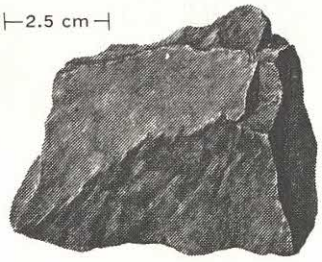
Jackscrew used to raise heavy objects.

JACQUARD



Weaving linen on a jacquard damask loom.

JADEITE



Specimen of massive jadeite in its dark-green variety chloromelonite, from Susa in Sardinia. *(Specimen from Department of Geology, Bryn Mawr College)*

jacobsite [MINERAL] $MnFe_2O_4$ A black magnetic mineral composed of an oxide of manganese and iron; a member of the magnetite series.

Jacob's ladder [NAV ARCH] A portable ladder, having rope, chain, or wire sides, and wooden or iron rungs, slung over the ship's side for temporary use. Also known as jack ladder.

Jacobsoniidae [INV ZOO] The false snout beetles, a small family of coleopteran insects in the superfamily Dermestoidea.

Jacobson radical *See* radical.

Jacobson's cartilage *See* vomeronasal cartilage.

Jacobson's organ [VERT ZOO] An olfactory canal in the nasal mucosa which ends in a blind pouch; it is highly developed in reptiles and vestigial in humans.

Jacob's staff *See* cross-staff.

Jacobs taper [DES ENG] A machine tool used for mounting drill chucks in drilling machines.

jacquard [TEXT] **1.** A loom or knitting machine for weaving figured fabrics and whose apparatus is controlled by punched cards. **2.** A fabric of jacquard weave.

Jacquemart's reagent [ANALY CHEM] Analytical reagent used to test for ethyl alcohol; consists of an aqueous solution of mercuric nitrate and nitric acid.

jacupirangite [PETR] An ultramafic plutonic rock that is part of the ijolite series; composed chiefly of titanaugite and magnetite, with a smaller amount of nepheline.

Jadassohn's nevus *See* nevus sebaceus.

jade [MINERAL] A hard, compact, dark-green or greenish-white gemstone composed of either jadeite or nephrite. Also known as jadestone.

jadeite [MINERAL] $NaAl(SiO_3)_2$ A clinopyroxene mineral occurring as green, fibrous monoclinic crystals; the most valuable variety of jade.

jadestone *See* jade.

Jaeger method [FL MECH] A method of determining surface tension of a liquid in which one measures the pressure required to cause air to flow from a capillary tube immersed in the liquid.

Jaeger-Steinwehr method [THERMO] A refinement of the Griffiths method for determining the mechanical equivalent of heat, in which a large mass of water, efficiently stirred, is used, the temperature rise of the water is small, and the temperature of the surroundings is carefully controlled.

jaff [ORD] A combination of electronic and chaff jamming.

jag bolt [DES ENG] An anchor bolt with barbs on a flaring shank.

jaguar [VERT ZOO] *Felis onca*. A large, wild cat indigenous to Central and South America; it is distinguished by a buff-colored coat with black spots, and has a relatively large head and short legs.

Jahn-Teller effect [PHYS CHEM] The effect whereby, except for linear molecules, degenerate orbital states in molecules are unstable.

jalap [MATER] An orange or reddish solid or a yellowish to brown powder with acrid taste and slight odor; the dried tuberous root of a Mexican plant (*Exogonium purga*), or the drug prepared from it; used as a cathartic in medicine.

jalousie [BUILD] A window that consists of a number of long, narrow panels, each hinged at the top.

jam [COMPUT SCI] In punched-card equipment, a feed malfunction causing blockage of passages with crumpled cards.

Jamaica bayberry *See* bayberry.

jamb [BUILD] The vertical member on the side of an opening, as a door or window.

jamb brick [MATER] A brick with one rounded corner; used to provide a rounded edge on wall openings.

jamb liner [BUILD] A small strip of wood applied to the edge of a window jamb to increase its width for use in thicker walls.

James concentrator [MIN ENG] A concentration table whose deck is divided into two sections; one section contains riffles for the coarse material, and the other section is smooth to allow settling of the fine particles which will not settle on a riffled surface.

jamesonite [MINERAL] $Pb_4FeSb_6S_{14}$ A lead-gray to gray-black mineral that crystallizes in the orthorhombic system, occurs in acicular crystals with fibrous or featherlike forms, and has a metallic luster. Also known as feather ore; gray antimony.

Jamin effect [FL MECH] Resistance to flow of a column of liquid divided by air bubbles in a capillary tube, even when subjected to a substantial pressure difference between the ends of the tube.

Jamin refractometer [OPTICS] An instrument for measuring the index of refraction of a gas in which two light beams from a common source are each passed through an evacuated tube and recombined, and the displacement of interference fringes is noted as gas is slowly admitted into one of the tubes.

jammer [ELECTR] A transmitter used in jamming of radio or radar transmissions. Also known as electronic jammer.

jammer finder [ELECTR] Radar which attempts to obtain the range of the target by training a highly directional pencil beam on a jamming source. Also known as burn-through.

jamming [ELECTR] Radiation or reradiation of electromagnetic waves so as to impair the usefulness of a specific segment of the radio spectrum that is being used by the enemy for communication or radar. Also known as active jamming; electronic jamming.

jam nut *See* locknut.

Janecke coordinates [CHEM ENG] Use of a rectangular or Ponchon-type diagram to plot the solvent content of liquid-liquid equilibrium phases; used for solvent-extraction design calculations.

jansky [ASTROPHYS] A unit of measurement of flux density, in units of watt·meter^{-2}·hertz^{-1}; 1 jansky is 10^{-26} W·m^{-2}·Hz^{-1}. Abbreviated Jy.

J antenna [ELECTROMAG] Antenna having a configuration resembling a J, consisting of a half-wave antenna end-fed by a parallel-wire quarter-wave section.

January thaw [CLIMATOL] A period of mild weather popularly supposed to recur each year in late January in New England and other parts of the northeastern United States.

Janus [ASTRON] The innermost satellite of Saturn, which orbits at a mean distance of 159.5×10^3 kilometers, very near Saturn's rings, and is judged to have a diameter of approximately 220 kilometers.

Janus system [NAV] A technique used in Doppler navigator design which utilizes radar or sound beams directed forward and astern for computation of ground-speed components; by heterodyning the returned pulses, the Doppler shift can be determined independently of the transmitted frequency.

japan [MATER] A glossy, black baking paint or varnish that consists primarily of a hard asphalt base.

Japan Current *See* Kuroshio Current.

Japanese encephalitis [MED] A human viral infection epidemic in Japan, transmitted by the common house mosquito (*Culex pipiens*) and characterized by severe inflammation of the brain.

Japanese peppermint oil [MATER] An oil distilled from *Mentha arvensis*, grown in Japan, Brazil, and the United States; the oil has less odor than peppermint oil; used for the production of menthol.

japanning [MET] The finishing of metal objects with japan.

Japan paper [MATER] A special paper made with an irregular mottled effect on the surface; used for greeting cards and other decorative applications.

Japan tallow *See* Japan wax.

Japan wax [MATER] A pale-yellow wax with rancid aroma obtained from the berries of sumac; soluble in benzene and naphtha, insoluble in water; melts at 53°C; used in wax products, polishes, and soaps, and as a beeswax substitute. Also known as Japan tallow; sumac wax.

Japygidae [INV ZOO] A family of wingless insects in the order Diplura with forcepslike anal appendages; members attack and devour small soil arthropods.

jar [ELEC] A unit of capacitance equal to 1000 statfarads, or approximately 1.11265×10^{-9} farad; it is approximately equal to the capacitance of a Leyden jar; this unit is now obsolete.

jar coupling *See* jars.

jardiniere glaze [MATER] A type of unfritted soft and hard lead glaze; contains oxides of lead, zinc, potassium, calcium, aluminum, and silicon.

jarlite [MINERAL] $NaSr_3Al_3F_{16}$ A colorless to brownish mineral composed of aluminofluoride of sodium and strontium.

jarosite [MINERAL] $KFe_3(SO_4)_2(OH)_6$ An ocher-yellow or brown alunite mineral having rhombohedral crystal structure. Also known as utahite.

jarosite process [MET] A zinc electrometallurgical process in which ferric ions are precipitated from feed solutions in the form of jarosite, a hydrous sulfate of iron and potassium or sodium.

jars [PETRO ENG] A series of links in the drill string to connect drill cables to the drill bit; sets up the uneven motion on the

upstroke that helps free the string of tools. Also known as jar coupling.

jasmine oil [MATER] A colorless fragrant essential oil from flowers of a jasmine, as *Jasminum officinale* or *J. grandiflorum*; the oil is extracted from the flowers by enfleurage and is used in perfumery.

jasmone [ORG CHEM] $C_{11}H_{16}O$ A liquid ketone found in jasmine oil and other essential oils from plants.

jaspagate *See* agate jasper.

jaspé [TEXT] Fabric which has a series of faint stripes formed by light, medium, and dark threads of the same color.

jasper [PETR] A dense, opaque to slightly translucent cryptocrystalline quartz containing iron oxide impurities; characteristically red. Also known as jasperite; jasperoid; jaspis.

jasperite *See* jasper.

jasperoid *See* jasper.

jaspilite [PETR] A compact siliceous rock resembling jasper and containing iron oxides in bands.

jaspis *See* jasper.

jaspoid *See* tachylite.

JATO engine [AERO ENG] Derived from jet-assisted-takeoff engine. **1.** An auxiliary jet-producing unit or units, usually rockets, for additional thrust. **2.** A JATO bottle or unit; the complete auxiliary power system used for assisted takeoff.

jauch *See* jauk.

jauk [METEOROL] A local name for the foehn in the Klagenfurt basin of Austria; it may come from the south, but is developed as a north foehn. Also spelled jauch.

jaundice [INV ZOO] *See* grasserie. [MED] Yellow coloration of the skin, mucous membranes, and secretions resulting from hyperbile-rubinemia. Also known as icterus.

jaundice of newborn [MED] Jaundice in infants during the first few days after birth, due to various causes.

Java black rot [PL PATH] A fungus disease of stored sweet potatoes caused by *Diplodia tubericola*; the inside of the root becomes black and brittle.

Java cotton *See* kapok.

Java man [PALEON] An overspecialized, apelike form of *Homo sapiens* from the middle Pleistocene having a small brain capacity, low cranial vault, and massive browridges.

jaw [ANAT] Either of two bones forming the skeleton of the mouth of vertebrates: the upper jaw or maxilla, and the lower jaw or mandible. [ENG] A notched part that permits a railroad-car axle box to move vertically. [GEOL] The side of a narrow passage such as a gorge.

jawbreaker *See* jaw crusher.

jaw clutch [MECH ENG] A clutch that provides positive connection of one shaft with another by means of interlocking faces; may be square or spiral; the most common type of positive clutch.

jaw crusher [MECH ENG] A machine for breaking rock between two steel jaws, one fixed and the other swinging. Also known as jawbreaker.

jawless vertebrate [VERT ZOO] The common name for members of the Agnatha.

J bolt [DES ENG] A J-shaped bolt, threaded on the long leg of the J.

J box *See* junction box.

J-carrier system [COMMUN] Broad-band carrier system, providing 12 telephone channels, which uses frequencies up to about 140 kilohertz by means of effective four-wire transmission on a single open-wire pair.

J display [ELECTR] A modified radarscope A display in which the time base is a circle; the target signal appears as an outward radial deflection from the time base.

Jeans viscosity equation [THERMO] An equation which states that the viscosity of a gas is proportional to the temperature raised to a constant power, which is different for different gases.

jeep [MECH ENG] A one-quarter-ton, four-wheel-drive utility vehicle in wide use in all United States military services.

jeffersonite [MINERAL] $Ca(Mn,Zn,Fe)Si_2O_6$ A dark-green or greenish-black mineral composed of pyroxene.

Jeffrey crusher [MIN ENG] A crusher to break soft minerals, such as limestone. Also known as whizzer mill.

Jeffrey diaphragm jig [MIN ENG] A plunger-type jig with the plunger beneath the screen.

Jeffrey molveyor [MIN ENG] A string of short conveyors on driven wheels connected together to run alongside a heading or room conveyor; used to keep a continuous miner in operation at all times.

Jeffrey single-roll crusher [MIN ENG] A simple type of crusher for coal, with a drum to which are bolted toothed segments designed to grip the coal, thus forcing it down into the crushing opening.

Jeffrey swing-hammer crusher [MIN ENG] A crusher with swing arms on a revolving shaft for crushing coal, ore, or other material against the iron casing of the crusher; a screen at the bottom allows sufficiently fine pieces to pass through.

Jeffrey-Traylor vibrating feeder [MIN ENG] A feed chute vibrated electromagnetically in a direction oblique to its surface; rate of movement of rock depends on amplitude and frequency of vibration.

Jeffrey-Traylor vibrating screen [MIN ENG] A vibrating screen whose action results from an oscillating armature and a stationary coil.

jejunitis [MED] Inflammation of the jejunum.

jejunostomy [MED] The making of an artificial opening through the abdominal wall into the jejunum.

jejunum [ANAT] The middle portion of the small intestine, extending between the duodenum and the ileum.

jellied gasoline *See* gelatinized gasoline.

jelly *See* ulmin.

jellyfish [INV ZOO] Any of various free-swimming marine coelenterates belonging to the Hydrozoa or Scyphozoa and having a bell- or bowl-shaped body. Also known as medusa.

jelly fungus [MYCOL] The common name for many members of the Heterobasidiomycetidae, especially the orders Tremallales and Dacromycetales, distinguished by a jellylike appearance or consistency.

jelutong *See* pontianak gum.

Jennerian vaccine *See* smallpox vaccine.

Jenner's stain *See* May-Grünwald stain.

jenny [VERT ZOO] **1.** A female animal, as a jenny wren. **2.** A female donkey.

Jensen's inequality [MATH] **1.** A general inequality satisfied by a convex function:

$$f\left(\sum_{i=1}^{n} a_i x_i\right) \leq \sum_{i=1}^{n} a_i f(x_i)$$

where the x_i are any numbers in the region where f is convex and the a_i are nonnegative numbers whose sum is equal to 1. **2.** If $a_1, a_2, \ldots, a_n$ are positive numbers and $s>t>0$, then $(a_1^s + a_2^s + \ldots + a_n^s)^{1/s}$ is less than or equal to $(a_1^t + a_2^t + \ldots + a_n^t)^{1/t}$.

Jensen's sarcoma [VET MED] A transmissible malignant tumor originally observed in a rat inoculated with acid-fast bacteria from a cow with pseudotuberculous enteritis.

Jeppel's oil *See* bone oil.

jerboa [VERT ZOO] The common name for 25 species of rodents composing the family Dipodidae; all are adapted for jumping, having extremely long hindlegs and feet.

jeremejevite [MINERAL] $AlBO_3$ A colorless or yellowish mineral composed of aluminum borate that occurs in hexagonal crystals.

Jeremiassen crystallizer [CHEM ENG] Device used to grow solid crystals in a supersaturated liquid solution and to separate them from it.

jerk [MECH] **1.** The rate of change of acceleration; it is the third derivative of position with respect to time. **2.** A unit of rate of change of acceleration, equal to 1 foot (30.48 centimeters) per second squared per second.

jerker line [PETRO ENG] A line that radiates from a common point of power to the jack of several wells, permitting the wells to be pumped by a single power unit.

jerkinhead [ARCH] Section of a roof hipped for only part of its height, forming a truncated gable on the wall below.

jerk pump [MECH ENG] A pump that supplies a precise amount of fuel to the fuel injection valve of an internal combustion engine at the time the valve opens; used for fuel injection.

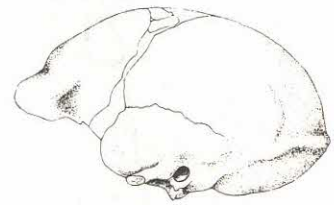
jerry can [ORD] A 5-gallon (19-liter), flat-sided, narrow can adapted from a German-made can, easily stacked and transported, and adapted by special openings for discharging fuel.

jersey [TEXT] A knitted wool, cotton, polyester, rayon, or other fabric with a slight rib on one side.

jet [FL MECH] A strong, well-defined stream of compressible fluid, either gas or liquid, issuing from an orifice or nozzle or moving in a contracted duct.

jet aircraft [AERO ENG] An aircraft with a jet engine or engines.

JAVA MAN

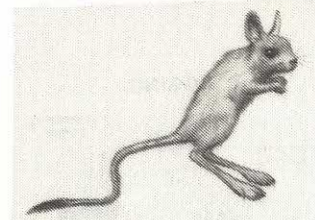


Lateral view of the cranium of *Homo erectus* II, one of the first specimens of Java man. (*Carnegie Institution of Washington, as used in M. F. Ashley Montagu, An Introduction to Physical Anthropology, 2d ed., Charles C. Thomas, 1951*)

J DISPLAY

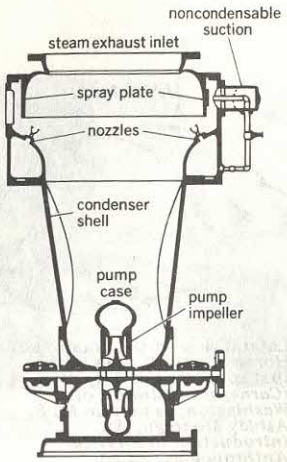
J type of radar display showing the signals as radial pips.

JERBOA



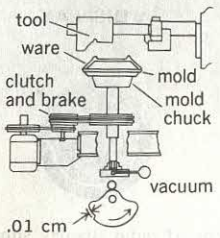
Jerboa, with body 3–6 inches (7–15 centimeters) long and tail up to 8 inches (20 centimeters) long.

JET CONDENSER



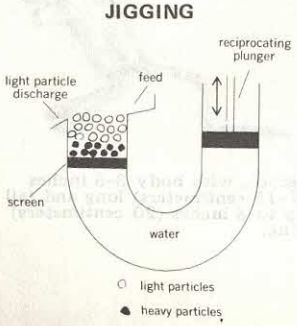
A low-level jet condenser. *(C. H. Wheeler Manufacturing Co.)*

JIGGERING



The jiggering tool and cam-raised jiggering apparatus used for plastic forming of clay. *(From W. D. Kingery, ed., Ceramic Fabrication Processes, Technology Press, MIT, and Wiley, 1958)*

JIGGING



The principle of the jigging method for beneficiation of ore.

jet bit [DES ENG] A modification of a drag bit or a roller bit that utilizes the hydraulic jet principle to increase drilling rate.

jet coal [GEOL] A hard, lustrous, pure black variety of lignite, occurring in isolated masses in bituminous shale; thought to be derived from waterlogged driftwood. Also known as black amber.

jet compressor [MECH ENG] A device, utilizing an actuating nozzle and a combining tube, for the pumping of a compressible fluid.

jet condenser [MECH ENG] A direct-contact steam condenser utilizing the aspirating effect of a jet for the removal of noncondensables.

jet drilling [MECH ENG] A drilling method that utilizes a chopping bit, with a water jet run on a string of hollow drill rods, to chop through soils and wash the cuttings to the surface. Also known as wash boring.

jet-effect wind [METEOROL] A wind which is increased in speed through the channeling of air by some mountainous configuration, such as a narrow mountain pass or canyon.

jet engine [AERO ENG] An aircraft engine that derives all or most of its thrust by reaction to its ejection of combustion products (or heated air) in a jet and that obtains oxygen from the atmosphere for the combustion of its fuel. [MECH ENG] Any engine that ejects a jet or stream of gas or fluid, obtaining all or most of its thrust by reaction to the ejection.

jet-flame drill [MIN ENG] A mining drill that utilizes a high-velocity flame to spall out a hole.

jet flap [AERO ENG] A sheet of fluid discharged at high speed close to the trailing edge of a wing so as to induce lift over the whole wing.

jet fuel [MATER] Special grade of kerosine with a flash point of 125°F (52°C), used for jet aircraft; may have methane or naphthene added to produce a 110°F (43°C) flash point, for military aircraft.

jet hole [ENG] A borehole drilled by use of a directed, forceful stream of fluid or air.

jet mill *See* fluid-energy mill.

jet mixer [MECH ENG] A type of flow mixer or line mixer, depending on impingement of one liquid on the other to produce mixing.

jet molding [ENG] Molding method in which most of the heat is applied to the material to be molded as it passes through a nozzle or jet, rather than in a conventional heating cylinder.

jet nozzle [DES ENG] A nozzle, usually specially shaped, for producing a jet, such as the exhaust nozzle on a jet or rocket engine.

jet-piercing drill *See* fusion-piercing drill.

jet propulsion [AERO ENG] The propulsion of a rocket or other craft by means of a jet engine. [ENG] Propulsion by means of a jet of fluid.

jet pump [MECH ENG] A pump in which an accelerating jet entrains a second fluid to deliver it at elevated pressure.

jetsam [ENG] Articles that sink when thrown overboard, particularly those jettisoned for the purpose of lightening a vessel in distress.

jet spinning [ENG] Production of plastic fibers in which a directed blast or jet of hot gas pulls the molten polymer from a die lip; similar to melt spinning.

jet stream [AERO ENG] The stream of gas or fluid expelled by any reaction device, in particular the stream of combustion products expelled from a jet engine, rocket engine, or rocket motor. [METEOROL] A relatively narrow, fast-moving wind current flanked by more slowly moving currents; observed principally in the zone of prevailing westerlies above the lower troposphere, and in most cases reaching maximum intensity with regard to speed and concentration near the troposphere.

jetting [CIV ENG] A method of driving piles or well points into sand by using a jet of water to break the soil. [ENG] During molding of plastics, the turbulent flow of molten resin from an undersized gate or thin section into a thicker mold section, as opposed to laminar, progressive flow.

jetting tool [PETRO ENG] Downhole device that jets a high-pressure, sand-laden fluid stream to clean out wellbore holes, to disintegrate perforating pipe, and to perform other operations.

jettison [ENG] The throwing overboard of objects, especially to lighten a craft in distress.

jetty *See* groin.

Jevons effect [METEOROL] The effect upon the measurement of rainfall caused by the presence of the rain gage; in 1861 W.S. Jevons pointed out that the rain gage causes a disturbance in airflow past it, and this carries part of the rain past the gage which would normally be captured.

jewel [ENG] **1.** A bearing usually made of synthetic corundum and used in precision timekeeping devices, gyros, and other instruments. **2.** A bearing lining of soft metal, used in railroad cars, for example.

jeweler's rouge *See* ferric oxide.

jewelry alloy [MET] Any ductile, malleable alloy, usually bronze, of good corrosion resistance, used as a base metal in jewelry.

jezekite *See* morinite.

J factor [THERMO] A dimensionless equation used for the calculation of free convection heat transmission through fluid films.

JFET *See* junction field-effect transistor.

J function [GEOPHYS] A dimensionless mathematical relationship to correlate capillary pressure data of similar geologic formations.

jib [NAV ARCH] A triangular sail bent to a foremast stay.

jib boom [MECH ENG] An extension that is hinged to the upper end of a crane boom. [NAV ARCH] A spar used as an extension of the bowsprit on sailing ships.

jib crane [MECH ENG] Any of various cranes having a projecting arm (jib).

jib end [MIN ENG] The delivery end in conveyor systems in which a jib is fitted to deliver the load in advance of and remote from the drive.

jig [ENG] A machine for dyeing piece goods by moving the cloth at full width (open width) through the dye liquor on rollers. [MECH ENG] A device used to position and hold parts for machining operations and to guide the cutting tool. [MIN ENG] A vibrating device in which coal is cleaned and ore is concentrated in water.

jig back [MECH ENG] An aerial ropeway with a pair of containers that move in opposite directions and are loaded or stopped alternately at opposite stations but do not pass around the terminals. Also known as reversible tramway; to-and-fro ropeway.

jig borer [MECH ENG] A machine tool resembling a vertical milling machine designed for locating and drilling holes in jigs.

jigger *See* jigging conveyor.

jigger boss [MIN ENG] A first-line supervisor in some western United States mines.

jiggering [ENG] A mechanization of the ceramic-forming operation consisting of molding the outside of a piece by throwing plastic clay on a plaster of paris mold, placing the mold and clay on a rotating head, and forming the inner surface by forcing a template or jigger knife against the clay; method used in mass-producing dinnerware.

jigging [MIN ENG] A gravity method which separates mineral from gangue particles by utilizing an effective difference in settling rate through a periodically dilated bed.

jigging conveyor [MIN ENG] A series of steel troughs suspended from the roof of the stope or laid on rollers on its floor, and given reciprocating motion mechanically, to move mineral. Also known as chute conveyor; jigger; pan conveyor.

jig grinder [MECH ENG] A precision grinding machine used to locate and grind holes to size, especially in hardened steels and carbides.

jigsaw [MECH ENG] A tool with a narrow blade suitable for cutting intricate curves and lines.

jig washer [MIN ENG] A coal or mineral washer for relatively coarse material; the broken ore is placed on a screen and pulsed vertically with water; the heavy portion passes through the screen and the light portion goes over the sides.

jim crow [DES ENG] A device with a heavy buttress screw thread used for bending rails by hand.

jimsonweed [BOT] *Datura stramonium*. A tall, poisonous annual weed having large white or violet trumpet-shaped flowers and globose prickly fruits. Also known as apple of Peru.

J indicator *See* J scope.

jird [VERT ZOO] Any one of the diminutive rodents composing related species of the genus *Meriones* which are inhabitants of northern Africa and southwestern Asia; they serve as experimental hosts for studies of schistosomiasis.

jitter [COMMUN] In facsimile, distortion in the received copy caused by momentary errors in synchronism between the scanner and recorder mechanisms; does not include slow errors in synchronism due to instability of the frequency standards used

in the facsimile transmitter and recorder. [ELECTR] Small, rapid variations in a waveform due to mechanical vibrations, fluctuations in supply voltages, control-system instability, and other causes.

jittered pulse recurrence frequency [COMMUN] Random variation of the pulse repetition period; provides a discrimination capability against repeater-type jammers.

j-j coupling [ATOM PHYS] A process for building up many-electron wave functions; the spin and orbital functions of each particle are combined to form eigenfunctions of the particle's total angular momentum, and then the wave functions of all the particles are combined to form eigenfunctions of the total angular momentum of the system; this coupling is used when the spin-orbit interaction is strong compared to the electrostatic interaction.

J-K flip-flop [ELECTR] A storage stage consisting only of transistors and resistors connected as flip-flops between input and output gates, and working with charge-storage transistors; gives a definite output even when both inputs are 1.

JND *See* just-noticeable difference.

joaquinite [MINERAL] $NaBa_2Ce_2Fe(Ti,Nb)_2Si_8O_{26}(OH,F)_2$ A honey-yellow mineral composed of sodium iron titanium silicate, occurring in orthorhombic crystals.

job [COMPUT SCI] A unit of work to be done by the computer; it is a single entity from the standpoint of computer installation management, but may consist of one or more job steps. [IND ENG] **1.** The combination of duties, skills, knowledge, and responsibilities assigned to an individual employee. **2.** A work order.

jobber's reamer [DES ENG] A machine reamer that is solid with straight or helical flutes and taper shanks.

job breakdown [IND ENG] Separation of an operation into elements. Also known as operation breakdown.

job characteristic *See* job factor.

job class [COMPUT SCI] The set of jobs on a computer system whose resource requirements (for the central processing unit, memory, and peripheral devices) fall within specified ranges. [IND ENG] A group of jobs involving a similar type of work, difficulty of performance, or range of pay. Also known as job family; job grade; labor grade.

job classification [IND ENG] Designating job classes on the basis of job factors or level of pay, or on the basis of job evaluation.

job control block [COMPUT SCI] A group of data containing the execution-control data and the job identification when the job is initiated as a unit of work to the operating system.

job control language *See* command language.

job control statement [COMPUT SCI] Any of the statements used to direct an operating system in its functioning, as contrasted to data, programs, or other information needed to process a job but not intended directly for the operating system itself. Also known as control statement.

job description [IND ENG] A detailed description of the essential activities required to perform a task.

job evaluation [IND ENG] Orderly qualitative appraisal of each job or position in an establishment either by a point system for the specific job characteristics or by comparison of job factors; used for establishing a job hierarchy and wage plans.

job factor [IND ENG] An essential job element which provides a basis for selecting and training employees and establishing the wage plan for the job. Also known as job characteristic.

job family *See* job class.

job flow control [COMPUT SCI] Control over the order in which jobs are handled by a computer in order to use the central processing units and the units under the computer's control as efficiently as possible.

job grade *See* job class.

job library [COMPUT SCI] A partitioned data set, or a concatenation of partitioned data sets, used as the primary source of object programs (load modules) for a particular job, and more generally, as a source of runnable programs from which all or most of the programs for a given job will be selected.

Jo block *See* Johansson block.

job mix [COMPUT SCI] The distribution of the jobs handled by a computer system among the various job classes.

job-oriented terminal [COMPUT SCI] A terminal, such as a point-of-sale terminal, at which data taken directly from a source can enter a communication network directly.

job plan [IND ENG] The organized approach to production management involving formal, step-by-step procedures.

job processing control [COMPUT SCI] The section of the control program responsible for initiating operations, assigning facilities, and proceeding from one job to the next.

job stacking [COMPUT SCI] The presentation of jobs to a computer system, each job followed by another.

job step [COMPUT SCI] A unit of work from the viewpoint of the user.

jochwinde [METEOROL] The mountain-gap wind of the Tauern Pass in the Alps.

jodfenphos [ORG CHEM] $C_8H_8O_3Cl_2IPS$ A crystalline compound with a melting point of 76°C; slight solubility in water; used as an insecticide in homes, farm buildings, and industrial sites. Also known as *O,O*-dimethyl-*O*-(2,5-dichloro-4-iodophenyl)thiophosphate; iodofenphos.

jogging [ELEC] Quickly repeated opening and closing of a circuit to produce small movements of the driven machine. Also known as inching.

joggle [DES ENG] **1.** A flangelike offset on a flat piece of metal. **2.** A projection or notch on a sheet of building material to prevent protrusion. **3.** A dowel for joining blocks of masonry. [MIN ENG] Trusses or sets of timbers joined for taking pressure at right angles.

joggled frame [NAV ARCH] A frame offset to fit the laps of the shell plating.

joggled plating [NAV ARCH] A plating construction used in riveted steel ships in which one or both edges of a plate are offset with respect to the edge of an adjacent one; it became essentially obsolete with the advent of all-welded ships.

jog method [NAV] Following one or more doglegs to avoid a direct approach, as when it is desired to delay arrival at a destination.

Johann crystal geometry [CRYSTAL] The focusing shape of a diffracting crystal for x-ray dispersion used in electron-probe microanalysis; less stringent than Johannson crystal geometry.

johannite [MINERAL] $Cu(UO_2)_2(SO_4)_2 \cdot 6H_2O$ An emerald green to apple green, triclinic mineral consisting of a hydrated basic copper and uranium sulfate.

johannsenite [MINERAL] $CaMnSi_2O_6$ A clove-brown, grayish, or greenish clinopyroxene mineral composed of a silicate of calcium and manganese; a member of the pyroxene group.

Johannson crystal geometry [CRYSTAL] The full-focusing shape of a diffracting crystal for x-ray dispersion used in electron-probe microanalyzers; more stringent than Johann crystal geometry.

Johansson block [DES ENG] A type of gage block ground to an accuracy of at least 1/100,000 inch (0.25 micrometer). Also known as Jo block.

Johne's bacillus *See* Mycobacterium paratuberculosis.

Johne's disease [VET MED] A chronic inflammation of the intestinal tract of sheep, cattle, and deer caused by *Mycobacterium paratuberculosis*.

Johnson and Lark-Horowitz formula [SOLID STATE] A formula according to which the resistivity of a metal or degenerate semiconductor resulting from impurities which scatter the electrons is proportional to the cube root of the density of impurities.

Johnson concentrator [MIN ENG] A device used to separate heavy particles such as metallic gold from auriferous pulp; composed of a shell in the shape of a cylinder that is lined with rubber grooves parallel to the inclined axis.

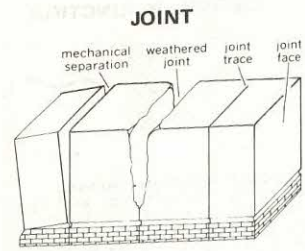
Johnson noise *See* thermal noise.

Johnson-Rahbeck effect [PHYS] An increase in frictional force between two electrodes in contact with a semiconductor that arises when a potential difference is applied between the electrodes.

johnstrupite [MINERAL] A mineral composed of a complex silicate of cerium and other metals, approximately $(Ca,Na)_3(Ce,Ti,Zr)(SiO_4)_2F$; occurs in prismatic crystals.

joiner plans [NAV ARCH] Plans showing the arrangement of quarters and living spaces on a ship.

joint [ANAT] A contact surface between two individual bones. Also known as articulation. [ELEC] A juncture of two wires or other conductive paths for current. [ENG] The surface at which two or more mechanical or structural components are united. [GEOL] A fracture that traverses a rock



Aspects of systematic joint, a type of geological joint.

and does not show any discernible displacement of one side of the fracture relative to the other.

joint bar [CIV ENG] A rigid steel member used in pairs to join, hold, and align rail ends.

joint block [GEOL] A body of rock that is bounded by joints.

joint body *See* joint mouse.

joint buildup sequence [MET] The sequence in which weld beads are deposited relative to the cross section of a multiple-pass joint.

joint capsule [ANAT] A sheet of fibrous connective tissue enclosing a synovial joint.

joint clearance [ENG] The distance between mating surfaces of a joint.

joint communications [COMMUN] Common use of communications facilities by two or more services of the same nation.

joint compound [MATER] A material used primarily to lubricate the threads of pipe joints and secondarily to prevent joint leakage.

joint distribution of two random variables [STAT] The distribution which gives the probability that $Z = z$ and $W = w$ for all values z and w of the random variables Z and W respectively.

joint drag *See* kink band.

joint efficiency [MET] A numerical value expressed as the ratio of the strength of a riveted, welded, or brazed joint to the strength of the parent metal.

jointer [ENG] **1.** Any tool used to prepare, make, or simulate joints, such as a plane for smoothing wood surfaces prior to joining them, or a hand tool for inscribing grooves in fresh cement. **2.** A file for making sawteeth the same height. **3.** An attachment to a plow that covers discarded material. **4.** A worker who makes joints, particularly a construction worker who cuts stone to proper fit.

jointer gage [DES ENG] An attachment to a bench vise that holds a board at any angle desired for planing.

jointing [CIV ENG] Caulking of masonry joints. [GEOL] A condition of rock characterized by joints.

joint marginal distribution [STAT] The distribution obtained by summing the joint distribution of three random variables over all possible values of one of these variables.

joint mouse [PATH] A small, loose body within a synovial joint, frequently calcified, derived from synovial membrane, organized fibrin fragments of articular cartilage, or arthritic osteophytes. Also known as joint body.

joint penetration [MET] The distance extended into a weld joint by the weld metal or fusion zone.

joint plane [GEOL] The surface of fracturing or potential fracture of a joint.

joint pole [ELEC] Pole used in common by two or more utility companies.

joint set [GEOL] A group of parallel joints in a geologic formation.

joint system [GEOL] Two or more joint sets.

joint vein [GEOL] A small vein in a joint.

joist [CIV ENG] A steel or wood beam providing direct support for a floor.

joist anchor *See* wall anchor.

jojoba [AGR] *Simmondsia californica*. A shrub adapted to the arid portions of the southwestern United States and Mexico; liquid extracted from the seed may be used as a substitute for sperm oil.

Jolly balance [ENG] A spring balance used to measure specific gravity of mineral specimens by weighing a specimen when in the air and when immersed in a liquid of known density.

jolt-and-jumble tests [ORD] A standardized program of tests intended to simulate the shocks to which various components of ammunition are subjected in transportation and handling.

jolt molding [ENG] A process for shaping refractory blocks in which a mold containing prepared batch is jolted mechanically to consolidate the material.

Jominy end quench test *See* Jominy test.

Jominy test [MET] A hardenability test in which a steel bar is heated to the desired austenitizing temperature and quench-hardened at one end and then measured for hardness along its length, beginning at the quenched end. Also known as Jominy end quench test.

Jonathan freckle [PL PATH] A storage disease of apples characterized by small circular discolorations in the skin.

Jonathan spot [PL PATH] A disease of apples characterized by circular depressed necrotic areas around the lenticels.

Jones reductor [CHEM] A device used to chemically reduce solutions, such as ferric salt solutions, consisting of a vertical tube containing granular zinc into which the solution is poured.

Jones riffle [MIN ENG] An apparatus used to reduce the size of a sample to a desired weight; consists of a hopper which passes samples to a series of open-bottom pockets, each of which divides the sample into two equal parts, and the next pass of each part gives a quarter of the original sample, and so on until the desired sample is obtained.

Jones splitter [MIN ENG] A device used to reduce the volume of a sample, consisting of a belled, rectangular container, the bottom of which is fitted with a series of narrow slots or alternating chutes designed to cast material in equal quantities to opposite sides of the device.

Jones sucker rod [PETRO ENG] Connecting rod between the subsurface pump and the lifting or pumping device on the surface; serves to lift oil out of the cased hole.

jonquil oil [MATER] A colorless oil obtained from flowers of jonquil (*Narcissus jonquilla*); used in perfumes. Also known as narcissus oil.

Joppeicidae [INV ZOO] A monospecific family of hemipteran insects included in the Pentatomorpha; found in the Mediterranean regions.

joran *See* juran.

jordan [MECH ENG] A machine or engine used to refine paper pulp, consisting of a rotating cone, with cutters, that fits inside another cone, also with cutters.

Jordan algebra [MATH] A nonassociative algebra over a field in which the products satisfy the Jordan identity $(xy)x^2 = x(yx^2)$.

Jordan curve [MATH] A simple closed curve in the plane, that is, a curve that is closed, connected, and does not cross itself.

Jordan curve theorem [MATH] The theorem that in the plane every simple closed curve separates the plane into two parts.

Jordan-Hölder theorem [MATH] The theorem that for a group any two composition series have the same number of subgroups listed, and both series produce the same quotient groups.

jordanite [MINERAL] $(Pb,Tl)_{13}As_7S_{23}$ A lead-gray mineral composed of lead arsenic sulfide, occurring as monoclinic crystals.

jordanon *See* microspecies.

Jordan's rule [EVOL] The rule that organisms which are closely related tend to occupy adjacent rather than identical or distant ranges. [VERT ZOO] The rule that fishes in areas of low temperatures tend to have more vertebrae than those in warmer waters.

Jordan sunshine recorder [ENG] A sunshine recorder in which the time scale is supplied by the motion of the sun; it consists of two opaque metal semicylinders mounted with their curved surfaces facing each other; each of the semicylinders has a short narrow slit in its flat side; sunlight entering one of the slits falls on light-sensitive paper (blueprint paper) which lines the curved side of the semicylinder.

Jordan-Wigner commutation rules [QUANT MECH] Rules obtained by replacing commutators of creation and destruction operators by anticommutators; applicable to fermion fields in a quantized field theory.

joseite [MINERAL] $Bi_3Te(Si,S)$ A mineral composed of telluride of bismuth containing sulfur and selenium.

josen *See* hartite.

josephinite [MINERAL] A mineral consisting of an alloy of iron and nickel; occurs naturally in stream gravel.

Josephson current [CRYO] The current across a Josephson junction in the absence of voltage across the junction, resulting from the Josephson effect.

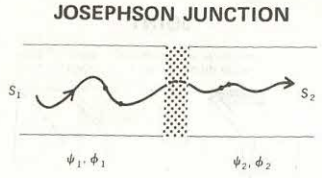
Josephson effect [CRYO] The tunneling of electron pairs through a thin insulating barrier between two superconducting materials. Also known as Josephson tunneling.

Josephson equation [CRYO] An equation according to which the Josephson current is a sinusoidally varying function of the applied magnetic field.

Josephson junction [CRYO] A thin insulator separating two superconducting materials; it displays the Josephson effect.

Josephson penetration depth [CRYO] A measure of the distance that a magnetic field extends into a Josephson junction.

JOSEPHSON JUNCTION



Josephson junction showing two superconductors S_1 and S_2 separated by a thin insulator (shaded area). The phases ϕ_1 and ϕ_2 of the order parameters ψ_1 and ψ_2 of the two superconductors are coherent.

Josephson tunneling *See* Josephson effect.

JOSS [COMPUT SCI] A time-sharing language, designed for concurrent use by a number of people, each at his own console typewriter, and for programs of moderate size and running time.

joule [MECH] The unit of energy or work in the meter-kilogram-second system of units, equal to the work done by a force of 1 newton magnitude when the point at which the force is applied is displaced 1 meter in the direction of the force. Symbolized J. Also known as newton-meter of energy.

Joule-Clausius velocity [STAT MECH] A quantity used in the description of the kinetic behavior of a gas, equal to the square root of the ratio of the pressure of the gas to one-third of its density.

Joule cycle *See* Brayton cycle.

Joule effect [PHYS] **1.** The heating effect produced by the flow of current through a resistance. **2.** A change in the length of a ferromagnetic substance which occurs parallel to an applied magnetic field. Also known as Joule magnetorestriction; longitudinal magnetorestriction.

Joule equivalent [THERMO] The numerical relation between quantities of mechanical energy and heat; the present accepted value is 1 fifteen-degrees calorie equals 4.1855± 0.0005 joules. Also known as mechanical equivalent of heat.

Joule heat [ELEC] The heat which is evolved when current flows through a medium having electrical resistance, as given by Joule's law.

Joule-Kelvin effect *See* Joule-Thomson effect.

Joule magnetorestriction *See* Joule effect.

Joule's law [ELEC] The law that when electricity flows through a substance, the rate of evolution of heat in watts equals the resistance of the substance in ohms times the square of the current in amperes. [THERMO] The law that at constant temperature the internal energy of a gas tends to a finite limit, independent of volume, as the pressure tends to zero.

Joule-Thomson effect [THERMO] A change of temperature in a gas undergoing Joule-Thomson expansion. Also known as Joule-Kelvin effect.

Joule-Thomson expansion [THERMO] The adiabatic, irreversible expansion of a fluid flowing through a porous plug or partially opened valve. Also known as Joule-Thomson process.

Joule-Thomson process *See* Joule-Thomsom expansion.

Joule-Thomson valve [CRYO] A valve through which a gas is allowed to expand adiabatically, resulting in lowering of its temperature; used in production of liquid hydrogen and helium.

journal [MECH ENG] That part of a shaft or crank which is supported by and turns in a bearing.

journal bearing [MECH ENG] A cylindrical bearing which supports a rotating cylindrical shaft.

journal box [ENG] A metal housing for a journal bearing.

journal friction [MECH ENG] Friction of the axle in a journal bearing arising mainly from viscous sliding friction between journal and lubricant.

journal oil [MATER] A special grade of lubricating oil for use on journal bearings.

JOVIAL [COMPUT SCI] A procedure-oriented language derived from ALGOL, commonly used in programming command and control procedures.

Jovian planet [ASTRON] Any of the four major planets (Jupiter, Saturn, Uranus, and Neptune) that are at a greater distance from the sun than the terrestrial planets (Mercury, Venus, Earth, and Mars).

Jovian Van Allen belts [ASTROPHYS] The extended belts of high-energy charged particles that are trapped in Jupiter's magnetic field and cause the microwave nonthermal emission of radio waves observed in the band from about 3 to 70 centimeters.

Joy double-ended miner [MIN ENG] A cutter-loader for continuous mining on a longwall face.

Joy extensible conveyor [MIN ENG] A type of belt conveyor consisting of a head section and a tail section, each mounted on crawler tracks and independently driven; used between a loader or continuous miner and the main transport.

Joy extensible steel band [MIN ENG] A hydraulically driven system linking a continuous miner to the main transport; the steel band is coiled on the drivehead.

Joy loader [MIN ENG] A loading machine which uses mechanical arms to collect coal or ore onto an apron that is pushed onto the broken material.

Joy longwall loading machine [MIN ENG] A modified Joy loader comprising a hydraulically elevated loading head fitted with mechanical gathering arms.

Joy microdyne [MIN ENG] A dust collector that wets and traps dust pulled into it and releases the dust as a slurry to be removed by pumps; used at the return end of tunnels or hard headings.

Joy miner [MIN ENG] A continuous miner weighing about 15 tons (13,600 kilograms) and made up of a turntable, a ripper bar, and a discharge boom conveyor; used mainly in coal headings and in extraction of coal pillars.

joystick [AERO ENG] A lever used to control the motion of an aircraft; fore-and-aft motion operates the elevators while lateral motion operates the ailerons. [ENG] A two-axis displacement control operated by a lever or ball, for XY positioning of a device or an electron beam.

Joy-Sullivan hydrodrill rig [MIN ENG] A drill rig set on a jib or boom which can be moved to and locked in any position by hydraulic power controlled from the drill carriage.

Joy transloader [MIN ENG] A rubber-tired, self-propelled machine for loading, transporting, and dumping.

Joy walking miner [MIN ENG] A continuous miner designed to make thin seams; a walking mechanism is used instead of caterpillar tracks for moving the miner.

JP-4 [MATER] Jet engine test fuel made up of 35% light petroleum distillates and 65% gasoline distillates.

JP-5 [MATER] Military jet engine fuel made of specially refined kerosine with specified flash and freezing points.

J particle [PARTIC PHYS] A neutral meson which has a mass of 3095 megaelectronvolts, spin quantum number 1, and negative parity and charge parity; it has an anomalously long lifetime of approximately 10^{-20} second (corresponding to a width of approximately 70 kiloelectronvolts). Also known as psi particle (symbolized ψ).

J scan *See* J scope.

J scope [ELECTR] A modification of an A scope in which the trace appears as a circular range scale near the circumference of the cathode-ray tube face, the signal appearing as a radial deflection of the range scale; no bearing indication is given. Also known as J indicator; J scan.

Judson powder [MATER] An explosive containing sodium nitrate, coal, sulfur, and some nitroglycerin.

jugal [ANAT] Pertaining to the zygomatic bone. [VERT ZOO] In lower vertebrates, a bone lying below the orbit of the eye.

Jugatae [INV ZOO] The equivalent name for Homoneura.

jugate [BIOL] Structures which are joined together.

Juglandaceae [BOT] A family of dicotyledonous plants in the order Juglandales having unisexual flowers, a solitary basal ovule in a unilocular inferior ovary, and pinnately compound, exstipulate leaves.

Juglandales [BOT] An order of dicotyledonous plants in the subclass Hamamelidae distinguished by compound leaves; includes hickory, walnut, and butternut.

jugular [ANAT] Pertaining to the region of the neck above the clavicle.

jugular compression [PATH] A test for a spinal subarachnoid block by noting the rate of rise and fall of the spinal fluid pressure following compression and release of the jugular veins.

jugular foramen [ANAT] An opening in the cranium formed by the jugular notches of the occipital and temporal bones for passage of an internal jugular vein, the ninth, tenth, and eleventh cranial nerves, and the inferior petrosal sinus.

jugular foramen syndrome [MED] Injury to the jugular foramen, usually due to a basilar skull fracture, with resultant paralysis of ninth, tenth, and eleventh cranial nerves.

jugular process [ANAT] A rough process external to the condyle of the occipital bone.

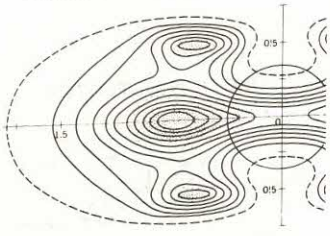
jugular vein [ANAT] The vein in the neck which drains the brain, face, and neck into the innominate.

jugum [BOT] One pair of opposite leaflets of a pinnate leaf. [INV ZOO] **1.** The most posterior and basal portion of the wing of an insect. **2.** A crossbar connecting the two arms of the brachidium in some brachiopods.

Julian calendar [ASTRON] A calendar replaced by the Gregorian calendar; the Julian year was 365.25 days, the fraction allowed for the extra day every fourth year (leap year). There are 12 months, each 30 or 31 days except for February which has 28 days or in leap year 29.

Julian day [ASTRON] The number of each day, as reckoned

JOVIAN VAN ALLEN BELTS



Contours of radio emission from Jupiter originating from one-half of the Van Allen belt, and extending far beyond the planet's disk.

consecutively since the beginning of the present Julian period on January 1, 4713 B.C.; it is used primarily by astronomers to avoid confusion due to the use of different calendars at different times and places; the Julian day begins at noon, 12 hours later than the corresponding civil day.

Julian ephemeris century [ASTRON] The unit of ephemeris time (ET) in Simon Newcomb's formulas which relate the orbital position of the earth to ephemeris time; the Julian ephemeris century is subdivided into 36,525 days, and 1 ephemeris day = 86,400 ephemeris seconds.

julienite [MINERAL] $Na_2Co(SCN)_4 \cdot 8H_2O$ A blue, tetragonal mineral consisting of a hydrated sodium cobalt thiocyanate.

jumbo *See* drill carriage.

jump [COMPUT SCI] A transfer of control which terminates one sequence of instructions and begins another sequence at a different location. Also known as branch; transfer.

jump discontinuity [MATH] A point a where for a real-valued function $f(x)$ the limit on the left of $f(x)$ as x approaches a and the limit on the right both exist but are distinct.

jumper [ELEC] A short length of conductor used to make a connection between two points or terminals in a circuit or to provide a path around a break in a circuit.

jumper tube [MECH ENG] A short tube used to bypass the flow of fluid in a boiler or tubular heater.

jump fire [FOR] A fire carried ahead of a forest fire by windborne burning material.

jump function [MATH] A function used to represent a sampled data sequence arising in the numerical study of linear difference equations.

jumping a claim [MIN ENG] **1.** Taking possession of a mining claim which has been abandoned. **2.** Taking possession of a mining claim that is liable to forfeiture because the requirements of the law are unfulfilled. **3.** Taking possession of a mining claim by stealth, fraud, or force.

jumping trace routine [COMPUT SCI] A trace routine which is primarily concerned with providing a record of jump instructions in order to show the sequence of program steps that the computer followed.

jump phenomenon [CONT SYS] A phenomenon occurring in a nonlinear system subjected to a sinusoidal input at constant frequency, in which the value of the amplitude of the forced oscillation can jump upward or downward as the input amplitude is varied through either of two fixed values, and the graph of the forced amplitude versus the input amplitude follows a hysteresis loop.

jump resonance [CONT SYS] A jump discontinuity occurring in the frequency response of a nonlinear closed-loop control system with saturation in the loop.

Juncaceae [BOT] A family of monocotyledonous plants in the order Juncales characterized by an inflorescence of diverse sorts, vascular bundles with abaxial phloem, and cells without silica bodies.

Juncales [BOT] An order of monocotyledonous plants in the subclass Commelinidae marked by reduced flowers and capsular fruits with one too many anatropous ovules per carpel.

junction [CIV ENG] A point of intersection of roads or highways, especially where one terminates. [ELEC] *See* major node. [ELECTR] A region of transition between two different semiconducting regions in a semiconductor device, such as a *pn* junction, or between a metal and a semiconductor. [ELECTROMAG] A fitting used to join a branch waveguide at an angle to a main waveguide, as in a tee junction. Also known as waveguide junction.

junctional nevus [MED] A skin lesion containing nevus cells at the junction of the epidermis and dermis.

junctional receptor [PHYSIO] An acetylcholine receptor which occurs in clusters in a muscle membrane at the nerve-muscle junction.

junction battery [NUCLEO] A nuclear-type battery in which a radioactive material, such as strontium-90, irradiates a *pn* silicon junction.

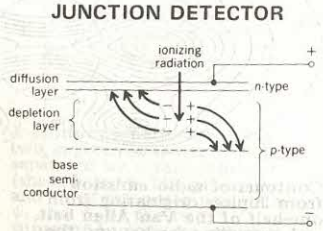
junction box [ENG] A protective enclosure into which wires or cables are led and connected to form joints. Also known as J box.

junction buoy [NAV] A buoy marking the junction of two channels or two parts of a channel when proceeding seaward.

junction capacitor [ELECTR] An integrated-circuit capacitor that uses the capacitance of a reverse-biased *pn* junction.

junction detector [NUCLEO] A reverse-biased semiconductor junction functioning as a solid ionization chamber to produce an electric output pulse whose amplitude is linearly proportional to the energy deposited in the junction depletion layer by the incident ionizing radiation.

JUNCTION DETECTOR



Silicon junction detector.

junction diode [ELECTR] A semiconductor diode in which the rectifying characteristics occur at an alloy, diffused, electrochemical, or grown junction between *n*-type and *p*-type semiconductor materials. Also known as junction rectifier.

junction field-effect transistor [ELECTR] A field-effect transistor in which there is normally a channel of relatively low-conductivity semiconductor joining the source and drain, and this channel is reduced and eventually cut off by junction depletion regions, reducing the conductivity, when a voltage is applied between the gate electrodes. Abbreviated JFET. Also known as depletion-mode field-effect transistor.

junction isolation [ELECTR] Electrical isolation of a component on an integrated circuit by surrounding it with a region of a conductivity type that forms a junction, and reverse-biasing the junction so it has extremely high resistance.

junction laser [OPTICS] A laser in which a junction in a semiconductor serves as the source of the coherent laser beam.

junction loss [COMMUN] In telephone circuits, that part of the repetition equivalent assignable to interaction effects arising at trunk terminals.

junction phenomena [ELECTR] Phenomena which occur at the boundary between two semiconductor materials, or a semiconductor and a metal, such as the existence of an electrostatic potential in the absence of current flow, and large injection currents which may arise when external voltages are applied across the junction in one direction.

junction point *See* branch point.

junction pole [ELEC] Pole at the end of a transposition section of an open-wire line or the pole common to two adjacent transposition sections.

junction rectifier *See* junction diode.

junction station [ELECTR] Microwave relay station that joins a microwave radio leg or legs to the main or through route.

junction streamer [GEOPHYS] The streamer process by which negative charge centers at successively higher altitudes in a thundercloud are believed to be "tapped" for discharge by lightning.

junction transistor [ELECTR] A transistor in which emitter and collector barriers are formed between semiconductor regions of opposite conductivity type.

junction transposition [ELEC] Transposition located at the junction pole between two transposition sections of an open-wire line.

junctor [ELEC] In crossbar systems, a circuit extending between frames of a switching unit and terminating in a switching device on each frame.

June solstice [ASTRON] Summer solstice in the Northern Hemisphere.

Jungermanniales [BOT] The leafy liverworts, an order of bryophytes in the class Marchantiatae characterized by chlorophyll-containing, ribbonlike or leaflike bodies and an undifferentiated thallus.

Jungian psychology *See* analytic psychology.

jungle [ECOL] An impenetrable thicket of second-growth vegetation replacing tropical rain forest that has been disturbed; lower growth layers are dense.

jungle yellow fever [MED] A form of yellow fever endemic in forested areas of Brazil.

junior [OPTICS] A 1000- or 2000-watt Fresnel spotlight.

juniper berry oil [MATER] Colorless oil that darkens and thickens in air; bitter taste, turpentinelike aroma; derived from the dried ripe fruit of the common juniper (*Juniperus communis*), used in medicine, gins, and liqueurs, and in veterinary practice. Also known as juniper oil.

juniperic acid [ORG CHEM] $C_{16}H_{32}O_3$ A crystalline hydroxy acid that melts at 95°C, obtained from waxy exudations from conifers.

juniper oil *See* juniper berry oil.

juniper tar oil *See* cade oil.

juniper wood oil [MATER] Oil made by diluting juniper berry oil with turpentine oil or by distilling turpentine oil over juniper wood; used as an external medicine and in veterinary practice.

Junkers engine [MECH ENG] A double-opposed-piston, two-cycle internal combustion engine with intake and exhaust ports at opposite ends of the cylinder.

junk wind [METEOROL] A south or southeast monsoon wind,

favorable for the sailing of junks; the wind is known in Thailand, China, and Japan.

Juno [ASTRON] An asteroid with a diameter of about 235 kilometers, mean distance from the sun of 2.668 astronomical units, and S-type surface composition; it is grouped with Ceres, Pallas, and Vesta as the Big Four.

junta [METEOROL] A wind blowing through Andes Mountain passes, sometimes reaching hurricane force.

Jupiter [ASTRON] The largest planet in the solar system, and the fifth in order of distance from the sun; semimajor axis = 485 $\times 10^6$ miles (780 $\times 10^6$ kilometers); sidereal revolution period = 11.86 years; mean orbital velocity = 8.2 miles per second (13.2 kilometers per second); inclination of orbital plane to ecliptic = 1.03; equatorial diameter = 88,700 miles (142,700 kilometers); polar diameter = 82,800 miles (133,300 kilometers); mass = about 318.4 (earth = 1).

Jupiter I *See* Io.

Jupiter III *See* Ganymede.

Jupiter IV *See* Callisto.

Jupiter VI *See* Himalia.

Jupiter VII *See* Elara.

Jupiter VIII *See* Pasiphae.

Jupiter IX *See* Sinope.

Jupiter X *See* Lysithea.

Jupiter XI *See* Carme.

Jupiter XII *See* Ananke.

Jupiter XIII *See* Leda.

Jupiter XIV [ASTRON] An extremely small satellite of Jupiter, discovered in 1975.

Jura *See* Jurassic.

juran [METEOROL] A wind blowing from the Jura Mountains in Switzerland from the northwest toward Lake Geneva; it is a cold and snowy wind and may be very turbulent, especially in spring. Also spelled joran.

Jurassic [GEOL] Also known as Jura. **1.** The second period of the Mesozoic era of geologic time. **2.** The corresponding system of rocks.

Jurin rule [FL MECH] The rule that a height to which a liquid rises in a capillary tube is twice the liquid's surface tension times the cosine of its contact angle with the capillary, divided by the product of the liquid's weight density and the internal radius of the tube.

jurupaite [MINERAL] $(Ca,Mg)_2(Si_2O_5)(OH)_2$ A mineral composed of hydrous calcium magnesium silicate.

jury rig [MIN ENG] Any makeshift or temporary device, rig, or piece of equipment.

jury rudder [NAV ARCH] A temporary device used to steer a boat when the rudder is out of commission.

justification [GRAPHICS] In type composition, the adjustment of spacing in each line of type so that all lines are filled out to the same desired length.

justify [COMPUT SCI] To shift data so that they assume a particular position relative to one or more reference points, lines, or marks in a storage medium.

justifying space [GRAPHICS] In type composition, a variable space used between words so that each line of type will attain a desired length.

justifying typewriter [GRAPHICS] A typewriter that is designed to type test material with regular right-hand margins or left-hand margins or both, especially for reproduction by offset lithography; the process usually requires two typings of the text because correct word spacing cannot be determined until the first typing is done; some typewriters in combination with a computer properly programmed can justify in one typing.

just-noticeable difference [PSYCH] A subjective scale used in psychophysical tests, defined by C. Fechner as the subjective unit, and the absolute threshold as the zero point of the subjective scale; for example, the subjective intensity of a particular brightness of light would be specified when it was given as 100 just-noticeable differences above the absolute threshold. Abbreviated JND. Also known as difference limen; difference threshold.

just scale [ACOUS] A diatonic scale rendered in the just tuning system.

just ton *See* ton.

just tuning [ACOUS] A tuning system generated by octave rearrangements of the notes of three consecutive triads, each having the frequency ratio 4:5:6, with the highest note of one triad serving as the lowest note of the next.

jute [BOT] Either of two Asiatic species of tall, slender, half-shrubby annual plants, *Corchorus capsularis* and *C. olitorius*, in the family Malvaceae, useful for their fiber.

jute board [MATER] A fiberboard made of jute fiber.

jute paper [MATER] A strong paper composed principally of jute fiber.

juvenile cell *See* metamyelocyte.

juvenile hormone *See* neotenin.

juvenile melanoma [MED] A benign compound nevus in young people; resembles a malignant melanoma histologically.

juvenile-onset diabetes [MED] A form of diabetes mellitus which develops early in life and presents much more severe symptoms than the more common maturity-onset diabetes.

juvenile water *See* magmatic water.

juvite [PETR] A light-colored nepheline syenite in which the feldspar is exclusively or predominantly orthoclase and the potassium oxide content is higher than the sodium oxide content.

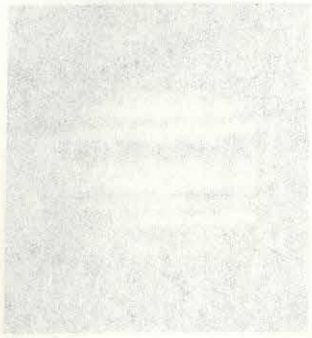
Jynginae [VERT ZOO] The wrynecks, a family of Old World birds in the order Piciformes; a subfamily of the Picidae in some systems of classification.

JUPITER

Telescopic appearance of Jupiter showing bands and Red Spot. *(Hale Observatories)*

JURASSIC

Chart showing the geologic periods and eras, with the Jurassic in the Mesozoic.



K

k *See* kilo-.

K *See* cathode; potassium.

kA *See* kiloampere.

K-A age [GEOL] The radioactive age of a rock determined from the ratio of potassium-40 (K^{40}) to argon-40 (A^{40}) present in the rock.

kaavie [METEOROL] In Scotland, a heavy fall of snow.

kachchan [METEOROL] A hot, dry west or southwest wind of foehn type in the lee of the Sri Lanka (Ceylon) hills during the southwest monsoon in June and July; it is well developed at Batticaloa on the east coast, where it is strong enough to overcome the sea breeze and bring maximum temperatures of nearly 100°F (38°C).

K acid [ORG CHEM] $C_{10}H_4NH_2OH(SO_3H)_2$ An acid derived from naphthylamine trisulfonic acid; used in dye manufacture. Also known as 1-amino-8-naphthol-4,6-disulfonic acid; 8-amino-1-naphthol-3,5-disulfonic acid.

kadaya gum *See* karaya gum.

K-A decay [NUC PHYS] Radioactive decay of potassium-40 (K^{40}) to argon-40 (A^{40}), as the nucleus of potassium captures an orbital electron and then decays to argon-40; the ratio of K^{40} to A^{40} is used to determine the age of rock (K-A age).

kaempferol [BIOCHEM] A flavonoid with a structure similar to that of quercetin but with only one hydroxyl in the B ring; acts as an enzyme cofactor and causes growth inhibition in plants.

Kahler's disease *See* multiple myeloma.

Kahn flocculation test [PATH] A macroscopic precipitin test for identification of the antibody resulting from syphilitic infection, by using an antigen prepared from normal beef heart.

kainite [MINERAL] $MgSO_4 \cdot KCl \cdot 3H_2O$ A white, gray, pink, or black monoclinic mineral, occurring in irregular granular masses; used as a fertilizer and as a source of potassium and magnesium compounds.

kainosite [MINERAL] $Ca_2(Ce,Y)_2(SiO_4)_3CO_3 \cdot H_2O$ A yellowish-brown mineral composed of a hydrous silicate and carbonate of calcium, cerium, and yttrium.

kairomone [PHYSIO] A chemical produced by an organism that benefits the recipient, which is an individual of a different species.

Kaiser effect [ACOUS] An effect observed in most metals, in which acoustic emissions are not observed during the reloading of a material until the stress exceeds its previous high value.

Kaiserling's method [BIOL] A method for preserving organ specimens and retaining their color by fixing in a solution of formalin, water, potassium nitrate, and potassium acetate, immersing in ethyl alcohol to restore color, and preserving in a solution of glycerin, aqueous arsenious acid, water, potassium acetate, and thymol.

kaki [BOT] *Diospyros kaki*. The Japanese persimmon; it provides a type of ebony wood that is black with gray, yellow, and brown streaks, has a close, even grain, and is very hard.

kakidrosis [MED] Secretion of sweat having a disagreeable odor.

kakorrhaphiophobia [PSYCH] Abnormal fear of failure.

kala azar [MED] Visceral leishmaniasis due to the protozoan *Leishmania donovani*, transmitted by certain sandflies (*Phlebotomus*); characterized by chronic, irregular fever, enlargement of the spleen and liver, emaciation, anemia, and leukopenia.

kal Baisakhi [METEOROL] A short-lived dusty squall at the onset of the southwest monsoon (April-June) in Bengal.

kale [BOT] Either of two biennial crucifers, *Brassica oleracea* var. *acephala* and *B. fimbriata*; in the order Capparales, grown for the nutritious curled green leaves.

kaleidoscope [OPTICS] An optical toy consisting of a tube containing two plane mirrors placed at an angle of 60° and mounted so that a symmetrical pattern produced by multiple reflection is observed through a peephole at one end when objects (such as pieces of colored glass) at the other end are suitably illuminated.

kalema [OCEANOGR] A very heavy surf breaking on the Guinea coast of Africa during the winter.

kalfax [GRAPHICS] An emulsion sensitive to ultraviolet light coated on a mylar base, processed by heat.

kaliborite [MINERAL] $HKMg_2B_{12}O_{21} \cdot 9H_2O$ A colorless to white mineral composed of a hydrous borate of potassium and magnesium. Also known as paternoite.

kalicinite [MINERAL] $KHCO_3$ A colorless to white or yellowish, monoclinic mineral consisting of potassium bicarbonate; occurs in crystalline aggregates.

kalinite [MINERAL] $KAl(SO_4)_2 \cdot 11H_2O$ A birefringent mineral of the alum group composed of a hydrous sulfate of potassium and aluminum, occurring in fibrous form. Also known as potash alum.

kaliophilite [MINERAL] $KAlSiO_4$ A rare hexagonal tectosilicate mineral found in volcanic rocks; high in potassium and low in silica, it is dimorphous with kalsilite. Also known as facellite; phacellite.

kalium *See* potassium.

kalkowskite [MINERAL] $Fe_2Ti_3O_9$ A rare, brownish or black mineral composed of an oxide of iron and titanium, usually with small amounts of rare-earth elements, niobium, and tantalum.

kallidin I *See* bradykinin.

kallitype [GRAPHICS] An early photographic process using paper sensitized with ferrous oxalate and a silver salt, and a developer containing borax and Rochelle salt.

Kalman filter [CONT SYS] A linear system in which the mean squared error between the desired output and the actual output is minimized when the input is a random signal generated by white noise.

Kalotermitidae [INV ZOO] A family of relatively primitive, lower termites in the order Isoptera.

kalsilite [MINERAL] $KAlSiO_4$ A rare mineral from volcanic rocks in southwestern Uganda; the crystal system is hexagonal; kalsilite is dimorphous with kaliophilite and sometimes contains sodium.

kalsomine *See* calcimine.

kalunite [MINERAL] The naturally occurring form of alum.

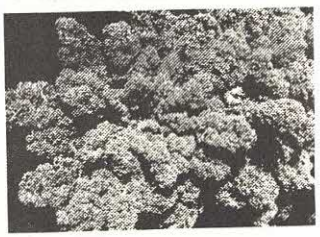
Kaluza theory [RELAT] An attempted unified field theory in which the four-dimensional world that one observes is taken to be a projection of a five-dimensional continuum.

Kalvar process [GRAPHICS] A procedure for producing microfilms in which exposure of the film causes photosensitive compounds to release nitrogen gas; upon development of the film by heat, the pressure of the gas creates air sacs in the film to scatter light during projection for reading.

kamacite [MINERAL] A mineral composed of a nickel-iron alloy and comprising with taenite the bulk of most iron meteorites.

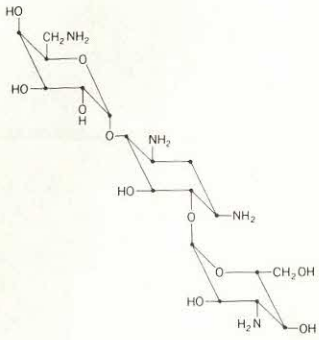
kame [GEOL] A low, long, steep-sided mound of glacial drift, commonly stratified sand and gravel, deposited as an alluvial fan or delta at the terminal margin of a melting glacier.

KALE



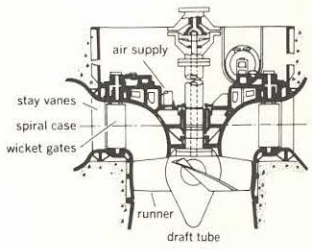
Kale (*Brassica oleracea* var. *acephala*), cultivar Vates. (*Joseph Harris Co., Rochester, N.Y.*)

KANAMYCIN



Structural formula of kanamycin A; the major component (95%) of commercial kanamycin sulfate USP.

KAPLAN TURBINE

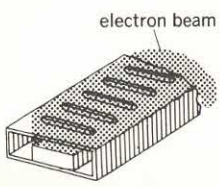


Cross section of a Kaplan type of hydraulic turbine installation.

KÁRMÁN VORTEX STREET

Kármán vortex street showing double row of line vortices. Here U = stream speed, h = perpendicular distance between the two lines of vortices, and a = distance between successive vortices on the same line.

KARP CIRCUIT



Karp circuit, used at millimeter wavelengths.

kame terrace [GEOL] A terracelike ridge deposited along the margins of glaciers by meltwater streams flowing adjacent to the valley walls.

Kamptozoa [INV ZOO] An equivalent name for Entoprocta.

kanamycin [MICROBIO] $C_{18}H_{36}O_{11}N_4$ A water-soluble, basic antibiotic produced by strains of *Streptomyces kanamyceticus;* the sulfate salt is effective in infections caused by gram-negative bacteria.

kangaroo [VERT ZOO] Any of various Australian marsupials in the family Macropodidae generally characterized by a long, thick tail that is used as a balancing organ, short forelimbs, and enlarged hindlegs adapted for jumping.

Kansan glaciation [GEOL] The second glaciation of the Pleistocene epoch in North America; began about 400,000 years ago, after the Aftonian and before the Yarmouth interglacials.

Kansasii disease [MED] A mycobacterial tuberculosislike infection caused by *Mycobacterium kansasii,* an orange-yellow acid-fast bacterium.

kansite *See* mackinawite.

kaolin [MINERAL] Any of a group of clay minerals, including kaolinite, nacrite, dickite, and anauxite, with a two-layer crystal in which silicon-oxygen and aluminum-hydroxyl sheets alternate; approximate composition is $Al_2O_3 \cdot 2SiO_2 \cdot 2H_2O$. [PETR] A soft, nonplastic white rock composed principally of kaolin minerals. Also known as bolus alba; white clay.

kaolinite [MINERAL] $Al_2Si_2O_5(OH)_4$ The principal mineral of the kaolin group of clay minerals; a white, gray, or yellowish high-alumina mineral consisting of sheets of tetrahedrally coordinated silicon linked by an oxygen shared with octahedrally coordinated aluminum.

kaolinization [GEOL] The forming of kaolin by the weathering of aluminum silicate minerals or other clay minerals.

kaon *See* K meson.

kaonic atom [ATOM PHYS] An atom consisting of a negatively charged kaon orbiting around an ordinary nucleus.

Kapetyn selected areas [ASTRON] Certain areas in the Milky Way Galaxy that the astronomer J.C. Kapetyn suggested be studied intensively in order to determine the structure of the galaxy. Also known as selected areas.

Kapetyn's star [ASTRON] A star 13.0 light-years from the solar system, absolute magnitude 11.2, spectrum type M0; has a large proper motion.

Kapitza expander [CHEM ENG] Reciprocating-piston gas expander used for helium liquefaction; relies on close fit rather than packing or rings on the pistons.

Kaplan turbine [MECH ENG] A propeller-type hydraulic turbine in which the positions of the runner blades and the wicket gates are adjustable for load change with sustained efficiency.

kapoc oil *See* kapok oil.

kapok [BOT] Silky fibers that surround the seeds of the kapok or ceiba tree. Also known as ceiba; Java cotton; silk cotton.

kapok oil [MATER] Yellow-green oil with pleasant aroma and taste; soluble in alcohol, ether, and chloroform; derived by pressing seeds of the kapok tree; used in edible oils and soap stock. Also spelled kapoc oil.

kapok tree [BOT] *Ceiba pentandra.* A tree of the family Bombacaceae which produces pods containing seeds covered with silk cotton. Also known as silk cotton tree.

kappa particle [CYTOL] A self-duplicating nucleoprotein particle found in various strains of *Paramecium* and thought to function as an infectious agent; classed as an intracellular symbiont, occupying a position between the viruses and the bacteria and organelles.

karaburan [METEOROL] A violent northeast wind of Central Asia occurring during spring and summer; it carries clouds of dust (which darken the sky) instead of snow. Also known as black buran; black storm.

karajol [METEOROL] On the Bulgarian coast, a west wind which usually follows rain and persists 1–3 days.

karat [MET] A unit for designating the fineness of gold in an alloy; represents a twenty-fourth part; thus, 18-karat gold is 18/24 or 75% pure.

karaya gum [MATER] The exudation from the Indian tree *Sterculia urens;* white to dark-colored tears; used in pharmaceuticals, textiles, and foods, and as tragacanth gum substitute. Also known as Indian tragacanth; kadaya gum.

karbutilate [ORG CHEM] $C_{14}H_{21}N_3O_3$ An off-white solid with a melting point of 176–177°C; used as an herbicide on noncroplands, railroad rights-of-way, and plant sites. Also known as *meta*-(3,3-dimethylureido)phenyl-*tert*-butylcarbamate.

karema [METEOROL] A violent east wind on Lake Tanganyika in Africa.

karif [METEOROL] A strong southwest wind on the southern shore of the Gulf of Aden, especially at Berbera, Somaliland, during the southwest monsoon.

Karl Fischer reagent [ANALY CHEM] A solution of 8 moles pyridine to 2 moles sulfur dioxide, with the addition of about 15 moles methanol and then 1 mole iodine; used to determine trace quantities of water by titration.

Karl Fischer technique [ANALY CHEM] A method of determining trace quantities of water by titration; the Karl Fischer reagent is added in small increments to a glass flask containing the sample until the color changes from yellow to brown or a change in potential is observed at the end point.

Kármán constant [FL MECH] A dimensionless number formed from the velocity of turbulent flow parallel to a plane wall, the distance from the wall, the shear stress, and the density of the fluid; for a wide range of flow patterns it has a constant value.

Kármán swirling flow problem [MATH] The problem of describing fluid motion above a rotating infinite plane disk when the fluid at infinity does not rotate.

Kármán vortex street [FL MECH] A double row of line vortices in a fluid which, under certain conditions, is shed in the wake of cylindrical bodies when the relative fluid velocity is perpendicular to the axis of the cylinder.

Karnaugh map [ELECTR] A truth table that has been rearranged to show a geometrical pattern of functional relationships for gating configurations; with this map, essential gating requirements can be recognized in their simplest form.

Karnian *See* Carnian.

karoo *See* karroo.

Karp circuit [ELECTR] A slow-wave circuit used at millimeter wavelengths for backward-wave oscillators.

Karrer method [CHEM ENG] An industrial method for the chemical synthesis of riboflavin.

karroo [GEOGR] A dry, broad, level, elevated area found especially in southern Africa, often rising to considerable elevations in terrace formations; does not support vegetation in the dry season but supports grass during the wet season. Also spelled karoo.

Karroo System [GEOL] Glaciated strata formed in Permian times in southern Africa.

karrusel [HOROL] A revolving escapement that reduces position errors.

karst [GEOL] A topography formed over limestone, dolomite, or gypsum and characterized by sinkholes, caves, and underground drainage.

karstbora [METEOROL] The bora of the Yugoslavian coast.

karst plain [GEOL] A plain on which karst features are developed.

Karumiidae [INV ZOO] The termitelike beetles, a small family of coleopteran insects in the superfamily Cantharoidea distinguished by having a tenth tergum.

Karush-Kuhn-Tucker conditions [MATH] A system of equations and inequalities which the solution of a nonlinear programming problem must satisfy when the objective function and the constraint functions are differentiable.

karyocyte *See* normoblast.

karyogamy [CYTOL] Fusion of gametic nuclei, as in fertilization.

karyokinesis [CYTOL] Nuclear division characteristic of mitosis.

karyolymph [CYTOL] The clear material composing the ground substance of a cell nucleus.

karyolysis [CYTOL] Dissolution of a cell nucleus.

karyomastigont [INV ZOO] Pertaining to members of the protozoan order Oxymonadida; individuals can be uni- or multinucleate, and unattached forms give rise to two pairs of flagella.

karyoplasm *See* nucleoplasm.

karyoplasmic ratio *See* nucleocytoplasmic ratio.

karyorrhexis [CYTOL] Fragmentation of a nucleus with scattering of the pieces in the cytoplasm.

karyotype [CYTOL] The normal diploid or haploid complement of chromosomes, with respect to size, form, and number, characteristic of an individual, species, genus, or other grouping.

kasha [TEXT] A flannel made of Tibetan goat hair slightly brushed with a crosswise streaked effect in darker hairs.

kasolite [MINERAL] $Pb(UO_2)SiO_4 \cdot H_2O$ Yellow-ocher mineral composed of a hydrous lead uranium silicate, occurring in monoclinic crystals.

kasugamycin [MICROBIO] $C_{14}H_{28}ClN_3O_{10}$ A white, crystalline antibiotic used as a fungicide for rice crops. Also known as kasumin; kasugamycin hydrochloride.

kasugamycin hydrochloride *See* kasugamycin.

kasumin *See* kasugamycin.

katabaric *See* katallobaric.

katabatic wind *See* gravity wind.

katafront [METEOROL] A front (usually a cold front) at which warm air descends the frontal surface (except, presumably, in the lowest layers).

katallobaric [METEOROL] Of or pertaining to a decrease in atmospheric pressure. Also known as katabaric.

katallobaric center *See* pressure-fall center.

Kata thermometer [ENG] An alcohol thermometer used to measure low velocities in air circulation, by heating the large bulb of the thermometer above 100°F (38°C) and noting the time it takes to cool from 100 to 95°F (38 to 35°C) or some other interval above ambient temperature, the time interval being a measure of the air current at that location.

katazone [GEOL] The lowest depth zone of metamorphism; features include high temperatures (500–700°C), strong hydrostatic pressure, and little or no shearing stress.

katchung oil *See* peanut oil.

Kater's reversible pendulum [MECH] A gravity pendulum designed to measure the acceleration of gravity and consisting of a body with two knife-edge supports on opposite sides of the center of mass.

katharometer [ENG] An instrument for detecting the presence of small quantities of gases in air by measuring the resulting change in thermal conductivity of the air. Also known as thermal conductivity cell.

Kathlaniidae [INV ZOO] A family of nematodes assigned to the Ascaridina by some authorities and to the Oxyurina by others.

katoptric system [OPTICS] An optical system such that, when the object is displaced in a direction parallel to the axis, the image is displaced in the opposite direction (in contrast to a dioptric system). Also known as contracurrent system.

katoptrite *See* catoptrite.

Kauertz engine [MECH ENG] A type of cat-and-mouse rotary engine in which the pistons are vanes which are sections of a right circular cylinder; two pistons are attached to one rotor so that they rotate with constant angular velocity, while the other two pistons are controlled by a gear-and-crank mechanism, so that angular velocity varies.

kauri-butanol value [ANALY CHEM] The measure of milliliters of paint or varnish petroleum thinner needed to cause cloudiness in a solution of kauri gum in butyl alcohol.

kauri gum [MATER] Hard copal resins from kauri pine (*Agathis australis*); used in lacquers and varnishes.

kaus [METEOROL] A moderate to gale-force southeasterly wind in the Persian Gulf, accompanied by gloomy weather, rain, and squalls; it is most frequent between December and April. Also known as cowshee; sharki.

kavaburd *See* cavaburd.

kaver *See* caver.

kay *See* key.

kayser [SPECT] A unit of reciprocal length, especially wave number, equal to the reciprocal of 1 centimeter. Also known as rydberg.

Kayser-Fleischer ring [PATH] A ring of golden-brown or brownish-green pigment behind the limbic border of the cornea, due to the deposition of copper.

Kazanian [GEOL] A European stage of geologic time: Upper Permian (above Kungurian, below Tatarian).

kb *See* kilobar.

K band [COMMUN] A band of radio frequencies extending from 10,900 to 36,000 megahertz, corresponding to wavelengths of 2.75 to 0.834 centimeters. [SOLID STATE] An optical absorption band which appears together with an *F*-band and has a lower intensity and shorter wavelength than the latter.

K bentonite *See* potassium bentonite.

kc *See* kilohertz.

KC-97 *See* Stratofreighter.

KC-135 *See* Stratotanker.

kcal *See* kilocalorie.

K capture [NUC PHYS] A type of beta interaction in which a nucleus captures an electron from the *K* shell of atomic electrons (the shell nearest the nucleus) and emits a neutrino.

K-carrier system [COMMUN] Carrier system providing 12 telephone channels with a bandwidth up to 60 kilohertz, either on a four-wire cable system or on microwave (line-of-sight) and trophospheric scatter radio systems.

K corona [ASTRON] The inner portion of the sun's corona, having a continuous spectrum caused by electron scattering.

K damage [ORD] **1.** Combat damage sufficient to cause a vehicle to be destroyed. **2.** Combat damage such that an aircraft will fall out of control immediately after the damage occurs.

K display [ELECTR] A modified radarscope A display in which a target appears as a pair of vertical deflections instead of as a single deflection; when the radar antenna is correctly pointed at the target in azimuth, the deflections are of equal height; when the antenna is not correctly pointed, the difference in pulse heights is an indication of direction and magnitude of azimuth pointing error.

kedge [NAV] To move, as a vessel, by carrying out an anchor, letting it go, and hauling the ship up to the anchor.

kedge anchor [NAV ARCH] A light anchor that is used to warp or kedge a ship.

keel [NAV ARCH] A steel beam or timber, or a series of steel beams and plates or timbers joined together, extending along the center of the bottom of a ship from stem to stern and often projecting below the bottom, to which the frames and hull plating are attached. [VERT ZOO] The median ridge on the breastbone in certain birds. Also known as carina.

Keel *See* Carina.

keel block [CIV ENG] docking block used to support a ship's keel. [MET] A simple shape from which a test casting is made in the form of a large head, which is removed and discarded, with a keel on the bottom.

keel condenser [NAV ARCH] Pipes, made of material that will not induce electrolysis with other parts of a ship, placed outside the ship near the keel for condensing steam.

keel molding [ARCH] A molding with two ogees, the central fillet of which projects like a keel.

keelson [NAV ARCH] A structure of timbers or steel beams which are bolted to the top of a keel to increase its strength. Also spelled kelson.

Keene's cement [MATER] An anhydrous calcined gypsum mixed with an accelerator; used as a hard-finish plaster.

keep-alive circuit [ELECTR] A circuit used with a transmit-receive (TR) tube or anti-TR tube to produce residual ionization for the purpose of reducing the initiation time of the main discharge.

keep-alive electrode *See* ignitor.

keeper [ELECTROMAG] A bar of iron or steel placed across the poles of a permanent magnet to complete the magnetic circuit when the magnet is not in use, to avoid the self-demagnetizing effect of leakage lines. Also known as magnet keeper.

keeps *See* folding boards.

Keesom force *See* orientation force.

Keesom relationship [PHYS CHEM] An equation for the potential energy associated with the interaction of the dipole moments of two polar molecules.

Keewatin [GEOL] A division of the Archeozoic rocks of the Canadian Shield.

kefir [FOOD ENG] A low-alcohol-content beverage prepared from cow's milk treated with *Lactobacillus casei* and then fermented by the action of *Saccharomyces kefir* on kefir grain.

keg buoy [NAV] A buoy consisting of a keg to which is attached a small pole with a flag, used by fishermen to mark the position of a trawl line.

Kegel karst *See* cone karst.

kehoeite [MINERAL] An amorphous mineral composed of a basic hydrous calcium aluminum zinc phosphate, occurring in massive form.

Keilor skull [PALEON] An Australian fossil type specimen of *Homo sapiens* from the Pleistocene.

Kekeya needle problem [MATH] The problem of finding the smallest area of a plane region in which a line segment of unit length can be continuously moved so that it returns to its original position after turning through 360°.

Kekulé structure [ORG CHEM] A molecular structure of a cyclic conjugated system that is depicted with alternating single and double bonds.

Keldysh theory [ATOM PHYS] A theory of multiphoton ionization, in which an atom is ionized by rapid absorption of a sufficient number of photons; it predicts that the ionization rate depends primarily upon the ratio of the mean binding electric field to the peak strength of the incident electromagnetic field, and upon the ratio of the binding energy to the energy of photons in the field.

K electron [ATOM PHYS] An electron in the *K* shell.

Kell blood group system [IMMUNOL] A family of antigens found in erythrocytes and designated K, k, Kp^a, Kp^b, and Ku; antibodies to the K antigen, which occurs in about 10% of the population of England, have been associated with hemolytic transfusion reactions and with hemolytic disease.

kellering [MECH ENG] Three-dimensional machining of a contoured surface by tracer-milling the die block or punch; the cutter path is controlled by a tracer that follows the contours on a die model.

Kellner eyepiece [OPTICS] A Ramsden eyepiece with an achromatic eye lens.

Kellogg equation [THERMO] An equation of state for a gas, of the form

$$p = RT\rho + \sum_{n=2}^{\infty} (b_n T - a_n - C_n/T^2)\rho^n$$

where p is the pressure, T the absolute temperature, ρ the density, R the gas constant, and a_n, b_n, and c_n are constants.

kelly [PETRO ENG] A pipe attached to the top of a drill string and turned during drilling; transmits twisting torque from the rotary machinery to the drill string and ultimately to the bit.

Kelly ball test [ENG] A test for the consistency of concrete using the penetration of a half sphere; a 1-inch (2.5 centimeters) penetration by the Kelly ball corresponds to about 2 inches (5 centimeters) of slump.

kelly bushing [PETRO ENG] A device added to the rotary table through which the kelly passes, so that the torque of the table is transmitted to the kelly and the drill.

keloid [MED] A firm, elevated fibrous formation of tissue at the site of a scar.

keloid acne [MED] Acnelike infection of hair follicles, especially on the nape of the neck, resulting in hard, white or reddish keloids and scarring. Also known as folliculitis keloidalis.

kelp [BOT] The common name for brown seaweed belonging to the Laminariales and Fucales.

kelsher [METEOROL] In England, a heavy fall of rain.

kelson *See* keelson.

kelvin [ELEC] A name formerly given to the kilowatt-hour. Also known as thermal volt. [THERMO] A unit of absolute temperature equal to 1/273.16 of the absolute temperature of the triple point of water. Symbolized K. Formerly known as degree Kelvin.

Kelvin absolute temperature scale [THERMO] A temperature scale in which the ratio of the temperatures of two reservoirs is equal to the ratio of the amount of heat absorbed from one of them by a heat engine operating in a Carnot cycle to the amount of heat rejected by this engine to the other reservoir; the temperature of the triple point of water is defined as 273.16 K. Also known as Kelvin temperature scale.

Kelvin balance [ELECTROMAG] An ammeter in which the force between two coils in series that carry the current to be measured, one coil being attached to one arm of a balance, is balanced against a known weight at the other end of the balance arm.

Kelvin body [MECH] An ideal body whose shearing (tangential) stress is the sum of a term proportional to its deformation and a term proportional to the rate of change of its deformation with time. Also known as Voigt body.

Kelvin bridge [ELEC] A specialized version of the Wheatstone bridge network designed to eliminate, or greatly reduce, the effect of lead and contact resistance, and thus permit accurate measurement of low resistance. Also known as double bridge; Kelvin network; Thomson bridge.

Kelvin equation [THERMO] An equation giving the increase in vapor pressure of a substance which accompanies an increase in curvature of its surface; the equation describes the greater rate of evaporation of a small liquid droplet as compared to that of a larger one, and the greater solubility of small solid particles as compared to that of larger particles.

Kelvin guard-ring capacitor [ELEC] A capacitor with parallel circular plates, one of which has a guard ring separated from the plate by a narrow gap; it is used as a standard, whose capacitance can be accurately calculated from its dimensions.

Kelvin-Helmholtz contraction [ASTROPHYS] A contraction of a star once it is formed and before it is hot enough to ignite its hydrogen; the contraction converts gravitational potential energy into heat, some of which is radiated, with the remainder used to raise the internal temperature of the star.

Kelvin network *See* Kelvin bridge.

Kelvin relations *See* Thomson relations.

Kelvin scale [THERMO] The basic scale used for temperature definition; the triple point of water (comprising ice, liquid, and vapor) is defined as 273.16 K; given two reservoirs, a reversible heat engine is built operating in a cycle between them, and the ratio of their temperatures is defined to be equal to the ratio of the heats transferred.

Kelvin's circulation theorem [FL MECH] The theorem that, if the external forces acting on an inviscid fluid are conservative and if the fluid density is a function of the pressure only, then the circulation along a closed curve which moves with the fluid does not change with time.

Kelvin's formula *See* Thomson formula.

Kelvin skin effect *See* skin effect.

Kelvin's minimum-energy theorem [FL MECH] The theorem that the irrotational motion of an incompressible, inviscid fluid occupying a simply connected region has less kinetic energy than any other fluid motion consistent with the boundary condition of zero relative velocity normal to the boundaries of the region.

Kelvin's statement of the second law of thermodynamics [THERMO] The statement that it is *not* possible that, at the end of a cycle of changes, heat has been extracted from a reservoir and an equal amount of work has been produced without producing some other effect.

Kelvin temperature scale [THERMO] **1.** An International Practical Temperature Scale which agrees with the Kelvin absolute temperature scale within the limits of experimental determination. **2.** *See* Kelvin absolute temperature scale.

Kelvin wave [OCEANOGR] A type of wave progression in relatively confined water bodies where because of Coriolis force the wave is higher to the right of direction of advance (in the Northern Hemisphere).

kelyphite *See* corona.

kelyphytic border *See* kelyphytic rime.

kelyphytic rime [PETR] A peripheral zone of pyroxene or amphibole developed around olivine in some igneous rocks. Also known as kelyphytic border.

kemp [TEXT] Short, wavy, coarse wool or hair fibers, usually white, which contain air spaces so that they resist dyeing and spinning.

Kempe chain [MATH] A subgraph of a graph whose vertices have been colored, consisting of vertices which have been assigned a given color or colors and arcs connecting pairs of such vertices.

kempite [MINERAL] $Mn_2(OH)_3Cl$ An emerald-green orthorhombic mineral composed of a basic manganese oxychloride, occurring in small crystals.

kenching [FOOD ENG] In the process of curing fish by salting, the step in which the brine is permitting to drain away.

Kendall effect [COMMUN] A spurious pattern or other distortion in a facsimile record caused by unwanted modulation products arising from the transmission of a carrier signal; occurs principally when the width of one side band is greater than half the facsimile carrier frequency.

Kennard packet [QUANT MECH] A wave packet for which the product of the root-mean-square deviations of position and momentum from their respective mean values is as small as possible, being equal to Planck's constant divided by 4π.

Kennedy key [DES ENG] A square taper key fitted into a keyway of square section and driven from opposite ends of the hub.

Kennelly-Heaviside layer *See* E layer.

kenophobia [PSYCH] An abnormal fear of large, empty spaces.

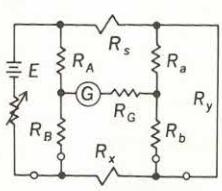
Kenoran orogeny *See* Algoman orogeny.

kenotron [ELEC] A high-vacuum diode designed to serve as a rectifier in appliances requiring high voltage and low current.

kenozooecium [INV ZOO] The outer, nonliving, hardened portion of a kenozooid.

kenozooid [INV ZOO] A type of bryozoan heterozooid pos-

KELVIN BRIDGE



Circuit of the Kelvin bridge. E = battery; R_A, R_B = main ratio resistors; R_a, R_b = auxiliary ratio; R_x = unknown; R_s = standard; R_y = a heavy copper yoke of low resistance connected between the unknown and standard resistors; R_G = resistance in series with galvanometer G.

sessing a slender tubular or boxlike chamber, completely enclosed and lacking an aperture.

kentrolite [MINERAL] $Pb_2Mn_2Si_2O_9$ A dark reddish-brown mineral composed of a lead manganese silicate.

Kentucky coffee tree [BOT] *Gymnocladus dioica*. An extremely tall, dioecious tree of the order Rosales readily recognized when in fruit by its leguminous pods containing heavy seeds, once used as a coffee substitute.

Kenyapithecus [PALEON] An early member of Hominidae from the Miocene.

kep interlock [MIN ENG] A system designed to prevent the lowering of a shaft conveyance before all keps are fully withdrawn, and to indicate the position of the keps.

Keplerian ellipse *See* Keplerian orbit.

Keplerian motion [ASTRON] Orbital movement of a body about another that is not disturbed by the presence of a third celestial body.

Keplerian orbit [ASTRON] An elliptical orbit of a celestial body about another, the latter at a focus of the ellipse. Also known as Keplerian ellipse.

Keplerian telescope [OPTICS] A telescope that forms a real intermediate image in the focal plane and can be used for introducing a reticle or a scale into the focal plane.

Kepler's equations [ASTRON] The mathematical relationship between two different systems of angular measurements of the position of a body in an ellipse.

Kepler's laws [ASTRON] Three laws, determined by Johannes Kepler, that describe the motions of planets in their orbits: the orbits of the planets are ellipses with the sun at a common focus; the line joining a planet and the sun sweeps over equal areas during equal intervals of time; the squares of the periods of revolution of any two planets are proportional to the cubes of their mean distances from the sun.

Kepler's nova [ASTRON] A nova that appeared in October 1604 and was visible until March 1606.

keps *See* folding boards.

kerabitumen *See* kerogen.

keratectomy [MED] Surgical removal of a portion of the cornea.

keratin [BIOCHEM] Any of various albuminoids characteristic of epidermal derivatives, such as nails and feathers, which are insoluble in protein solvents, have a high sulfur content, and generally contain cystine and arginine as the predominating amino acids.

keratinized tissue [HISTOL] Any tissue with a high keratin content, such as the epidermis or its derivatives.

keratinocyte [HISTOL] A specialized epidermal cell that synthesizes keratin.

keratinous degeneration [CYTOL] The occurrence of keratin granules in the cytoplasm of a cell, other than a keratinocyte.

keratitis [MED] Inflammation of the cornea.

keratitis rosacea [MED] The occurrence of small, sterile infiltrates at the periphery of the cornea.

keratoconjunctivitis [MED] Concurrent inflammation of the cornea and the conjunctiva. Also known as shipyard eye.

keratohyalin [HISTOL] Granules in the stratum granulosum of keratinized stratified squamous epithelium which become keratin.

keratomalacia [MED] Degeneration of the cornea characterized by infiltration and keratinization of the epithelium, eventually leading to thinning and perforation of the cornea; generally occurs in vitamin A deficiency.

keratophyre [PETR] Any dike rock or salic lava that is characterized by the presence of albite or albite oligoclase, chlorite, epidote, and calcite.

keratoplasty [MED] A plastic operation on the cornea, especially the transplantation of a portion of the cornea.

keratosis [MED] Any disease of the skin characterized by an overgrowth of the cornified epithelium.

kerf [ENG] A cut made in wood, metal, or other material by a saw or cutting torch. [MIN ENG] A narrow, deep cut made in the face of coal to facilitate mining.

Kerguelen faunal region [ECOL] A marine littoral faunal region comprising a large area surrounding Kerguelen Island in the southern Indian Ocean.

kerma [NUCLEO] The kinetic energy imparted to charged particles in a unit mass of material by uncharged particles such as neutrons; it may be expressed as joules per kilogram or ergs per gram.

kermesite [MINERAL] Sb_2S_2O A cherry-red mineral occurring as tufts of capillary crystals, and formed from an alteration of stibnite. Also known as antimony blende; purple blende; pyrostibite; red antimony.

Kern counter *See* dust counter.

kernel [ATOM PHYS] An atom that has been stripped of its valence electrons, or a positively charged nucleus lacking the outermost orbital electrons. [BOT] **1.** The inner portion of a seed. **2.** A whole grain or seed of a cereal plant, such as corn or barley. [MATH] *See* null space.

kernel blight [PL PATH] Any of several fungus diseases of barley caused chiefly by *Gibberella zeae*, *Helminthosporium sativum*, and *Alternaria* species shriveling and discoloring the grain.

kernel ice [HYD] In aircraft icing, an extreme form of rime ice, that is, very irregular, opaque, and of low density; it forms at temperatures of $-15°C$ and lower.

kernel of a homomorphism [MATH] For a homomorphism h from a group G to a group H, this consists of all elements of G which h sends to the identity element of H.

kernel of a linear transformation [MATH] All those vectors which a linear transformation maps to the zero vector.

kernel of an integral equation [MATH] For Fredholm and Volterra type of equations, this is the function $K(x,t)$.

kernel of an integral transform [MATH] The function $K(x, t)$ in the transformation which sends the function $f(x)$ to the function $\int K(x,t)f(t)dt = F(x)$.

kernel spot [PL PATH] A fungus disease of the pecan kernel caused by *Coniothyrium caryogenum* and characterized by dull-brown roundish spots.

kernicterus [PATH] Deposition of bilirubin in the gray matter of the brain and spinal cord, especially the basal ganglia, accompanied by nerve cell degeneration.

Kernig's sign [MED] In meningeal irritation, with the patient lying face up and the thigh flexed at the hip, the pain and spasm of the hamstring muscles when an attempt is made to completely extend the leg at the knee.

kerning [GRAPHICS] Adjusting the spacing between letters during typesetting so that part of each letter overhangs adjacent letters.

kernite [MINERAL] $Na_2B_4O_7 \cdot 4H_2O$ A colorless to white hydrous borate mineral crystallizing in the monoclinic system and having vitreous luster; an important source of boron. Also known as rasorite.

kerogen [GEOL] The complex, fossilized organic material present in sedimentary rocks, especially in shales; converted to petroleum products by distillation. Also known as kerabitumen; petrologen.

kerogen shale *See* oil shale.

kerosine [MATER] A refined petroleum fraction used as a fuel for heating and cooking, jet engines, lamps, and weed burning and as a base for insecticides; specific gravity is about 0.8; components are mostly paraffinic and naphthenic hydrocarbons in the C_{10} to C_{14} range. Also known as lamp oil.

kerosine distillate [MATER] The distilled cut in the 150–300°C range from petroleum or shale oil; used as lamp, stove, or illuminating oil, as a solvent, and as a component of jet aircraft fuels. Also known as burning oil.

kerosine propellant [MATER] A propellant consisting of highly refined, low-aromatic liquid propellant distillate with a gravity range not exceeding three degrees American Petroleum Institute gravity at 60°F (15.6°C); may contain additives.

kerosine shale *See* torbanite.

Kerr cell [OPTICS] A glass cell containing a dielectric liquid that exhibits the Kerr effect, such as nitrobenzene, in which is inserted the two plates of a capacitor, used to observe the Kerr effect on light passing through the cell.

Kerr constant [OPTICS] A measure of the strength of the Kerr effect in a substance, equal to the difference between the extraordinary and ordinary indices of refraction divided by the product of the light's wavelength and the square of the electric field.

Kerr effect *See* electrooptical Kerr effect.

Kerr magnetooptical effect *See* magnetooptic Kerr effect.

kersantite [PETR] Dark dike rocks consisting mostly of biotite, plagioclase, and augite.

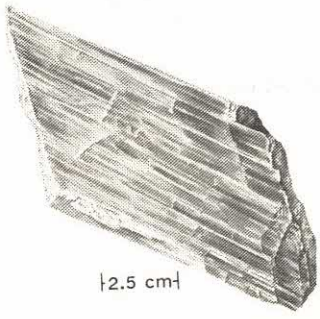
kersey *See* melton.

ketal [ORG CHEM] **1.** Former term for the =CO group, as in dimethyl ketal (acetone). **2.** Any of the ketone acetates from

KENTUCKY COFFEE TREE

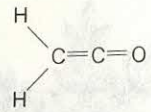
Branch of Kentucky coffee tree (*Gymnocladus dioica*).

KERNITE



Kernite crystal, Kern County, California. (*Specimen from Department of Geology, Bryn Mawr College*)

KETENE



Structural formula of ketene.

condensation of alkyl orthoformates with ketones in the presence of alcohols.

ketene [ORG CHEM] C_2H_2O A colorless, toxic, highly reactive gas, with disagreeable taste; boils at $-56°C$; soluble in ether and acetone, and decomposes in water and alcohol; used as an acetylating agent in organic synthesis.

ketene lamp [CHEM ENG] An electrically heated Chromel filament by the means of which acetone is hydrolyzed to produce ketene.

ketimide [ORG CHEM] A compound that is represented by R_2:C:NX, where X is an acyl radical.

ketimine [ORG CHEM] An organic compound that contains the divalent group >C═NH; a Schiff base is an example.

keto- [ORG CHEM] Organic chemical prefix for the keto or carbonyl group, C:O, as in a ketone.

keto acid [ORG CHEM] A compound that is both an acid and a ketone; an example is β-acetoacetic acid.

ketoacidosis *See* ketosis.

ketoadipic acid [BIOCHEM] $C_6H_8O_5$ An intermediate product in the metabolism of lysine to glutaric acid.

β-ketobutyranilide *See* acetoacetic acid.

ketogenesis [BIOCHEM] Production of ketone bodies.

ketogenic hormone [BIOCHEM] A factor originally derived from crude anterior hypophysis extract which stimulated fatty-acid metabolism; now known as a combination of adrenocorticotropin and the growth hormone. Also known as fat-metabolizing hormone.

ketogenic substance [BIOCHEM] Any foodstuff which provides a source of ketone bodies.

ketoglutaric acid [BIOCHEM] $C_5H_6O_5$ A dibasic keto acid occurring as an intermediate product in carbohydrate and protein metabolism.

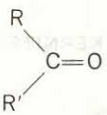
ketohexamethylene *See* cyclohexanone.

ketohexose [BIOCHEM] Any monosaccharide composed of a six-carbon chain and containing one ketone group.

ketolase [BIOCHEM] A type of enzyme that catalyzes cleavage of carbohydrates at the carbonyl carbon position.

ketolysis [BIOCHEM] Dissolution of ketone bodies.

KETONE



Structural formula of a ketone.

ketone [ORG CHEM] One of a class of chemical compounds of the general formula RR′CO, where R and R′ are alkyl, aryl, or heterocyclic radicals; the groups R and R′ may be the same or different, or incorporated into a ring; the ketones, acetone, and methyl ethyl ketone are used as solvents, and ketones in general are important intermediates in the synthesis of organic compounds.

ketone body [BIOCHEM] Any of various ketones which increase in blood and urine in certain conditions, such as diabetic acidosis, starvation, and pregnancy. Also known as acetone body.

ketonemia *See* acetonemia.

ketonuria [MED] Presence of ketone bodies in the urine.

ketose [BIOCHEM] A carbohydrate that has a ketone group.

ketosis [MED] Excess amounts of ketones in the body, especially associated with diabetes mellitus. Also known as ketoacidosis.

ketosteroid [BIOCHEM] One of a group of neutral steroids possessing keto substitution, which produces a characteristic red color with *m*-dinitrobenzene in an alkaline solution; these compounds are principally metabolites of adrenal cortical and gonadal steroids.

γ-ketovaleric acid *See* levulinic acid.

kettle [GEOL] **1.** A bowl-shaped depression with steep sides in glacial drift deposits that is formed by the melting of glacier ice left behind by the retreating glacier and buried in the drift. Also known as kettle basin; kettle hole. **2.** *See* pothole.

kettle basin *See* kettle.

kettle hole *See* kettle.

kettle reboiler [CHEM ENG] Tube-and-shell heat exchange device in which liquid is vaporized on the shell side from heat transferred from hot liquid flowing through the tubes; dome space allows liquid-vapor separation above the tube bundle.

ket vector [QUANT MECH] A vector in Hilbert space specifying the state of a system (opposed to bra vector); represented by the symbol "|>," with a letter or one or more indices inserted to distinguish it from other vectors.

Keuper [GEOL] A European stage of geologic time, especially in Germany; Upper Triassic.

keV *See* kiloelectronvolt.

Kew barometer [ENG] A type of cistern barometer; no adjustment is made for the variation of the level of mercury in the cistern as pressure changes occur; rather, a uniformly contracting scale is used to determine the effective height of the mercury column.

Keweenawan [GEOL] The younger of two Precambrian time systems that constitute the Proterozoic period in Michigan and Wisconsin.

key [BUILD] **1.** Plastering that is forced between laths to secure the rest of the plaster in place. **2.** The roughening on a surface to be glued or plastered to increase adhesiveness. [CIV ENG] A projecting portion that serves to prevent movement of parts at a construction joint. [COMPUT SCI] A data item that serves to uniquely identify a data record. [DES ENG] **1.** An instrument that is inserted into a lock to operate the bolt. **2.** A device used to move in some manner in order to secure or tighten. **3.** One of the levers of a keyboard. **4.** *See* machine key. [ELEC] **1.** A hand-operated switch used for transmitting code signals. Also known as signaling key. **2.** A special lever-type switch used for opening or closing a circuit only as long as the handle is depressed. Also known as switching key. [ENG] The pieces of core causing a block in a core barrel, the removal of which allows the rest of the core in the barrel to slide out. [GEOL] A cay, especially one of the islets off the south of Florida. Also spelled kay. [PETRO ENG] A hooklike wrench fitted to the square of a sucker rod to pull and run each sucker rod of a pumping oil well. [SYST] An arrangement of the distinguishing features of a taxonomic group to serve as a guide for establishing relationships and names of unidentified members of the group.

key auto-key cipher [COMMUN] A stream cipher in which the cryptographic bit stream generated at a given time is determined by the cryptographic bit stream generated at earlier times.

key bed [GEOL] Also known as index bed; key horizon; marker bed. **1.** A stratum or body of strata that has distinctive characteristics so that it can be easily identified. **2.** A bed whose top or bottom is employed as a datum in the drawing of structure contour maps.

keyboard [ENG] A set of keys or control levers having a systematic arrangement and used to operate a machine or other piece of equipment such as a typewriter, typesetter, processing unit of a computer, or piano.

keyboard entry [COMPUT SCI] A piece of information fed manually into a computing system by means of a set of keys, such as a typewriter.

keyboard inquiry [COMPUT SCI] A question asked a computer concerning the status of a program being run, or concerning the value achieved by a specific variable, by means of a console typewriter.

keyboardless typesetter [COMPUT SCI] An automatic typesetting machine that has no keyboard and is operated by perforated tape at a speed of 12–15 lines per minute; the text is punched on tape at separate keyboard machines.

keyboard lockout [COMPUT SCI] An arrangement for preventing transmission from a particular keyboard while other transmissions are taking place on the same circuit.

keyboard perforator [ENG] A typewriterlike device that prepares punched paper tape for communications or computing equipment.

keyboard printer [COMPUT SCI] A computer input device that includes a keyboard and a printer that prints the keyed-in data and often also prints computer output information.

keyboard send/receive [ELECTR] A manual teleprinter that can transmit or receive. Abbreviated KSR. Also known as keyboard teleprinter.

keyboard teleprinter *See* keyboard send/receive.

key cabinet [ELECTR] A case, installed on a customer's premises, to permit different lines to the control office to be connected to various telephone stations; it has signals to indicate originating calls and busy lines.

key change [COMPUT SCI] The occurrence, in a file of records which have been sorted according to their keys and are being read into a computer, of a record whose key differs from that of its immediate predecessor.

key click [COMMUN] Transient signal sometimes produced when a radiotelegraph sending key is opened or closed; it is heard in a loudspeaker or headphone as a click or chirp.

key compression [COMPUT SCI] A technique used to reduce the number of bits contained in a key.

key cut [MIN ENG] In strip mine operations, the section excavated adjacent to the new highwall.

key day *See* control day.

key-disk machine [COMPUT SCI] A keyboard machine used to record data directly on a magnetic disk.

key-driven calculator [COMPUT SCI] A mechanical desk calculator in which numeric selection keys, arranged in columns, are coupled directly to accumulator dials on which the results are visible.

keyed clamp [ELECTR] Clamping circuit in which the time of clamping is determined by a control signal.

keyed clamp circuit [ELECTR] A clamp circuit in which the time of clamping is controlled by separate voltage or current sources, rather than by the signal itself. Also known as synchronous clamp circuit.

keyer [ELECTR] Device which changes the output of a transmitter from one condition to another according to the intelligence to be transmitted.

keyer adapter [ELECTR] Device which detects a modulated signal and produces the modulating frequency as a direct-current signal of varying amplitude.

Keyes equation [THERMO] An equation of state of a gas which is designed to correct the Van der Waals equation for the effect of surrounding molecules on the term representing the volume of a molecule.

Keyes process [CHEM ENG] A distillation process used to obtain absolute alcohol; benzene is added to a constant-boiling 95% alcohol–water solution, and on distillation anhydrous alcohol leaves the bottom of the column.

keyhole [DES ENG] A hole or a slot for receiving a key. [MET] A welding method wherein the heat source, because of its concentration, causes a hole through the surface immediately ahead of the molten weld metal in the direction of welding; the hole is filled as the welding progresses, ensuring complete joint penetration. [ORD] Of a bullet, to strike a target after tumbling in flight so that the long axis of the bullet and the line of flight are not the same; usually caused by failure of the bullet to receive sufficient spin from the rifling in the barrel.

keyhole saw [DES ENG] A fine compass saw with a blade 11–16 inches (28–41 centimeters) long.

keyhole specimen [MET] A metal specimen containing a keyhole shaped notch and used in certain impact tests.

key horizon *See* key bed.

keying [CIV ENG] Establishing a mechanical bond in a construction joint. [ELEC] The forming of signals, such as for telegraph transmission, by modulating a direct-current or other carrier between discrete values of some characteristic.

keying error rate [COMMUN] The ratio of the number of characters incorrectly transmitted to the total number of characters in a message.

keying frequency [COMMUN] In facsimile, the maximum number of times a second that a black-line signal occurs when scanning the subject copy.

keying interval [COMMUN] In a periodically keyed transmission system, one of the set of intervals starting from a change in state and equal in length to the shortest time between changes of state.

keying wave *See* marking wave.

key job [IND ENG] A job that has been evaluated and is considered representative of similar jobs in the same labor market and is used as a benchmark to evaluate the similar jobs and to establish non-key-job wages.

key joint [CIV ENG] A mortar joint with a concave pointing.

keyless ringing [COMMUN] Form of machine ringing on a manual telephone switchboard which is started automatically by the insertion of the calling plug into the jack of the called line.

keyline [GRAPHICS] An outline drawing on completed art for the purpose of indicating exactly the shape, position, and size of elements such as halftones or line sketches.

keylock switch [ELEC] A switch that can be operated only by inserting and turning a key such as that used in ordinary locks.

key plate [GRAPHICS] A plate used in printing two-color stamps that prints the central design of the stamp.

key pulse [COMMUN] System of signaling where numbered keys are depressed instead of using a dial.

key punch [COMPUT SCI] A keyboard-actuated device that punches holes in a card; it may be a hand-feed punch or an automatic feed punch.

key seat *See* keyway.

keyseater [MECH ENG] A machine for milling beds or grooves in mechanical parts which receive keys.

keyshelf [COMMUN] Horizontal shelf of a manual telephone switchboard on which are mounted the keys by which the operator switches one or more of the switchboard circuits.

keystone [ARCH] Wedge-shaped stone at the crown of an arch. [MATER] Small crushed stone used as filler for the large aggregate in bituminous bound roads.

keystone distortion [COMMUN] Distortion produced by scanning in a rectilinear manner, with constant-amplitude sawtooth waves, a plane target area which is not normal to the average direction of the beam.

keystoning [ELECTR] Producing a keystone-shaped (wider at the top than at the bottom, or vice versa) scanning pattern because the electron beam in the television camera tube is at an angle with the principal axis of the tube.

keyswitch [COMPUT SCI] A switch that is operated by depressing a key on the keyboard of a data entry terminal.

key telephone system [COMMUN] A telephone system consisting of phones with several keys, connecting cables, and relay switching apparatus, which does not need a special operator to handle incoming or outgoing calls and which generally permits users to select one of several possible lines and to hold calls.

key telephone unit [COMMUN] A small mounting plate with relays which performs pickup and hold switching functions in a key telephone system.

key-to-disk system [COMPUT SCI] A data-entry system in which information entered on several keyboards is collected on different sections of a magnetic disk, and the data are extracted from the disk when complete, and are copied onto a magnetic tape or another disk for further processing on the main computer.

key-to-tape system [COMPUT SCI] A data-entry system consisting of several keyboards connected to a central controlling unit, typically a minicomputer, which collects information from each keyboard and then directs it to a magnetic tape.

key verify [COMPUT SCI] The use of a key punch verifier to ascertain that the data punched on a card corresponds to the data of the original document.

keyway [DES ENG] **1.** An opening in a lock for passage of a flat metal key. **2.** The pocket in the driven element to provide a driving surface for the key. **3.** A groove or channel for a key in any mechanical part. Also known as key seat. [ENG] An interlocking channel or groove in a cement or wood joint to provide reinforcement.

key-word-in-context index [COMPUT SCI] A computer-generated listing of titles of documents, produced on a line printer, with the key words lined up vertically in a fixed position within the title and arranged in alphabetical order. Abbreviated KWIC index.

key-word-out-of-context index [COMPUT SCI] A computer-generated listing of document titles with their keywords listed separately, arranged in the alphabetical order of the keywords. Abbreviated KWOC index.

K factor [GRAPHICS] *See* base-altitude ratio. [NUCLEO] A measure of the energy of the gamma rays produced by a particular type of emitter; it is the gamma-ray dose rate in roentgens per hour at a distance of 1 centimeter from a source having a radioactive disintegration rate of 1 millicurie (3.7×10^7 disintegrations per second). [ORD] In artillery ground fire, a factor to be applied to the actual range to a point in order to determine the range which must be fired to hit that point; it is the result of registration and the solution of a meteorological message, and is expressed as plus or minus so many yards per thousand units of actual range.

K feldspar *See* potassium feldspar.

kg *See* kilogram; kilogram force.

kg-cal *See* kilocalorie.

kgf *See* kilogram force.

kgf-m *See* meter-kilogram.

K gun [ORD] A type of U.S. Navy gun in the shape of a K for firing depth charges.

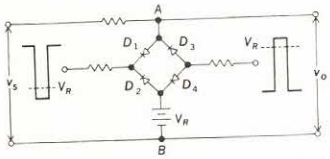
kg-wt *See* kilogram force.

khamsin [METEOROL] A dry, dusty, and generally hot desert wind in Egypt and over the Red Sea; it is generally southerly or southeasterly, occurring in front of depressions moving eastward across North Africa or the southeastern Mediterranean.

khelin *See* khellin.

khellin [PHARM] $C_{14}H_{12}O_5$ A synthetic compound that crystallizes from methanol solution, has a bitter taste, melts at 154–155°C, and is more soluble in water than in organic solvents; used in medicine as an antispasmodic, a coronary vas-

KEYED CLAMP CIRCUIT



Four-diode bidirectional keyed clamp circuit. D = diode; V_R = reference voltage; v_S = voltage when switch is in series with reference voltage; A, B = terminals.

odilator, and a bronchodilator. Also spelled chellin; khelin. Also known as visammin.

khibinite *See* mosandrite.

kHz *See* kilohertz.

kibble *See* hoppit.

kibli *See* ghibli.

kick [ORD] Violent backward movement of a gun after being fired, caused by the rearward force of the propellant gases acting on the gun.

kickback [MECH ENG] A backward thrust, such as the backward starting of an internal combustion engine as it is cranked, or the reverse push of a piece of work as it is fed to a rotary saw.

kickdown [MECH ENG] **1.** Shifting to lower gear in an automotive vehicle. **2.** The device for shifting.

kick over [MECH ENG] To start firing; applied to internal combustion engines.

kickpipe [BUILD] A short pipe protecting an electrical cable at the point where it emerges from a floor.

kickplate [BUILD] A plate used on the bottom of doors and cabinets or on the risers of steps to protect them from shoe marks.

Kick's law [ENG] The law that the energy needed to crush a solid material to a specified fraction of its original size is the same, regardless of the original size of the feed material.

kick-sorter *See* pulse-height analyzer.

kick wheel [ENG] A potter's wheel worked by a foot pedal.

Kidd blood group system [IMMUNOL] The erythrocyte antigens defined by reactions to anti-Jk^a antibodies, originally found in the mother (Mrs. Kidd) of the erythroblastotic infant, and to anti-Jk^b antibodies.

kidney [ANAT] Either of a pair of organs involved with the elimination of water and waste products from the body of vertebrates; in humans they are bean-shaped, about 5 inches (12.7 centimeters) long, and are located in the posterior part of the abdomen behind the peritoneum.

kidney joint [ELECTROMAG] Flexible joint, or air-gap coupling, used in the waveguide of certain radars and located near the transmitting-receiving position.

kidney ore [MINERAL] A form of hematite found in compact masses, concretions, or nodules that are kidney-shaped.

kidney stone *See* nephrite.

Kienböck's disease *See* osteochondrosis.

kier [TEXT] A tank in which unfinished cotton is boiled under pressure to remove foreign materials such as sizing or wax.

kier boiling [TEXT] A scouring process for cotton and linen in which the fibers are treated for removal of impurities by boiling with a 1% solution of caustic soda.

kieselguhr *See* diatomaceous earth.

kieserite [MINERAL] $MgSO_4 \cdot H_2O$ A white mineral that crystallizes in the monoclinic system, is composed of hydrous magnesium sulfate, and occurs in saline residues.

Kikuchi lines [CRYSTAL] A pattern consisting of pairs of white and dark parallel lines, obtained when an electron beam is scattered (diffracted) by a crystalline solid; the pattern gives information on the structure of the crystal.

Kiliani reaction [ORG CHEM] A method of synthesizing a higher aldose from a lower aldose; monosaccharides, such as aldehydes and ketones, react with hydrogen cyanide to form cyanohydrins, which are hydrolyzed to hydroxy acids, converted to lactones, and reduced to aldoses with sodium amalgams.

Kilkenny coal *See* anthracite.

kill [MATER] To treat in such a way as to destroy undesirable properties; for example, neutralization of an acid by the addition of an alkali. [MET] To add a strong deoxidizer, such as silicon or aluminum, to molten steel in order to stop the reaction between carbon and oxygen forming gaseous carbon monoxide and dioxide during solidification. [PETRO ENG] **1.** In drilling, to prevent well blowout by appropriate measures. **2.** In oil production, to halt well production so that reconditioning of the well may proceed.

killed steel [MET] Thoroughly deoxidized steel, for example, by additions of aluminum or silicon, in which the reaction between carbon and oxygen during solidification is suppressed.

killed vaccine [IMMUNOL] A suspension of killed microorganisms used as antigens to produce immunity.

killer circuit [ELECTR] Vacuum tube or tubes and associated circuits in which are generated the blanking pulses used to temporarily disable a radar set.

killer pulse [ELECTR] Blanking pulse generated by a killer circuit.

killer stage *See* color killer circuit.

killer whale [VERT ZOO] *Orcinus orca*. A predatory, cosmopolitan cetacean mammal, about 30 feet (9 meters) long, found only in cold waters.

kill probability [ORD] The probability that, given a hit, a single projectile or missile will kill the target against which it is fired.

kiln [ENG] A heated enclosure used for drying, burning, or firing materials such as ore or ceramics.

kilo- [SCI TECH] A prefix representing 10^3 or 1000. Abbreviated k.

kiloampere [ELEC] A metric unit of current flow equal to 1000 amperes. Abbreviated kA.

kilobar [MECH] A unit of pressure equal to 1000 bars (100 megapascals). Abbreviated kb.

kilocalorie [THERMO] A unit of heat energy equal to 1000 calories. Abbreviated kcal. Also known as kilogram-calorie (kg-cal); large calorie (Cal).

kilocycle *See* kilohertz.

kiloelectronvolt [PHYS] A unit of energy, equal to 1000 electronvolts. Abbreviated keV.

kilogram [MECH] **1.** The unit of mass in the meter-kilogram-second system, equal to the mass of the international prototype kilogram stored at Sèvres, France. Abbreviated kg. **2.** *See* kilogram force.

kilogram-calorie *See* kilocalorie.

kilogram-equivalent weight [CHEM] A unit of mass 1000 times the gram-equivalent weight.

kilogram force [MECH] A unit of force equal to the weight of a 1-kilogram mass at a point on the earth's surface where the acceleration of gravity is 9.80665 meters/sec^2. Abbreviated kgf. Also known as kilogram (kg); kilogram weight (kg-wt).

kilogram-meter *See* meter-kilogram.

kilogram weight *See* kilogram force.

kilohertz [PHYS] A unit of frequency equal to 1000 hertz. Abbreviated kHz. Also known as kilocycle (kc).

kilohm [ELEC] A unit of electrical resistance equal to 1000 ohms. Abbreviated K; kohm.

kilojoule [PHYS] A unit of energy or work equal to 1000 joules. Abbreviated kJ.

kiloliter [MECH] A unit of volume equal to 1000 liters or to 1 cubic meter. Abbreviated kl.

kilomega- *See* giga-.

kilomegacycle *See* gigahertz.

kilomegahertz *See* gigahertz.

kilometer [MECH] A unit of length equal to 1000 meters. Abbreviated km.

kilometric wave [COMMUN] British term for electromagnetic waves having wavelengths between 1000 and 10,000 meters.

kiloparsec [ASTRON] A distance of 1000 parsecs (3260 light-years).

kiloton [PHYS] A unit used in specifying the yield of a fission or fusion bomb, equal to the explosive power of 1000 metric tons of trinitrotoluene (TNT). Abbreviated kt.

kilovar [ELEC] A unit equal to 1000 volt-amperes reactive. Abbreviated kvar.

kilovolt [ELEC] A unit of potential difference equal to 1000 volts. Abbreviated kV.

kilovolt-ampere [ELEC] A unit of apparent power in an alternating-current circuit, equal to 1000 volt-amperes. Abbreviated kVA.

kilovoltmeter [ELEC] A voltmeter which measures potential differences on the order of several kilovolts.

kilovolts peak [ELECTR] The peak voltage applied to an x-ray tube, expressed in kilovolts. Abbreviated kVp.

kilowatt [PHYS] A unit of power equal to 1000 watts. Abbreviated kW.

kilowatt-hour [ELEC] A unit of energy or work equal to 1000 watt-hours. Abbreviated kWh; kW-hr. Also known as Board of Trade Unit.

Kimberley reefs [GEOL] Gold-bearing reefs in southern Africa that lie above the Main reef and Bird reef groups. Also known as battery reefs.

kimberlite [PETR] A form of mica periodite that is formed mainly of phenocrysts, olivine, phlogopite, and subordinate melilite with minor amounts of pyroxene, apatite, perovskite, and opaque oxides.

Kimmelstiel-Wilson disease *See* intercapillary glomerulosclerosis.

Kimmeridgian [GEOL] A European stage of geologic time; middle Upper Jurassic, above Oxfordian, below Portlandian.

kimono flannel *See* flannelette.

kinzeyite [MINERAL] $Ca_3(Zr,Ti)_2(Al,Si)_2O_{12}$ A mineral of the garnet group.

kinase [BIOCHEM] Any enzyme that catalyzes phosphorylation reactions.

Kind-Chaudron process [MIN ENG] A technique used to sink a large-diameter deep shaft; a pilot shaft of smaller diameter is first dug, then enlarged until the full diameter is reached; a lining with a moss box at the bottom is forced into place when water is found.

Kinderhookian [GEOL] Lower Mississippian geologic time, above the Chautauquan of Devonian, below Osagian.

K indicator *See* K scope.

kinematic boundary condition [FL MECH] The condition that the component of fluid velocity perpendicular to a solid boundary must vanish on the boundary itself; when the boundary is a fluid surface, the condition applies to the vector difference of velocities across the interface.

kinematic fluidity [FL MECH] The reciprocal of the kinematic viscosity.

kinematics [MECH] The study of the motion of a system of material particles without reference to the forces which act on the system.

kinematic similarity [FL MECH] A relationship between fluid-flow systems in which corresponding fluid velocities and velocity gradients are in the same ratios at corresponding locations.

kinematic viscosity [FL MECH] The absolute viscosity of a fluid divided by its density. Also known as coefficient of kinematic viscosity.

Kinepanorama [GRAPHICS] A Soviet motion picture process similar to Cinerama, using standard 35-millimeter film, a frame size that is six perforations high and 1 inch (25 millimeters) wide, three lens sets, three camera mechanisms, and three strips of film to take the picture, and three projectors to show it.

kineplasty [MED] An amputation of a limb in which tendons are arranged in the stump to permit their use in moving parts of the prosthetic appliance. Also spelled cineplasty.

kinescope *See* picture tube.

kinescope recording [COMMUN] A motion picture film made by photographing images on the face of the picture tube in a television monitor or receiver, to permit repeating the same television program later and at different stations. Also known as television recording.

kinesiatrics [MED] The treatment of disease by systematic active or passive movements. Also known as kinesitherapy; kinnotherapy.

kinesiology [PHYSIO] The study of human motion through anatomical and mechanical principles.

kinesis [PHYSIO] The general term for physical movement, including that induced by stimulation, for example, light.

kinesitherapy *See* kinesiatrics.

kinesthesis [PHYSIO] The system of sensitivity present in the muscles and their attachments.

kinesthetic apraxia *See* motor apraxia.

kinetic [SCI TECH] Pertaining to or producing motion.

kinetic art [GRAPHICS] The use of material objects in motion to produce an artistic effect.

kinetic energy [MECH] The energy which a body possesses because of its motion; in classical mechanics, equal to one-half of the body's mass times the square of its speed.

kinetic energy ammunition [ORD] Ammunition designed to inflict damage to fortifications, armored vehicles, or ships by reason of the kinetic energy of the missile upon impact; the damage may consist of shattering, spalling, or piercing; the missile may be solid, or may contain an explosive charge, intended to function after penetration.

kinetic equilibrium *See* dynamic equilibrium.

kinetic friction [MECH] The friction between two surfaces which are sliding over each other.

kinetic lead [ORD] The correction or allowance made for the relative motion of a target when computing the lead angle in gunnery.

kinetic momentum [MECH] The momentum which a particle possesses because of its motion; in classical mechanics, equal to the particle's mass times its velocity.

kinetic potential *See* Lagrangian.

kinetic pressure [FL MECH] The kinetic energy per unit volume of a fluid, equal to one-half the product of its density and the square of its velocity.

kinetic reaction [MECH] The negative of the mass of a body multiplied by its acceleration.

kinetics [MECH] The dynamics of material bodies.

kinetic stress [STAT MECH] A stress which arises, in a theory taking the motions of individual molecules into account, from the existence of a velocity distribution of molecules, an example is the pressure of an ideal gas.

kinetic theory [STAT MECH] A theory which attempts to explain the behavior of physical systems on the assumption that they are composed of large numbers of atoms or molecules in vigorous motion; it is further assumed that energy and momentum are conserved in collisions of these particles, and that statistical methods can be applied to deduce the particles' average behavior. Also known as molecular theory.

kinetin [BIOCHEM] $C_{10}H_9ON_5$ A cytokinin formed in many plants which has a stimulating effect on cell division.

kinetochore [CYTOL] Within the centromere, the granule upon which the spindle fibers attach.

kinetoplast [CYTOL] A genetically autonomous, membrane-bound organelle associated with the basal body at the base of flagella in certain flagellates, such as the trypanosomes. Also known as parabasal body.

Kinetoplastida [INV ZOO] An order of colorless protozoans in the class Zoomastigophorea having pliable bodies and possessing one or two flagella in some stage of their life.

kinetosome *See* basal body.

kinetotherapy *See* kinesiatrics.

kingdom [SYST] One of the primary divisions that include all living organisms: most authorities recognize two, the animal kingdom and the plant kingdom, while others recognize three or more, such as Protista, Plantae, Animalia, and Mychota.

kingfisher [VERT ZOO] The common name for members of the avian family Alcedinidae; most are tropical Old World species characterized by short legs, long bills, bright plumage, and short wings.

kingpin [MECH ENG] The pin for articulation between an automobile stub axle and an axle-beam or steering head. Also known as swivel pin.

king post [NAV ARCH] A short, strong post for supporting a cargo boom on a cargo ship. Also known as derrick post; samson post.

king post truss [BUILD] A wooden roof truss having two principal rafters held by a horizontal tie beam, a king post upright between tie beam and ridge, and usually two struts to the rafters from a thickening at the king post foot.

king's blue *See* cobalt blue.

kingston valve [NAV ARCH] A sea valve so arranged that the pressure of the sea forces the valve on its seat or closes it, thus differing from most valves which are so arranged that the pressure is in the direction of opening of the valve.

kinic acid *See* quinic acid.

kinin [PHARM] Any of several pharmacologically active polypeptides that act as hypotensives, contracting isolated smooth muscles and increasing capillary permeability; an example is bradykinin.

kink [ENG] A tightened loop in a wire rope resulting in permanent deformation and damage to the wire.

kink band [GEOL] A deformation band in a single crystal or in foliated rocks in which the orientation is changed due to slipping on several parallel slip planes. Also known as joint drag; knick band; knick zone.

kink instability [PL PHYS] A type of hydromagnetic instability in which the ionized gas and its magnetic confining field tend to form a loop or kink, which then grows steadily larger. Also known as sausage instability.

kinocilium [CYTOL] A type of cilium containing one central pair of microfibrils and nine peripheral pairs; they extend from the apex of hair cells in all vertebrate ears except mammals.

kinomere *See* centromere.

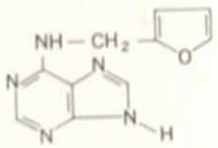
kinoplasm [CYTOL] The substance of the protoplasm that is thought to form astral rays and spindle fibers.

Kinorhyncha [INV ZOO] A class of the phylum Aschelminthes consisting of superficially segmented microscopic marine animals lacking external ciliation.

Kinosternidae [VERT ZOO] The mud and musk turtles, a family of chelonian reptiles in the suborder Cryptodira found in North, Central, and South America.

kintal *See* hundredweight.

KINETIN

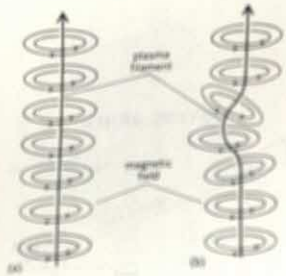


Structural formula for kinetin.

KINGFISHER

The belted kingfisher with white underparts, a blue-gray back, and a band across the chest.

KINK INSTABILITY



Plasma-magnetic-field configuration for cylindrical pinch. (*a*) Equilibrium configuration of plasma filament and magnetic field generated by axial current flow through plasma. (*b*) Onset of kink instability.

kinzigite [PETR] A coarse-grained metamorphic rock that is formed principally of garnet and biotite, with K feldspar, quartz, mica, cordierite, and sillimanite.

kip [MECH] A 1000-pound (453.6-kilogram) load.

Kirchhoff formula [THERMO] A formula for the dependence of vapor pressure p on temperature T, valid over limited temperature ranges; it may be written $\log p = A - (B/T) - C \log T$, where A, B, and C are constants.

Kirchhoff's current law [ELEC] The law that at any given instant the sum of the instantaneous values of all the currents flowing toward a point is equal to the sum of instantaneous values of all the currents flowing away from the point. Also known as Kirchhoff's first law.

Kirchhoff's equations [THERMO] Equations which state that the partial derivative of the change of enthalpy (or of internal energy) during a reaction, with respect to temperature, at constant pressure (or volume) equals the change in heat capacity at constant pressure (or volume).

Kirchhoff's first law *See* Kirchhoff's current law.

Kirchhoff's law [ELEC] Either of the two fundamental laws dealing with the relation of currents at a junction and voltages around closed loops in an electric network; they are known as Kirchhoff's current law and Kirchhoff's voltage law. [THERMO] The law that the ratio of the emissivity of a heat radiator to the absorptivity of the same radiator is the same for all bodies, depending on frequency and temperature alone, and is equal to the emissivity of a blackbody. Also known as Kirchhoff's principle.

Kirchhoff's principle *See* Kirchhoff's law.

Kirchhoff's second law *See* Kirchhoff's voltage law.

Kirchhoff's voltage law [ELEC] The law that at each instant of time the algebraic sum of the voltage rises around a closed loop in a network is equal to the algebraic sum of the voltage drops, both being taken in the same direction around the loop. Also known as Kirchhoff's second law.

Kirchhoff theory [OPTICS] A theory of diffraction of light which gives a mathematical formulation of Huygens' principle, based on the wave equation and Green's theorem, and enables quantitative determination of the amplitude and phase at any point to a very close approximation.

Kirkbyacea [PALEON] A monomorphic superfamily of extinct ostracods in the suborder Beyrichicopina, all of which are reticulate.

Kirkbyidae [PALEON] A family of extinct ostracods in the superfamily Kirkbyacea in which the pit is reduced and lies below the middle of the valve.

Kirkendall effect [MET] The phenomenon whereby a marker placed at the interface between an alloy and a metal moves toward the alloy region when the temperature of the system is raised to the point where diffusion can occur.

Kirkwood-Brinkely's theory [MECH] In terminal ballistics, a theory formulating the scaling laws from which the effect of blast at high altitudes may be inferred, based upon observed results at ground level.

Kirkwood gaps [ASTRON] Regions in the main zone of asteroids where almost no asteroids are found.

kirovite [MINERAL] $(Fe,Mg)SO_4 \cdot 7H_2O$ A mineral composed of a hydrous sulfate of iron and magnesium; it is isomorphous with malanterite and pisanite.

Kirsten propeller [NAV ARCH] A vertical-axis propeller whose vertical blades are interlocked by gears so that each one makes half a revolution about its axis for each revolution of the whole propeller.

Kiruna method [MIN ENG] A borehole-inclination survey method whereby the electrolytic deposition of copper from a solution is used to make a mark on the inside of a metal container.

kish [MET] Free graphite that floats to the surface of molten hypereutectic cast iron as it cools.

kissing disease *See* infectious mononucleosis.

kiss-roll coating [ENG] Procedure for coating a substrate web in which the coating roll carries a metered film of coating material; part of the film transfers to the web, part remains on the roll.

Kistiakowsky-Fishtine equation [PHYS CHEM] An equation to calculate latent heats of vaporization of pure compounds; useful when vapor pressure and critical data are not available.

Kitasatoa [MICROBIO] A genus of bacteria in the family Actinoplanaceae; club-shaped sporangia, each containing a single chain of diplococcuslike uniflagellate spores.

kite observation [METEOROL] An atmospheric sounding by means of instruments carried aloft by a kite.

kitol [ORG CHEM] $C_{40}H_{60}O_2$ One of the provitamins of vitamin A derived from whale liver oil; crystallizes from methanol solution.

Kiviat graph [COMPUT SCI] A circular diagram used in computer performance evaluation, in which variables are plotted on axes of the circle with 0% at the center of the circle and 100% at the circumference, and variables which are "good" and "bad" as they approach 100% are plotted on alternate axes.

kiwi [VERT ZOO] The common name for three species of nocturnal ratites of New Zealand composing the family Apterygidae; all have small eyes, vestigial wings, a long slender bill, and short powerful legs.

Kiwi nuclear reactor [NUCLEO] One of several test reactors for the nuclear engine for a rocket vehicle.

kJ *See* kilojoule.

Kjeldahl method [ANALY CHEM] Quantitative analysis of organic compounds to determine nitrogen content by interaction with concentrated sulfuric acid; ammonia is distilled from the NH_4SO_4 formed.

KK damage [ORD] Combat damage of such extent or nature that an aircraft will disintegrate immediately after the damage occurs.

kl *See* kiloliter.

klapperstein *See* rattle stone.

klaprothite [MINERAL] $Cu_6Bi_4S_9$ A gray mineral composed of copper bismuth sulfide.

klaxon [ENG ACOUS] A diaphragm horn sometimes operated by hand.

klebelsbergite [MINERAL] A mineral composed of basic antimony sulfate, occurring between crystals of stibnite.

Klebsiella [MICROBIO] A genus of bacteria in the family Enterobacteriaceae; nonmotile, encapsulated rods arranged singly, in pairs, or in chains; some species are human pathogens.

Klebsiella pneumoniae [MICROBIO] An encapsulated pathogenic bacterium that causes severe pneumonitis in humans. Formerly known as Friedlander's bacillus; pneumobacillus.

Klebs-Loeffler bacillus *See* Corynebacterium diphtheriae.

Klein bottle [MATH] The nonorientable surface having only one side with no inside or outside; it resembles a bottle pulled into itself.

Klein-Gordon equation [QUANT MECH] A wave equation describing a spinless particle which is consistent with the special theory of relativity. Also known as Schrödinger-Klein-Gordon equation.

kleinite [MINERAL] A yellow to orange mineral composed of a basic oxide, sulfate, and chloride of mercury and ammonium.

Klein-Nishina formula [QUANT MECH] A formula, based on the Dirac electron theory without radiative correction, for the differential cross section for scattering of a photon by an unbound electron.

Klein paradox [QUANT MECH] The paradox whereby, according to the Dirac electron theory, an electron can penetrate into a potential barrier which is greater than twice the rest energy of the electron (about 1 MeV) by making a transition from a positive energy state to a negative energy state, provided the potential change occurs over a distance on the order of a Compton wavelength or less.

Klein-Rydberg method [PHYS CHEM] A method for determining the potential energy function of the distance between the nuclei of a diatomic molecule from the molecule's vibrational and rotational levels.

Kleinschmidt printer [COMPUT SCI] A page printer capable of receiving ASCII (American Standard Code for Information Interchange) or Baudot code from transmission circuits exceeding 300 bits per second.

Klein's hypothesis [ASTRON] A theory of the overall structure of the universe that regards the visible universe as part of a large but finite astronomical system called a metagalaxy, which may itself belong to a much larger bounded system.

Klein's reagent [CHEM] Saturated solution of borotungstate; used to separate minerals by specific gravity.

klendusity [BOT] The tendency of a plant to resist disease due to a protective covering, such as a thick cuticle, that prevents inoculation.

kleptomania [PSYCH] An obsessive desire to steal; stolen objects are usually petty and useless, being of symbolic value only.

kleptophobia [PSYCH] **1.** An abnormal fear of thieves or of being robbed. **2.** An abnormal fear of becoming a kleptomaniac.

Klinefelter's syndrome [MED] A complex of symptoms associated with hypogonadism in males as an accompaniment of an anomaly of the sex chromosomes; somatic cells are found to have a Y chromosome and more than one X chromosome.

Kline flocculation test [PATH] A microscopic precipitin test for identification of the antibody resulting from syphilitic infection.

Klinkenberg correction [PETRO ENG] Mathematical conversion of laboratory air-permeability measurements (made on formation material) into equivalent liquid-permeability values.

klinotaxis [BIOL] Positive orientation movement of a motile organism induced by a stimulus.

klint [GEOL] An exhumed coral reef or bioherm that is more resistant to the processes of erosion than the rocks that enclose it so that the core remains in relief as hills and ridges.

klintite [GEOL] The dense, hard dolomite composing a klint; gives to the core a strength and resistance to erosion.

klippe [GEOL] A block of rock that is separated from underlying rocks by a fault that usually has a gentle dip.

klockmannite [MINERAL] CuSe A slate gray mineral consisting of copper selenide; occurs in granular aggregates.

Kloedenellacea [PALEON] A dimorphic superfamily of extinct ostracods in the suborder Kloedenellocopina having the posterior part of one dimorph longer and more inflated than the other dimorph.

Kloedenellocopina [PALEON] A suborder of extinct ostracods in the order Paleocopa characterized by a relatively straight dorsal border with a gently curved or nearly straight ventral border.

kloof wind [METEOROL] A cold southwest wind of Simons Bay, South Africa.

K/L ratio [NUC PHYS] The ratio of the number of internal conversion electrons emitted from the K shell of an atom during de-excitation of a nucleus to the number of such electrons emitted from the L shell.

kludge [COMPUT SCI] A poorly designed data-processing system composed of ill-fitting mismatched components.

klydonograph [ENG] A device attached to electric power lines for estimating certain electrical characteristics of lightning by means of the figures produced on photographic film by the lightning-produced surge carried over the lines; the size of the figure is a function of the potential and polarity of the lightning discharge.

klystron [ELECTR] An evacuated electron-beam tube in which an initial velocity modulation imparted to electrons in the beam results subsequently in density modulation of the beam; used as an amplifier in the microwave region or as an oscillator.

klystron generator [ELECTR] Klystron tube used as a generator, with its second cavity or catcher directly feeding waves into a waveguide.

klystron oscillator *See* velocity-modulated oscillator.

klystron repeater [ELECTR] Klystron tube operated as an amplifier and inserted directly in a waveguide in such a way that incoming waves velocity-modulate the electron stream emitted from a heated cathode; a second cavity converts the energy of the electron clusters into waves of the original type but of greatly increased amplitude and feeds them into the outgoing guide.

km *See* kilometer.

K meson [PARTIC PHYS] **1.** Collective name for four pseudoscalar mesons, having masses of about 495 MeV (megaelectronvolts) and decaying via weak interactions: K^+, K^-, K_S^0, and K_L^0; they consist of two isotopic spin doublets, the (K^+, K^0) doublet and its antiparticle doublet $(K^-, \bar{K}^0)$, having hypercharge or strangeness of $+1$ and -1 respectively, where K^0 and $\bar{K}^0$ are certain combinations of K_L^0 and K_S^0 states. Also known as kaon. **2.** Collective name for any meson resonance belonging to an isotopic doublet with hypercharge $+1$ or -1, denoted $K_{JP}(m)$ or $\bar{K}_{JP}(m)$ respectively, where m is the mass, and J and P are the spin and parity.

K Monel [MET] A nonmagnetic, age-hardenable alloy of nickel (28–34%) and copper and 2.75% aluminum that can be heat-treated after finishing to produce a material that is both corrosion-resistant and extra strong.

kneaded eraser [MATER] An eraser made of unvulcanized rubber whose shape can be readily changed by the user for removing pencil marks from paper.

kneader [FOOD ENG] Mixer for doughy materials in which the dough is repeatedly pulled out, folded back on itself, and pushed down to join the separate layers into a homogeneous mixture.

knebelite [MINERAL] $(Fe,Mn)_2SiO_4$ A mineral composed of an iron manganese silicate.

knee [ANAT] **1.** The articulation between the femur and the tibia in humans. Also known as genu. **2.** The corresponding articulation in the hindlimb of a quadrupedal vertebrate. [MECH ENG] In a knee-and-column type of milling machine, the part which supports the saddle and table and which can move vertically on the column. [MET] The lower supporting structure for an arm in a resistance welding machine.

knee brace [BUILD] A stiffener between a column and a supported truss or beam to provide greater rigidity in a building frame under transverse loads.

kneecap *See* patella.

kneecap height [ANTHRO] A measure of the vertical distance taken from the floor at the base of the heel to the top of the muscle mass near the end of the thigh bone as the subject sits with both feet on the floor.

knee frequency *See* break frequency.

knee pad [ENG] A protective cushion, usually made of sponge rubber, that can be strapped to a worker's knee.

knee rafter [BUILD] A brace placed diagonally between a principal rafter and a tie beam.

knee tool [MECH ENG] A tool holder with a shape resembling a knee, such as the holder for simultaneous cutting and interval operations on a screw machine or turret lathe.

knee wall [BUILD] A partition that forms a side wall or supports roof rafters under a pitched roof.

Kneriidae [VERT ZOO] A small family of tropical African fresh-water fishes in the order Gonorynchiformes.

knick *See* knickpoint.

knick band *See* kink band.

knickpoint [GEOL] A point of sharp change of slope, especially in the longitudinal profile of a stream or of its valley. Also known as break; knick; nick; nickpoint; rejuvenation head; rock step.

knick zone *See* kink band.

knife [DES ENG] A sharp-edged blade for cutting.

knife coating [ENG] Procedure for coating a continuous-web substrate in which coating thickness is controlled by the distance between the substrate and a movable knife or bar.

knife-edge [DES ENG] A sharp narrow edge resembling that of a knife, such as the fulcrum for a lever arm in a measuring instrument.

knife-edge bearing [MECH ENG] A balance beam or lever arm fulcrum in the form of a hardened steel wedge; used to minimize friction.

knife-edge cam follower [DES ENG] A cam follower having a sharp narrow edge or point like that of a knife; useful in developing cam profile relationships.

knife-edge refraction [ELECTROMAG] Radio propagation effect in which the atmospheric attenuation of a signal is reduced when the signal passes over and is diffracted by a sharp obstacle such as a mountain ridge.

knife file [DES ENG] A tapered file with a thin triangular cross section resembling that of a knife.

knife harrow [AGR] A type of harrow that consists of a frame holding a number of knives which scrape and partly invert the soil surface to smooth it and destroy small weeds.

knife-line attack [MET] Intergranular corrosion of an alloy adjacent to a weldment after heating the joint above the sensitization temperature.

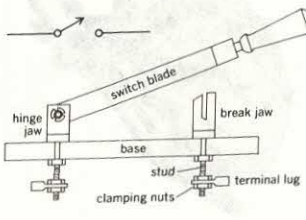
knife switch [ELEC] An electric switch consisting of a metal blade hinged at one end to a stationary jaw, so that the blade can be pushed over to make contact between spring clips.

knik wind [METEOROL] Local name for a strong southeast wind in the vicinity of Palmer in the Matanuska Valley of Alaska; it blows most frequently in the winter, although it may occur at any time of year.

knitting [TEXT] Making a fabric by interlocking loops of yarn by means of needles or wires.

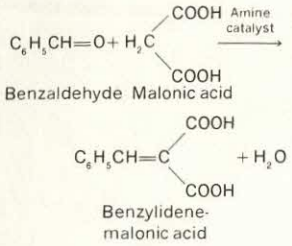
knob [DES ENG] A component that is placed on a control shaft to facilitate manual rotation of the shaft; sometimes has a pointer or markings to indicate shaft position. [GEOL] **1.** A rounded eminence, such as a knoll, hillock, or small hill or mountain, and especially a prominent or isolated hill with steep sides. **2.** A peak or other projection at the top of a hill or mountain.

KNIFE SWITCH



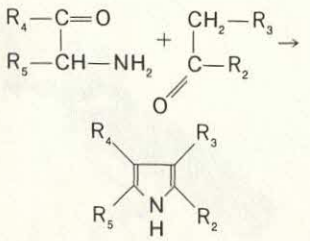
Knife switch with schematic symbol of single switch shown at top.

KNOEVENAGEL REACTION



An example of the Knoevenagel reaction.

KNORR SYNTHESIS



Equation of the reaction in the Knorr synthesis where an α-aminoketone combines with an α-methylene carbonyl compound to form a pyrrole.

KOALA

The koala, a slow-moving arboreal animal with opposable digits and a rudimentary tail.

knob-and-tube wiring [ELEC] An electric wiring method used for light and power circuits that uses open insulated wiring on solid insulators; now obsolete and illegal in most countries.

knocker *See* shell knocker.

knock intensity [ENG] The intensity of knock (detonation) recorded when testing a motor gasoline for octane or knock rating.

knockmeter [ENG] A fuels-testing device used to measure the output of the detonation meter used in ASTM knock-test ratings of motor fuels.

knock-off [MECH ENG] **1.** The automatic stopping of a machine when it is operating improperly. **2.** The device that causes automatic stopping.

knock-off bit *See* detachable bit.

knock-on atom [SOLID STATE] An atom which is knocked out of its equilibrium position in a crystal lattice by an energetic bombarding particle, and is displaced many atomic distances away into an interstitial position, leaving behind a vacant lattice site.

knockout [ENG] A partially cutout piece in metal or plastic that can be forced out when a hole is needed.

knockout pin *See* ejector pin.

knockout vessel [CHEM ENG] A vessel, drum, or trap used to remove fluid droplets from flowing gases.

knock rating [ENG] Rating of gasolines according to knocking tendency.

knock suppressor [MATER] A material added to motor fuel to retard or prevent detonation and resultant knock in reciprocating internal combustion engines; an example is tetraethyllead.

Knoevenagel reaction [ORG CHEM] The condensation of aldehydes with compounds containing an activated methylene ($=CH_2$) group.

knoll [GEOL] A mound rising less than 1000 meters from the sea floor. Also known as sea knoll.

Knoop hardness [MET] The relative microhardness of a material, such as metal, determined by the Knoop indentation test.

Knoop indentation test [MET] A diamond pyramid hardness test employing the Knoop indenter; hardness is determined by the depth to which the Knoop indenter penetrates.

Knoop indenter [MET] A diamond indenter which has a rhombic base with diagonals in a 1:7 ratio and included apical angles of 130° and 172°30′; used in the Knoop indentation test.

knop [TEXT] A yarn with pronounced knots of different color or of different material appearing at intervals. Also known as knotted yarn; nub yarn.

knopite [MINERAL] A cerium-bearing variety of perovskite.

Knorr synthesis [ORG CHEM] A condensation reaction carried out in either glacial acetic acid or an aqueous alkali in which an α-aminoketone combines with an α-carbonyl compound to form a pyrrole; possibly the most versatile pyrrole synthesis.

knot [COMPUT SCI] *See* deadlock. [MATER] A scar on lumber marking a place where a branch grew out of the tree truck. [MATH] In the general case, a knot consists of an embedding of an n-dimensional sphere in an $(n+2)$-dimensional sphere; classically, it is an interlaced closed curve, homeomorphic to a circle. [ORG CHEM] A chiral structure in which rings containing 50 or more members have a knotlike configuration. [PHYS] A speed unit of 1 nautical mile (1.852 kilometers) per hour, equal to approximately 0.51444 meters per second.

knotted yarn *See* knop.

knot theory [MATH] The topological and algebraic study of knots emphasizing their classification and how one may be continuously deformed into another.

Knox and Oxborne furnace [MIN ENG] A continuously working shaft furnace for roasting quicksilver ores, having the fireplace built in the masonry at one side; the fuel is wood.

knoxvillite *See* copiapite.

knuckle [MIN ENG] The place on an incline where there is a sudden change in grade.

knuckle joint [DES ENG] A hinge joint between two rods in which an eye on one piece fits between two flat projections with eyes on the other piece and is retained by a round pin.

knuckle joint press [MECH ENG] A short-stroke press in which the slide is actuated by a crank attached to a knuckle joint hinge.

knuckle man [MIN ENG] A worker who connects mine cars to and disconnects them from cables and also couples cars into trains.

knuckle pin [DES ENG] The pin of a knuckle joint.

knuckle post [MECH ENG] A post which acts as the pivot for the steering knuckle in an automobile.

Knudsen cell [PHYS CHEM] A vessel used to measure very low vapor pressures by measuring the mass of vapor which escapes when the vessel contains a liquid in equilibrium with its vapor.

Knusden cosine law [PHYS] A law which states that the probability of a gas molecule leaving a solid surface in a given direction within a solid angle $d\omega$ is proportional to $\cos\theta\, d\omega$, where θ is the angle between the direction and the normal to the surface.

Knudsen flow *See* free molecule flow.

Knudsen gage [ENG] An instrument for measuring very low pressures, which measures the force of a gas on a cold plate beside which there is an electrically heated plate.

Knudsen-Langmuir equation [CHEM ENG] Relationship of molecular distillation rate to vapor saturation pressure, solution temperature, and molecular weight during evaporation and no-recycle condensation.

Knudsen number [FL MECH] The ratio of the mean free path length of the molecules of a fluid to a characteristic length; used to describe the flow of low-density gases.

Knudsen reversing water bottle [ENG] A type of frameless reversing bottle for collecting water samples; carries reversing thermometers.

Knudsen's equation [PHYS] An equation for the amount of gas that flows through a tube in free molecule flow, $q=\sqrt{2\pi}\Delta p d^3/6l\sqrt{\rho}$, where q is the volume of gas measured at unit pressure that flows through the tube per second, Δp is the difference between the pressures at the ends of the tube, d is the inside diameter of the tube, l is the length of the tube, and ρ is the density of the gas at unit pressure.

Knudsen's tables [OCEANOGR] Hydrographical tables published by Martin Knudsen in 1901 to facilitate the computation of results of seawater chlorinity titrations and hydrometer temperature readings, and their conversion to salinity and density.

Knudsen vacuum gage [ENG] Device to measure negative gas pressures; a rotatable vane is moved by the pressure of heated molecules, proportionately to the concentration of molecules in the system.

knurl [ENG] To provide a surface, usually a metal, with small ridges or knobs to ensure a firm grip or as a decorative feature.

koala [VERT ZOO] *Phascolarctos cinereus*. An arboreal marsupial mammal of the family Phalangeridae having large hairy ears, gray fir, and two clawed toes opposing three others on each limb.

kobellite [MINERAL] $Pb_2(Bi,Sb)_2S_5$ A blackish-gray mineral composed of antimony bismuth lead sulfide.

Kochab [ASTRON] The brighter of the two stars called the Guardian of the Pole in the constellation Ursa Minor.

Koch curve [MATH] A fractal which can be constructed by a recursive procedure; at each step of this procedure every straight segment of the curve is divided into three equal parts and the central piece is then replaced by two similar pieces.

Koch freezing process [MIN ENG] A process used to sink a shaft through a formation such as clay that will not sustain a shaft; magnesium chloride cooled to about −30°C is circulated through pipes sunk in the ground until the ground is frozen.

Koch's postulates [MICROBIO] A set of laws elucidated by Robert Koch: the microorganism identified as the etiologic agent must be present in every case of the disease; the etiologic agent must be isolated and cultivated in pure culture; the organism must produce the disease when inoculated in pure culture into susceptible animals; a microorganism must be observed in and recovered from the experimentally diseased animal. Also known as law of specificity of bacteria.

koechlinite [MINERAL] Bi_2MoO_6 A greenish-yellow orthorhombic mineral composed of a bismuth molybdate.

Koehler lamp [MIN ENG] A naphtha-burning flame safety lamp for use in gaseous mines.

koembang [METEOROL] A dry foehnlike wind from the southeast or south in Cheribon and Tegal in Java, caused by the east monsoon which develops a jet effect in passing through the gaps in the mountain ranges and descends on the leeward side.

koenenite [MINERAL] $Mg_5Al_2(OH)_{12}Cl_4$ A very soft mineral composed of a basic magnesium aluminum chloride.

Koepe hoist *See* Koepe winder.

Koepe shear [MIN ENG] A wheel used in place of a winding

drum in the Koepe winder; made up of a cast steel hub with steel arms and a welded rim.

Koepe winder [MIN ENG] A hoisting system in which the winding drum is replaced by large wheels or sheaves over which passes an endless rope. Also known as Koepe hoist.

Koepe winder brake [MIN ENG] A device that works directly on the Koepe shear to slow or stop the hoist; can be applied by the engineman's brake lever or by safety devices.

koettigite [MINERAL] $Zn_3(AsO_4)_2 \cdot 8H_2O$ A carmine mineral composed of a hydrated zinc arsenate.

Kohler illumination [OPTICS] A method of illumination for the optical microscope used with coiled filaments or other sources of irregular form or brightness; an image of the filament large enough to fill the iris opening is focused on the condenser which is focused so that the image of the iris diaphragm on the lamp is in focus with the specimen, and the lamp iris is opened only enough to fill the field of view; the iris of the microscope is opened only enough to illuminate the back aperture of the objective; no ground glass is used.

Kohler's disease *See* osteochondrosis.

kohlrabi [BOT] A biennial crucifer, designated *Brassica caulorapa* and *B. oleracea* var. *caulo-rapa*, of the order Capparales grown for its edible turniplike, enlarged stem.

Kohlrausch method [PHYS CHEM] A method of measuring the electrolytic conductance of a solution using a Wheatstone bridge.

kohm *See* kilohm.

Kohoutek's comet [ASTRON] A comet that was discovered on March 7, 1973, at a distance of 4 astronomical units from the sun, and reached a perihelion of less than 0.1 astronomical unit at the end of 1973.

koilonychia [MED] Spoon-shaped deformity of the fingernails, which may be familial or associated with a disease, such as iron-deficiency anemia. Also known as spoon nail.

koilorachic [MED] Having the lumbar spinal region concave ventrally.

Kojic acid [ORG CHEM] $C_6H_6O_4$ A crystalline antibiotic with a melting point of 152–154°C; soluble in water, acetone, and alcohol; used in insecticides and as an antifungal and antimicrobial agent.

koktaite [MINERAL] $(NH_4)_2Ca(SO_4)_2 \cdot H_2O$ A mineral composed of a hydrous calcium ammonium sulfate.

kolbeckite [MINERAL] A blue to gray mineral composed of a hydrous beryllium aluminum calcium silicate and phosphate. Also known as sterrettite.

Kolbe hydrocarbon synthesis [ORG CHEM] The production of an alkane by the electrolysis of a water-soluble salt of a carboxylic acid.

Kolbe-Schmitt synthesis [ORG CHEM] The reaction of carbon dioxide with sodium phenoxide at 125°C to give salicyclic acid.

Kollsman window [AERO ENG] A small window on the dial face of an aircraft pressure altimeter in which the altimeter setting in inches of mercury is indicated.

Kolmer test [PATH] A complement-fixation test for syphilis and other diseases.

Kolmogoroff inertial subrange [OCEANOGR] The middle portion of the turbulence spectrum, between the low-wave-number (long-wave) part and the high-wave-number (short-wave) part.

Kolmogorov consistency conditions [MATH] For each finite subset F of the real numbers or integers, let P_F denote a probability measure defined on the Borel subsets of the cartesian product of $k(F)$ copies of the real line indexed by elements in F, where $k(F)$ denotes the number of elements in F; the family $\{P_F\}$ of measures satisfy the Kolmogorov consistency conditions if given any two finite sets F_1 and F_2 with F_1 contained in F_2, the restriction of P_{F_2} to those sets which are independent of the coordinates in F_2 which are not in F_1 coincides with P_{F_1}.

Kolmogorov inequalities [MATH] For each integer K let X_k be a random variable with finite variance σ_k and suppose $\{X_k\}$ is an independent sequence which is uniformly bounded by some constant c; then for every $\epsilon > 0$, and integer n,

$$1 - (\epsilon + 2c)^2 \Big/ \sum_{k=1}^{n} \sigma_k^2 \leq \text{Prob}\{\max_{k \leq n} |S_k + ES_k| \geq \epsilon\} \text{ and}$$

$$\frac{1}{\epsilon^2} \sum_{k=1}^{n} \sigma_k^2 \geq \text{Prob}\{\max_{k \leq n} |S_k + ES_k| \geq \epsilon\};$$

here $S_k = \sum_{i=1}^{k} X_i$ and ES_k denotes the expected value of S_k.

Kolmogorov-Sinai invariant [MATH] An isomorphism invariant of measure-preserving transformations; if T is a measure-preserving transformation on a probability space, the Kolmogorov-Sinai invariant is the least upper bound of the set of entropies of T given each finite partition of the probability space. Also known as entropy of a transformation.

Komodo dragon [VERT ZOO] *Varanus komodoensis*. A predatory reptile of the family Varanidae found only on the island of Komodo; it is the largest living lizard and may grow to 10 feet (3 meters).

kona [METEOROL] A stormy, rain-bringing wind from the southwest or south-southwest in Hawaii; it blows about five times a year on the southwest slopes, which are in the lee of the prevailing northeast trade winds.

kona cyclone [METEOROL] A slow-moving extensive cyclone which forms in subtropical latitudes during the winter season. Also known as kona storm.

kona storm *See* kona cyclone.

Kondo alloy [MET] A dilute alloy of a magnetic material in a nonmagnetic host which exhibits the Kondo effect.

Kondo effect [MET] The large anomalous increase in the resistance of certain dilute alloys of magnetic materials in nonmagnetic hosts as the temperature is lowered.

Kondo temperature [MET] The temperature below which the Kondo effect predominates for a specified magnetic impurity and host material.

kongsbergite [MINERAL] A silver-rich variety of a native amalgam composed of silver (95%) and mercury (5%).

konig [OPTICS] The X tristimulus value.

Konig's theorem [MATH] In combinatorial theory, the theorem that the minimum number m of lines is the same as the maximum number m of independent points.

konimeter [ENG] An air-sampling device used to measure dust as in a cement mill or a mine; a measured volume of air drawn through a jet impacts on a glycerin-jelly-coated glass surface; the particles are counted with a microscope.

koninckite [MINERAL] $FePO_4 \cdot 3H_2O$ A yellow mineral composed of a hydrous ferric phosphate.

koniscope [ENG] An instrument which indicates the presence of dust particles in the atmosphere. Also spelled coniscope.

Konowaloff rule [PHYS CHEM] An empirical rule which states that in the vapor over a liquid mixture there is a higher proportion of that component which, when added to the liquid, raises its vapor pressure, than of other components.

Koonungidae [INV ZOO] A family of Australian crustaceans in the order Anaspidacea with sessile eyes and the first thoracic limb modified for digging.

kopfring [ORD] A metal ring which is attached to the nose of a bomb to reduce its penetration in earth or water.

Koplik's sign [MED] Small red spots surrounded by white areas seen in the mucous membrane of the mouth in the prodromal stage of measles. Also known as Koplik's spots.

Koplik's spots *See* Koplik's sign.

kopophobia [PSYCH] An abnormal fear of fatigue or exhaustion.

Köppen-Supan line [METEOROL] The isotherm connecting places which have a mean temperature of 10°C (50°F) for the warmest month of the year.

koppite [MINERAL] Mineral composed of a form of pyrochlore containing cerium, iron, and potassium.

Kopp's law [PHYS CHEM] The law that for solids the molal heat capacity of a compound at room temperature and pressure approximately equals the sum of heat capacities of the elements in the compound.

Korfmann arch saver [MIN ENG] A machine that uses a controlled hydraulic system to withdraw steel arches.

Korfmann power loader [MIN ENG] A cutter-loader that is able to cart and load in both directions; its components are four drilling heads and one cutter chain surrounding them.

kornelite [MINERAL] $Fe_2(SO_4)_3 \cdot 7H_2O$ A colorless to brown mineral composed of hydrous ferric sulfate.

Korner's method [ORG CHEM] A method for determining the absolute position of substituents for positional isomers in benzene by the experimental production of positional isomers from a given disubstituted benzene.

kornerupine [MINERAL] $(Mg,Fe,Al)_{20}(Si,B)_9O_{43}$ A color-

KOHLRABI

Kohlrabi *(Brassica caulorapa)*, cultivar Early White Vienna. *(Joseph Harris Co., Rochester, N.Y.)*

less, yellow, brown, or sea-green mineral composed of magnesium iron borosilicate.

Korsakoff's neurosis *See* Korsakoff's syndrome.

Korsakoff's psychosis *See* Korsakoff's syndrome.

Korsakoff's syndrome [PSYCH] A form of amnesic-confabulatory syndrome characterized by confusion, loss of memory, retrograde amnesia with compensatory confabulation, and polyneuritis; seen in chronic alcoholism and other causes of vitamin B deficiency. Also known as Korsakoff's neurosis; Korsakoff's psychosis.

Korshun method [ANALY CHEM] Microdetermination of carbon and hydrogen in organic compounds; the sample is prepyrolyzed (cracked) in a shortage of oxygen, then oxidized in an excess of oxygen.

Kort nozzle [NAV ARCH] A cylindrical tube enclosing a screw propeller on a ship to decrease the tip losses and increase the efficiency; the walls of the tube are streamlined where clear of the ship's hull; adopted in many river towboats and recently in large tankers.

kossava [METEOROL] A cold, very squally wind descending from the east or southeast in the region of the Danube "Iron Gate" through the Carpathians, continuing westward over Belgrade, then spreading northward to the Rumanian and Hungarian borderlands and southward as far as Nish.

Kossel-Sommerfeld law [SPECT] The law that the arc spectra of the atom and ions belonging to an isoelectronic sequence resemble each other, especially in their multiplet structure.

kotoite [MINERAL] $Mg_3(BO_3)_2$ An orthorhombic borate mineral; it is isostructural with jimboite.

Kourbatoff's reagents [MET] Etching agents used for microanalysis of carbon steels; there are four different formulations, three with nitric acid, one with hydrochloric acid.

Kovat's retention indexes [ANALY CHEM] Procedure to identify compounds in gas chromatography; the behavior of a compound is indicated by its position on a scale of normal alkane values (for example, methane = 100, ethane = 200).

Kozeny-Carmen equation [FL MECH] Equation for streamline flow of fluids through a powdered bed.

Kozeny's equation [PETRO ENG] Mathematical relationship of flow network permeability to capillary pore dimensions; used for reservoir calculations.

Kr *See* krypton.

kraft paper [MATER] A strong paper or cardboard made from sulfate-process wood pulp; unbleached varieties are used for wrapping paper and shipping cartons.

kraft process *See* sulfate pulping.

kraft pulping *See* sulfate pulping.

Krakatao winds [METEOROL] A layer of easterly winds over the tropics at an altitude of about 18 to 24 kilometers, which tops the mid-tropospheric westerlies (the antitrades), is at least 6 kilometers deep, and is based at about 2 kilometers above the tropopause.

Kramers-Kronig relation [OPTICS] A relation between the real and imaginary parts of the index of refraction of a substance, based on the causality principle and Cauchy's theorem.

Kramer's theorem [SOLID STATE] The theorem that the states of a system consisting of an odd number of electrons in an external electrostatic field are at least twofold degenerate.

Krassowski ellipsoid of 1938 [GEOD] The reference ellipsoid of which the semimajor axis is 6,378,245 meters and the flattening or ellipticity equals 1/298.3.

K ratio [AERO ENG] The ratio of propellant surface to nozzle throat area.

kraurosis [MED] A progressive, sclerosing, shriveling process of the skin, due to glandular atrophy.

Krause rolling mill [MET] A type of rolling mill in which the rolls translate as well as rotate, accomplishing a high reduction of thickness for the single passage of a metal sheet.

Krause's corpuscle [ANAT] One of the spheroid nerve-end organs resembling lamellar corpuscles, but having a more delicate capsule; found especially in the conjunctiva, the mucosa of the tongue, and the external genitalia; they are believed to be cold receptors. Also known as end bulb of Krause.

krausite [MINERAL] $KFe(SO_4)_2 \cdot H_2O$ Yellowish-green mineral composed of hydrous potassium iron sulfate.

Krebs cycle [BIOCHEM] A sequence of enzymatic reactions involving oxidation of a two-carbon acetyl unit to carbon dioxide and water to provide energy for storage in the form of high-energy phosphate bonds. Also known as citric acid cycle; tricarboxylic acid cycle.

Krebs-Henseleit cycle [BIOCHEM] A cyclic reaction pathway involving the breakdown of arginine to urea in the presence of arginase.

Krebspest [INV ZOO] A fatal fungus disease of crayfish caused by *Aphanomyces mystaci*.

Krein-Milman theorem [MATH] The theorem that in a locally convex topological vector space, any compact convex set K is identical with the intersection of all convex sets containing the extreme points of K.

kremastic water *See* vadose water.

kremersite [MINERAL] $[NH_4,K]_2FeCl_5 \cdot H_2O$ A red mineral composed of hydrous potassium ammonium iron chloride, occurring in octahedral crystals.

Kremser formula [CHEM ENG] Equation for calculating distillation-column material balances and equilibrium, assuming the ideal distribution law, that is, the concentrations in the two phases (vapor and liquid) are proportional to each other.

krennerite [MINERAL] $AuTe_2$ A silver-white to pale-yellow mineral composed of gold telluride and often containing silver. Also known as white tellurium.

kribergite [MINERAL] $Al_5(PO_4)_3(SO_4)(OH)_4 \cdot 2H_2O$ White, chalklike mineral composed of hydrous basic aluminum sulfate and phosphate.

krill [INV ZOO] A name applied to planktonic crustaceans that constitute the diet of many whales, particularly whalebone whales.

krohnkite [MINERAL] $Na_2Cu(SO_4)_2 \cdot 2H_2O$ An azure-blue monoclinic mineral composed of hydrous copper sodium sulfate, occurring in massive form.

krokidolite *See* crocidolite.

Kroll process [MET] A reduction process for the production principally of titanium metal sponge from titanium tetrachloride.

Kronecker delta [MATH] The function or symbol δ_{ij} dependent upon the subscripts i and j which are usually integers; its value is 1 if $i = j$ and 0 if $i \neq j$.

Kronecker product [MATH] Given two different representations of the same group, their Kronecker product is a representation of the group constructed by taking direct products of matrices from the respective representations.

Kronig-Penney model [SOLID STATE] An idealized one-dimensional model of a crystal in which the potential energy of an electron is an infinite sequence of periodically spaced square wells.

Krukenberg's tumor [MED] Bilateral carcinoma of the ovaries; originally described as primary, but now denoting a metastatic form usually of gastric origin.

krummholz [ECOL] Stunted alpine forest vegetation. Also known as elfinwood.

Krupp ball mill [MIN ENG] An ore pulverizer in which the grinding is done by chilled iron or steel balls of various sizes moving against each other and the die ring, composed of five perforated spiral plates, each of which overlaps the next; material is discharged through a cylindrical screen.

kryolithionite [MINERAL] $Na_3Li_3(AlF_6)_2$ Variety of spodumene found in Greenland; has a crystal structure resembling that of garnet.

kryptoclimate *See* cryptoclimate.

kryptoclimatology *See* cryptoclimatology.

krypton [CHEM] A colorless, inert gaseous element, symbol Kr, atomic number 36, atomic weight 83.80; it is odorless and tasteless; used to fill luminescent electric tubes.

krypton-86 [NUC PHYS] An isotope of krypton, atomic mass 86; used in measurement of the standard meter.

krypton lamp [ELEC] An arc lamp filled with krypton; one type pierces fog for 1000 feet (300 meters) or more and is used to light airplane runways at night.

K scan *See* K scope.

K scope [ELECTR] A modified form of A scope on which one signal appears as two pips, the relative amplitudes of which indicate the error of aiming the antenna. Also known as K indicator; K scan.

K shell [ATOM PHYS] The innermost shell of electrons surrounding the atomic nucleus, having electrons characterized by the principal quantum number 1.

K-14 sight [ORD] A gyroscopic computing gunsight employing a mechanical range-control system.

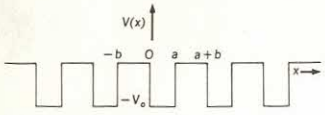
K-18 sight [ORD] A gyroscopic computing gunsight employing an electrical range-control system.

k-space *See* wave-vector space.

KSR *See* keyboard send/receive.

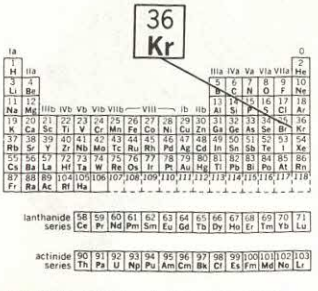
kt *See* kiloton.

KRONIG-PENNEY MODEL



Potential energy $V(x)$ which is assumed for the one-dimensional Kronig-Penney model. Here x is directed distance from origin O. Square wells of depth V_0 and width a are separated by distance b.

KRYPTON



Periodic table of the chemical elements showing the position of krypton.

K theory [MATH] The study of the mathematical structure resulting from associating an abelian group $K(X)$ with every compact topological space X in a geometrically natural way, with the aid of complex vector bundles over X. Also known as topological K theory.

K transfer [ORD] In artillery ground fire, the shift of fire from one point to another in the transfer limits of the piece, the actual range being corrected by application of the K.

K truss [BUILD] A building truss in the form of a K due to the orientation of the vertical member and two oblique members in each panel.

Kubelka-Munk model [OPTICS] A widely used theoretical model of reflectance; the model supposes that some light passing through a homogeneous sample is scattered and absorbed so that the light is attenuated in both directions.

kudzu [BOT] Any of various perennial vine legumes of the genus *Pueraria* in the order Rosales cultivated principally as a forage crop.

Kuehneosauridae [PALEON] The gliding lizards, a family of Upper Triassic reptiles in the order Squamata including the earliest known aerial vertebrates.

kukersite [GEOL] An organic sediment rich in remains of the alga *Gloexapsamorpha prisca*; found in the Ordovician of Estonia.

Kullenberg piston corer [MECH ENG] A piston-operated coring device used to obtain 2-inch-diameter (5-centimeter-diameter) core samples.

kumiss [FOOD ENG] A low-alcohol-content beverage made of fermented mare's or cow's milk by the action of *Lactobacillus casei, Streptococcus lactis,* and yeasts.

kumquat [BOT] A citrus shrub or tree of the genus *Fortunella* in the order Sapindales grown for its small, flame- to orange-colored edible fruit having three to five locules filled with an acid pulp, and a sweet, pulpy rind.

Kundt effect *See* Faraday effect.

Kundt rule [SPECT] The rule that the optical absorption bands of a solution are displaced toward the red when its refractive index increases because of changes in composition or other causes.

Kundt's constant [OPTICS] A measure of the strength of the Faraday effect in a material, equal to the ratio of the Faraday rotation to the product of the path length and the magnetization of the material; it depends only on the temperature for any magnetic material.

Kundt tube [ACOUS] A tube used to measure the speed of sound; it is filled with air or other gas and contains a light powder which becomes lumped at nodes, giving the length of standing waves generated in the tube.

Kungurian [GEOL] A European stage of geologic time; Middle Permian, above Artinskian, below Kazanian.

kunzite [MINERAL] A pinkish gem variety of spodumene.

Kupffer cell [HISTOL] One of the fixed macrophages lining the hepatic sinusoids.

Kuratowski's lemma [MATH] Each linearly ordered subset of a partially ordered set is contained in a maximal linearly ordered subset.

Kurie plot [NUC PHYS] Graph used in studying beta decay, in which the square root of the number of beta particles whose momenta (or energy) lie within a certain narrow range, divided by a function worked out by Fermi, is plotted against beta-particle energy; it is a straight line for allowed transitions and some forbidden transitions, in accord with the Fermi beta-decay theory. Also known as Fermi plot.

kurnakovite [MINERAL] $Mg_2B_6O_{11}\cdot 13H_2O$ A white mineral composed of hydrous magnesium borate.

Kuroshio Countercurrent [OCEANOGR] A component of the Kuroshio system flowing south and southwest between latitudes 155° and 160°E about 70 kilometers from the coast of Japan on the right-hand side of the Kuroshio Current.

Kuroshio Current [OCEANOGR] A fast ocean current (2–4 knots) flowing northeastward from Taiwan to the Ryukyu Islands and close to the coast of Japan to about 150°E. Also known as Japan Current.

Kuroshio extension [OCEANOGR] A general term for the warm, eastward-transitional flow that connects the Kuroshio and the North Pacific currents.

Kuroshio system [OCEANOGR] A system of ocean currents which includes part of the North Equatorial Current, the Tsushima Current, the Kuroshio Current, and the Kuroshio extension.

Kurrol's salt [INORG CHEM] $NaPO_3$(IV) A crystalline high-temperature form of sodium phosphate made by seeding a melt at 550°C.

Kurthia [MICROBIO] A genus of gram-positive, aerobic, rod-shaped to coccoid bacteria in the coryneform group; metabolism is respiratory.

Kurtoidei [VERT ZOO] A monogeneric suborder of perciform fishes having a unique ossification that encloses the upper part of the swim bladder, and an occipital hook in the male for holding eggs during brooding.

kurtorachic [MED] Having the lumbar spinal region concave dorsally.

kurtosis [STAT] The extent to which a frequency distribution is concentrated about the mean or peaked; it is sometimes defined as the ratio of the fourth moment of the distribution to the square of the second moment.

Kusnezovia [MICROBIO] A genus of bacteria of uncertain affiliation; coccoid, nonmotile cells attach to substrate and reproduce by budding.

kutnahorite [MINERAL] $Ca(Mn,Mg,Fe)(CO_3)_2$ A rare carbonate of calcium and manganese, found with some magnesium and iron substituting for manganese; forms rhombohedral crystals and is isomorphous with dolomite.

Kutorginida [PALEON] An order of extinct brachiopod mollusks that is unplaced taxonomically.

Kutta-Joukowski airfoil [FL MECH] A class of airfoils that may be produced by mapping circles with the complex variable transform $w = z + (c^2/z)$.

Kutta-Joukowski equation [FL MECH] An equation which states that the lift force exerted on a body by an ideal fluid, per unit length of body perpendicular to the flow, is equal to the product of the mass density of the fluid, the linear velocity of the fluid relative to the body, and the fluid circulation. Also known as Kutta-Joukowski theorem.

Kutta-Joukowski theorem *See* Kutta-Joukowski equation.

kV *See* kilovolt.

kVA *See* kilovolt-ampere.

kvar *See* kilovar.

K virus [VIROL] A group 2 papovavirus affecting rats and mice.

kVp *See* kilovolts peak.

kW *See* kilowatt.

kwashiorkor [MED] A nutritional deficiency disease in infants and young children, mainly in the tropics, caused primarily by a diet low in proteins and rich in carbohydrates. Also known as nutritional dystrophy.

kWh *See* kilowatt-hour.

kW-hr *See* kilowatt-hour.

KWIC index *See* key-word-in-context index.

KWOC index *See* key-word-out-of-context index.

kyanite [MINERAL] Al_2SiO_5 A blue or light-green neosilicate mineral; crystallizes in the triclinic system, and luster is vitreous to pearly; occurs in long, thin bladed crystals and crystalline aggregates. Also known as cyanite; disthene; sappare.

kyanize [CHEM ENG] To saturate wood with mercuric chloride as a decay preventive.

Kyasanur Forest virus [VIROL] A group B arbovirus recognized as an agent that causes hemorrhagic fever.

kymograph [MED] A device for recording internal body movements by making tracings with a stylus on a revolving smoked drum.

kymography [MED] Recording of the movements of internal organs by a kymograph.

kynurenic acid [BIOCHEM] $C_{10}H_7O_3N$ A product of tryptophan metabolism found in the urine of mammals.

kynurenine [BIOCHEM] $C_{10}H_{12}O_3N_2$ An intermediate product of tryptophan metabolism occurring in the urine of mammals.

kyphos [MED] The anteroposterior hump in the spine occurring in kyphoscoliosis.

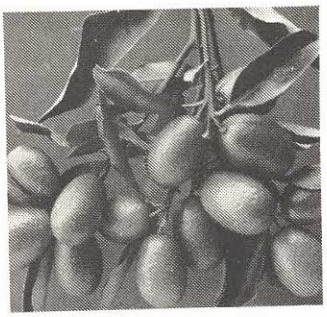
kyphoscoliosis [MED] Lateral curvature of the spine accompanied by rotation of the vertebrae.

kyphosis [MED] Angular curvature of the spine, usually in the thoracic region. Also known as humpback; hunchback.

kyrohydratic point [OCEANOGR] The temperature at which a particular salt crystallizes in brine which is trapped by frozen seawater, the eutectic temperature of that salt.

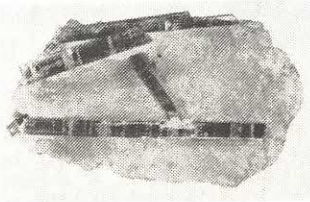
kytoon [AERO ENG] A captive balloon used to maintain meteorological equipment aloft at approximately a constant height; it is streamlined, and combines the aerodynamic properties of a balloon and a kite.

KUMQUAT



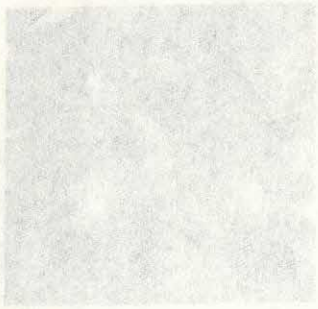
Fruit cluster and foliage of Nagami kumquat *(Fortunella margarita). (The McFarland Co.)*

KYANITE



⊢29 mm⊣

Kyanite on paragonite schist, St. Gotthard, Switzerland. *(American Museum of Natural History Specimen)*



L

l *See* liter.

L *See* lambert.

La *See* lanthanum.

Labarraque's solution [MATER] Aqueous solution of 4–6% sodium hypochlorite and 4–6% sodium chloride with sodium hydroxide or sodium carbonate stabilizer; used as disinfectant.

labbé [METEOROL] An infrequent, moderate to strong southwest wind that occurs only in March in Provence (southeastern France), bringing mild, humid, and very cloudy or rainy weather, while on the coast it raises a rough sea.

labdanum oil [MATER] An essential oil, golden yellow with ambergris aroma; soluble in alcohol, chloroform, and ether; derived from gum resin of various rockroses, such as *Cistus ladaniferus;* used in perfumes. Also known as ladanum oil.

label [COMPUT SCI] A data item that serves to identify a data record (much in the same way as a key is used), or a symbolic name used in a program to mark the location of a particular instruction or routine. [NUCLEO] *See* isotopic tracer.

label constant *See* location constant.

label data type [COMPUT SCI] A scalar data type that refers to locations in the computer program.

labeled cargo [IND ENG] Cargo of a dangerous nature, such as explosives and flammable or corrosive liquids, which is designated by different-colored labels to indicate the requirements for special handling and storage.

labeled graph [MATH] A graph whose vertices are distinguished by names.

labellate [BIOL] Having a labellum.

labellum [BOT] The median membrane of the corolla of an orchid often differing in size and morphology from the other two petals. [INV ZOO] **1.** A prolongation of the labrum in certain beetles and true bugs. **2.** In Diptera, either of a pair of sensitive fleshy lobes consisting of the expanded end of the labium.

label paper [GRAPHICS] Any of the various papers used for can and bottle labels; made for both offset and letterpress printing, they have a smooth side for printing and a rough side to receive an adhesive.

label record [COMPUT SCI] A tape record containing information concerning the file on that tape, such as format, record length, and block size.

labial gland [ANAT] Any of the small, tubular mucous and serous glands underneath the mucous membrane of mammalian lips. [INV ZOO] A salivary gland, or modification thereof, opening at the base of the labium in certain insects.

labial palp [INV ZOO] **1.** Either of a pair of fleshy appendages on either side of the mouth of certain bivalve mollusks. **2.** A jointed appendage attached to the labium of certain insects.

labial papilla [INV ZOO] Any of the sensory bristles around the mouth of many nematodes; they are jointed projections of the cuticle.

Labiatae [BOT] A large family of dicotyledonous plants in the order Lamiales; members are typically aromatic and usually herbaceous or merely shrubby.

labiate [ANAT] Having liplike margins that are thick and fleshy. [BIOL] Having lips. [BOT] Having the limb of a tubular calyx or corolla divided into two unequal overlapping parts.

labile [PSYCH] Unstable in mood. [SCI TECH] Also known as metastable. **1.** Readily changed, as by heat, oxidation, or other processes. **2.** Moving from place to place.

labile factor *See* proaccelerin.

labile oscillator [ELECTR] An oscillator whose frequency is controlled from a remote location by wire or radio.

lability [PSYCH] Very rapid fluctuations in intensity and modality of emotions; seen in the affective reaction or in certain organic brain disorders.

labite [MINERAL] $MgSi_3O_6(OH)_2 \cdot H_2O$ A mineral composed of hydrous basic silicate of magnesium.

labium [BIOL] **1.** A liplike structure. **2.** The lower lip, as of a labiate corolla or of an insect.

labium majus [ANAT] Either of the two outer folds surrounding the vulva in the female.

labium minus [ANAT] Either of the two inner folds, at the inner surfaces of the labia majora, surrounding the vulva in the female.

laboratory [SCI TECH] A place for experimental study.

laboratory coordinate system [MECH] A reference frame attached to the laboratory of the observer, in contrast to the center-of-mass system.

laboratory pack film [GRAPHICS] Unexposed film which is wound on a plain core (no flange), usually in 100-foot (30-meter) lengths.

labor cost [IND ENG] That part of the cost of goods and services attributable to wages, especially for direct labor.

labor grade *See* job class.

labor relations [IND ENG] The management function that deals with a company's work force; usually the term is restricted to relations with organized labor.

Laboulbeniales [MYCOL] An order of ascomycetous fungi made up of species that live primarily on the external surfaces of insects.

La Bour centrifugal pump [MIN ENG] A self-priming centrifugal pump with a trap which ensures sufficent water for the pump to function, and a separator to remove the entrained air in the water.

Labrador Current [OCEANOGR] A current that flows southward from Baffin Bay, through the Davis Strait, and southwestward along the Labrador and Newfoundland coasts.

labradorite [MINERAL] A gray, blue, green, or brown plagioclase feldspar with composition ranging from $Ab_{50}An_{50}$ to $Ab_{30}An_{70}$, where $Ab = NaAlSi_3O_8$ and $An = CaAl_2Si_2O_8$; in the course of formation when the natural material cools, the feldspar sometimes exhibits a variously colored luster. Also known as Labrador spar.

Labrador spar *See* labradorite.

Labridae [VERT ZOO] The wrasses, a family of perciform fishes in the suborder Percoidei.

labrum [INV ZOO] **1.** The upper lip of certain arthropods, lying in front of or above the mandibles. **2.** The outer edge of a gastropod shell.

labyrinth [ANAT] **1.** Any body structure full of intricate cavities and canals. **2.** The inner ear. [ENG ACOUS] A loudspeaker enclosure having air chambers at the rear that absorb rearward-radiated acoustic energy, to prevent it from interfering with the desired forward-radiated energy.

labyrinthine placenta *See* hemochorial placenta.

labyrinthine reflex [PHYSIO] The involuntary response to stimulation of the vestibular apparatus in the inner ear.

labyrinthine syndrome *See* Ménière's syndrome.

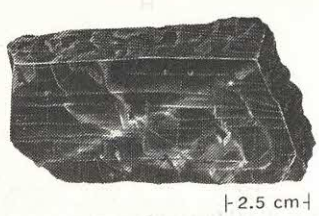
labyrinthitis [MED] Inflammation of the labyrinth of the inner ear.

Labyrinthodontia [PALEON] A subclass of fossil amphibi-

LABIATAE

Monarda fistulosa, an eastern North American species of wild bergamot, showing the characteristic opposite leaves and irregular corolla of the family Labiatae. *(Courtesy of A. W. Ambler, National Audubon Society)*

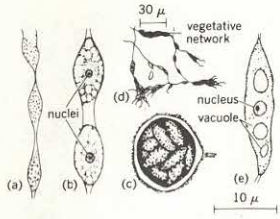
LABRADORITE



2.5 cm

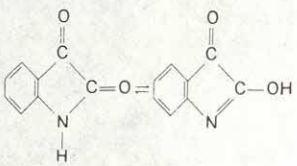
Labradorite from Labrador, Canada. *(Specimen from Department of Geology, Bryn Mawr College)*

LABYRINTHULIA



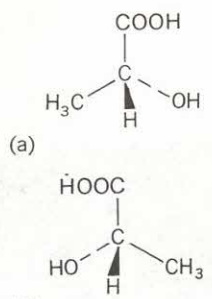
Labyrinthulia. *Labyrinthula zopfi:* *(a)* portion of living network, *(b)* two organisms stained, *(c)* encysted stage *(after Valkoanov). L. macrocystis:* *(d)* vegetative network, *(e)* single organism stained *(after Cienkowski). (From R. P. Hall, Protozoology, Prentice-Hall, 1953)*

LACTAM



Equation showing conversion of γ-aminobutyric acid to γ-butyrolactam.

LACTIC ACID



Structural formulas of *(a)* dextro form and *(b)* levo form of lactic acid.

ans descended from crossopterygian fishes, ancestral to reptiles, and antecedent to at least part of other amphibian types.

labyrinth seal [ENG] A minimum-leakage seal that offers resistance to fluid flow while providing radial or axial clearance; a labyrinth of circumferential knives or touch points provides for successive expansion of the fluid being piped; used for gas pipes, steam engines, and turbines.

Labyrinthulia [INV ZOO] A subclass of the protozoan class Rhizopoda containing mostly marine, ovoid to spindle-shaped, uninucleate organisms that secrete a network of filaments (slime tubes) along which they glide.

Labyrinthulida [INV ZOO] The single order of the protozoan subclass Labyrinthulia.

lac [MATER] A resinous material secreted by some insects that live on the sap of certain trees, principally in India; used in the manufacture of shellac.

Lacaille's constellations [ASTRON] The 14 southern constellations identified by N. L. de Lacaille in 1763: Antlia, Callum, Circinus, Crux, Fornax, Horologium, Mensa, Microscopium, Norma, Octans, Pictor, Reticulum, Sculptor, and Telescopium.

laccal [BIOCHEM] $C_{17}H_{31}C_6H_3(OH)_2$ A phenol compound which is found in the sap of lacquer trees, and which can be isolated in crystalline form.

laccase [BIOCHEM] Any of a class of plant oxidases which catalyze the oxidation of phenols.

laccate [BIOL] Having a lacquered appearance.

Lacciferinae [INV ZOO] A subfamily of scale insects in the superfamily Coccoidea in which the male lacks compound eyes, the abdomen is without spiracles in all stages, and the apical abdominal segments of nymphs and females do not form a pygidium.

laccolith [GEOL] A body of igneous rock intruding into sedimentary rocks so that the overlying strata have been notably lifted by the force of intrusion.

lace [COMPUT SCI] To punch all the holes in some area of a punch card, such as a card row or card column. [TEXT] A patterned, openwork fabric made by hand with needles or hooks, or by machinery.

laced card [COMPUT SCI] A punched card in which several holes appear in all or nearly all of the card columns; it usually carries no information but is used for testing purposes or to indicate the end of a file of cards.

lacerate [MED] To inflict a wound by tearing.

lacerated [BIOL] Having a deeply and irregularly incised margin or apex.

laceration [MED] A wound made by tearing.

Lacerta [ASTRON] A small northern constellation lying between Cygnus and Andromeda, and adjoining the northern boundary of Pegasus. Also known as Lizard.

Lacertidae [VERT ZOO] A family of reptiles in the suborder Sauria, including all typical lizards, characterized by movable eyelids, a fused lower jaw, homodont dentition, and epidermal scales.

lachesne [ORG CHEM] $C_{20}H_{26}ClNO_3$ A compound that crystallizes from a solution of ethanol and acetone, and whose melting point is 213°C; used in ophthalmology. Also known as chloride benzilate.

Lachnospira [MICROBIO] A genus of weakly gram-positive, anaerobic bacteria of uncertain affiliation; motile, curved rods that ferment glucose and are found in the rumen of bovine animals.

lacing [CIV ENG] **1.** A lightweight metallic piece that is fixed diagonally to two channels or four angle sections, forming a composite strut. **2.** A course of brick, stone, or tiles in a wall of rubble to give strength. **3.** A course of upright bricks forming a bond between two or more arch rings. **4.** Distribution steel in a slab of reinforced concrete. **5.** A light timber fastened to pairs of struts or walings in the timbering of excavations (including mines). [COMPUT SCI] Extra multiple punching in a card column to signify the end of a specific card run; the term is derived from the lacework appearance of the card. [ELEC] Tying insulated wires together to support each other and form a single neat cable, with separately laced branches.

laciniate [BIOL] **1.** Having a fringed border. **2.** Narrowly and deeply incised to form irregular lobes, which may be pointed.

lacmus *See* litmus.

lac operon [GEN] A sequence of three linked genes which code for the enzymes involved in lactose utilization in many bacteria.

lacquer [MATER] A material which contains a substantial quantity of a cellulose derivative, most commonly nitrocellulose but sometimes a cellulose ester, such as cellulose acetate or cellulose butyrate, or a cellulose ether such as ethyl cellulose; used to give a glossy finish, especially on brass and other bright metals.

lacquer diluent [MATER] An organic liquid with no solvent power added to lacquer formulations to reduce viscosity and to adjust flow or other properties.

lacquer print [TEXT] A textile design in which lustrous lacquer is used for coloring.

lacquer tree *See* varnish tree.

lacrimal [ANAT] Pertaining to tears, tear ducts, or tear-secreting organs.

lacrimal apparatus [ANAT] The functional and structural mechanisms for secreting and draining tears; includes the lacrimal gland, lake, puncta, canaliculi, sac, and nasolacrimal duct.

lacrimal bone [ANAT] A small bone located in the anterior medial wall of the orbit, articulating with the frontal, ethmoid, maxilla, and inferior nasal concha.

lacrimal canal *See* nasolacrimal canal.

lacrimal canaliculus [ANAT] A small tube lined with stratified squamous epithelium which runs vertically a short distance from the punctum of each eyelid and then turns horizontally in the lacrimal part of the lid margin to the lacrimal sac. Also known as lacrimal duct.

lacrimal duct *See* lacrimal canaliculus.

lacrimal gland [ANAT] A compound tubuloalveolar gland that secretes tears. Also known as tear gland.

lacrimal sac [ANAT] The dilation at the upper end of the nasolacrimal duct within the medial canthus of the eye. Also known as dacryocyst.

lacrimation [PHYSIO] **1.** Normal secretion of tears. **2.** Excessive secretion of tears, as in weeping.

lacrimator *See* tear gas.

lacroixite [MINERAL] A pale yellowish-green mineral composed of basic phosphate of aluminum, calcium, manganese, and sodium (often with fluorine), occurring as crystals.

LACT *See* lease automatic custody transfer.

lactalbumin [BIOCHEM] A simple protein contained in milk which resembles serum albumin and is of high nutritional quality.

lactam [ORG CHEM] An internal (cyclic) amide formed by heating gamma (γ) and delta (δ) amino acids; thus γ-aminobutyric acid readily forms γ-butyrolactam lactam (pyrrolidone); many lactams have physiological activity.

lactase [BIOCHEM] An enzyme that catalyzes the hydrolysis of lactose to dextrose and galactose.

lactase deficiency syndrome [MED] Diarrhea induced by ingestion of a lactose-containing food such as milk, secondary to a congenital or acquired deficiency of lactase.

lactate [ORG CHEM] A salt or ester of lactic acid in which the acidic hydrogen of the carboxyl group has been replaced by a metal or an organic radical. [PHYSIO] To secrete milk.

lactate dehydrogenase [BIOCHEM] A zinc-containing enzyme which catalyzes the oxidation of several α-hydroxy acids to corresponding α-keto acids.

lactation [PHYSIO] Secretion of milk by the mammary glands.

lacteal [ANAT] One of the intestinal lymphatics that absorb chyle. [PHYSIO] Pertaining to or resembling milk.

lactescent [BIOL] Having a milky appearance. [PHYSIO] Secreting milk or a milklike substance.

lactic acid [BIOCHEM] $C_3H_6O_3$ A hygroscopic α-hydroxy acid, occurring in three optically isomeric forms: L form, in blood and muscle tissue as a product of glucose and glycogen metabolism; D form, obtained by fermentation of sucrose; and DL form, a racemic mixture present in foods prepared by bacterial fermentation, and also made synthetically. Also known as 2-hydroxypropanoic acid; α-hydroxypropanoic acid.

lactic dehydrogenase [BIOCHEM] An enzyme that catalyzes the dehydrogenation of L-lactic acid to pyruvic acid. Abbreviated LDH.

lactic dehydrogenase virus [VIROL] A virus of the rubella group which infects mice.

lactide [ORG CHEM] A cyclic, intermolecular, double ester formed from α-hydroxy acids; most lactides are relatively low

melting solids and are easily hydrolyzed by base to form salts of the parent acid, such as sodium lactate.

lactim [ORG CHEM] A tautomeric enol form of a lactam with which it forms an equilibrium whenever the lactam nitrogen carries a free hydrogen.

lactin *See* lactose.

lactivorous [ZOO] Feeding on milk.

Lactobacillaceae [MICROBIO] The single family of gram-positive, asporogenous, rod-shaped bacteria; they are saccharoclastic, and produce lactate from carbohydrate metabolism.

Lactobacilleae [MICROBIO] Formerly a tribe of rod-shaped bacteria in the family Lactobacillaceae.

Lactobacillus [MICROBIO] Lactic acid bacteria, the single genus of the family Lactobacillaceae; found in dairy products, meat products, fruits, beer, wine, and other food products.

lactoferrin [BIOCHEM] An iron-binding protein found in milk, saliva, tears, and intestinal and respiratory secretions that interferes with the iron metabolism of bacteria; in conjunction with antibodies, it plays an important role in resistance to certain infectious diseases.

lactoflavin *See* riboflavin.

lactogenic hormone *See* prolactin.

lactoglobulin [BIOCHEM] A crystalline protein fraction of milk, which is soluble in half-saturated ammonium sulfate solution and insoluble in pure water.

lactometer [ENG] A hydrometer used to measure the specific gravity of milk.

lactonase [BIOCHEM] The enzyme that catalyzes the hydrolysis of 6-phosphoglucono-Δ-lactone to 6-phosphogluconic acid in the pentose phosphate pathway.

lactone [ORG CHEM] An internal cyclic mono ester formed by gamma (γ) or delta (δ) hydroxy acids spontaneously; thus γ-hydroxybutyric acid forms γ-butyrolactone.

lactonitrile [ORG CHEM] $CH_3CHOHCN$ A straw-colored liquid boiling at 183°C; soluble in water, insoluble in carbon disulfide and petroleum ether; used as a solvent, and as a chemical intermediate in making esters of lactic acid. Also known as acetaldehyde cyanohydrin; α-hydroxypropionitrile.

lactophenene *See para*-lactophenetide.

***para*-lactophenetide** [PHARM] $C_{11}H_{15}NO_3$ A water-soluble compound, crystallizing from ethyl acetate and hexane solution, and melting at 117–118°C; used in medicine as an analgesic and antipyretic. Also known as fenolactine; lactophenene; *para*-lactophenetidide; lactyl-*para*-phenetiden.

***para*-lactophenetidide** *See para*-lactophenetide.

lactoprene [MATER] Any of several synthetic rubbers that have good resistance to hydrocarbon oil, ozone, oxygen, and other weather elements excepting cold, and that are polymers or copolymers of an acrylic acid ester.

lactose [BIOCHEM] $C_{12}H_{22}O_{11}$ A disaccharide composed of D-glucose and D-galactose which occurs in milk. Also known as lactin; milk sugar.

lactosuria [MED] Presence of lactose in the urine.

lactron [TEXT] A thread made from natural rubber latex by extrusion.

lactyl-*para*-phenetiden *See para*-lactophenetide.

lacuna [BIOL] A small space or depression. [HISTOL] A cavity in the matrix of bone or cartilage which is occupied by the cell body.

lacunaris *See* lacunosus.

lacunar system [INV ZOO] A series of intercommunicating spaces branching from two longitudinal vessels in the hypodermis of many acanthocephalins.

lacunosus [METEOROL] A cloud variety characterized more by the appearance of the spaces between the cloud elements than by the elements themselves, the gaps being generally rounded, often with fringed edges, and the overall appearance being that of a honeycomb or net; it is the negative of clouds composed of separate rounded elements. Formerly known as lacunaris.

lacustrine [GEOL] Belonging to or produced by lakes.

lacustrine sediments [GEOL] Sediments that are deposited in lakes.

lacustrine soil [GEOL] Soil that is uniform in texture but variable in chemical composition and that has been formed by deposits in lakes which have become extinct.

Lacydonidae [INV ZOO] A benthic family of pelagic errantian polychaetes.

ladanum oil *See* labdanum oil.

ladar [OPTICS] A missile-tracking system that uses a visible light beam in place of a microwave radar beam to obtain measurements of speed, altitude, direction, and range of missiles. Derived from laser detecting and ranging. Also known as colidar; laser radar.

ladder [ENG] A structure, often portable, for climbing up and down; consists of two parallel sides joined by a series of crosspieces that serve as footrests.

ladder attenuator [ELECTR] A type of ladder network designed to introduce a desired, adjustable loss when working between two resistive impedances, one of which has a shunt arm that may be connected to any of various switch points along the ladder.

ladder-bucket dredge *See* bucket-ladder dredge.

ladder ditcher *See* ladder trencher.

ladder dredge *See* bucket-ladder dredge.

ladder drilling [MECH ENG] An arrangement of retractable drills with pneumatic powered legs mounted on banks of steel ladders connected to a holding frame; used in large-scale rock tunneling, with the advantage that many drills can be worked at the same time by a small labor force.

ladder fire [ORD] A method of establishing a gun range to a target by firing a succession of salvos with established differences in elevation.

ladder jack [ENG] A scaffold support which hooks onto a ladder.

ladder network [ELECTR] A network composed of a sequence of H, L, T, or pi networks connected in tandem; chiefly used as an electric filter. Also known as series-shunt network.

ladder road *See* ladderway.

ladder track [CIV ENG] A main track that joins successive body tracks in a railroad yard.

ladder trencher [MECH ENG] A machine that digs trenches by means of a bucket-ladder excavator. Also known as ladder ditcher.

ladderway [MIN ENG] Also known as ladder road; manway. **1.** Mine shaft between two main levels, equipped with ladders. **2.** The particular shaft, or compartment of a shaft, containing ladders.

laddic [ELECTR] Multiaperture magnetic structure resembling a ladder, used to perform logic functions; operation is based on a flux change in the shortest available path when adjacent rungs of the ladder are initially magnetized with opposite polarity.

Ladenburg f value *See* oscillator strength.

Ladinian [GEOL] A European stage of geologic time: upper Middle Triassic (above Anisian, below Carnian).

ladle [DES ENG] A deep-bowled spoon with a long handle for dipping up, transporting, and pouring liquids. [MET] A receptacle for transporting and pouring molten metal.

LADR *See* linear accelerator-driven reactor.

Laemobothridae [INV ZOO] A family of lice in the order Mallophaga including parasites of aquatic birds, especially geese and coots.

Laennec's cirrhosis *See* portal cirrhosis.

Lafarge cement [MATER] A cement made of plaster of paris, lime, and marble powder; used in mortar for marble and limestone pieces because it is nonstaining.

Lafond's Tables [METEOROL] A set of tables and associated information for correcting reversing thermometers and computing dynamic height anomalies, compiled by E. C. Lafond and published by the U.S. Navy Hydrographic Office.

lag [ELECTR] A persistence of the electric charge image in a camera tube for a small number of frames. [PHYS] **1.** The difference in time between two events or values considered together. **2.** *See* lag angle.

lagan [ENG] A heavy object thrown overboard and buoyed to mark its location for future recovery.

lag angle [PHYS] The negative of phase difference between a sinusoidally varying quantity and a reference quantity which varies sinusoidally at the same frequency, when this phase difference is negative. Also known as angle of lag; lag.

lag bolt *See* coach screw.

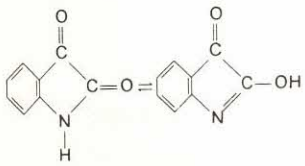
lag coefficient *See* time constant.

lag deposit [GEOL] Residual accumulation of coarse, unconsolidated rock and mineral debris left behind by the winnowing of finer material.

Lagenidiales [MYCOL] An order of aquatic fungi belonging to the class Phycomycetales characterized by a saclike to limited hyphal thallus and zoospores having two flagella.

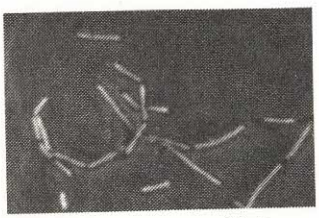
lageniform [BIOL] Flask-shaped.

LACTIM



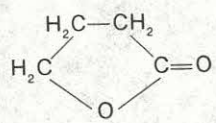
Equation showing tautomeric equilibrium between the lactam and lactim forms of isatin.

LACTOBACILLEAE



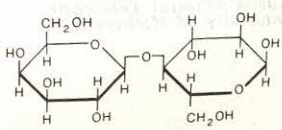
Photomicrograph showing morphology of *Lactobacillus brevis*, tribe Lactobacilleae.

LACTONE



Structural formula of γ-butyrolactone.

LACTOSE



The α-D anomer of lactose, the usual form in which lactose is obtained.

LACUNAR SYSTEM

Lacunar system of *Moniliformis*, dorsal view, showing regular circular branches. *(After Meyer in L. H. Hyman, The Invertebrates, vol. 3, McGraw-Hill, 1951)*

lager beer [FOOD ENG] A variety of beer produced by bottom fermentation and allowed to age from 6 weeks to 6 months; it is usually dry, light in color, and well carbonated.

lag fault [GEOL] A minor low-angle thrust fault occurring within an overthrust; it develops when one part of the mass is thrust farther than an adjacent higher or lower part.

lagging [CIV ENG] **1.** Horizontal wooden strips fastened across an arch under construction to transfer weight to the centering form. **2.** Wooden members positioned vertically to prevent cave-ins in earthworking. [MATER] Asbestos and magnesia plaster that is used as a thermal insulation on process equipment and piping.

lagging current [ELEC] An alternating current that reaches its maximum value up to 90° behind the voltage that produces it.

lagging load *See* inductive load.

lagging network *See* integral network.

lag gravel [GEOL] Residual accumulations of particles that are coarser than the material that has blown away.

lag-lead network *See* lead-lag network.

lag network *See* integral network.

Lagomorpha [VERT ZOO] The order of mammals including rabbits, hares, and pikas; differentiated from rodents by two pairs of upper incisors covered by enamel, vertical or transverse jaw motion, three upper and two lower premolars, fused tibia and fibula, and a spiral valve in the cecum.

lagoon [GEOGR] **1.** A shallow sound, pond, or lake generally near but separated from or communicating with the open sea. **2.** A shallow fresh-water pond or lake generally near or communicating with a larger body of fresh water.

Lagoon Nebula [ASTRON] A patchy, luminous gaseous nebula that appears to be surrounded by a much larger region of cold, neutral hydrogen.

lag phase [MICROBIO] The period of physiological activity and diminished cell division following the addition of inoculum of bacteria to a new culture medium.

Lagrange bracket [MECH] Given two functions of coordinates and momenta in a system, their Lagrange bracket is an expression measuring how coordinates and momenta change jointly with respect to the two functions.

Lagrange function *See* Lagrangian.

Lagrange-Hamilton theory [MECH] The formalized study of continuous systems in terms of field variables where a Lagrangian density function and Hamiltonian density function are introduced to produce equations of motion.

Lagrange-Helmholtz equation *See* Helmholtz equation.

Lagrange's equations [MECH] Equations of motion of a mechanical system for which a classical (non-quantum-mechanical) description is suitable, and which relate the kinetic energy of the system to the generalized coordinates, the generalized forces, and the time. Also known as Lagrangian equations of motion.

Lagrange's theorem [MATH] In a group of finite order, the order of any subgroup must divide the order of the entire group.

Lagrange stream function [FL MECH] A scalar function of position used to describe steady, incompressible two-dimensional flow; constant values of this function give the streamlines, and the rate of flow between a pair of streamlines is equal to the difference between the values of this function on the streamlines. Also known as current function; stream function.

Lagrangian [MECH] **1.** The difference between the kinetic energy and the potential energy of a system of particles, expressed as a function of generalized coordinates and velocities from which Lagrange's equations can be derived. Also known as kinetic potential; Lagrange function. **2.** For a dynamical system of fields, a function which plays the same role as the Lagrangian of a system of particles; its integral over a time interval is a maximum or a minimum with respect to infinitesimal variations of the fields, provided the initial and final fields are held fixed.

Lagrangian coordinates *See* generalized coordinates.

Lagrangian current measurement [OCEANOGR] Observation of the speed direction of an ocean current by means of a device, such as a parachute drogue, which follows the water movement.

Lagrangian density [MECH] For a dynamical system of fields or continuous media, a function of the fields, of their time and space derivatives, and the coordinates and time, whose integral over space is the Lagrangian.

Lagrangian equations of motion *See* Lagrange's equations.

Lagrangian function [MECH] The function which measures the difference between the kinetic and potential energy of a dynamical system.

Lagrangian generalized velocity *See* generalized velocity.

Lagrangian method [FL MECH] A method of studying fluid motion and the mechanics of deformable bodies in which one considers volume elements which are carried along with the fluid or body, and across whose boundaries material does not flow; in contrast to Euler method.

Lagrangian multipliers [MATH] A technique whereby potential extrema of functions of several variables are obtained. Also known as undetermined multipliers.

Lagrangian points [ASTRON] In planetary orbits, two positions in which the motion of a body of negligible mass (such as an asteroid) is stable under the gravitational influence of two other bodies (such as the sun and Jupiter), one of which is moving about the other in an approximately circular orbit; the two positions are located on the orbit, 60° ahead of or behind the orbiting body, so that the three bodies form an equilateral triangle.

Lagriidae [INV ZOO] The long-jointed bark beetles, a family of coleopteran insects in the superfamily Tenebrionoidea.

lag screw *See* coach screw.

lag time [ELEC] The time between the application of current and rupture of the circuit within the detonator.

Laguerre polynomials [MATH] A sequence of orthogonal polynomials which solve Laguerre's differential equation for positive integral values of the parameter.

Laguerre's differential equation [MATH] The equation $xy'' + (1 - x)y' + \alpha y = 0$, where α is a constant.

Lagynacea [INV ZOO] A superfamily of foraminiferan protozoans in the suborder Allogromiina having a free or attached test that has a membranous to tectinous wall and a single, ovoid, tubular, or irregular chamber.

lahar [GEOL] **1.** A mudflow or landslide of pyroclastic material occurring on the flank of a volcano. **2.** The deposit of mud or land so formed.

laid fabric [TEXT] Fabric in which the warp threads are bonded in a material, such as latex, there being no weft threads.

laid paper [MATER] A paper with a pattern of parallel lines spaced so as to give a ribbed effect.

laitance [MATER] Weak material, consisting principally of lime, that is formed on the surface of concrete, especially when excess water is mixed with the cement.

lake [HYD] An inland body of water, small to moderately large, with its surface water exposed to the atmosphere. [MATER] Any of a large group of dyes that have been combined with or adsorbed by salts of calcium, barium, chromium, aluminum, phosphotungstic acid, or phosphomolybdic acid; used for textile dyeing. Also known as color lake.

lake ball [ECOL] A spherical mass of tangled, waterlogged fibers and other filamentous material of living or dead vegetation, produced mechanically along a lake bottom by wave action, and usually impregnated with sand and fine-grained mineral fragments. Also known as burr ball; hair ball.

lake breeze [METEOROL] A wind, similar in origin to the sea breeze but generally weaker, blowing from the surface of a large lake onto the shores during the afternoon; it is caused by the difference in surface temperature of land and water, as in the land and sea breeze system.

lake copper [MET] A pure type of copper produced from ores taken from the Lake Superior region; has high conductivity.

lake effect [METEOROL] Generally, the effect of any lake in modifying the weather about its shore and for some distance downwind; in the United States, this term is applied specifically to the region about the Great Lakes.

lake effect storm [METEOROL] A severe snowstorm over a lake caused by the interaction between the warmer water and unstable air above it.

lake ore *See* bog iron ore.

lake peat [GEOL] A sedimentary peat formed near lakes.

lake plain [GEOL] One of the surfaces of the earth that represent former lake bottoms; these featureless surfaces are formed by deposition of sediments carried into the lake by streams.

Lalande cell [ELEC] A type of wet cell that uses a zinc anode and cupric oxide cathode cast as flat plates or hollow cylinders, and an electrolyte of sodium hydroxide in aqueous solution (caustic soda).

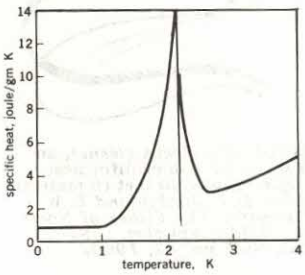
laliophobia [PSYCH] An abnormal fear of talking or stuttering.

LAGOON NEBULA

Lagoon Nebula NGC 6523 and star cluster NGC 6530; dark grains and globules are caused by solid grains in the neighborhood of the nebula. (*Curtis Schmidt Telescope, University of Michigan*)

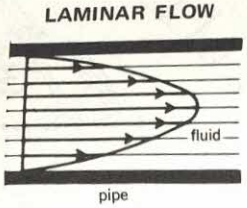
lally column [CIV ENG] A hollow and nearly circular steel column that supports girders or beams.
lalopathy [MED] Any disorder of speech or disturbance of language.
laloplegia [MED] Inability to speak, caused by paralysis of the muscles concerned in speech, except those of the tongue.
Lamarckism [EVOL] The theory that organic evolution takes place through the inheritance of modifications caused by the environment, and by the effects of use and disuse of organs.
lamb [VERT ZOO] A young sheep.
lamb-blasts *See* lambing storm.
lambda [MECH] A unit of volume equal to 10^{-6} liter or 10^{-9} cubic meter.
lambda calculus [MATH] A mathematical formalism to model the mathematical notion of substitution of values for bound variables.
lambda dispatch [IND ENG] The solution of the problem of finding the most economical use of generators to supply a given quantity of electric power, using the method of Lagrange multipliers, which are symbolized λ.
lambda expression [MATH] An expression used to define a function in the lambda calculus; for example, the function $f(x) = x + 1$ is defined by the expression $\lambda\, x\, (x + 1)$.
lambda hyperon [PARTIC PHYS] **1.** A quasi-stable baryon, forming an isotopic singlet, having zero charge and hypercharge, a spin of ½, positive parity and mass of 1115.5 MeV (megaelectronvolts). Designated Λ. Also known as lambda particle. **2.** Any baryon resonance having zero hypercharge and total isotopic spin; designated $\Lambda_{J^P}(m)$, where m is the mass of the baryon in MeV, and J and P are its spin and parity (if known).
lambda particle *See* lambda hyperon.
lambda point [CRYO] The temperature (2.1780 K), at atmospheric pressure, at which the transformation between the liquids helium I and helium II takes place; a special case of the thermodynamics definition. [THERMO] A temperature at which the specific heat of a substance has a sharply peaked maximum, observed in many second-order transitions.
lambda sulfur [CHEM] One of the two components of plastic (or gamma) sulfur; soluble in carbon disulfide.
lamb dysentery [VET MED] A bacterial infection and inflammation of the intestinal tract of lambs caused by *Clostridium perfringens*, chiefly along the English-Scottish border.
lambert [OPTICS] A unit of luminance (photometric brightness) that is equal to $1/\pi$ candela per square centimeter, or to the uniform luminance of a perfectly diffusing surface emitting or reflecting light at the rate of 1 lumen per square centimeter. Abbreviated L.
Lambert bearing [NAV] A bearing as measured on a Lambert conformal chart or plotting sheet; approximates a great-circle bearing.
Lambert-Beer law *See* Bouguer-Lambert-Beer law.
Lambert conformal chart [MAP] A chart on the Lambert conformal projection.
Lambert conformal projection [MAP] A conformal conic projection with two standard parallels, or a conformal conic map projection in which the surface of a sphere or spheroid, such as the earth, is conceived as developed on a cone which intersects the sphere or spheroid at two standard parallels; the cone is then spread out to form a plane which is the map.
Lambert course [NAV] Course as measured on a Lambert conformal chart or plotting sheet.
Lambert's law [OPTICS] **1.** The law that the illumination of a surface by a light ray varies as the cosine of the angle of incidence between the normal to the surface and the incident ray. **2.** The law that the luminous intensity in a given direction radiated or reflected by a perfectly diffusing plane surface varies as the cosine of the angle between that direction and the normal to the surface. **3.** *See* Bouguer-Lambert law.
Lambert surface [THERMO] An ideal, perfectly diffusing surface for which the intensity of reflected radiation is independent of direction.
lambing storm [METEOROL] A slight fall of snow in the spring in England. Also known as lamb-blasts; lamb-showers; lamb-storm.
Lamb shift [ATOM PHYS] A small shift in the energy levels of a hydrogen atom, and of hydrogenlike ions, from those predicted by the Dirac electron theory, in accord with principles of quantum electrodynamics.
Lamb-shift source [NUCLEO] A device for producing a beam of polarized ions from one-electron atoms in their $2s$ excited state; the $2s$ and $2p$ levels, initially separated by the Lamb shift, are mixed by magnetic and electric fields, and selected nuclear magnetic substrates are then depopulated, leaving the remaining atoms in a state with large nuclear polarization.
lamb-showers *See* lambing storm.
lamb-storm *See* lambing storm.
lamb's wool [VERT ZOO] The first fleece taken from a sheep up to 7 months old, having natural tapered fiber tip and spinning qualities superior to those of wool taken from previously shorn sheep.
Lamb wave [ACOUS] *See* plate wave. [ELECTROMAG] Electromagnetic wave propagated over the surface of a solid whose thickness is comparable to the wavelength of the wave.
lamé [TEXT] A fabric, usually of silk, rayon, or polyester, ornamented with flat metal threads.
Lamé constants [MECH] Two constants which relate stress to strain in an isotropic, elastic material.
lamella [ANAT] A thin scale or plate.
lamella arch [CIV ENG] An arch consisting basically of a series of intersecting skewed arches made up of relatively short straight members; two members are bolted, riveted, or welded to a third piece at its center.
lamellar bone [HISTOL] Any bone with a microscopic structure consisting of thin layers or plates.
lamellar chloroplast [CYTOL] A type of chloroplast in which the layered structure extends more or less uniformly through the whole chloroplast body.
lamellar crystal [CRYSTAL] A polycrystalline substance whose grains are in the form of thin sheets.
lamella roof [BUILD] A large span vault built of members connected in a diamond pattern.
lamellar vector field *See* irrotational vector field.
Lamellibranchiata [INV ZOO] An equivalent name for Bivalvia.
Lamellisabellidae [INV ZOO] A family of marine animals in the order Thecanephria.
Lamé's equations [MATH] A general collection of second-order differential equations which have five regular singularities.
Lamé's relations [MATH] Six independent relations which when satisfied by the covariant metric tensor of a three-dimensional space provide necessary and sufficient conditions for the space to be euclidean.
Lamiaceae [BOT] An equivalent name for Labiatae.
Lamiales [BOT] An order of dicotyledonous plants in the subclass Asteridae marked by its characteristic gynoecium, consisting of usually two biovulate carpels, with each carpel divided between the ovules by a false partition, or with the two halves of the carpel seemingly wholly separate.
lamina [ANAT] A thin sheet or layer of tissue; a scalelike structure. [GEOL] A thin, clearly differentiated layer of sedimentary rock or sediment, usually less than 1 centimeter thick. [MATER] A flat or curved arrangement of unidirectional or woven fibers in a matrix.
lamina cribrosa [ANAT] **1.** The portion of the sclera which is perforated for the passage of the optic nerve. **2.** The fascia covering the saphenous opening in the thigh. **3.** The anterior or posterior perforated space of the brain. **4.** The perforated plates of bone through which pass branches of the cochlear part of the vestibulocochlear nerve.
laminal placentation [BOT] Condition in which the ovules occur on the inner surface of the carpels.
laminar [SCI TECH] **1.** Arranged in thin layers. **2.** Pertaining to viscous streamline flow without turbulence.
laminar boundary layer [FL MECH] A thin layer over the surface of a body immersed in a fluid, in which the fluid velocity relative to the surface increases rapidly with distance from the surface and the flow is laminar.
laminar flow [FL MECH] Streamline flow of an incompressible, viscous Newtonian fluid; all particles of the fluid move in distinct and separate lines.
laminar flow control [AERO ENG] The removal of a small amount of boundary-layer air from the surface of an aircraft wing with the result that the airflow is laminar rather than turbulent; frictional drag is greatly reduced.
Laminariophyceae [BOT] A class of algae belonging to the division Phaeophyta.

LAMBDA POINT



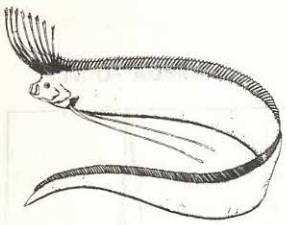
Specific heat of liquid helium computed as a function of temperature. Helium I is the high-temperature liquid; helium II occurs below the lambda point.

LAMINAR FLOW



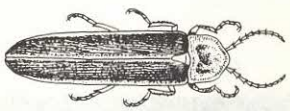
Laminar flow in a circular pipe. In this case the velocity adjacent to the wall is zero and increases to a maximum in the center of the pipe.

LAMPRIDIFORMES



Oarfish *(Regalecus glesne)*, an example of Lampridiformes; length to over 20 feet (6 meters). *(After D. S. Jordan and B. W. Evermann, The Fishes of North and Middle America, U.S. Nat. Mus. Bull. no. 47, 1900)*

LAMPYRIDAE



Drawing of a firefly beetle; there are 11,109 species. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill 1957)*

laminar sublayer [FL MECH] The laminar boundary layer underlying a turbulent boundary layer.

laminar wing [AERO ENG] A low-drag wing in which the distribution of thickness along the chord is so selected as to maintain laminar flow over as much of the wing surface as possible.

laminate [MATER] A sheet of material made of several different bonded layers.

laminated composite [MATER] A composite material consisting of layers of various materials.

laminated contact [ELEC] Switch contact made up of a number of laminations, each making individual contact with the opposite conducting surface.

laminated core [ELECTROMAG] An iron core for a coil transformer, armature, or other electromagnetic device, built up from laminations stamped from sheet iron or steel and more or less insulated from each other by surface oxides and sometimes also by application of varnish.

laminated glass *See* nonshattering glass.

laminated metal [MET] A sheet or bar of composite metal composed of two or more bonded layers.

laminated plastic [MATER] A thin sheet made of superposed layers of plastic bonded or impregnated with resin or compressed under heat.

laminated spring [DES ENG] A flat or curved spring made of thin superimposed plates and forming a cantilever or beam of uniform strength.

laminated wood [MATER] Board or timber composed of layers of wood glued together with the grains parallel.

lamina terminalis [ANAT] The layer of gray matter in the brain connecting the optic chiasma and the anterior commissure where the latter becomes continuous with the rostral lamina.

lamination [GRAPHICS] A plastic protective film on a printed sheet that has been bonded by heat and pressure. [MATER] One of the thin punchings of iron or steel used in building up a laminated core for a magnetic circuit. [MED] An operation in embryotomy in which the skull is cut in slices. [SCI TECH] Arrangement in layers.

laminectomy [MED] Surgical removal of the lateral portion of the neural arch from one or more vertebrae.

laminography *See* sectional radiography.

Lami's theorem [MECH] When three forces act on a particle in equilibrium, the magnitude of each is proportional to the sine of the angle between the other two.

lamp [ENG] A device that produces light, such as an electric lamp.

lampadite [MINERAL] A mineral composed chiefly of hydrous manganese oxide with as much as 18% copper oxide and often cobalt oxide.

lamp bank [ELEC] A number of incandescent lamps connected in parallel or series to serve as a resistance load for full-load tests of electric equipment.

lampblack [MATER] A grayish-black amorphous, practically pure form of carbon made by burning oil, coal tar, resin, or other carbonaceous substance in an insufficient supply of air; used in making paints, lead pencils, metal polishes, electric brush carbons, crayons, and carbon papers.

lampbrush chromosome [CYTOL] An exceptionally large chromosome characterized by fine lateral projections which are associated with active ribonucleic acid and protein synthesis.

lamp cabin *See* lamp room.

lamp-charging rack [MIN ENG] Mine-lamp-charging racks which allow miners to store lamp units for recharging after daily use.

lamp cord [ELEC] Two twisted or parallel insulated wires, usually no. 18 or no. 20, used chiefly for connecting electric equipment to wall outlets.

lampholder [ELEC] A device designed to connect an electric lamp to a circuit and to support it mechanically.

lamphouse [ENG] **1.** The light housing in a motion picture projector, located behind the projector head ordinarily consisting of a carbon arc lamp operating on direct current at about 60 volts, a concave reflector behind the arc which colleets the light and concentrates it on the film, and cooling devices. **2.** A box with a small hole containing an electric lamp and a concave mirror behind it, used as a concentrated source of light in a microscope, photographic enlarger, or other instrument.

lamping [MIN ENG] Use of a portable ultraviolet lamp to reveal fluorescent minerals in prospecting.

lampman [MIN ENG] A person responsible for maintaining and servicing miners' lamps.

lamp oil *See* kerosine.

lamprey [VERT ZOO] The common name for all members of the order Petromyzonida.

Lampridiformes [VERT ZOO] An order of teleost fishes characterized by a compressed, often ribbonlike body, fins composed of soft rays, a ductless swim bladder, and protractile maxillae among other distinguishing features.

lamprobolite *See* basaltic hornblende.

Lamprocystis [MICROBIO] A genus of bacteria in the family Chromatiaceae; cells are spherical and motile, have gas vacuoles, and contain bacteriochlorophyll *a* on vesicular photosynthetic membranes.

lamp room [MIN ENG] A room or building at the surface of a mine for charging, servicing, and issuing all cap, hand, and flame safety lamps. Also known as lamp cabin; lamp station.

Lampropedia [MICROBIO] A genus of gram-negative, obligately anaerobic cocci of uncertain affiliation; cells form pairs, tetrads, or flat squared tablets.

lamprophyllite [MINERAL] $Na_2SrTiSi_2O_8$ A mineral composed of titanium strontium sodium silicate.

lamprophyre [PETR] Any of a group of igneous rocks characterized by a porphyritic texture in which abundant, large crystals of dark-colored minerals appear set in a not visibly crystalline matrix.

lampshade paper [MATER] Paper that is translucent and either flame-resistant or flame-retardant; often made of wood pulp, vegetable parchment, or laminated glassine.

lamp station *See* lamp room.

Lampyridae [INV ZOO] The firefly beetles, a large cosmopolitan family of coleopteran insects in the superfamily Cantharoidea.

lanac [NAV] A proprietary navigation system that depends on secondary radar to aid airplanes to avoid midair collisions and maintain a specified altitude prior to landing. Derived from laminar, air navigation, and collision.

Lanarkian [GEOL] A European stage of geologic time forming part of the lower Upper Carboniferous, above Lancastrian and below Yorkian, equivalent to lowermost Westphalian.

lanarkite [MINERAL] Pb_2OSO_4 A white, greenish, or gray monoclinic mineral consisting of basic lead sulfate, with specific gravity of 6.92; formed by action of heat and air on galena.

lanatoside [BIOCHEM] Any of three natural glycosides from the leaves of *Digitalis lanata*; on hydrolysis with acid, it yields one molecule of D-glucose, three molecules of digitoxose, and one molecule of acetic acid; all three glycosides are cardioactive.

Lancashire boiler [MECH ENG] A cylindrical steam boiler consisting of two longitudinal furnace tubes which have internal grates at the front.

Lancastrian [GEOL] A European stage of geologic time forming part of the lower Upper Carboniferous, above Viséan and below Lanarkian.

lance [MED] To cut or open, as with a lancet. [MET] To cut into but not through the piece of work.

Lance [ORD] A surface-to-surface missile that has inertial guidance and a liquid propulsion system, to provide artillery support for infantry, armored, mechanized, and airborne divisions.

lance door [MECH ENG] The door to a boiler furnace through which a hand lance is inserted.

Lancefield groups [MICROBIO] Antigenically determined categories for classification of β-hemolytic streptococci.

lancelet [ZOO] The common name for members of the subphylum Cephalochordata.

lanceolate [BIOL] Shaped like the head of a lance.

Lanceolidae [INV ZOO] A family of bathypelagic amphipod crustaceans in the suborder Hyperiidea.

lancet [MED] A sharp-pointed, double-edged cutting instrument used to make small incisions.

lancet arch *See* acute arch.

lancet window [ARCH] A narrow window with a sharply pointed top.

Lanchester balancer [MECH ENG] A device for balancing four-cylinder engines; consists of two meshed gears with eccentric masses, driven by the crankshaft.

land [AERO ENG] Of an aircraft, to alight on land or a ship deck. [DES ENG] The top surface of the tooth of a cutting tool, behind the cutting edge. [ELECTR] *See* terminal

area. [ENG] **1.** In plastics molding equipment, the horizontal bearing surface of a semipositive or flash mold to allow excess material to escape; or the bearing surface along the top of the screw flight in a screw extruder; or the surface of an extrusion die that is parallel to the direction of melt flow. **2.** The surface between successive grooves of a diffraction grating or phonograph record. [GEOGR] The portion of the earth's surface that stands above sea level. [ORD] One of the raised ridges in the bore of a rifled gun barrel.

land accretion [CIV ENG] Gaining land in a wet area, such as a marsh or by the sea, by planting maritime plants to encourage silt deposition or by dumping dredged materials in the area. Also known as land reclamation.

land and sea breeze [METEOROL] The complete cycle of diurnal local winds occurring on seacoasts due to differences in surface temperature of land and sea; the land breeze component of the system blows from land to sea, and the sea breeze blows from sea to land.

Landau damping [PL PHYS] Damping of a plasma oscillation wave which occurs in situations where the particles of the plasma are able to increase their average energy at the expense of the wave, and thus to damp it out, even in cases where the dissipative effects of collisions are unimportant.

Landau fluctuations [NUCLEO] Variations in the losses of energy of different particles in a thin detector, resulting from random variations in the number of collisions and in the energies lost in each collision of the particle.

Landau-Ginzburg theory *See* Ginzburg-Landau theory.

Landau levels [SOLID STATE] Energy levels of conduction electrons which occur in a metal subjected to a magnetic field at very low temperatures and which are quantized because of the quantization of the electron motion perpendicular to the field.

landblink [METEOROL] A yellowish glow observed over snow-covered land in the polar regions.

land breeze [METEOROL] A coastal breeze blowing from land to sea, caused by the temperature difference when the sea surface is warmer than the adjacent land; therefore, the land breeze usually blows by night and alternates with a sea breeze which blows in the opposite direction by day.

land bridge [GEOGR] A strip of land linking two landmasses, often subject to temporary submergence, but permitting intermittent migration of organisms.

land drainage [CIV ENG] The removal of water from land to improve the soil as a medium for plant growth and a surface for land management operations.

land effect *See* coastal refraction.

Landé g factor [ATOM PHYS] Also known as g factor. **1.** The negative ratio of the magnetic moment of an electron or atom, in units of the Bohr magneton, to its angular momentum, in units of Planck's constant divided by 2π. **2.** The ratio of the difference in energy between two energy levels which differ only in magnetic quantum number to the product of the Bohr magneton, the applied magnetic field, and the difference between the magnetic quantum numbers of the levels; identical to the first definition for free atoms. Also known as Landé splitting factor; spectroscopic splitting factor. [NUC PHYS] The ratio of the magnetic moment of a nucleon, in units of the nuclear magneton, to its angular momentum in units of Planck's constant divided by 2π.

Landé interval rule [ATOM PHYS] The rule that when the spin-orbit interaction is weak enough to be treated as a perturbation, an energy level having definite spin angular momentum and orbital angular momentum is split into levels of differing total angular momentum, so that the interval between successive levels is proportional to the larger of their total angular momentum values.

Landenian [GEOL] A European stage of geologic time: upper Paleocene (above Montian, below Ypresian of Eocene).

Landé Γ-permanence rule [ATOM PHYS] The rule that the sum of the shifts of energy levels produced by the spin-orbit interaction, over a series of states having the same spin and orbital angular momentum quantum numbers (or the same total angular momentum quantum numbers for individual electrons) but different total angular momenta, and having the same total magnetic quantum number, is independent of the strength of an applied magnetic field.

lander [MIN ENG] **1.** A worker at one of the levels of a mine shaft to unload rock and to load drilling and blasting supplies to be lowered. **2.** In the quarry industry, one who guides, steadies, and loads trucks or railroad cars with the blocks of stone hoisted from the quarry floor. Also known as top hooker. **3.** In metal mining, one who cleans skips by directing a blast of compressed air into them through a hose, records number of loaded skips hoisted to surface, and loads railroad cars with ore from bins. **4.** In coal mining, one who works with shaft sinking crew at the top of the shaft or at a level immediately above shaft bottom, dumping rock into mine cars from a bucket in which it is raised. Also known as bucket dumper; landing tender; top lander. **5.** The worker who receives the loaded bucket or tub at the mouth of the shaft. Also known as banksman.

landesite [MINERAL] A brown mineral consisting of a hydrated phosphate of iron and manganese.

Landé splitting factor *See* Landé g factor.

landfall [NAV] **1.** The first sighting of land when approaching from seaward; by extension, the term is sometimes used to refer to the first contact with land by any means, as by radar. **2.** A navigational procedure in which an aircraft, after a relatively long overwater flight, turns on to a line of position passing through its destination and follows the line to the destination.

landfast ice *See* fast ice.

landfill [CIV ENG] Disposal of solid waste by burying in layers of earth in low ground.

landform [GEOGR] All the physical, recognizable, naturally formed features of land, having a characteristic shape; includes major forms such as a plain, mountain, or plateau, and minor forms such as a hill, valley, or alluvial fan.

landform map *See* physiographic diagram.

land hemisphere [GEOGR] The half of the globe, with its pole located at 47.25°N 2.5°W, in which most of the earth's land area is concentrated.

Landholt fringe [OPTICS] A black fringe that crosses the darkened field which is produced when a brilliant source of light is viewed through two Nicol prisms oriented with their principal axes at right angles to one another.

land ice [HYD] Any part of the earth's seasonal or perennial ice cover which has formed over land as the result, principally, of the freezing of precipitation.

landing [CIV ENG] A place where boats receive or discharge passengers, freight, and so on. [MIN ENG] **1.** Level stage in a shaft at which cages are loaded and discharged. **2.** The top or bottom of a slope, shaft, or inclined plane. [NAV] The termination of an aircraft's flight or of a ship's voyage.

landing aid [NAV] A lamp, searchlight, radio beacon, radar device, communicating device, or any system of such devices for aiding aircraft in an approach and landing. Also known as landing system.

landing area [AERO ENG] An area intended primarily for landing and takeoff of aircraft.

landing beacon [NAV] A beacon transmitting a beam to guide aircraft in making a landing.

landing chart [NAV] An aeronautical chart showing obstructions in the immediate vicinity of an aerodrome and the layout of the runways or landing area for use in landing and taxiing.

landing circle [AERO ENG] The approximately circular path flown by an airplane to get into the landing pattern; used particularly with naval aircraft landing on an aircraft carrier.

landing compass [NAV] A compass taken ashore so as to be unaffected by deviation; if reciprocal bearings of the landing compass and the magnetic compass on board a ship are observed, the deviation of the magnetic compass can be determined.

landing craft [NAV ARCH] A combat vessel employed in amphibious warfare to transport mobile equipment, amphibious vehicles, tanks, general cargo, and personnel, and to discharge such directly on to the beach; the vessel ranges from 36 to 135 feet (11 to 41 meters) in length and differs from landing ships in that it is not designed for long transoceanic voyages.

landing direction indicator [NAV] A device which indicates visually to pilots of aircraft the direction designated for landing or takeoff.

landing flap [AERO ENG] A movable airfoil-shaped structure located aft of the rear beam or spar of the wing; extends about two-thirds of the span of the wing and functions to substantially increase the lift, permitting lower takeoff and landing speeds.

landing flare [NAV] A pyrotechnic flare sometimes dropped from an aircraft for illumination during a night landing.

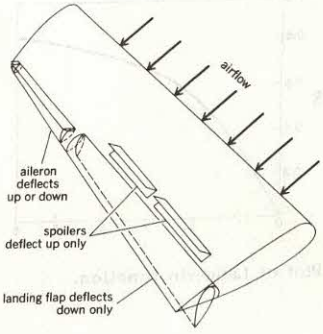
landing gear [AERO ENG] Those components of an aircraft or spacecraft that support and provide mobility for the craft on land, water, or other surface.

landing light [AERO ENG] One of the floodlights mounted on

LANDING CRAFT

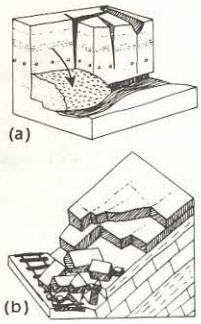
The LCU-1613, used to discharge vehicles, mobile equipment, general cargo, and personnel directly onto a beach. *(Official U.S. Navy photograph)*

LANDING FLAP



Drawing of a section of an airplane wing showing the position and movement of the landing flap.

LANDSLIDE



Two principal types of landslide: *(a)* debris fall and *(b)* rockslide.

the leading edge of the wing and below the nose of the fuselage to enable an airplane to land at night.

landing load [AERO ENG] The load on an aircraft's wings produced during landing; depends on descent velocity and landing attitude.

landing ship [NAV ARCH] Large-type assault ship generally over 200 feet (60 meters) long which is designed for long sea voyages and for rapid unloading over or onto a beach.

landing stage [CIV ENG] A platform, usually floating and attached to the shore, for the discharge and embarkation of passengers, freight, and so on.

landing strip [AERO ENG] A portion of the landing area prepared for the landing and takeoff of aircraft in a particular direction; it may include one or more runways. Also known as air strip.

landing system *See* landing aid.

landing tee *See* wind tee.

landing tender *See* lander.

landline [ELEC] A communications cable on or under the earth's surface, in contrast to a submarine cable.

landlocked [GEOGR] Pertaining to a harbor which is surrounded or almost completely surrounded by land.

landmark [ENG] Any fixed natural or artificial monument or object used to designate a land boundary. [NAV] A conspicuous natural or artificial object near or on land, other than an established aid to navigation, and observable by eye or radar; used in the piloting type of navigation.

landmark beacon [NAV] A light beacon, flashing white and red, marking the location of a natural or man-made landmark or a point on the Federal airways.

land measure [MECH] **1.** Units of area used in measuring land. **2.** Any system for measuring land.

land mile *See* mile.

land mine [ORD] A container filled with high explosives or chemicals, placed on the ground or lightly covered, and fitted with a fuse or a firing device or both.

land mobile service [COMMUN] Mobile service between base stations and mobile stations, or between land mobile stations.

land mobile station [COMMUN] Mobile station in the land mobile service, capable of surface movement within the geographical limits of a country or continent.

land navigation [NAV] Navigation of vehicles across land or ice, generally used in connection with the crossing of a region devoid of roads or landmarks, so that methods similar to those employed in air or marine navigation must be used.

land pebble *See* land pebble phosphate.

land pebble phosphate [GEOL] A pebble phosphate in a clay or sand bed below the ground surface; a small amount of uranium is often present and is recovered as a by-product; used as a source of phosphate fertilizer. Also known as land pebble; land rock; matrix rock.

land plaster [MATER] Finely ground gypsum, used as a fertilizer and as a corrective for soil with excess sodium and potassium carbonates.

land reclamation *See* land accretion.

land return *See* ground clutter.

land rock *See* land pebble phosphate.

Landry-Guillain-Barré syndrome [MED] A diffuse motor-neuron paresis, rapid in onset, and usually ascending and symmetrical in distribution, with proximal involvement greater than distal, and motor deficits greater than sensory. Also known as Guillain-Barré syndrome; Landry's paralysis.

Landry's paralysis *See* Landry-Guillain-Barré syndrome.

landscape [GEOGR] The distinct association of landforms that can be seen in a single view.

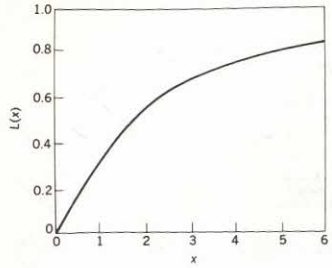
landscape agate [MINERAL] A type of chalcedony that is translucent and contains inclusions which give it an appearance reminiscent of familiar natural scenes. Also known as fortification agate.

landscape architecture [CIV ENG] The art of arranging and fitting land for human use and enjoyment.

landscape engineer [CIV ENG] A person who applies engineering principles and methods to planning, design, and construction of natural scenery arrangements on a tract of land.

land sky [METEOROL] The relatively dark appearance of the underside of a cloud layer when it is over land that is not snow-covered, used largely in polar regions with reference to the sky map; it is brighter than water sky, but much darker than iceblink or snowblink.

LANGEVIN FUNCTION



Plot of Langevin function.

landslide [GEOL] The perceptible downward sliding or falling of a relatively dry mass of earth, rock, or combination of the two under the influence of gravity. Also known as landslip.

landslide track [GEOL] An exposed path in rock or earth created as the result of a landslide.

landslip *See* landslide.

land station [COMMUN] Station in the mobile service not intended for operation while in motion.

land surveyor [CIV ENG] A specialist who measures land and its natural features and any man-made features such as buildings or roads for drawing to scale as plans or maps.

land tie [CIV ENG] A rod or chain connecting an outside structure such as a retaining wall to a buried anchor plate.

land transportation frequency bands [COMMUN] A group of radio-frequency bands between 25 megahertz and 30,000 megahertz allocated for use by taxicabs, railroads, buses, and trucks.

land transportation radio services [COMMUN] Any service of radio communications operated by and for the sole use of certain land transportation carriers, the radio transmitting facilities of which are defined as fixed, land, or mobile stations.

land-use classes [CIV ENG] Categories into which land areas can be grouped according to present or potential economic use.

land-use map [MAP] A map showing land-use classes as well as other earth surface features such as roads, manufacturing plants, and harbors.

lane [CIV ENG] An established route, as an air lane, shipping lane, or highway traffic lane. [NAV] One of the sections of the coverage area of a pair of Decca stations in which any phase relationship may be measured.

Lane-Emden equation *See* Emden equation.

Lane-Emden function *See* Emden function.

Lane's law [ASTROPHYS] For the contraction of a star that is assumed to be a sphere of perfect gas, the law that the temperature of the perfect-gas sphere is inversely proportional to its radius.

langbanite [MINERAL] An ironblack hexagonal mineral composed of silicate and oxide of manganese, iron, and antimony, occurring in prismatic crystals.

langbeinite [MINERAL] $K_2Mg_2(SO_4)_3$ Colorless, yellowish, reddish, or greenish hexagonal mineral with vitreous luster, found in salt deposits; used in the fertilizer industry as a source of potassium sulfate.

Langerhans cell [HISTOL] **1.** A type of cytotrophoblast in the human chorionic vesicle which is thought to secrete chorionic gonadotropin. **2.** A highly branched dendritic cell of the mammalian epidermis showing a lobulated nucleus and a diagnostic organelle resembling a tennis racket.

Langerhansian adenoma *See* islet-cell tumor.

Lange's nerve [INV ZOO] One of the paired cords of nervous tissue lying in the wall of the radial perihemal canal of asteroids.

Langevin-Debye formula [STAT MECH] A formula for the polarizability of a dielectric material or the paramagnetic susceptibility of a magnetic material, in which these quantities are the sum of a temperature-independent contribution and a contribution arising from the partial orientation of permanent electric or magnetic dipole moments which varies inversely with the temperature. Also known as Langevin-Debye law.

Langevin-Debye law *See* Langevin-Debye formula.

Langevin function [ELECTROMAG] A mathematical function, $L(x)$, which occurs in the expressions for the paramagnetic susceptibility of a classical (non-quantum-mechanical) collection of magnetic dipoles, and for the polarizability of molecules having a permanent electric dipole moment; given by $L(x) = \coth x - 1/x$.

Langevin ion *See* large ion.

Langevin ion-mobility theories [ELECTR] Two theories developed to calculate the mobility of ions in gases; the first assumes that atoms and ions interact through a hard-sphere collision and have a constant mean free path, while the second assumes that there is an attraction between atoms and ions arising from the polarization of the atom in the ion's field, in addition to hard-sphere repulsion for close distances of approach.

Langevin ion-recombination theory [ELECTR] A theory predicting the rate of recombination of negative with positive ions in an ionized gas on the assumption that ions of opposite sign approach one another under the influence of mutual attraction, and that their relative velocities are determined by ion

mobilities; applicable at high pressures, above 1 or 2 atmospheres.

Langevin radiation pressure [ACOUS] A measure of acoustic radiation pressure, equal to the difference between the mean pressure on an absorbing or reflecting wall and that in the same acoustic medium, at rest, behind the wall.

Langevin theory of diamagnetism [ELECTROMAG] A theory based on the idea that diamagnetism results from electronic currents caused by Larmor precession of electrons inside atoms.

Langevin theory of paramagnetism [ELECTROMAG] A theory which treats a substance as a classical (non-quantum-mechanical) collection of permanent magnetic dipoles with no interactions between them, having a Boltzmann distribution with respect to energy of interaction with an applied field.

langite [MINERAL] A blue to green mineral composed of basic hydrous copper sulfate.

lang lay [DES ENG] A wire rope lay in which the wires of each strand are twisted in the same direction as the strands.

langley [PHYS] A unit of energy per unit area commonly employed in radiation theory; equal to 1 gram-calorie per square centimeter.

Langmuir-Child equation *See* Child's law.

Langmuir dark space [ELECTR] A nonluminous region surrounding a negatively charged probe inserted in the positive column of a glow discharge.

Langmuir effect [SOLID STATE] The ionization of atoms of low ionization potential that come into contact with a hot metal with a high work function.

Langmuir isotherm equation [PHYS CHEM] An equation, useful chiefly for gaseous systems, for the amount of material adsorbed on a surface as a function of pressure, while the temperature is held constant, assuming that a single layer of molecules is adsorbed; it is $f = ap/(1 + ap)$, where f is the fraction of surface covered, p is the pressure, and a is a constant.

Langmuir plasma frequency [PL PHYS] The frequency of nonpropagating oscillations in a plasma; in rationalized mks units, it is $(ne^2/\epsilon_0 m)^{1/2}$, where e and m are the charge and mass of the oscillating electrons or ions, n is their number density, and ϵ_0 is the permittivity of empty space. Also known as plasma frequency.

Langmuir probe [PL PHYS] A device for measuring the temperature and electron density of a plasma, consisting of an electrode in contact with the plasma whose potential is varied while the resulting collection currents are measured.

Lang's vesicle [INV ZOO] A seminal bursa in many polyclad flatworms.

language [COMPUT SCI] The set of words and rules used to construct sentences with which to express and process information for handling by computers and associated equipment.

language converter [COMPUT SCI] A device which translates a form of data (such as that on microfilm) into another form of data (such as that on magnetic tape).

language theory [MATH] A branch of automata theory which attempts to formulate the grammar of a language in mathematical terms; it has been applied to automatic language translation and to the construction of higher-level programming languages and systems such as the propositional calculus, nerve networks, sequential machines, and programming schemes.

language translator [COMPUT SCI] **1.** Any assembler or compiler that accepts human-readable statements and produces equivalent outputs in a form closer to machine language. **2.** A program designed to convert one computer language to equivalent statements in another computer language, perhaps to be executed on a different computer. **3.** A routine that performs or assists in the performance of natural language translations, such as Russian to English, or Chinese to Russian.

Langurlidae [INV ZOO] The lizard beetles, a cosmopolitan family of coleopteran insects in the superfamily Cucujoidea.

Langweiler charge *See* traveling charge.

Laniatores [INV ZOO] A suborder of arachnids in the order Phalangida having flattened, often colorful bodies and found chiefly in tropical areas.

lanolin [MATER] The hydrous sheep's-wool wax (primarily cholesterol esters of higher fatty acids) derived as a by-product from the preparation of raw wool for the spinner; used as a base for emollients in cosmetics and shampoos.

lanosterol [BIOCHEM] $C_{30}H_{50}O$ An unsaturated sterol occurring in wool fat and yeast.

lansan [METEOROL] A strong southeast trade wind of the New Hebrides and East Indies.

lansfordite [MINERAL] $MgCO_3 \cdot 5H_2O$ A mineral composed of hydrous basic carbonate of magnesium when extracted from the earth, changing to nesquehovite after exposure to the air.

Lanston Monotype [GRAPHICS] A kind of composing machine that casts type in single characters in justified lines of predetermined length.

L antenna [ELECTROMAG] An antenna that consists of an elevated horizontal wire having a vertical down-lead connected at one end.

lantern [ENG] A portable lamp.

lantern clock [HOROL] **1.** A wall-mounted clock with weights and pendulum outside the case. **2.** A 17th-century clock characterized by a dome and open fretwork.

lantern fish [VERT ZOO] The common name for the deep-sea teleost fishes composing the family Myctophidae and distinguished by luminous glands that are widely distributed upon the body surface.

lantern pinion [DES ENG] A pinion with bars (between parallel disks) instead of teeth.

lantern ring [DES ENG] A ring or sleeve around a rotating shaft; an opening in the ring provides for forced feeding of oil or grease to bearing surfaces; particularly effective for pumps handling liquids.

lantern slide [GRAPHICS] A positive transparent picture on glass or film which can be viewed by projection onto reflecting screens, by hand viewers, or by devices in which the picture is projected onto the rear of a diffusing screen.

lanthana *See* lanthanum oxide.

lanthanide contraction [ATOM PHYS] A phenomenon encountered in the rare-earth elements; the radii of the atoms of the members of the series decrease slightly as the atomic numbers increase; starting with element 58 in the periodic table, the balancing electron fills in an inner incomplete $4f$ shell as the charge on the nucleus increases.

lanthanide series [CHEM] Rare-earth elements of atomic numbers 57 through 71; their chemical properties are similar to those of lanthanum, atomic number 57.

lanthanite [MINERAL] $(La,Ce)_2(CO_3)_3 \cdot 8H_2O$ A colorless, white, pink, or yellow mineral composed of hydrous lanthanum carbonate, occurring in crystals or in earthy form.

lanthanum [CHEM] A chemical element, symbol La, atomic number 57, atomic weight 138.91; it is the second most abundant element in the rare-earth group. [MET] A white, soft, malleable metal; tarnishes in moist air; a major component of misch metal.

lanthanum-doped lead zirconate–lead titanate *See* lead lanthanum zirconate titanate.

lanthanum nitrate [INORG CHEM] $La(NO_3)_3 \cdot 6H_2O$ Hygroscopic white crystals melting at 40°C; soluble in alcohol and water; used as an antiseptic and in gas mantles.

lanthanum oxide [INORG CHEM] La_2O_3 A white powder melting at about 2000°C; soluble in acid, insoluble in water; used to replace lime in calcium lights and in optical glass. Also known as lanthana; lanthanum sesquioxide; lanthanum trioxide.

lanthanum sesquioxide *See* lanthanum oxide.

lanthanum sulfate [INORG CHEM] $La_2(SO_4)_3 \cdot 9H_2O$ White crystals; slightly soluble in water, soluble in alcohol; used for atomic weight determinations for lanthanum.

lanthanum trioxide *See* lanthanum oxide.

Lanthonotidae [VERT ZOO] A family of lizards (Sauria) belonging to the Anguimorpha line; restricted to North Borneo.

lanugo [ANAT] A downy covering of hair, especially that seen on the fetus or persisting on the adult body.

lanyard [NAV ARCH] A small rope or line used to fasten something in ships, especially one passing through deadeyes and used to extend shrouds or stays.

lap [CIV ENG] The length by which a reinforcing bar must overlap the bar it will replace. [MATER] An abrasive material used for lapping. [MET] A defect caused by folding and then rolling or forging a hot metal fin or corner onto a surface without welding. Also known as fold.

lapachoic acid *See* lapachol.

lapachol [BIOCHEM] $C_{15}H_{14}O_3$ A yellow crystalline compound obtained from lapacho, a hardwood in Argentina and Paraguay. Also known as 2-hydroxy-3-amylene-α-naphthoquinone; lapachoic acid; targusic acid.

laparoscopy [MED] A method of visually examining the peritoneal cavity by means of a long slender endoscope equipped with sheath, obturator, biopsy forceps, a sphyg-

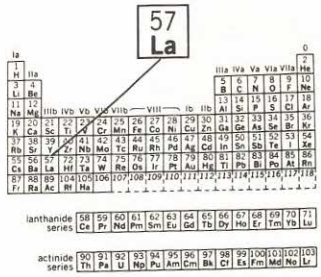
LANG LAY

Drawing of lang lay method of winding wire rope.

LANTERN FISH

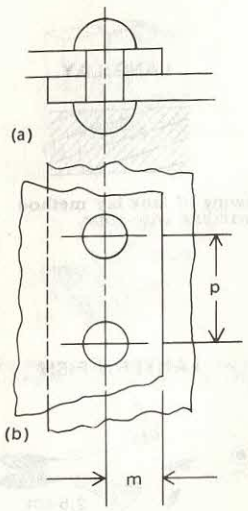
Drawing of the lantern fish *(Myctophym punctatum)*; luminous glands are shown as small circles.

LANTHANUM



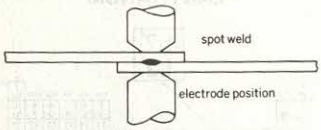
Periodic table of the chemical elements showing the position of lanthanum.

LAP JOINT



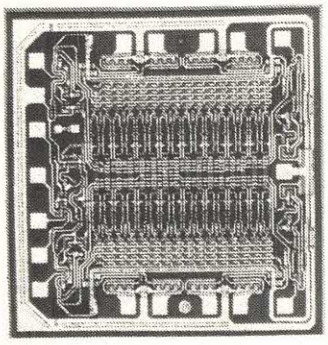
An example of a lap joint involving plates and rivets. *(a)* Side view *(b)* top view; p = the distance between adjacent rivets along the line through the centers of the rivets parallel to the edge of the plate; m = margin which is the distance between the line through the center of the rivets and the edge of the plate.

LAP WELD



Drawing of a lap weld showing how the edge of one plate is welded to the surface of the other plate.

LARGE-SCALE INTEGRATED CIRCUIT



Monolithic silicon 128-bit read-only memory unit. *(Courtesy of Motorola Semiconductor Products Inc.)*

momanometer bulb and tubing, scissors, and a syringe; the endoscope is introduced into the peritoneal cavity through a small incision in the abdominal wall. Also known as peritoneoscopy.

laparotomy [MED] A surgical incision through the abdominal wall into the abdominal cavity.

lap dissolve [ELECTR] Changeover from one television scene to another so that the new picture appears gradually as the previous picture simultaneously disappears. [GRAPHICS] *See* dissolve.

lapel microphone [ENG ACOUS] A small microphone that can be attached to a lapel or pocket on the clothing of the user, to permit free movement while speaking.

lapidary [SCI TECH] **1.** Of or pertaining to precious stones. **2.** The art of cutting precious stones. **3.** A person skilled in such art.

lapidicolous [ECOL] Living under a stone.

lapilli [GEOL] Pyroclasts that range from 1 to 64 millimeters in diameter.

lapilli-tuff [GEOL] A pyroclastic deposit that is indurated and consists of lapilli in a fine tuff matrix.

lapis lazuli [PETR] An azure-blue, violet-blue, or greenish-blue, translucent to opaque crystalline rock used as a semiprecious stone; composed chiefly of lazurite and calcite with some haüyne, sodalite, and other minerals. Also known as lazuli.

lap joint [ENG] A simple joint between two members made by overlapping the ends and fastening them together with bolts, rivets, or welding.

Laplace irrotational motion [FL MECH] Irrotational flow of an inviscid, incompressible fluid.

Laplace law *See* Ampère law.

Laplace operator [MATH] The linear operator defined on differentiable functions which gives for each function the sum of all its nonmixed second partial derivatives. Also known as Laplacian.

Laplace's equation [ACOUS] An equation for the speed c of sound in a gas; it may be written $c = \sqrt{\gamma p/\rho}$, where p is the pressure, ρ is the density, and γ is the ratio of specific heats. [MATH] The partial differential equation which states that the sum of all the nonmixed second partial derivatives equals 0; the potential functions of many physical systems satisfy this equation.

Laplace's expansion [MATH] An expansion by means of which the determinant of a matrix may be computed in terms of the determinants of all possible smaller square matrices contained in the original.

Laplace's measure of dispersion [STAT] The expected value of the absolute value of the difference between a random variable and its mean.

Laplace transform [MATH] For a function $f(x)$ its Laplace transform is the function $F(y)$ defined as the integral over x from 0 to ∞ of the function $e^{-yx}f(x)$.

Laplacian *See* Laplace operator.

Laplacian speed of sound [FL MECH] The phase speed of a sound wave in a compressible fluid under the assumption that the expansions and compressions are adiabatic.

Laporte selection rule [ATOM PHYS] The rule that an electric dipole transition can occur only between states of opposite parity.

lappet [TEXT] **1.** An attachment for a loom, used to insert floating warp threads into a fabric. **2.** A lightweight patterned fabric such as dotted swiss made with such an attachment. [ZOO] A lobe or flaplike projection, such as on the margin of a jellyfish or the wattle of a bird.

lapping [ELECTR] Moving a quartz, semiconductor, or other crystal slab over a flat plate on which a liquid abrasive has been poured, to obtain a flat polished surface or to reduce the thickness a carefully controlled amount. [MET] Polishing with a material such as cloth, lead, plastic, wood, iron, or copper having fine abrasive particles incorporated or rubbed into the surface.

lap-rivet [MET] To rivet a lap joint.

lapse line [METEOROL] A curve showing the variation of temperature with height in the free air.

lapse rate [METEOROL] **1.** The rate of decrease of temperature in the atmosphere with height. **2.** Sometimes, the rate of change of any meteorological element with height.

lap siding [BUILD] Beveled boards used for siding that are similar to clapboards but longer and wider. [CIV ENG] Two railroad sidings, the turnout of one overlapping that of the other.

lapstrake [NAV ARCH] A method of hull construction where each continuous band of hull planking (strake) is lapped on the outside of the one beneath.

lap weld [MET] A welded lap joint.

lap winding [ELEC] A two-layer winding in which each coil is connected in series to the adjacent coil.

Laramic orogeny *See* Laramidian orogeny.

Laramide orogeny *See* Laramidian orogeny.

Laramide revolution *See* Laramidian orogeny.

Laramidian orogeny [GEOL] An orogenic era typically developed in the eastern Rocky Mountains; phases extended from Late Cretaceous until the end of the Paleocene. Also known as Laramic orogeny; Laramide orogeny; Laramide revolution.

Laray viscometer [ENG] An instrument designed to measure viscosity and other properties of ink.

larch [BOT] The common name for members of the genus *Larix* of the pine family, having deciduous needles and short, spurlike branches which annually bear a crown of needles.

larch canker [PL PATH] A destructive fungus disease of larch and sometimes pine and fir caused by *Dasyscypha willkommii* and characterized by flat, depressed cankers on the twigs and branches.

lard [FOOD ENG] A solid fat prepared by rendering the fatty tissue from hogs.

larderillite [MINERAL] $(NH_4)B_5O_8 \cdot 2H_2O$ A white mineral composed of hydrous ammonium borate, occurring as a crystalline powder.

lard ice *See* grease ice.

lardite *See* agalmatolite.

lard oil [MATER] Yellowish to colorless oil with characteristic aroma and bland taste; melts at $-2°C$; soluble in carbon disulfide, ether, benzene, and chloroform; main components are olein and glycerides of solid fatty acids; used as a lubricant, wool oil, and illuminant, and in soap manufacture.

large calorie *See* kilocalorie.

large dyne *See* newton.

large intestine *See* colon.

large ion [METEOROL] An ion created by a small ion attaching to an Aitken nucleus; it is characterized by relatively large mass and low mobility. Also known as heavy ion; Langevin ion; slow ion.

Large Magellanic Cloud [ASTRON] An irregular cloud of stars in the constellation Doradus; it is 150,000 light-years away and nearly 30,000 light-years in diameter. Abbreviated LMC. Also known as Nubecula Major.

large nuclei [OCEANOGR] Particles of concentrated seawater or crystalline salt in the marine atmosphere having radii larger than 10^{-5} centimeter.

large number hypothesis [PHYS] The hypothesis that there is a physical basis for the approximate equality of two numbers on the order of 10^{40}: the ratio of the electrostatic to the gravitational force between a proton and an electron in a hydrogen atom, and the ratio of the age of the universe to the time required for light to cross an elementary particle diameter.

large scale [MAP] A scale of sufficient size to permit the plotting of much detail with exactness. [METEOROL] A scale such that the curvature of the earth may not be considered negligible; this scale is applicable to the high tropospheric long-wave patterns, with four or five waves around the hemisphere in the middle latitudes.

large-scale convection [METEOROL] Organized vertical motion on a larger scale than atmospheric free convection associated with cumulus clouds; the patterns of vertical motion in hurricanes or in migratory cyclones are examples of such convection.

large-scale integrated circuit [ELECTR] A very complex integrated circuit, which contains well over 100 interconnected individual devices, such as basic logic gates and transistors, placed on a single semiconductor chip. Abbreviated LSI circuit. Also known as chip circuit; multiple-function chip.

large-scale integrated memory *See* semiconductor memory.

large-systems control theory [CONT SYS] A branch of the theory of control systems concerned with the special problems that arise in the design of control algorithms (that is, control policies and strategies) for complex systems.

Largidae [INV ZOO] A family of hemipteran insects in the superfamily Pentatomorpha.

Laridae [VERT ZOO] A family of birds in the order Charadriiformes composed of the gulls and terns.

Larinae [VERT ZOO] A subfamily of birds in the family Laridae containing the gulls and characterized by a thick, slightly hooked beak, a square tail, and a stout white body, with shades of gray on the back and the upper wing surface.

larixinic acid *See* maltol.

Larmor formula [ELECTROMAG] The rate at which energy is radiated by a nonrelativistic, accelerated charge is $2q^2a^2/3c^3$, where q is the particle's charge in esu (electrostatic units), a is its acceleration, and c is the speed of light.

Larmor frequency [ELECTROMAG] The angular frequency of the Larmor precession, equal in esu (electrostatic units) to the negative of a particle's charge times the magnetic induction divided by the product of twice the particle's mass and the speed of light.

Larmor orbit [ELECTROMAG] The motion of a charged particle in a uniform magnetic field, which is a superposition of uniform circular motion in a plane perpendicular to the field, and uniform motion parallel to the field.

Larmor precession [ELECTROMAG] A common rotation superposed upon the motion of a system of charged particles, all having the same ration of charge to mass, by a magnetic field.

Larmor radius [ELECTROMAG] For a charged particle moving transversely in a uniform magnetic field, the radius of curvature of the projection of its path on a plane perpendicular to the field. Also known as gyromagnetic radius.

Larmor's theorem [ELECTROMAG] The theorem that for a system of charged particles, all having the same ratio of charge to mass, moving in a central field of force, the motion in a uniform magnetic induction B is, to first order in B, the same as a possible motion in the absence of B except for the superposition of a common precession of angular frequency equal to the Larmor frequency.

larnite [MINERAL] β-Ca_2SiO_4 A gray mineral that is a metastable monoclinic phase of calcium orthosilicate, stable from 520 to 670°C. Also known as belite.

LARR *See* linear accelerator-regenerator reactor.

larry [MIN ENG] **1.** A car with a hopper bottom and adjustable chutes for feeding coke ovens. Also known as lorry. **2.** *See* barney.

larsenite [MINERAL] $PbZnSiO_4$ A colorless or white mineral composed of lead zinc silicate, occurring in orthorhombic crystals.

Larsen's pile [MIN ENG] A collection of hollow cylinders that increases resistance against bending and crumpling; useful for sinking a shaft in sand or gravel.

Larsen's spiles [MIN ENG] Steel sheet made in various forms to resist bending; used in place of wooden spiles in timbering a weak roof.

Larson-Miller parameter [MECH] The effects of time and temperature on creep, defined empirically as $P = T(C + \log t) \times 10^{-3}$, where T = test temperature in degrees Rankine (degrees Fahrenheit + 460) and t = test time in hours; the constant C depends upon the material but is frequently taken to be 20.

larva [INV ZOO] An independent, immature, often vermiform stage that develops from the fertilized egg and must usually undergo a series of form and size changes before assuming characteristic features of the parent.

Larvacea [INV ZOO] A class of the subphylum Tunicata consisting of minute planktonic animals in which the tail, with dorsal nerve cord and notochord, persists throughout life.

Larvaevoridae [INV ZOO] The tachina flies, a large family of dipteran insects in the suborder Cyclorrhapha distinguished by a thick covering of bristles on the body; most are parasites of arthropods.

larva migrans [INV ZOO] Fly larva, *Hypoderma* or *Gastrophilus*, that produces a creeping eruption in the dermis. [MED] Infestation of the dermis by various burrowing nematode larvae, producing a creeping eruption that may become contaminated with bacteria.

larvicide [MATER] A pesticide used to kill larvae.

larvikite [PETR] An alkali syenite consisting of cryptoperthite or anorthoclase in rhombic crystals; used as an ornamental building material.

larviporous [INV ZOO] Feeding on larva, referring especially to insects.

laryngeal pouch [VERT ZOO] A lateral saclike expansion of the cavity of the larynx that is greatly developed in certain monkeys.

laryngectomy [MED] Surgical removal of all or part of the larynx.

laryngismus stridulus [MED] **1.** Spasmodic croup. **2.** The laryngeal spasm sometimes seen in hypocalcemic states.

laryngitis [MED] Inflammation of the larynx.

laryngology [MED] The science of anatomy, physiology, and diseases of the larynx.

laryngopharynx [ANAT] The lower portion of the pharynx, lying adjacent to the larynx. Also known as hypopharynx.

laryngophone [ENG ACOUS] A microphone designed to be placed against the throat of a speaker, to pick up voice vibrations directly without responding to background noise.

laryngoscope [MED] A tubular instrument, combining a light system and a telescopic system, used in the visualization of the interior larynx and adaptable for diagnostic, therapeutic, and surgical procedures.

laryngospasm [MED] Sudden and uncontrollable closure of the larynx; often seen in anaphylactic reactions.

laryngotracheal groove [EMBRYO] A channel in the floor of the pharynx serving as the anlage of the respiratory system.

laryngotracheitis [MED] Inflammation of the larynx and trachea.

laryngotracheobronchitis [MED] Acute inflammation of the mucosa of the larynx, trachea, and bronchi.

laryngotracheobronchitis virus *See* croup-associated virus.

larynx [ANAT] The complex of cartilages and related structures at the opening of the trachea into the pharynx in vertebrates; functions in protecting the entrance of the trachea, and in phonation in higher forms.

LASCR *See* light-activated silicon controlled rectifier.

LASCS *See* light-activated silicon controlled switch.

Lasater's bubble-point pressure correction [PETRO ENG] Relation of the gas-oil ratio in a high-pressure oil reservoir to the bubble-point-pressure factor.

laser [OPTICS] An active electron device that converts input power into a very narrow, intense beam of coherent visible or infrared light; the input power excites the atoms of an optical resonator to a higher energy level, and the resonator forces the excited atoms to radiate in phase. Derived from light amplification by stimulated emission of radiation.

laser altimeter [NAV] An altimeter in which a laser beam, modulated by radio frequencies, is directed downward from an aircraft, and the laser light reflected from the terrain is picked up by a telescope system, sensed by a photomultiplier, and phase-compared with the transmitted signal to obtain the round-trip propagation time; the height above ground equals one-half the product of the propagation time and the speed of light.

laser amplifier [ELECTR] A laser which is used to increase the output of another laser. Also known as light amplifier.

laser anemometer [ENG] An anemometer in which the wind being measured passes through two perpendicular laser beams, and the resulting change in velocity of one or both beams is measured.

laser beam [OPTICS] A narrow beam of coherent, powerful, and nearly monochromatic electromagnetic radiation emitted by a laser.

laser-beam printer [GRAPHICS] A nonimpact printer that operates at well over 10,000 lines per minute, using a low-power laser to produce image-forming charges a line at a time on the photoconductive surface of a drum; dry powder that adheres only to charged areas is applied to the drum, transferred to plain paper, and fused by heat.

laser camera [OPTICS] An airborne camera system for night photography in which a laser beam is split into two beams; one beam, which is almost invisible, scans the ground, while the second beam is modulated by a detector of light reflected from the ground area being scanned, and is in turn swept back and forth over a moving film by the same scanner.

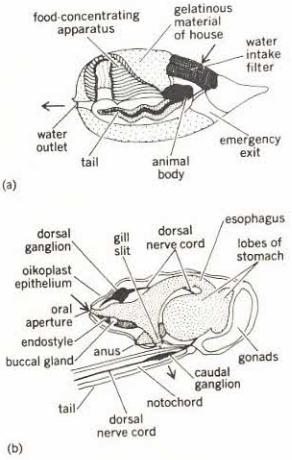
laser ceilometer [ENG] A ceilometer in which the time taken by a light pulse from a ground laser to travel straight up to a cloud ceiling and be reflected to a receiving photomultiplier is measured and converted into a cathode-ray display that indicates cloud-base height.

laser communication [COMMUN] Optical communication in which the light source is a laser whose beam is modulated for voice, video, or data communication over information bandwidths up to 1 gigahertz.

laser cutting [MET] A process by which a laser beam impinges on the workpiece in order to heat and sever the piece.

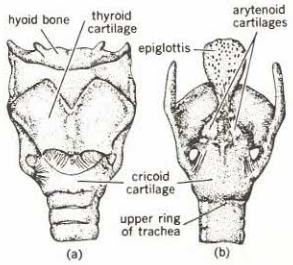
laser detecting and ranging *See* ladar.

LARVACEA



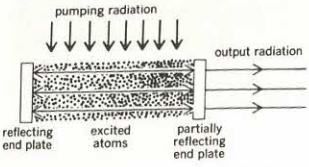
Oikopleura dioica, a larvacean. *(a)* In its house, a gelatinous tunic with strainers to filter food. *(b)* Body and anterior tail region. Arrows indicate the direction of water flow. *(Modified after Körner)*

LARYNX



Human laryngeal cartilages and ligaments. *(a)* Front view. *(b)* Back view. *(After Sappey, from J. Symington, ed., Quain's Elements of Anatomy, vol. 2, pt. 2, Longmans, Green, 1914)*

LASER



Structure of a parallel-plate laser.

laser diode *See* semiconductor laser.

laser Doppler velocimeter [OPTICS] A type of laser velocimeter used for determining the velocity of a fluid flow from the Doppler shift in the frequency of laser light scattered from particles in the fluid.

laser drill [OPTICS] A drill in which concentrated light from a ruby laser generates intense heat for drilling holes as small as 0.0001 inch (0.00025 centimeter) in diameter in tungsten, gemstones, and other hard materials.

laser earthquake alarm [ENG] An early-warning system proposed for earthquakes, involving the use of two lasers with beams at right angles, positioned across a known geologic fault for continuous monitoring of distance across the fault.

laser extensometer [OPTICS] A device which uses interference of laser beams to measure small changes in distance; it can operate between points as much as 1 kilometer apart, and has been used to measure effects produced by earth tides.

laser flash tube [ELECTR] A high-power, air-cooled or water-cooled xenon flash tube designed to produce high-intensity flashes for pumping applications.

laser fusion [NUCLEO] The use of an intense beam of laser light to heat a small pellet of deuterium and tritium to a temperature of about 100,000,000°C, as required for initiating a fusion reaction. Also known as laser-induced fusion.

laser glazing [MET] A surface alloying process in which a continuous high-energy carbon dioxide laser traverses the surface of a metal part, creating a thin layer of melt.

laser guidance [NAV] Guidance in which the target is continuously illuminated by a laser beam from an aircraft or other location so that missiles, bombs, or projectiles equipped with suitable seeker heads can home in on the laser energy reflected by the target.

laser gyro [ENG] A gyro in which two laser beams travel in opposite directions over a ring-shaped path formed by three or more mirrors; rotation is thus measured without the use of a spinning mass. Also known as ring laser.

laser heterodyne spectroscopy [SPECT] A high-resolution spectroscopic technique, used in astronomical and atmospheric observations, in which the signal to be measured is mixed with a laser signal in a solid-state diode, producing a difference-frequency signal in the radio-frequency range.

laser-holography storage [COMPUT SCI] A computer storage technology in which information is stored in microscopic spots burned in a holographic substrate by a laser beam, and is read by sensing a lower-energy laser beam that is transmitted through these spots.

laser-induced fusion *See* laser fusion.

laser-induced nuclear polarization [NUC PHYS] A technique for making the spin vectors of an ensemble of nuclei point preferentially in one direction by means of an optical pumping process using either circularly or linearly polarized laser light. Abbreviated LINUP.

laser infrared radar *See* lidar.

laser interferometer [OPTICS] An interferometer which uses a laser as a light source; because of the monochromaticity and high intrinsic brilliance of laser light, it can operate with path differences in the interfering beams of hundreds of meters, in contrast to a maximum of about 20 centimeters for classical interferometers.

laser intrusion-detector [ENG] A photoelectric intrusion detector in which a laser is a light source that produces an extremely narrow and essentially invisible beam around the perimeter of the area being guarded.

laser jamming [ORD] An electronic countermeasure in which a continuous-wave laser directs jamming energy back to a hostile laser receiver to prevent it from interfering with the use of laser rangefinders, radars, and tracking equipment during an attack.

laser memory [COMPUT SCI] A computer memory in which a controlled laser beam acts on individual and extremely small areas of a photosensitive or other type of surface, for storage and subsequent readout of digital data or other types of information.

laser photocoagulator [MED] A laser combined with an ophthalmoscope for directing bursts of coherent light through a human eye to burn selected points on a detached retina; subsequent healing of the burns causes scars that weld the retina back into position.

laser radar *See* ladar.

laser radiation detector [ELECTR] A photodetector that responds primarily to the coherent visible, infrared, or ultraviolet light of a laser beam.

laser rangefinder [OPTICS] A portable rangefinder using a battery-powered ruby laser in combination with an optical telescope to aim a laser beam and a photomultiplier for picking up the laser beam reflected from the target.

laser recorder [COMMUN] An image reproducer that resembles a facsimile system, in which a laser beam is initially modulated by the video signal and swept over photographic film or paper to reproduce an image received over wire or radio communication systems.

laserscope [ENG] A pulsed high-power laser used with appropriate scanning and imaging devices to sense objects over the sea at night or in fog and provide three-dimensional images on a viewing screen.

laser scriber [ENG] A laser-cutting setup used in place of a diamond scriber for dicing thin slabs of silicon, gallium arsenide, and other semiconductor materials used in the production of semiconductor diodes, transistors, and integrated circuits; also used for scribing sapphire and ceramic substrates.

laser seismometer [ENG] A laser interferometer system that detects seismic strains in the earth by measuring changes in distance between two granite piers located at opposite ends of an evacuated pipe through which a helium-neon or other laser beam makes a round trip; movements as small as 80 nanometers (one-eighth the wavelength of the 632.8-nanometer helium-neon laser radiation) can be detected.

laser spectroscopy [SPECT] A branch of spectroscopy in which a laser is used as an intense, monochromatic light source; in particular, it includes saturation spectroscopy, as well as the application of laser sources to Raman spectroscopy and other techniques.

laser spectrum [PHYS] The spectrum that includes all optical wavelengths, ranging from infrared through visible light to ultraviolet, in which coherent radiation can be produced by various types of lasers.

laser threshold [ELECTR] The minimum pumping energy required to initiate lasing action in a laser.

laser tracking [ENG] Determination of the range and direction of a target by echoed coherent light.

laser transit [ENG] A transit in which a laser is mounted over the sighting telescope to project a clearly visible narrow beam onto a small target at the survey site.

laser-triggered switch [ELEC] A high-voltage high-power switch that consists of a spark gap triggered into conduction by a laser beam.

laser velocimeter [OPTICS] Any velocity measuring instrument that makes use of a laser.

laser welding [MET] Micro-spot welding with a laser beam.

lashing [ENG] A rope, chain, or wire used for binding, fastening, or wrapping. [MIN ENG] Planks nailed inside of frames or sets in a shaft to keep them in place. Also known as listing.

lashing chain [MIN ENG] A short chain to attach tubs to an overrope in endless rope haulage by wrapping the chain around the rope.

lash-up [ENG] A model or test sample of equipment required in the testing of a new concept or idea which is in the embryo stage.

lasing [OPTICS] Generation of visible or infrared light waves having very nearly a single frequency by pumping or exciting electrons into high-energy states in a laser.

Lasiocampidae [INV ZOO] The tent caterpillars and lappet moths, a family of cosmopolitan (except New Zealand) lepidopteran insects in the suborder Heteroneura.

lasso cell *See* adhesive cell.

last in, first out [IND ENG] A method of determining the inventory costs by transferring the costs of material to the product in reverse chronological order. Abbreviated LIFO.

last-mask read-only memory [COMPUT SCI] A read-only memory in which the final mask used in the fabrication process determines the connections to the internal transistors, and these connections in turn determine the data pattern that will be read out when the cell is accessed. Also known as contact-mask read-only memory.

last quarter [ASTRON] The phase of the moon at western quadrature, half of the illuminated hemisphere being visible from the earth; has the characteristic half-moon shape.

latch [ENG] Any of various closing devices on a door that fit into a hook, notch, or cavity in the frame. [MIN ENG] To

make an underground survey with a dial and chain, or to mark out upon the surface, with the same instruments, the position of the workings underneath.

latch bolt [DES ENG] A self-acting spring bolt with a beveled head.

latch-in relay [ELEC] A relay that maintains its contacts in the last position assumed, even without coil energization.

latch needle [TEXT] A fine steel needle for machine knitting which has at its ends a butt and a short hook with a latch.

late blight [PL PATH] A fungus blight disease in which symptoms do not appear until late in the growing season and vary for different species.

latency [COMPUT SCI] The waiting time between the order to read/write some information from/to a specified place and the beginning of the data–read/write operation. [MED] The stage of an infectious disease, other than the incubation period, in which there are neither clinical signs nor symptoms. [PHYSIO] The period between the introduction of and the response to a stimulus. [PSYCH] The phase between the Oedipal period and adolescence, characterized by an apparent cessation of psychosexual development.

latent bud [BOT] An axillary bud whose development is inhibited, sometimes for many years, due to the influence of apical and other buds. Also known as dormant bud.

latent defect [IND ENG] A flaw or other imperfection in any article which is discovered after delivery; usually, latent defects are inherent weaknesses which normally are not detected by examination or routine tests, but which are present at time of manufacture and are aggravated by use.

latent heat [THERMO] The amount of heat absorbed or evolved by 1 mole, or a unit mass, of a substance during a change of state (such as fusion, sublimation or vaporization) at constant temperature and pressure.

latent heat of fusion *See* heat of fusion.

latent heat of sublimation *See* heat of sublimation.

latent heat of vaporization *See* heat of vaporization.

latent Herschel effect *See* Herschel effect.

latent homosexuality [PSYCH] Homosexual tendencies present in the unconscious but not felt or expressed overtly.

latent image [GRAPHICS] An invisible image produced by the physical or chemical effects of light on the individual crystals (usually silver halide) of photographic emulsions; the development process makes the image visible, in the negative.

latent instability [METEOROL] The state of that portion of a conditionally unstable air column lying above the level of free convection; latent instability is released only if an initial impulse on a parcel gives it sufficient kinetic energy to carry it through the layer below the level of free convection, within which the environment is warmer than the parcel.

latent load [MECH ENG] Cooling required to remove unwanted moisture from an air-conditioned space.

latent period [MED] Any stage of an infectious disease in which there are no clinical signs of symptoms of the infection. [PHYSIO] The period between the introduction of a stimulus and the response to it. [VIROL] The initial period of phage growth after infection during which time virus nucleic acid is manufactured by the host cell.

latent root *See* eigenvalue.

latent-virus infection [MED] A chronic, inapparent virus infection in which a virus-host equilibrium is established.

laterad [ANAT] Toward the lateral aspect.

lateral [ANAT] At, pertaining to, or in the direction of the side; on either side of the medial vertical plane. [ENG] In a gas distribution or transmission system, a pipe branching away from the central, primary part of the system. [MIN ENG] **1.** In horizon mining, a hard heading branching off a horizon along the strike of the seams. **2.** A horizontal mine working.

lateral aberration [OPTICS] **1.** The distance from the axis of an optical system at which a ray intersects a plane perpendicular to the axis through the focus of paraxial rays. **2.** The difference between the reciprocals of the image distances for paraxial and rim rays. **3.** For chromatic aberration, the difference in sizes of the images of an object for two different colors.

lateral acceleration [AERO ENG] The component of the linear acceleration of an aircraft or missile along its lateral, or Y, axis.

lateral accretion [GEOL] The digging away of material at the outer bank of a meandering stream and the simultaneous building up to the water level by deposition of material brought there by pushing and rolling along the stream bottom.

lateral area [MATH] The area of a surface with the bases (if any) excluded.

lateral axis [NAV ARCH] The athwartship line approximately through the center of gravity of a craft, around which it pitches.

lateral bud [BOT] Any bud that develops on the side of a stem.

lateral compliance [ENG ACOUS] That characteristic of a stylus based on the force required to move it from side to side as it follows the grooves of a phonograph record.

lateral cone *See* adventive cone.

lateral controller [AERO ENG] A primary flight control mechanism, generally a part of the longitudinal controller, which controls the ailerons; often resembles an automobile steering wheel but may be a control column.

lateral deflection angle [ORD] The horizontal angle representing the difference between the azimuth of the target at the instant of firing and the azimuth at which the gun must be pointed in order to hit the target; it is the algebraic sum of the principal lateral deflection angle and the lateral pointing correction.

lateral deflection setting [ORD] The setting on the lateral deflection scale of the sighting mechanism of the gun, corresponding to the lateral deflection angle.

lateral deviation [ORD] Horizontal distance between the point of impact or burst and the gun-target line.

lateral displacement [NAV] The number of nautical miles an aircraft has been displaced, perpendicular to its effective air path, determined by a pressure pattern formula. Also known as lateral drift; pressure pattern displacement.

lateral drift *See* lateral displacement.

lateral erosion [GEOL] The action of a stream in undermining a bank on one side of its channel so that material falls into the stream and disintegrates; simultaneously, the stream shifts toward the bank that is being undercut.

lateral extensometer [ENG] An instrument used in photoelastic studies of the stresses on a plate; it measures the change in the thickness of the plate resulting from the stress at various points.

lateral face [MATH] The lateral face for a prism or pyramid is any edge or face which is not part of a base.

lateral fault [GEOL] A fault along which there has been strike separation. Also known as strike-separation fault.

lateral flow spillway *See* side-channel spillway.

lateral hermaphroditism [MED] A form of human hermaphroditism in which there is an ovary on one side and a testis on the other.

lateral jump [ORD] The horizontal angle between the plane of fire and the plane of departure.

lateral lemniscus [ANAT] The secondary auditory pathway arising in the cochlear nuclei and terminating in the inferior colliculus and medial geniculate body.

lateral line [INV ZOO] A longitudinal lateral line along the sides of certain oligochaetes consisting of cell bodies of the layer of circular muscle. [VERT ZOO] A line along the sides of the body of most fishes, often distinguished by differently colored scales, which marks the lateral line organ.

lateral-line organ [VERT ZOO] A small, pear-shaped sense organ in the skin of many fishes and amphibians that is sensitive to pressure changes in the surrounding water.

lateral-line system [VERT ZOO] The complex of lateral-line end organs and nerves in skin on the sides of many fishes and amphibians.

lateral magnification [OPTICS] The ratio of some linear dimension, perpendicular to the optical axis, of an image formed by an optical system, to the corresponding linear dimension of the object. Also known as magnification.

lateral meristem [BOT] Strips or cylinders of dividing cells located parallel to the long axis of the organ in which they occur; the lateral meristem functions to increase the diameter of the organ.

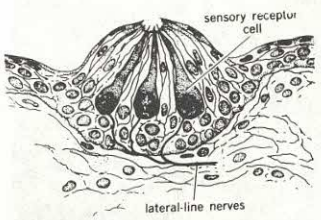
lateral mirage [OPTICS] A very rare type of mirage in which the apparent position of an object appears displaced to one side of its true position.

lateral moraine [GEOL] Drift material, usually thin, that was deposited by a glacier in a valley after the glacier melted.

lateral observation [ORD] Observation of gunfire from a point considerably to the right or left of the line of fire.

lateral parity check [COMPUT SCI] The number of one bits counted across the width of the magnetic tape; this number plus

LATERAL-LINE ORGAN



Schematic drawing of a lateral-line sense organ in skin of adult salamander, the common aquatic vermilion spotted newt. Sensory receptor cells, surrounded by supporting cells and skin epithelium, terminate in hairs projecting into skin pores. Lateral-line nerves terminate around bases of the sensory cells.

a one or a zero must always be odd (or even), depending upon the manufacturer.

lateral planation [GEOL] Reduction in land in interstream areas in a plane parallel to the stream profile; the reduction is caused by lateral movement of the stream against its banks.

lateral pointing correction [ORD] That part of the lateral deflection angle due to causes other than the travel of the target, such as wind, drift, and lateral adjustment correction.

lateral quadrupole [ACOUS] A sound source resulting from a variation of a component of the velocity of matter in a direction perpendicular to the velocity component. [ELECTROMAG] An electric or magnetic quadrupole which produces a field equivalent to that of two equal and opposite electric or magnetic dipoles separated by a small distance perpendicular to the direction of the dipoles.

lateral recording [ENG ACOUS] A type of disk recording in which the groove modulation is parallel to the surface of the recording medium so that the cutting stylus moves from side to side during recording.

lateral root [BOT] A root branch arising from the main axis.

lateral sclerosis *See* amyotrophic lateral sclerosis; primary lateral sclerosis.

lateral search *See* profiling.

lateral secretion [GEOL] A supposed phenomenon whereby a lode's or vein's mineral content is derived from the adjacent wall rock.

lateral separation [NAV] In air-traffic control, the separation between aircraft on parallel course lines.

lateral sewer [CIV ENG] A sewer discharging into a branch or other sewer and having no tributary sewer.

lateral shear interferometer [OPTICS] An interferometer in which a wavefront is interfered with a shifted version of itself, resulting in fringes along which the slope or derivative of the wavefront is constant. Also known as differential interferometer.

lateral support [CIV ENG] Horizontal propping applied to a column, wall, or pier across its smallest dimension.

lateral system [NAV] In marine operations, a system of buoyage in which the shape, color, and number distinction are assigned in accordance with the buoy's location in respect to navigable waters; when used to mark a channel, the buoys are assigned colors to indicate the side they mark and numbers to indicate their sequence along the channel; the lateral system is used in the United States.

lateral ventricle [ANAT] The cavity of a cerebral hemisphere; communicates with the third ventricle by way of the interventricular foramen.

laterite [GEOL] Weathered material composed principally of the oxides of iron, aluminum, titanium, and manganese; laterite ranges from soft, earthy, porous soil to hard, dense rock.

lateritic soil [GEOL] **1.** Soil containing laterite. **2.** Any reddish soil developed from weathering. Also known as latosol.

laterization [GEOL] Those conditions of weathering that lead to removal of silica and alkalies, resulting in a soil or rock with high concentrations of iron and aluminum oxides (laterite).

laterlog [ENG] A downhole resistivity measurement method wherein electric current is forced to flow radially through the formation in a sheet of predetermined thickness; used to measure the resistivity in hard-rock reservoirs as a method of determining subterranean structural features.

late-type star [ASTROPHYS] A star with relatively low surface temperature, in spectral class K or M.

latex [MATER] **1.** Milky colloid in which natural or synthetic rubber or plastic is suspended in water. **2.** An elastomer product made from latex.

latex cement [MATER] A highly adhesive solvent solution of latex.

latex paint [MATER] A paint consisting of a water suspension or emulsion of latex combined with pigments and additives such as binders and suspending agents. Also known as latex water paint.

latex water paint *See* latex paint.

lath [CIV ENG] **1.** A narrow strip of wood used in making a level base, as for plaster or tiles, or in constructing a light framework, as a trellis. **2.** A sheet of material used as a base for plaster.

lath brick [MATER] A long, narrow brick.

lath crib *See* lath frame.

lath door-set *See* lath frame.

lathe [MECH ENG] A machine for shaping a workpiece by gripping it in a holding device and rotating it under power against a suitable cutting tool for turning, boring, facing, or threading.

lath frame [MIN ENG] A weak construction of laths, surrounding a main crib, the space between being for the insertion of piles. Also known as lath crib; lath door-set.

lathing board *See* backup strip.

Lathridiidae [INV ZOO] The minute brown scavenger beetles, a large cosmopolitan family of coleopteran insects in the superfamily Cucujoidea.

lathyrism [MED] Poisoning produced by ingestion of vetch (*Lathyrus*) and characterized by spastic paraplegia and decreased connective-tissue tensile strength. Also known as neurolathyrism.

laticifer [BOT] A latex duct found in the mid-cortex of certain plants.

latiferous [BOT] Containing or secreting latex.

Latimeridae [VERT ZOO] A family of deep-sea lobefin fishes (Coelacanthiformes) known from a single living species, *Latimeria chalumnae*.

Latin square [MATH] An $n \times n$ square array of n different symbols, each symbol appearing once in each row and once in each column; these symbols prove useful in ordering the observations of an experiment.

latite [PETR] A not visibly crystalline rock of volcanic origin composed chiefly of sodic plagioclase and alkali feldspar with subordinate quantities of dark-colored minerals in a finely crystalline to glassy groundmass.

latitude [GEOD] Angular distance from a primary great circle or plane, as on the celestial sphere or the earth.

latitude effect [GEOPHYS] The variation of a quantity with latitude; applied particularly to the increase in cosmic-ray intensity with increasing magnetic latitude.

latitude factor [NAV] The change in latitude along a celestial line of position per 1-minute change in longitude.

latitude line [NAV] A line of position extending in an approximate east-west direction.

latitude variation [GEOPHYS] A periodic change in the latitude of any position on the earth's surface, caused by the polar variation.

latosol *See* lateritic soil.

latrappite [MINERAL] $(Ca,Na)(Nb,Ti,Fe)O_3$ A variety of the mineral perovskite.

latrine [ENG] A toilet facility, either fixed or of a portable nature, such as is maintained underground for use by miners.

latrine cleaner [MIN ENG] A laborer who brings toilet cars in a mine to the surface on a cage and flushes the contents into a sewer. Also called sanitary nipper.

latten [MET] A thin metal sheet, particularly of brass or similar alloy, hot-rolled steel, or tin-covered iron, used for ornamental purposes.

lattice [CIV ENG] A network of crisscrossed strips of metal or wood. [CRYSTAL] A regular periodic arrangement of points in three-dimensional space; it consists of all those points P for which the vector from a given fixed point to P has the form $n_1\mathbf{a} + n_2\mathbf{b} + n_3\mathbf{c}$, where n_1, n_2, and n_3 are integers, and **a**, **b**, and **c** are fixed, linearly independent vectors. Also known as periodic lattice; space lattice. [MATH] A partially ordered set in which each pair of elements has both a greatest lower bound and least upper bound. [NAV] A pattern formed by two or more families of intersecting lines of position, such as the hyperbolic lines of position from two or more loran stations. [NUCLEO] An orderly array or pattern of nuclear fuel elements and moderator in a reactor or critical assembly.

lattice constant [CRYSTAL] A parameter defining the unit cell of a crystal lattice, that is, the length of one of the edges of the cell or an angle between edges. Also known as lattice parameter.

lattice defect *See* crystal defect.

lattice drainage pattern *See* rectangular drainage pattern.

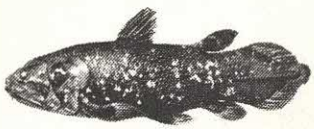
lattice dynamics [SOLID STATE] The study of the thermal vibrations of a crystal lattice. Also known as crystal dynamics.

lattice energy [SOLID STATE] The energy required to separate ions in an ionic crystal an infinite distance from each other.

lattice filter [ELECTR] An electric filter consisting of a lattice network whose branches have L-C parallel-resonant circuits shunted by quartz crystals.

lattice girder [CIV ENG] An open girder, beam, or column built from members joined and braced by intersecting diagonal bars. Also known as open-web girder.

LATIMERIDAE



Living coelacanth, *Latimeria chalumnae*; 5 feet (1.5 meters). *(After P. P. Grasse, ed., Traite de Zoologie, tome 13, fasc. 3, 1958)*

lattice network [ELEC] A network that is composed of four branches connected in series to form a mesh; two nonadjacent junction points serve as input terminals, and the remaining two junction points serve as output terminals.

lattice parameter *See* lattice constant.

lattice polarization [SOLID STATE] Electric polarization of a solid due to displacement of ions from equilibrium positions in the lattice.

lattice reactor [NUCLEO] A heterogeneous nuclear reactor in which both fuel and moderator are in the form of long rods.

lattice scattering [SOLID STATE] Scattering of electrons by collisions with vibrating atoms in a crystal lattice, reducing the mobility of charge carriers in the crystal and thereby affecting its conductivity.

lattice truss [CIV ENG] A truss that resembles latticework because of diagonal placement of members connecting the upper and lower chords.

lattice vibration [SOLID STATE] A periodic oscillation of the atoms in a crystal lattice about their equilibrium positions.

lattice wave [SOLID STATE] A disturbance propagated through a crystal lattice in which atoms oscillate about their equilibrium positions.

lattice winding [ELEC] A winding made of lattice coils and used for electric machines.

lattice-wound coil *See* honeycomb coil.

lattissimus dorsi [ANAT] The widest muscle of the back; a broad, flat muscle of the lower back that adducts and extends the humerus, is used to pull the body upward in climbing, and is an accessory muscle of respiration.

Lattorfian *See* Tongrian.

latus rectum [MATH] The length of a chord through the focus and perpendicular to the axis of symmetry in a conic section.

lauan [MATER] Wood from any of several genera of trees of the Philippines, Malaya, and Sarawak; resembles mahogany but shrinks and swells more with changes in moisture.

laubmannite [MINERAL] $Fe_3Fe_6(PO_4)_4(OH)_2$ Mineral composed of basic ferrous iron phosphate and ferric iron phosphate.

laudanidine [ORG CHEM] $C_{20}H_{25}NO_4$ An optically active alkaloid found in opium that crystallizes as prisms from an alcohol solution, and melts at 185°C. Also known as *l*-laudanine; tritopine.

laudanine [ORG CHEM] $C_{20}H_{25}NO_4$ An optically inactive alkaloid derived from alkaline mother liquors from morphine extraction; it crystallizes in orthorhombic prisms from alcohol and chloroform; the prisms melt at 167°C, and are soluble in hot alcohol, benzene, and chloroform. Also known as *dl*-laudanine.

***dl*-laudanine** *See* laudanine.

***l*-laudanine** *See* laudanidine.

laudanosine [ORG CHEM] $C_{21}H_{27}NO_4$ An alkaloid that is the methyl ether of laudanine; the optically inactive form crystallizes from dilute alcohol and melts at about 115°C; the levorotatory active form crystallizes from light petroleum solution and melts at 89°C.

Laue camera [CRYSTAL] The apparatus used in the Laue method; the x-ray beam usually enters through a hole in the x-ray film, which records beams bent through an angle of nearly 180° by the crystal; less commonly, the film is placed beyond the crystal.

Laue condition [CRYSTAL] **1.** The condition for a vector to lie in a Laue plane: its scalar product with a specified vector in the reciprocal lattice must be one-half of the scalar product of the latter vector with itself. **2.** *See* Laue equations.

Laue equations [CRYSTAL] Three equations which must be satisfied for an x-ray beam of specified wavelength to be diffracted through a specified angle by a crystal; they state that the scaler products of each of the crystallographic axial vectors with the difference between unit vectors in the directions of the incident and scattered beams, are integral multiples of the wavelength. Also known as Laue condition.

Laue method [CRYSTAL] A method of studying crystalline structures by x-ray diffraction, in which a finely collimated beam of polychromatic x-rays falls on a single crystal whose orientation can be set as desired, and diffracted beams are recorded on a photographic film.

Laue pattern [CRYSTAL] The characteristic photographic record obtained in the Laue method.

Laue plane [CRYSTAL] A plane which is the perpendicular bisector of a vector in the reciprocal lattice; such planes form the boundaries of Brillouin zones.

Laue theory [CRYSTAL] A theory of diffraction of x-rays by crystals, based on the Laue equations.

laughing gas *See* nitrous oxide.

Laugiidae [PALEON] A family of Mesozoic fishes in the order Coelacanthiformes.

laumonite *See* laumontite.

laumontite [MINERAL] $CaAl_2Si_4O_{12}\cdot 4H_2O$ A white zeolite mineral crystallizing in the monoclinic system; loses water on exposure to air, eventually becoming opaque and crumbling. Also known as laumonite; lomonite; lomontite.

launch [AERO ENG] **1.** To send off a rocket vehicle under its own rocket power, as in the case of guided aircraft rockets, artillery rockets, and space vehicles. **2.** To send off a missile or aircraft by means of a catapult or by means of inertial force, as in the release of a bomb from a flying aircraft. **3.** To give a space probe an added boost for flight into space just before separation from its launch vehicle.

launch complex [AERO ENG] The composite of facilities and support equipment needed to assemble, check out, and launch a rocket vehicle.

launcher [ORD] **1.** A device designed to support and launch a rocket or rocket shell. **2.** A device on a rifle for firing a grenade.

launching [CIV ENG] The act or process of floating a ship after only hull construction is completed; in some cases ships are not launched until after all construction is completed. [ELECTROMAG] The process of transferring energy from a coaxial cable or transmission line to a waveguide.

launching angle [AERO ENG] The angle between the horizontal plane and the longitudinal axis of a rocket or missile at the time of launching.

launching cradle [CIV ENG] A framework made of wood to support a vessel during launching from sliding ways.

launching ramp [AERO ENG] A ramp used for launching an aircraft or missile into the air.

launching site [AERO ENG] **1.** A site from which launching is done. **2.** The platform, ramp, rack, or other installation at such a site.

launching tube [ORD] A tube used to guide a rocket missile or other projectile during launching.

launching ways [CIV ENG] Two (or more) sets of long, heavy timbers arranged longitudinally under the bottom of a ship during building and launching, with one set on each side, and sloping toward the water; the lower set, or ground ways, remain stationary and support the upper set, or sliding ways, which carry the weight of the ship after the shores and keel blocks are removed.

launch pad [AERO ENG] The load-bearing base or platform from which a rocket vehicle is launched. Also known as pad.

launch vehicle [AERO ENG] A rocket or other vehicle used to launch a probe, satellite, or the like. Also known as booster.

launch window [AERO ENG] The time period during which a spacecraft or missile must be launched in order to achieve a desired encounter, rendezvous, or impact.

launder [ENG] An inclined channel or trough for the conveyance of a liquid, such as for water in mining and construction engineering or for molten metal.

launder screen [MIN ENG] A screen used in a launder for the sizing and dewatering of small sizes of anthracite.

launder separation process [MIN ENG] A hydraulic process for separating heavy gravity product from the lighter product that flows above it; a stream of fluid carries material down a channel that has draws to separate the heavy material from the light material.

launder washer [MIN ENG] A type of coal washer in which the coal is separated from the refuse by stratification due to hindered settling while being carried in aqueous suspension through the launder.

laundry blue [MATER] Dye-containing solution used to give a blue tint to laundry-yellowed white cottons and linens; usually contains Prussian blue.

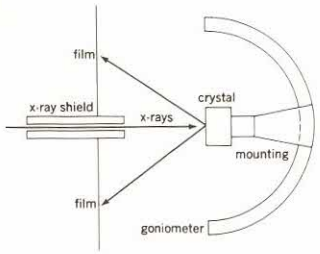
lauoho o pele *See* Pele's hair.

Lauraceae [BOT] The laurel family of the order Magnoliales distinguished by definite stamens in series of three, a single pistil, and the lack of petals.

lauraldehyde *See* lauryl aldehyde.

Laurasia [GEOL] A continent theorized to have existed in the Northern Hemisphere; supposedly it broke up to form the pres-

LAUE CAMERA



Schematic diagram of back-reflection Laue camera. Orientation of single crystal can be set as desired by system of goniometer circles. Diffracted beams, bent through angles of nearly 180°, are recorded on film.

LAUNCH COMPLEX

Aerial view of the Titan 3 complex at Cape Canaveral, Florida.

ent northern continents about the end of the Pennsylvania period.

Lauratonematidae [INV ZOO] A family of marine nematodes of the superfamily Enoploidea; many females possess a cloaca.

laurel forest *See* temperate rainforest.

laurel wax *See* bayberry wax.

laurence [OPTICS] A shimmering seen over a hot surface on a calm, cloudless day, caused by the unequal refraction of light by innumerable convective air columns of different temperatures and densities.

Laurence-Moon-Biedl syndrome [MED] A hereditary endocrine disorder of the pituitary or other hypothalamic structures transmitted as a dominant mutant gene and characterized principally by girdle-type obesity, mental retardation, and hypogenitalism.

Laurent expansion [MATH] An infinite series in which an analytic function $f(z)$ defined on an annulus about the point z_0 may be expanded, with nth term $a_n(z-z_0)^n$, n ranging from $-\infty$ to ∞, and $a_n = 1/2\pi i$ times the integral of $f(t)/(t-z_0)^{n+1}$ along a simple closed curve interior to the annulus. Also known as Laurent series.

Laurent half-shade plate [OPTICS] A device used to determine the direction of polarization of plane polarized light; it consists of a quartz plate of special thickness that covers half of the plane polarized beam, followed by a plane polarization analyzer.

Laurentian Plateau *See* Laurentian Shield.

Laurentian Shield [GEOL] A Precambrian plateau extending over half of Canada from Labrador southwest along Hudson Bay and northwest to the Arctic Ocean. Also known as Canadian Shield; Laurentian Plateau.

Laurentide ice sheet [HYD] A major recurring glacier that at its maximum completely covered North America east of the Rockies from the Arctic Ocean to a line passing through the vicinity of New York, Cincinnati, St. Louis, Kansas City, and the Dakotas.

Laurent series *See* Laurent expansion.

Laurer's canal [INV ZOO] In certain flukes, a canal which passes from the oviduct to the ventral surface of the body.

lauric acid [ORG CHEM] $CH_3(CH_2)_{10}COOH$ A fatty acid melting at 44°C, boiling at 225°C (100 mmHg; 13,332 newtons per square meter); colorless needles soluble in alcohol and ether, insoluble in water; found as the glyceride in vegetable fats, such as coconut and laurel oils; used for wetting agents, in cosmetics, soaps, resins, and insecticides, and as a chemical intermediate. Also known as dodecanoic acid.

lauric aldehyde *See* lauryl aldehyde.

laurionite [MINERAL] $Pb(OH)Cl$ A colorless mineral composed of basic lead chloride, occurring in prismatic crystals; it is dimorphous with paralaurionite.

laurisilva *See* temperate rainforest.

laurite [MINERAL] RuS_2 A black mineral composed of ruthenium sulfide (often with osmium), occurring as small crystals or grains.

Lauritsen electroscope [ELEC] A rugged and sensitive electroscope in which a metallized quartz fiber is the sensitive element.

lauryl alcohol [ORG CHEM] $CH_3(CH_2)_{11}OH$ A colorless solid which is obtained from coconut oil fatty acids, has a floral odor, and boils at 259°C; used in detergents, lubricating oils, and pharmaceuticals. Also known as alcohol C-12; *n*-dodecanol; dodecyl alcohol.

lauryl aldehyde [ORG CHEM] $CH_3(CH_2)_{10}CHO$ A constituent of an essential oil from the silver fir; a colorless solid or a liquid, with a floral odor, that is soluble in 90% alcohol; used in perfumes. Also known as aldehyde C-12 lauric; lauraldehyde; lauric aldehyde.

lauryl mercaptan [ORG CHEM] $C_{12}H_{25}SH$ Pale-yellow or water-white liquid with mild odor; insoluble in water, soluble in organic solvents; used to manufacture plastics, pharmaceuticals, insecticides, fungicides, and elastomers.

lausenite [MINERAL] $Fe_2(SO_4)_3 \cdot 6H_2O$ A white, monoclinic mineral consisting of hydrated ferric sulfate; occurs in lumpy aggregates of fibers.

Lauson engine [ENG] Single-cylinder engine used in screening tests prior to the L-series lube oil tests (such as L-1 or L-2 tests).

lautal [MET] A hard aluminum alloy with small percentages of copper and silicon and traces of iron, manganese, or magnesium.

lautarite [MINERAL] $Ca(IO_3)_2$ A monoclinic mineral composed of calcium iodate that occurs in prismatic crystals.

lauter tub [FOOD ENG] A tank with a perforated false bottom in which the extract (wort) is separated from the insoluble grain residue during mashing of barley malt.

lautite [MINERAL] $CuAsS$ A mineral composed of copper sulfide and copper arsenide.

Lauxaniidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae; larvae are leaf miners.

lava [GEOL] **1.** Molten extrusive material that reaches the earth's surface through volcanic vents and fissures. **2.** The rock mass formed by consolidation of molten rock issuing from volcanic vents and fissures, consisting chiefly of magnesium silicate; used for insulators.

lava blisters [GEOL] Small, steep-sided swellings that are hollow and raised on the surfaces of some basaltic lava flows; formed by gas bubbles pushing up the lava's viscous surface.

lava cone [GEOL] A volcanic cone that was formed of lava flows.

lava dome *See* shield volcano.

lava field [GEOL] A wide area of lava flow; it is commonly several square kilometers in area and forms along the base of a large compound volcano or on the flanks of shield volcanoes.

lava flow [GEOL] **1.** A lateral, surficial stream of molten lava issuing from a volcanic cone or from a fissure. **2.** The solidified mass of rock formed when a lava stream congeals.

lava fountain [GEOL] A jetlike eruption of lava that issues vertically from a volcanic vent or fissure. Also known as fire fountain.

lavage [MED] Therapeutic washing out of an organ.

lava lake [GEOL] A lake of lava that is molten and fluid; usually contained within a summit volcanic crater or in a pit crater on the flanks of a shield volcano.

Laval nozzle *See* de Laval nozzle.

lava plateau [GEOL] An elevated tableland or flat-topped highland that is several hundreds to several thousands of square kilometers in area; underlain by a thick succession of lava flows.

lava tube [GEOL] A long, tubular opening under the crust of solidified lava.

lavender oil [MATER] Colorless to yellow or green-yellow essential oil with sweet aroma and bitter taste; distilled from fresh flowers of several species of lavender (*Lavandula*); main components are linalool, linalyl acetate, geraniol, cumarin, furfurol, and borneol; used in perfumery, and in medicine as a stimulant.

lavender spike oil *See* spike oil.

lavenite [MINERAL] $(Na,Ca)_3Zr(Si_2O_7)(O,OH,F)_2$ A mineral composed of complex silicate, occurring in prismatic crystals.

Laves phases [MET] Alloy phases which have the general formula AB_2, and the crystal structures of either $MgCu_2$ (cubic) or $MgZn_2$ or $MgNi_2$ (both hexagonal).

law [SCI TECH] A regularity which applies to all members of a broad class of phenomena.

lawn [TEXT] A sheer cotton or cotton and polyester fabric made of combed or carded yarn.

lawnmower [ELECTR] Type of radio-frequency preamplifier used with radar receivers. [ENG] A helix-type recorder mechanism. [MECH ENG] A machine for cutting grass on lawns.

law of action and reaction *See* Newton's third law.

law of constant angles [CRYSTAL] The law that the angles between the faces of a crystal remain constant as the crystal grows.

law of constant heat summation *See* Hess's law.

law of corresponding states [CHEM] The law that when, for two substances, any two ratios of pressure, temperature, or volume to their respective critical properties are equal, the third ratio must equal the other two.

law of cosines [MATH] Given a triangle with angles A, B, and C and sides a, b, c opposite these angles respectively: $a^2 = b^2 + c^2 - 2bc \cos A$.

law of definite composition *See* law of definite proportion.

law of definite proportion [CHEM] The law that a given chemical compound always contains the same elements in the same fixed proportion by weight. Also known as law of definite composition.

law of electric charges [ELEC] The law that like charges repel, and unlike charges attract.

law of electromagnetic induction *See* Faraday's law of electromagnetic induction.

law of electrostatic attraction *See* Coulomb's law.

law of equal areas [ASTRON] The second of Kepler's laws.

law of exponents [MATH] Any of the laws $a^m a^n = a^{m+n}$, $a^m/a^n = a^{m-n}$, $(a^m)^n = a^{mn}$, $(ab)^n = a^n b^n$, $(a/b)^n = a^n/b^n$; these laws are valid when m and n are any integers, or when a and b are positive and m and n are any real numbers. Also known as exponential law.

law of extralateral rights *See* apex law.

law of gravitation *See* Newton's law of gravitation.

law of large numbers [STAT] The law that if, in a collection of independent identical experiments, $N(B)$ represents the number of occurrences of an event B in n trials, and p is the probability that B occurs at any given trial, then for large enough n it is unlikely that $N(B)/n$ differs from p by very much. Also known as Bernoulli theorem.

law of magnetism [ELECTROMAG] The law that like poles repel, and unlike poles attract.

law of mass action [CHEM] The law stating that the rate at which a chemical reaction proceeds is directly proportional to the molecular concentrations of the reacting compounds.

law of minimum [BIOL] The law that those essential elements for which the ratio of supply to demand (A/N) reaches a minimum will be the first to be removed from the environment by life processes; it was proposed by J. von Liebig, who recognized phosphorus, nitrogen, and potassium as minimum in the soil; in the ocean the corresponding elements are phosphorus, nitrogen, and silicon. Also known as Liebig's law of minimum.

law of parallel solenoids [PHYS] The law that under stationary conditions isopycnals and isobars must be parallel at all levels, and isobars and isopycnals at one level must be parallel to those at all other levels.

law of partial pressures *See* Dalton's law.

law of rational intercepts *See* Miller law.

law of reflection *See* reflection law.

law of signs [MATH] The product or quotient of two numbers is positive if the numbers have the same sign, negative if they have opposite signs.

law of sines [MATH] Given a triangle with angles A, B, and C and sides a, b, c opposite these angles respectively: $\sin A/a = \sin B/b = \sin C/c$.

law of specificity of bacteria *See* Koch's postulate.

law of storms [METEOROL] Historically, the general statement of the manner in which the winds of a cyclone rotate about the cyclone's center, and the way that the entire disturbance moves over the earth's surface.

law of superposition [GEOL] The law that strata underlying other strata must be the older if there has been neither overthrust nor inversion.

law of tangents [MATH] Given a triangle with angles A, B, and C and sides a, b, c opposite these angles respectively: $(a-b)/(a+b) = [\tan \frac{1}{2}(A-B)]/[\tan \frac{1}{2}(A+B)]$.

Lawrence tube *See* chromatron.

lawrencite [MINERAL] $(Fe,Ni)Cl_2$ A brown or green mineral composed of ferrous chloride and found as an abundant accessory mineral in iron meteorites.

lawrencium [CHEM] A chemical element, symbol Lr, atomic number 103; two isotopes have been discovered, mass number 257 or 258 and mass number 256.

laws of refraction *See* Snell laws of refraction.

Lawson criterion [PL PHYS] The requirement for the energy produced by fusion in a plasma to exceed that required to produce the confined plasma; it states that for a mixture of deuterium and tritium in the temperature range from 1×10^8 to 5×10^8 degrees Celsius, the product of the ionic density and the confinement time must be about 10^{14} seconds per cubic centimeter.

lawsonite [MINERAL] $CaAl_2(Si_2O_7)(OH)_2 \cdot H_2O$ A colorless or grayish-blue mineral crystallizing in the orthorhombic system; found in gneisses and schists.

laxative [PHARM] An agent that stimulates bowel movement and relieves constipation.

lay [DES ENG] The direction, length, or angle of twist of the strands in a rope or cable. [MET] The direction of the prevailing surface pattern on a piece of metal after grinding, cutting, lapping, or other processing. [MIN ENG] A share of profit.

lay-by [MIN ENG] Siding in single-track underground tramming road.

layer [GEOL] A tabular body of rock, ice, sediment, or soil lying parallel to the supporting surface and distinctly limited above and below. [GEOPHYS] One of several strata of ionized air, some of which exist only during the daytime, occurring at altitudes between 50 and 400 kilometers; the layers reflect radio waves at certain frequencies and partially absorb others. [MET] The stratum of weld metal consisting of one or more passes and lying parallel to the welding surface.

layer capacitance *See* cathode interface capacitance.

layer depth [OCEANOGR] **1.** The thickness of the mixed layer in an ocean. **2.** The depth to the top of the thermocline.

layer depth effect [GEOPHYS] The weakening of a sound beam or seismic pulse because of abnormal spreading in passing from a positive gradient layer to an underlying negative layer.

layer impedance *See* cathode interface impedance.

layering [BOT] A propagation method by which root formation is induced on a branch or a shoot attached to the parent stem by covering the part with soil. [ECOL] A stratum of plant forms in a community, such as mosses, shrubs, or trees in a bog area.

layering of firedamp [MIN ENG] The formation of a layer of firedamp at the roof of a mine working and above the ventilating air current.

layer lattice *See* layer structure.

layer loading [MIN ENG] A procedure whereby the coal is placed in the railroad cars in horizontal layers.

layer of no motion [OCEANOGR] A layer, assumed to be at rest, at some depth in the ocean.

layer silicate *See* phyllosilicate.

layer structure [CRYSTAL] A crystalline structure found in substances such as graphites and clays, in which the atoms are largely concentrated in a set of parallel planes, with the regions between the planes comparatively vacant. Also known as layer lattice.

layer winding [ELEC] Coil-winding method in which adjacent turns are laid evenly and side by side along the length of the coil form; any number of additional layers may be wound over the first, usually with sheets of insulating material between the layers.

lay off [ENG] The process of fairing a ship's lines or an airplane's in a mold loft in order to make molds and templates for structural units. [NAV] The act of steering a ship away from the shore, a pier, or another ship.

layout [GRAPHICS] A design drawing or graphical statement of the overall form of a component, system, or device, which is usually prepared during innovative stages of a design.

layout character [COMPUT SCI] A control character that determines the form in which the output data generated by a printer or display device are arranged. Also known as format effector.

lay ratio [ELEC] The ratio of the axial length of one complete turn of the helix formed by the core of a cable or the wire of a stranded conductor, to the mean diameter of the cable.

lay-up [ENG] Production of reinforced plastics by positioning the reinforcing material (such as glass fabric) in the mold prior to impregnation with resin.

lazaret [NAV ARCH] A space between decks above the afterpeak.

lazuli *See* lapis lazuli.

lazulite [MINERAL] $(Mg,Fe)Al_2(OH)_2(PO_4)_2$ A violet-blue or azure-blue mineral with vitreous luster; composed of basic aluminum phosphate and occurring in small masses or monoclinic crystals; hardness is 5-6 on Mohs scale, and specific gravity is 3.06–3.12. Also known as berkeyite; blue spar; false lapis.

lazurite [MINERAL] $(Na,Ca)_8(Al,Si)O_{24}(S,SO_4)$ A blue or violet-blue feldspathoid mineral crystallizing in the isometric system; the chief mineral constituent of lapis lazuli.

lazy evaluation *See* demand-driven execution.

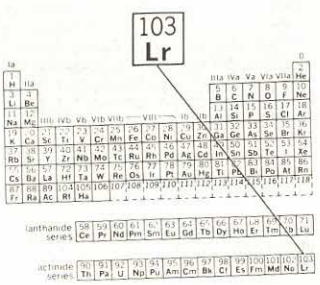
lazy H antenna [ELECTROMAG] An antenna array in which two or more dipoles are stacked one above the other to obtain greater directivity.

lazy jack [ENG] A device that accommodates changes in length of a pipeline or similar structure through the motion of two linked bell cranks.

lb *See* pound.

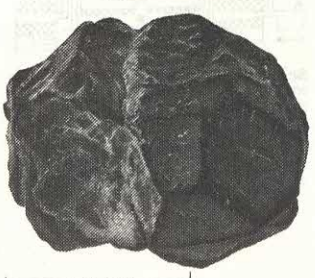
L band [COMMUN] A band of radio frequencies extending from 390 to 1550 megahertz, corresponding to wavelengths of 76.9 to 19.37 centimeters.

LAWRENCIUM



Periodic table of the chemical elements showing the position of lawrencium.

LAZURITE



Lazurite from Afghanistan. *(Specimen from Department of Geology, Bryn Mawr College)*

lb ap *See* pound.
lb apoth *See* pound.
lbf *See* pound.
lbf-ft *See* foot-pound.
lb t *See* pound.
lb tr *See* pound.

L capture [NUC PHYS] A type of generalized beta interaction in which a nucleus captures an electron from the *L* shell of atomic electrons (the shell second closest to the nucleus).

L carrier system [COMMUN] Telephone carrier system used on coaxial cable systems, and microwave (line of sight), and tropospheric scatter radio systems; it occupies a frequency band from 68 kilohertz to over 8 megahertz.

LCD *See* liquid crystal display.

LC filter *See* inductive filter.

L chain *See* light chain.

LCL *See* less-than-carload; lifting condensation level.

LC ratio [ELEC] The inductance of a circuit in henrys divided by capacitance in farads.

LD_{50} *See* lethal dose 50.

LDA localizer [NAV] A facility of comparable utility and accuracy to the standard ILS (instrument landing system) localizer, but which is not part of a full ILS and may not be in line with the runway.

LDH *See* lactic dehydrogenase.

L display [ELECTR] A radarscope display in which the target appears as two horizontal pulses or blips, one extending to the right and one to the left from a central vertical time base; when the radar antenna is correctly aimed in azimuth at the target, both blips are of equal amplitude; when not correctly aimed, the relative blip amplitudes indicate the pointing error; the position of the signal along the baseline indicates target distance; the display may be rotated 90° when used for elevation aiming instead of azimuth aiming.

L/D ratio [ENG] Length to diameter ratio, a frequently used engineering relationship.

leachate [CHEM] A solution formed by leaching.

leaching [CHEM ENG] The dissolving, by a liquid solvent, of soluble material from its mixture with an insoluble solid; leaching is an industrial separation operation based on mass transfer; examples are the washing of a soluble salt from the surface of an insoluble precipitate, and the extraction of sugar from sugar-beets. [GEOCHEM] The separation or dissolving out of soluble constituents from a rock or ore body by percolation of water. [MIN ENG] Dissolving soluble minerals or metals out of the ore, as by the use of percolating solutions such as cyanide or chlorine solutions, acids, or water. Also known as lixiviation.

leach ion-exchange flotation process [MET] A method of extraction developed for treatment of copper ores not amenable to direct flotation; the metal is dissolved by leaching, for example, with sulfuric acid, in the presence of an ion-exchange resin; the resin recaptures the dissolved metal and is then recovered in a mineralized froth by the flotation process.

leach material [MIN ENG] Material sufficiently mineralized to be economically recoverable by leaching.

leach pile [MIN ENG] Mineralized materials stacked so as to permit wanted minerals to be effectively and selectively dissolved by leaching.

lead [CHEM] A chemical element, symbol Pb, atomic number 82, atomic weight 207.19. [DES ENG] The distance that a screw will advance or move into a nut in one complete turn. [ELEC] A wire used to connect two points in a circuit. [ENG] A mass of lead attached to a line, as used for sounding at sea. [GEOL] A small, narrow passage in a cave. [GRAPHICS] A thin strip of metal used during the composition process to space lines of type. [MET] A soft, heavy metal with a silvery-bluish color; when freshly cut it is malleable and ductile; occurs naturally, mostly in combination; used principally in alloys in pipes, cable sheaths, type metal, and shields against radioactivity. [ORD] **1.** The action of aiming ahead of a moving target with a gun, bomb, rocket, or torpedo so as to hit the target, including whatever action is necessary to correct for deflection. **2.** The distance between the moving target and the point at which the gun or missile is aimed. **3.** The number of diameters for one complete turn of the rifling. **4.** An explosive train component which consists of a column of high explosive, usually small in diameter, used to transmit detonation from one detonating component to a succeeding high explosive component; it is generally used to transmit the detonation from a detonator to a booster charge. [PHYS] *See* lead angle.

lead-208 [NUC PHYS] Lead isotope, atomic mass number of 208, formed by the radioactive decay of thorium.

lead acetate [ORG CHEM] $Pb(C_2H_3O_2)_2 \cdot 3H_2O$ Poisonous, water-soluble white crystals decomposing at 280°C; loses water at 75°C; used in hair dyes, medicines, and textile mordants, for waterproofing, for manufacture of varnishes and pigments, and as an analytical reagent. Also known as sugar of lead.

lead-acid battery [ELEC] A storage battery in which the electrodes are grids of lead containing lead oxides that change in composition during charging and discharging, and the electrolyte is dilute sulfuric acid.

lead angle [DES ENG] The angle that the tangent to a helix makes with the plane normal to the axis of the helix. [MET] The angle at the point of welding between an electrode and a line perpendicular to the weld axis. [ORD] **1.** The angle between the line of sight to a moving target and the line of sight to a point ahead of the target. **2.** A dropping angle. [PHYS] The phase difference between a sinusoidally varying quantity and a reference quantity which varies sinusoidally at the same frequency, when this phase difference is positive. Also known as angle of lead; lead; phase lead.

lead antimonite [INORG CHEM] $Pb_3(SbO_4)_2$ Poisonous, water-insoluble orange-yellow powder; used as a paint pigment and to stain glass and ceramics. Also known as antimony yellow; Naples yellow.

lead arsenate [INORG CHEM] $Pb_3(AsO_4)_2$ Poisonous, water-insoluble white crystals; soluble in nitric acid; used as an insecticide.

lead azide [INORG CHEM] $Pb(N_3)_2$ Unstable, colorless needles that explode at 350°C; lead azide is shipped submerged in water to reduce sensitivity; used as a detonator for high explosives.

lead-base babbitt [MET] Alloy of 10–15% antimony, 2–10% tin, up to 0.2% copper, sometimes with arsenic, the remainder being lead; used as a bearing metal; a variation used in diesel engine and railway bearings contains alkaline-earth metals. Also known as white-metal bearing alloy.

lead-base grease [MATER] A mixture of soap and mineral oil, usually prepared by the reaction of lead oxide and fatty acid; holds up to extreme pressure and is useful as a gear lubricant.

lead borate [INORG CHEM] $Pb(BO_2)_2 \cdot H_2O$ Poisonous, water-insoluble white powder; soluble in dilute nitric acid; used as varnish and paint drier, for galvanoplastic work, in lead glass, and in waterproofing paints.

lead bromide [INORG CHEM] $PbBr_2$ An alcohol-insoluble white powder melting at 373°C, boiling at 916°C; slightly soluble in hot water.

lead bronze [MET] An alloy of 60–70% copper, up to 2% nickel, and up to 15% tin with the balance lead; used as a bearing metal.

lead bullet [ORD] In small-arms ammunition, a bullet composed of lead or of a composition with a high percentage of lead.

lead burning *See* lead welding.

lead carbonate [INORG CHEM] $PbCO_3$ Poisonous, acid-soluble white crystals decomposing at 315°C; insoluble in alcohol and water; used as a paint pigment.

lead-chamber process [CHEM ENG] A process for the preparation of impure or dilute (60–78%) sulfuric acid; sulfur dioxide is oxidized by moist air with nitrogen oxide catalysts in a series of lead-lined chambers, the Gay-Lussac tower and the Glover tower; used primarily in the manufacture of fertilizer.

lead chart [ORD] A chart or table giving the leads necessary to strike a moving target under various conditions, such as the distance to the target and its speed and direction of travel.

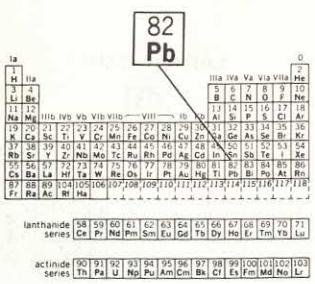
lead chloride [INORG CHEM] $PbCl_2$ Poisonous white crystals melting at 498°C, boiling at 950°C; slightly soluble in hot water, insoluble in alcohol and cold water; used to make lead salts and lead chromate pigments and as an analytical reagent.

lead chromate [INORG CHEM] $PbCrO_4$ Poisonous, water-insoluble yellow crystals melting at 844°C; soluble in acids; used as a paint pigment.

lead compensation [CONT SYS] A type of feedback compensation primarily employed for stabilization or for improving a system's transient response; it is generally characterized by a series compensation transfer function of the type

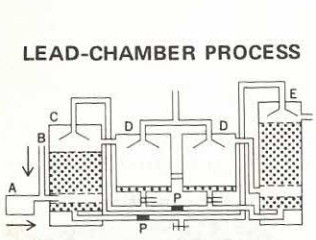
$$G_c(s) = K\frac{(s - z)}{(s - p)}$$

LEAD



Periodic table of the chemical elements showing the position of lead.

LEAD-CHAMBER PROCESS



Schematic drawing of the lead-chamber process for manufacture of sulfuric acid, with concentration of 60–78%. A, sulfur or pyrite burners; B, inlet for nitrogen oxides; C, Glover tower; D, lead chamber; E, Gay-Lussac tower; P, pumps.

where $z < p$ and K is a constant.

lead computer [ORD] A device for calculating leads to hit a moving target, often placed in the sights or mount of a machine gun that automatically gives the proper lead when the target is tracked by the gun.

lead-covered cable [ELEC] A cable whose conductors are protected from moisture and mechanical damage by a lead sheath.

lead curve [CIV ENG] The curve in a railroad turnout between the switch and the frog.

lead cyanide [INORG CHEM] $Pb(CN)_2$ Poisonous white to yellow powder; slightly soluble in water, decomposed by acids; used in metallurgy.

lead dioxide [INORG CHEM] PbO_2 Poisonous brown crystals that decompose when heated; insoluble in water and alcohol, soluble in glacial acetic acid; used as an oxidizing agent, in electrodes, batteries, matches, and explosives, as a textile mordant, in dye manufacture, and as an analytical reagent. Also known as anhydrous plumbic acid; brown lead oxide; lead peroxide.

leaded alloy [MET] An alloy, especially of brass, bronze, or steel, to which lead is added to improve machinability and mechanical properties.

leaded gasoline [MATER] Motor gasoline into which a small amount of TEL (tetraethyllead) has been added to increase octane number or rating.

leaded zinc oxide [MATER] A mixture of zinc oxide and basic lead sulfate; used in paints.

lead encephalopathy [MED] Degeneration of the neurons of the brain accompanied by cerebral edema, due to lead poisoning.

lead equivalent [NUCLEO] The thickness of lead that gives the same reduction in radiation dose rate as the material in question.

leader [COMPUT SCI] A record which precedes a group of detail records, giving information about the group not present in the detail records; for example, "beginning of batch 17." [ENG] The unrecorded length of magnetic tape that enables the operator to thread the tape through the drive and onto the take-up reel without losing data or recorded music, speech, or such. [GEOPHYS] The streamer which initiates the first phase of each stroke of a lightning discharge; it is a channel of very high ion density which propagates through the air by the continual establishment of an electron avalanche ahead of its tip. Also known as leader streamer. [GRAPHICS] **1.** A short piece of blank film at each end of a strip of photographic film or reel of motion picture film, used to thread the film through the mechanism of a camera or projector. **2.** Lines or rows of dashes or dots used to guide the reader's eye across a printed page.

leader cable [NAV] A cable used as a navigation aid, in which the path to be followed is defined by the magnetic field produced by current flowing through the cable.

leader label [COMPUT SCI] A record appearing at the beginning of a magnetic tape to uniquely identify the tape as one required by the system.

leader streamer *See* leader.

leader stroke [GEOPHYS] The entire set of events associated with the propagation of any leader between cloud and ground in a lightning discharge.

lead fluoride [INORG CHEM] PbF_2 A crystalline solid with a melting point of 824°C; used for laser crystals and electronic and optical applications.

lead fluosilicate *See* lead hexafluorosilicate.

lead foil [MET] A foil of lead or of lead alloy containing, for example, 10–12% tin and 1% copper.

lead formate [ORG CHEM] $Pb(CHO_2)_2$ Poisonous, water-soluble brownish-white crystals that decompose at 190°C; used as an analytical reagent.

lead glance *See* galena.

lead glass [MATER] Glass into which lead oxide is incorporated to give high refractive index, optical dispersion, and surface brilliance; used in optical glass.

lead halide [INORG CHEM] PbX_2, where X is a halogen (such as F, Br, Cl, or I).

lead hexafluorosilicate [INORG CHEM] $PbSiF_6 \cdot 2H_2O$ Poisonous, colorless, water-soluble crystals; used in the electrolytic method for refining lead. Also known as lead fluosilicate; lead silicofluoride.

leadhillite [MINERAL] $Pb_4(SO_4)(CO_3)_2(OH)_2$ A yellowish or greenish- or grayish-white monoclinic mineral consisting of basic sulfate and carbonate of lead; dimorphous with susanite.

lead-I-lead junction [SOLID STATE] A Josephson junction consisting of two pieces of lead separated by a thin insulating barrier of lead oxide. Abbreviated Pb-I-Pb junction.

lead-in [ELEC] A single wire used to connect a single-terminal outdoor antenna to a receiver or transmitter. Also known as down-lead.

lead-in-air indicator [MIN ENG] An instrument that utilizes reagents to measure the concentration of lead in the air.

leading [GRAPHICS] Space inserted between lines of type to open them up vertically.

leading current [ELEC] An alternating current that reaches its maximum value up to 90° ahead of the voltage that produces it.

leading edge [COMPUT SCI] The edge of a punched card or document which enters a machine first. [AERO ENG] The front edge of an airfoil or wing. [DES ENG] The surfaces or inset cutting points on a bit that face in the same direction as the rotation of the bit. [PHYS] The major portion of the rise of a pulse.

leading edge slat [AERO ENG] A small airfoil attached to the leading edge of a wing of an aircraft that automatically improves airflow at large angles of attack.

leading end [COMPUT SCI] The end of a paper or magnetic tape that is read first, or has data entered on it first.

leading fire [ORD] Fire delivered ahead of a moving target to allow for its motion.

leading heading [MIN ENG] **1.** The heading of a pair of parallel headings that is a short distance in front of the other; used to drain a mining area. **2.** A heading dug into the solid coal before the advance of the general face.

leading light [NAV] A light or lights arranged to indicate the path to be followed.

leading load [ELEC] Load that is predominately capacitive, so that its current leads the voltage applied to the load.

leading phase [ELEC] In three-phase power measurement, the phase whose voltage is leading upon that of one of the other phases by 120°.

lead-in groove [DES ENG] A blank spiral groove at the outside edge of a disk recording, generally of a pitch much greater than that of the recorded grooves, provided to bring the pickup stylus quickly to the first recorded groove. Also known as lead-in spiral.

leading stone *See* lodestone.

leading truck [MECH ENG] A swiveling frame with wheels under the front end of a locomotive.

leading zeros [MATH] Zeros preceding the first nonzero integer of a number.

lead-in insulator [ELEC] A tubular insulator inserted in a hole drilled through a wall, through which the lead-in wire can be brought into a building.

lead-in spiral *See* lead-in groove.

lead iodide [INORG CHEM] PbI_2 Poisonous, water- and alcohol-insoluble golden-yellow crystals melting at 402°C, boiling at 954°C; used in photography, medicine, printing, mosaic gold, and bronzing.

lead joint [ENG] A pipe joint made by caulking with lead wool or molten lead.

lead-lag network [CONT SYS] Compensating network which combines the characteristics of the lag and lead networks, and in which the phase of a sinusoidal response lags a sinusoidal input at low frequencies and leads it at high frequencies. Also known as lag-lead network.

lead lanthanum zirconate titanate [MATER] A ferroelectric, ceramic, electrooptical material whose optical properties can be changed by an electric field or by being placed in tension or compression; used in optoelectronic storage and display devices. Abbreviated PLZT. Also known as lanthanum-doped lead zirconate–lead titanate.

lead line *See* sounding line.

lead lining [ENG] Lead sheeting used to line the inside surfaces of liquid-storage vessels and process equipment to prevent corrosion.

lead marcasite *See* sphalerite.

lead metallurgy [MET] The science and technology of lead.

lead metasilicate *See* lead silicate.

lead molybdate [INORG CHEM] $PbMoO_4$ Poisonous, acid-soluble yellow powder; insoluble in water and alcohol; used in pigments and as an analytical reagent.

lead monoxide [INORG CHEM] PbO Yellow, tetragonal crystals that melt at 888°C and are soluble in alkalies and acids; used in storage batteries, ceramics, pigments, and paints. Also known as litharge; plumbous oxide; yellow lead oxide.

lead naphthenate [MATER] Soft, combustible, alcohol-soluble, transparent, resinous material, melting about 100°C; made from addition of lead salt to solution of sodium naphthenate; used as a paint and varnish drier, wood preservative, catalyst, insecticide, and lubricating oil additive.

lead network *See* derivative network.

lead nitrate [INORG CHEM] $Pb(NO_3)_2$ Strongly oxidizing, poisonous, water- and alcohol-soluble white crystals that decompose at 205–223°C; used as a textile mordant, paint pigment, and photographic sensitizer and in medicines, matches, explosives, tanning, and engraving.

lead ocher *See* massicot.

lead oleate [ORG CHEM] $Pb(C_{18}H_{33}O_2)_2$ Poisonous, water-insoluble, white, ointmentlike material; soluble in alcohol, benzene, and ether; used in varnishes, lacquers, and high-pressure lubricants, and as a paint drier.

lead orthoplumbate *See* lead tetroxide.

lead-out groove [DES ENG] A blank spiral groove at the end of a disk recording, generally of a pitch much greater than that of the recorded grooves, connected to either the locked or eccentric groove. Also known as throw-out spiral.

lead-over groove [DES ENG] A groove cut between separate selections or sections on a disk recording to transfer the pickup stylus from one cut to the next. Also known as cross-over spiral.

lead oxide red *See* lead tetroxide.

lead palsy *See* lead polyneuropathy.

lead peroxide *See* lead dioxide.

lead phosphate [INORG CHEM] Pb_3PO_4 A poisonous, white powder that melts at 1014°C; soluble in nitric acid and in fixed alkali hydroxide; used as a stabilizer in plastics.

lead pigments [CHEM] Chemical compounds of lead used in paints to give color; examples are white lead; basic lead carbonate; lead carbonate; lead thiosulfate; lead sulfide; basic lead sulfate (sublimed white lead); silicate white lead; basic lead silicate; lead chromate; basic lead chromate; lead oxychloride; and lead oxide (monoxide and dioxide).

lead poisoning [MED] Poisoning due to ingestion or absorption of lead over a prolonged period of time; characterized by colic, brain disease, anemia, and inflammation of peripheral nerves.

lead polyneuropathy [MED] A distal polyneuropathy, affecting mainly the wrist and hand, seen principally in adults with chronic lead poisoning; characterized by weakness, paresthesias, pain, and glove-and-stocking anesthesia. Also known as lead palsy.

lead rail [CIV ENG] In an ordinary rail switch, the turnout rail lying between the rails of the main track.

lead resinate [ORG CHEM] $Pb(C_{20}H_{29}O_2)_2$ Poisonous, insoluble, brown, lustrous, translucent lumps; used as a paint and varnish drier and for textile waterproofing.

lead screw [MECH ENG] A threaded shaft used to convert rotation to longitudinal motion; in a lathe it moves the tool carriage when cutting threads; in a disk recorder it guides the cutter at a desired rate across the surface of an ungrooved disk.

lead silicate [INORG CHEM] $PbSiO_3$ Toxic, insoluble white crystals; used in ceramics, paints, and enamels, and to fireproof fabrics. Also known as lead metasilicate.

lead silicofluoride *See* lead hexafluorosilicate.

lead-silver babbitt [MET] Alloy of lead with 10–15% antimony, 2.5–5.1% silicon, up to 5% tin, and up to 0.2% copper; used as a bearing metal.

lead-soap lubricant [MATER] Hard, high-melting-point, extreme-pressure lubricant made of lead salts saponified with fats.

lead sodium hyposulfate *See* lead sodium thiosulfate.

lead sodium thiosulfate [INORG CHEM] $Na_4Pb(S_2O_3)_3$ Poisonous, small, white, heavy crystals that are soluble in thiosulfate solutions; used in the manufacture of matches. Also known as lead sodium hyposulfate; sodium lead hyposulfate; sodium lead thiosulfate.

lead solder [MET] Solder composed of a lead alloy.

lead spar *See* anglesite.

lead stearate [ORG CHEM] $Pb(C_{18}H_{35}O_2)_2$ Poisonous white powder; soluble in alcohol and ether, insoluble in water; used as a lacquer and varnish drier and in high-pressure lubricants.

lead sulfate [INORG CHEM] $PbSO_4$ Poisonous white crystals melting at 1170°C; slightly soluble in hot water, insoluble in alcohol; used in storage batteries and as a paint pigment.

lead sulfide [INORG CHEM] PbS Blue, metallic, cubic crystals that melt at 1120°C, derived from the mineral galena or by reacting hydrogen sulfide gas with a solution of lead nitrate; used in semiconductors and ceramics. Also known as plumbous sulfide.

lead sulfide cell [ELECTR] A cell used to detect infrared radiation; either its generated voltage or its change of resistance may be used as a measure of the intensity of the radiation.

lead susceptibility [CHEM ENG] The increase in octane number of gasoline imparted by the addition of a specified amount of TEL (tetraethyllead).

lead telluride [INORG CHEM] PbTe A crystalline solid that is very toxic if inhaled or ingested; melts at 902°C; used as a semiconductor and photoconductor in the form of single crystals.

lead tetraacetate [ORG CHEM] $Pb(CH_3COO)_4$ Crystals that are faintly pink or colorless; melts at 175°C; used as an oxidizing agent in organic chemistry, cleaving 1,2-diols to form aldehydes or ketones.

lead tetroxide [INORG CHEM] Pb_3O_4 A poisonous, bright-red powder, soluble in excess glacial acetic acid and dilute hydrochloric acid; used in medicine, in cement for special applications, in manufacture of colorless glass, and in ship paint. Also known as lead orthoplumbate; lead oxide red; red lead.

lead thiocyanate [INORG CHEM] $Pb(SCN)_2$ Yellow, monoclinic crystals, soluble in potassium thiocyanate and slightly soluble in water; used in the powder mixture that primes small arm cartridges, in dyes, and in safety matches.

lead time [IND ENG] The time allowed or required to initiate and develop a piece of equipment that must be ready for use at a given time.

lead titanate [INORG CHEM] $PbTiO_3$ A water-insoluble, pale-yellow solid; used as coloring matter in paints.

lead track [CIV ENG] A distance measured along a straight railroad track from a switch to a frog.

lead tungstate [INORG CHEM] $PbWO_4$ A yellowish powder, melting at 1130°C; insoluble in water, soluble in acid; used as a pigment. Also known as lead wolframate.

lead vanadate [INORG CHEM] $Pb(VO_3)_2$ A water-insoluble, yellow powder; used as a pigment and for the preparation of other vanadium compounds.

lead vitriol *See* anglesite.

lead welding [MET] Welding of lead by fusion. Incorrectly known as lead burning.

lead wire [ENG] One of the heavy wires connecting a firing switch with the cap wires.

lead wolframate *See* lead tungstate.

lead wool [MATER] A coarse lead fiber used to caulk pipe joints.

lead zirconate titanate [MATER] A ferroelectric, ceramic, electrooptic material that has lower optical transparency than lead lanthanum zirconate titanate but similar other properties. Abbreviated PZT.

leaf [BOT] A modified aerial appendage which develops from a plant stem at a node, usually contains chlorophyll, and is the principal organ in which photosynthesis and transpiration occur. [BUILD] **1.** A separately movable division of a folding or sliding door. **2.** One of a pair of doors or windows. **3.** One of the two halves of a cavity wall. [COMPUT SCI] *See* terminal vertex.

leaf blight [PL PATH] Any of various blight diseases which cause browning, death, and falling of the leaves.

leaf blotch [PL PATH] A plant disease characterized by discolored areas in the leaves with indistinct or diffuse margins.

leaf bud [BOT] A bud that produces a leafy shoot.

leaf cast [PL PATH] Any of several diseases of conifers characterized by falling of the needles.

leaf curl [PL PATH] A fungus or viral disease of plants marked by the curling of leaves.

leaf cushion [BOT] The small part of the thickened leaf base that remains after abscission in various conifers, and also in some extinct plants.

leaf drop [PL PATH] Premature falling of leaves, associated with disease.

leaf fiber [BOT] A long, multiple-celled fiber extracted from the leaves of many plants that is used for cordage, such as sisal for binder, and abaca for manila hemp.

leafhopper [INV ZOO] The common name for members of the homopteran family Cicadellidae.

leaflet [BOT] **1.** A division of a compound leaf. **2.** A small or young foliage leaf.

leaflet projectile [ORD] A projectile designed for or adapted to usage as a carrier for leaflets.

leaf miner [INV ZOO] Any of the larvae of various insects which burrow into and eat the parenchyma of leaves.

leaf mold [GEOL] A soil layer or compost consisting principally of decayed vegetable matter.

leaf mottle [PL PATH] A fungus disease characterized by chlorotic mottling of the leaves; for example, caused by *Verticillium dahliae* in sunflower.

leaf-nosed [VERT ZOO] Having a leaflike membrane on the nose, as certain bats.

leaf roll [PL PATH] Any of several virus diseases characterized by upward or inward rolling of the leaf margins.

leaf rot [PL PATH] Any plant disease characterized by breakdown of leaf tissues; for example, caused by *Pellicularia koleroga* in coffee.

leaf rust [PL PATH] Any rust disease that primarily affects leaves; common in coffee, alfalfa, and wheat, barley, and other cereals.

leaf scald [PL PATH] A bacterial disease of sugarcane caused by *Bacterium albilineans* which invades the vascular tissues, causing creamy or grayish streaking and withering of the leaves.

leaf scar [BOT] A mark on a stem, formed by secretion of suberin and a gumlike substance, showing where a leaf has abscised.

leaf scorch [BOT] Any of several disorders and fungus diseases marked by a burned appearance of the leaves; for example, caused by the fungus *Diplocarpon earliana* in strawberry.

leaf sight [ORD] Rear sight for small arms, hinged so that it can be raised for aiming or lowered to keep it from being broken when not in use, and containing a peep sight that can be moved up and down to make adjustments for range.

leaf spot [PL PATH] Any of various diseases or disorders characterized by the appearance of well-defined discolored spots on the leaves.

leaf spring [DES ENG] A beam of cantilever design, firmly anchored at one end and with a large deflection under a load. Also known as flat spring.

leaf stripe [PL PATH] Any of various plant diseases characterized by striped discolorations on the foliage.

league [MECH] A unit of length equal to 3 miles or 4828.032 meters.

leak [PL PATH] A watery rot of fruits and vegetables caused by various fungi, such as *Rhizopus nigricans* in strawberry.

leakage [ENG] Undesired and gradual escape or entry of a quantity, such as loss of neutrons by diffusion from the core of a nuclear reactor, escape of electromagnetic radiation through joints in shielding, flow of electricity over or through an insulating material, and flow of magnetic lines of force beyond the working region. [MIN ENG] An unintentional diversion of ventilation air from its designed path. [PHYS CHEM] A phenomenon occurring in an ion-exchange process in which some influent ions are not adsorbed by the ion-exchange bed and appear in the effluent.

leakage coefficient *See* leakage factor.

leakage conductance [ELEC] The conductance of the path over which leakage current flows; it is normally a low value.

leakage current [ELEC] **1.** Undesirable flow of current through or over the surface of an insulating material or insulator. **2.** The flow of direct current through a poor dielectric in a capacitor. [ELECTR] The alternating current that passes through a rectifier without being rectified.

leakage factor [ELECTROMAG] The total magnetic flux in an electric rotating machine or transformer divided by the useful flux that passes through the armature or secondary winding. Also known as leakage coefficient.

leakage flux [ELECTROMAG] Magnetic lines of force that go beyond their intended path and do not serve their intended purpose. [NUCLEO] The number of neutrons which pass outward through a unit area at the surface of a reactor core in a unit time, and are not reflected back into the core.

leakage halo [GEOCHEM] The dispersion of elements along channels and paths followed by mineralizing solutions leading into and away from the central focus of mineralization.

leakage indicator [ELEC] An instrument used to measure or detect current leakage from an electric system to earth. Also known as earth detector.

leakage inductance [ELECTROMAG] Self-inductance due to leakage flux in a transformer.

leakage intake system [MIN ENG] A ventilation circuit with two adjacent intake roadways leading to the coal face.

leakage radiation [ELECTROMAG] In a radio transmitting system, radiation from anything other than the intended radiating system.

leakage rate [ENG] Flow rate of all leaks from an evacuated vessel.

leakage reactance [ELECTROMAG] Inductive reactance due to leakage flux that links only the primary winding of a transformer.

leakage resistance [ELEC] The resistance of the path over which leakage current flows; it is normally high.

leak detector [ENG] An instrument used for finding small holes or cracks in the walls of a vessel; the helium mass spectrometer is an example.

leaking mode [GEOPHYS] A surface seismic wave which is imperfectly trapped, so that its energy leaks or escapes across a layer boundary, causing some attenuation. Also known as leaky wave.

leak test pressure [MECH ENG] The inlet pressure used for a standard quantitative seat leakage test.

leaky [ELEC] Pertaining to a condition in which the leakage resistance has dropped so much below its normal value that excessive leakage current flows; usually applied to a capacitor.

leaky mutant gene [GEN] An allele with reduced activity relative to that of the normal allele.

leaky wave *See* leaking mode.

leaky-wave antenna [ELECTROMAG] A wide-band microwave antenna that radiates a narrow beam whose direction varies with frequency; it is fundamentally a perforated waveguide, thin enough to permit flush mounting for aircraft and missile radar applications.

lean [MATER] **1.** Of concrete or mortar, containing little or insufficient cement. **2.** Of clay, deficient in plasticity. **3.** Of coal, having little or no volatile matter. **4.** Of lime, containing impurities. **5.** Of fuel mixture, expecially for internal combustion engines, being low in combustible component. **6.** Of ore, being low-grade.

lean fuel mixture *See* lean mixture.

lean gas [MATER] **1.** In natural-gas absorption processes (such as natural-gasoline recovery from natural gas), gas from which desired liquid components have been removed. **2.** Natural gas poor in butane-and-heavier liquids.

leaning wheel grader [CIV ENG] A grader with skewed wheels to help cut or spread the soil.

lean mixture [MECH ENG] A fuel-air mixture containing a low percentage of fuel and a high percentage of air, as compared with a normal or rich mixture. Also known as lean fuel mixture.

lean oil [MATER] Absorbent oil from which absorbed gas has been stripped; an example is absorber oil in a natural-gasoline plant from which absorbed liquids (ethane, propane, butane) have been removed.

lean-to [BUILD] A single-pitched roof whose summit is supported by the wall of a higher structure.

lean-to roof *See* shed roof.

leapfrog system [MIN ENG] A system used in mining coal on a longwall face; self-advancing supports are used, with alternate supports advancing as each web of coal is removed.

leapfrog test [COMPUT SCI] A computer test using a special program that performs a series of arithmetical or logical operations on one group of storage locations, transfers itself to another group, checks the correctness of the transfer, then begins the series of operations again; eventually, all storage positions will have been tested.

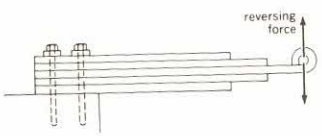
leap year [ASTRON] A year with 366, and not 365, days.

learning [PSYCH] The gathering, processing, storage, and recall of information received through the senses.

learning curve [PSYCH] Graphical representation of the relationship between acquisition of knowledge or skill, and the amount of practice or trials.

learning machine [COMPUT SCI] A machine that is capable

LEAF SPRING



Drawing of a leaf spring showing response to perpendicular force in either direction.

of improving its future actions as a result of analysis and appraisal of past actions.

lease [IND ENG] **1.** Contract between landowner and another granting the latter the right to use the land, usually upon payment of an agreed rental, bonus, or royalty. **2.** A piece of land that is leased. [TEXT] A means of keeping warp threads in position during weaving and beaming by passing them alternately over and under a set of rods.

lease automatic custody transfer [PETRO ENG] Automatic unattended system to receive and record oil produced from a drilling lease, then to transfer the contents to a pipeline. Abbreviated LACT.

leased facility [COMMUN] A collection of communication lines dedicated to a particular service; sometimes the lines have a predetermined path through system switching equipment.

lease-distribution system [PETRO ENG] Any of the electrical distribution systems serving oil-field pump motors and other electrical equipment.

lease rod [TEXT] A rod used to position warp threads during weaving.

lease tank [PETRO ENG] An oil-field storage tank that stores oil flowing from designated wells.

least-action principle *See* principle of least action.

least common denominator [MATH] The least common multiple of the denominators of a collection of fractions.

least common multiple [MATH] The least common multiple of a set of quantities (for example, numbers or polynomials) is the smallest quantity divisible by each of them.

least-energy principle [MECH] The principle that the potential energy of a system in stable equilibrium is a minimum relative to that of nearby configurations.

least significant bit [COMPUT SCI] The bit that carries the lowest value or weight in binary notation for a numeral; for example, when 13 is represented by binary 1101, the 1 at the right is the least significant bit. Abbreviated LSB.

least significant character [COMPUT SCI] The character in the rightmost position in a number or word.

least squares method [STAT] A technique of fitting a curve close to some given points which minimizes the sum of the squares of the deviations of the given points from the curve.

least-time principle *See* Fermat's principle.

least upper bound [MATH] The least upper bound of a subset A of a set S with ordering $<$ is the smallest element of S which is greater than or equal to every element of A. Abbreviated lub. Also known as supremum (sup).

least-work theory [MECH] A theory of statically indeterminate structures based on the fact that when a stress is applied to such a structure the individual parts of it are deflected so that the energy stored in the elastic members is minimized.

leather [MATER] Dressed hide or skin of an animal.

leather rot [PL PATH] A hard rot of strawberry caused by the fungus *Phytophthora cactorum*.

leaven [FOOD ENG] **1.** A substance (such as yeast) used to produce fermentation. **2.** A substance such as yeast or baking powder used to produce a gas to lighten dough.

leaving group [ORG CHEM] The group of charged or uncharged atoms that departs during a substitution or displacement reaction. Also known as nucleofuge.

Lebesgue integral [MATH] The generalization of Riemann integration of real valued functions, which allows for integration over more complicated sets, existence of the integral even though the function has many points of discontinuity, and convergence properties which are not valid for Riemann integrals.

Lebesgue measure [MATH] A measure defined on subsets of euclidean space which expresses how one may approximate a set by coverings consisting of intervals.

Lebesgue number [MATH] The Lebesgue number of an open cover of a compact metric space X is a positive real number so that any subset of X whose diameter is less than this number must be completely contained in a member of the cover.

Lebesgue-Stieltjes integral [MATH] A Lebesgue integral of the form

$$\int_b^a f(x)\, d\phi(x)$$

where ϕ is of bounded variation; if $\phi(x) = x$, it reduces to the Lebesgue integral of $f(x)$; if $\phi(x)$ is differentiable, it reduces to the Lebesgue integral of $f(x)\phi'(x)$.

Lecanicephaloidea [INV ZOO] An order of tapeworms of the subclass Cestoda distinguished by having the scolex divided into two portions; all species are intestinal parasites of elasmobranch fishes.

Lecanoraceae [BOT] A temperate and boreal family of lichens in the order Lecanorales characterized by a crustose thallus and a distinct thalloid rim on the apothecia.

Lecanorales [BOT] An order of the Ascolichenes having open, discoid apothecia with a typical hymenium and hypothecium.

lechatelierite [MINERAL] A natural silica glass, occurring in fulgurites and impact craters and formed by the melting of quartz sand at high temperatures generated by lightning or by the impact of a meteorite.

Le Chatelier's principle [PHYS] The principle that when an external force is applied to a system at equilibrium, the system adjusts so as to minimize the effect of the applied force.

Lecher line *See* Lecher wires.

Lecher wires [ELECTROMAG] Two parallel wires that are several wavelengths long and a small fraction of a wavelength apart, used to measure the wavelength of a microwave source that is connected to one end of the wires; a shorting bar which slides along the wires is used to determine the position of standing-wave nodes. Also known as Lecher line; Lecher wire wavemeter.

Lecher wire wavemeter *See* Lecher wires.

Lecideaceae [BOT] A temperate and boreal family of lichens in the order Lecanorales; members lack a thalloid rim around the apothecia.

lecithin [BIOCHEM] Any of a group of phospholipids having the general composition $CH_2OR_1 \cdot CHOR_2 \cdot CH_2OPO_2OHR_3$, in which R_1 and R_2 are fatty acids and R_3 is choline, and with emulsifying, wetting, and antioxidant properties. [MATER] **1.** A mixture of phosphatides and oil obtained by drying the separate gums from the degumming of soybean oil; consists of the phosphatides (lecithin), cephalin, other fatlike phosphorus-containing compounds, and 30–35% entrained soybean oil; may be treated to produce more refined grades; used in foods, cosmetics, and paints. Also known as commercial lecithin; crude lecithin; soybean lecithin; soy lecithin. **2.** A waxy mixture of phosphatides obtained by refining commercial lecithin to remove the soybean oil and other materials; used in pharmaceuticals. Also known as refined lecithin.

lecithinase [BIOCHEM] An enzyme that catalyzes the breakdown of a lecithin into its constituents.

lecithinase A [BIOCHEM] An enzyme that catalyzes the removal of only one fatty acid from lecithin, yielding lipolecithin.

lecithinase C [BIOCHEM] An enzyme that catalyzes the removal of the nitrogenous base of lecithin to produce the base and a phosphatidic acid.

lecithinase D [BIOCHEM] An enzyme that catalyzes the removal of the phosphorylated base from lecithins, producing α-β-diglyceride.

Leclanché cell [ELEC] The common dry cell, which is a primary cell having a carbon positive electrode and a zinc negative electrode in an electrolyte of sal ammoniac and a depolarizer.

lecontite [MINERAL] $Na(NH_4,K)SO_4 \cdot 2H_2O$ A colorless mineral composed of a hydrous sodium potassium ammonium sulfate; found in bat guano.

le cri du chat syndrome [MED] A complex of congenital malformations resulting from a deletion in chromosome 4 or 5 and characterized by mental retardation and the production of a catlike cry.

lectin [BIOCHEM] Any of various proteins that agglutinate erythrocytes and other types of cells and also have other properties, including mitogenesis, agglutination of tumor cells, and toxicity toward animals; found widely in plants, predominantly in legumes, and also occurring in bacteria, fish, and invertebrates.

lectotype [SYST] A specimen selected as the type of a species or subspecies if the type was not designated by the author of the classification.

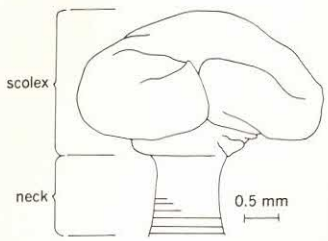
Lecythidaceae [BOT] The single family of the order Lecythidales.

Lecythidales [BOT] A monofamilial order of dicotyledonous tropical woody plants in the subclass Dilleniidae; distinguished by entire leaves, valvate sepals, separate petals, numerous centrifugal stamens, and a syncarpous, inferior ovary with axile placentation.

LED *See* light-emitting diode.

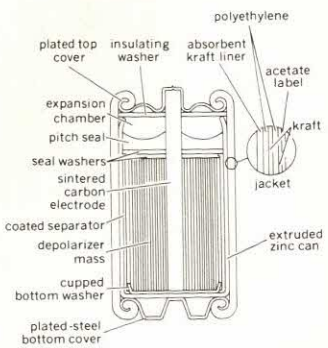
Leda [ASTRON] A small satellite of Jupiter with a diameter

LECANICEPHALOIDEA



Anterior end of a lecanicephaloid tapeworm showing scolex and neck.

LECLANCHÉ CELL



Modern Leclanché dry cell. *(Bright Star Industries Inc.)*

probably less than 8 kilometers, orbiting at a mean distance of 1.11×10^7 kilometers. Also known as Jupiter XIII.

ledeburite [MET] The eutectic of the iron-carbon system, the constituents being cementite and austenite at high temperatures; cooling decomposes the austenite to ferrite and cementite.

Lederberg technique [MICROBIO] A method for rapid isolation of individual bacterial cells for demonstrating the spontaneous origin of bacterial mutants.

ledge [BUILD] A horizontal timber on the back of a batten door or on a framed and braced door. [ENG] **1.** A raised edge or molding. **2.** A narrow shelf projecting from the side of a vertical structure. **3.** A horizontal timber that supports the putlogs of scaffolding. [GEOL] **1.** A narrow, shelflike ridge or rock protrusion, much longer than high, and usually horizontal, formed in a rock wall or on a cliff face. **2.** A ridge of rocks found underwater, especially one near a shore or connected with and bordering a shore. [MET] Ingate for a foundry mold. [MIN ENG] **1.** A mining quarry exposure. **2.** An outcrop associated with a mineral deposit.

ledged door *See* batten door.

ledger [CIV ENG] A main horizontal member of formwork, supported on uprights and supporting the soffit of the formwork. [ENG] The horizontal support for a scaffold platform.

ledger balance [COMMUN] Facility used with message switching equipment to check the number of addresses received with the number of addresses transmitted, to ensure that no messages are lost within the center.

ledger paper [GRAPHICS] A heavy white paper made from rag pulp, chemical wood pulp, or a mixture of both and well suited for ink and wash drawings; it is a strong, durable, and permanent paper, and the best varieties are fully opaque.

Ledian [GEOL] Lower upper Eocene geologic time. Also known as Auversian.

Ledoux bell meter [ENG] A type of manometer used to measure the difference in pressure between two points generated by any one of several types of flow measurement devices such as a pitot tube; it is equipped with a shaped plug which makes the reading of the meter directly proportional to the flow rate.

Leduc current [ELEC] An asymmetrical alternating current obtained from, or similar to that obtained from, the secondary winding of an induction coil; used in electrobiology.

Leduc effect *See* Righi-Leduc effect.

Leduc law *See* Amagat-Leduc rule.

lee [SCI TECH] The side of an object, such as an island or a ship, away from the direction in which the wind is coming, and sheltered from wind or waves.

Leeaceae [BOT] A family of dicotyledonous plants in the order Rhamnales distinguished by solitary ovules in each locule, simple to compound leaves, a small embryo, and hypogynous flowers.

leech [INV ZOO] The common name for members of the annelid class Hirudinea.

LEED *See* low-energy electron diffraction.

lee dune [GEOL] A dune formed to the leeward of a source of sand or of an obstacle.

lee eddies [FL MECH] The small, irregular motions or eddies produced immediately in the rear of an obstacle in a turbulent fluid.

leek [BOT] *Allium porrum*. A biennial herb known only by cultivation; grown for its mildly pungent succulent leaves and thick cylindrical stalk.

Lee-Norse miner [MIN ENG] A continuous miner for driving headings in medium or thick coal seams.

lee tide *See* leeward tidal current.

lee trough *See* dynamic trough.

leeward [SCI TECH] **1.** Situated away from the wind. **2.** On the lee side.

leeward tidal current [OCEANOGR] A tidal current setting in the same direction as that in which the wind is blowing. Also known as lee tide; leeward tide.

leeward tide *See* leeward tidal current.

lee wave [FL MECH] Any wave disturbance which is caused by, and is therefore stationary with respect to, some barrier in the fluid flow.

leeway [NAV] The off-course, leeward motion of a vessel due to wind or current; may be expressed as distance, speed, or angular difference between course steered and course through the water.

LE factor [PATH] A substance in body fluids, especially the blood, of patients with systemic lupus erythematosus, and sometimes of those with other diseases. Derived from lupus erythematosus factor.

left bank [GEOGR] The bank of a stream or river on the left of an observer when he is facing in the direction of flow, or downstream.

left-continuous function [MATH] A function $f(x)$ of a real variable is left-continuous at a point c if $f(x)$ approaches $f(c)$ as x approaches c from the left, that is, $x < c$ only.

left-hand [DES ENG] Of drilling and cutting tools, screw threads, and other threaded devices, designed to rotate clockwise or cut to the left.

left-hand derivative [MATH] The limit of the difference quotient $[f(x) - f(c)]/[x - c]$ as x approaches c from the left, that is, $x < c$ only.

left-handed [CRYSTAL] Having a crystal structure with a mirror-image relationship to a right-handed structure. [DES ENG] *See* left-laid.

left-handed coordinate system [MATH] **1.** A three-dimensional rectangular coordinate system such that when the thumb of the left hand extends in the positive direction of the first (or x) axis, the fingers fold in the direction in which the second (or y) axis could be rotated about the first axis to coincide with the third (or z) axis. **2.** A coordinate system of a Riemannian space which has negative scalar density function.

left-hand limit *See* limit on the left.

left-hand polarization [ELECTROMAG] In elementary-particle discussions, circular or elliptical polarization of an electromagnetic wave in which the electric field vector at a fixed point in space rotates in the left-hand sense about the direction of propagation; in optics, the opposite convention is used; in facing the source of the beam, the electric vector is observed to rotate counterclockwise.

left-hand rule [ELECTROMAG] **1.** For a current-carrying wire, the rule that if the fingers of the left hand are placed around the wire so that the thumb points in the direction of electron flow, the fingers will be pointing in the direction of the magnetic field produced by the wire. **2.** For a current-carrying wire in a magnetic field, such as a wire on the armature of a motor, the rule that if the thumb, first, and second fingers of the left hand are extended at right angles to one another, with the first finger representing the direction of magnetic lines of force and the second finger representing the direction of current flow, the thumb will be pointing in the direction of force on the wire. Also known as Fleming's rule.

left-hand screw [DES ENG] A screw that advances when turned counterclockwise.

left-hand taper [ELEC] A taper in which there is greater resistance in the counterclockwise half of the operating range of a rheostat or potentiometer (looking from the shaft end) than in the clockwise half.

left-justify [COMPUT SCI] To shift the contents of a register so that the left, or most significant, digit is at some specified position. [GRAPHICS] To align characters horizontally so that the leftmost character of a string is in a specified position.

left-laid [DES ENG] The lay of a wire or fiber rope or cable in which the individual wires or fibers in the strands are twisted to the right and the strands to the left. Also known as left-handed; regular-lay left twist.

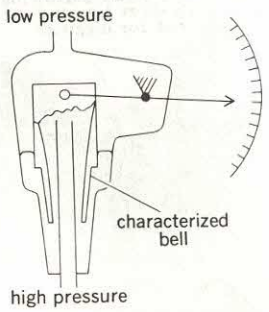
left lateral fault [GEOL] A fault in which movement is such that an observer walking toward the fault along an index plane (a bed, vein, or dike) would turn to the left to find the other part of the displaced index plane. Also known as sinistral fault.

left rudder [NAV] The operation of moving the rudder, and consequently the bow of the ship, to port.

left ventricular thrust *See* apex impulse.

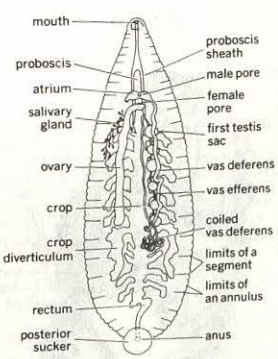
leg [ANAT] The lower extremity of a human limb, between the knee and the ankle. [COMPUT SCI] The sequence of instructions that is followed in a computer routine from one branch point to the next. [ENG] **1.** Anything that functionally or structurally resembles an animal leg. **2.** One of the branches of a forked or jointed object. **3.** One of the main upright members of a drill derrick or tripod. [GEOPHYS] A single cycle of more or less periodic motion in a wave train on a seismogram. [MECH ENG] The case that encloses the vertical part of the belt carrying the buckets within a grain elevator. [MET] In a fillet weld, the distance between the root and the toe. [MIN ENG] **1.** In mine timbering, a prop or upright member of a set or frame. **2.** A stone that has to be wedged out

LEDOUX BELL METER



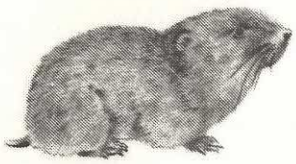
Ledoux bell meter with uniform flow rate scales.

LEECH



General structure of a leech. Male reproductive system is shown on the right, the female on the left. *(From K. H. Mann, A key to the British freshwater leeches, Freshwater Biol. Assoc. Sci. Publ., 14:3-21, 1954)*

LEMMING



A lemming, a small burrowing rodent with short legs and stout claws adapted for digging.

LEMON

Fruit and branch of lemon tree (*Citrus limon*).

LEMUR

ng-tailed lemur, measuring (1.2 meters), including tail.

from beneath a larger one. [NAV] **1.** One part of a craft's track, consisting of a single course line. **2.** A track identified by an aid to navigation. [ZOO] An appendage or limb used for support and locomotion.

legena [VERT ZOO] An appendage of the sacculus containing sensory areas in the inner ear of tetrapods; termed the cochlea in humans.

legend [GRAPHICS] A title or explanation on a chart, diagram, or other illustration.

Legendre contact transformation *See* Legendre transformation.

Legendre equation [MATH] The second-order linear homogeneous differential equation $(1 - x^2)y'' - 2xy' + \nu(\nu + 1)y = 0$, where ν is real and nonnegative.

Legendre polynomials [MATH] A collection of orthogonal polynomials which provide solutions to the Legendre equation for nonnegative integral values of the parameter.

Legendre transformation [MATH] A mathematical procedure in which one replaces a function of several variables with a new function which depends on partial derivatives of the original function with respect to some of the original independent variables. Also known as Legendre contact transformation.

legrandite [MINERAL] $Zn_{14}(OH)(AsO_4)_9 \cdot 12H_2O$ A yellow to nearly colorless mineral composed of basic hydrous zinc arsenate.

legume [BOT] A dry, dehiscent fruit derived from a single simple pistil; common examples are alfalfa, beans, peanuts, and vetch.

legume forage [AGR] Any plant of the legume family (Leguminosae) used for livestock feed, grazing, hay, or silage.

Leguminosae [BOT] The legume family of the plant order Rosales characterized by stipulate, compound leaves, 10 or more stamens, and a single carpel; many members harbor symbiotic nitrogen-fixing bacteria in their roots.

leg wire [ENG] One of the two wires forming a part of an electric blasting cap or squib.

Lehigh jig [MIN ENG] A plunger-type jig in which check valves open on the upstroke of the plunger, makeup water is introduced with the feed, the screen plate is at two levels, and the bottom of the discharge end is hinged; used to wash anthracite.

lehite [MINERAL] $(Na,K)_2Ca_5Al_8(PO_4)_8(OH)_{12} \cdot 6H_2O$ White mineral composed of hydrous basic calcium aluminum phosphate.

Lehmann process [MIN ENG] A process for treating coal by disintegration and separation of the petrographic constituents.

Leibnitz's rule [MATH] A formula to compute the nth derivative of the product of two functions f and g:

$$d^n(f \cdot g)/dx^n = \sum_{k=0}^{n} \binom{n}{k} d^{n-k} f/dx^{n-k} \cdot d^k g/dx^k$$

where $\binom{n}{k} = n!/(n-k)!\,k!$

Leibnitz's test [MATH] If the sequence of positive numbers a_n approaches zero monotonically, then the series

$$\sum_{n=1}^{\infty} (-1)^n a_n \text{ is convergent.}$$

Leidenfrost point [THERMO] The lowest temperature at which a hot body submerged in a pool of boiling water is completely blanketed by a vapor film; there is a minimum in the heat flux from the body to the water at this temperature.

Leidenfrost's phenomenon [THERMO] A phenomenon in which a liquid dropped on a surface that is above a critical temperature becomes insulated from the surface by a layer of vapor, and does not wet the surface as a result.

leifite [MINERAL] $Na_2AlSi_4O_{10}F$ A colorless mineral composed of fluoride and silicate of sodium and aluminum.

leightonite [MINERAL] $K_2Ca_2Cu(SO_4)_4 \cdot 2H_2O$ A pale-blue mineral composed of hydrous sulfate of copper, calcium, and potassium.

Leiodidae [INV ZOO] The round carrion beetles, a cosmopolitan family of coleopteran insects in the superfamily Staphylinoidea; commonly found under decaying bark.

leiomyofibroma [MED] A benign tumor composed of smooth muscle cells and fibrocytes.

leiomyoma [MED] A benign tumor composed of smooth muscle cells.

leiomyosarcoma [MED] A malignant tumor composed of anaplastic smooth muscle cells.

leiosporous [MYCOL] Having smooth spores.

Leishman-Donovan bodies [PATH] Small, oval protozoans lacking flagella and undulating membranes, found within macrophages of the skin, liver, and spleen in leishmanial infections such as kala-azar and mucocutaneous leishmaniasis.

Leishmania [INV ZOO] A genus of flagellated protozoan parasites that are the etiologic agents of several diseases of humans, such as leishmaniasis.

Leishmania donovani [INV ZOO] The protozoan parasite that causes kala-azar.

Leishmania infantum [INV ZOO] The protozoan parasite that causes infantile leishmaniasis.

leishmaniasis [MED] Any of several infections caused by *Leishmania* species.

Leitneriales [BOT] A monofamilial order of flowering plants in the subclass Hamamelidae; members are simple-leaved, dioecious shrubs with flowers in catkins, and have a superior, pseudomonomerous ovary with a single ovule.

lek [ZOO] A gathering place for courtship. Also known as arena.

Lelapiidae [INV ZOO] A family of calcaronean sponges in the order Sycettida characterized by a rigid skeleton composed of tracts or bundles of modified triradiates.

L electron [ATOM PHYS] An electron in the L shell.

LEM *See* lunar excursion module.

lemma [BOT] Either of the pair of bracts that are borne above the glumes and enclose the flower of a grass spikelet. [MATH] A mathematical fact germane to the proof of some theorem.

lemma of duBois-Reymond [MATH] A continuous function $f(x)$ is constant in the interval (a,b) if for certain functions g whose integral over (a,b) is zero, the integral over (a,b) of f times g is zero.

lemming [VERT ZOO] The common name for the small burrowing rodents composing the subfamily Microtinae.

Lemnaceae [BOT] The duckweeds, a family of monocotyledonous plants in the order Arales; members are small, free-floating, thalloid aquatics with much reduced flowers that form a miniature spadix.

lemniscate of Bernoulli [MATH] The locus of points (x,y) in the plane satisfying the equation $(x^2 + y^2)^2 = a^2(x^2 - y^2)$ or, in polar coordinates (r,θ), the equation $r^2 = a^2 \cos 2\theta$.

lemniscus [ANAT] A secondary sensory pathway of the central nervous system, usually terminating in the thalamus.

lemon [BOT] *Citrus limon*. A small evergreen tree belonging to the order Sapindales cultivated for its acid citrus fruit which is a modified berry called a hesperidium.

lemongrass oil [MATER] An essential oil with the odor of lemon, distilled from either of two lemongrasses (*Cymbopogon citratus* or *C. flexuosus*) in the East Indies; contains citral, citronellol, and geraniol; used as a perfume and as a flavoring.

lemon oil [MATER] A yellow essential oil squeezed from lemon rind; it is high in citral, limonene, terpinol, and citronellol; used in soap, perfumes, and flavors.

lemur [VERT ZOO] The common name for members of the primate family Lemuridae; characterized by long tails, foxlike faces, and scent glands on the shoulder region and wrists.

Lemuridae [VERT ZOO] A family of prosimian primates of Madagascar belonging to the Lemuroidea; all members are arboreal forest dwellers.

Lemuroidea [VERT ZOO] A suborder or superfamily of Primates including the lemurs, tarsiers, and lorises, or sometimes simply the lemurs.

lenacil [ORG CHEM] $C_{13}H_{18}N_2O_2$ A colorless, crystalline compound with a melting point of 316–317°C; slight solubility in water; used as an herbicide to control weeds in sugarbeets, cereal grains, and strawberries. Also known as 3-cyclohexyl-5,6-trimethyleneuracil.

Lenard rays [ELECTR] Cathode rays produced in air by a Lenard tube.

Lenard tube [ELECTR] An early experimental electron-beam tube that had a thin glass or metallic foil window at the end opposite the cathode, through which the electron beam could pass into the atmosphere.

lengenbachite [MINERAL] $Pb_6(Ag,Cu)_2As_4S_{13}$ A steel gray mineral consisting of lead, silver, and copper arsenic sulfide.

length [MECH] Extension in space.

length between perpendiculars [NAV ARCH] The summer

load waterline as measured from the fore side of the stern post or to the center of the rudder stock.

length block [COMPUT SCI] The total number of records, words, or characters contained in one block.

lengthened dipole [ELECTROMAG] An antenna element with lumped inductance to compensate an end loss.

lengthening joint [ENG] A joint between two members running in the same direction.

lengthening reaction [PHYSIO] Sudden inhibition of the stretch reflex when extensor muscles are subjected to an excessive degree of stretching by forceful flexion of a limb.

length-height index [ANTHRO] The ratio of the basion-bregma height of the skull to its greatest length multiplied by 100.

length of a curve [MATH] A curve represented by $x = x(t)$, $y = y(t)$ for $t_1 \leq t \leq t_2$, with $x(t_1) = x_1$, $x(t_2) = x_2$, $y(t_1) = y_1$, $y(t_2) = y_2$, has length from (x_1,y_1) to (x_2,y_2) given by the integral from t_1 to t_2 of the function $\sqrt{(dx/dt)^2 + (dy/dt)^2}$.

length of barrel *See* length of bore.

length of bore [ORD] The length of the bore, measured from the rear face of the tube or barrel to the muzzle, expressed in inches or calibers. Also known as length of barrel; length of cannon; length of tube.

length of cannon *See* length of bore.

length of lay [DES ENG] The distance measured along a line parallel to the axis of the rope in which the strand makes one complete turn about the axis of the rope, or the wires make a complete turn about the axis of the strand.

length of record [CLIMATOL] The period during which observations have been maintained at a meteorological station, and which serves as the frame of reference for climatic data at that station.

length of shot [ENG] The depth of the shothole, in which powder is placed, or the size of the block of coal or rock to be loosened by a single blast, measured parallel with the hole. [MIN ENG] In open-pit mining, the distance from the first drill hole to the last drill hole along the bank.

length of tube *See* length of bore.

length on waterline [NAV ARCH] The length along the designed waterline from the forepart of the stem to the afterpart of the stern.

length overall [NAV ARCH] The total length of a ship's hull from the foremost to the aftermost points.

lenitic *See* lentic.

Lennard-Jones potential [PHYS CHEM] A semiempirical approximation to the potential of the force between two molecules, given by $V = (A/R^{12})-(B/R^6)$, where R is the distance between the centers of the molecules, and A and B are constants.

leno [TEXT] A mesh-weave cotton or cotton-and-polyester fabric made by twisting two warp yarns around each other.

lens [ANAT] A transparent, encapsulated, nearly spherical structure located behind the pupil of vertebrate eyes, and in the complex eyes of many invertebrates, that focuses light rays on the retina. Also known as crystalline lens. [COMMUN] A dielectric or metallic structure that is transparent to radio waves and can bend them to produce a desired radiation pattern; used with antennas for radar and microwave relay systems. [ELECTR] *See* electron lens. [ELECTROMAG] *See* magnetic lens. [GEOL] A geologic deposit that is thick in the middle and converges toward the edges, resembling a convex lens. [MATER] *See* acoustic lens. [OPTICS] A curved piece of ground and polished or molded material, usually glass, used for the refraction of light, its two surfaces having the same axis; or two or more such surfaces cemented together. Also known as optical lens.

lens antenna [ELECTROMAG] A microwave antenna in which a dielectric lens is placed in front of the dipole or horn radiator to concentrate the radiated energy into a narrow beam or to focus received energy on the receiving dipole or horn.

lens coating [OPTICS] A transparent substance coated on an optical surface to derive maximum light transmission.

lens element [OPTICS] Separate component lens of a multielement lens.

lens equation [OPTICS] Any equation which relates the distance of a point object from some well-defined reference point in an optical system to the distance of its image from a similar point.

Lense-Thirring effect *See* dragging of inertial frames.

lens placode [EMBRYO] The ectodermal anlage of the lens of the eye; its formation is induced by the presence of the underlying optic vesicle.

lens shim [OPTICS] Thin piece of material used to position and focus a lens.

lens stop *See* diaphragm.

lens tissue [MATER] Specially prepared paperlike material for cleaning lenses.

lentic [ECOL] Of or pertaining to still waters such as lakes, reservoirs, ponds, and bogs. Also spelled lenitic.

lenticel [BOT] A loose-structured opening in the periderm beneath the stomata in the stem of many woody plants that facilitates gas transport.

lenticle [GEOL] A bed or rock stratum or body that is lens-shaped.

lenticular [OPTICS] Of or pertaining to a lens. [SCI TECH] Having the shape of a lentil or double convex lens.

lenticular cloud *See* lenticularis.

lenticular film process [GRAPHICS] An additive color-photography process in which the camera lens carries a three-color banded filter, the film is embossed on the back with minute lenses facing the camera lens, development by reversal produces a photograph broken up into minute elements each of which is an image of the filter, and projection through a similar filter gives a color reproduction.

lenticularis [METEOROL] A cloud species, the elements of which have the form of more or less isolated, generally smooth lenses; the outlines are sharp. Also known as lenticular cloud.

lenticule [GRAPHICS] One of the minute lenses embossed on the back of a color photographic film in the lenticular film process.

lentiginose [ANAT] Of or pertaining to pigment spots in the skin; freckled.

lentil [BOT] *Lens esculenta*. A semiviny annual legume having pinnately compound, vetchlike leaves; cultivated for its thin, lens-shaped, edible seed. [GEOL] **1.** A rock body that is lens-shaped and enclosed in a stratum of different material. **2.** A rock stratigraphic unit that is a subdivision of a formation and has limited geographic extent; it thins out in all directions.

lentor *See* stoke.

Lenz's law [ELECTROMAG] The law that whenever there is an induced electromotive force (emf) in a conductor, it is always in such a direction that the current it would produce would oppose the change which causes the induced emf.

leo [MECH] A unit of acceleration, equal to 10 meters per second per second; it has rarely been employed.

Leo [ASTRON] A northern constellation, right ascension 11 hours, declination 15° north. Also known as Lion.

Leo Minor [ASTRON] A northern constellation, right ascension 10 hours, declination 35° north. Also known as Lesser Lion.

Leonardian [GEOL] A North American provincial series: Lower Permian (above Wolfcampian, below Guadalupian).

Leon firedamp tester [MIN ENG] A device, based on a form of Wheatstone bridge, that is used to detect firedamp.

Leonids [ASTRON] A meteor shower, the radiant of which lies in the constellation Leo; it is visible between November 10 and 15.

leonite [MINERAL] $K_2Mg(SO_4)_2 \cdot 4H_2O$ A colorless, white, or yellowish mineral composed of hydrous magnesium potassium sulfate, occurring in monoclinic crystals.

leopard [VERT ZOO] *Felis pardus*. A species of wildcat in the family Felidae found in Africa and Asia; the coat is characteristically buff-colored with black spots.

leopoldite *See* sylvite.

Leotichidae [INV ZOO] A small Oriental family of hemipteran insects in the superfamily Leptopodoidea.

Lepadomorpha [INV ZOO] A suborder of barnacles in the order Thoracica having a peduncle and a capitulum which is usually protected by calcareous plates.

leper [MED] A person afflicted with Hansen's disease.

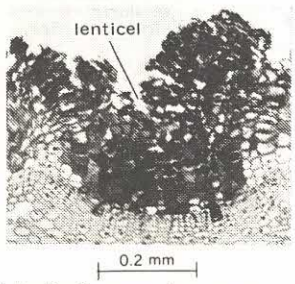
Leperditicopida [PALEON] An order of extinct ostracods characterized by very thick, straight-backed valves which show unique muscle scars and other markings.

Leperditillacea [PALEON] A superfamily of extinct paleocopan ostracods in the suborder Kloedenellocopina including the unisulcate, nondimorphic forms.

Lepiceridae [INV ZOO] Horn's beetle, a family of Central American coleopteran insects composed of two species.

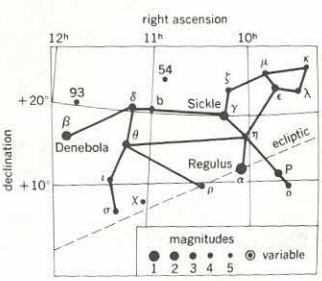
lepidine [ORG CHEM] $C_9H_6NCH_3$ An alkaloid derived as an oily liquid from cinchona bark; boils at 266°C; soluble in

LENTICEL



A lenticel as seen in a cross section of the stem periderm of *Sambucus nigra*.

LEO



Line pattern of the constellation Leo. The grid lines represent the coordinates of the sky. Right ascension (E–W) is in hours, and declination (N–S) in degrees, corresponding to the longitude and latitude of the earth. The apparent brightness, or magnitude, of the stars is shown by the sizes of the dots, which are graded by appropriate numbers as indicated.

LEPIDOBLASTIC

The fabric of lepidoblastic rock seen under the microscope. *(From T. F. W. Barth, Theoretical Petrology, Wiley, 1952)*

ether, benzene, and alcohol; used in organic synthesis. Also known as cincholepidine; γ-methylquinoline.

lepidoblastic [PETR] Of the texture of a metamorphic rock, having a fabric of minerals characterized as flaky or scaly, such as mica.

Lepidocentroida [INV ZOO] The name applied to a polyphyletic assemblage of echinoids now regarded as members of the Echinocystitoida and Echinothurioida.

lepidocrocite [MINERAL] $\alpha FeO(OH)$ A ruby- or blood-red mineral crystallizing in the orthorhombic system; it is associated with limonite in iron ores and is a component of meteorites.

Lepidodendrales [PALEOBOT] The giant club mosses, an order of extinct lycopods (Lycopodiopsida) consisting primarily of arborescent forms characterized by dichotomous branching, small amounts of secondary vascular tissue, and heterospory.

lepidolite [MINERAL] $K(Li,Al)_3(Si,Al)_4O_{10}(F,OH)_2$ A rose-colored mineral of the mica group crystallizing in the monoclinic system. Also known as lithionite; lithium mica.

lepidomelane [MINERAL] A black variety of biotite that is characterized by the presence of large amounts of ferric iron. Also known as iron mica.

lepidophyllous [BOT] Having scaly leaves.

Lepidoptera [INV ZOO] Large order of scaly-winged insects, including the butterflies, skippers, and moths; adults are characterized by two pairs of membranous wings and sucking mouthparts, featuring a prominent, coiled proboscis.

Lepidorsirenidae [VERT ZOO] A family of slender, obligate air-breathing, eellike fishes in the order Dipteriformes having small thin scales, slender ribbonlike paired fins, and paired ventral lungs.

LEPIDOLITE

2.5 cm

Group of lepidolite crystals found in Zinnwald, Czechoslovakia. *(Specimen from Department of Geology, Bryn Mawr College)*

Lepidosaphinae [INV ZOO] A family of homopteran insects in the superfamily Coccoidea having dark-colored, noncircular scales.

Lepidosauria [VERT ZOO] A subclass of reptiles in which the skull structure is characterized by two temporal openings on each side which have reduced bony arcades, and by the lack of an antorbital opening in front of the orbit.

Lepidotrichidae [INV ZOO] A family of wingless insects in the order Thysanura.

Lepismatidae [INV ZOO] A family of silverfish in the order Thysanura characterized by small or missing compound eyes.

Lepisostei [VERT ZOO] An equivalent name for Semionotiformes.

Lepisosteidae [VERT ZOO] A family of fishes in the order Semionotiformes.

Lepisosteiformes [VERT ZOO] An equivalent name for Semionotiformes.

lepisphere [PETR] A microspherical aggregate of platy, blade-shaped crystals of opal-CT.

Lepley-Hull hypothesis [PSYCH] An explanation of the empirical phenomenon in serial learning which postulates both direct and remote associations among items, with the former excitatory and the latter inhibitory.

Leporidae [VERT ZOO] A family of mammals in the order Lagomorpha including the rabbits and hares.

Lepospondyli [PALEON] A subclass of extinct amphibians including all forms in which the vertebral centra are formed by ossification directly around the notochord.

lepospondylous [VERT ZOO] Having the notochord enclosed by cylindrical vertebrae shaped like an hourglass in longitudinal section.

leproma [MED] The cutaneous nodular lesion of leprosy.

lepromatous leprosy [MED] A severely debilitating form of Hansen's disease characterized by the presence of multiple nodular lesions (lepromata) on the skin.

lepromin [IMMUNOL] An emulsion of ground lepromata containing the leprosy bacillus; used for intradermal skin tests in Hansen's disease.

leprophobia [PSYCH] An abnormal fear of Hansen's disease.

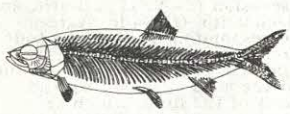
leprosarium [MED] An institution for the treatment of lepers.

leprosy *See* Hansen's disease.

Leptaleinae [INV ZOO] A subfamily of the Formicidae including largely arboreal ant forms which inhabit plants in tropical and subtropical regions.

Leptictidae [PALEON] A family of extinct North American insectivoran mammals belonging to the Proteutheria which ranged from the Cretaceous to middle Oligocene.

LEPTOLEPIDAE



Leptolepis dubia (Blainville) restoration, scales omitted. *(From A. S. Woodward, Catalogue of the Fossil Fishes in the British Museum (Natural History), pt. 3, 1895)*

leptine [ANTHRO] Having a high, a narrow, or a high and narrow forehead with an upper facial index of 55–60 on the skull and of 53–57 on the living person.

Leptinidae [INV ZOO] The mammal nest beetles, a small European and North American family of coleopteran insects in the superfamily Staphylinoidea.

leptite [PETR] A quartz-feldspathic metamorphic rock that is fine-grained with little or no foliation; formed by regional metamorphism of the highest grade.

Leptocardii [ZOO] The equivalent name for Cephalochordata.

leptocephalous larva [VERT ZOO] The marine larva of the fresh-water European eel *Anguilla vulgaris*.

leptocephaly [ANTHRO] Abnormal narrowness and tallness of the head or skull.

leptocercal [VERT ZOO] Of the tail of a fish, tapering to a long, slender point.

Leptochoeridae [PALEON] An extinct family of palaeodont artiodactyl mammals in the superfamily Dichobunoidea.

Leptodactylidae [VERT ZOO] A large family of frogs in the suborder Procoela found principally in the American tropics and Australia.

leptodactylous [VERT ZOO] Having slender toes, as certain birds.

Leptodiridae [INV ZOO] The small carrion beetles, a cosmopolitan family of coleopteran insects in the superfamily Staphylinoidea.

leptogeosyncline [GEOL] A deep oceanic trough that has not been filled with sedimentation and is associated with volcanism.

leptokurtic distribution [STAT] A distribution in which the ratio of the fourth moment to the square of the second moment is greater than 3, which is the value for a normal distribution; it appears to be more heavily concentrated about the mean, or more peaked, than a normal distribution.

Leptolepidae [PALEON] An extinct family of fishes in the order Leptolepiformes representing the first teleosts as defined on the basis of the advanced structure of the caudal skeleton.

Leptolepiformes [PALEON] An extinct order of small, ray-finned teleost fishes characterized by a relatively strong, ossified axial skeleton, thin cycloid scales, and a preopercle with an elongated dorsal portion.

Leptomedusae [INV ZOO] A suborder of hydrozoan coelenterates in the order Hydroida characterized by the presence of a hydrotheca.

leptomeninges [ANAT] The pia mater and arachnoid considered together.

leptomeningitis [MED] Inflammation of the leptomeninges of the brain or the spinal cord.

Leptomitales [MYCOL] An order of aquatic Phycomycetes characterized by a hyphal thallus, or basal rhizoids and terminal hyphae, and zoospores with two flagella.

lepton [PARTIC PHYS] A fermion having a mass smaller than the proton mass; leptons interact with electromagnetic and gravitational fields, but beyond this they interact only through weak interactions.

lepton conservation [PARTIC PHYS] The principle that the number of electrons and e-neutrinos minus the number of positrons and e-antineutrinos is unchanged in any interaction; similarly, the number of negatively charged muons and μ-neutrinos minus the number of positively charged muons and μ-antineutrinos is unchanged.

lepton era [ASTRON] The period in the early universe, following the hadron era, during which electrons, positrons, neutrinos, and photons were present in nearly equal numbers; roughly between 10^{-4} and 20 seconds after the big bang.

leptonic decay [PARTIC PHYS] Decay of an elementary particle in which at least some of the products are leptons.

leptophos [ORG CHEM] $C_{13}H_{10}BrCl_2O_2PS$ A white solid with a melting point of 70.2–70.6°C; slight solubility in water; used as an insecticide on vegetables, fruit, turf, and ornamentals. Also known as *O*-(4-bromo-2,5-dichlorophenyl) *O*-methyl phenylphosphorothioate.

leptophyll [ECOL] A growth-form class of plants having a leaf surface area of 25 square millimeters or less; common in alpine and desert habitats.

Leptopodidae [INV ZOO] A tropical and subtropical family of hemipteran insects in the superfamily Leptopodoidea distinguished by the spiny body and appendages.

Leptopodoidea [INV ZOO] A superfamily of hemipteran insects in the subdivision Geocorisae.

leptorrhine [ANTHRO] Having a long, narrow nose with a nasal index of less than 47 on the skull or of less than 70 on the living person.

Leptosomatidae [VERT ZOO] The cuckoo rollers, a family of Madagascan birds in the order Coraciiformes composed of a single species distinguished by the downy covering on the newly hatched young.

Leptospira [MICROBIO] A genus of bacteria in the family Spirochaetaceae; thin, helical cells with bent or hooked ends.

Leptospira icterohemorrhagiae [MICROBIO] The organism that causes spirochetal jaundice in humans.

leptospirosis [MED] Infection with spirochetes of the genus *Leptospira*.

leptospirosis icterohemorrhagia *See* Weil's disease.

leptostaphyline [ANTHRO] Having a high, narrow palate with a palatal index of less than 80 on the skull.

Leptostraca [INV ZOO] A primitive group of crustaceans considered as one of a series of Malacostraca distinguished by an additional abdominal somite that lacks appendages, and a telson bearing two movable articulated prongs.

Leptostromataceae [MYCOL] A family of fungi of the order Sphaeropsidales; pycnidia are black and shield-shaped, circular or oblong, and slightly asymmetrical; included are some fruit-tree pathogens.

leptotene [CYTOL] The first stage of meiotic prophase, when the chromosomes appear as thin threads having well-defined chromomeres.

Leptothrix [MICROBIO] A genus of sheathed bacteria; single cells are motile by means of polar or subpolar flagella, and sheaths are encrusted with iron or manganese oxides.

Leptotrichia [MICROBIO] A genus of bacteria in the family Bacteroidaceae; straight or slightly curved rods with pointed or rounded ends arranged in filaments.

Leptotyphlopidae [VERT ZOO] A family of small, harmless, burrowing circumtropical snakes (Serpentes) in the order Squamata; teeth are present only on the lower jaw and are few in number.

Lepus [ASTRON] A southern constellation, right ascension 5.5 hours, declination 20°S. Also known as Hare. [VERT ZOO] The type genus of the family Leporidae, comprising the typical hares.

leren [AGR] *Calathea allouia*. A tuber food crop of the family Marautaceae cultivated in the Caribbean and in Central and South America.

Lernaeidae [INV ZOO] A family of copepod crustaceans in the suborder Caligoida; all are fixed ectoparasites, that is, they penetrate the skin of fresh-water fish.

Lernaeopodidae [INV ZOO] A family of ectoparasitic crustaceans belonging to the Lernaeopodoida; individuals are attached to the walls of the fishes' gill chambers by modified second maxillae.

Lernaeopodoida [INV ZOO] The fish maggots, a group of ectoparasitic crustaceans characterized by a modified postembryonic development reduced to two or three stages, a free-swimming larva, and the lack of external signs of physical maturity in adults.

LES *See* Lincoln experimental satellite.

lesbian [PSYCH] **1.** Pertaining to female homosexuality. **2.** A female homosexual.

Lesch-Nyhan syndrome [MED] A hereditary disease of male children, transmitted as an X-linked recessive, characterized by hyperuricemia, deficiency of hypoxanthine-guanine phosphoribosyl transferase, mental retardation, spastic cerebral palsy, choreathetosis, and self-mutilating biting.

lesion [BIOL] A structural or functional alteration due to injury or disease.

Leskeineae [BOT] A suborder of mosses in the order Hypnobryales; plants are not complanate, paraphyllia are frequently present, leaves are costate, and alar cells are not generally differentiated.

lespedeza [BOT] Any of various legumes of the genus *Lespedeza* having trifoliate leaves, small purple pea-shaped blossoms, and one seed per pod.

lesser circulation *See* pulmonary circulation.

Lesser Dog *See* Canis Minor.

lesser ebb [OCEANOGR] The weaker of two ebb currents occurring during a tidal day.

lesser flood [OCEANOGR] The weaker of two flood currents occurring during a tidal day.

Lesser Lion *See* Leo Minor.

lesser omentum [ANAT] A fold of the peritoneum extending from the lesser curvature of the stomach to the transverse hepatic fissure.

less-than-carload [IND ENG] Too light to fill a freight car and therefore not eligible for carload rate. Abbreviated LCL.

leste [METEOROL] Spanish nautical term for east wind, specifically the hot, dry, dusty easterly or southeasterly wind which blows from the Atlantic coast of Morocco out to Madeira and the Canary Islands; it is a form of sirocco, occurring in front of depressions advancing eastward.

Lestidae [INV ZOO] A family of odonatan insects belonging to the Zygoptera; distinguished by the wings being held in a V position while at rest.

Lestoniidae [INV ZOO] A monospecific family of hemipteran insects in the superfamily Pentatomorpha found only in Australia.

LET *See* stopping power.

letdown [AERO ENG] Gradual and orderly reduction in altitude, particularly in preparation for landing.

lethal area [ORD] In terminal ballistics, a figure of merit, having the dimension of area, which permits prediction of the number of casualties a missile may be expected to produce when employed under specified conditions; an equation states the relationship between the lethal area and the numerous factors affecting its numerical value.

lethal dose 50 [PHARM] The dose of a substance which is fatal to 50% of the test animals. Abbreviated LD_{50}. Also known as median lethal dose.

lethal gene [GEN] A gene mutation that causes premature death in heterozygotes if dominant, and in homozygotes if recessive. Also known as lethal mutation.

lethal mutation *See* lethal gene.

lethal radius [ORD] The distance from point of burst or ground zero at which a projectile, missile, or the like will probably destroy a target or kill persons.

lethargy [MED] A morbid condition of drowsiness or stupor; mental torpor. [NUCLEO] A measure of the energy which has been lost by a neutron, equal to the natural logarithm of the ratio of the initial energy of a neutron to its energy at any given point in the slowing-down process.

letovicite [MINERAL] $(NH_3)_3H(SO_4)_2$ A mineral composed of acid ammonium sulfate.

letter [COMMUN] A character used in an alphabet generally representing one or more sounds of a spoken language.

letter code [COMPUT SCI] A Baudot code function which cancels errors by causing the receiving terminal to print nothing.

Letterer-Siwe disease [MED] A fatal disease of infants and young children, of unknown etiology, characterized by hyperplasia of the reticuloendothelial system without lipid storage.

letterpress [GRAPHICS] A method of printing by impressing paper on a raised inked surface; the oldest printing process, it employs type or plates cast or engraved in relief on materials such as metal, wood, or rubber. Also known as relief press.

letterset [GRAPHICS] A method of printing that uses a blanket for transferring an image from plate to paper; unlike offset lithography, it uses a relief plate and requires no dampening system. Also known as dry offset.

letter spacing [GRAPHICS] Space inserted between letters of a word to open it up horizontally.

letters patent *See* patent.

letters shift [COMMUN] Abbreviated LTRS. **1.** A movement of a teletypewriter carriage which permits printing of alphabetic characters in an appropriate, generally linear sequence. **2.** The control which actuates this movement.

lettuce [BOT] *Lactuca sativa*. An annual plant of the order Asterales cultivated for its succulent leaves; common varieties are head lettuce, leaf or curled lettuce, romaine lettuce, and iceberg lettuce.

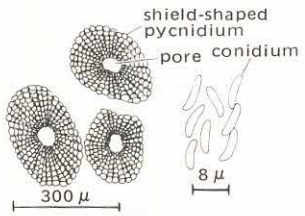
leucaenine *See* mimosine.

leucaenol *See* mimosine.

Leucaltidae [INV ZOO] A family of calcinean sponges in the order Leucettida having numerous small, interstitial, flagellated chambers.

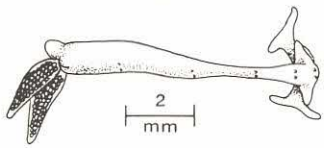
Leucascidae [INV ZOO] A family of calcinean sponges in the order Leucettida having a radiate arrangement of flagellated chambers.

LEPTOSTROMATACEAE



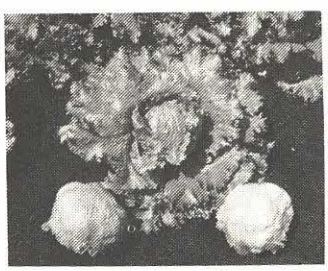
Pycnidia and conidia of *Leptothyrium vulgare*.

LERNAEIDAE



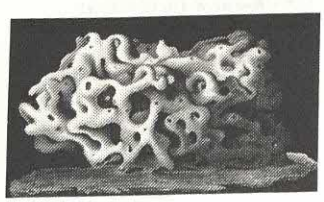
Lernaea cyprinacea L., the female, showing the branched processes of the head that anchor the parasite deep in the flesh of the host.

LETTUCE



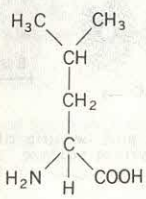
Head lettuce *(Lactuca sativa)*, cultivar Fulton, of the plant order Asterales. *(J. Harris Co., Rochester, N.Y.)*

LEUCALTIDAE



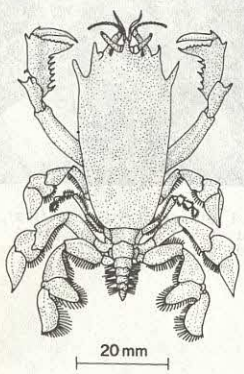
Leucaltis clathria showing the small chambers. *(After Polejaeff, 1883)*

LEUCINE



Structural formula of leucine.

LEUCOSIIDAE



Drawing of a purse crab, *Persephona punctata.* *(Smithsonian Institution)*

leucenine *See* mimosine.

leucenol *See* mimosine.

Leucettida [INV ZOO] An order of calcareous sponges in the subclass Calcinea having a leuconoid structure and a distinct dermal membrane or cortex.

leucine [BIOCHEM] $C_6H_{13}O_2N$ A monocarboxylic essential amino acid obtained by hydrolysis of protein-containing substances such as milk.

leucine amino peptidase [BIOCHEM] An enzyme that acts on peptides to catalyze the release of terminal amino acids, especially leucine residues, having free α-amino groups.

leucite [MINERAL] $KAlSi_2O_6$ A white or gray rock-forming mineral belonging to the feldspathoid group; at ordinary temperatures the mineral exists as aggregates of trapezohedral crystals with glassy fracture; hardness is 5.5–6.0 on Mohs scale, and specific gravity is 2.45–2.50. Also known as amphigene; grenatite; vesuvian; Vesuvian garnet; white garnet.

leucite phonolite [PETR] An extrusive rock composed of alkali feldspar, mafic minerals, and leucite.

leucitite [PETR] A fine-grained or porphyritic extrusive rock or hypabyssal igneous rock composed mostly of pyroxene and leucite.

leucitohedron *See* trapezohedron.

leucochalcite *See* olivenite.

leucocratic [PETR] Light-colored as applied to igneous rock containing 0–50% dark-colored minerals.

Leucodontineae [BOT] A family of mosses in the order Isobryales with foliated branches, often bearing catkins.

leucoline *See* quinoline.

leucon [INV ZOO] A type of sponge having the choanocytes restricted to flagellated chambers inserted between the incurrent and excurrent canals, and a reduced or absent paragastric cavity.

Leuconostoc [MICROBIO] A genus of bacteria in the family Streptococcaceae; spherical or lenticular cells occurring in pairs or chains; ferment glucose with production of levorotatory lactic acid (heterofermentative), ethanol, and carbon dioxide.

leucophanite [MINERAL] $(Na,Ca)_2BeSi_7(O,F,OH)_7$ Greenish mineral composed of beryllium sodium calcium silicate containing fluorine and occurring in glassy, tabular crystals.

leucophore [HISTOL] A white reflecting chromatophore.

leucophosphite [MINERAL] $K_2Fe_4(PO_4)_4(OH)_2 \cdot 9H_2O$ White mineral composed of hydrous basic phosphate of potassium and iron.

leucoplast [BOT] A nonpigmented plastid; capable of developing into a chromoplast.

leucopyrite *See* loellingite.

Leucosiidae [INV ZOO] The purse crabs, a family of true crabs belonging to the Oxystomata.

leucosin [BIOCHEM] A simple protein of the albumin type found in wheat and other cereals.

Leucosoleniida [INV ZOO] An order of calcareous sponges in the subclass Calcaronea characterized by an asconoid structure and the lack of a true dermal membrane or cortex.

leucosphenite [MINERAL] $Na_4BaTi_2Si_{10}O_{27}$ A white mineral composed of sodium barium silicotitanate and occurring as wedge-shaped crystals.

Leucospidae [INV ZOO] A small family of hymenopteran insects in the superfamily Chalcidoidea distinguished by a longitudinal fold in the forewings.

leucosporous [MYCOL] Having white spores.

Leucothoidae [INV ZOO] A family of amphipod crustaceans in the suborder Gammaridea including semiparasitic and commensal species.

Leucothrix [MICROBIO] The type genus of the family Leucotrichaceae; cells do not form sulfur deposits.

Leucotrichaceae [MICROBIO] A family of bacteria in the order Cytophagales; long, colorless, unbranched filaments having conspicuous cross-walls and containing cylindrical or ovoid cells; filaments attach to substrate.

leucovorin [PHARM] Folinic acid used as a calcium salt to counteract the toxic effects of folic acid antagonists and for treatment of megaloblastic anemias.

leucoxene [MINERAL] A mineral composed of rutile with some anatase or sphene; occurs in igneous rocks, usually as an alteration product of ilmenite.

leukemia [MED] Any of several diseases of the hemopoietic system characterized by uncontrolled leukocyte proliferation. Also known as leukocythemia.

leukemia virus *See* leukovirus.

leukemoid [MED] Similar to leukemia, that is, characterized by the presence of immature leukocytes in the blood, but of a different etiology.

leukocidin [BIOCHEM] A toxic substance released by certain bacteria which destroys leukocytes.

leukocyte [HISTOL] A colorless, ameboid blood cell having a nucleus and granular or nongranular cytoplasm. Also known as white blood cell; white corpuscle.

leukocythemia *See* leukemia.

leukocytolysin [BIOCHEM] A leukocyte-disintegrating lysin.

leukocytopenia *See* leukopenia.

leukocytopoiesis [PHYSIO] Formation of leukocytes.

leukocytosis [MED] Elevation of the leukocyte count to values above the normal limit.

leukoderma [MED] Defective skin pigmentation, especially the congenital absence of pigment in patches or bands.

leukodystrophy [MED] A condition thought to result from an inborn error of metabolism and characterized by progressive degeneration of the white matter of the cerebrum, or by defective buildup of myelin.

leukoencephalitis [MED] Inflammation of the white matter of the cerebrum.

leukoerythroblastic anemia *See* myelophthisic anemia.

leukoerythroblastosis *See* myelophthisic anemia.

leukol *See* quinoline.

leukolymphosarcoma *See* leukosarcoma.

leukoma [MED] A large and dense opacity of the cornea as a result of an ulcer, wound, or inflammation, which presents an appearance of ground glass.

leukonychia [MED] Whitish discoloration or spotting of the fingernails.

leukopenia [MED] A reduction in the leukocyte count to values below the normal limit. Also known as leukocytopenia.

leukoplakia [MED] Formation of thickened white patches on mucous membranes, particularly of the mouth and vulva.

leukorrhea [MED] A whitish, mucopurulent discharge from the female genital canal.

leukosarcoma [MED] Lymphosarcoma accompanied by a small number of anaplastic lymphoid cells in the peripheral blood. Also known as leukolymphosarcoma; sarcoleukemia.

leukosis [MED] An excess of white blood cells.

leukotomy *See* lobotomy.

leukotriene [BIOCHEM] Any of a family of oxidized metabolites of certain polyunsaturated fatty acids, predominantly arachidonic acid, that mediate responses in allergic reactions and inflammations, produced in specific cells upon stimulation.

leukovirus [VIROL] A major group of animal viruses including those causing leukemia in birds, mice, and rats. Also known as leukemia virus.

leuneburgite [MINERAL] $Mg_3B_2(PO_4)_2(OH)_6 \cdot 5H_2O$ A colorless mineral consisting of a hydrous basic phosphate of magnesium and boron.

leurocristine *See* vincristine.

levan [BIOCHEM] $(C_6H_{10}O_5)_n$ A polysaccharide consisting of repeating units of D-fructose and produced by a range of microorganisms, such as *Bacillus mesentericus.*

levante [METEOROL] The Spanish and most widely used term for an east or northeast wind occurring along the coast and inland from southern France to the Straits of Gibraltar; it is moderate or fresh, mild, very humid, and rainy, and occurs with a depression over the western Mediterranean Sea.

levantera [METEOROL] A persistent east wind of the Adriatic, usually accompanied by cloudy weather.

Levantine Basin [OCEANOGR] A basin in the Mediterranean Ocean between Asia Minor and Egypt.

levator [MED] An instrument used for raising a depressed portion of the skull. [PHYSIO] Any muscle that raises or elevates a part.

leveche [METEOROL] A warm wind in Spain, either a foehn or a hot southerly wind in advance of a low-pressure area moving from the Sahara Desert.

levee [CIV ENG] **1.** A dike for confining a stream. **2.** A pier along a river. [GEOL] **1.** An embankment bordering one or both sides of a sea channel or the low-gradient seaward part of a canyon or valley. **2.** A low ridge sometimes deposited by a stream on its sides.

level [CIV ENG] **1.** A surveying instrument with a telescope and bubble tube used to take level sights over various distances, commonly 100 feet (30 meters). **2.** To make the earth surface

horizontal. [COMMUN] A specified position on an amplitude scale applied to a signal waveform, such as reference white level and reference black level in a standard television signal. [COMPUT SCI] **1.** The status of a data item in COBOL language indicating whether this item includes additional items. **2.** *See* channel. [DES ENG] A device consisting of a bubble tube that is used to find a horizontal line or plane. Also known as spirit level. [ELEC] A single bank of contacts, as on a stepping relay. [ELECTR] **1.** The difference between a quantity and an arbitrarily specified reference quantity, usually expressed as the logarithm of the ratio of the quantities. **2.** A charge value that can be stored in a given storage element of a charge storage tube and distinguished in the output from other charge values. [MIN ENG] **1.** Mine workings that are at the same elevation. **2.** A gutter for the water to run in.

level above threshold [PHYSIO] Also known as sensation level. **1.** The pressure level of a sound in decibels above its threshold of audibility for the individual observer. **2.** In general, the level of any psychophysical stimulus, such as light, above its threshold of perception.

level bombing [ORD] Releasing bombs in level flight.

level compensator [ELECTR] **1.** Automatic transmission-regulating feature or device used to minimize the effects of variations in amplitude of the received signal. **2.** Automatic gain control device used in the receiving equipment of a telegraph circuit.

level converter [ELECTR] An amplifier that converts nonstandard positive or negative logic input voltages to standard DTL or other logic levels.

level crosscut [MIN ENG] A horizontal crosscut.

level drive [MIN ENG] A horizontal shaft which allows access to the length of a deposit and forms the basis for the splitting of the deposit into levels.

leveled elemental time *See* normal elemental time.

level error [ASTRON] **1.** The difference between the apparent altitude of a celestial object above the apparent horizon and its true altitude above the celestial horizon. **2.** The angle between the east-west mechanical axis of a transit telescope and the horizontal plane.

leveled time *See* normal time.

leveler [ENG] A back scraper, drag, or other form of device for smoothing land.

level fold *See* nonplunging fold.

level indicator [ENG] An instrument that indicates liquid level. [ENG ACOUS] An indicator that shows the audio voltage level at which a recording is being made; may be a volume-unit meter, neon lamp, or cathode-ray tuning indicator.

leveling [ENG] Adjusting any device, such as a launcher, gun mount, or sighting equipment, so that all horizontal or vertical angles will be measured in the true horizontal and vertical planes. [IND ENG] A method of performance rating which seeks to rate the principal factors that cause the speed of motions rather than speed itself; it considers that the level at which the operator works is influenced by effort and skill. [MET] Flattening rolled sheet by evening out irregularities, using a roller or tensile straining. [MIN ENG] Measurement of rises and falls, heights, and contour lines.

leveling action [MET] The property exhibited by a plating solution in making the coating smoother than the base metal.

leveling instrument [ENG] An instrument for establishing a horizontal line of sight, usually by means of a spirit level or a pendulum device.

leveling screw [ENG] An adjusting screw used to bring an instrument into level.

level measurement [MECH] The determination of the linear vertical distance between a reference point or datum plane and the surface of a liquid or the top of a pile of divided solid.

level of burst [ORD] Point at which a projectile bursts.

level off [AERO ENG] To bring an aircraft to level flight after an ascent or descent.

level-off position [AERO ENG] That position over which a craft ends an ascent or descent and begins relatively horizontal motion.

level of free convection [METEOROL] The level at which a parcel of air lifted dry and adiabatically until saturated, and lifted saturated and adiabatically thereafter, would first become warmer than its surroundings in a conditionally unstable atmosphere. Abbreviated LFC.

level of nondivergence [METEOROL] A level in the atmosphere throughout which the horizontal velocity divergence is zero; although in some meteorological situation there may be several such surfaces (not necessarily level), the level of nondivergence usually considered is that mid-tropospheric surface which separates the major regions of horizontal convergence and divergence associated with the typical vertical structure of the migratory cyclonic-scale weather systems.

level of saturation *See* water table.

level of significance of a test [STAT] The probability of false rejection of the null hypothesis. Also known as significance level.

level point *See* point of fall.

level rod [ENG] A straight rod or bar, with a flat face graduated in plainly visible linear units with zero at the bottom, used in measuring the vertical distance between a point on the earth's surface and the line of sight of a leveling instrument that has been adjusted to the horizontal position.

level scheme *See* energy-level diagram.

level shifting [ELECTR] Changing the logic level at the interface between two different semiconductor logic systems.

level surface [ENG] A surface which is perpendicular to the plumb line at every point. [GEOPHYS] *See* geopotential surface.

level valve [MECH ENG] A valve operated by a lever which travels through a maximum arc of 180°.

level width [QUANT MECH] A measure of the spread in energy of an unstable state, equal to the difference between the energies at which intensity of emission or absorption of photons or particles, or the cross section for a reaction, is one-half its maximum value.

Levenstein process [CHEM ENG] A process for the manufacture of mustard gas from ethene, $CH_2{=}CH_2$, and sulfur chloride, S_2Cl_2.

lever [ENG] A rigid bar, pivoted about a fixed point (fulcrum), used to multiply force or motion; used for raising, prying, or dislodging an object.

leverage [MECH] The multiplication of force or motion achieved by a lever.

lever escapement [HOROL] A clock movement in which the balance wheel is connected to the escapement by a lever attached to a roller; the wheel swings through a much larger angle than does a pendulum.

leveret [VERT ZOO] A young hare.

Leverett function [FL MECH] A dimensionless number used in studying two-phase flow in porous mediums, written as $(\xi/e)^{1/2}(p/\sigma)$, where ξ is the permeability of a medium (as defined by Darcy's law), e is the medium's porosity, σ is the surface tension between two liquids flowing through it, and p is the capillary pressure.

lever shears [DES ENG] A shears in which the input force at the handles is related to the output force at the cutting edges by the principle of the lever. Also known as alligator shears; crocodile shears.

lever switch [ELEC] A switch having a lever-shaped operating handle.

Levi-Civita symbol [MATH] A symbol $\epsilon_{i,j,\ldots,s}$ where $i, j, \ldots, s$ are n indices, each running from 1 to n; the symbol equals zero if any two indices are identical, and 1 or -1 otherwise, depending on whether $i, j, \ldots, s$ form an even or an odd permutation of $1, 2, \ldots, n$.

levigate [BOT] *See* glabrous. [CHEM] **1.** To separate a finely divided powder from a coarser material by suspending in a liquid in which both substances are insoluble. Also known as elutriation. **2.** To grind a moist solid to a fine powder.

levigated abrasive [MATER] A fine abrasive powder for final burnishing of metals or for metallographic polishing; the powder is usually processed to make it chemically neutral.

levisticum oil *See* lovage oil.

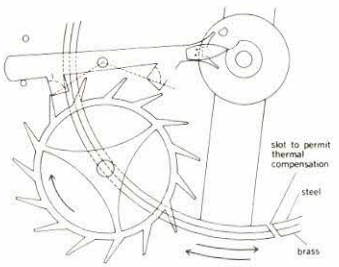
levitated vehicle [MECH ENG] A train or other vehicle which travels at high speed at some distance above an electrically conducting track by means of levitation.

levitation [MIN ENG] In froth flotation, raising of particles in a froth to the surface of the pulp, to facilitate separation of selected minerals in the froth. [PHYS] The use of a force that does not involve physical contact to balance gravity, such as that associated with an electric or magnetic field, or electromagnetic or acoustic radiation.

levitation heating [MET] Providing heat through high-frequency magnetic fields; employed in levitation melting.

levitation melting [MET] Melting metal out of contact with a

LEVER ESCAPEMENT



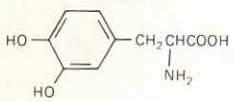
The lever escapement, used in good spring clocks and watches, is detached from the balance wheel during most of a cycle, thus promoting accurate timekeeping.

supporting material by using the induced current provided by a high-frequency surrounding magnetic field to suspend the melt.

levocardia [MED] Location of the heart on the left side associated with visceral situs inversus and congenital cardiac disease.

levodopa [PHARM] $C_9H_{11}NO_4$ Crystals or crystalline powder, soluble in dilute hydrochloric acid and in formic acid; used as an anticholinergic drug and in the treatment of Parkinson's disease. Also known as 2-amino-3-(3,4-dihydroxyphenyl)propanoic acid; β-(3,4-dihydroxyphenyl)-*d*-alanine; L-dopa.

LEVODOPA



Structural formula.

levo form [PHYS CHEM] An optical isomer which induces levorotation in a beam of plane polarized light.

levophobia [PSYCH] An abnormal fear of objects to the left of the body.

levorotation [OPTICS] Rotation of the plane of polarization of plane polarized light in a counterclockwise direction, as seen by an observer facing in the direction of light propagation. Also known as levulorotation.

levotropic cleavage [EMBRYO] Spiral cleavage with the cells displaced counterclockwise.

levulinic acid [ORG CHEM] $CH_3COCH_2CH_2COOH$ Crystalline compound forming plates or leaflets that melt at 37°C; freely soluble in alcohol, ether, and chloroform; used in the manufacture of pharmaceuticals, plastics, rubber, and synthetic fibers. Also known as acetylpropionic acid; γ-ketovaleric acid; 4-oxypentanoic acid.

levulorotation *See* levorotation.

levulose [BIOCHEM] Levorotatory D-fructose.

levulose tolerance test [PATH] A liver function test based on the observation that blood sugar increases in cases of hepatic disease following oral administration of levulose.

levyine *See* levynite.

levyite *See* levynite.

levyne *See* levynite.

levynite [MINERAL] $NaCa_3Al_7Si_{11}O_{36}\cdot 15H_2O$ A white or light-colored mineral of the zeolite group, composed of hydrous silicate of aluminum, sodium, and calcium, and occurring in rhombohedral crystals. Also known as levyine; levyite; levyne.

lewis [DES ENG] A device for hoisting heavy stones; employs a dovetailed tenon that fits into a mortise in the stone.

Lewis acid [CHEM] A substance that can accept an electron pair from a base; thus, $AlCl_3$, BF_3, and SO_3 are acids.

Lewis base [CHEM] A substance that can donate an electron pair; examples are the hydroxide ion, OH^-, and ammonia, NH_3.

Lewis blood group system [IMMUNOL] An antigen, designated by Le^a, first recognized in a Mrs. Lewis, occurring in about 22% of the population, detected by anti-Le^a antibodies; primarily composed of soluble antigens of serum and body fluids like saliva, with secondary absorption by erythrocytes.

lewis bolt [DES ENG] A bolt with an enlarged, tapered head that is inserted into masonry or stone and fixed with lead; used as a foundation bolt.

Lewis gun [ORD] A gas-operated machine gun with a horizontal drum magazine, manufactured in several modifications; now obsolete.

lewis hole [MIN ENG] A series of two or more holes drilled as closely together as possible, but then connected by knocking out the thin partition between them, thus forming one wide hole having its greatest diameter in a plane with the desired rift.

lewisite [MINERAL] $(Ca,Fe,Na)_2$ A titanian romeite mineral. [ORG CHEM] $C_2H_2AsCl_3$ An oily liquid, colorless to brown or violet; forms a toxic gas, used in World War I.

Lewis-Matheson method [CHEM ENG] Trial-and-error calculation method for the design of multicomponent distillation columns, or for the determination of the separating ability of an existing column.

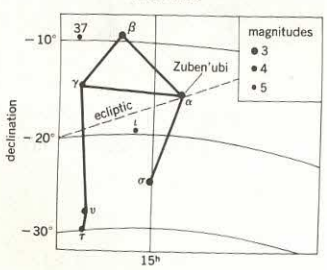
Lewis number [PHYS] **1.** A dimensionless number used in studies of combined heat and mass transfer, equal to the thermal diffusivity divided by the diffusion coefficient. Symbolized *Le*; N_{Le}. **2.** Sometimes, the reciprocal of this quantity.

lewis pin [MIN ENG] A pin used for attachment to a key block; it is placed in a shallow drill hole with a wedge at either side.

lewistonite [MINERAL] $(Ca,K,Na)_3(PO_4)_3(OH)$ White mineral composed of basic calcium potassium sodium phosphate.

Lexell's Comet [ASTRON] A small comet that approached to within 2,000,000 miles (3,200,000 kilometers) of earth in 1770; it has not been seen since.

LIBRA



Line pattern of the constellation Libra. The grid lines represent the coordinates of the sky. The apparent brightness, or magnitude, of the stars is shown by the sizes of the dots, graded by appropriate numbers.

lexicographic order [MATH] Given sets A and B with a common ordering $<$, one defines an ordering between all sequences (finite or infinite) of elements of A and of elements of B by $(a_1,a_2,\ldots) < (b_1,b_2,\ldots)$ if either $a_i = b_i$ for every i, or $a_n < b_n$, where n is the first place in which they differ; this is the way words are ordered in a dictionary.

Leyden jar [ELEC] An early type of capacitor, consisting simply of metal foil sheets on the inner and outer surfaces of a glass jar.

Leydig cell [HISTOL] One of the interstitial cells of the testes; thought to produce androgen.

Leydig-cell tumor *See* interstitial-cell tumor.

LF *See* low-frequency.

LFC *See* level of free convection.

LF loran *See* low-frequency loran.

LGV *See* lymphogranuloma venereum.

L-head engine [MECH ENG] A type of four-stroke cycle internal combustion engine having both inlet and exhaust valves on one side of the engine block which are operated by pushrods actuated by a single camshaft.

lherzolite [PETR] Peridotite composed principally of olivine with orthopyroxene and clinopyroxene.

l'Hospital's rule [MATH] A rule useful in evaluating indeterminate forms: if both the functions $f(x)$ and $g(x)$ and all their derivatives up to order $(n-1)$ vanish at $x = a$, but the nth derivatives both do not vanish or both become infinite at $x = a$, then $\lim_{x\to a} f(x)/g(x) = f^{(n)}(a)/g^{(n)}(a)$, $f^{(n)}$ denoting the nth derivative.

l'Huilier's equation [MATH] An equation used in the solution of a spherical triangle, involving tangents of various functions of its angles and sides.

Li *See* lithium.

liana [BOT] A woody or herbaceous climbing plant with roots in the ground.

Liapunov function *See* Lyapunov function.

Lias *See* Liassic.

Liassic [GEOL] The Lower Jurassic period of geologic time. Also known as Lias.

Libby counter *See* black carbon counter.

Libby effect [GEOCHEM] The increase, since about 1950, in the carbon-14 content of the atmosphere, produced by the detonation of thermonuclear devices.

libeccio [METEOROL] Italian name for a southwest wind, used in northern Corsica for the west or southwest wind which blows throughout the year, especially in winter when it is often stormy.

Libellulidae [INV ZOO] A large family of odonatan insects belonging to the Anisoptera and distinguished by a notch on the posterior margin of the eyes and a foot-shaped anal loop in the hindwing.

libethenite [MINERAL] $Cu_2(PO_4)OH$ An olive-green mineral composed of basic copper sulfate, occurring as small prismatic crystals or in masses.

libido [PSYCH] **1.** Sexual desire. **2.** The sum total of all instinctual forces; psychic energy or drive usually associated with the sexual instinct.

Libman-Sacks endocarditis [MED] Inflammation of, accompanied by the presence of watery vegetations on, the endocardium; complicates systemic lupus erythematosus.

Libra [ASTRON] A southern constellation, right ascension 15 hours, declination 15° south. Also known as Balance.

librarian [COMPUT SCI] The program which maintains and makes available all programs and routines composing the operating system.

library [COMPUT SCI] **1.** A computerized facility containing a collection of organized information used for reference. **2.** An organized collection of computer programs together with the associated program listings, documentation, users' directions, decks, and tapes.

library routine [COMPUT SCI] A computer program that is part of some program library.

library software [COMPUT SCI] The collection of programs and routines in the library of a computer system.

library tape [COMPUT SCI] A magnetic tape that is kept in a stored, indexed collection for ready use and is made generally available.

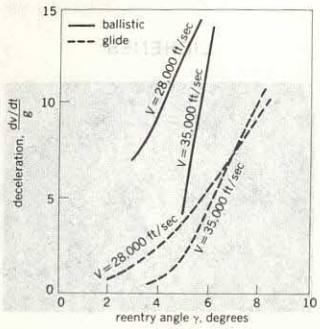
libration [PHYS] Any oscillatory rotational motion, such as that of the moon, or of a molecule in a solid which does not have enough energy to make full rotations.

libration in latitude *See* lunar libration.
Libytheidae [INV ZOO] The snout butterflies, a family of cosmopolitan lepidopteran insects in the suborder Heteroneura distinguished by long labial palps; represented in North America by a single species.
licanic oil [MATER] A fatty acid found in drying oils that are in paint formulations.
Liceaceae [MYCOL] A family of plasmodial slime molds in the order Liceales.
Liceales [MYCOL] An order of plasmodial slime molds in the subclass Myxogastromycetidae.
licensed material [NUCLEO] Source material, special nuclear material, or by-product material received, possessed, used, or transferred under a general or special license issued by the Nuclear Regulatory Commission.
lichen [BOT] The common name for members of the Lichenes.
Lichenberger figures *See* Lichtenberg figures.
lichen blue *See* litmus.
Lichenes [BOT] A group of organisms consisting of fungi and algae growing together symbiotically.
Lichenes Imperfecti [BOT] A class of the Lichenes containing species with no known method of sexual reproduction.
lichenification [MED] The process whereby the skin becomes leathery and hardened; often the result of chronic pruritis and the irritation produced by scratching or rubbing eruptions.
lichenology [BOT] The study of lichens.
lichenophagous [ZOO] Feeding on lichens.
Lichnophorina [INV ZOO] A suborder of ciliophoran protozoans belonging to the Heterotrichida.
Lichtenberg figures [ELEC] Patterns produced on a photographic emulsion, or in fine powder spread over the surface of a solid dielectric, by an electric discharge produced by a high transient voltage. Also known as Lichenberger figures.
licorice [BOT] *Glycyrrhiza glabra*. A perennial herb of the legume family (Leguminosae) cultivated for its roots, which when dried provide a product used as a flavoring in medicine, candy, and tobacco and in the manufacture of shoe polish.
lidar [OPTICS] An instrument in which a ruby laser generates intense infrared pulses in beam widths as small as 30 seconds of arc; beam reflections and scattering effects of clouds, smog layers, and some atmospheric discontinuities are measured by radar techniques; it can also be used for tracking weather balloons, smoke puffs, and rocket trails. Derived from laser infrared radar.
lidocaine [ORG CHEM] $C_{14}H_{22}N_2O$ A crystalline compound, used as a local anesthetic. Also known as lignocaine.
Lie algebra [MATH] The algebra of vector fields on a manifold with additive operation given by pointwise sum and multiplication by the Lie bracket.
liebigite [MINERAL] $Ca_2U(CO_3)_4 \cdot 10H_2O$ An apple- or yellow-green mineral composed of hydrous uranium calcium carbonate; occurs as a coating or concretion in rock.
Liebig's law of the minimum *See* law of minimum.
Liebmann effect [OPTICS] The effect whereby it is more difficult to visually distinguish contrasting forms when they have the same luminance and different chromaticities than when they have different luminances and the same chromaticity.
Lie bracket [MATH] Given vector fields X,Y on a manifold M, their Lie bracket is the vector field whose value is the difference between the values of XY and YX.
lie detector [ENG] An instrument that indicates or records one or more functional variables of a person's body while the person undergoes the emotional stress associated with a lie. Also known as polygraph; psychintegroammeter.
Lie group [MATH] A topological group which is also a differentiable manifold in such a way that the group operations are themselves analytic functions.
Lienard-Wiechert potentials [ELECTROMAG] The retarded and advanced electromagnetic scaler and vector potentials produced by a moving point charge, expressed in terms of the (retarded or advanced) position and velocity of the charge.
Liesegang banding [GEOL] Colored or compositional rings or bands in a fluid-saturated rock due to rhythmic precipitation. Also known as Liesegang rings.
Liesegang rings *See* Liesegang banding.
Lieskeela [MICROBIO] A genus of sheathed bacteria; cells are nonmotile, and sheaths are not attached and may be encrusted with iron and manganese oxides.
lifeboat [NAV ARCH] A small boat hoisted on davits or carried on one of the upper decks of a vessel, which can be quickly lowered into the water in case of an emergency.
life cycle [BIOL] The functional and morphological stages through which an organism passes between two successive primary stages.
life expectancy [BIOL] The expected number of years that an organism will live based on statistical probability. [ENG] The predicted useful service life of an item of equipment.
life form [ECOL] The form characteristically taken by a plant at maturity.
life of mine [MIN ENG] The time in which, through the employment of the available capital, the ore reserves—or such reasonable extension of the ore reserves as conservative geological analysis may justify—will be extracted.
life preserver [ENG] A buoyant device that is used to prevent drowning by supporting a person in the water.
life raft [NAV ARCH] A very buoyant raft designed to be used by people forced into the water; made of a metal tube covered with wood or canvas, of balsa wood, or of rubber which may be automatically inflated.
life-saving station *See* Coast Guard station.
life support system [ENG] A system providing atmospheric control and monitoring, such as a breathing mixture supply system, air purification and filtering system, or carbon dioxide removal system; used in oceanographic submersibles and spacecraft.
life test [CHEM ENG] In petroleum testing, an ASTM oxidation test made on inhibited steam-turbine oils to determine their stability under oxidizing conditions. [ENG] A test in which a device is operated under conditions that simulate a normal lifetime of use, to obtain an estimate of service life.
lifetime *See* mean life.
life zone [ECOL] A portion of the earth's land area having a generally uniform climate and soil, and a biota showing a high degree of uniformity in species composition and adaptation.
LIFO *See* last in, first out.
lift [FL MECH] *See* aerodynamic lift. [MECH ENG] *See* elevator. [MIN ENG] **1.** The vertical height traveled by a cage in a shaft. **2.** The distance between the first level and the surface or between any two levels. **3.** Any of the various gangways from which coal is raised at a slope colliery.
lift bridge [CIV ENG] A drawbridge whose movable spans are raised vertically.
lift coefficient [AERO ENG] The quantity $C_L = 2L/\rho V^2 S$, where L is the lift of a whole airplane wing, ρ is the mass density of the air, V is the free-stream velocity, and S is the wing area; this is also applicable to other airfoils.
lift-drag ratio [AERO ENG] The lift of an aerodynamic form, such as an airplane wing, divided by the drag.
lifter [MIN ENG] A shothole drilled near the floor when tunneling, and fired subsequent to the cut and relief holes.
lifter case [MIN ENG] The sleeve or tubular part attached to the lower end of the inner tube of M-design core barrels and some other types of core barrels, in which is fitted a core lifter. Also known as core-catcher case; core-gripper case; core-lifter case; core-spring case; inner-tube extension; ring-lifter case; spring-lifter case.
lifter flight [DES ENG] Spaced plates or projections on the inside surfaces of cylindrical rotating equipment (such as rotary dryers) to lift and shower the solid particles through the gas-drying stream during their passage through the dryer cylinder.
lifter roof [ENG] Gas storage tank in which the roof is raised by the incoming gas as the tank fills.
lift fan [AERO ENG] A special turbofan engine used primarily for lift in VTOL/STOL aircraft and often mounted in a wing with vertical thrust axis.
lift fire [ORD] **1.** Command to advance the range of fire by elevating the muzzle of a weapon. **2.** Command to cease or suspend fire.
lifting [MATH] Given a fiber bundle $(\tilde{X},B,p)$ and a continuous map of a topological space $\tilde{Y}$ to B, $g:\tilde{Y}\to B$, lifting entails finding a continuous map $\tilde{g}:\tilde{Y}\to\tilde{X}$ such that the function g is the composition $p \circ \tilde{g}$.
lifting block [MECH ENG] A combination of pulleys and ropes which allows heavy weights to be lifted with least effort.
lifting condensation level [METEOROL] The level at which a parcel of moist air lifted dry adiabatically would become saturated. Abbreviated LCL. Also known as isentropic condensation level (ICL).
lifting device [ENG] A device to manually open a pressure

LICHENES

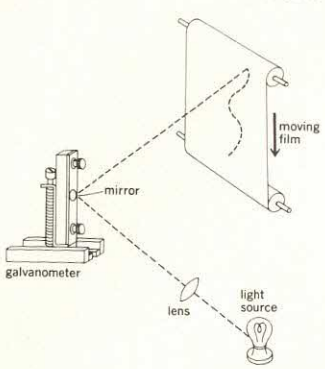
A picture of the foliose (leaflike) type of plant body of the *Parmelia* species. *(From H. J. Fuller and O. Tippo, College Botany, rev. ed., Holt, 1954)*

LIFTING REENTRY



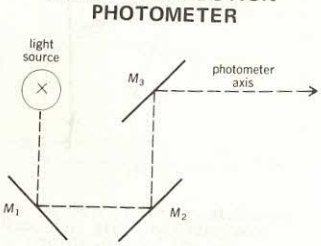
Maximum deceleration (in units of acceleration of gravity, g) versus initial reentry angle, γ, for glide and ballistic vehicles and various initial reentry speeds, V.

LIGHT-BEAM OSCILLOGRAPH



Essential components of a light-beam oscillograph. *(General Electric Co.)*

LIGHT-DISTRIBUTION PHOTOMETER



Mirror system in a light-distribution photometer. M_1, M_2, M_3 are mirrors.

relief valve by decreasing the spring loading in order to determine if the valve is in working order.

lifting dog [ENG] **1.** A component part of the overshot assembly that grasps and lifts the inner tube or a wire-line core barrel. **2.** A clawlike hook for grasping cylindrical objects, such as drill rods or casing, while raising and lowering them.

lifting guard [MIN ENG] Fencing placed around the mouth of a shaft and lifted out of the way by the ascending cage.

lifting magnet [ELECTROMAG] A type of electromagnet in which a material to be held or moved is initially placed in contact with the magnet, in contrast to a traction magnet. Also known as holding magnet. [ENG] A large circular, rectangular, or specially shaped magnet used for handling pig iron, scrap iron, castings, billets, rails, and other magnetic materials.

lifting reentry [AERO ENG] A reentry into the atmosphere by a space vehicle where aerodynamic lift is used, allowing a more gradual descent, greater accuracy in landing at a predetermined spot; it can accommodate greater errors in the guidance system and greater temperature control.

lifting reentry vehicle [AERO ENG] A space vehicle designed to utilize aerodynamic lift upon entering the atmosphere.

lift-off [AERO ENG] The action of a rocket vehicle as it leaves its launch pad in a vertical ascent.

lift pump [MECH ENG] A pump for lifting fluid to the pump's own level.

lift-slab construction [CIV ENG] Pouring reinforced concrete roof and floor slabs at ground level, then lifting them into position after hardening.

lift truck [MECH ENG] A small hand- or power-operated dolly equipped with a platform or forklift.

lift valve [MECH ENG] A valve that moves perpendicularly to the plane of the valve seat.

ligament [ENG] The section of solid material in a tube sheet or shell between adjacent holes. [HISTOL] A flexible, dense white fibrous connective tissue joining, and sometimes encapsulating, the articular surfaces of bones.

ligamentum nuchae *See* nuchal ligament.

ligand [CHEM] The molecule, ion, or group bound to the central atom in a chelate or a coordination compound; an example is the ammonia molecules in $[Co(NH_3)_6]^{3+}$.

ligand membrane [CHEM] A solvent immiscible with water and a reagent and acting as an extractant and complexing agent for an ion.

ligase [BIOCHEM] An enzyme that catalyzes the union of two molecules, involving the participation of a nucleoside triphosphate which is converted to a nucleoside diphosphate or monophosphate. Also known as synthetase.

ligate tar [MATER] A soft tar produced by destructive distillation of lignite; can be used without further refining as diesel fuel or can be redistilled to yield a substance resembling coal tar distillate.

ligation [MED] Surgical tying of vessels or ducts with a ligature.

ligature [MED] A cord or thread used for tying vessels and ducts.

light [OPTICS] **1.** Electromagnetic radiation with wavelengths capable of causing the sensation of vision, ranging approximately from 4000 (extreme violet) to 7700 angstroms (extreme red). Also known as light radiation; visible radiation. **2.** More generally, electromagnetic radiation of any wavelength; thus, the term is sometimes applied to infrared and ultraviolet radiation.

light absorption [OPTICS] The process in which energy of light radiation is transferred to a medium through which it is passing.

light-activated silicon controlled rectifier [ELECTR] A silicon-controlled rectifier having a glass window for incident light that takes the place of, or adds to the action of, an electric gate current in providing switching action. Abbreviated LASCR. Also known as photo-SCR; photothyristor.

light-activated silicon controlled switch [ELECTR] A semiconductor device that has four layers of silicon alternately doped with acceptor and donor impurities, but with all four of the p and n layers made accessible by terminals; when a light beam hits the active light-sensitive surface, the photons generate electron-hole pairs that make the device turn on; removal of light does not reverse the phenomenon; the switch can be turned off only by removing or reversing its positive bias. Abbreviated LASCS.

light adaptation [PHYSIO] The disappearance of dark adaptation; the chemical processes by which the eyes, after exposure to a dim environment, become accustomed to bright illumination, which initially is perceived as quite intense and uncomfortable.

light amplification by stimulated emission of radiation *See* laser.

light amplifier [ELECTR] **1.** Any electronic device which, when actuated by a light image, reproduces a similar image of enhanced brightness, and which is capable of operating at very low light levels without introducing spurious brightness variations (noise) into the reproduced image. Also known as image intensifier. **2.** *See* laser amplifier.

light antiaircraft artillery [ORD] Conventional antiaircraft artillery pieces, usually under 90-millimeter, the weight of which in a trailed mount, including on-carriage fire control, does not exceed 20,000 pounds (9000 kilograms); self-propelled versions are rated in the same category as the trailed version.

light artillery [ORD] All guns and howitzers of 105-millimeter caliber (4.13-inch bore) or smaller.

light beacon [NAV] A beacon from which a light is displayed for directing ships.

light-beam galvanometer *See* d'Arsonval galvanometer.

light-beam oscillograph [ELECTROMAG] An oscillograph in which a beam of light, focused to a point by a lens, is reflected from a tiny mirror attached to the moving coil of a galvanometer onto a photographic film moving at constant speed.

light-beam pickup [ENG ACOUS] A phonograph pickup in which a beam of light is a coupling element of the transducer.

light blasting [ENG] Loosening of shallow or small outcrops of rock and breaking boulders by explosives.

light bomber [AERO ENG] Any bomber with a gross weight of less than 100,000 pounds (45,000 kilograms), including bombs; for example, the A-20 and A-26 bombers in World War II.

light bulb *See* incandescent lamp.

light carrier injection [ELECTR] A method of introducing the carrier in a facsimile system by periodic variation of the scanner light beam, the average amplitude of which is varied by the density changes of the subject copy. Also known as light modulation.

light-case bomb [ORD] A type of general-purpose bomb having a thin, light metal casing and designed to accomplish damage by blast primarily.

light chain [IMMUNOL] The smaller of the two types of chains found in immunoglobulm molecules, molecular weight 23,500. Also known as B chain; L chain.

light chopper [ELECTR] A rotating fan or other mechanical device used to interrupt a light beam that is aimed at a phototube, to permit alternating-current amplification of the phototube output and to make its output independent of strong, steady ambient illumination.

light climate *See* illumination climate.

light crude [PETRO ENG] Crude oil having a high proportion of low-viscosity, low-molecular-weight hydrocarbons.

light cruiser [NAV ARCH] A naval vessel whose armaments consist primarily of 6-inch (15 centimeter) guns.

light curve [ASTROPHYS] A graph showing the variations in brightness of a celestial object; the stellar magnitude is usually shown on the vertical axis, and time is the horizontal coordinate.

light-distribution photometer [OPTICS] A device which measures the luminous intensity of a light source in various directions; the light source is fixed, and a mirror system is rotated about an axis passing through the centers of the light source and a photocell so that the light emitted by the source in any direction perpendicular to this axis is reflected to the photocell. Also known as distribution photometer.

light-drawn [MET] Cold-worked very slightly; for copper or copper alloy tubing, drawing entails between 10 and 25% reduction in area.

lighted buoy [NAV] In marine operations, a buoy with a light having definite characteristics for detection and identification during darkness.

light-emitting diode [ELECTR] A semiconductor diode that converts electric energy efficiently into spontaneous and noncoherent electromagnetic radiation at visible and near-infrared wavelengths by electroluminescence at a forward-biased pn junction. Abbreviated LED. Also known as solid-state lamp.

light ends [MATER] The lower-boiling components of a mixture of hydrocarbons, such as those evaporated or distilled off

easily in comparison to the bulk of the mixture; for hydrocarbon mixtures, usually considered to be butane and lighter.

lighter [NAV ARCH] A barge used to load and unload ships not lying at piers, or to move cargo around a harbor.

lighterage [IND ENG] **1.** Loading or unloading ships by means of a lighter. **2.** The fee charged for this operation.

lighter-than-air craft [AERO ENG] An aircraft, such as a dirigible, that weighs less than the air it displaces.

light exposure [OPTICS] A measure of the total amount of light falling on a surface; equal to the integral over time of the luminance of the surface. Also known as exposure.

light filter *See* color filter.

light float [NAV] A boatlike structure (smaller than a light vessel and usually unmanned) used instead of a light buoy in waters where strong streams or currents are experienced, or when a greater elevation than that of a light buoy is necessary.

light fog [GRAPHICS] A graying of the image produced by exposure to white light.

light freeze [METEOROL] The condition when the surface temperature of the air drops to below the freezing point of water for a short time period, so that only the tenderest plants and vines are adversely affected.

light frost [HYD] A thin and more or less patchy deposit of hoarfrost on surface objects and vegetation.

light-gating cathode-ray tube [ELECTR] A cathode-ray tube in which the electron beam varies the transmission or reflection properties of a screen that is positioned in the beam of an external light source.

light guide *See* optical fiber.

light gun [ELECTR] A light pen mounted in a gun-type housing.

light homing [ORD] Guidance of a missile to its target by using light which the target emits.

lighthouse [NAV] A structure equipped with a powerful light to aid in navigation.

lighthouse tube *See* disk-seal tube.

light howitzer [ORD] A complete projectile-firing weapon with a medium muzzle velocity and a curved trajectory, a bore diameter is over 30 millimeters, through 125 millimeters.

light hydrogen *See* protium.

lighting branch circuit [ELEC] A circuit that supplies power to outlets for lighting fixtures only.

lighting-off torch [ENG] A torch used to ignite a fuel oil burner; it consists of asbestos cloth wrapped around an iron rod and soaked with oil.

light-inspection car [MECH ENG] A railway motorcar weighing 400–600 pounds (180–270 kilograms) and having a capacity of 650–800 pounds (295–360 kilograms).

light intensity *See* luminous intensity.

light ion *See* small ion.

light list [NAV] A publication tabulating navigational lights, with their locations, candlepowers, and other characteristics, to assist in their identification, and details of any accompanying fog signals.

light list number [NAV] In marine operations, a number assigned each aid to navigation (except unlighted buoys), published in the light list for identification purposes.

light machine gun [ORD] **1.** Any aircraft machine gun of .30 caliber or smaller. **2.** In U.S. Army usage, any lightweight machine gun, including the .30-caliber air-cooled machine gun and excluding fully automatic rifles, submachine guns, and machine pistols. **3.** In specific nonofficial context, any fully automatic rifle or any machine gun having total weight, with mount, between 20–30 pounds (9–14 kilograms) approximately; for example, the Browning automatic rifle and the Lewis machine gun.

light meromyosin [BIOCHEM] The smaller of two fragments obtained from the muscle protein myosin following limited proteolysis by trypsin or chymotrypsin.

light metal [MET] A metal or alloy of low density, especially aluminum and magnesium alloys.

light meter [ENG] A small, portable device for measuring illumination; an exposure meter is a specific application, being calibrated to give photographic exposures.

light microscope *See* optical microscope.

light microsecond [ELECTROMAG] Distance a light wave travels in free space in one-millionth of a second.

light mineral [MINERAL] **1.** A rock with minerals that have a specific gravity lower than a standard, usually 2.85. **2.** A light-colored mineral.

light modulation *See* light carrier injection.

light modulator [ELECTR] The combination of a source of light, an appropriate optical system, and a means for varying the resulting light beam to produce an optical sound track on motion picture film.

light-negative [ELECTR] Having negative photoconductivity, hence decreasing in conductivity (increasing in resistance) under the action of light.

lightning [GEOPHYS] The large spark produced by an abrupt discontinuous discharge of electricity through the air, resulting most often from the creation and separation of electric charge in cumulonimbus clouds.

lightning arrester [ELEC] A protective device designed primarily for connection between a conductor of an electrical system and ground to limit the magnitude of transient overvoltages on equipment. Also known as arrester; surge arrester.

lightning channel [GEOPHYS] The irregular path through the air along which a lightning discharge occurs.

lightning conductor [ELEC] A conductor designed to carry the current of a lightning discharge from a lightning rod to ground.

lightning discharge [GEOPHYS] The series of electrical processes by which charge is transferred within the atmosphere along a channel of high ion density between electric charge centers of opposite sign.

lightning flash [GEOPHYS] In atmospheric electricity, the total observed luminous phenomenon accompanying a lightning discharge.

lightning generator [ELEC] A high-voltage power supply used to generate surge voltages resembling lightning, for testing insulators and other high-voltage components.

lightning protection [ELEC] Means, such as lightning rods and lightning arresters, of protecting electrical systems, buildings, and other property from lightning.

lightning recorder *See* sferics receiver.

lightning rod [ELEC] A metallic rod set up on an exposed elevation of a structure and connected to a low-resistance ground to intercept lightning discharges and to provide a direct conducting path to ground for them.

lightning stroke [GEOPHYS] Any one of a series of repeated discharges comprising a single lightning discharge (or lightning flash); specifically, in the case of the cloud-to-ground discharge, a leader plus its subsequent return streamer.

lightning surge [ELEC] A transient disturbance in an electric circuit due to lightning.

lightning switch [ELEC] A manually operated switch used to connect a radio antenna to ground during electrical storms, rather than to the radio receiver.

light-of-the-night-sky *See* airglow.

light oil [MATER] **1.** A coal tar fraction obtained by distillation; boiling range, 110–210°C; used as a source of benzene, toluene, pherol, and cresols. Also known as coal tar light oil. **2.** Any oil having a boiling range of 110–210°C.

light-operated switch [ELECTR] A switch that is operated by a beam or pulse of light, such as a light-activated silicon controlled rectifier.

light panel *See* electroluminescent panel.

light pen [ELECTR] A tiny photocell or photomultiplier, mounted with or without fiber or plastic light pipe in a pen-shaped housing; it is held against a cathode-ray screen to make measurements from the screen or to change the nature of the display.

light pillar *See* sun pillar.

light pipe [OPTICS] A solid, transparent plastic rod that transmits light from one end to the other even when bent.

light-positive [ELECTR] Having positive photoconductivity; selenium ordinarily has this property.

light projector [OPTICS] A device designed to produce controlled beams of light that can be projected over considerable distances.

light quantum *See* photon.

light radiation *See* light.

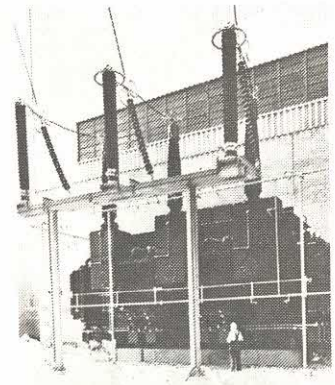
light ratio [ASTROPHYS] A number (2.512) that expresses the ratio of a star's light to that of another star that is one magnitude fainter or brighter.

light ray [OPTICS] A beam of light having a small cross section.

light-red silver ore *See* proustite.

light reflex [PHYSIO] The postural orientation response of

LIGHTNING ARRESTER

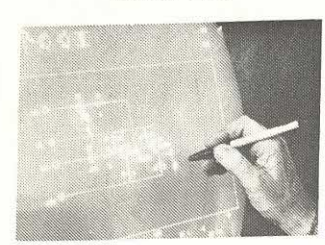


Installation of three single-pole station lightning arresters rated 276 kilovolts for lightning and surge protection of large 345-kilovolt power transformer. *(General Electric Co.)*

LIGHTNING ROD

Lightning rods on a house.

LIGHT PEN



Electronic light pen is used by designer on a cathode-ray tube to instruct computer in the drafting of a schematic. *(Lockheed)*

certain aquatic forms stimulated by the source of light; receptors may be on the ventral or dorsal surface.

light relay *See* photoelectric relay.

light-ruby silver *See* proustite.

light scattering [OPTICS] The process in which energy is removed from a beam of light radiation and reemitted without appreciable change in wavelength.

light section car [MECH ENG] A railway motorcar weighing 750–900 pounds (340–408 kilograms) and propelled by 4–6-horsepower (3000–4500-watt) engines.

light sector [NAV] **1.** A sector in which a navigational light has a distinctive color differing from that of adjoining sectors. **2.** A sector in which a navigational light is visible.

light-sensitive [ELECTR] Having photoconductive, photoemissive, or photovoltaic characteristics. Also known as photosensitive.

light-sensitive cell *See* photodetector.

light-sensitive detector *See* photodetector.

light-sensitive tube *See* phototube.

light sensor photodevice *See* photodetector.

lightship [NAV] A distinctively marked vessel anchored or moored at a charted point, to serve as an aid to navigation.

light source [OPTICS] A lamp used to supply radiant energy, as for an optical microscope, projector, or photoelectric control system.

light stability [COMPUT SCI] In optical character recognition, the ability of an image to retain its spectral appearance when exposed to radiant energy.

light station [NAV] A group of buildings including a lighthouse and additional buildings housing personnel, fog signal, radio-beacon, and any other equipment associated with the lighthouse.

light time [ASTRON] The time required for light to travel from a distant object to the earth.

light transmission [OPTICS] The process in which light travels through a medium without being absorbed or scattered.

light valve [ELECTR] **1.** A device whose light transmission can be made to vary in accordance with an externally applied electrical quantity, such as voltage, current, electric field, or magnetic field, or an electron beam. **2.** Any direct-view electronic display optimized for reflecting or transmitting an image with an independent collimated light source for projection purposes.

light water [MATER] A water solution of perfluorocarbon compounds mixed with a polyoxyethylene thickener; used as a fire-fighting agent. [NUCLEO] Water in which both the hydrogen atoms in each molecule are of the isotope protium.

light waterline [NAV ARCH] The waterline of a vessel without cargo.

light-water reactor [NUCLEO] A nuclear reactor that uses ordinary water as moderator, in contrast to heavy water.

light watt [OPTICS] A unit of luminous power equal to the luminous power of light of a single wavelength λ whose radiant power is $1/V_\lambda$ watts, where V_λ is the value of the luminosity function at λ.

lightweight aggregate [MATER] A lightweight inert material, such as foamed slag, vermiculite, clinker, and perlite, used in unreinforced concrete for making structures of low weight and high insulation.

lightweight concrete [MATER] A type of concrete made with lightweight aggregate.

light-year [ASTROPHYS] A unit of measurement of astronomical distance; it is the distance light travels in one sidereal year and is equivalent to 9.461×10^{12} kilometers or 5.879×10^{12} miles.

Ligiidae [INV ZOO] A family of primitive terrestrial isopods in the suborder Oniscoidea.

lignaloe oil *See* linaloe wood oil.

ligneous [BIOL] Of, pertaining to, or resembling wood.

lignify [BOT] To convert cell wall constituents into wood or woody tissue by chemical and physical changes.

lignin [BIOCHEM] A substance that together with cellulose forms the woody cell walls of plants and cements them together; a colorless to brown substance removed from paper-pulp sulfite liquor.

lignin plastic [ORG CHEM] A plastic based on resins derived from lignin; used as a binder or extender.

lignite [GEOL] Coal of relatively recent origin, intermediate between peat and bituminous coal; often contains patterns from the wood from which it formed. Also known as brown coal.

lignite A *See* black lignite.

lignite B *See* brown lignite.

lignite wax *See* montan wax.

lignocaine *See* lidocaine.

lignocellulose [BIOCHEM] Any of a group of substances in woody plant cells consisting of cellulose and lignin.

lignosa [BOT] Woody vegetation.

lignosulfonate [ORG CHEM] Any of several substances manufactured from waste liquor of the sulfate pulping process of soft wood; used in the petroleum industry to reduce the viscosity of oil well muds and slurries, and as extenders in glues, synthetic resins, and cements.

lignumvitae [BOT] *Guaiacum sanctum.* A medium-sized evergreen tree in the order Sapindales that yields a resin or gum known as gum guaiac or resin of guaiac. Also known as hollywood lignumvitae.

ligroin *See* petroleum ether.

ligulate [BOT] **1.** Strap-shaped. **2.** Having ligules.

ligule [BOT] **1.** A small outgrowth in the axis of the leaves in Selaginellales. **2.** A thin outgrowth of a foliage leaf or leaf sheath. [INV ZOO] A small lobe on the parapodium of certain polychaetes.

likelihood [MATH] The likelihood of a sample of independent values of $x_1, x_2, \ldots, x_n$, with $f(x)$ the probability function, is the product $f(x_1) \cdot f(x_2) \cdot \ldots \cdot f(x_n)$.

likelihood ratio [STAT] The probability of a random drawing of a specified sample from a population, assuming a given hypothesis about the parameters of the population, divided by the probability of a random drawing of the same sample, assuming that the parameters of the population are such that this probability is maximized.

Liliaceae [BOT] A family of the order Liliales distinguished by six stamens, typically narrow, parallel-veined leaves, and a superior ovary.

Liliales [BOT] An order of monocotyledonous plants in the subclass Liliidae having the typical characteristics of the subclass.

Liliatae *See* Liliopsida.

Liliidae [BOT] A subclass of the Liliopsida; all plants are syncarpous and have a six-membered perianth, with all members petaloid.

Liliopsida [BOT] The monocotyledons, making up a class of the Magnoliophyta; characterized generally by a single cotyledon, parallel-veined leaves, and stems and roots lacking a well-defined pith and cortex.

lillianite [MINERAL] $Pb_3Bi_2S_6$ A steel-gray mineral composed of lead bismuth sulfide.

Lilly controller [MECH ENG] A device on steam and electric winding engines that protects against overspeed, overwind, and other incidents injurious to workers and the engine.

lily [BOT] **1.** Any of the perennial bulbous herbs with showy unscented flowers constituting the genus *Lilium*. **2.** Any of various other plants having similar flowers.

lily-pad ice *See* pancake ice.

Limacidae [INV ZOO] A family of gastropod mollusks containing the slugs.

limacon [MATH] The locus of points of the plane which in polar coordinates (r,θ) satisfy the equation $r = a \cos \theta + b$. Also known as Pascal's limacon.

limb [ANAT] An extremity or appendage used for locomotion or prehension, such as an arm or a leg. [ASTRON] The circular outer edge of a celestial body; the half with the greater altitude is called the upper limb, and the half with the lesser altitude, the lower limb. [BOT] A large primary tree branch. [DES ENG] **1.** The graduated margin of an arc or circle in an instrument for measuring angles, as that part of a marine sextant carrying the altitude scale. **2.** The graduated staff of a leveling rod. [GEOL] One of the two sections of an anticline or syncline on either side of the axis. Also known as flank.

limbate [BIOL] Having a part of one color bordered with a different color.

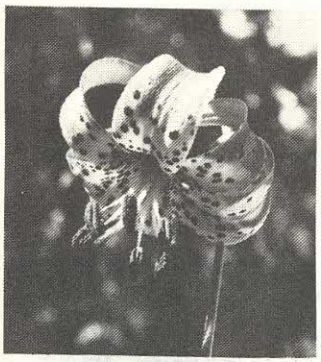
limb bud [EMBRYO] A mound-shaped lateral proliferation of the embryonic trunk; the anlage of a limb.

limb darkening [ASTROPHYS] An observed darkening near the surface of the sun's limb as compared to its brighter center.

limber [ORD] A two-wheeled vehicle designed primarily to support the trail section of a gun carriage while in transit.

limber board [NAV ARCH] One of several movable planks

LILIACEAE



Carolina lily *(Lilium michauxii)*, a characteristic member of the family Liliaceae in the order Liliales. The six-membered perianth, with all members petaloid, is typical of the family, order, and subclass (Liliidae). *(Courtesy of John H. Gerard, from National Audubon Society)*

for covering the bilge-water passages on either side of the keelson. Also known as bilge board.

limber hole [NAV ARCH] A drainage hole running through the bottom of the frame of ship.

limbic system [ANAT] The inner edge of the cerebral cortex in the medial and temporal regions of the cerebral hemispheres.

limb-kinetic apraxia *See* motor apraxia.

limburgite [PETR] A dark, glass-rich igneous rock with abundant large crystals of olivine and pyroxene and with little or no feldspar.

limbus [BIOL] A border clearly defined by its color or structure, as the margin of a bivalve shell or of the cornea of the eye.

lime [BOT] *Citrus aurantifolia*. A tropical tree with elliptic oblong leaves cultivated for its acid citrus fruit which is a hesperidium.

lime-and-cement mortar [MATER] Mortar made of mortar cement, lime putty or hydrated lime, and sand in proportions, by volume, normally of one part cement, one or two lime, and five or six sand; suited for all kinds of masonry.

lime glass [MATER] A type of glass containing a high proportion of lime; used in many commercial glass products, such as bottles.

lime grease [MATER] A type of grease that emulsifies less readily than one made with a soda base and therefore is used in an environment where water may occur.

lime kiln [CHEM ENG] Furnace-type apparatus, usually a long, tilted cylinder that is slowly rotated, used to heat calcium carbonate, $CaCO_3$, above 900°C to produce lime.

limelight [ENG] A light source once used in spotlights; it consisted of a block of lime heated to incandescence by means of an oxyhydrogen flame torch.

lime liniment *See* carron oil.

lime mortar [MATER] A mixture of hydrated lime, sand, and water having a compressive strength up to 400 pounds per square inch (2.8×10^6 newtons per square meter); used for interior non-load-bearing walls in buildings.

lime oil [MATER] **1.** An edible essential oil squeezed from the rind of lime and other citrus fruit, whose components are limonene and citral; used in flavorings and perfumes. **2.** The distilled essential oil from citron.

lime-pan playa [GEOL] A playa with a smooth, hard surface composed of calcium carbonate.

lime putty [MATER] A puttylike cement made from lime slaked in water.

lime sour [TEXT] The first treatment with a weak acid solution given to cotton goods in the finishing process. Also known as gray sour.

limestone [PETR] **1.** A sedimentary rock composed dominantly (more than 95%) of calcium carbonate, principally in the form of calcite; examples include chalk and travertine. **2.** Any rock containing 80% or more of calcium carbonate or magnesium carbonate.

limestone log [ENG] A log that employs an electrical resistivity element in the form of four symmetrically arranged current electrodes to give accurate readings in borehole surveying of hard formations.

limestone pebble conglomerate [GEOL] A well-sorted conglomerate composed of limestone pebbles resulting from special conditions involving rapid mechanical erosion and short transport distances.

lime water [PHARM] An alkaline aqueous solution of calcium hydroxide; used in medicine as an antacid.

limicolous [ECOL] Living in mud.

liminal contrast *See* threshold contrast.

liming [AGR] Treating the soil with lime. [CHEM ENG] Soaking hides and skins in milk of lime and causing them to swell, to facilitate the removal of hair.

limit control [MECH ENG] **1.** In boiler operation, usually a device, electrically controlled, that shuts down a burner at a prescribed operating point. **2.** In machine-tool operation, a sensing device which terminates motion of the workpiece or tool at prescribed points.

limit cycle of a differential equation [MATH] A closed trajectory C in the plane (corresponding to a periodic solution of the equation) where every point of C has a neighborhood so that every trajectory through it spirals toward C.

limit dimensioning method [DES ENG] Method of dimensioning and tolerancing wherein the maximum and minimum permissible values for a dimension are stated specifically to indicate the size or location of the element in question.

limited-access data [COMPUT SCI] Data to which only authorized users have access.

limited-access highway *See* expressway.

limited-entry decision table [COMPUT SCI] A decision table in which the condition stub specifies exactly the condition or the value of the variable.

limited integrator [ELECTR] A device used in analog computers that has two input signals and one output signal whose value is proportional to the integral of one of the input signals with respect to the other as long as this output signal does not exceed specified limits.

limited-pressure cycle *See* mixed cycle.

limited-rotation hydraulic actuator [MECH ENG] A type of hydraulic actuator that produces limited reciprocating rotary force and motion; used for lifting, lowering, opening, closing, indexing, and transferring movements; examples are the piston-rack actuator, single-vane actuator, and double-vane actuator.

limited signal [ELECTR] Radar signal that is intentionally limited in amplitude by the dynamic range of the radar system.

limited traverse [ORD] Restricted movement of a gun to right or left, caused by a mechanical device or by a natural obstacle.

limiter [ELECTR] An electronic circuit used to prevent the amplitude of an electronic waveform from exceeding a specified level while preserving the shape of the waveform at amplitudes less than the specified level. Also known as amplitude limiter; amplitude-limiting circuit; automatic peak limiter; clipper; clipping circuit; limiter circuit; peak limiter.

limiter circuit *See* limiter.

limit governor [MECH ENG] A mechanical governor that takes over control from the main governor to shut the machine down when speed reaches a predetermined excess above the allowable rated. Also known as topping governor.

limit inferior [MATH] **1.** The limit inferior of a sequence whose nth term is a_n is the limit as N approaches infinity of the greatest lower bound of the terms a_n for which n is greater than N; denoted by $\liminf_{n\to\infty} a_n$ or $\underline{\lim}_{n\to\infty} a_n$. **2.** The limit inferior of a function f at a point c is the limit as ϵ approaches zero of the greatest lower bound of $f(x)$ for $|x - c| < \epsilon$ and $x \neq c$; denoted by $\liminf_{x\to c} f(x)$ or $\underline{\lim}_{x\to c} f(x)$.

limiting [ELECTR] A desired or undesired amplitude-limiting action performed on a signal by a limiter. Also known as clipping.

limiting current density [PHYS CHEM] The maximum current density to achieve a desired electrode reaction before hydrogen or other extraneous ions are discharged simultaneously.

limiting ray [ACOUS] Any ray which is tangent to a plane at which the velocity of propagation of sound has a maximum value, either at a boundary of the medium of propagation or at a level where the velocity gradient changes sign.

limiting viscosity number *See* intrinsic viscosity.

limit lines [IND ENG] Lines on a chart designating specification limits.

limit-load design *See* ultimate-load design.

limit of a function [MATH] A function $f(x)$ has limit L as x tends to c if given any positive number ϵ (no matter how small) there is a positive number δ such that if x is in the domain of f, x is not c, and $|x - c| < \delta$, then $|f(x) - L| < \epsilon$; written $\lim_{x\to c} f(x) = L$.

limit of a sequence [MATH] A sequence $\{a_n : n = 1, 2, \ldots\}$ has limit L if given a positive number ϵ (no matter how small), there is a positive integer N such that for all integers n greater than N, $|a_n - L| < \epsilon$.

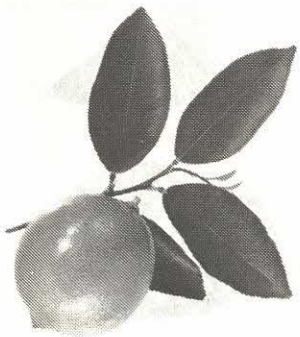
limit of fire [ORD] **1.** Any angular limit, established for safety purposes, for firing at a towed aerial target. **2.** The boundary of an area within which gunfire is placed.

limit of resolution [OPTICS] The minimum distance or angular separation between two point objects which allows them to be resolved according to the Rayleigh criterion.

limit of the atmosphere [GEOPHYS] The level at which the atmospheric density becomes the same as the density of interplanetary space, which is usually taken to be about one particle per cubic centimeter.

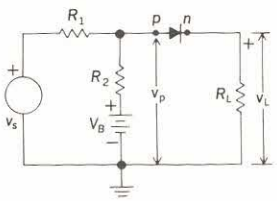
limit on the left [MATH] The limit on the left of the function f at a point c is the limit of f at c which would be obtained if only values of x less than c were taken into account; more precisely, it is the number L which has the property that for any positive number ϵ, there is a positive number δ so that if x is the domain

LIME



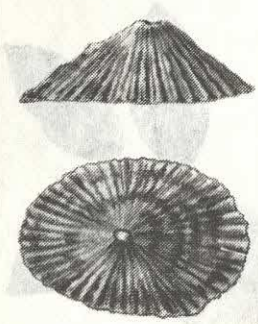
Tahiti (Persian) lime (*Citrus aurantifolia*).

LIMITER



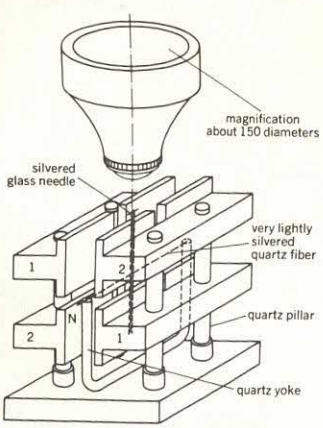
Circuit diagram of series diode clipping.

LIMPET



Two views of the rough keyhole limpet *(Diodora aspera)* of the Pacific Coast, maximum length 2 inches (5 centimeters).

LINDEMANN ELECTROMETER



Lindemann electrometer. Here 1 and 2 indicate the quadrants. *(From F. A. Laws, Electrical Measurements, 2d ed., McGraw-Hill, 1938)*

of f and $0<c-x<\delta$ then $|f(x)-L|<\epsilon$; denoted by $\lim_{x\to c^-} f(x) = L$, or $f(c^-) = L$. Also known as left-hand limit.

limit on the right [MATH] The limit on the right of the function $f(x)$ at a point c is the limit of f at c which would be obtained if only values of x greater than c were taken into account; more precisely, it is the number L which has the property that for any positive number ϵ there is a positive number δ so that if x is in the domain of f and $0<x-c<\delta$, then $|f(x)-L|<\epsilon$; denoted by $\lim_{x\to c^+} f(x) = L$ or $f(c^+) = L$. Also known as right-hand limit.

limit point *See* cluster point.

limit priority [COMPUT SCI] An upper bound to the dispatching priority that a task can assign to itself or any of its subtasks.

limit ratio [ELECTR] Ratio of peak value to limited value, or comparison of such ratios.

limits [DES ENG] In dimensioning, the maximum and minimum values prescribed for a specific dimension; the limits may be of size if the dimension concerned is a size dimension, or they may be of location if the dimension concerned is a location dimension.

limits of integration [MATH] The end points of the interval over which a function is being integrated.

limit stop [ORD] An arm or part used to limit angular motions, as of a gun turret.

limit superior [MATH] **1.** The limit superior of a sequence whose nth term is a_n is the limit as N approaches infinity of the least upper bound of the terms a_n for which n is greater than N; denoted by $\lim_{x\to\infty} \sup\ a_n$ or $\overline{\lim}_{x\to\infty} a_n$. **2.** The limit superior of a function f at a point c is the limit as ϵ approaches zero of the least upper bound of $f(x)$ for $|x-c|<\epsilon$ and $x\neq c$; denoted by $\lim_{x\to c} \sup f(x)$ or $\overline{\lim}_{x\to c} f(x)$.

limit switch [ELEC] A switch designed to cut off power automatically at or near the limit of travel of a moving object controlled by electrical means.

limit velocity [MECH] In armor and projectile testing, the lowest possible velocity at which any one of the complete penetrations is obtained; since the limit velocity is difficult to obtain, a more easily obtainable value, designated as the ballistic limit, is usually employed.

limivorous [ZOO] Feeding on mud, as certain annelids, for the organic matter it contains.

Limnebiidae [INV ZOO] The minute moss beetles, a family of coleopteran insects in the superfamily Hydrophiloidea.

limnetic [ECOL] Of, pertaining to, or inhabiting the pelagic region of a body of fresh water.

Limnichidae [INV ZOO] The minute false water beetles, a cosmopolitan family of coleopteran insects in the superfamily Dryopoidea.

limnimeter [ENG] A type of tide gage for measuring lake level variations.

limnite *See* bog iron ore.

Limnocharitaceae [BOT] A family of monocotyledonous plants in the order Alismatales characterized by schizogenous secretory canals, multiaperturate pollen, several or many ovules, and a horseshoe-shaped embryo.

limnograph [ENG] A recording made on a limnimeter.

limnology [ECOL] The science of the life and conditions for life in lakes, ponds, and streams.

Limnomedusae [INV ZOO] A suborder of hydrozoan coelenterates in the order Hydroida characterized by naked hydroids.

limnoplankton [BIOL] Plankton found in fresh water, especially in lakes.

Limnoriidae [INV ZOO] The gribbles, a family of isopod crustaceans in the suborder Flabellifera that burrow into submerged marine timbers.

limonene [ORG CHEM] $C_{10}H_{16}$ A terpene with a lemon odor that is optically active and is found in oils from citrus fruits and in oils from peppermint and spearmint; a colorless, water-insoluble liquid that boils at 176°C.

limoniform [BOT] Lemon-shaped.

limonite [MINERAL] A group of brown or yellowish-brown, amorphous, naturally occurring ferric oxides of variable composition; commonly formed secondary material by oxidation of iron-bearing minerals; a minor ore of iron. Also known as brown hematite; brown iron ore.

limpet [INV ZOO] Any of several species of marine gastropod mollusks composing the families Patellidae and Acmaeidae which have a conical and tentlike shell with ridges extending from the apex to the border.

Limulacea [INV ZOO] A group of horseshoe crabs belonging to the Limulida.

Limulida [INV ZOO] A subgroup of Xiphosurida including all living members of the subclass.

Limulodidae [INV ZOO] The horseshoe crab beetles, a family of coleopteran insects in the superfamily Staphylinoidea.

Limulus [INV ZOO] The horseshoe crab; the type genus of the Limulacea.

linac *See* linear accelerator.

Linaceae [BOT] A family of herbaceous or shrubby dicotyledonous plants in the order Linales characterized by mostly capsular fruit, stipulate leaves, and exappendiculate petals.

Linales [BOT] An order of dicotyledonous plants in the subclass Orsidae containing simple-leaved herbs or woody plants with hypogynous, regular, syncarpous flowers having five to many stamens which are connate at the base.

linaloe wood oil [MATER] An essential oil derived from fruit and wood of *Bursera* species; a colorless to yellow liquid, soluble in fixed oils and alcohol; used in perfumery and for flavoring. Also known as lignaloe oil; Mexican linaloe oil.

linalool [ORG CHEM] $(CH_3)_2C{:}CH(CH_2)_2CCH_3OHCH{:}CH_2$ A terpene that is a colorless liquid, has a bergamot odor, boils at 195–196°C, and is found in many essential oils, particularly bergamot and rosewood; used as a flavoring agent and in perfumes. Also known as coriandrol; 3,7-dimethyl-1,6-octadiene-3-ol.

linalyl acetate [ORG CHEM] $(CH_3)_2C{:}CH(CH_2)_2CCH_3(OCOCH_3)CH{:}CH_2$ The acetic acid ester of linalool, a colorless oily liquid with a bergamot odor that boils at 108–110°C; used in perfumes and as a flavoring agent.

linarite [MINERAL] $PbCu(SO_4)(OH)_2$ A deep-blue mineral composed of basic lead copper sulfate and occurring as monoclinic crystals.

Lincoln experimental satellite [AERO ENG] A series of military communication satellites initiated in 1965; carried out successful X band experiments. Abbreviated LES.

lincomycin [MICROBIO] $C_{18}H_{34}O_6N_2S{\cdot}HCl$ Monobasic crystalline antibiotic, produced by *Streptomyces lincolnensis*, that is active as lincomycin hydrochloride mainly toward gram-positive microorganisms.

lindackerite [MINERAL] $Cu_6Ni_3(AsO_4)_4(SO_4)(OH)_4$ A light-green or apple-green mineral composed of hydrous basic sulfate and arsenate of nickel and copper; occurs in tabular crystals or massive.

Lindeck potentiometer [ELEC] A potentiometer in which an unknown potential difference is balanced against a known potential difference derived from a fixed resistance carrying a variable current; the converse of most potentiometers.

Linde copper sweetening [CHEM ENG] A petroleum-refinery process to treat gasolines and distillates with a slurry of clay and cupric chloride to remove mercaptans.

Linde drill *See* fusion-piercing drill.

Lindelof space [MATH] A topological space where if a family of open sets covers the space, then a countable number of these sets also covers the space.

Lindemann electrometer [ELEC] A variant of the quadrant electrometer, designed for portability and insensitivity to changes in position, in which the quadrants are two sets of plates about 6 millimeters apart, mounted on insulating quartz pillars; a needle rotates about a taut silvered quartz suspension toward the oppositely charged plates when voltage is applied to it, and its movement is observed through a microscope.

Lindemann glass [MATER] A lithium borate–beryllium oxide glass having no element higher in atomic number than oxygen; used as window material for low-voltage x-ray tubes because it will pass x-rays of extremely long wavelength, such as Grenz rays.

linden *See* basswood.

Linde's rule [SOLID STATE] The rule that the increase in electrical resistivity of a monovalent metal produced by a substitutional impurity per atomic percent impurity is equal to $a + b(v-1)^2$, where a and b are constants for a given solvent metal and a given row of the periodic table for the impurity, and v is the valence of the impurity.

lindgrenite [MINERAL] $Cu_3(MoO_4)_2(OH)_2$ A green mineral composed of basic copper molybdate.

L indicator *See* L scope.

lindstromite [MINERAL] $PbCuBi_3S_6$ A lead-gray to tin-white mineral composed of bismuth copper lead sulfide.

line [BOT] A unit of length, equal to 1/12 inch, or approximately 2.117 millimeters; it is most frequently used by botanists in describing the size of plants. [ELECTR] **1.** The path covered by the electron beam of a television picture tube in one sweep from left to right across the screen. **2.** One horizontal scanning element in a facsimile system. **3.** *See* trace. [MATH] The set of points $(x_1, \ldots, x_n)$ in euclidean space, each of whose coordinates is a linear function of a single parameter t; $x_i = f_i(t)$.

linea alba [ANAT] A tendinous ridge extending in the median line of the abdomen from the pubis to the tiphoid process and formed by the blending of aponeuroses of the oblique and transverse muscles of the abdomen.

lineage [GEN] Descent from a common progenitor.

lineage structure [CRYSTAL] An imperfection structure characterizing a crystal, parts of which have slight differences in orientation.

lineament [ASTRON] A prominent linear feature on the lunar surface. [GEOL] A straight or gently curved, lengthy topographic feature expressed as depressions or lines of depressions. Also known as linear. [GRAPHICS] A structurally controlled line on an aerial photograph; applied to lines representing beds, veins, faults, rock boundaries, and such.

line-and-staff organization [IND ENG] A form of organization structure which combines functional subunits with staff officers in line functions.

line and trunk group [COMMUN] A group consisting of four-wire circuits, incoming private automatic branch exchange trunks, and intertoll trunk groups.

linear [CONT SYS] Having an output that varies in direct proportion to the input. [GEOL] *See* lineament. [SCI TECH] **1.** Of or relating to a line. **2.** Having a single dimension.

linear accelerator [NUCLEO] A particle accelerator which accelerates electrons, protons, or heavy ions in a straight line by the action of alternating voltages. Also known as linac.

linear accelerator breeder [NUCLEO] A device which uses a linear accelerator to generate neutrons that produce fissile fuel for nuclear reactors. Also known as electronuclear breeder.

linear accelerator–driven reactor [NUCLEO] A nuclear reactor which consists of a linear accelerator and a subcritical reactor target containing depleted, natural, or slightly enriched uranium or thorium, that produces a net amount of energy when supplied with neutrons generated by stopping a high-energy proton beam from a linear accelerator. Abbreviated LADR.

linear accelerator–regenerator reactor [NUCLEO] A device in which neutrons, generated by stopping a high-energy proton beam from a linear accelerator, irradiate nuclear fuel to bring it to a level of reactivity where it can be used in place in a conventional power reactor. Abbreviated LARR.

Linear actuator [MECH ENG] A device that converts some kind of power, such as hydraulic or electric power, into linear motion.

linear algebra [MATH] The study of vector spaces and linear transformations.

linear algebraic equation [MATH] An equation in some algebraic system where the unknowns occur linearly, that is, to the first power.

linear amplifier [ELECTR] An amplifier in which changes in output current are directly proportional to changes in applied input voltage.

linear array [ELECTROMAG] An antenna array in which the dipole or other half-wave elements are arranged end to end on the same straight line. Also known as collinear array.

linear birefringence [OPTICS] Birefringence effects which are proportional to applied stresses.

linear bounded automaton [COMPUT SCI] A nondeterministic, one-tape Turing machine whose read/write head is confined to move only on a restricted section of tape initially containing the input.

linear burning rate [ORD] The distance normal to any burning surface of the propellant grain burned through in unit time.

linear circuit *See* linear network.

linear cleavage [GEOL] The property of metamorphic rocks of breaking into long planar fragments.

linear collision cascade [SOLID STATE] A sputtering event in which the bombarding projectile collides directly with a small number of target atoms, which collide with others, and the sharing of energy then proceeds through many generations before one or more target atoms are ejected; the density of atoms in motion remains sufficiently small so that collisions between atoms can be ignored.

linear combination [MATH] A linear combination of vectors $\mathbf{v}_1, \ldots, \mathbf{v}_n$ in a vector space is any expression of the form $a_1\mathbf{v}_1 + a_2\mathbf{v}_2 + \ldots + a_n\mathbf{v}_n$, where the a_i are scalars.

linear comparator [ELECTR] A comparator circuit which operates on continuous, or nondiscrete, waveforms. Also known as continuous comparator.

linear computing element [ELEC] A linear circuit in an analog computer.

linear conductor antenna [ELECTROMAG] An antenna consisting of one or more wires which all lie along a straight line.

linear control [ELEC] Rheostat or potentiometer having uniform distribution of graduated resistance along the entire length of its resistance element.

linear control system [CONT SYS] A linear system whose inputs are forced to change in a desired manner as time progresses.

linear detection [ELECTR] Detection in which the output voltage is substantially proportional, over the useful range of the detecting device, to the voltage of the input wave.

linear differential equation [MATH] A differential equation in which all derivatives occur linearly, and all coefficients are functions of the independent variable.

linear distortion [ELECTR] Amplitude distortion in which the output signal envelope is not proportional to the input signal envelope and no alien frequencies are involved.

linear electrical constants of a uniform line [ELEC] Series resistance, series inductance, shunt conductance, and shunt capacitance per unit length of line.

linear electrical parameters *See* transmission-line parameters.

linear energy transfer *See* stopping power.

linear equation [MATH] A linear equation in the variables $x_1, \ldots, x_n$, and y is any equation of the form $a_1x_1 + a_2x_2 + \ldots + a_nx_n = y$.

linear expansion [PHYS] Expansion of a body in one direction.

linear feedback control [CONT SYS] Feedback control in a linear system.

linear flow structure *See* platy flow structure.

linear fractional transformations *See* Möbius transformations.

linear function *See* linear transformation.

linear functional [MATH] A linear transformation from a vector space to its scalar field.

linear independence [MATH] The property of a set of vectors $\mathbf{v}_1, \ldots, \mathbf{v}_n$ in a vector space where if $a_1\mathbf{v}_1 + a_2\mathbf{v}_2 + \ldots + a_n\mathbf{v}_n = 0$, then all the scalars $a_i = 0$.

linear inequalities [MATH] A collection of relations among variables x_i, where at least one relation has the form $\sum_i a_i x_i \geq 0$.

linear integrated circuit [ELECTR] An integrated circuit that provides linear amplification of signals.

linear interpolation [MATH] A process to find a value of a function between two known values under the assumption that the three plotted points lie on a straight line.

linearity [MATH] The property whereby a mathematical system is well behaved (in the context of the given system) with regard to addition and scalar multiplication. [PHYS] The relationship that exists between two quantities when a change in one of them produces a directly proportional change in the other.

linearity control [ELECTR] A cathode-ray-tube control which varies the distribution of scanning speed throughout the trace interval. Also known as distribution control.

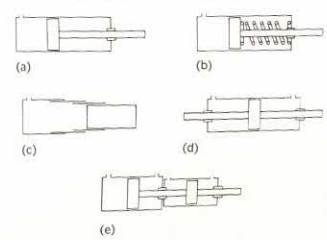
linearization [CONT SYS] **1.** The modification of a system so that its outputs are approximately linear functions of its inputs, in order to facilitate analysis of the system. **2.** The mathematical approximation of a nonlinear system, whose departures from linearity are small, by a linear system corresponding to small changes in the variables about their average values.

linear light [NAV] In marine operations, a luminous signal having perceptible length, as contrasted with a point light, which does not have perceptible length.

linear-logarithmic intermediate-frequency amplifier [ELECTR] Amplifier used to avoid overload or saturation as a protection against jamming in a radar receiver.

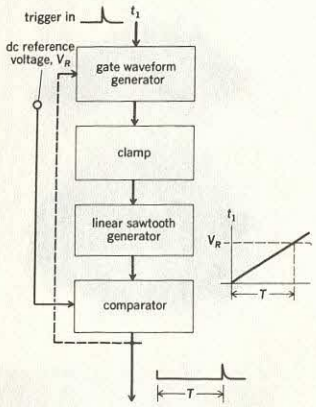
linearly graded junction [ELECTR] A *pn* junction in which the impurity concentration does not change abruptly from do-

LINEAR ACTUATOR



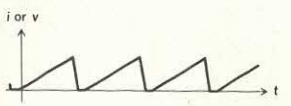
Hydraulic cylinder types of linear actuators. *(a)* Single-acting, external return. *(b)* Single-acting, spring return. *(c)* Telescopic. *(d)* Double-acting double-ended rod. *(e)* Tandem cylinders.

LINEAR-SWEEP DELAY CIRCUIT



Elements of linear-sweep delay circuit. T = delay time; V_R = reference voltage; t_1 = time.

LINEAR-SWEEP GENERATOR



Sawtooth waveform of a linear-sweep generator. Current i or voltage v is plotted against time t.

nors to acceptors, but varies smoothly across the junction, and is a linear function of position.

linearly independent quantities [MATH] Quantities which do not jointly satisfy a homogeneous linear equation unless all coefficients are zero.

linearly ordered set [MATH] A set with an ordering $\leq$ such that for any two elements a and b either $a \leq b$ or $b \leq a$. Also known as chain; serially ordered set; simply ordered set.

linear magnetic amplifier [ELECTR] A magnetic amplifier employing negative feedback to make its output load voltage a linear function of signal current.

linear manifold [MATH] A subset of a vector space which is itself a vector space with the induced operations of addition and scalar multiplication.

linear meter [ENG] A meter in which the deflection of the pointer is proportional to the quantity measured.

linear modulation [COMMUN] Modulation in which the amplitude of the modulation envelope (or the deviation from the resting frequency) is directly proportional to the amplitude of the intelligence signal at all modulation frequencies.

linear molecule [PHYS CHEM] A molecule whose atoms are arranged so that the bond angle between each is 180°; an example is carbon dioxide, CO_2.

linear momentum *See* momentum.

linear motion *See* rectilinear motion.

linear motor [ELEC] An electric motor that has in effect been split and unrolled into two flat sheets, so that the motion between rotor and stator is linear rather than rotary.

linear network [ELEC] A network in which the parameters of resistance, inductance, and capacitance are constant with respect to current or voltage, and in which the voltage or current of sources is independent of or directly proportional to other voltages and currents, or their derivatives, in the network. Also known as linear circuit.

linear operator *See* linear transformation.

linear order [MATH] Any order $<$ on a set S with the property that for any two elements a and b in S either $a<b$ or $b<a$. Also known as complete order; simple order; total order.

linear oscillator *See* harmonic oscillator.

linear parallax *See* absolute stereoscopic parallax.

linear parallel texture [PETR] The parallel texture of a rock in which the constituents are parallel to a line, not just to a plane as in plane parallel texture.

linear-phase [ELECTR] Pertaining to a filter or other network whose image phase constant is a linear function of frequency.

linear polarization [OPTICS] Polarization of an electromagnetic wave in which the electric vector at a fixed point in space remains pointing in a fixed direction, although varying in magnitude. Also known as plane polarization.

linear polymer [ORG CHEM] A polymer whose molecule is arranged in a chainlike fashion with few branches or bridges between the chains.

linear power amplifier [ELECTR] A power amplifier in which the signal output voltage is directly proportional to the signal input voltage.

linear programming [MATH] The study of maximizing or minimizing a linear function $f(x_1, \ldots, x_n)$ subject to given constraints which are linear inequalities involving the variables x_i.

linear-quadratic-Gaussian problem [CONT SYS] An optimal-state regulator problem, containing Gaussian noise in both the state and measurement equations, in which the expected value of the quadratic performance index is to be minimized. Abbreviated LQG problem.

linear rectifier [ELECTR] A rectifier, the output current of voltage of which contains a wave having a form identical with that of the envelope of an impressed signal wave.

linear regression [STAT] The straight line running among the points of a scatter diagram about which the amount of scatter is smallest, as defined, for example, by the least squares method.

linear regulator problem [CONT SYS] A type of optimal control problem in which the system to be controlled is described by linear differential equations and the performance index to be minimized is the integral of a quadratic function of the system state and control functions. Also known as optimal regulator problem; regulator problem.

linear repeater [ELECTR] A repeater used in communication satellites to amplify input signals a fixed amount, generally with traveling-wave tubes or solid-state devices operating in their linear region.

linear scanning [ENG] Radar beam which moves with constant angular velocity through the scanning sector, which may be a complete 360°.

linear space *See* vector space.

linear speed method [ORD] Method of calculating artillery firing data in which the future position of a moving target is determined by finding the direction of flight and the ground speed of the target; by multiplying the ground speed by the time of flight of the projectile, the future position is determined.

linear Stark effect [ATOM PHYS] A splitting of spectral lines of hydrogenlike atoms placed in an electric field; each energy level of principal quantum number n is split into $2n-1$ equidistant levels of separation proportional to the field strength.

linear stopping power *See* stopping power.

linear strain [MECH] The ratio of the change in the length of a body to its initial length. Also known as longitudinal strain.

linear sweep [ELECTR] A cathode-ray sweep in which the beam moves at constant velocity from one side of the screen to the other, then suddenly snaps back to the starting side.

linear-sweep delay circuit [ELECTR] A widely used form of linear time-delay circuit in which the input signal initiates action by a linear sawtooth generator, such as the bootstrap or Miller integrator, whose output is then compared with a calibrated direct-current reference voltage level.

linear-sweep generator [ELECTR] An electronic circuit that provides a voltage or current that is a linear function of time; the waveform is usually recurrent at uniform periods of time.

linear system [CONT SYS] A system in which the outputs are components of a vector which is equal to the value of a linear operator applied to a vector whose components are the inputs. [MATH] A system where all the interrelationships among the quantities involved are expressed by linear equations which may be algebraic, differential, or integral.

linear taper [ELEC] A taper that gives the same change in resistance per degree of rotation over the entire range of a potentiometer.

linear time base [ELECTR] A time base that makes the electron beam of a cathode-ray tube move at a constant speed along the horizontal time scale.

linear transducer [ELECTR] A transducer for which the pertinent measures of all the waves concerned are linearly related.

linear transformation [MATH] A function T defined in a vector space E and having its values in another vector space over the same field, such that if f and g are vectors in E, and c is a scalar, then $T(f+g) = Tf + Tg$ and $T(cf) = c(Tf)$. Also known as homogeneous transformation; linear function; linear operator.

linear unit [ELECTR] An electronic device used in analog computers in which the change in output, due to any change in one of two or more input signals, is proportional to the change in that input and does not depend upon the values of the other inputs.

linear variable-differential transformer [ELECTR] A transformer in which a diaphragm or other transducer sensing element moves an armature linearly inside the coils of a differential transformer, to change the output voltage by changing the inductances of the coils in equal but opposite amounts. Abbreviated LVDT.

linear velocity *See* velocity.

line at infinity *See* ideal line.

lineation [GEOL] Any linear structure on or within a rock; examples are ripple marks and flow lines.

line balance [ELEC] **1.** Degree of electrical similarity of the two conductors of a transmission line. **2.** Matching impedance, equaling the impedance of the line at all frequencies, that is used to terminate a two-wire line.

line-balance converter *See* balun.

line block *See* line cut.

line blow [METEOROL] A strong wind on the equator side of an anticyclone, probably so called because there is little shifting of wind direction during the blow, as contrasted with the marked shifting which occurs with a cyclonic windstorm.

line brattice [MIN ENG] A partition in an opening to divide it into intake and return airways.

line building out network *See* impedance-matching network.

linecasting machine [GRAPHICS] A composing machine which assembles a line of type, casts it, and distributes the matrices to a magazine.

line characteristic distortion [COMMUN] A kind of teletypewriter transmission distortion caused when the lengths of the received signal impulses are affected by the presence of changing current transitions in wire circuits.

line circuit [ELEC] **1.** Relay equipment associated with each station connected to a dial or manual switchboard. **2.** A circuit to interconnect an individual telephone and a channel terminal.

line clinometer [ENG] A clinometer designed to be inserted between rods at any point in a string of drill rods.

line code [COMPUT SCI] The single instruction required to solve a specific type of problem on a special-purpose computer.

line conditioning [COMMUN] The addition of compensating reactances to a data transmission line to reduce amplitude and phase delays over certain frequency bands.

line conductor [ELEC] A metal used as a conductor in a power line; the most frequently used conductors are copper and aluminum.

line-controlled blocking oscillator [ELECTR] A circuit formed by combining a monostable blocking oscillator with an open-circuit transmission line in the regenerative circuit; it is capable of generating pulses with large amounts of power.

line conversion [GRAPHICS] A picture obtained by photographing continuous-tone pictures with line film, and no screen, thus reducing all the values in the original picture to black or white.

line copy [GRAPHICS] Copy that can be reproduced directly without using a halftone screen.

line cord [ELEC] A two-wire cord terminating in a two-prong plug at one end and connected permanently to a radio receiver or other appliance at the other end; used to make connections to a source of power. Also known as power cord.

line-cord resistor [ELEC] An asbestos-enclosed wire-wound resistor incorporated in a line cord along with the two regular wires.

line cut [GRAPHICS] A relief printing plate made by photographing a design and then transferring the negative onto a zinc or copper plate that is then developed, with the lines that will form the printing surface being protected and the rest of the plate etched down; used exclusively for the reproduction of materials executed in black (or a color) and white, with no intermediate shades of gray (or tones). Also known as line block; line engraving; line etching; line plate.

line defect *See* dislocation.

line displacement [ASTROPHYS] Widening or shifting of spectral lines of celestial objects arising from several causes, such as gas under high pressure.

line dot matrix [COMPUT SCI] A line printer that uses the dot matrix printing technique. Also known as parallel dot character printer.

line drilling [MIN ENG] The combined methods of drilling and broaching for the primary cut in quarrying; deep, closely spaced holes are drilled in a straight line by means of a reciprocating drill, and webs between holes are removed by a drill or a flat broaching tool.

line driver [ELECTR] An integrated circuit that acts as the interface between logic circuits and a two-wire transmission line.

line drop [ELEC] The voltage drop existing between two points on a power line or transmission line, due to the impedance of the line.

line-drop compensator [ELEC] A device that restores the voltage lost when electricity is transmitted along a wire.

line drop signal [COMMUN] Signal associated with a subscriber line on a manual switchboard.

line editor [COMPUT SCI] A text-editing system that stores a file of discrete lines of text to be printed out on the console (or displayed) and manipulated on a line-by-line basis, so that editing operations are limited and are specified for lines identified by a specific number.

line engraving *See* line cut.

line equalizer [ELEC] An equalizer containing inductance or capacitance, inserted in a transmission line to modify the frequency response of the line.

line etching *See* line cut.

line facility [COMMUN] A transmission line in a communication system, together with amplifiers spaced at regular intervals to offset attenuation in the line.

line fault [ELEC] A defect, such as an open circuit, short circuit, or ground, in an electric line for transmission or distribution of power or of speech, music, or other content.

line feed [COMPUT SCI] **1.** Signal that causes a printer to feed the paper up a discrete number of lines. **2.** Rate at which paper is fed through a printer.

line fill [COMMUN] Ratio of the number of connected main telephone stations on a line to the nominal main station capacity of that line.

line filter [ELEC] **1.** A filter inserted between a power line and a receiver, transmitter, or other unit of electric equipment to prevent passage of noise signals through the power line in either direction. Also known as power-line filter. **2.** A filter inserted in a transmission line or high-voltage power line for carrier communication purposes.

line filter balance [COMMUN] Network designed to maintain phantom group balance when one side of the group is equipped with a carrier system.

line finder [COMMUN] A switching device that automatically locates an idle telephone or telegraph circuit going to the desired destination. [COMPUT SCI] A device that automatically advances the platen of a line printer or typewriter.

line-finder shelf [COMMUN] Usually, 20 line finders with the equipment required for connecting any of the associated calling telephones to a selector or connector which will receive the dial pulses from the calling telephone.

line-finder switch [COMMUN] In telephony, an automatic switch for seizing selector apparatus which provides dial tone to the calling party.

line flux [ELECTROMAG] A local inductive field of a telephone or power line.

line-formula method [ORG CHEM] A system of notation for hydrocarbons showing the chemical elements, functional groups, and ring systems in linear form; an example is acetone, CH_3COCH_3.

line frequency [ELECTR] The number of times per second that the scanning spot sweeps across the screen in a horizontal direction in a television system. Also known as horizontal frequency; horizontal line frequency.

line-frequency blanking pulse *See* horizontal blanking pulse.

line functions [IND ENG] Organizational functions having direct authority and responsibility.

line gage *See* type gage.

line gale *See* equinoctial storm.

line graph [MATH] A graph in which successive points representing the value of a variable at selected values of the independent variable are connected by straight lines.

line hydrophone [ENG ACOUS] A directional hydrophone consisting of one straight-line element, an array of suitably phased elements mounted in line, or the acoustic equivalent of such an array.

Lineidae [INV ZOO] A family of the Heteronemertini.

line impedance [ELECTROMAG] The impedance measured across the terminals of a transmission line.

line influence [ELECTROMAG] The effect of a local inductive field around a telephone line.

line integral [MATH] **1.** For a curve in a vector space defined by $\mathbf{x} = \mathbf{x}(t)$, and a vector function $\mathbf{V}$ defined on this curve, the line integral of $\mathbf{V}$ along the curve is the integral over t of the scalar product of $\mathbf{V}[\mathbf{x}(t)]$ and $d\mathbf{x}/dt$; this is written $\int \mathbf{V} \cdot d\mathbf{x}$. **2.** For a curve defined by $x = x(t)$, $y = y(t)$, and a scalar function f depending on x and y, the line integral of f along the curve is the integral over t of $f[x(t),y(t)]\sqrt{(dx/dt)^2 + (dy/dt)^2}$; this is written $\int f ds$, where $ds = \sqrt{(dx)^2 + (dy)^2}$ is an infinitesimal element of length along the curve. **3.** For a curve in the complex plane defined by $z = z(t)$, and a function f depending on z, the line integral of f along the curve is the integral over t of $f[z(t)](dz/dt)$; this is written $\int f dz$.

line interlace *See* interlaced scanning.

line lengthener [ELECTROMAG] Device for altering the electrical length of a waveguide or transmission line without altering other electrical characteristics, or the physical length.

line level [COMMUN] Signal level in decibels at a particular position on a transmission line.

line link [COMMUN] A frame on which several hundred telephone lines appear in a crossbar switching system. Abbreviated LL.

line location [ELEC] The location of power and communications lines when two or more such lines run along the same route; they should either be used jointly, or located with respect to each other so as to avoid unnecessary crossings, conflicts, and inductive exposures.

line loop [COMMUN] Portion of a telephone circuit that in-

cludes a user's telephone set and the pair of wires that connect it with the distributing frame of a central office.

line loop resistance [ELEC] Metallic resistance of the line wires that extend from an individual telephone set to the dial central office.

line loss [ELEC] Total of the various energy losses occurring in a transmission line. [ENG] The quantity of gas that is lost in a distribution system or pipeline.

line lubricator *See* line oiler.

line map *See* planimetric map.

line microphone [ENG ACOUS] A highly directional microphone consisting of a single straight-line element or an array of small parallel tubes of different lengths, with one end of each abutting a microphone element. Also known as machine-gun microphone.

line misregistration [COMPUT SCI] In character recognition, the improper appearance of a line of characters, on site in a character reader, with respect to a real or imaginary horizontal line.

line mixer *See* flow mixer.

linen [TEXT] A cloth made from flax fibers, noted for its strength, weavability, durability, and minimum discharge of lint.

line noise [COMMUN] Noise originating in a transmission line from such causes as poor joints and inductive interference from power lines.

line of action [MECH ENG] The locus of contact points as gear teeth profiles go through mesh.

line of aim [ORD] A line from a person's eye, as that of a gunner or bombardier, through a sight, along which aim is taken.

line of apsides [ASTRON] **1.** The line connecting the two points of an orbit that are nearest and farthest from the center of attraction, as the perigee and apogee of the moon or the perihelion and aphelion of a planet. **2.** The length of this line.

line of balance [IND ENG] A production planning system that schedules key events leading to completion of an assembly on the basis of the delivery date for the completed system. Abbreviated LOB.

line of code [COMPUT SCI] A single statement in a programming language.

line of collimation [OPTICS] In a surveying telescope, the imaginary line through the optical center of the object glass and the cross-hair intersection in the diaphragm.

line of departure [NAV] The initial position of a scouting line, from which scouts proceed on their prescribed courses for search. [ORD] **1.** The direction of a projectile at the instant it clears the muzzle of the gun. **2.** The direction of a bomb or rocket at the instant of launching.

line of electrostatic induction [ELEC] A unit of electric flux equal to the electric flux associated with a charge of 1 statcoulomb.

line of elevation [ORD] The prolongation of the bore of a gun when the piece is set to fire.

line of fall [MECH] The line tangent to the ballistic trajectory at the level point.

line of flight [MECH] The line of movement, or the intended line of movement, of an aircraft, guided missile, or projectile in the air.

line of flux *See* line of force.

line of force [PHYS] An imaginary line in a field of force (such as an electric, magnetic, or gravitational field) whose tangent at any point gives the direction of the field at that point; the lines are spaced so that the number through a unit area perpendicular to the field represents the intensity of the field. Also known as flux line; line of flux.

line of impact [MECH] A line tangent to the trajectory of a missile at the point of impact.

line of magnetic induction *See* maxwell.

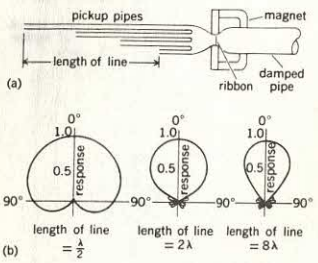
line of observation [ORD] A line from a position finder to a target at the exact time of a recorded observation.

line of position [NAV] A line indicating a series of possible positions of a craft, determined by observation or measurement. Also known as position line.

line of retirement [NAV] The position of a scouting line when it has reached its outer limit, and a search to the rear is initiated.

line of return [NAV] The final position of the scouting line, where individual scouts leave their stations and return to their bases.

LINE MICROPHONE



Line microphone. *(a)* Sectional view showing open-ended pipes. *(b)* Directivity patterns. The maximum voltage response is arbitrarily chosen as unity.

line of sight [ELECTROMAG] The straight line for a transmitting radar antenna in the direction of the beam. [SCI TECH] A straight, unobstructed path or line between two points, as between an observer's eye and a target.

line-of-sight velocity *See* radial velocity.

line of soundings [NAV] A series of soundings obtained by a vessel when it is under way.

line of strike *See* strike.

line of thrust [MECH] Locus of the points through which the resultant forces pass in an arch or retaining wall.

line of tunnel [ENG] The width marked by the exterior lines or sides of a tunnel.

line oiler [MECH ENG] An apparatus inserted in a line conducting air or steam to an air- or steam-activated machine that feeds small controllable amounts of lubricating oil into the air or steam. Also known as air-line lubricator; line lubricator.

Lineolaceae [MICROBIO] A family of bacteria in some systems of classification that includes coenocytic members (*Lineola*) of the Caryophanales.

lineolate [BIOL] Marked with fine lines.

line pack [ENG] The actual amount of gas in a pipeline or distribution system.

line pad [ELECTR] Pad inserted between a program amplifier and a transmission line, to isolate the amplifier from impedance variations of the line.

line pair [SPECT] In spectrographic analysis, a particular spectral line and the internal standard line with which it is compared to determine the concentration of a substance.

line parameters *See* transmission-line parameters.

line plate *See* line cut.

line printer [COMPUT SCI] A device that prints an entire line in a single operation, without necessarily printing one character at a time.

line printing [COMPUT SCI] The printing of an entire line of characters as a unit.

line profile [ASTROPHYS] A curve that indicates the internal variation in intensity of a spectral line of a celestial body.

line pulsing [ELECTR] Method of pulsing a transmitter in which an artificial line is charged over a relatively long period of time and then discharged through the transmitter tubes in a short interval determined by the line characteristic.

liner [DES ENG] A replaceable tubular sleeve inside a hydraulic or pump-pressure cylinder in which the piston travels. [ENG] A string of casing in a borehole. [MET] **1.** The cylindrical chamber that holds the billet for extrusion. **2.** The slab of coating metal that is placed on the core alloy and is subsequently rolled down to form a clad composite. [MIN ENG] **1.** A foot piece for uprights in timber sets. **2.** Timber supports erected to reinforce existing sets which are beginning to collapse due to heavy strata pressure. **3.** A bar put up between two other bars to assist in carrying the roof. **4.** Replaceable facings inside a grinding mill. [NAV ARCH] A merchant vessel engaged in regular, usually high-speed service.

line radiation [ELECTROMAG] Electromagnetic radiation from a power line caused mainly by corona pulses; gives rise to radio interference.

liner bushing [DES ENG] A bushing, provided with or without a head, that is permanently installed in a jig to receive the renewable wearing bushings. Also known as master bushing.

line reflection [COMMUN] Reflection of a signal at the end of a transmission line, at the junction of two or more lines, or at a substation.

line regulation [ELEC] The maximum change in the output voltage or current of a regulated power supply for a specified change in alternating-current line voltage, such as from 105 to 125 volts.

line relay [ELEC] Relay which is controlled over a subscriber line or trunkline.

line rod *See* range rod.

liner plate cofferdam [CIV ENG] A cofferdam made from steel plates about 16 inches (41 centimeters) high and 3 feet (91 centimeters) long, and corrugated for added stiffness.

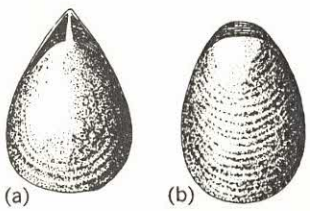
lines [NAV ARCH] The outline of a ship, either as projected onto one of three perpendicular planes or as viewed visually. Also known as ship's lines.

line scanner [ENG] An infrared imaging device which utilizes the motion of a moving platform, such as an aircraft or satellite, to scan infrared radiation from the terrain. Also known as thermal mapper.

line segment [MATH] A connected piece of a line.

line-sequential color television [COMMUN] A color television system in which an entire line is one color, with colors changing from line to line in a red, blue, and green sequence.
line shafting [MECH ENG] One or more pieces of assembled shafting to transmit power from a central source to individual machines.
line side [ELEC] Terminal connections to an external or outstation source, such as data terminal connections to a communications circuit connecting to another data terminal.
line skew [COMPUT SCI] In character recognition, a form of line misregistration, when the string of characters to be recognized appears in a uniformly slanted condition with respect to a real or imaginary baseline.
linesman [ENG] **1.** A worker who sets up and repairs communication and power lines. **2.** An assistant to a surveyor.
line source [OPTICS] An idealized source of light consisting of an infinitely long line from which light is emitted with uniform intensity.
line space lever [MECH ENG] A lever on a typewriter used to move the carriage to a new line.
line spectrum [SPECT] **1.** A spectrum of radiation in which the quantity being studied, such as frequency or energy, takes on discrete values. **2.** Conventionally, the spectra of atoms, ions, and certain molecules in the gaseous phase at low pressures; distinguished from band spectra of molecules, which consist of a pattern of closely spaced spectral lines which could not be resolved by early spectroscopes.
line speed [COMMUN] Maximum rate at which signals may be transmitted over a given channel, usually in bauds or bits per second.
lines per minute [COMPUT SCI] A measure of the speed of the printer. Abbreviated LPM.
line squall [METEOROL] A squall that occurs along a squall line.
line-stabilized oscillator [ELECTR] Oscillator in which a section of line is used as a sharply selective circuit element for the purpose of controlling the frequency.
line storm *See* equinoctial storm.
line strength [ATOM PHYS] The intensity of a spectrum line.
line stretcher [ELECTROMAG] Section of waveguide or rigid coaxial line whose physical length is variable to provide impedance matching.
line switching [COMMUN] A telephone switching system in which a switch attached to a subscriber line connects an originating call to an idle part of the switching apparatus. [ELECTR] Connecting or disconnecting the line voltage from a piece of electronic equipment.
line switching concentrator [COMMUN] Switching center used between a group of users and the switching center to reduce the number of trunks and increase efficiency of switching equipment usage.
line synchronizing pulse *See* horizontal synchronizing pulse.
line timbers [MIN ENG] Timbers placed along the sides of the track of a working place in rows according to a predetermined plan.
line-to-ground fault [ELEC] A defect in a power or communications line in which faulty insulation allows the conductor to make contact with the earth.
line transducer [ELECTR] A special type of electret transducer consisting essentially of a coaxial cable with polarized dielectric, and with the center conductor and shield serving as electrodes; mechanical excitation resulting in a deformation of the shield at any point along the length of the cable produces an electrical output signal.
line transformer [ELEC] Transformer connecting a transmission line to terminal equipment; used for isolation, line balance, impedance matching, or additional circuit connections.
line trap [ELEC] A filter consisting of a series inductance shunted by a tuning capacitor, inserted in series with the power or telephone line for a carrier-current system to minimize the effects of variations in line attenuation and reduce carrier energy loss.
line tuning [ELEC] Adjustment of the frequency of carrier current of a communication system to tune out the reactance of a capacitor with suitable inductance.
line-turn *See* maxwell-turn.
line unit [ELECTR] Electric control device used to send, receive, and control the impulses of a teletypewriter.
line up [MIN ENG] **1.** A command signifying that the drill runner wants the hoisting cable attached to the drill stem, threaded through the sheave wheel, or wound on the hoist drum. **2.** To reposition a drill so that the drill stem is centered over the parallel to a newly collared drill hole.
line-use ratio [COMMUN] As applied to facsimile broadcasting, the ratio of the available line to the total length of scanning line.
line voltage [ELEC] The voltage provided by a power line at the point of use.
line-voltage regulator [ELEC] A regulator that counteracts variations in power-line voltage, so as to provide an essentially constant voltage for the connected load.
line vortex [FL MECH] A type of fluid motion in which fluid flows approximately in circles about a line, at speeds inversely proportional to the distance from the line, so that there is an infinite concentration of vorticity on the line, and vorticity vanishes elsewhere.
lingual artery [ANAT] An artery originating in the external carotid and supplying the tongue.
lingual gland [ANAT] A serous, mucous, or mucoserous gland lying deep in the mucous membrane of the mammalian tongue.
lingual nerve [ANAT] A branch of the mandibular nerve having somatic sensory components and innervating the mucosa of the floor of the mouth and the anterior two-thirds of the tongue.
lingual tonsil [ANAT] An aggregation of lymphoid tissue composed of 35–100 separate tonsillar units occupying the posterior part of the tongue surface.
Linguatulida [INV ZOO] The equivalent name for Pentastomida.
Linguatuloidea [INV ZOO] A suborder of pentastomid arthropods in the order Porocephalida; characterized by an elongate, ventrally flattened, annulate, posteriorly attenuated body, simple hooks on the adult, and binate hooks in the larvae.
linguistic model [COMPUT SCI] A method of automatic pattern recognition in which a class of patterns is defined as those patterns satisfying a certain set of relations among suitably defined primitive elements. Also known as syntactic model.
linguistics [COMMUN] The study of human speech in its various aspects, especially units of language, phonetics, syntax, accent, semantics, and grammar.
lingula [ANAT] A tongue-shaped organ, structure, or part thereof.
Lingulacea [INV ZOO] A superfamily of inarticulate brachiopods in the order Lingulida characterized by an elongate, biconvex calcium phosphate shell, with the majority having a pedicle.
lingulate [BIOL] Tongue- or strap-shaped.
Lingulida [INV ZOO] An order of inarticulate brachiopods represented by two living genera, *Lingula* and *Glottidia*.
linguloid ripple mark *See* linguoid ripple mark.
linguoid current ripple *See* linguoid ripple mark.
linguoid ripple mark [GEOL] An aqueous current ripple mark with tonguelike projections which are formed by action of a current of water and which point into the current. Also known as cuspate ripple mark; linguloid ripple mark; linguoid current ripple.
liniment [PHARM] A heat-generating liquid that is thinner than ointment and is applied to the skin with friction.
lining [MATER] A material used to protect inner surfaces, as of tunnels, pipes, or process equipment.
lining bar [DES ENG] A crowbar with a pinch, wedge, or diamond point at its working end.
lining pole *See* range rod.
lining sight [MIN ENG] An instrument consisting of a plate with a slot in the middle, and the means of suspending it; used with a plumbline for directing the courses of underground drifts or headings.
linin net [CYTOL] The reticulum composed of chromatinic or oxyphilic substances in a cell nucleus.
linishing *See* belt grinding.
link [CIV ENG] A standardized part of a surveyor's chain, which is 7.92 inches (20.1168 centimeters) in the Gunter's chain and 1 foot (30.48 centimeters) in the engineer's chain. [COMMUN] General term used to indicate the existence of communications facilities between two points. [DES ENG] **1.** One of the rings of a chain. **2.** A connecting piece in the moving parts of a machine.
linkage [COMPUT SCI] In programming, coding that connects two separately coded routines. [ELECTROMAG] *See*

LINGULACEA



Internal molds of Cambrian lingulacean *Lingulella*. *(a)* Pedicle valve. *(b)* Brachial valve. *(From C. D. Walcott, Cambrian Brachiopoda, USGS Monogr. no. 51, 1912)*

flux linkage. [GEN] Failure of nonallelic genes to recombine at random as a result of their being located within the same chromosome or chromosome fragment. [MECH ENG] A mechanism that transfers motion in a desired manner by using some combination of bar links, slides, pivots, and rotating members.

linkage editor [COMPUT SCI] A service routine that converts the output of assemblers and compilers into a form that can be loaded and executed.

linkage group [GEN] The genes located on a single chromosome.

link bar *See* hinged bar.

link chute adapter [ORD] A unit attached to a gun to allow a link ejection chute to be fastened to the gun, and to lead ejected links to the chute.

link circuit [ELECTROMAG] Closed loop used for coupling purposes; it generally consists of two coils, each having a few turns of wire, connected by a twisted pair of wires or by other means, with each coil placed over, near, or in one of the two coils that are to be coupled.

link control message [COMMUN] **1.** Message sent over a link of a network to condition the link to handle transmissions in a prearranged manner. **2.** Message used only between a pair of terminals for the conditioning of the link for digital system control.

link coupling [ELECTROMAG] Modification of inductive coupling where the two coils are connected together by a short length of transmission line, with each coil inductively coupled to the coil of a separate tuned circuit.

linked ammunition [ORD] Cartridges fastened side by side with metal links, forming a belt for ready feed to a machine gun.

link ejection chute [ORD] A chute or passage attached to a machine gun, through which links are thrown or conveyed to a desired point after being separated from the cartridges; it may be either fixed or flexible.

link encryption [COMMUN] The application of on-line crypto-operation to the individual links of relay systems so that all messages passing over the link are encrypted in their entirety.

linker-delinker [ORD] A machine designed to assemble or disassemble a metallic disintegrating linked belt for ammunition.

Linke scale [METEOROL] A type of cyanometer; used to measure the blueness of the sky; it is simply a set of eight cards of different standardized shades of blue, numbered (evenly) 2 to 16; the odd numbers are used by the observer if the sky color lies between any of the given shades. Also known as blue-sky scale.

link field [COMPUT SCI] The first word of a message buffer, used to point to the next buffer on the message queue.

link group [COMMUN] A collection of links that employ the same multiplex terminal equipment.

linking loader [COMPUT SCI] A loader which combines the functions of a relocating loader with the ability to combine a number of program segments that have been independently compiled into an executable program.

link-loading machine [ORD] Machine that quickly loads ammunition into interlocking metal links, which in turn form an ammunition belt for certain types of automatic weapons.

link stretch [ORD] The change in the center to center distance of the individual rounds of belted ammunition as the load is applied.

link V belt [DES ENG] A V belt composed of a large number of rubberized-fabric links joined by metal fasteners.

lin-log amplifier [ELECTR] Automatic gain control amplifier that operates in a linear manner for low-amplitude input signals, but responds in a logarithmic manner to high-amplitude input signals.

linnaeite [MINERAL] $(Co,Ni)_3S_4$ A steel-gray mineral with a coppery-red tarnish, occurring in isometric crystals; an ore of cobalt. Also known as cobalt pyrites; linneite.

linneite *See* linnaeite.

Linnik interference microscope [OPTICS] A type of interference microscope used for studying the surface structure of reflecting specimens; light from a source is divided by a semireflecting mirror into two beams, one of which is focused through an objective onto the specimen surface, the other onto a comparison surface; after reflection from the respective surfaces, the beams are reunited by the mirror.

linoleic acid [BIOCHEM] $C_{17}H_{31}COOH$ A yellow unsaturated fatty acid, boiling at 229°C (14 mm Hg), occurring as a glyceride in drying oils; obtained from linseed, safflower, and tall oils; a principal fatty acid in plants, and considered essential in animal nutrition; used in medicine, feeds, paints, and margarine. Also known as linolic acid; 9,12-octadecadienoic acid.

linolenate [BIOCHEM] A salt or ester of linolenic acid.

linolenic acid [BIOCHEM] $C_{17}H_{29}COOH$ One of the principal unsaturated fatty acids in plants and an essential fatty acid in animal nutrition; a colorless liquid that boils at 230°C (17 mmHg or 2266 newtons per square meter), soluble in many organic solvents; used in medicine and drying oils. Also known as 9,12,15-octadecatrienoic acid.

linolenyl alcohol [ORG CHEM] $C_{18}H_{32}O$ A colorless, combustible solid used for paints, paper, leather, and flotation processes. Also known as octadecatrienol.

linoleum [MATER] A floor covering made by applying a mixture of gelled linseed oil, pigments, fillers, and other materials to a burlap backing, and curing to produce a hard, resilient sheet.

linolic acid *See* linoleic acid.

linseed cake [MATER] The residue formed during pressing of commercial linseed oil; used for cattle feed and fertilizer.

linseed oil [MATER] A product made from the seeds of the flax plant by crushing and pressing either with or without heat; formulated in various grades and with various drying agents and used as a vehicle in oil paints and as a component of oil varnishes.

lint [MATER] During the first stage of processing cotton, the fiber that is separated from the seeds in a cotton gin.

lintel [BUILD] A horizontal member over an opening, such as a door or window, usually carrying the wall load.

linter [MECH ENG] A machine for removing fuzz linters from ginned cottonseed.

linters [MATER] Short residual fibers that adhere to ginned cottonseed; used for making fabrics that do not require long fibers, as plastic fillers, and in the manufacture of cellulosic plastics.

LINUP *See* laser-induced nuclear polarization.

linuron [ORG CHEM] $C_9H_{10}Cl_2N_2O_2$ A white, crystalline compound that melts at 93–94°C; slight solubility in water; used as an herbicide for roadsides and fence rows, and weeds in crops. Also known as 3-(3,4-dichlorophenyl)-1-methoxy-1-methylurea.

LIOCS [COMPUT SCI] Set of routines handling buffering, blocking, label checking, and overlap of input/output with processing. Derived from logical input/output control system.

lion [VERT ZOO] *Felis leo*. A large carnivorous mammal of the family Felidae distinguished by a tawny coat and blackish tufted tail, with a heavy blackish or dark-brown mane in the male.

Lion *See* Leo.

Liopteridae [INV ZOO] A small family of hymenopteran insects in the superfamily Cynipoidea.

Liouville equation [STAT MECH] An equation which states that the density of points representing an ensemble of systems in phase space which are in the neighborhood of some given system does not change with time.

Liouville-Neumann series [MATH] An infinite series of functions constructed from the given functions in the Fredholm equation which under certain conditions provides a solution. Also known as Neumann series.

Liouville's theorem [MATH] Every function of a complex variable which is bounded and analytic in the entire complex plane must be constant.

lip [ANAT] A fleshy fold above and below the entrance to the mouth of mammals. [CIV ENG] A parapet placed on the downstream margin of a millrace or apron in order to minimize scouring of the river bottom. [DES ENG] Cutting edge of a fluted drill formed by the intersection of the flute and the lip clearance angle, and extending from the chisel edge at the web to the circumference. [MED] The margin of an open wound. [SCI TECH] The edge of a hollow cavity or container.

Lipalian [GEOL] A hypothetical geologic period that supposedly antedated the Cambrian.

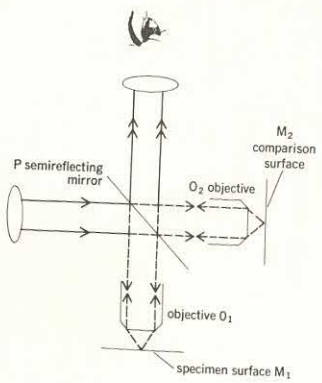
Liparidae [INV ZOO] The equivalent name for Lymantriidae.

lipase [BIOCHEM] An enzyme that catalyzes the hydrolysis of fats or the breakdown of lipoproteins.

lipemia [MED] The presence of a fine emulsion of fatty substance in the blood. Also known as lipidemia; lipoidemia.

Liphistiidae [INV ZOO] A family of spiders in the suborder

LINNIK INTERFERENCE MICROSCOPE



The Linnik interference microscope for reflecting specimens.

Liphistiomorphae in which the abdomen shows evidence of true segmentation by the presence of tergal and sternal plates.

Liphistiomorphae [INV ZOO] A suborder of arachnids in the order Araneida containing families with a primitively segmented abdomen.

lipid [BIOCHEM] One of a class of compounds which contain long-chain aliphatic hydrocarbons and their derivatives, such as fatty acids, alcohols, amines, amino alcohols, and aldehydes; includes waxes, fats, and derived compounds. Also known as lipin; lipoid.

lipidemia *See* lipemia.

lipid histiocytosis [MED] **1.** Any collection of histiocytes containing lipids. **2.** *See* Niemann-Pick disease.

lipid metabolism [BIOCHEM] The physiologic and metabolic processes involved in the assimilation of dietary lipids and the synthesis and degradation of lipids.

lipid nephrosis [MED] A chronic kidney disease of children associated with thickening of the basement membranes of glomeruli and characterized by edema, presence of protein in the urine, and abnormally high blood levels of albumin and cholesterol.

lipidosis [MED] The generalized deposition of fat or fatty substances in reticuloendothelial cells. Also known as lipoidosis.

lipid pneumonia [MED] **1.** Pneumonia resulting from aspiration of oily substances, such as nose drops. **2.** Deposition of lipids in tissues of chronically inflamed lungs. Also known as lipoid pneumonia.

lipid proteinosis [MED] A hereditary disorder characterized by extracellular deposits of phospholipid-protein conjugate involving various areas of the body, including the skin and air passages.

lipid storage disease [MED] Any of various rare diseases characterized by the accumulation of large histiocytes containing lipids throughout reticuloendothelial tissues; examples are Goucher's disease, Niemann-Pick disease, and amaurotic familial idiocy.

lipin [BIOCHEM] **1.** A compound lipid, such as a cerebroside. **2.** *See* lipid.

lipoblastoma *See* liposarcoma.

lipochondrodystrophy *See* Hurler's syndrome.

lipochrome [BIOCHEM] Any of various fat-soluble pigments, such as carotenoid, occurring in natural fats. Also known as chromolipid.

lipodystrophy [MED] A disturbance of fat metabolism in which the subcutaneous fat disappears over some regions of the body, but is unaffected in others.

lipofuscin [BIOCHEM] Any of a group of lipid pigments found in cardiac and smooth muscle cells, in macrophages, and in parenchyma and interstitial cells; differential reactions include sudanophilia, Nile blue staining, fatty acid, glycol, and ethylene.

lipogranuloma [MED] A small mass of fatty tissue associated with granulomatous inflammation.

lipoic acid [BIOCHEM] $C_8H_{14}O_2S_2$ A compound which participates in the enzymatic oxidative decarboxylation of α-keto acids in a stage between thiamine pyrophosphate and coenzyme A.

lipoid [BIOCHEM] **1.** A fatlike substance. **2.** *See* lipid.

lipoidemia *See* lipemia.

lipoidosis *See* lipidosis.

lipoid pneumonia *See* lipid pneumonia.

lipoma [MED] A benign tumor composed of fat cells.

lipomatosis [MED] **1.** Multiple lipomas. **2.** Obesity.

lipomelanotic reticulosis [MED] A form of lymph node hyperplasia characterized by preservation of the architectural structure, inflammatory exudate, and hyperplasia of the reticulum cells which show phagocytosis of hemosiderin, melanin, and occasionally fat. Also known as dermatopathic lymphadenitis.

Lipomycetoideae [MICROBIO] A subfamily of oxidative yeasts in the family Saccharomycetaceae characterized by budding cells and a saclike appendage which develops into an ascus.

lipomyxoma *See* liposarcoma.

lipophilic [CHEM] **1.** Having a strong affinity for fats. **2.** Promoting the solubilization of lipids.

lipophore [HISTOL] A chromatophore which contains lipochrome.

lipopolysaccharide [BIOCHEM] Any of a class of conjugated polysaccharides consisting of a polysaccharide combined with a lipid.

lipoprotein [BIOCHEM] Any of a class of conjugated proteins consisting of a protein combined with a lipid.

liposarcoma [MED] A sarcoma originating in adipose tissue. Also known as embryonal-cell lipoma; fetal fat-cell lipoma; infiltrating lipoma; lipoblastoma; lipomyxoma; myxolipoma; myxoma lipomatodes.

liposome [CYTOL] One of the fatty droplets occurring in the cytoplasm, particularly of an egg.

Lipostraca [PALEON] An order of the subclass Branchiopoda erected to include the single fossil species *Lepidocaris rhyniensis*.

lipotropic [BIOCHEM] Having an affinity for lipid compounds. [PHARM] Having a preventive or curative effect on the deposition of excessive fat in abnormal sites.

lipotropic hormone [BIOCHEM] Any hormone having lipolytic activity on adipose tissue.

Lipotyphla [VERT ZOO] A group of insectivoran mammals composed of insectivores which lack an intestinal cecum and in which the stapedial artery is the major blood supply to the brain.

lipoxidase [BIOCHEM] An enzyme catalyzing the oxidation of the double bonds of an unsaturated fatty acid.

lipper [OCEANOGR] **1.** Slight ruffling or roughness appearing on a water surface. **2.** Light spray originating from small waves.

Lippich prism [OPTICS] A Nicol prism which is placed in the eyepiece of a polarimeter, covering half the field of view, to identify the character of polarized light emerging from the instrument.

Lippmann effect [PHYS] A change in surface tension that results from a potential difference across the interface between two immiscible liquid conductors.

Lippmann electrometer *See* capillary electrometer.

Lippmann fringes [OPTICS] Interference fringes in standing electromagnetic waves generated when light is reflected by a mercury coating at the back of a special fine-grained photographic emulsion; originally used in color photography.

Lipschitz condition [MATH] A function f satisfies such a condition at a point b if $|f(x) - f(b)| \leq K|x - b|$, with K a constant, for all x in some neighborhood of b.

lip-sync [COMMUN] Synchronization of sound and motion picture so that facial movements of speech coincide with the sounds.

liptinite *See* exinite.

liq pt *See* pint.

liquation [MET] **1.** Separation of fusible metals from less fusible ones by applying heat. **2.** The partial melting of an alloy.

liquefaction [PHYS] A change in the phase of a substance to the liquid state; usually, a change from the gaseous to the liquid state, especially of a substance which is a gas at normal pressure and temperature.

liquefied gas [MATER] A gaseous compound or mixture converted to the liquid phase by cooling or compression; examples are liquefied petroleum gas (LPG), liquefied natural gas (LNG), liquid oxygen, and liquid ammonia.

liquefied natural gas [MATER] A product of natural gas which consists primarily of methanes; its critical temperature is about −100°F (−73°C), and thus it must be liquefied by cooling to cryogenic temperatures and must be well insulated to be held in the liquid state; used as a domestic fuel. Abbreviated LNG.

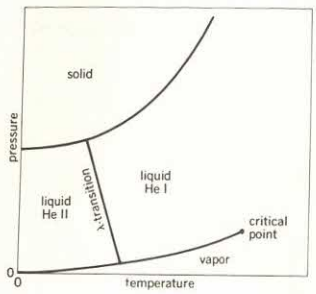
liquefied petroleum gas [MATER] A product of petroleum gases; principally propane and butane, it must be stored under pressure to keep it in a liquid state; it is often stored in metal cylinders (bottled gas) and used as fuel for tractors, trucks, and buses, and as a domestic cooking or heating fuel in rural areas. Abbreviated LPG.

liquefier [ENG] Equipment or system used to liquefy gases; usually employs a combination of compression, heat exchange, and expansion operations.

liqueur [FOOD ENG] An alcoholic beverage prepared by combining a spirit, usually brandy, with certain flavorings and sugar.

liquid [PHYS] A state of matter intermediate between that of crystalline substances and gases in which a substance has the capacity to flow under extremely small shear stresses and conforms to the shape of a confining vessel, but is relatively incompressible, lacks the capacity to expand without limit, and can possess a free surface.

LIQUID HELIUM



Phase diagram for He^4 (not to scale). There are two liquid phases, helium I and helium II; the transition between them is called the λ-transition. Solid phase is never in equilibrium with vapor phase, and occurs only at elevated pressures. Critical point has temperature of 5.2 K and pressure of 2.26 atmospheres.

liquid air [PHYS] Air in the liquid state obtained as a faintly bluish, transparent, mobile, intensely cold liquid by compressing purified air and cooling it to a temperature below the boiling points of its principal components, nitrogen and oxygen; used chiefly as a refrigerant.

liquid asphalt *See* residual oil.

liquid blast cleaning [MET] Cleaning metal surfaces with a suspension of abrasive in water accelerated to high velocities by compressed air, or by a centrifugal wheel.

liquid blocking [PETRO ENG] The blocking or plugging of the sand around an injection-well borehole, usually caused by lubricant carryover from compressors.

liquid bright gold [MATER] Any of several gold compounds applied to ceramics in the form of varnish which is dried and heated to redness, decomposing the compound and leaving a thin film of gold firmly attached to the underlying ceramic; used in decorating china and for the production of printed electrical circuits on ceramics.

liquid-bubble tracer [FL MECH] A method of observing the motion of a liquid by following tiny particles of an immiscible liquid of the same density as the moving liquid.

liquid carburizing [MET] Surface hardening of steel by immersion into a molten bath consisting of cyanides and other salts, for example, at 1600–1750°F (850–950°C).

liquid chromatography [ANALY CHEM] A form of chromatography employing a liquid as the moving phase and a solid or a liquid on a solid support as the stationary phase; techniques include column chromatography, gel permeation chromatography, and partition chromatography.

liquid-column gage *See* U-tube manometer.

liquid compass [ENG] A compass in a bowl filled with liquid.

liquid-cooled dissipator *See* cold plate.

liquid-cooled engine [MECH ENG] An internal combustion engine with a jacket cooling system in which liquid, usually water, is circulated to maintain acceptable operating temperatures of machine parts.

liquid cooling [ENG] Use of circulating liquid to cool process equipment and hermetically sealed components such as transistors.

liquid crystal [PHYS CHEM] A liquid which is not isotropic; it is birefringent and exhibits interference patterns in polarized light; this behavior results from the orientation of molecules parallel to each other in large clusters.

liquid crystal display [ELECTR] A digital display that consists of two sheets of glass separated by a sealed-in, normally transparent, liquid crystal material; the outer surface of each glass sheet has a transparent conductive coating such as tin oxide or indium oxide, with the viewing-side coating etched into character-forming segments that have leads going to the edges of the display; a voltage applied between front and back electrode coatings disrupts the orderly arrangement of the molecules, darkening the liquid enough to form visible characters even though no light is generated. Abbreviated LCD.

liquid-dielectric capacitor [ELEC] A capacitor in which the plate assemblies are mounted in a tank filled with a suitable oil or liquid dielectric.

liquid dioxide *See* nitrogen dioxide.

liquid-dominated hydrothermal reservoir [GEOL] Any geothermal system mainly producing superheated water (often termed brines); hot springs, fumaroles, and geysers are the surface expressions of hydrothermal reservoirs; an example is the hot-brine region in the Imperial Valley–Salton Sea area of southern California.

liquid-drop model of nucleus [NUC PHYS] A model of the nucleus in which it is compared to a drop of incompressible liquid, and the nucleons are analogous to molecules in the liquid; used to study binding energies, fission, collective motion, decay, and reactions. Also known as drop model of nucleus.

liquid extraction *See* solvent extraction.

liquid-filled porosity [GEOL] The condition in porous rock or sand formations in which pore spaces contain fresh or salt water, liquid petroleum, pressure-liquefied butane or propane, or tar.

liquid filter [CHEM ENG] A device for the removal of solids or coalesced droplets out of a liquid stream by use of a filter medium, such as a screen, cartridge, or granular bed.

liquid flow [FL MECH] The flow or movement of materials in the liquid phase.

liquid fluorine [CRYO] Cold, liquefied fluorine gas; used as a cryogenic propellant.

liquid fuel [MATER] A rocket fuel which is liquid under the conditions in which it is utilized in the rocket. Also known as liquid propellant.

liquid fuse unit [ELEC] Fuse unit in which the fuse link is immersed in a liquid, or provision is made for drawing the arc into the liquid when the fuse link melts.

liquid gas [PHYS] A gas in the liquid state.

liquid glass *See* sodium silicate.

liquid grease [MATER] Lubricating oil of light or medium grade that is thickened with calcium soap.

liquid helium [CRYO] The state of helium which exists at atmospheric pressure at temperatures below −268.95°C (4.2 K), and for temperatures near absolute zero at pressures up to about 25 atmospheres (2.53 megapascals); has two phases, helium I and helium II.

liquid holdup [FL MECH] A condition in two-phase flow through a vertical pipe; when gas flows at a greater linear velocity than the liquid, slippage takes place and liquid holdup occurs.

liquid honing *See* vapor blasting.

liquid hydrocarbon [ORG CHEM] A hydrocarbon that has been converted from a gas to a liquid by pressure or by reduction in temperature; usually limited to butanes, propane, ethane, and methane.

liquid hydrogen [CRYO] Hydrogen that exists as a liquid at atmospheric pressure, at −252.7°C (20.46 K); used for high-impulse rocket fuels.

liquid-hydrogen bubble chamber [NUCLEO] A bubble chamber in which the active liquid is hydrogen; particularly useful in research on elementary particles produced in high-energy interactions, because the hydrogen provides a dense target of protons.

liquid-in-glass thermometer [ENG] A thermometer in which the thermally sensitive element is a liquid contained in a graduated glass envelope; the indication of such a thermometer depends upon the difference between the coefficients of thermal expansion of the liquid and the glass; mercury and alcohol are liquids commonly used in meteorological thermometers.

liquid-in-metal thermometer [ENG] A thermometer in which the thermally sensitive element is a liquid contained in a metal envelope, frequently in the form of a Bourdon tube.

liquid insulator [MATER] A liquid with a resistivity greater than about 10^{14} ohm-centimeters, such as a petroleum oil, silicone oil, or halogenated aromatic hydrocarbon.

liquid junction emf [PHYS CHEM] The emf (electromotive force) generated at the area of contact between the salt bridge and the test solution in a pH cell electrode.

liquid knockout *See* impingement.

liquid laser [OPTICS] A laser whose active material is dissolved in a liquid contained in a transparent cylindrical shell; rare-earth ions in suitable dissolved molecules and organic dye solutions are used.

liquid level control [ENG] Regulation of the linear vertical distance between the surface of a liquid and some reference point.

liquid limit [GEOL] The moisture content boundary that exists between the plastic and semiliquid states of a sediment.

liquid-liquid chemical reaction [CHEM] Chemical reaction in which the reactants, two or more, are liquids.

liquid-liquid extraction [CHEM ENG] The removal of a soluble component from a liquid mixture by contact with a second liquid, immiscible with the carrier liquid in which the component is preferentially soluble.

liquid measure [MECH] A system of units used to measure the volumes of liquid substances in the United States; the units are the fluid dram, fluid ounce, gill, pint, quart, and gallon.

liquid-metal embrittlement [MET] The rapid loss of mechanical properties of a metal or an alloy due to contact with certain liquid metals.

liquid-metal fuel cell [ELEC] A fuel cell that uses molten potassium and bismuth as reactants and a molten salt electrolyte; has very high power output, but a relatively short life.

liquid-metal MHD generator [ELEC] A system for generating electric power in which the kinetic energy of a flowing, molten metal is converted to electric energy by magnetohydrodynamic (MHD) interaction.

liquid-metal nuclear fuel [NUCLEO] A nuclear fuel consist-

ing of a solution of uranium or plutonium in a molten metal such as bismuth.

liquid methane [CRYO] Methane that has been cooled to at least −161°C; used for cryogenic applications and for tankship transport of methane.

liquid nitrogen [CRYO] Nitrogen that exists as a liquid at atmospheric pressure, at −195°C (77.4 K); used in research work, cryogenics, and cryosurgery.

liquid oxygen [CRYO] Oxygen that exists as a liquid at 59 atmospheres (5.978 megapascals), at −113°C (160.2 K); a pale-blue, transparent, mobile liquid.

liquid-oxygen explosive [MATER] Sawdust or other carbonaceous material formed into a cartridge and dipped into liquid oxygen, to use in blasting. Abbreviated LOX.

liquid penetrant test [ENG] A penetrant method of nondestructive testing used to locate defects open to the surface of nonporous materials; penetrating liquid is applied to the surface, and after 1–30 minutes excess liquid is removed, and a developer is applied to draw the penetrant out of defects, thus showing their location, shape, and size.

liquid petrolatum *See* white mineral oil.

liquid-phase hydrogenation [CHEM ENG] Hydrogen reaction with liquid-phase hydrogenatable material, such as unsaturated aliphatic or aromatic hydrocarbons.

liquid pint *See* pint.

liquid piston rotary compressor [MECH ENG] A rotary compressor in which a multiblade rotor revolves in a casing partly filled with liquid, for example, water.

liquid poison [NUCLEO] A neutron-absorbing liquid that can be injected quickly into the cooling system of a nuclear reactor by explosive-actuated valves; used for automatic or manual scramming to shut down a reactor.

liquid propellant *See* liquid fuel.

liquid rheostat [ELECTR] A variable-resistance type of voltage regulator in which the variable-resistance element is liquid, usually water; carbon electrodes are raised or lowered in the liquid to change resistance ratings and control voltage flow.

liquid rosin *See* tall oil.

liquid scintillation detector [NUCLEO] Scintillation counter in which the sensitive material is a liquid, such as *p*-terphenyl dissolved in toluene, placed in a glass or metal container.

liquid seal [CHEM ENG] **1.** The depth of liquid above an opening from which gas or vapor issues, as for a riser in a distillation-column tray. **2.** Product drawoff in which a depth of liquid prevents the outflow of gas or vapor.

liquid-sealed meter [ENG] A type of positive-displacement meter for gas flows consisting of a cylindrical chamber that is more than half filled with water and divided into four rotating compartments formed by trailing vanes; gas entering through the center shaft into one compartment after another forces rotation that allows the gas then to exhaust out the top as it is displaced by the water. Also known as drum meter.

liquid semiconductor [ELECTR] An amorphous material in solid or liquid state that possesses the properties of varying resistance induced by charge carrier injection.

liquid-solid chemical reaction [CHEM] Chemical reaction in which at least one of the reactants is a liquid, and another of the reactants is a solid.

liquid-solid equilibrium *See* solid-liquid equilibrium.

liquid-sorbent dehumidifier [MECH ENG] A sorbent type of dehumidifier consisting of a main circulating fan, sorbent-air contactor, sorbent pump, and reactivator; dehumidification and reactivation are continuous operations, with a small part of the sorbent constantly bled off from the main circulating system and reactivated to the concentration required for the desired effluent dew point.

liquid sulfur dioxide–benzene process [CHEM ENG] A petroleum-refinery process using a mixed solvent (SO_2 and benzene) to dewax lubricating oils or improve their viscosity indices.

liquidus line [THERMO] For a two-component system, a curve on a graph of temperature versus concentration which connects temperatures at which fusion is completed as the temperature is raised.

liquid-vapor chemical reaction [CHEM] Chemical reaction in which at least one of the reactants is a liquid, and another of the reactants is a vapor.

liquid-vapor equilibrium [PHYS CHEM] The equilibrium relationship between the liquid and its vapor phase for a partially vaporized compound or mixture at specified conditions of pressure and temperature; for mixtures, it is expressed by $K = x/y$, where K is the equilibrium constant, x the mole fraction of a key component in the vapor, and y the mole fraction of the same key component in the liquid. Also known as vapor-liquid equilibrium.

liquid-water content *See* water content.

liquor [CHEM ENG] **1.** Supernatant liquid decanted from a liquid-solids mixture in which the solids have settled. **2.** Liquid overflow from a liquid-liquid extraction unit. [FOOD ENG] **1.** Sugarcane sap before it is crystallized into sugar. **2.** A strong distilled alcoholic beverage. [PHARM] A solution of a medicinal substance in water.

liquor finish [MET] A bright, smooth finish on wet-drawn wire achieved by using fermented-grain mash liquor as a lubricant.

lirella [BOT] A long, narrow apothecium with a medial longitudinal furrow, occurring in certain lichens.

Liriopeidae [INV ZOO] The phantom craneflies, a family of dipteran insects in the suborder Orthorrhapha distinguished by black and white banded legs.

liroconite [MINERAL] $Cu_2Al(AsO_4)(OH)_4 \cdot 4H_2O$ A light-blue or yellowish-green mineral composed of basic hydrous aluminum copper arsenate, occurring in monoclinic crystals.

liskeardite [MINERAL] $(Al,Fe)_3(AsO_4)(OH)_6 \cdot 5H_2O$ A soft, white mineral composed of basic hydrous aluminum iron arsenate.

lisle [TEXT] Fine-quality, tightly twisted, long-staple cotton yarn with a sleek surface produced by passing it near a gas flame to remove fuzz.

LISP [COMPUT SCI] An interpretive language developed for the manipulation of symbolic strings of recursive data; can also be used to manipulate mathematical and arithmetic logic. Derived from list processing language.

Lissajous figure [PHYS] The path of a particle moving in a plane when the components of its position along two perpendicular axes each undergo simple harmonic motions and the ratio of their frequencies is a rational number.

Lissamphibia [VERT ZOO] A subclass of Amphibia including all living amphibians; distinguished by pedicellate teeth and an operculum-plectrum complex of the middle ear.

list [COMPUT SCI] **1.** A last-in, first-out storage organization, usually implemented by software, but sometimes implemented by hardware. **2.** In FORTRAN, a set of data items to be read or written. [ENG] To lean to one side, or deviate from the vertical.

listening station [ENG] A radio or radar receiving station that is continuously manned for various purposes, such as for radio direction finding or for gaining information about enemy electronic devices.

Listeria [MICROBIO] A genus of small, gram-positive, motile coccoid rods of uncertain affiliation; found in animal and human feces.

listeriosis [MED] A bacterial disease of humans and some animals caused by *Listeria monocytogenes;* occurs primarily as meningitis or granulomatosis infantiseptica in humans, and takes many forms, such as meningoencephalitis, distemperlike disease, or generalized infection, in animals.

listing *See* lashing.

Listomatic camera [GRAPHICS] A machine used in photocopying which photographs data on tabulating cards and prints it in columnar form on roll film; the film negative is then used for printing by photolithography.

list processing [COMPUT SCI] A programming technique in which list structures are used to organize memory.

list processing language *See* LISP.

list structure [COMPUT SCI] A set of data items, connected together because each element contains the address of a successor element (and sometimes of a predecessor element).

litchi *See* lychee.

liter [MECH] A unit of volume or capacity, equal to 1 decimeter cubed, or 0.001 cubic meter, or 1000 cubic centimeters. Abbreviated l.

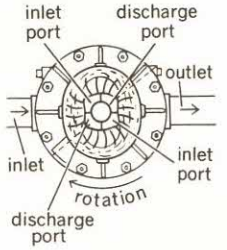
literal constant [MATH] A letter denoting a constant.

literal expression [MATH] An expression or equation in which the constants are represented by letters.

literal notation [MATH] The use of letters to denote numbers, known or unknown.

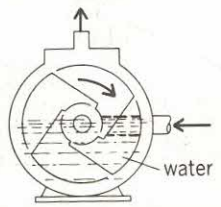
literal operand [COMPUT SCI] An operand, usually occurring in a source language instruction, whose value is specified

LIQUID PISTON ROTARY COMPRESSOR



Schematic of the compressor showing its components.

LIQUID-SEALED METER



Liquid-sealed drum-type gas flowmeter.

by a constant which appears in the instruction rather than by an address where a constant is stored.

liter-atmosphere [PHYS] A unit of energy equal to the work done on a piston by a fluid at a pressure of 1 standard atmosphere (101,325 newtons per square meter) when the piston sweeps out a volume of 1 liter; equal to 101.325 joules.

lithamide *See* lithium amide.

litharge *See* lead monoxide.

litharge-glycerin cement [MATER] Mixture of glycerin, water, and litharge (lead monoxide) to give, when cured, an acid-resistant cement.

lithemia *See* hyperuricemia.

lithian muscovite [MINERAL] A form of the mineral lepidolite containing 3–4% lithium oxide and having a modified two-layer monoclinic muscovite structure.

lithiasis [MED] The formation of calculi in the body.

lithic [PETR] Pertaining to stone.

lithic graywacke [PETR] A low-grade graywacke, that is, containing an abundance of unstable materials, especially a sandstone containing less than 75% quartz and chert, 15–75% detrital clay matrix, and more rock fragments than feldspar grains.

lithic sandstone [PETR] A sandstone that contains more rock fragments than feldspar grains.

lithic tuff [GEOL] **1.** A tuff that is mostly crystalline rock fragments. **2.** An indurated volcanic ash deposit whose fragments are composed of previously formed rocks that first solidified in the volcanic vent and were then blown out.

lithifaction *See* lithification.

lithification [GEOL] **1.** Conversion of a newly deposited sediment into an indurated rock. Also known as lithifaction. **2.** Compositional change of coal to bituminous shale or other rock.

lithionite *See* lepidolite.

lithiophilite [MINERAL] $Li(Mn,Fe)PO_4$ A salmon-pink or clove-brown mineral crystallizing in the orthorhombic system; isomorphous with triphylite.

lithiophorite [MINERAL] $(Al,Li)MnO_2(OH)_2$ Mineral composed of basic manganese aluminum lithium oxide.

Lithistida [PALEON] An order of fossil sponges in the class Demospongia having a reticulate skeleton composed of irregular and knobby siliceous spicules.

lithium [CHEM] A chemical element, symbol Li, atomic number 3, atomic weight 6.939; an alkali metal.

lithium aluminum hydride [INORG CHEM] $LiAlH_2$ A compound made by the reaction of lithium hydride and aluminum chloride; a powerful reducing agent for specific linkages in complex molecules; used in organic synthesis.

lithium amide [INORG CHEM] $LiNH_2$ A compound crystallizing in the cubic form, and melting at 380–400°C; used in organic synthesis. Also known as lithamide.

lithium battery [ELEC] A solid-state battery with a lithium anode, an iodine-polyvinyl pyridine cathode, and an electrolyte consisting of a layer of lithium iodide; used in cardiac pacemakers.
